08/11/2026 Europe/Athens - INVOICE-OWNER-FINALIZATION-01 / ASSIGNED / BEFORE SOURCE

Owner: Claude Code page, branch claude/admiring-heisenberg-y0jv5v (task #28, priority IMMEDIATE). New independent scope; no existing claim found in the tracker, active list or pending roadmap. Checkpoint: CHECKPOINTS/CHANGES/2026-11-08-invoice-owner-correction-claim.md.

Owner decision 08/11/2026: the POS operator **keeps** the current invoice finalization and stock posting rights unchanged. The Owner or an authorized manager must be able, after finalization, to **correct** (items/quantities, Invoice Assistant rerun on the same draft) or **delete/cancel** the finalized invoice.

Scope: (1) extend the existing management-only PurchaseOrder reopen (server/src/services/purchase-order-reopen.js, currently INVOICED only) to also accept FINAL, with the same exact recorded stock compensation, immutable audit and payment/photo retention; (2) add a management-only "cancel invoice" action that atomically reopens (stock compensation) and removes the draft while preserving the POS payment and originals, with required reason and preview; (3) per-line correction history (append-only); (4) BackOffice buttons for FINAL/INVOICED orders in client/src/components/commerce/installPurchaseOrdersSuite.js. Existing role set for reopen (SUPER_ADMIN/OWNER/ADMIN/MANAGER) is retained unchanged unless the owner decides otherwise.

Read-only evidence at main 64c36f4: PATCH status=FINAL (server/src/routes/purchase-order-posting-guard.js:166-331) posts StockMovement, StoreProduct stock, Product cost/sale price, APPROVED PurchaseDocument and posting rows, and is reachable by POS operators via posPurchaseOrderAccess; DELETE (:95-120) allows only NEW drafts without posting; reopen rejects FINAL (purchase-order-reopen.js:34). Reopen has only a LIMITED LIVE preview PASS (18/10); actual reversal/re-finalization remains NOT TESTED. No line-level correction history exists.

Preserve: operator finalization, idempotent single posting, store/company isolation, one settlement/one AI job/one draft, POS payment retention, existing reopen behavior for INVOICED, fiscal/myDATA untouched. Status: OPEN / BEFORE SOURCE. No code, LAB transaction, stock or payment mutation in this claim. Next: after claim CI and merge to main, bounded server change with regression tests, then AWAITING LAB.

07/11/2026 22:24:54 UTC - CASH-UNIFIED-AUDIT-15 / FULL NATIVE PREVIEW AND CANCEL / SCOPED LIVE PASS

Retained owner codex/cash-chat-reconciliation-20261026 with /root coordination; no transfer. PR #3711 merged as ff4665eb8ec4b7b572ac65d792a788e48657a051; exact PR CI 42417280001 and main CI 42418343730 passed all five jobs. Guarded deploy 42419487430 / job 128544666223 succeeded; actual health confirmed the exact revision at 07/11 22:14:28.5241665 UTC.

Actual native owner preview, 07/11 22:20:04.336–22:21:02.568 UTC: full rendered system report 15,141 JavaScript characters / 147 lines, declared count matched, start visible and actual end reached by native scrolling. Three full-audit pending rows, system handoff sentence and two configured recipients were visible; addresses remain private. Optional comment stayed blank. Cancel closed the dialog and restored the preview control; Send was not selected. No operator email, no-charge repetition or monetary/approval action. PASS applies only to this full native preview and Cancel.

No raw HTTP/reportHash/generation parity, independent DB/global-state/provider/SMTP/inbox proof, mobile or other-role coverage. Delivery NOT SENT / NOT TESTED; exact-recipient approval remains OUTSTANDING after prior automatic approval rejection. Parent financial/source scope OPEN / ASSIGNED. Old native-preview.json FAIL and every prior registry byte/owner remain unchanged. Manual update is scoped only to observed preview/Cancel. New sanitized evidence: CHECKPOINTS/EVIDENCE/cash-system-email-20261107/native-in-app-preview.json. Parent checkpoint: CHECKPOINTS/CHANGES/2026-11-07-cash-system-generated-email.md. No new outbound authorization or financial closure.

07/11/2026 23:13:35 Europe/Athens - CASH-UNIFIED-AUDIT-15 / CONSOLIDATED PREVIEW UI CANDIDATE / AWAITING LAB

Same retained owner codex/cash-chat-reconciliation-20261026 with /root coordination; no transfer. Existing PR #3711 history, UI note and registry prefixes retained. Consolidation uses exact remote base 4b620b2928b0acb9dfdca2174c3bf4b1db1d6466, including the complete intervening daily-contract test adaptation. The prior local baa512c candidate stayed unpublished; its old test evidence is separate. Draft/review hold on 07/11 at 21:01:44Z / 21:02:04Z changed PR metadata only.

Bounded additions repair captured scope/session freshness, modal focus and Escape/in-flight cancel behavior, and short-height access while preserving the full scrollable system report, visible recipients, optional blank comment and explicit Send/Cancel. Four existing client/test paths, using platform-admin.css; backend/schema/recipient authority unchanged. Preserve owner/self readiness, canonical fingerprint/generation, stale-response rejection and atomic double-submit protection. No financial/provider/schedule expansion.

Actual consolidated Node 20.20.2 focused suite: 67 PASS / 0 FAIL / 0 SKIP / 0 CANCEL; separate exact-remote daily contract: 11 PASS / 0 FAIL / 0 SKIP / 0 CANCEL. Initial footerless run not counted. Final independent review: NO BLOCKERS; text whitespace check clean. Local source evidence only; new exact-head CI/release and hosted full-preview acceptance remain pending. Preserve actual native-preview FAIL JSON, unchanged manual, prior scoped cash PASS and every peer byte/owner. No new functional PASS.

Delivery NOT TESTED / NOT SENT; exact-recipient approval remains outstanding. Next: exact CI/review and authorized guarded release, then complete native preview/recipients/blank-comment/Cancel observation. Do not repeat the completed no-charge check or any rejected outbound action. Parent checkpoint: CHECKPOINTS/CHANGES/2026-11-07-cash-system-generated-email.md. Ten-path increment over current remote base; complete twelve-path PR includes the retained remote UI note and daily-contract test.

07/11/2026 - CASH-UNIFIED-AUDIT-15 - FULL EMAIL PREVIEW UI CANDIDATE

Retained owner codex/cash-chat-reconciliation-20261026 with /root coordination; no transfer. Before-source claim #3710 merged. PR #3711 (fix/cash-email-preview-20261107) replaces oversized native cash-email dialogs with a complete scrollable in-app system-generated report preview and explicit Send/Cancel for owner, self preview and not-ready visibility. Original backend reader, arithmetic, permissions, fingerprint/generation, recipients, SMTP and schedules unchanged. Synthetic >10,240-character mounted UI regression and atomic double-send, stale-store/day and pending-readiness checks added. Exact CI and LIVE recheck remain pending; no actual email sent and no financial, review, provider, bank or fiscal mutation. Prior limited PASS and the real 10,240-character preview FAIL remain preserved. Separate approval of exact outbound recipients required. Checkpoint: CHECKPOINTS/CHANGES/2026-11-07-cash-email-preview-ui.md.

07/11/2026 17:05 Europe/Athens - OCR4-CONFIDENCE-SCALE-01 / ASSIGNED / BEFORE SOURCE

Retained invoice/task4 owner /root; continuation from docs/ocr4-k01-hosted-20261106 at the owner's request to continue here in small steps. Claim branch docs/ocr4-confidence-scale-claim-20261107; subsequent source branch fix/ocr4-confidence-scale-20261107.

Scope: only make the FAST provider's confidence unit explicit in the schema description and prompt: percentage points from 0 to 100; 99 means 99%, 1 means 1%, and 0.99 remains a valid 0.99%. No automatic multiplication, minimum confidence, UI conversion or retrospective reinterpretation of K01. Add focused actual-request/response regression coverage with synthetic mocked provider values.

Read-only source review at main a9d6873c98f045de943bc67e3ff15ba70843f896: the schema already permits 0-100; the prompt does not name the scale, the endpoint preserves the numeric value, and the UI rounds it. K01's raw confidence is NOT CAPTURED, so its historical cause remains UNPROVEN. Existing limited K01 file/page/header PASS remains protected; K01 and all previously consumed fixtures are not

replayed. Full OCR and hosted acceptance remain OPEN.

Preserve supplier/number/date/total selection, physical PDF counting, provider order/models/reasoning/timeouts, Azure and durable reuse, tenant/store authorization, wallet and every payment/draft/stock/fiscal writer. OCR4-LOCAL-PDF-3697 and the separate latency scopes/owners are unchanged. Source integration starts only after normal claim CI and merge to main. Next: the bounded prompt/schema clarification and focused checks; no paid OCR or production transaction in this step.

Checkpoint: CHECKPOINTS/CHANGES/2026-11-07-ocr4-confidence-scale-claim.md. All earlier registry bytes are retained unchanged below. No new LAB PASS or numbered-work closure is claimed.

07/11/2026 22:19:03 Europe/Athens - CASH-UNIFIED-AUDIT-15 / FULL NATIVE PREVIEW FAIL / UI CLAIM BEFORE SOURCE

Retained owner codex/cash-chat-reconciliation-20261026 with /root coordination; no transfer. Source PR #3708 is installed at be3844895e807db469c3d3571cefa42bd7f3ec1c. Claim branch docs/cash-email-preview-claim-20261107; future implementation fix/cash-email-preview-20261107. OPEN / ASSIGNED / AWAITING UI IMPLEMENTATION AND LAB.

Actual native preview opened on 07/11 at 20:10:42.209 UTC and was observed by 20:11:08.808 UTC. Full-mode content was visible: three pending full-audit rows, the canonical system follow-up sentence, duplicate evidence and cached/unread papers. However, the observed message stopped at exactly 10,240 characters mid-paper line; recipients and final instructions were not visible. Overall full-preview acceptance is FAIL, not PASS. This observation does not establish a universal browser limit or complete-body parity.

The comment field was empty; no comment was typed. Cancel at 20:14:15.269 UTC closed the dialog and restored the native button. No email was sent. Delivery remains NOT TESTED / NOT SENT and exact-recipient approval remains outstanding. Financial/source reconciliation stays OPEN; prior 03/11 source evidence, 04/11 basic/full scoped PASS and 07/11 no-charge LIVE UI PASS remain protected.

Bounded UI correction only: replace the oversized browser dialog with a scrollable in-app complete system preview, visible recipients, optional blank comment and explicit Send/Cancel. Preserve the installed full reader, canonical text, readiness/auth/store/day/fingerprint/generation/stale-context/double-submit guards. No schedules, paid providers, recipient changes, financial/review writes or new send authorization. No new manual PASS; existing limited short-preview history is not contradicted.

Next: merge this documentation-only claim after applicable CI before UI source edits, then verify long-body completeness and guards with synthetic tests and separately authorized native preview/cancel acceptance. Do not repeat the completed no-charge button or any outbound action. Checkpoint: CHECKPOINTS/CHANGES/2026-11-07-cash-system-generated-email.md; sanitized evidence: CHECKPOINTS/EVIDENCE/cash-system-email-20261107/native-preview.json. Every prior registry byte and peer owner retained.

07/11/2026 21:34:07 Europe/Athens - CASH-UNIFIED-AUDIT-15 / SOURCE CANDIDATE / AWAITING LAB

Same owner codex/cash-chat-reconciliation-20261026 with /root coordination; no transfer. Claim PR #3707 merged as 7b40395f1313dd5cc1d3789878930e1eca56602b after exact docs CI 42406315142. Implementation branch fix/cash-system-email-20261107.

Candidate: native email reads the full existing no-charge report; the complete canonical envelope is checked before a private email-only basic-readiness projection. Delivered findings, canonical fingerprint/generation and arithmetic/provisional/auth/recipient guards remain authoritative. One conditional system-generated follow-up instruction supports owner/manager review; blank sender comment supported. Scheduled/public schemas and duplicate formatting stay unchanged.

Node 20.20.2 focused checks: 44 PASS / 0 FAIL / 0 SKIP; injected fake mail transport only. Final independent review found no blocking issue in the five approved source/test paths. This is local source evidence only; exact source CI/release and new hosted acceptance remain pending. AWAITING LAB, no new functional/manual PASS. Preserve 03/11 source evidence, 04/11 basic/full saved-reading scoped PASS and

07/11 limited no-charge LIVE UI PASS.

No paid OCR, ledger/review/offset writes, schedules, recipient/settings changes or production email attempt. Prior outbound approval rejection remains; separate approval of exact recipients is still required. Delivery NOT TESTED / NOT SENT. Parent financial/source residuals and all peer ownership stay OPEN. Next: exact source CI/review and authorized release, then scoped native full-report/email-preview LAB parity. Checkpoint: CHECKPOINTS/CHANGES/2026-11-07-cash-system-generated-email.md. Complete base registry suffixes retained.

07/11/2026 21:19 Europe/Athens - CASH-UNIFIED-AUDIT-15 / SYSTEM-GENERATED EMAIL / BEFORE SOURCE

ASSIGNED - retained owner codex/cash-chat-reconciliation-20261026, coordinated by /root; no transfer or competing claim. Claim branch docs/cash-system-email-claim-20261107; implementation branch fix/cash-system-email-20261107. OPEN / AWAITING IMPLEMENTATION AND LAB.

The owner requires the system to generate the full cash report and send it through its native email flow; the owner or manager then reviews its findings and pending items. Current native email uses an ordinary source read, while the no-charge full check enables fullAudit. Duplicate-sale, stored-paper and full-audit pending evidence therefore does not all reach the existing email preview. This is a bounded connection gap, not a new financial-finality requirement.

Scope: connect native email preview/send to the existing full read-only report, validate the complete canonical envelope, and retain the email-only readiness projection without changing scheduled/public schemas. Preserve preview fingerprints/generation, arithmetic/provisional/auth/recipient guards and original amounts. Add only short system-owned pending/follow-up wording; no assistant-authored report/comment or richer duplicate formatter.

Protected: existing 03/11 source evidence, 04/11 basic/full saved-reading scoped PASS and 07/11 limited no-charge LIVE UI PASS. No new functional PASS, manual entry, source fix or delivery is claimed. No paid OCR, ledger/review/offset writes, schedules, new recipients or production email attempt. Earlier outbound approval rejection remains effective; this claim/code correction grants no send approval. Any later delivery needs separate approval for its exact recipients.

Next: publish this documentation-only claim on main after applicable CI, then implement the bounded correction and verify synthetic parity/freshness guards, exact CI and separately authorized LAB. All full-email delivery and new behavior remain NOT TESTED / NOT SENT. Parent and existing residual financial/source work remain OPEN. Checkpoint: CHECKPOINTS/CHANGES/2026-11-07-cash-system-generated-email.md. All prior registry bytes and peer ownership retained.

07/11/2026 — CASH-ADJACENT-COUNT-21 / LIMITED NATIVE LIVE UI PASS; OPEN/ASSIGNED

Retained cash owner. Source PR#3683 and release receipt#3699 are merged. On runtime5606b18cc591cb6682dbe54f3aa0fb7e01c0cf91, one owner-directed live-store no-charge automatic UI invocation was recorded on 07/11 at 16:34:50 Europe/Athens; completed result was observed by 16:36:08: HOLD,3checked/pending shifts,3ambiguous candidates and0numeric proposals. Before/after compared visible rows and pending replies matched; review history0→0. This supersedes historical draft#3657/skipped-CI/authentication-block delivery notes only for this flow. It is not financial agreement. Database, provider telemetry and reportHash NOT MEASURED; broader hosted coverage and financial/evidence reconciliation remain OPEN under the same owner, including parent CASH-UNIFIED-AUDIT-15. Do not replay the completed read merely for recording. Checkpoint CHECKPOINTS/CHANGES/2026-11-06-cash-automatic-review.md; manual docs/manual/cash-control/PASS.md; sanitized live-ui-acceptance-20261107.json.

07/11/2026 08:31 Europe/Athens — OCR4-LOCAL-PDF-3697 / ASSIGNED / BEFORE SOURCE

Owner: κεντρικός συντονιστής /root (έγκριση ιδιοκτήτη στη συνομιλία). Μία ανάθεση για το υπάρχον GitHub issue #3697. Κλάδος καταχώρισης: docs/ocr4-local-pdf-claim-20261106. Προβλεπόμενος κλάδος κώδικα μετά τη συγχώνευση της ανάθεσης: fix/ocr4-local-pdf-3697.

Εύρος: μόνο «Τοπική ανάγνωση» PDF. Διαδοχική αναγνώριση όλων των φυσικών σελίδων, συγκέντρωση κειμένου και γραμμών με τη σειρά, σαφές σφάλμα σελίδας και αποδέσμευση πόρων. Έλεγχος του ενεργού AiReaderPanel και των δύο legacy helpers του issue. Διατήρηση αρχικού PDF και ροής εικόνας. Το FAST #3673 και οι λειτουργίες πληρωμών, αποθεμάτων, οριστικοποίησης και φορολογίας είναι εκτός εύρους.

Κατάσταση: OPEN. Υπάρχει ξεχωριστό προσχέδιο patch. Πέντε απομονωμένες δοκιμές με προσομοιώσεις πέρασαν. Έλεγχος σειράς με συνθετικά PDF και Poppler/Tesseract CLI, με λάθη χαρακτήρων. Εκκρεμούν browser/PDF.js/Tesseract.js και LAB. Αλλαγές κώδικα στο repository μετά τη δημοσίευση της ανάθεσης στο main. Checkpoint: CHECKPOINTS/CHANGES/2026-11-07-ocr4-local-pdf-3697-claim.md.

07/11/2026 — INVENTORY-SCAN-WORKFLOW-01 / #3690 filter USER PASS (LIMITED). Owner /root; existing MYWORKSTATION LAB Owner/SA draft 109 all rows / one counted 3.25 row; owner confirmed filter on 06/11 at 11:08 Europe/Athens. Existing count unchanged. Only filter closed; physical scanner, staff-specific admission and new-product card/attach remain OPEN (#3701/#3702). See CHECKPOINTS/CHANGES/2026-11-05-inventory-scan-workflow.md and docs/manual/inventory/PASS.md. No repeat count.

06/11/2026 22:14 Europe/Athens - INVOICE-PHYSICAL-PAGE-DISPLAY-01 / OCR4 / K01 HOSTED LIMITED PASS / REMAINING SCOPE OPEN

Retained task4 owner /root; documentation branch docs/ocr4-k01-hosted-20261106, existing page-display scope, no ownership transfer or runtime change. One authorized selection/read of the new synthetic LAB-OCR4-20261106-K01 in MYWORKSTATION LAB / ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ, store cmtpopbgo000trhb5ng9ytiru, after disclosure of provider use at platform cost. Ready fields were captured by 2026-11-06T20:14:56.265Z; the later 20:20:43Z record-completion time is not a latency measurement. Fixture: one PDF, 55,825 bytes, SHA256 7de9ea9e5dca6cfc0e8347aea743a9036b66948abf841e78055efc29f55bd18c.

LIMITED HOSTED PASS: actual accessibility-tree observation showed «1 αρχείο · 1 PDF» and «Αρχείο 1: 2 φυσικές σελίδες PDF». The four fields matched without edits: LAB METER TEST; LAB-OCR4-20261106-K01; 2026-11-06; 49,60 EUR, not either page subtotal 18,60 or 31,00 EUR. The ready screenshot captures the four fields and the 1% status; the page-count badge was below its viewport and is evidenced by the accessibility-tree observation, not that screenshot crop. One successful UI file selection; no replay, field correction, invoice submission, payment action or setting change. ΠΛΗΡΩΜΕΝΟ and ΜΕ ΠΙΣΤΩΣΗ were not selected; submit remained disabled.

Fresh company-wallet observations before/after agreed: customer balance 4.610532 EUR, reserved 0 EUR, customer/invoice billing OFF; historical AI amount 0.409468 EUR, 10 calls and 14 movements unchanged. Those wallet counters do not measure platform-funded provider usage. Actual provider-call count and cost were NOT CAPTURED; one UI selection may include server retry or metadata rescue. Financial/database deltas and another-terminal/control reconciliation are NOT TESTED. The shift overview GET may reconcile pre-existing online sales; no global zero-database-write claim is made.

The displayed «1 αρχείο έτοιμο (1%). Έλεγξε τα 4 στοιχεία και συνέχισε.» is reader-confidence formatting, not document coverage or progress. Raw confidence and its scale were not captured; confidence interpretation remains OPEN, with no invented 99%/100% value. Full product-line/quantity/package/discount/VAT/EFK extraction, invoice/payment/stock behavior and general OCR/latency acceptance remain outside this observation and NOT TESTED here. Existing No09/No15 status and all other assignments are unchanged. The exact live revision during K01 was NOT CAPTURED; do not substitute a prior health revision or infer it from earlier CI/deployment evidence.

Close only the pending need to observe this K01 file/page display and its four header fields. K01 is now consumed and must not be replayed to repair records or investigate confidence; original J 37.20 remains unused and unchanged. Earlier source-stage AWAITING LAB entries below remain historical and are superseded only for this narrow observed result. Broader OCR4 work remains OPEN with the same owner. Next: complete the normal documentation CI/merge for this result; any confidence investigation uses retained evidence under a separate bounded step, without another K01 read.

Checkpoint: CHECKPOINTS/CHANGES/2026-11-06-ocr4-k01-hosted-reading.md. Evidence: CHECKPOINTS/EVIDENCE/ocr4-physical-page-display-20261105/hosted-k01-20261106.json. Manual: docs/manual/invoices/PASS.md. Preserve every prior registry byte and all peer results/claims; this entry records hosted observation, not a new source fix or a full OCR/financial/control PASS.

06/11/2026 — CENTRAL-AGENT-IO-01 / ASSIGNED / DOCS CANDIDATE / NOT TESTED

Owner: κεντρικός συντονιστής /root. Branch: docs/central-bounded-agent-io-20261106. Ρητή εντολή ιδιοκτήτη «Ξεκίνα» για κεντρική δοκιμή περιορισμού εξόδου σε όλες τις σελίδες. Ανεξάρτητο scope: μόνο κοινές οδηγίες ανάγνωσης/μεταφοράς, χωρίς ανάληψη εργασιών άλλων owners ή αλλαγή εφαρμογής.

Base main: 0eab200446e5284bb7312a612d923feb7116be5c. Τοπική ανάκτηση πλήρων μητρώων: tracker 4.119.924 bytes, pending 3.646.706 bytes, ενεργή λίστα 5.295.710 bytes. Η συνδεδεμένη ανάγνωση επέστρεψε κενό content για τα μεγάλα αρχεία, ενώ το τοπικό Git έδωσε μη κενά δεδομένα. Αυτό τεκμηριώνει πρόβλημα της συγκεκριμένης διαδρομής ανάγνωσης, όχι αιτία ή λύση του ορίου συνομιλίας.

Πρόταση: τοπικό Git για μεγάλα αρχεία, προέλεγχος μεγέθους, μικρά αποσπάσματα/diff, όρια γραμμών ΚΑΙ χαρακτήρων, καμία εμφάνιση ολόκληρου blob/Base64 και ανεξάρτητος έλεγχος remote πριν από επανάληψη ενέργειας. Διατηρείται αυτούσιο όλο το προηγούμενο ιστορικό, οι αναθέσεις και οι κανόνες PASS/CI/LAB. Checkpoint: CHECKPOINTS/CHANGES/2026-11-06-central-bounded-agent-io.md.

Status: NOT TESTED ως κεντρική παράκαμψη σε νέα πλήρη εργασία. Δεν είναι platform fix ή LAB PASS. Next: review/CI και ενσωμάτωση του ακριβούς docs-only PR, έπειτα μία οριοθετημένη εργασία με καταγεγραμμένα μεγέθη εξόδου. Καμία αναγέννηση PDF ή PASS closure σε αυτή την αλλαγή· όλα τα υπάρχοντα artifacts διατηρούνται.

05/11/2026 21:43 Europe/Athens - INVENTORY-SCAN-WORKFLOW-01 / ENTER PR #3689 / LIMITED OWNER UI LAB PASS / WHOLE SCOPE OPEN

Retained owner: /root. Original claim: #3684. Enter branch: fix/inventory-quantity-enter-20261105. The approved PR head 962bf8113654da77051db1e2ac783fa223daeacd merged as 0cd52a6c49c7da92b41756efec911e846b7e5aa4, with the reviewed tree unchanged. Full PR CI 42090428560 and exact main CI 42093525223 each completed all five jobs successfully: 5,913 server tests + 8 backup tests passed, with zero failures or skips. Normal guard 42095172878 / job 127483286831 triggered the pinned deployment at 19:34:56 UTC and confirmed the exact healthy revision at 19:36:59 UTC. Independent public health at 19:37:13 UTC returned HTTP 200, ok=true and the exact merged revision. Rollback artifact 13445879862 preserves previous healthy revision 759311ed. The freshly loaded LAB client main-JEXcvf8-.js matched the served HTML. These are release checks, separate from the measured observation below.

At 19:41:57.696 UTC (21:41:57 Europe/Athens), the authenticated Owner/Super Admin pressed browser-keyboard Enter once for quantity 3.25 in the normal MYWORKSTATION LAB UI. The selected item was LAB EXCEL TEST 2, SKU LAB-EXCEL-20260909-02 / barcode 2900000000018, in existing draft LAB31-THEORY-20261103-01 / ID 8925a034-cd4f-4e05-a14b-d4d96881a1bf. Its blank count became 3.25, with difference +5.25 against snapshot -2; the draft stayed DRAFT. Both entry fields cleared, quantity became disabled and focus returned to the empty barcode input. Fresh before/after Full Audit exports contain 109 rows: 1 changed and 108 identical. There is exactly one new COUNT by the authenticated Owner/SA. SCANNER is the existing API source classification; the action used a browser keyboard.

Fresh stock-report and movement-drilldown reads retained current stock -2 and the same one SALE -1 / POS_SALE movement, dated 01 Oct at 12:51:17 Europe/Athens, within the selected 01 Sep-05 Nov range. MAIN opening/current cash remained 40 EUR with one movement/transaction; all other measured money totals remained zero. The historical closed MAIN / LAB POS 2 control and offline counters (pending 2, failed 0, synced 2, replay 0) were unchanged. There was no second live terminal to compare. Exactly one ordinary UI draft-count write occurred; no direct database/API operation outside the normal UI, finalization, stock posting, shift or financial action occurred. The synthetic count remains as evidence.

This supersedes AWAITING LAB only for the Owner/SA shared-component Enter keyboard path. Personal/delegated lab31 and physical scanner acceptance remain NOT TESTED. This single initially uncounted row does not newly certify repeated additive counting, pencil replacement, ArrowDown, retries or concurrency. No grants changed. The whole INVENTORY-SCAN-WORKFLOW-01 scope remains OPEN/ASSIGNED. Filter #3690, unknown barcode #3691 and dependent product attachment #3692 remain OPEN. CENTRAL-BACKOFFICE-ACCESS-01, INVENTORY-RECONCILIATION-01 and every peer owner/PASS retain their scopes. The archive movement-menu preflight error remains a separate observation.

Evidence: CHECKPOINTS/CHANGES/2026-11-05-inventory-scan-workflow.md; measured receipt and screenshot in CHECKPOINTS/EVIDENCE/inventory-enter-20261105/; verified usage in docs/manual/inventory/PASS.md. Next: review existing filter PR #3690 and its exact current CI under the same owner before any further source change or LAB action. Do not repeat the accepted count.

05/11/2026 - OCR4 / VERIFIED TEST COMPATIBILITY / CURRENT-MAIN RECORDS PRESERVED

Retained task4 owner /root, PR3673. Recovered the exact137/137-tested compatibility files from artifact13408722602 after its publication-only PDF text check stopped on a normal title line break. Normalized text verifies the unchanged PDF title; no application or test assertion was relaxed. The initial new helper tests were corrected to resolve the client package, not the separate server PDF.js package. Original15-test reproduction remains12PASS/3FAIL; corrected combined137PASS/0FAIL/0SKIP and normal client build are verified, not full CI or hosted PASS.

Merged concurrent documentation mainf1830f3470c05741d920891159362b8f01a6a938 into this source branch only. Preserve all peer R01-R05 results, Azure-timing claim, manual/numbered records and the entire current-main registries as exact suffixes after unchanged task4 prefixes. All tested runtime/test bytes remain unchanged. Require exact new-head full CI and independent review; no merge to main, deployment, OCR/provider request, invoice/payment/draft/stock/fiscal operation or old-fixture replay. Broad OCR completeness stays OPEN.

05/11/2026 - INVOICE-PHYSICAL-PAGE-DISPLAY-01 / TEST BUNDLER COMPATIBILITY / AWAITING FULL CI

Retained task4 owner /root; source PR3673, branch fix/ocr4-physical-page-display-20261105. Exact full CI42009262448 on d604619 failed3 of5835 server tests (5832PASS,0SKIP). Independently downloaded original job127183902392 log SHA256738ac499dee72b45b64ba1bcd7b0b722237553b3c765e8e2722b0511552d3a32 identifies the SAME build-time error in pos-decimal-keyboard, pos-direct-credit-payment and pos-internal-return-ui: plain esbuild interpreted the Vite PDF worker ?url import as worker JavaScript with no default export. This is not a failed monetary assertion. Raw-log artifact13407993190 is retained; no diagnosis inferred from truncated logs.

Bounded compatibility change: a test-only esbuild plugin resolves exactly the real local PDF worker ?url asset to its URL, without executing worker code or substituting the parser. Three existing fixture builders use it. Every original test body/assertion remains byte-exact after reversing only the import/plugin-option additions. Added negative control reproduces the unadapted compiler failure; positive tests verify real URL resolution and actual production loader compilation. No application runtime file, dependency, CI policy, payment/credit/stock/fiscal writer or acceptance threshold changed.

Complete-checkout Node20 targeted reproduction: before12PASS/3FAIL; combined after137PASS/0FAIL/0SKIP. Existing actual Chromium/PDF.js16 cases and normal client build passed again; all1330 tracked client/server-runtime files remain equal to d604619. Provider/DB/business I/O in mounted-form tests is simulated, not hosted acceptance. Recorded 2026-11-05T12:59:21+02:00. Earlier119 focused tests and independent d604 review remain historical; exact NEW-head full PR/main CI and review are required before normal guarded release. Source remains DRAFT/AWAITING LAB. No new OCR or old-fixture replay; I/H/G and peer R01-R05 remain protected, J37.20 unused. Broad supplier/rows/packages/discount/VAT/EFK completeness remains OPEN.

Checkpoint CHECKPOINTS/CHANGES/2026-11-05-ocr4-physical-page-display.md; evidence bundler-compatibility-results.json in the existing evidence directory. Next: exact new-head full CI/review, reconcile concurrent main without losing peer records, ordinary guarded release, then separately observed hosted display acceptance. All prior registry bytes are retained as exact suffixes; no new manual or numbered PASS.

05/11/2026 - INVOICE-PHYSICAL-PAGE-DISPLAY-01 / SOURCE CANDIDATE / AWAITING FULL CI AND LAB

Retained invoice/task4 owner /root; fix/ocr4-physical-page-display-20261105. Before-source claim3670 merged at7851efe9889621553790fe920316c6b0a5bdbfcd after normal exact documentation CI42005942223. No overlap with task2 latency or task3 preparation/navigation.

Existing FAST form now distinguishes selected files/images from physical PDF page metadata. The installed client PDF.js reads copied retained-original bytes without rendering or provider calls. Unknown, malformed, encrypted, oversized, timed-out or cancelled counts never silently become one page. Request/source/store lifetime fencing rejects late counts and destroys parser tasks. Counting is asynchronous and not awaited by FAST; original source order/bytes, four header fields, five-file bound, backend limits, amount-return guard, billing, roles/modules/tenant and every payment/credit/draft/stock/fiscal writer remain unchanged. File-based status/removal wording is accurate. Two existing tests now target the exact new file labels for Premium only; original five-file/order/payment assertions and other form expectations remain intact. A page count is not complete OCR or row coverage.

Complete-checkout Node20 focused baseline: 72/72 PASS; combined 119/119 PASS, zeroFAIL/SKIP/CANCELLED. Includes actual React summary lifecycle and FAST form with mocked header I/O, plus actual client PDF.js worker/Chromium16 synthetic cases (1/2/5/6-page, invalid, encrypted, image and mixed at desktop/narrow widths). Normal production client build succeeded. This is not full native security/PostgreSQL/HTTP CI, independent review, live OCR or hosted LAB acceptance. Screenshots require separate visual inspection. Existing I/H/G originals were not replayed; J remains unused.

Preserve all previous registry bytes; regenerate canonical tracker PDF copies. Accepted invoice manuals and numbered acceptance remain unchanged. Checkpoint CHECKPOINTS/CHANGES/2026-11-05-ocr4-physical-page-display.md; evidence CHECKPOINTS/EVIDENCE/ocr4-physical-page-display-20261105/source-results.json. Source PR must remain DRAFT until independent review and exact full CI; then main CI/ordinary guarded release and fresh separately scoped display acceptance. General suppliers/rows/packages/discounts/VAT/EFK remains OPEN. No production configuration/deployment or business mutation occurred.

05/11/2026 19:27 Europe/Athens - INVOICE-HEADER-LATENCY / VERIFIED MULTIPAGE PDF PRIORITY / INSTALLED, THREE SYNTHETIC HEADERS PASS; GENERAL SPEED OPEN

Task2 owner /root retained. Before-source claim3685/mainfc8d80106 green before implementation; source3686 finalhead1ea2df989eb04e054b44a8c141937fdefb99e4ef normal merge2b13a8419c3ec82fb14c67902b6bb06bfef8752b. Exact source CI42067246727 and mainCI42069768057 SUCCESS, each5861native+8backup PASS,0FAIL0SKIP, actual frontend/browser/PostgreSQL/HTTP green. First obsolete-head CI42065566043 was not accepted: mounted scanner fixture stub omitted new helper export; fixed to use real helper and assert unchanged original JPEG/store/no priority flag. Separate Chrome startup timeout preceded app. Final source/main each pass first attempt; no guard/time-budget/test-threshold bypass or independent human approval claim. Guarded deploy42072372148 SUCCESS, Renderdep-dbmbic3m8hqs73f9c5vg LIVE and direct health ok/exact2b13a8419. Rollbackartifact13437102745 retains previous healthyc09981151631b5c35bb92649c667eed3dfccae40. Existing hosted OpenAI connection reused; no key/configuration change.

Actual authorized SuperAdmin/Owner Cloud Chrome at canonical /platform-admin -> MYWORKSTATION LAB -> ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ -> full Backoffice/payment form, one read each NEW original2page PDF-H01/H02/H03. All3 exact LAB METER TEST, unique LAB-PDF-HEADER-PRIORITY-20261105-H01/H02/H03,2026-11-05 and24.80/49.60/74.40EUR; H02 ignores separate10EURreceipt, H03 ignores120/45.60account balances and auto-detects CREDIT_NOTE. No manual type/PAID/CREDIT/settlement choice, submission, payment/draft/stock/fiscal write. Fresh BEFORE/control committed29c4624d3da3b28cf60ad683b70cdca38a47fcd4 /0097d4ebc7cc3ffb67c3423bfa150085f0e9e780 /13c1ddd69ace3b7dad8d20755a7986e0a6e4a19c precedes each once-only read. Fresh AFTER matches all ten complete digests/counts, shifts and wallet in LAB/N40. MAIN opened by LAB POS2 remains1transaction,cash40EUR,cards/IRIS/total0; this shift opener is not acting operator. Wallet/invoice charging OFF,balance4610532micros,reserved0 unchanged. No claim of zero upstream provider cost or captured response model/usage.

Server3464.580/2100.953/2795.611ms (median2795.611,range2100.953-3464.580); OpenAI3101.277/2069.295/2778.292ms. Server physical-page probe346.074/8.105/7.883ms. Three unique complete allowlisted UUID timing chains, one successful OpenAI attempt each, NO Azure stages. UI observation3720/2355/2980ms includes upload/automation, not a pure server SLA; confirmed ready screenshots retained. Historical minimal median10326.470ms is different documents/layouts/times, no controlled percentage or population guarantee. New opt-in is only server-proven2-5page PDFs; legacy/image/single-page/unknown clients preserve Azure-first. Existing whole-PDF bytes/prompt/schema/model/minimal, deadlines/retries, access/wallet/amount/credit/durable/business boundaries preserved. Optional initial FAST rows are deferred only in this opt-in to unchanged durable background path; no full-row or later-provider-cost acceptance. Source probe does not change peer physical-page display/worker; UI still shows1file as1page(1%).

Evidence CHECKPOINTS/EVIDENCE/invoice-pdf-header-priority-20261105: hashed originals/consumed manifest, three committed BEFORE + fresh AFTER/logs/results/real screenshots, SQL, actual local tests/build, release and summary. Local422/422 regressions/build/syntax PASS; mounted scanner2PASS/1localChromeSKIP and other callers84PASS/5localPGSKIP explicitly superseded by full zero-skip CI. Manual docs/manual/invoices/PASS.md and numbered item15 synchronized, both tracker PDFs and numbered PDF regenerated. Scoped PASS ONLY for these synthetic headers and measured invariants. General speed/No15, supplier/row accuracy, representative-layout repetition, physical POS and stable latency remain OPEN; task3/task4/scanner/RBS owners and complete historical registry bytes protected. All prior consumed samples plus PDF-H01/H02/H03 are NO REPLAY. Checkpoint CHECKPOINTS/CHANGES/2026-11-05-invoice-pdf-header-priority.md. Single next for retained /root: separately claim new representative-layout cold/warm header latency acceptance with same tenant/wallet/full-document-money guards; no unbounded provider reads or old sample replay.

05/11/2026 18:30 Europe/Athens - INVOICE-HEADER-LATENCY / VERIFIED MULTIPAGE PDF PRIORITY / LOCAL PASS, FULL CI AND LAB PENDING

Task2 owner /root retained. Before-source claim #3685 merged fc8d80106f27e37e854247c92c9e0af0dee50fc6; PR42061903324/main42062131042 SUCCESS before implementation. Existing hosted OpenAI connection reused; no credential/configuration change. Implemented only strict PDF store-form opt-in, server-proven2-5page priority, original whole-PDF OpenAI first, complete four-field return without Azure, one later metadata rescue only with positive full-PDF amount, no second OpenAI call, no Azure money for proven multipage. Unknown/single-page/nonboolean/missing-key/images/other clients remain legacy Azure-first; exact durable cache remains before probe. Wallet errors stop; no provider parallelism or budget/retry changes. Optional FAST rows deferred for this opt-in to unchanged durable background path; no row completeness claim. Peer OCR physical-page display/worker and task3/scanner/RBS ownership/source unchanged.

Node20.20.2 baseline378PASS; final11suites422/422PASS,0FAIL0SKIP; actual frontend build and route syntax PASS. Tests cover actual original PDF transport/server parser, flag/count/key/MIME boundaries, request isolation, exact cache, no Azure on complete priority header, missing/nonfinite totals, metadata rescue and forbidden subtotal override, credit type, access denial, wallet stop and preserved deadlines/retry/legacy fallback. Static guards updated for stronger eligibility/control flow; initial obsolete assertions and fake-worker version collision resolved without production parser or budget changes. Evidence CHECKPOINTS/EVIDENCE/invoice-pdf-header-priority-20261105/tests.json plus actual TAP/build logs. Three clearly synthetic2page PDFs PDF-H01/H02/H03 prepared and visually checked, hashes/expected values in samples.json; NOT UPLOADED/NOT CONSUMED. H02 separate receipt10 versus invoice49.6; H03 CREDIT_NOTE74.4 versus account120/45.6, no settlement choice or submission.

Source not yet installed; no live speed claim. Parent speed/No15, supplier/rows/physical POS and stable latency OPEN. Full existing source PR/main CI and normal guarded exact healthy release precede fresh committed BEFORE/control/one read/AFTER for each new sample. No old consumed samples replay; no payment/draft/stock/fiscal action. Checkpoint CHECKPOINTS/CHANGES/2026-11-05-invoice-pdf-header-priority.md. Single next: publish exact tested source for full CI, then guarded release and bounded three-header LAB acceptance.

05/11/2026 18:05 Europe/Athens - INVOICE-HEADER-LATENCY / VERIFIED MULTIPAGE PDF HEADER PRIORITY / ASSIGNED BEFORE SOURCE

Retained task2 owner /root; docs/invoice-pdf-header-priority-claim-20261105, source feat/invoice-pdf-header-priority-20261105. Existing hosted OpenAI connection remains explicitly authorized; no new key or credentials access. Read current AGENTS, complete recovered registries/manual/checkpoints and main history. Base65ea6e1d4 includes peer RBS profile source and inventory-scanner claim/recovery; all their complete records, owners and source remain protected. Invoice runtime since accepted minimal samples is unchanged. Latest accepted MIN-P01/P02/P03:3/3 exact four fields and unchanged ten-table/wallet/shift/N40control; server9.774-21.863s, OpenAI median2.984s. P01 Azure_TIMEOUT18868.872ms delayed a successful full-PDF OpenAI result. Source3680/mainc255548 and closure3681/main152589093 with green CI retained. Parent speed/No15 OPEN.

Bounded causal candidate: new explicit boolean pdfHeaderPriority in the existing store FAST payment-form PDF request, built by a small pure request-body helper preserving original bytes/name/mime/store. Server activates priority only after unchanged access/module/store/wallet-scope/exact-durable-cache checks, configured OpenAI and the existing server invoiceAssistantPageCount safely proves2-5physical pages. Do not trust client counts. Probe failure/unknown/single-page, absent/false/nonboolean flag, images, missing OpenAI configuration and other clients keep the legacy Azure-first behavior. This does not change the peer physical-page display/counting/worker work; no frontend PDF parser, rendering, source preparation, page-order or count-label edit.

For a verified multipage priority request: read the ORIGINAL WHOLE PDF with the existing OpenAI prompt, strict schema, configured exact-model/minimal setting and70s/two-attempt helper FIRST. A complete valid supplier/name-or-tax, digit-bearing number, ISO date and positive finite whole-document amount can return its four-field header without the Azure wait. Optional product lines are left to the unchanged existing durable background path, as on today's successful Azure-timeout fallback. Explicitly this new mode does not promise initial FAST row-cache coverage. Legacy clients/images/single-page shortcuts and their optional reconciled-row cache stay intact. If full-PDF amount is invalid or provider fails, fail closed; a wallet error always stops without another provider. If a positive full-document amount is available but other header fields need rescue, invoke Azure once after OpenAI for missing metadata; never reuse Azure money for a physically proven multipage document and never issue a second OpenAI call. No provider parallelism.

Keep both provider deadlines, retries and polling unchanged; use normal existing billing for whichever providers are actually invoked, no artificial cost claim or billing bypass. Preserve tenant/license/role/access, all monetary/credit/supplier rules, original bytes, durable identities, one-job handoff/retry and payment/stock/fiscal writers. Only a fixed sanitized pdf_header_page_probe stage may be added to existing timing allowlist; no file/content/amount/URL/IDs logged. Scope limited to FAST route control flow, its timing stage, pure client payload helper and one request callsite, plus meaningful actual-handler/transport/UI-payload/legacy/PDF/wallet/handoff tests. Peer task3 and task4 ownership retained.

Require normal green claim publication before source; then Node20 baseline and focused regressions for explicit flag/MIME/key/page-count boundaries, exact PDF transport, one successful OpenAI call/no Azure, missing/nonfinite totals fail-closed, metadata rescue without duplicate call or subtotal override, credit type, durable shortcut, foreign-store/role denial, wallet fail-stop, unchanged legacy paths and empty-fast-row background contract. Full exact source PR/main CI/review and ordinary guarded exact healthy release precede LAB.

Only then3NEW synthetic PDFs PDF-H01/H02/H03, one read each with committed fresh BEFORE/AFTER/control, four exact fields and correlated timings; include separate receipt/account balances and one clearly marked synthetic credit-header case without settlement. No type/payment/CREDIT choice or submit/draft/stock/fiscal action. Stop on any required-field or measured-state failure. All F/D/G/H/I/R01-R05/T01/MIN-P01/P02/P03 and paid/CREDIT originals plus peer J remain consumed/protected. General supplier/rows/physical POS and stable latency remain OPEN. Checkpoint CHECKPOINTS/CHANGES/2026-11-05-invoice-pdf-header-priority.md. Source NOT CHANGED; new samples NOT CREATED/NOT CONSUMED. Single next: normal docs claim publication, then bounded implementation.

05/11/2026 — INVENTORY-SCAN-WORKFLOW-01 / ASSIGNED BEFORE SOURCE

Owner /root, branch fix/inventory-scan-workflow-20261105, explicit owner requests in this conversation. Bounded personal inventory UI: quantity Enter/next row, preserve counted-only filter across detail reload, missing barcode notice and existing full product card with products.create and inventory.count checked. Existing central BackOffice and reconciliation owners retain every other scope. USER FAIL screenshots at Rizareio; no new LAB action. Required mounted UI/security/native regressions, full CI, exact guarded release and LAB acceptance; no real stock/count/finalize/payment action for diagnostics. Checkpoint CHECKPOINTS/CHANGES/2026-11-05-inventory-scan-workflow.md.

Registry recovery: source c099811 replaced these shared registries with only the Acharnon source note. Restore the complete pre-change 1525890 records and retain the Acharnon source note below. This is document recovery only; fiscal source and every prior owner/PASS are unchanged.

05/11/2026 — ACHARNON-RBS-FISCAL-PROFILE-01 / SOURCE PR #3682 / CI PENDING

Source owner: isolated Acharnon RBS profile follow-up to merged before-source claim PR #3678. Branch fix/acharnon-rbs-fiscal-profile-20261105. Exact selected store cmw0pwyvo000uokg2jrjm1p0c; owner identity is not hardcoded or inferred: the authenticated req.user.companyId must equal the tenant-owned, server-loaded store.companyId. Client checkout company/store fields never choose the profile.

Code adds ONLY Acharnon internal legacyVatCode → department/VAT profiles: 1/1/0, 2/2/0, 3/3/0, 4/4/6, 5/5/13, 6/6/24, 7/7/24, 8/8/0, 9/9/0, 17/17/24, 18/18/24. KAT10 and Diadoxou7 profiles are unchanged. The existing CAP Driver checkout builds the command after resolving the confirmed mapping; payments CASH1/CARD2 from existing installation settings remain unchanged, as do Windows-1253, mismatch block, one-shot/no-replay, shift, license, financial and stock posting. No schema, catalogue, pricing, production SQL, credentials or writer/device operation.

Tests added in server/test/rbs-capdriver-acharnon-profile.test.js: all eleven pairings, wrong/missing authenticated owner-store identity, foreign store profile cross-over, invalid VAT/code/department, and actual checkout command statement for NERO 500ML 0.50EUR department5 VAT13 with one CASH1 or CARD2 final CR; body-provided foreign identity cannot select profile. Source PR #3682 initially failed CI checkpoint policy because this log was missing; remediation recorded here. FULL PR CI / main CI / deployed exact revision / physical receipt / financial, payment, stock and audit deltas all OPEN until verified; no claim of successful sale. No repeat of older attempted or paid transactions.

05/11/2026 16:10 Europe/Athens - INVOICE-HEADER-LATENCY / FAST MINIMAL 3-SAMPLE SCOPED LAB PASS / GENERAL SPEED OPEN

Retained task2 owner /root; docs/invoice-fast-minimal-lab-20261105. Existing hosted OpenAI connection explicitly authorized, no key or configuration change. Source PR3680 exact afc318b024080504c056ba646fc8d55b829db7ae passed full CI42035492775 attempt2: initial wholesale Chrome Target.createTarget startup timeout, one unchanged retry PASS. Both source and normal main c255548a17cfa4d21c024a76bfae6148d76bb3cd full CI42037512760 passed native5813/5813,0FAIL/0SKIP plus frontend/Chromium/PostgreSQL/HTTP. Coordinating review complete; no independent formal GitHub review claimed. Guarded release42039640153 SUCCESS, Render dep-dbm8kdijnfac738oebu0 LIVE, direct health exact c255548 before and after the batch. Rollback artifact13419808219 preserves previous healthy fca291dcc. Normal main69c9a14f3 only adds the peer Acharnon fiscal-profile claim; its complete registry entries and assignment are preserved. No fiscal work performed here.

ONE new selection each MIN-P01/P02/P03, two physical PDF pages each, after committed fresh BEFORE adca90e43745bb2c3881ac3401689a5efeda7928 / db21f364bbba3c43ea9fdc9b164a0eb58889ec30 / 6fa07a22f798984bf0a56e35146a257414b5fe40. All3/3 returned exact LAB METER TEST, respective LAB-FAST-MINIMAL-20261105-P01/P02/P03,2026-11-05 and24.80/49.60/74.40EUR without correction. P02 ignored separate10EURpayment receipt; P03 ignored previous120/new194.40EURaccount balances. P01 also succeeded through existing full-PDF fallback after Azure timeout. No type/PAID/CREDIT selection, submit, payment, draft, stock/fiscal action or physical POS acceptance.

Server P01/P02/P03:21863.067/9773.883/10326.470ms, median10326.470ms, range9.774-21.863s. Azure18868.872ms ERROR(AZURE_TIMEOUT),6688.361ms OK,8066.456ms OK;14/5/6 ordered paired polls. OpenAI2983.772/3067.921/2241.032ms, one successful attempt each, median2983.772ms. UI22052/10036/10582ms continuous file-selection-to-observed-ready intervals include upload/automation; server spans are the comparison source. First P01 screenshot frame was stale/busy; confirmed screenshots show actual ready fields without replay. Existing file-count label1page does not prove coverage of2physical pages; peer OCR4 display scope unchanged.

Historical R01-R05 low-effort OpenAI median4161.048ms versus new3sample minimal median2983.772ms: observed28.29% lower. This is different IDs/layouts/times and sample counts, NOT paired causal proof, stable speed/SLA, population tail improvement or broad supplier accuracy. Overall delay still varies and P01

Azure timeout makes the21.863s tail worse than the old18.343s maximum. General latency remains OPEN. Runtime configuration observed gpt-5 with FAST inheriting invoice model; actual returned model/usage/cost was not captured. No zero provider cost is inferred from disabled customer billing.

Each sample had fresh complete ten-table count/digest BEFORE/AFTER, active shifts and wallet in LAB and N40control; all unchanged. LAB counts135transactions/44shifts/110stock/95movements/74documents/62orders/634lines/82jobs/84attachments/66inbox; N40 allzero. Wallet enabled=false/invoiceEnabled=false, balance4610532micros/reserved0 unchanged. UI refresh before/after each selection: MAIN openedByLAB POS2,1transaction,cash40EUR,cards/IRIS/total0. Acting authorized SuperAdmin/CloudChrome, no physical terminal or payment method. Only readonly data queries and local form closure, no stored invoice deletion/replay.

SCOPED LAB PASS: minimal-effort FAST header for these3synthetic layouts, protected amount cases and unchanged measured state. Production source differs from protected base by ONE low-to-minimal field value for exact gpt-5/gpt-5-2025-08-07 only; original bytes/prompt/schema/provider order, Azure20s/polls and OpenAI70s/two attempts, wallet fail-stop, amount guards, optional rows and background handoff are byte-identical otherwise. No generic quality/row/physical-POS PASS. MIN-P01/P02/P03 now CONSUMED_ONCE_NO_REPLAY; all F/D/G/H/I/R01-R05/T01, paid/CREDIT originals and peer J remain protected. Parent task2/No15 OPEN; this top status closes only minimal experiment/three-sample acceptance and supersedes its same-scope older AWAITING LAB entries. Checkpoint/manual/three whole registries/item15 and tracker/numbered PDFs synchronized. Evidence root CHECKPOINTS/EVIDENCE/invoice-fast-minimal-20261105: fixtures/hash manifest, per-sample BEFORE/result/AFTER/logs, snapshot.sql, actual confirmed screenshots, tests.json and summary.json. Single next: separately claim diagnosis/optimization of Azure's mandatory wait and timeout bottleneck while preserving all wallet/whole-PDF/row safety; no unclaimed provider overlap or timeout change. Owner retained until a named handoff.

05/11/2026 - ACHARNON-RBS-FISCAL-PROFILE-01 / ASSIGNED BEFORE SOURCE / USER FAIL

Owner /root; source branch fix/acharnon-rbs-fiscal-profile-20261105. Independent installation subtask for existing Acharnon 309 / ACHARNON-POS-01. Existing catalogue import, Diadoxou, KAT, general fiscal gates and peer owners remain unchanged.

User evidence: selected-PC activation now displays ACHARNON-POS-01; Writer authentication/folder check and BackOffice WRITER ONLINE were observed. The later 1 x NERO 500ML / SKU13298 / EUR0.50 CASH attempt displays "Kiosk VAT code, register department and VAT rate do not match the confirmed register profile". No successful receipt or measured sale/payment/stock/Audit acceptance is claimed. Source validation rejects before request insertion; independent financial/queue delta remains NOT TESTED.

Technician message, Acharnon register DNA26017643 receipt and explicit owner clarification confirm register departments in printed order: 1 tobacco0,2 press0,3 cards0,4 goods6,5 goods13,6 goods24,7 services24,8 tickets0,9 scratch0,17 environmental fee24,18 plastic contribution24. Existing ACHARNON_CATALOG_V1 import uses those exact department numbers as INTERNAL legacyVatCode; these are not Diadoxou's42/5/13 or KAT42/2/13 codes. No inferred AADE exemption.

Bounded source AFTER this claim is green/main: add exact Acharnon store profile using existing imported internal code/department/rate triplets. Bind it to server-selected store cmw0pwyvo000uokg2jrjm1p0c and equality of authenticated companyId with the same store record's companyId; never read profile identity from checkout body. Store lookup already enforces active tenant ownership. Preserve all KAT10/Diadoxou7 profiles, payment codes, Windows1253, VAT mismatch refusal, one-shot queue, session/shift/licence gates and financial posting. No catalogue/rate/price/schema/migration/credential/production SQL change or new device command in engineering.

Required failing-before and regression tests: all11 exact triplets; wrong/missing owner-store identity, KAT/Diadoxou code/rate confusion, unknown/invalid department; actual checkout command-build statement emits department5/13 and one CASH1 or CARD2 CR while hostile body identity cannot select profile. Existing mismatch, encoding, no replay and other store profiles stay protected. Full exact PR/main CI, normal guarded healthy revision and fresh before/after/control precede a user-controlled new physical

attempt. Physical receipt, card, financial uniqueness and full go-live OPEN / NOT TESTED. No already attempted/paid transaction replay for paperwork.

Checkpoint CHECKPOINTS/CHANGES/2026-11-05-acharnon-rbs-fiscal-profile.md. Next: publish this before-source claim, then the bounded profile correction and tests. No runtime edit or fiscal operation in this claim.

05/11/2026 15:23 Europe/Athens - INVOICE-HEADER-LATENCY / FAST MINIMAL SOURCE / TARGETED281 PASS / AWAITING FULL CI AND LAB

Retained owner /root; feat/invoice-fast-minimal-20261105. Claim PR3679 main93889ed64e788c1fdbb4e1a7dd6591a59242542c, exact claim docs CI42034792534 and main42034912532 SUCCESS. Existing hosted API connection explicitly approved; no key/configuration change. Production change is ONE request-field value low to minimal, only exact gpt-5/gpt-5-2025-08-07. All original Azure-first/provider/wallet/bytes/prompt/schema/model/70s-two-attempt/20s/polling/amount/row/handoff behavior remains. No business or fiscal writer.

Actual-handler transport/model/retry coverage now requires minimal for exact targets, with additional nano/codex/whitespace non-target cases proving no new field is sent to them. Combined eight-suite Node20.20.2 baseline281PASS/0FAIL/0SKIP and after281PASS/0FAIL/0SKIP. Initial clean-worktree dependency lookup failures were environment-only; reused existing installed workspace dependencies before the successful baseline. tests.json records exact command and source/TAP hashes. No monetary threshold, guard, timeout, assertion scope or accepted PDF policy relaxed. Focused I/O is simulated; full native/source release and live acceptance NOT TESTED.

Three new two-page MIN-P01/P02/P03 fixtures and samples.json prepared/visually reviewed, NOT UPLOADED: respective totals24.80/49.60/74.40EUR, last variants include separate10EURreceipt or120/194.40EURaccount balances. Only future header read; no submission. Full exact source PR/main CI, review and ordinary guarded healthy release required before committed fresh BEFORE/AFTER/control per sample. All prior consumed F/D/G/H/I/R01-R05/T01 and peer J protected; task3/OCR4 scopes unchanged. Parent speed/No15 OPEN; no speed or general quality PASS claimed. Current accepted T01/manual remains authoritative. Single next: exact full source CI and review.

05/11/2026 15:18 Europe/Athens - INVOICE-HEADER-LATENCY / FAST GPT5 MINIMAL / RETAINED OWNER / BEFORE SOURCE

ASSIGNED retained task2 owner /root; docs/invoice-fast-minimal-claim-20261105, source feat/invoice-fast-minimal-20261105. Existing hosted OpenAI connection explicitly authorized by owner; no new key or secret access/write. Latest accepted T01 on healthy fca291dcc: four fields correct, unchanged ten-table/shift/wallet/control, server16.992s/Azure12.117/OpenAI4.794. PR3677 mainfcbf02372 centrally published with docs PR42021234212/main42021432560 SUCCESS. General speed/No15 remains OPEN. All registries, AGENTS, manual and relevant checkpoints read; only documentation since tested runtime. Peer task3 and OCR4 physical-page scope remain untouched.

One bounded candidate: in existing FAST Responses body only, change reasoning.effort low to minimal for EXACT gpt-5 and gpt-5-2025-08-07. Preserve configured model resolution and every other model unchanged (including mini/nano, later versions and aliases), original whole-PDF bytes, exact prompt/strict schema, Azure-first order and20s deadline,700/700/1200ms polling/30cap, OpenAI70s shared/two-attempt budget, wallet reserve/settle/review/fail-stop, all PDF subtotal/unknown-page guards, supplier/date/credit rules, reconciled optional rows and background handoff. No timeout lowering, provider overlap, extra call, monetary/stock/fiscal writer or UI change. Parallel-provider idea is not implemented because it would broaden the wallet/failure-order contract.

Official GPT5 model/cookbook docs explicitly support minimal effort: https://developers.openai.com/api/docs/models/gpt-5 and https://developers.openai.com/cookbook/examples/gpt-5/gpt-5_new_params_and_tools (checked05Nov).

Supported parameter is not proof of accuracy or speed. Local actual-handler/transport/model-resolution, PDF amount, Azure phases and wallet regression coverage required, then exact full PR/main CI/review and normal guarded exact healthy release. No new speed/quality PASS before live acceptance.

After publication/release only, three NEW identified synthetic2page header-only/no-submit samples MIN-P01/P02/P03 may be read once each with fresh committed BEFORE/AFTER/control and four exact fields, including distractor receipt/balance/subtotal layouts. Inspect correlated OpenAI and Azure spans separately; historical R01-R05 low-effort OpenAI median4.161048s and T01 low4.794406s are observational baselines, not paired causal proof. No provider model/usage response or population SLA inferred. If any required field fails, stop sample batch and record FAIL; retain/reinstate low through normal reviewed release before further acceptance. If no speed gain is measured, do not label speed improved.

All F/D/G/H/I/R01-R05/T01, paid/CREDIT originals and peer J remain consumed/protected. No real invoices or accepted transactions replayed. No physical POS/payment/draft/stock/fiscal action. Checkpoint CHECKPOINTS/CHANGES/2026-11-05-invoice-fast-minimal.md. Source NOT CHANGED/NOT INSTALLED; new samples NOT CREATED/NOT CONSUMED. Single next: publish this before-source claim on main with normal docs CI, then implement one parameter change and its exact transport regression.

05/11/2026 11:38 UTC - INVOICE-HEADER-LATENCY / AZURE PHASE T01 SCOPED LAB PASS / GENERAL SPEED OPEN

Retained owner /root, docs/invoice-azure-phase-lab-20261105. Source PR3676 is normal main fca291dcc4d0c81dca1ea46bf0709201652bcbfc, identical reviewed source tree5df1e1db. Exact full source CI42015942408 attempt2 SUCCESS (initial wholesale Chrome Target.createTarget startup timeout, one unchanged retry PASS), full main CI42018078967 SUCCESS, both native5813PASS/0FAIL/0SKIP plus frontend/browser/PostgreSQL/HTTP. Coordinating review complete; no formal independent GitHub review is claimed. Guarded deploy42019424642 SUCCESS; Render dep-dbm6hm942hec73dq74rg LIVE and direct health before/after exactfca291dcc. Rollback previous healthyb7c75d4 artifact13411156139 preserved. No deployment safeguard/policy bypass.

ONE new T01 two-page synthetic PDF was selected2026-11-05T11:34:52.532Z after published BEFORE commitd06f904b70326465e256c5d604cea986ac0997f3 (fresh DB11:33:18.014631Z and refreshed UI). Four fields observed correct without correction: LAB METER TEST / LAB-AZURE-PHASE-20261105-T01 /2026-11-05 /24.80EUR. Correlated server16.992443s, Azure12.117169s, OpenAI4.794406s/one attempt. Unique correlationf251e19d-79cb-45b7-8991-052be3a1cfe0, complete26events, all allowlisted finite values. Azure submit727.993ms; nine paired waits9803.829ms; nine GET+JSON requests1578.498ms; whole-span residual6.849ms. All polls ordered1-9. Scheduled wait is measured while Azure analysis progresses; it is NOT proven removable processing time. No interval/deadline/provider behavior changed and no speed fix/SLA is claimed.

AFTER2026-11-05T11:35:28.480573Z all ten LAB/control counts AND complete digests, active shifts and wallet equal BEFORE. LAB counts135transactions/44shifts/110stock/95movements/74documents/62orders/634lines/82jobs/84attachments/66inbox; N40control allzero. Wallet billing OFF, balance4610532micros/reserved0 unchanged. MAIN/LAB POS2 UI before/after1transaction,cash40EUR,cards/IRIS/total0; after readonly canonical LAB reentry around11:37UTC. No type/PAID/CREDIT selection, submit, payment, draft, stock/fiscal action or physical POS test.

Measurement limits: UI25894ms is only an upper bound, because the observation loop escaped an initial3s locator timeout and a later timestamp assignment failed; server spans are exact. After the four ready fields were captured in DOM, old tabs displayed connection-changed fail-closed notice before ready screenshot/shift refresh. Canonical PlatformAdmin explicit LAB selection restored the readonly shift AFTER, unchanged. Cause of context switch NOT DIAGNOSED here; no real-store action, invoice replay or fabricated ready screenshot. Evidence has actual connection-stop and recovered shift-after screenshots. The existing one-file page-count text does not prove two physical pages; peer OCR4 display/task3 scopes untouched.

SCOPED LAB PASS: optional phase diagnostics, same four-field synthetic header and unchanged measured state only. T01 CONSUMED_ONCE_NO_REPLAY. All F/D/G/H/I/R01-R05, paid/CREDIT originals and peer J

remain protected. Parent task2/No15, general supplier accuracy/lines/physical POS and performance remain OPEN. Diagnostics implementation/its one-sample acceptance is complete; this top status supersedes only the same subtask's older AWAITING LAB text. Manual invoices/PASS, numbered item15 and regenerated tracker/numbered PDFs synchronized. Evidence directory CHECKPOINTS/EVIDENCE/invoice-azure-phase-timing-20261105 contains T01-before/result/after/logs/manifest, snapshot.sql, original T01.pdf and screenshots. Single next: separately claim one causal speed optimization using these phase timings, preserving original PDF money safety and all accepted behavior; no unclaimed interval change or consumed replay.

05/11/2026 - INVOICE-HEADER-LATENCY / AZURE PHASE SOURCE / TARGETED281 PASS / AWAITING FULL CI AND LAB

Retained task2 owner /root; feat/invoice-azure-phase-timing-20261105. Before-source claim PR3675 is mainf1830f3470c05741d920891159362b8f01a6a938 after exact documentation CI42013750967 SUCCESS; main CI42013985981 also SUCCESS. The protected R01-R05 results and all peer claims remain intact. Parent task2/No15 stays OPEN; source is NOT INSTALLED / hosted diagnostics NOT TESTED.

Optional FAST-only observer forwarding now distinguishes azure_submit, azure_poll_wait and azure_poll_request with existing random request correlation, monotonic finite elapsed and bounded poll1-30. Existing OpenAI attempt1-2 schema stays unchanged. Shared callAzure consumers without an observer remain silent. Faulty start/getter/finish/clock/logger or rejected asynchronous observer cannot replace the provider value/error or introduce a retry. No raw provider URL/operation, key, content/amount/supplier/tenant/store/user identifiers or exception text is accepted by diagnostic payloads.

Preserved source contracts: original PDF bytes, POST/header/API version/model, operation marking and wallet fail-stop/settlement, Azure20s FAST timeout, OpenAI shared70s/two-attempt budget,700/700/1200ms waits,max30polls, request cancellation, provider order and full-PDF monetary safety. No extra fetch, polling optimization, business writer or configuration change. This is telemetry, not a speed fix.

Local Node20.20.2: original timing6 and actual-handler73 baseline passed; new three-suite104/104 and combined eight-suite281/281 PASS,0FAIL/0SKIP. The new23-case actual-transport suite covers exact bytes/headers/waits/deadline/marking, HTTP/decode/status/network/cancel/timeout/wallet errors, thirty-poll cap, observer faults and two overlapping calls through one compiled transport. Existing FAST forwarding/privacy/concurrency and strict poll-ordinal regressions pass. Initial combined280PASS/1FAIL was an obsolete exact call-options regex; it now requires timing forwarding while all actual20s/70s/client budget assertions remain. No test/threshold/amount guard was relaxed.

Checkpoint CHECKPOINTS/CHANGES/2026-11-05-invoice-azure-phase-timing.md; evidence CHECKPOINTS/EVIDENCE/invoice-azure-phase-timing-20261105/results.json with exact commands and SHA256s. Provider/DB/wallet I/O in focused tests is simulated. Full native source PR/main CI, review and ordinary guarded healthy release remain required before one fresh T01 header-only/no-submit LAB read with committed BEFORE/AFTER/control. All F/D/G/H/I/R01-R05, paid/CREDIT originals and peer J stay protected from replay. No live provider read, payment/draft/stock/fiscal operation or source deployment occurred. Single next: exact full source CI and review.

05/11/2026 - INVOICE-HEADER-LATENCY / AZURE PHASE TIMING / RETAINED OWNER / BEFORE SOURCE

Retained task2 owner /root; docs/invoice-azure-timing-claim-20261105, subsequent source branch feat/invoice-azure-phase-timing-20261105. Parent task2/No15 remains OPEN. Five R01-R05 results are centrally published by PR3674/main27b756ef2 with exact PR/main documentation CI SUCCESS; all5 correct fields/unchanged before-after-control. Median server11.499s, Azure span3.943-13.558s, OpenAI3.322-4.768s. These are measured spans, not proof of where Azure spends its wait or a general speed PASS.

Bounded before-source scope: add OPTIONAL request-local diagnostic observation to the existing shared callAzure transport, enabled only by the existing authorized FAST handler's timing object. Distinguish

azure_submit, azure_poll_wait and azure_poll_request using the existing random correlation and monotonic elapsed clock. Poll ordinals are integers1-30; preserve OpenAI attempt1-2 exactly. Only allowlisted stage/outcome/finite elapsed/poll/correlation fields may be emitted. Never log operation-location/URLs, keys, tenant/store/user identifiers, filenames, PDF bytes/content, supplier/amount/payload or error strings. Other Azure consumers without an observer retain silent behavior.

Protect the current POST body/headers/API version/model, original PDF bytes, provider order and monetary safeguards, markOperation/wallet reserve-settle-review/fail-stop, original value/error identity, cancellation and shared deadline, first-two700ms/subsequent1200ms waits and maximum30polls. No new fetch/validation request, retry, parallelism, timeout or interval change. Observer setup/clock/logger/getter/async-rejection failures must be swallowed without changing the single provider invocation, response, error or business path. Request concurrency must not mix events. This is instrumentation only; do not label latency fixed.

After this exact claim is green and on main, source scope is limited to pos-fast-header-timing helper, commerce-azure-invoice-reader transport, FAST observer forwarding and meaningful focused regression tests. Test the ACTUAL compiled transport with deterministic network/clock/wait/wallet boundaries: exact bytes/headers/call order, poll ordinals/count/waits/deadline, HTTP/decode/status/error/cancel/timeout cases, logger/start/finish failures, unobserved compatibility and overlapping request isolation. Keep existing handler/timing/money/wallet tests. Require full exact Node20/PostgreSQL/frontend/browser/HTTP PR/main CI, review and ordinary guarded healthy release before LAB.

Only after normal release may ONE separately identified fresh synthetic LAB-AZURE-PHASE-20261105-T01 be read, header-only/no-submit, in selected LAB with fresh committed ten-table/wallet/active-shift BEFORE, AFTER and N40 control. All four fields and stage correlation/ordinals/finite times must agree; no payment/draft/stock/fiscal action. No H/I/R01-R05/F/D/G, paid/CREDIT originals or reserved peer J replay. Peer task3 and task4 physical-page ownership remain protected; no page count/UI/source-content rewrite. General OCR/latency/physical POS stay OPEN.

Checkpoint CHECKPOINTS/CHANGES/2026-11-05-invoice-azure-phase-timing.md. No runtime code, configuration, provider call or LAB mutation occurred in this claim. Single next action: complete normal documentation publication; only then implement the bounded optional observer and test its invariants.

05/11/2026 - INVOICE-HEADER-LATENCY / R01-R05 MEASURED / LIMITED LAB PASS / GENERAL SPEED OPEN

Retained task2 owner /root; docs/invoice-latency-repeatability-results-20261105. Before-action claim PR3671 merged as3b33cc2998dc366cc44f9bd9e65dadf77a343651 after exact PR CI42006859313 SUCCESS and main CI42007066766 SUCCESS. Five fresh two-page synthetic samples R01-R05 were each selected ONCE on unchanged healthy b7c75d4ec908919acaa21d967ae81f29b4d6aadf, at12:02-12:12 Europe/Athens. All5/5 automatically returned LAB METER TEST, their distinct exact number,05Nov2026 and24.80 EUR with no manual correction. This LIMITED LAB PASS covers four-field extraction and measured read-only invariance, not general speed acceptance.

Correlated server milliseconds: R01=11499.038; R02=18342.919; R03=11451.570; R04=8123.174; R05=14083.341. Median11499.038ms, minimum8123.174ms, maximum18342.919ms. Azure spans3942.635-13558.454ms (median8108.414); OpenAI3322.069-4767.567ms (median4161.048), one successful attempt each. Azure has the largest observed span variability. UI observed milliseconds12481/18565/11606/8273/14334 include upload/automation overhead; R01 includes a scheduling gap and is an upper-bound observation. Do not use it as an exact provider or render latency. H21.959s and I8.538s remain historical protected observations;8.5s is not a constant or guarantee. No SLA, tail percentile or causal low-reasoning speed claim.

Each trial's fresh ten-table/active-shift/wallet baseline was committed BEFORE file selection, then exact AFTER/control was compared. All5/5 preserve counts/digests, active shifts and wallet in selected LAB cmtpopbgo000trhb5ng9ytiru and N40 control cmv2qanca000psigeizep8o9m. UI MAIN/LAB POS2 remains one transaction, operational cash40/cards0/IRIS0/total0. Wallet and invoice billing stay OFF, balance4610532micros/reserved0. No document type, PAID or CREDIT selected; no submission/payment/new draft/stock/fiscal/configuration mutation or validation probe. These records do

not measure provider cost or returned model/reasoning tokens. Displayed general modelgpt-5/FAST application default supports inference only.

R01-R05 are now CONSUMED and removed from current pending actions; never replay them or F/D/G/H/I or peer J. Parent task2/No15 remains OPEN / ASSIGNED: broader supplier/layout/size coverage, representative latency and physical POS remain unverified. Same synthetic supplier/layout is not cross-supplier OCR or full physical-page/line acceptance. Task4 physical-page UI work and all peer claims remain protected. Existing Gate3 assistant PASS remains unchanged.

Checkpoint: CHECKPOINTS/CHANGES/2026-11-05-invoice-latency-repeatability.md; per-trial BEFORE/result JSON, summary.json and R05-ready.jpg in CHECKPOINTS/EVIDENCE/invoice-latency-repeatability-20261105/. Manual invoices/PASS and numbered item15 record only the measured limited result. No new runtime source or provider order/budget/model change. Single next action after exact documentation publication: separately publish the bounded before-source claim for sanitized Azure submission/poll timing diagnostics, preserving all existing polling intervals, retry/deadline/provider/wallet contracts. Implement only after that claim is green/main. Further acceptance needs new identities and fresh before/after/control, never a replay.

05/11/2026 - INVOICE-HEADER-LATENCY / FIVE FRESH REPEATABILITY SAMPLES / RETAINED OWNER

Retained task2 owner /root; docs/invoice-latency-repeated-samples-20261105. Prior result PR3668 is published on main401f6a1f5 with exact PR/main documentation CI SUCCESS. H21.959s and I8.538s/61.12% two-sample reduction stay protected. H/I are consumed; fixture-expectations now reconciles I's stale PREPARED label to the real observation. No older F/D/G/H/I or peer J is replayed.

Before-action scope: five NEW synthetic two-page PDFs LAB-LATENCY-20261105-R01 through R05, one known synthetic supplier LAB METER TEST, same original layout and24.80 EUR payable, fresh identities/hashes in manifest. Each is uploaded ONCE, sequentially, only in selected MYWORKSTATION LAB cmtpopbgo000trhb5ng9ytiru, control cmv2qanca000psigeizep8o9m, existing MAIN/LAB POS2. Read four header fields and correlated stage times only. No document type/PAID/CREDIT selection, submission, payment, new draft, stock/fiscal operation, model/provider/billing/configuration change or external validation probe. Peer ownership unchanged.

Claim/protocol/fixtures must be green and on main BEFORE selecting any file. Refresh and COMMIT a per-trial ten-table plus active-shift baseline before each selection; store UI cash40/cards0/IRIS0/total0/one transaction and exact healthy revision/configuration. Fresh AFTER and control must match before; stop the batch on any field mismatch, provider error, unexpected row/hash/shift delta, stale baseline, ambiguous timing correlation or revision change. No retry/replay of a consumed trial. Keep errors/timeouts in the report; never silently exclude them. Record wall-clock file-selection-to-first-ready UI time, server total, Azure/OpenAI spans and attempt count separately. Field PASS and valid timing are separate from broad OCR acceptance.

Report all five results plus median/min/max of successful comparable observations, with failure count and raw times. Five same-layout synthetic samples do not establish supplier coverage, tail percentile/SLA, a causal low-reasoning effect, full page/line accuracy or physical POS PASS. H/I comparisons are descriptive across historical versions. No artificial speed threshold or general task closure. Any provider/model/config/revision change requires a separate cohort. Parent task2/No15 stays OPEN / ASSIGNED. A new result publication will synchronize checkpoint/manual/pending/tracker/PDFs after observed outcomes.

Checkpoint: CHECKPOINTS/CHANGES/2026-11-05-invoice-latency-repeatability.md; prepared evidence/manifest: CHECKPOINTS/EVIDENCE/invoice-latency-repeatability-20261105/. Preparation snapshot09:49:00.710031Z is NOT an action baseline. Current health b7c75d4 verified; read-only UI readiness opened the empty new-invoice form, no file selected. Single next action after claim publication: fresh R01 BEFORE evidence, then its one read and AFTER/control; continue only on measured success. All five reads remain NOT TESTED at preparation.

05/11/2026 - INVOICE-PHYSICAL-PAGE-DISPLAY-01 / OCR4 / BEFORE-SOURCE CLAIM / OPEN

Retained invoice/task4 owner /root; continuation of POS-BACKGROUND-PDF-PAGES-01 and installed INVOICE-PDF-TOTAL-SAFETY-01, not an ownership transfer. Documentation branch docs/ocr4-physical-page-display-20261105; subsequent bounded source branch fix/ocr4-physical-page-display-20261105. User requests continued correction. Source edits begin only after this synchronized claim passes normal applicable CI and is merged to main.

Observed defect: accepted I has two physical PDF pages but the FAST form displays "1 σελίδα έτοιμη (1%)" because nextPages.length counts uploaded files. I's four-field/24.80 limited PASS, original timing, snapshots and ownership remain protected; no replay of I/H/G/F/D, paid or CREDIT documents. J37.20 remains unused. A count is not proof of complete OCR or row coverage.

Bounded source scope: separate uploaded-file/image counts from locally measured original PDF page counts in the existing FAST invoice form. Reuse the installed PDF library without rendering/OCR/provider calls; retain original bytes and source order. Show pending/unknown explicitly for unreadable, encrypted, invalid, cancelled or stale PDF counts; never silently substitute one page. Use request/source/store lifetime fencing and cleanup; counting must not delay or change existing OCR requests. Keep file-count wording accurate throughout status/removal controls. Verify actual multi-page PDFs, invalid input, cleanup, removal/replacement and store/unmount isolation with focused tests and the normal build/browser checks.

Protected: existing five-file selection/physical-page server bounds, original attachments/jobs, supplier/number/date/amount/confidence fields, models/reasoning/provider order/deadlines, wallet/access/tenant/module/licence checks, payment/credit/draft/stock/fiscal writers and the installed subtotal guard. No new upload endpoint, authentication workaround, source preparation route, business write, hosted provider call or unrelated refactor. Peer task3 preparation/navigation and task2 latency scopes remain separate. No feature or general OCR PASS from this claim or a display count.

Publication: prepend this identical entry to complete active/tracker/pending records, preserving every prior byte; regenerate both canonical tracker PDF copies. Existing numbered acceptance and manuals remain unchanged because no new functional acceptance exists. Checkpoint CHECKPOINTS/CHANGES/2026-11-05-ocr4-physical-page-display.md. Next: publish this claim, then implement the narrow source/test change, independent review, exact full PR/main CI and ordinary guarded release; hosted page-display acceptance stays NOT TESTED until independently observed. General suppliers/rows/packages/discounts/VAT/EFK remains OPEN.

05/11/2026 - INVOICE-HEADER-LATENCY / I MEASURED / LIMITED LAB PASS / TASK 2 OPEN

Retained owner /root; branch docs/invoice-header-i-result-20261105, PR #3668. This is the authoritative continuation for the reserved I measurement; older I-unused/AWAITING-LAB plans below are historical and must not cause replay. I was consumed once at 09:53:56.963-09:54:05.501 Europe/Athens on healthy b7c75d4ec908919acaa21d967ae81f29b4d6aadf (combined reviewed #3665 + #3667). Exact full main CI41986965526 and ordinary guarded deploy41988328490 completed SUCCESS; rechecked during documentation continuation.

LIMITED LAB PASS: fresh synthetic two-page PDF LAB-HEADER-TIMING-20261105-I automatically returned LAB METER TEST / exact number / 05Nov2026 /24.80 EUR without correction or submission. Browser8538ms versus H21959ms: observed61.12% reduction in these two samples. Correlated server8317.927ms, Azure5381.341ms, OpenAI2920.083ms/one successful attempt. Before snapshot07:52:10.757084Z was committed BEFORE upload; after07:54:16.874581Z. All ten measured table counts/digests and active shifts match exactly in selected LAB and N40 control. No invoice submission, payment, draft, stock or fiscal operation.

Completed measurement and four-field acceptance are removed from current pending actions; do not rerun I or H. Parent task2/No15 remains OPEN / ASSIGNED to the same owner: representative latency/quality evidence across suppliers and repeated fresh samples, tail latency, effective model

attribution and physical POS remain unverified. One combined-revision sample cannot isolate low-reasoning causality; Azure also accelerated. General OCR lines/pages/packages/discount/VAT/EFK completeness and every peer owner remain unchanged. The UI still labels one PDF as one page; physical-page correctness is not certified.

Evidence: CHECKPOINTS/CHANGES/2026-11-05-invoice-header-I-measurement.md; CHECKPOINTS/EVIDENCE/invoice-header-timing-20261104/header-I-{before,after,observation}.json; docs/manual/invoices/PASS.md. This documentation does not claim another OCR test or production modification. Publication closure still requires exact new-head CI/review and normal integration. Single next action: finish those documentation gates, then define a bounded fresh-sample latency protocol without replaying consumed or paid/CREDIT originals.

05/11/2026 - INVOICE-CREDIT-HOSTED-PREP-01 / RETAINED OWNER / BEFORE-SOURCE CLAIM / OPEN

Retained task3 owner /root. Documentation branch docs/task3-lab-readiness-20261105, PR3669; subsequent bounded source branch fix/task3-lab-preparation-20261105. This claim becomes published only after normal documentation CI and main integration. It does not transfer invoice-reading, payment/credit, stock or peer ownership. Parent INVOICE-CREDIT-CONSOLIDATION-01 and INVOICE-CREDIT-THIRD-HEADER-01 remain OPEN.

Source3659 is already merged at608cecc and its ordinary release was verified earlier. Fresh source mainb7c75d4 retains the correction; guarded deployment41988328490 reports SUCCESS. These receipts supersede old source-candidate/CI-pending wording, not the historical pair PASS, third-member review FAIL or acceptance gate. No new hosted consolidation has been executed. The last measured LAB readiness had one credit but no applied-credit draft/inbound-credit/common-credit family; do not treat that old inventory as a fresh action baseline.

Authenticated access to the exact LAB works. Executor navigation remains unreliable: the latest bounded rund866940d-9d3f-44ea-b22b-61d6ad0f7e03 reported a recorder utility without a visible close control and did not reach InvoiceInboxPanel. It also inferred an equivalence between pending-confirmation and Pending Center buttons that source inspection does not establish. No screenshot was returned. These are executor limitations, not a confirmed application defect. Stop repeated metered blind navigation and do not change user permissions or ask for another login on this evidence.

Bounded preparation scope, implemented in separate reviewed stages only after this claim is published: first a deterministic, explicitly selected-store entry to the EXISTING invoice view, preserving the normal Backoffice and its role/module/session/lifecycle boundaries; no standalone replacement or speculative event-handler fix. Then complete the existing preparation-route inventory and, only if needed, a read-only readiness preview plus narrowly allowlisted, idempotent creation of NEW synthetic inbound attachments and unpaid NEW/DRAFT records in MYWORKSTATION LAB. No arbitrary tenant targeting, old-record reuse or global defaults.

Ordinary attachment upload creates only an attachment/inbox row, not a common-credit family. Fixture preparation must never forge paid state, signed payments, applied-credit audits, canonical aliases or success flags. Any required NEW synthetic payment and OFFSET/CASH_RETURN application must use the unchanged ordinary application writers with their real confirmations and audit. No direct shared-database seed, isolated-test-schema helper, external myDATA/OCR/AI call, company VAT/integration edit, stock/fiscal posting or historical payment/credit replay. Protect H/G, reserved I, all old originals, existing acceptance and peer work.

Required source gates: complete relevant checkpoint/manual inspection; scoped normal/denied/stale-context tests; no outbound calls or fabricated credit proof; exact full native PR/main CI and independent review; ordinary guarded healthy release. Only then prepare one uniquely identified synthetic family, inspect setup changes, record fresh per-action BEFORE/AFTER and untouched CONTROL, and perform normal original/MARK/header/reason/root-table-confirmed reconciliation and retry. Preserve canonical identity, signed credit/original positive payment, rows/files, allocations and stock. OFFSET and CASH_RETURN are separate evidence scopes. Source, CI, setup or equal snapshots alone never closes task3.

This documentation update prepends the same entry to the three complete registries and both relevant checkpoints, preserving every prior byte as an exact suffix. Regenerate the canonical tracker PDF; preserve accepted manuals and the numbered acceptance snapshot because no new functional PASS exists. Any isolated document-build helper is excluded from the final documentation tree and ancestry. Checkpoint: CHECKPOINTS/CHANGES/2026-11-05-task3-hosted-preparation-design.md. Single next: verify and publish the synchronized documentation claim, then implement only the first bounded entry stage. No business mutation or runtime deployment is authorized by a documentation build.

05/11/2026 - INVOICE-PDF-TOTAL-SAFETY-01 / VERIFIED CI CAUSE / LEGACY TEST ALIGNED / AWAITING FULL CI

Retained task4 owner /root, source PR3667. Main723b167 is already synchronized without losing peer3665. Exact downloaded raw CI logs for jobs127068324620 and127077517536 both show the same single failure: pos-invoice-multipage-upload-v1.test.js, MANTZILAS FAST total. Previous contradictory tool diagnoses remain withdrawn. Raw evidence artifact13393140796 SHA25658634e5970e05d6336322ba32e014c3246b9c960ea0dee50daec759eeb4e238e; test-before blob7bd1c5f087f7d74762db88ce37ac196d8aaaef41 verified.

Cause: one historical static regex required unconditional VAT-footer reuse. The test now requires the numeric-one-page eligibility binding and guarded production assignment. All original parser/account-balance/unbalanced-footer assertions remain. The actual production assignment is also executed: eligible full-document reuse returns318.74; ineligible multi-page/unknown-page reuse returns0. No runtime edit, amount relaxation, deleted test, skip or threshold change.

Initial staging run stopped before test edits because the imported verifier required a generated Prisma client (277PASS plus one module-load failure); standard client generation fixes only that setup, with no database connection. Complete-checkout Node20 targeted seven suites: before324PASS/1FAIL; after325PASS/0FAIL/0SKIP. Runtime SHA25632e1f56f985603aaa7c819a490c9dc2d846884c0c43dbd7e4f22f8fd9d5653e8 unchanged. Provider/database/wallet I/O simulated. This is not full native CI, independent approval or OCR/LAB acceptance. Keep source PR DRAFT until review and full exact checks.

No paid provider request, invoice submission/payment, stock/fiscal operation, main change or deployment. Protect H/G, H21.959s and reserved I; no historical replay. General OCR, supplier/pages/packages/discount/VAT/EFK and latency remain OPEN. Checkpoint CHECKPOINTS/CHANGES/2026-11-05-ocr4-pdf-total-safety-source.md. Next: exact full PR/main CI and independent read-only review before guarded release and fresh no-submit LAB acceptance.

05/11/2026 - INVOICE-PDF-TOTAL-SAFETY-01 / PR3667 MAIN SYNC / AWAITING FULL CI AND REVIEW

Retained task4 owner /root; fix/ocr4-pdf-total-safety-20261105. Before-source claim3666 remains published. Merged peer3665 main723b167 into this SOURCE BRANCH only. Both the exact-model low-reasoning provider change and PDF amount-return guards are preserved; no new runtime policy, transfer of peer ownership or release is performed.

The sole active-registry merge conflict is resolved by preserving the entire main registry as an exact suffix after the existing2137-byte task4 source prefix. Common history and both owners survive. Node20 complete-checkout focused six-suite result:277PASS/0FAIL/0SKIP; provider/DB/wallet I/O remains simulated. Exact full native CI and independent review remain required.

The previous CI41973921759 attempts failed at the server-test stage. Retrieved diagnostics conflicted with verified source files; no causal test attribution, flaky classification or full-suite count is asserted. No existing test, expected amount, guard or threshold was weakened. Fresh exact-head normal CI must determine release eligibility.

No production deployment, paid provider read, invoice submission/payment, stock or fiscal operation. H/G and H21.959s are protected; F/D/G/H and reserved I are not replayed. General

supplier/pages/packages/discount/VAT/EFK completeness and latency remain OPEN. Checkpoint: CHECKPOINTS/CHANGES/2026-11-05-ocr4-pdf-total-safety-source.md. Next: exact full CI and read-only independent review, then guarded release and a separately identified fresh no-submit LAB read.

05/11/2026 - INVOICE-PDF-TOTAL-SAFETY-01 / SOURCE CANDIDATE / AWAITING FULL CI AND LAB

Retained invoice/task4 owner /root; branch fix/ocr4-pdf-total-safety-20261105. Before-source claim3666 passed documentation CI41972028360 and merged f0d45edfd0628557f7a1a545355faa928d631240 BEFORE source integration. The exact V3 candidate3654 is applied to the complete checkout. No ownership transfer or low-reasoning change; peer3665 stays separate.

Multi-page or unknown-count PDFs cannot return Azure page money after absent key or failed fallback, fill missing full-reader money from Azure, or replace a complete-reader amount with a partial footer. Missing/non-finite positive full-reader money fails explicitly. Image/known-single-page policy, durable reuse, wallet/access, PDF transport, models/prompts/retries/deadlines and request-local timing remain protected. Provider OCR accuracy is not independently proven by this guard.

Complete-checkout v20.20.2: original header/timing/handoff tests 108 PASS/0FAIL/0SKIP; after source integration 274 PASS/0FAIL/0SKIP. Exact V3 patch SHA256528afc2c440164dc089e5cb62d451212edb7f13573b3a8a50687c85250512def applied with syntax and combined regression checks. Provider/DB/settlement are simulated. Full native PostgreSQL/build/browser/HTTP/security CI, independent review and OCR/LAB remain NOT TESTED here.

Protect H/G and H21.959s baseline. Never replay F/D/G/H, latency-reserved I, paid or CREDIT originals. No real provider request/charge, payment, draft submission, posting, stock/fiscal operation, production configuration or deployment. Preserve all prior registry bytes and peers. General supplier/pages/packages/discount/VAT/EFK and latency remain OPEN; no manual/PASS closure.

Next: source PR review and exact full Node20/native PR/main CI before ordinary guarded release; then one separately identified fresh synthetic no-submit LAB read with before/after/control. Checkpoint CHECKPOINTS/CHANGES/2026-11-05-ocr4-pdf-total-safety-source.md; results CHECKPOINTS/EVIDENCE/ocr4-pdf-total-safety-source-20261105/results.json. Owner retained until recorded completion or named handoff.

05/11/2026 - INVOICE-PDF-TOTAL-SAFETY-01 / OCR4 / BEFORE-SOURCE CLAIM / OPEN

Retained invoice owner /root, current task4 continuation; publication branch docs/ocr4-pdf-total-safety-20261105, then bounded source branch fix/ocr4-pdf-total-safety-20261105. This continues candidate PR3654, not a transfer or duplicate of the latency/low-reasoning owner and PR3665. Only the FAST handler's PDF fallback amount-return policy and its regression expectations are assigned here; configured models, request construction, reasoning, timings, provider order, deadlines, wallet and all business writers stay outside this scope. No source integration before this synchronized claim is green and merged on main.

Evidence: V3 at ce589169 records172 isolated Node22 PASS/0FAIL/0SKIP against a timing-compatible excerpt; that is NOT full checkout/native CI, OCR or LAB acceptance. Main6f30ba0 contains the published fresh H four-field/24.80 header PASS and measured21.959s baseline on live0aef945f. H/G are protected, F/D remain historical FAIL, I belongs to the latency owner. The remaining fallback-subtotal risk is documented in the invoice manual and is not resolved by a successful H sample. General supplier/pages/packages/discount/VAT/EFK completeness remains OPEN.

Bounded next source after publication: for multi-page or unknown-count PDFs, refuse Azure monetary fallback on absent key, ordinary full-reader failure or missing/invalid full-reader amount; never overwrite a valid full-reader total with a partial Azure footer. Preserve images, known numeric-one-page PDFs, verified exact-file durable reuse, original errors/wallet fail-stop, access isolation, table reconciliation and all instrumentation. Do not claim the full-reader amount itself is independently OCR-verified. Re-review current

source and coordinate any changed peer hunks before applying V3.

Required gates: complete source/checkpoint inspection, current-source integration, independent review, full exact Node20/native PR/main CI, ordinary guarded release and one separately identified NEW synthetic no-submit LAB read with before/after/control. Never replay F/D/G/H, reserved I, paid or CREDIT originals. No payment, draft submission, posting, stock/fiscal, production config or paid provider operation is authorized by this claim. Manual/PASS status is unchanged. Single next: finish lossless three-registry/PDF claim publication, then source integration; parent OCR4 remains OPEN.

05/11/2026 - INVOICE-HEADER-LATENCY / H MEASURED / FAST LOW REASONING CLAIM / ASSIGNED

Retained /root; docs/invoice-header-h-result-20261105 then fix/invoice-fast-low-reasoning-20261105. Timing PR3655 is full PR/main green5562+8/0FAIL/0SKIP and exact healthy0aef945f via ordinary guarded release41931055526. Fresh H automatically matched all4fields/24.80, browser21959ms/server21746.166ms, Azure14839.447ms/OpenAI6884.620ms/oneattempt; all ten-table LAB/control counts/hashes and active shift unchanged. H consumed, no submission/payment/draft/stock. This is a measured baseline and limited header confirmation, NOT speed improvement. G accepted evidence and all peer assignments preserved.

Bounded next source only AFTER this claim is green/main: keep configured model/prompt/schema/PDF bytes/provider order/deadlines/wallet/total safety unchanged and add reasoning low solely for exactgpt-5/gpt-5-2025-08-07 inside the existing FAST request. Config UI generalgpt-5/FASTapplicationdefault supports this target; H provider snapshot unrecorded because LAB invoice billing is OFF. This targets only H's31.66% OpenAI component, not dominant Azure wait. Required actual transport/precedence/excluded-model/retry regressions, full PR/main CI, guarded healthy release, then one new I no-submit4-field/timing/before-after-control acceptance. No source or model/config change yet. Parent latency, No15 broad OCR, physical POS and other scopes remain OPEN.

Current checkpoint CHECKPOINTS/CHANGES/2026-11-05-invoice-fast-low-reasoning.md; H evidence CHECKPOINTS/CHANGES/2026-11-04-invoice-header-timing.md. Manual/No15 residual and central PDFs synchronize only the real H baseline; I remains unused. Next: publish this bounded claim green/main, then implement. Owner retained.

05/11/2026 — CASH-ADJACENT-COUNT-21 / RETAINED OWNER / BEFORE-SOURCE CLAIM / AWAITING LAB

Parent: CASH-UNIFIED-AUDIT-15 remains OPEN and assigned to the retained cash audit owner. This owner-directed bounded task continues PR #3657 (DRAFT; no merge) to detect potential cash-counting errors between immediately consecutive CLOSED shifts of the same company/store/terminal, with strict carried closing/opening equality, current six-check cash arithmetic, opposite nonzero cash differences and no existing manual OFFSET. No secondary owner or competing scope.

Read-only example: night -344.00 EUR / next morning +343.08 EUR; candidate common amount 343.08 EUR, separate night residual -0.92 EUR and morning residual 0.00 EUR. This is a *candidate*, not proof of a physical counting mistake, not a final balance adjustment, employee charge or automatic OFFSET. Ambiguous triple overlaps must not be allocated.

Evidence as at 05Nov: 8 isolated helper tests PASS in V8; full Node20/DB/HTTP CI and MYWORKSTATION LAB NOT TESTED. PR CI run 41927565706 FAIL at the mandatory active-list checkpoint gate; its native tests SKIPPED. The source PR stays DRAFT. Protect all actual cash/card/IRIS values, raw audit, immutable reviews/ledgers, roles/store permissions, fiscal, stock, invoice, provider, paid-AI and outbound actions. No production operation was performed.

Sequence: publish this intact documentation claim and relevant checkpoint to main with applicable green CI; synchronize all three central registries and generated tracker PDF; then rebase PR #3657 and run complete Node20/native/PG/HTTP CI, isolated LAB, guarded release and separately verified read-only selected-store acceptance. Parent CASH-UNIFIED-AUDIT-15 remains OPEN until all evidence and final audit

criteria are met.

Checkpoint: CHECKPOINTS/CHANGES/2026-11-05-cash-adjacent-counting.md.

05/11/2026 — INVOICE-CREDIT-THIRD-HEADER-01 / SOURCE CANDIDATE / AWAITING NATIVE CI AND LAB

Retained owner /root, implementation fix/invoice-credit-third-header-20261104. Before-source claim #3652 merged 4fa7ffa4bb0420487b072770a61080ee8bd9bd6f after applicable documentation CI41922045801. No ownership transfer or change to any peer scope. Parent duplicate/triple consolidation remains OPEN.

Candidate derives a version-bound server capability only for an additional unpaid NEW/DRAFT credit whose series alone differs from the established paid canonical. Same company/store/supplier/VAT/type/day/exact cents/numeric suffix and the original applied-credit proof are required. The writer recomputes candidates under existing locks and retains flat-family/posting checks. Explicit originals/MARK/header/reason AND the canonical table selection are mandatory, including an empty extra. Root identity, spelling, payment, signed OFFSET/CASH_RETURN audit, original positive transaction, rows, files and stock are not rewritten. No credit writer, money writer, schema, provider or posting changes.

The new negative actual-writer test exposed a date/amount mismatch that the old near-receipt heuristic did not always flag. Within established paid-credit continuation only, nonexact additional headers now require review; only the narrow series-only capability can release the settled-credit block. Initial paid-credit header correction, paid extras, other differences, stale proof and malformed families remain denied; existing positive-invoice manual continuation is covered.

Local Node22.16.0 actual-helper/preview/writer synthetic-query regressions: 52 PASS, 0 FAIL, 0 SKIP. Selected new actual-writer regression against exact old server blob a57006f failed with INVOICE_CREDIT_REVIEW_REQUIRED (0 PASS/1 FAIL); candidate passes. Syntax and git diff --check pass. These are isolated local engineering checks, NOT PostgreSQL, Node20, browser, hosted, financial or LAB acceptance. Four new native PostgreSQL groups use the actual OFFSET/CASH_RETURN writer, concurrent third/retry, complete-row preservation, denied variants and stale proof; a mounted actual-dialog test covers capability flags, explicit confirmations/root choice, empty extras and stale responses. Native and mounted suites are prepared but NOT EXECUTED locally: this environment has neither isolated PostgreSQL/Prisma nor React/esbuild/jsdom. Required full native Node20 PR/main CI must execute them without skips before merge/release.

Current candidate does not change production or any business record. Historical hosted third-member FAIL and existing pair PASS remain intact. Shared registries retain their complete histories; existing manuals and accepted PDF snapshots retain their baseline because no new functional PASS exists. No original credit/payment is replayed to manufacture acceptance evidence.

Single next action: run exact full native PR CI and resolve failures before source merge; then exact main CI, ordinary guarded healthy release and one separately measured synthetic LAB acceptance with before/after/control. Do not mark task 3 complete from this candidate or CI alone. Checkpoint CHECKPOINTS/CHANGES/2026-11-04-invoice-credit-third-header.md.

05/11/2026 — INVOICE-HEADER-LATENCY / PR3655 CONTINUATION / FULL CI REQUIRED

User-directed continuation on the same retained owner and fix/invoice-header-timing-20261104. Reconciled the three shared registry prepends against main4fa7ffa4, retaining all peer records and every historical byte. Exact source/test/fixture blobs remain those reviewed and tested at c0419bb3 (108 PASS, 0 FAIL, 0 SKIP). The former head had no CI run because its merge state was dirty; no full CI or hosted speed PASS is inferred. Next: full exact PR/main CI, ordinary guarded exact healthy release, then one fresh H header-only read with refreshed ten-table LAB/control evidence. H/I remain unused; no payment/draft/stock action. Checkpoint CHECKPOINTS/CHANGES/2026-11-04-invoice-header-timing.md.

05/11/2026 — INVOICE-HEADER-LATENCY / TIMING SOURCE CANDIDATE / ASSIGNED

Retained /root, fix/invoice-header-timing-20261104; claim #3648 green/main f131f00c before source. Added sanitized request/stage/attempt timing without changing provider or business behavior. Node20 targeted108PASS/0FAIL/0SKIP; independent review no blocker. Full exact PR/main CI and guarded healthy release required. Fresh H prepared for one no-submit header timing read with ten-table LAB/control baseline; I reserved for a separately claimed speed candidate. G limited header PASS protected; latency OPEN, no new LAB/manual/performance PASS. Checkpoint: CHECKPOINTS/CHANGES/2026-11-04-invoice-header-timing.md. All peer owners and existing accepted manuals/PDFs preserved. Next: full CI/release, then correlated H measurement.

04/11/2026 — INVOICE-CREDIT-THIRD-HEADER-01 / RETAINED OWNER / ASSIGNED BEFORE SOURCE

Same retained INVOICE-CREDIT-CONSOLIDATION-01 and duplicate owner /root; bounded continuation fix/invoice-credit-third-header-20261104. Owner explicitly requested continuation after the measured blocked third-member review. No transfer of credit issuance, OFFSET/CASH_RETURN writers, reader/header latency, posting, inventory or reporting scopes.

Current observation: hosted additional-member review of an established common credit draft remains disabled after original/MARK, header correction, root-table choice and reason confirmations. Independently compared saved POS photos and original PDF: one physical row, matching identity/economics; the additional unpaid NEW/DRAFT has an OCR series error. No consolidation POST, payment, stock, fiscal or provider operation submitted. Before/after count AND complete-row MD5 signatures agree for the two original signed transactions, existing applied-credit audit, all measured settlements, order/document rows, attachments and store movements. This is a blocked hosted review FAIL, not consolidation/LAB PASS. Existing successful pair and its canonical/payment identity are protected and are not replayed. Private identities, commercial amounts, MARK, originals and record IDs are excluded from public documentation.

Fresh read-only health reports ok=true, revision bc19fb45cfd24ef83385ff60383ae59ec148b1cb; relevant backend/UI source has no delta from prior c7830ad through reviewed main2427c1cbc. Prior3623 native/full CI and exact healthy source receipt remain valid engineering history. The earlier LAB inventory lacks a suitable applied-credit family; no production seed or historical money replay is authorized to manufacture one.

Causal diagnosis: client blockedCredit and server settledCredit reject candidate.headerReviewRequired unconditionally. Bounded implementation AFTER this claim is green/main: expose a server-computed eligibility for a reviewed additional UNPAID NEW/DRAFT credit with the same scoped supplier, type, exact date/cent total and numeric suffix, where only the extra member's series differs; retain the established exact NEW/DRAFT root, signed-credit proof, root table, full flat family and original audit/payment identity. Require explicit manual header confirmation/reason and fresh version, and recompute under existing store/row locks. Never alter the paid original header, supplier, spelling, amounts, rows or links. Initial paid-credit header correction, other header differences, paid extra, unverified/reversed/foreign/partial proof, automatic/posted/drifting families and canonical/table replacement remain refused. Historical extra rows/files remain preserved; no quantity summing or new money/stock write.

Source scope: server/src/lib/invoice-common-draft.js and client/src/components/commerce/InvoiceCommonDraftReview.jsx only, plus focused proof/native/mounted regressions. Required old-source failure and new OFFSET/CASH_RETURN continuation, required confirmations, unchanged paid-credit/original positive payment/audit/settlements/allocations/stock/files/rows, same-member retry/concurrency/stale-proof and denied variant cases. Full exact Node20/native PR/main CI and ordinary guarded exact healthy release precede one measured synthetic acceptance and separately recorded real selected-store review. No new functional/manual/PDF PASS from source/CI. Existing manuals/numbered statuses retain their accepted baseline.

Single next action: publish this bounded before-source claim green/main, then implement and validate only this reviewed eligibility. Parent duplicate task remains OPEN; owner retained through completion or named handoff. Checkpoint CHECKPOINTS/CHANGES/2026-11-04-invoice-credit-third-header.md.

04/11/2026 — INVOICE-HEADER-LATENCY / TASK 2 CONTINUATION / READ-ONLY TIMING EVIDENCE

Current user explicitly assigns task2, initial PDF reading speed. Continue the existing retained /root owner and PR3648/docs/invoice-header-timing-20261104, then fix/invoice-header-timing-20261104; no parallel claim. Reconcile the existing documentation-only conflict onto current main8f558f094776fb4e2b0d1bfc7616bf48b0a7af53, preserving all peer content/source. FAST route/test/Azure/metering sources have no changes since accepted transport0d57653f. Fresh Node20.20.2 actual-handler baseline56PASS/0FAIL/0SKIP, no provider call. G four-field limited header PASS remains protected; latency OPEN.

Read-only 04Nov production wallet evidence explicitly has purpose PAYMENT_HEADER_READ, surface PAYMENT_ENTRY, execution DIRECT and status SETTLED. UTC16:45:54.248249–16:46:16.352881: Azure reserve-to-settle9.310s, gap1.286s, OpenAI11.509s; sequence22.105s. UTC16:56:08.887167–16:56:35.133567: Azure7.314s, gap0.757s, OpenAI18.176s; sequence26.246s. Each window contains two recorded header operations with identical activity and an immediately following FAST Azure fallback log. They have separate provider references and no unique shared request/document identifier: pairing is a temporal inference, not proven request correlation. These are wallet-inclusive operation spans, not frontend/provider-only stopwatches, and neither identifies the accepted G fixture or proves field accuracy. OpenAI recorded gpt-5-2025-08-07; reasoning-token counts absent. No logged OpenAI attempt failure in the bounded window is not a universal retry-count claim.

Minute-resolution CPU0.077–0.125/1CPU and memory244–276MB/2GiB in the two windows do not indicate sustained resource exhaustion; short unsampled spikes remain unknown. Current production remains healthy bc19fb45cfd24ef83385ff60383ae59ec148b1cb, automatic deploy OFF; this read-only work changed no production setting or state.

Proceed with the existing bounded timing-only source claim below after this reconciled PR is green/main. New diagnostic events need a request-local random correlation and fixed stage/outcome plus nonnegative monotonic elapsedMs (bounded attempt ordinal when applicable), response finish/close coverage, original errors/results/provider counts preserved even if logging fails, and same-handler concurrent isolation tests. All model/prompt/provider order/retry/deadline/response/UI/wallet/access/payment/draft/stock/fiscal behavior stays under its existing contract. No new LAB/manual/PDF PASS or performance improvement claimed. Single next: finish green claim publication, then implement/test this diagnostic change before any separate causal performance change.

04/11/2026 — INVOICE-HEADER-LATENCY / RETAINED OWNER / TIMING-ONLY SOURCE CLAIM

ASSIGNED /root, continuation docs/invoice-header-timing-20261104, then fix/invoice-header-timing-20261104. Owner explicitly requested continuation and publication in this repository. Parent INVOICE-HEADER-LATENCY stays OPEN. Preserve every peer ownership and prior limited G correct-header PASS; do not replay G/F/D or any paid invoice.

Read-only diagnosis on main bf6b04884: FAST source unchanged from accepted transport repair. Render workspace explicitly confirmed by owner. Existing G logs show fallback entry 2026-11-04T14:50:46.281470519Z, 5477ms after browser selection14:50:40.804Z; this includes upload/authorization/wallet/durable lookup/Azure and is NOT Azure-only latency. No completion timing exists. Current healthy source independently reports bc19fb45cfd24ef83385ff60383ae59ec148b1cb. Existing actual-handler suite56PASS/0FAIL; no new provider request or business action.

Bounded next source after this claim is green/main: sanitized monotonic timing events for FAST header route total, exact-file lookup, Azure header operation, OpenAI header operation/attempt and supplier matching. Include random per-request correlation, fixed stage/outcome, elapsed milliseconds only; never

input bytes/text, filename, supplier/customer/store/company/document IDs, amounts, credentials or error bodies. Observe response finish/close and failures without changing returned fields, provider order/models/prompt/retries/timeouts, wallet/access/tenant or business semantics. Tests must exercise actual handler success/fallback/wallet refusal and concurrent timing isolation; no real provider call. Timing is diagnostic overhead, not a speed fix.

Hosted G readiness remains imprecise:83920ms is observation upper bound only. Main history, current registries, invoice manual and relevant header-only/timeout/transport checkpoints reviewed. Prior wrong subtotalF/D, EFK/general accuracy/UI counts and physical POS latency remain OPEN. No new LAB/manual/PDF PASS. Required next: publish green claim, implement bounded instrumentation, exact full PR/main CI and ordinary guarded healthy release, then separately identified fresh no-submit synthetic read with before/after/control; never repair old evidence by replay. Existing accepted PDFs/manuals retain their baseline during this pre-change claim.

Checkpoint CHECKPOINTS/CHANGES/2026-11-04-invoice-header-timing.md. Owner retained until recorded completion or named handoff.

04/11/2026 — CASH-OWNER-DIRECTED-TAKEOVER-19 / ASSIGNED / PARENT OPEN

ΑΝΑΛΗΨΗ ΑΠΟ codex/cash-chat-reconciliation-20261026 — ASSIGNED docs/cash-takeover-20261104 / current Work page /root, explicitly directed by the owner in this conversation. This transfers only remaining cash reconciliation source/matching and final agreement work; all independent peer scopes remain with their owners. Historical owner records below remain evidence, superseded only for this ownership transfer after merge. Claim publication PR3646.

Protect CASH-EVENT-SNAPSHOT-18 scoped 04Nov LIVE PASS for multi-session basic and existing-readings GET completion, prior manuals and immutable eight-original paid-read outcomes. No repeat of accepted tests or paid sources. Parent CASH-UNIFIED-AUDIT-15 stays OPEN: uncertain original/transcription accuracy, handwritten date/section/shift proof, document/payment/expense relevance, card/event/bank/custody/handoff evidence and final non-netted financial acceptance.

Full oversized active/tracker/pending originals recovered through their Git blob SHAs after the contents adapter returned empty bodies/transport failures. This resolves the retrieval blocker in the initial PR3646 draft. This handoff changes documentation only; no source/config/schema, paid provider, upload, financial/stock/fiscal/review/issue/settings or email action. No new LAB/LIVE/financial PASS. Existing accepted PDFs/manuals retain their baseline; before-source claim is not completion.

Single next: green synchronized handoff/main publication, then inspect existing stored unresolved evidence and current matching without paid retries. Any bounded runtime fix requires its own causal pre-change scope, tests and normal exact CI/release/acceptance. Checkpoint CHECKPOINTS/CHANGES/2026-11-04-cash-owner-directed-takeover.md.

04/11/2026 — CENTRAL-POS-AI-ANDROID-TAKEOVER-01 / OWNER-DIRECTED HANDOFF / OPEN

ΑΝΑΛΗΨΗ ΑΠΟ «Ανάθεση πρακτόρων POS AI Render Chat Android» — ASSIGNED docs/central-pos-ai-android-takeover-20261104 / current Work coordinator /root. The owner explicitly requests takeover because the previous conversation stalled. This transfers its coordination and unfinished delivery work, not independently retained invoice, reporting, bandwidth, fiscal or other peer scopes. Claim time 2026-11-04T19:41:23+02:00.

Three bounded read-only subagents completed AI-history, Android-conflict and infrastructure/Agent reviews under this coordinator. Every page may use 2–3 non-overlapping subagents under its retained owner; existing shared instruction PR3641 is reused, not duplicated. No subagent changes prices, credentials, business state or deployment gates.

AI PR3612 head6cd69e1f fullCI41851414061 and recovery41851413952 SUCCESS; fresh fetched main43a140e includes its merge. Integration happened during this review; do not merge/replay it again.

Exact-main CI, ordinary guarded release and hosted pagination acceptance must still be verified. Separate residual financial waiver requires the owner's native financial submission under the prior checkpoint; no workaround or repeat of accepted waiver.

Android PR3618 head3e9b0dc9 OPEN/dirty. Cancelled CI41690022881 attempt2 is NOT PASS: checkout consumed the job window before tests. Current main already contains the checkout blob filter. Next bounded delivery action AFTER this handoff is green/main: reconcile existing PR with latest main, retaining all peer text, insert the existing publication-candidate block at its original boundary, regenerate central PDF, preserve exact signed APK/manifest and require new exact full CI. No source/APK rebuild, timeout increase or repeated accepted Chat actions. New topics physical acceptance stays NOT TESTED.

Agent2.0.2 automated/source validation is complete; physical speed/Greek typing/files/disconnect/three-PC acceptance remains OPEN. Database compute upgrade already executed; do not repeat. Backup upload/readback PASS is protected; full disaster recovery and endurance remain OPEN with their retained owners. POS latency remains with its latest checkpoint/owner; 21-NT is a separate unverified residual. Completed Diadoxou POS–myDATA is protected and never repeated for paperwork.

Publication refresh after explicit owner approval: Android PR3618 has independently advanced to3a1f57123c189fa42ff5a6464ec136807f22595f and is now mergeable, with all five exact-head check runs SUCCESS. The older conflict diagnosis above is historical; do not apply a second reconciliation or overwrite that head. Next action is final diff/release-gate review of the updated PR, then exact-main CI and normal guarded release; physical acceptance remains OPEN.

Documentation-only takeover; no new LAB/LIVE/USER PASS, financial/stock/fiscal action, provider call, credential, infrastructure change or deployment. Existing manuals/numbered statuses and accepted PDF baseline remain unchanged for this pre-change claim. Checkpoint CHECKPOINTS/CHANGES/2026-11-04-central-pos-ai-android-takeover.md. Single next: publish this claim with applicable green checks before delivery mutations; then refresh latest main/PR statuses to avoid racing another owner.

Continuation review 04/11/2026: exact PR head3a1f571 full CI41880091814 completed SUCCESS. New main464eb2e introduced three documentation-only top-block conflicts after that check; independently reproduced with merge-tree. Reconciled the existing PR by preserving the complete newest main records and inserting its unchanged signed-publication block at the original boundary. APK and manifest remain byte-identical to3a1f571. New exact-head full CI, merge/main CI, guarded release and public byte verification remain pending; physical acceptance NOT TESTED. Single next: validate the updated PR full CI before merge.

03/11/2026 — CHAT-TOPICS-VISUAL-01 / VERIFIED SIGNED0.1.16 / PUBLICATION CANDIDATE

Sequential delivery owner codex/chat-topics-delivery-20261103; takeover PR3615/cf6dd390 passed docsCI41688183724 (3SUCCESS/2expectedSKIP) and merged84052550 BEFORE distribution edits. Prior source owner/claims3572/3567/3570 and protected scoped USER PASS remain unchanged. Source main0c352c2ecafe386f6c6af324bb9db736b8cd70d3 exact fullCI41680791674: all5SUCCESS,5479server+8backup/0FAIL/0SKIP. Existing source PR fullCI41543209513/Android41543209531/browser41543209506 are SUCCESS; owned Chat paths have no delta through signed source.

Stable signed workflow41680412136 attempt2/job126096597944 SUCCESS after the initial guard refusal; exact fullCI checked before key access, compile/unit/lint, actual emulator/capture/lifecycle/regression and apksigner pinned-certificate verification passed. Artifact13257496000 ZIPsha256891f665784ebecc86409cb98b5d78a68612dd0e64ffa74846317f1b091344547 independently downloaded/CRC/digest verified. APK3703820bytes/SHA2566aa390d0c24ce37fd7f84fac0c20f8d4304a62c159e739bb175036e746fb98d8; independent binary manifest package gr.myworkstation.chat.preview/version0.1.16-preview/code17 and APKv2 leaf certificate17c4d56123c6015a58343faba73d26a8b7d085a1baff7e680500767ae084ea97 verified against receipt and prior0.1.15 signer. No new key or private signing data accessed by this environment.

This distribution candidate adds only the verified versioned APK/public manifest and own evidence/records. It does not change application source, permissions, selected-store boundaries, old APKs, financial/provider/AI writers or peer owners. Browser artifact13185614621 digest and360x740/390x420 layout images independently reviewed. Existing text/photo/voice/video/topic reply/search/forward safeguards and accepted familiarUI behavior remain protected. No real Chat send/read/ack/forward/Push, production SQL, sale/payment/stock/fiscal or physical acceptance action.

PUBLICATION PENDING: exact distribution PR/main fullCI, ordinary guarded release and independent public health/manifest/APK byte equality still REQUIRED. Public0.1.15 must not be described as0.1.16 until those checks complete. New topic physical/LAB/USER acceptance NOT TESTED; previous accepted checks are not repeated. ParentN16 and all other owners/residuals remain OPEN. Next: exact distribution validation and guarded publication, then ONE combined topic-only phone check. Evidence CHECKPOINTS/EVIDENCE/chat-topics-visual-20261103/verified-signing.json.

04/11/2026 — FTEXT-OVER-LIMIT-REPORT-01 / SOURCE PREPARED / AWAITING CI AND INSTALLED ACCEPTANCE

Same explicitly transferred central owner /root; source continuation fix/ftext-original-rejection-report-20261104 after before-source claim #3638 merged 835dded. The operator supplied the three originals and confirmed CASH/no receipt. Originals remain private and are never committed. Their six-field report binds its raw digest to the original rejection bytes; this is diagnosis only, not a live release.

Add an explicit rejection-only opt-in to the shared original-file verifier. It accepts exactly the six-field numeric code2 CASH shape only with the complete ingestion-validator report digest, exact stored field equality and matching raw-result SHA256, retaining original bytes and their separate digest. The existing sole S/OVER LIMIT/command/settings/device/scope/lifecycle/no-sale/ack checks remain. Legacy four-field verification and late-receipt/CARD defaults are unchanged. No original report/result/status rewrite, Sale/payment/stock/fiscal command, automatic release or production SQL.

Initial native execution exposed validator serialization order in the new fixture; corrected to the exact ingestion digest, without changing its algorithm or old four-field behavior. Focused Node20 now 17PASS/0FAIL/0SKIP; full native CI still required. Synthetic regressions cover connector shape/idempotent audited app-only release, JSONB key order, raw/report tampering, code/type/schema/intent mutations and default-path refusal. Exact full native PR/main CI and normal guarded deployment remain required. Physical POS unblock remains NOT TESTED; original files must be verified through the native app after the corrected revision is installed. No broad/manual PASS. Retain every peer owner and accepted behavior.

04/11/2026 — FTEXT-OVER-LIMIT-REPORT-01 / ASSIGNED BEFORE SOURCE / NOT TESTED

ΑΝΑΛΗΨΗ ΑΠΟ FTEXT-RESILIENCE-01 — ASSIGNED fix/ftext-over-limit-report-20261104 /root. Owner explicitly requests this bounded verifier compatibility fix. Preserve other FTEXT assignments and scoped PASS.

Public-source diagnosis: verifyFtextOriginalUnknownFiles accepts only four-field reports, while the existing connector may emit code/rawResultHash. Add rejection-specific support for the canonical six-field code2 report, preserving complete original report bytes, stored result digest, raw RES digest, command/settings/scope/lifecycle/device checks, exact first/only CASH S OVER LIMIT and app-only idempotent audited release. Do not broaden late printed receipt, CARD, timeout or any financial/fiscal execution.

Required synthetic tests: legacy/current reports, full hashes, tamper/code/command/refusal and native no-business-write/idempotency regression. No private incident IDs, original files, customer data, amounts or local configuration included. New compatibility NOT TESTED/AWAITING IMPLEMENTATION; no live or manual PASS. Exact full CI/main and ordinary guarded release precede user acceptance. Next: publish this before-source claim green/main, then source/test edits. Checkpoint CHECKPOINTS/CHANGES/2026-11-04-ftext-over-limit-report.md.

04/11/2026 — CENTRAL-BACKOFFICE-ACCESS-01 / INVENTORY LIST PAGINATION INSTALLED / HOSTED ACCEPTANCE OPEN

Same retained owner; receipt branch docs/backoffice-list-release-20261104. Source PR3626 final head d36e08b517d37eaba5913f8ff26743ba710389b1/tree b6ca98cd747c620028d792b4d7903b300db05278 merged6088b7b2d1eb1b404205f15e93a7503bfcea268b. Before-source claim3625 was green/main before edits. This engineering receipt supersedes the historical SOURCE CANDIDATE/AWAITING CI status below for this bounded batch only.

Exact full PR CI41719478340/job126208964679 and full main CI41721519954/job126223126740 each all5SUCCESS,5517server+8backupPASS/0FAIL/0SKIP. Actual isolated PostgreSQL425-stocktake fixture, full-precision timestamp ties, multi-page completeness/no duplicates, scope/visibility cursor rejection and late grant/lifecycle fencing executed. Shared mounted UI, Work/TABLE_SERVICE build and browser/HTTP checks passed. Initial PR assertion corrected to existing stronger403 foreign-store denial without runtime relaxation. Initial main Chromium startup/render timeouts passed failed-job-only retry with source unchanged. Do not sum overlapping runs.

First guarded deploy41725654512/job126230179307 built exact6088 but Render dep-dbl5g7mgekts7393a0ng failed activation03Nov22:06:54UTC. Existing ensure-pos-return-compat.js could not reach PostgreSQL while old runtime logged57P01 administrator shutdown. Read-only query confirmed database restart03Nov22:07:05.787972UTC and recovered connectivity; no inventory source defect or responsible operator inferred. Only failed guarded job retried after recovery. Retry job126239304368 SUCCESS; Render dep-dbl5oarncjis73baf2u0 LIVE03Nov22:18:03.66069UTC (04Nov00:18Athens), exact6088. Independent public /api/health returned ok=true and exact6088 on04Nov. No direct deploy/config/schema/seed/database mutation from this page. Previous healthy rollback revisionc7830ad2108603bdbab8739e8ce78164cc234b5f retained by ordinary workflow.

Installed personal list uses bounded200-row keyset pages with next/previous controls, exact scoped visible anchor and redacted DTO; Owner readers/writers and grants unchanged. Detail10000-line refusal remains OPEN; no cross-page snapshot guarantee under concurrent source mutation.

HOSTED PAGINATION ACCEPTANCE NOT TESTED: 04Nov browser opened ordinary sign-in, selected the previously used personal Username/PIN method for lab31 and requested credentials through secure browserAuth. Request and following state inspection both timed out; authentication result UNKNOWN, no positive signed-in identity or inventory view observed. No PIN/credential value read or persisted. No hosted425-row fixture, grant/count/finalize/stock/payment action. Do not label browser transport failure as product failure or infer business invariance. Prior109-line draft and limited theory/history observations preserved without replay. CI/release proof is not functional LAB/manual/PDF PASS.

Full all-functions request remains ASSIGNED/OPEN under CENTRAL-BACKOFFICE-ACCESS-01. INVENTORY-RECONCILIATION-01 retains report/value/review/correction/export scope. Single next action: restore responsive secure personal login, verify lab31/LAB scope and exact loaded client revision, then measured read-only acceptance; cross-page hosted acceptance still requires separately reviewed safe fixture, not bulk production records. No permission expansion or broader closure. Checkpoint CHECKPOINTS/CHANGES/2026-11-03-backoffice-inventory-list-pages.md.

04/11/2026 16:50–16:52 Europe/Athens — INVOICE-FAST-PDF-TRANSPORT-03 / LIMITED HOSTED HEADER PASS / LATENCY OPEN

Retained /root owner. One-line validated PDF dataUrl transport repair PR3633/c3badc0d0a60097fc661a7d659918d580aaca01a passed fullPRCI41845161776, merged0d57653f03d2425189d1ae6ef3744e32e6b7b279. Exact fullmainCI41847674040/job126635512102:5522server+8backupPASS/0FAIL/0SKIP, all5jobsSUCCESS. Normal guarded release41850110142/job126643968501 SUCCESS, preserved rollback13335485067, exact healthy revision14:44:36Z and independent health before/after new read. No direct hook/forced guard/schema/business write. Focused199PASS/56actual-handlerPASS; independent read-only reviewer56PASS/no blocker.

ONE new native header-only no-submit read of header-table-safety-20261104-G.pdf / LAB-HEADER-TABLE-20261104-G on exact healthy0d57653f: supplier LAB METER TEST, number and date2026-11-04, automatic24.80 all agree with the two-page printed original, without manual correction. Two rows qty1/net10/VAT2.40/gross12.40 each, final net20/VAT4.80/gross24.80/EFK0. No type/payment/CREDIT selection, payment/draft submission, approval, finalization, stock/fiscal/myDATA action or previousF/D/paid replay. LIMITED PASS only for valid PDF transport and correct four-field automatic header in this fresh synthetic sample; no product matching/full invoice/general supplier/Gate3 acceptance.

Before-state3635/bf9f4126fabc83bed3cde44f1ce682c777b95839 passed docsCI41851329117 and mergedd8bc79ec62c174d484c36fe1484a71d081775fb8 BEFORE upload. Baseline14:45:28.531234Z refreshed14:50:29.339519Z without drift; after14:52:30.076310Z all nine measured LAB/control counts and selected scalar signatures unchanged: transactions135/shifts44/stock110/movements95/documents74/orders62/jobs82/attachments84/inbox66, controlall0. Visible native MAIN before cash/opening40/cards0/IRIS0/total0 and one existing transaction, same selected virtual LAB. PurchaseOrderLine/full-database invariance and physical POS/payment settlement duration NOT TESTED. Evidence CHECKPOINTS/EVIDENCE/invoice-fast-pdf-transport-20261104/:before/immediate-before/after/result.json, synthetic G PDF and correct-header-slow.jpg.

LATENCY remains OPEN: browser upload timer started14:50:40.804Z; eighteen3second ready waits ended without a ready timestamp, so continuous timer did NOT capture the actual readiness instant. Correct fields first appeared in the AX snapshot at the end of that64.767s tool call; subsequent timestamp14:52:04.724Z gives only83920ms observation upper bound with a gap, NOT an exact83.9s reading duration. This is a slow roughly minute-scale observation, no performance PASS. UI confidence displayed1% and one ready file rather than two physical pages; do not infer calibration or physical-page UI correctness. Hosted log14:50:46.281Z confirms Azure entered configured fallback; no FAST failure appeared in the bounded log window. UI result, not missing logs, is evidence of correct fields; complete provider transport/response timing was not captured.

PreviousF12.346s andD12.111s wrong12.40-versus24.80 remain real historical failures; earlierC11.642s correct sample remains historical, not a speed guarantee. The captured F HTTP400 invalid inline-PDF file_data has a targeted source repair and new correct-header observation, not universal provider accuracy. Ordinary provider failure/no-key useful-Azure fallback policy remains a known OPEN limit. Completed transport03 and superseded guard-only implementation/retest sections are removed from pending; latency/fallback policy/EFK/unnumbered/general accuracy/UI physical count and all peer owners remain OPEN. No full invoice/Gate3 closure. Manuals updated only for this observed bounded flow. Single next action retained /root: read-only timing/profile of the existing FAST header path to reduce waiting before POS payment; publish a precise claim before another source change. Do not replay G/F/D to repair timing evidence.

04/11/2026 — INVOICE-FAST-PDF-TRANSPORT-03 / SOURCE CANDIDATE / AWAITING FULL CI AND LAB

Retained /root owner, fix/invoice-fast-pdf-transport-20261104. Before-source claim3632/head348939e470715b60c9254366e3566913f04cec87 passed applicable docsCI41844507527 and merged36fff0ebc1664a38a9447f04a5e87c569a4bae24 BEFORE source/test edits. Latest actual F onhealthy6088b7b:12346ms, automatic12.40 vs printed24.80 FAIL. Captured hosted Azure fallback entry then both OpenAI HTTP400 invalid file_data; ordinary failure returned the Azure subtotal. Existing whole-return PDF guard worked to enter fallback and is preserved.

Single runtime line: fast-header input_file.file_data now keeps the already validated full PDF dataUrl rather than stripping its MIME/data prefix. Matches official OpenAI inline PDF contract; no extra provider/network request, full-product waiting, model, timeout, retry count, wallet/access/store/payment/draft/stock/fiscal/auth or schema change. Other import/recheck similar callsites remain separately scoped findings. Existing useful-header fallback policy on ordinary failure/no key remains explicitly open, not a new guaranteed-total gate.

Meaningful actual-handler/transport regression loads actual callFastOpenAiHeader and captures the JSON body at stubbed fetch: original two-page synthetic PDF data URL, filename, decoded bytes, Responses URL/POST and strict header schema; actual image fallback unchanged. Before runtime edit55PASS/1FAIL, failure on stripped file_data; after56handlerPASS. Focused199PASS/0FAIL/0SKIP across seven header/handoff/multipage/provenance/duplicate/tolerance suites. No live provider call or credential in tests. Independent read-only reviewer found no blocker and independently ran56handlerPASS/0FAIL/0SKIP; full exact PR/main/native/build/invariant/E2E CI and ordinary guarded exact healthy release remain required.

No new correct-total manual/PASS entry. Hosted transport repair NOT TESTED / AWAITING LAB: after release publish fresh baseline and ONE separately identified new synthetic header-only no-submit PDF read; check four fields including printed24.80, continuous timing and before/after/control. Do not replay F/D or previous paid/CREDIT documents; no payment/approval/finalization/stock/fiscal action. Fixing request validity is not an accuracy/latency guarantee. Provenance limitedPASS and every peer owner retained; EFK/unnumbered/general supplier accuracy/physical POS latency remain separate OPEN. Single next action full exact CI before installation and new measured read.

03/11/2026 — CENTRAL-BACKOFFICE-ACCESS-01 / PERSONAL INVENTORY LIST PAGES / SOURCE CANDIDATE AWAITING CI

Same retained owner; feat/backoffice-inventory-list-pages-20261103. Claim3625 head ec6e489087f718ecd06a9ac2d8e7096a44534f22 passed docsCI41715627365 and merged68949e87d0d8598475787bbe1e6c7b54e1eb43c4 BEFORE source.

The existing personal list now returns bounded200-row keyset pages plus nextCursor, rather than refusing the whole result above200. Only a bounded validated object ID is accepted; PostgreSQL compares the anchor's full-precision startedAt/id inside the same company/store/version/current visible status. Missing/hidden/foreign anchors request a fresh first page without disclosing a list. Existing before/after live grant/session/module/licence/lifecycle checks and explicit redacted list DTO remain. No new permission, default, role, Owner reader, schema, worker or business writer.

Actual controlled native personal workspace has next/previous page controls, scoped cursor stack, first-page refresh and detail clearing; existing sequence/scope fencing discards obsolete reads and pending-write locks remain. Owner rendering is unchanged. Detail10000-line refusal remains OPEN; no cross-page snapshot consistency guarantee during concurrent source changes. Cursor page is never company scope or report/audit admission.

Local Node20.20.2: focused personal visibility/module/native-UI group28PASS/0FAIL/1nativePGSKIP; disjoint list/rights/actions/route group17PASS/0FAIL/0SKIP, Work-safe frontend/TABLE_SERVICE build PASS. Initial local import failure from ungenerated Prisma client resolved by local client generation; no source workaround. New real-PG test adds425 same-microsecond stocktakes, stable multi-page completeness/no duplicates, blind/history masks, invalid/foreign/hidden cursors, mid-read grant withdrawal/lifecycle change

and unchanged business controls. That native fixture is NOT TESTED locally; full CI must execute unskipped. Existing Owner/masking/uncertain-writer UI tests passed. No hosted fixture, count/finalize/stock/payment/grant action for this batch.

Status SOURCE CANDIDATE / AWAITING exact full PR/main CI, ordinary guarded healthy release and subsequent measured read-only hosted acceptance. Not installed or functional LAB PASS. Full all-functions BackOffice remains ASSIGNED/OPEN; report/value/review/correction/export remains with INVENTORY-RECONCILIATION-01. Previous3624 observed theory-only test and open109-line LAB draft preserved without replay. No manual/PDF PASS closure. Checkpoint CHECKPOINTS/CHANGES/2026-11-03-backoffice-inventory-list-pages.md.

03/11/2026 — ACHARNON-CATALOG-IMPORT-01 / CODE CI GREEN / IMPORT WAITING FOR RELEASE

Same owner /root; runtime PR #3620 merged as 0bbdf8a485a608bfadcf67d2d5e7e338dcf865eb. Exact PR CI 41708117358 and main CI 41710179007 passed every job, including real isolated PostgreSQL atomic rollback, concurrent repeat, same-company cross-store generated SKU allocation and barcode-less replay. Later shared main 059f18a122aea21353c92311c8f20911334e2875 also passed full CI 41713216507. **CI evidence only: no positive separate-tenant LAB PASS and no LIVE catalogue import.** Existing owners and protected PASS scopes remain intact.

The owner delegated duplicate choices and repeatedly authorized final import into the existing store. Private catalogue is cleaned and saved: 3310 products / 4387 unique numeric text aliases, all stock0, generated program SKUs still blank; actual new parser/normalizer reports zero invalid and every category/subcategory belongs to the Rizareio taxonomy. Audits retain 13 merged source rows,196 excluded nonnumeric strings,2 negative-price system rows; one packaged item unit corrected with source evidence. The original-stock filter retains 939 positive and2371 negative source records, with no source-zero item. No private catalogue or record identifiers are committed.

OPEN / release and business write pending. Ordinary guarded deployment deferred the validated imports while newer independent production changes arrived on main. Deploy workflows 41713323189 and41715260986 ran the freshness guard and skipped triggering Render; do not mistake their overall success for a live release. Preserve the other pages' changes and deployment safeguards. Official checkout blob filters retain full history and all checks while avoiding historical file downloads. The superseded already-failing main run41702074420 was cancelled to unblock newer main CI; no test gate was removed.

The owner explicitly declined creating any new test company/tenant. Do not retry that rejected action or ask for another import approval. Existing-store session was restored through secure password and2FA; final workbook is loaded in the selected-store import form. Next: verify the actual healthy release containing #3620, run authenticated preview (3310 CREATE /0 UPDATE /0 INVALID), final import once, independently compare every persisted item/price/department/relationship/alias and stock0, then synchronize acceptance evidence. Checkpoint: CHECKPOINTS/CHANGES/2026-11-03-acharnon-import-release-progress.md. No overall PASS or manual completion claim.

03/11/2026 — CENTRAL-BACKOFFICE-ACCESS-01 / PERSONAL INVENTORY LIST PAGINATION / BEFORE-SOURCE CLAIM

Same retained full-scope owner; branch feat/backoffice-inventory-list-pages-20261103. Continue after merged3624/c3cf6f5, exact docsCI41714586527 success, independent history/theory/combined UI observations retained without replay. Full all-functions scope stays ASSIGNED/OPEN. No overlapping report/value/review/correction/export work transferred from INVENTORY-RECONCILIATION-01.

Bounded next source: replace the personal inventory list's whole-result200-row refusal with bounded200-row keyset pages on its existing exact scoped reader, cursor anchored to a visible stocktake in the same company/store and current permitted lifecycle status. Validate bounded cursor inputs; retain before/after grant/session/licence/module/lifecycle checks and explicit redacted DTO. Native personal InventoryV2Center gets next/previous page controls through its existing controlled coordinator, clearing details and fencing stale responses on page/store/rights change. Existing Owner list and every writer

unchanged. No new right, default/profile expansion, company authority, schema/worker change, hosted grant or business mutation. Detail10000-line limit remains separate OPEN; no claim of snapshot consistency across concurrent inventory changes.

Required proof: >200 allowed list rows with no omissions/duplicate at stable source; equal timestamps; malformed/foreign/hidden cursor rejection without disclosure; history versus draft-only masks; grant withdrawal/lifecycle fencing; store change/late UI results and Owner unchanged. Current hosted observation on109lines is not a pagination/load acceptance. Focused local/native tests, Work build, full exact PR/main CI and guarded release precede future measured hosted pagination acceptance. No bulk hosted fixtures, stock/count/finalize/payment actions under this claim.

Status NOT TESTED / BEFORE SOURCE. Single next action: publish claim green/main, then implement this bounded list-only pagination. Existing manuals/PDF scoped PASS retained; no functional closure. Checkpoint CHECKPOINTS/CHANGES/2026-11-03-backoffice-inventory-list-pages.md.

03/11/2026 — CENTRAL-BACKOFFICE-ACCESS-01 / THEORY-ONLY PERSONAL UI OBSERVED / FULL ACCEPTANCE OPEN

Same retained owner; receipt docs/lab31-theory-observation-20261103. Claim3621 exact head1e7fe18 CI41709166435 success, merged e06ba2ef85b65c1d0f9de5d275b6d3c3001c3df7 before new action. Explicit user authorization covers all LAB tests.

One canonical native UI creation at20:29:46.4UTC: LAB31-THEORY-20261103-01, id8925a034-cd4f-4e05-a14b-d4d96881a1bf, DRAFT/FREE (native form),109snapshot lines,0counted. Not FULL as the preliminary baseline action label had anticipated. No counting, finalization, financial or stock action. Fresh before20:28:46 and after20:30:01/20:38:32: 43shift/27count-event/90sale/95movement/110store-product/1CloudAudit counts AND content digests unchanged. Stocktake4→5 only. Fresh product quantity/latest movement baseline and zero N40 sale/movement/stocktake control retained.

Secure form genuine personal login verified welcome Δοκιμή απογραφέα LAB, sole store and sole Απογραφή action. Existing saved inventory.read + inventory.expected.read only; no new rights changed. Personal list shows only the new DRAFT and hides four prior FINALIZED stocktakes. Opened109uncounted rows: expected visible, e.g. TEST1 current snapshot4; counted and difference are unknown em-dash, not false zero. No cost/retail or count/clear/zero/delete/finalize/export controls. SKU search selects TEST1 without write. Screenshot viewport clips right columns; accessibility tree separately confirms4/—/—. No API-denial/revocation/mobile acceptance inferred.

This is a limited hosted UI observation, not formal revision-bound/full LAB PASS: exact loaded client revision was not captured; difference for an actually counted draft, direct API denials and broader rights remain NOT TESTED. Do not repeat earlier accepted counts/finalizations to close documentation. No functional manual/PDF closure. Existing prior PASS/manual and all peer ownership protected. Draft remains open for future separately identified tests; lab31 remains theory-read-only.

Whole all-functions BackOffice scope ASSIGNED/OPEN to retained CENTRAL-BACKOFFICE-ACCESS-01. INVENTORY-RECONCILIATION-01 keeps report/value/correction/export ownership. Next: preserve this observation centrally, then review next independent native permission adapter without replaying accepted operations. Checkpoint CHECKPOINTS/CHANGES/2026-11-03-lab31-theory-observation.md.

03/11/2026 — CENTRAL-BACKOFFICE-ACCESS-01 / INDEPENDENT PERSONAL UI OBSERVATIONS / DRAFT PREPARATION CLAIM

Same retained access owner; branch docs/lab31-independent-reads-20261103. Explicit user approval covers all LAB tests. No transfer of INVENTORY-RECONCILIATION-01 or any other owner.

Observed earlier in this conversation: lab31 with inventory.read + inventory.history.read only opened the existing FINALIZED N39-LAB-20261010-RECOUNT-REASON-01, counted4 visible, expected/difference/cost and mutation controls absent. Then saved inventory.read + inventory.expected.read only; inventory.history.read and inventory.count off, other rights/stores unselected. Save confirmation required

fresh personal login. Secure form/manual login difficulties resolved by secure browserAuth form; positive welcome Δοκιμή απογραφέα LAB and sole LAB store verified. Personal inventory list displayed no available stocktakes. This supports hidden finalized history in that UI, but does not positively verify theoretical fields on an open draft. Exact loaded client revision and independent API/business invariance were not captured: limited UI observations, not formal LAB PASS.

Current resumed Chrome tab1 showed session changed and a different company's support view. No operation was performed there. Canonical Super Admin sign-in and 2FA completed through secure forms; no secrets read or recorded. Selected MYWORKSTATION LAB / ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ cmtpopbgo000trhb5ng9ytiru. Owner inventory UI has only the four prior finalized stocktakes, no visible open draft. MAIN at 03Nov21:11 Athens showed cash/card/IRIS/total0 and transaction count0, opened29Oct19:04 by LAB POS2; this is preliminary UI evidence only, not a complete pre-mutation baseline.

Before-action bounded claim: prepare at most one separately named synthetic open LAB stocktake for positive theory-only visibility, with existing canonical UI and no count/finalize/stock/payment action. Name LAB31-THEORY-20261103-01. Publish this claim green/main first; then record exact draft creation semantics, fresh SKU/stock/latest movement, shifts/audit and unaffected control before creation. If complete baseline or safe semantics cannot be obtained, leave creation NOT TESTED. No automatic grant expansion; retain current two rights. Capture exact installed/client revision for new acceptance. No business action has yet been executed under this claim.

Full all-functions scope remains ASSIGNED/OPEN. Previous scoped PASS/manual and all peer ownership preserved. Single next action: after green/main claim, collect complete fresh LAB/control baseline and prepare exactly one canonical open draft only if safe; then genuine personal login and expected/count/difference masking review. No replay of accepted stocktakes or financial actions. Checkpoint CHECKPOINTS/CHANGES/2026-11-03-lab31-independent-reads.md. No functional/PDF PASS closure; current PDF baseline retained.

03/11/2026 — ACHARNON-CATALOG-IMPORT-01 / ASSIGNED BEFORE SOURCE / LIVE PREVIEW FAIL

Owner /root, branch fix/acharnon-catalog-import-20261103. User explicitly requests correction and import of the prepared new-store catalogue after removing 25 unresolved items. Independent Acharnon first-import scope only; existing Rizareio, Daily Bite, KAT, Diadochou and all other owners/PASS remain protected. No takeover of retained inventory reconciliation or operator permission work.

Actual authenticated selected-store preview: 3325 rows, 0 CREATE, 0 UPDATE, 3325 INVALID; hardcoded legacy department/code validation rejects the new store's existing department identities. No final import, product, stock, fiscal, payment or schema write occurred. Approved private preparation retains 3325 products,4598 source barcode pairs, all stock0; unresolved barcode collisions/invalid scanner strings must be explicitly resolved before import, never silently discarded. Private catalogue/identifiers remain outside Git.

After this claim is green/main: add bounded ACHARNON_IMPORT source profile with explicit company/store manifest and exact existing department bindings (1–9,17,18; percentage distinct from internal department code). Reuse canonical company SKU allocation transactionally; old source codes are reference only. Preserve all reviewed text barcode aliases, exact cost/retail precision, categories/subcategories and supplier links. Reject mismatch, collision, existing products/replay, nonzero stock and wrong tenant/store atomically. No inferred legal exemption, fabricated fiscal code, legacy-map broadening or direct production repair. Bound runtime to new inventory-acharnon-source.js plus source-profile dispatch, normalizer/first-import SKU allocation integration and focused/native tests.

Required: failing-before regression; target/dept/code/zero-stock/alias/collision/precision checks; native atomic rollback/concurrent allocation/replay and existing profile regressions; exact full PR/main CI and ordinary guarded healthy release; measured synthetic LAB import before one conflict-free real preview/final import and exact readback. Current source NOT IMPLEMENTED, tests NOT TESTED, real import NOT RUN. Checkpoint CHECKPOINTS/CHANGES/2026-11-03-acharnon-catalog-import.md. Next: publish this claim before source changes.

03/11/2026 — CHAT-TOPICS-VISUAL-01 / AUTHORIZED DELIVERY TAKEOVER / SIGNING IN PROGRESS

ΑΝΑΛΗΨΗ ΑΠΟ codex/chat-native-readers-20261031 / feat/chat-topics-visual-20261103 — ASSIGNED codex/chat-topics-delivery-20261103. The owner explicitly requested this page resume the stalled Render conversation and explicitly approved Android0.1.16 construction with the existing signing key. This is a sequential transfer of the existing bounded topic/visual delivery, not a parallel implementation or expanded feature scope. Before-source claims3567/3570 and merged source3572 remain authoritative; all previous scoped USER PASS and peer owners are preserved.

Verified source3572 head9dc36d0b: fullCI41543209513, Android41543209531 and actual browser41543209506 SUCCESS. Browser artifact13185614621 ZIPsha256ca36e092d105d0ec1e78ef5de5cfbcd70071ac116e361993fd1844ef79469e07 independently verified;360x740 and390x420 images visually reviewed, tabs/composer visible. Source-owned Android/web/server Chat paths are unchanged from merge3721113c through checked0c352c2e. Exact full mainCI41680791674 at0c352c2ecafe386f6c6af324bb9db736b8cd70d3: all5jobsSUCCESS,5479server+8backupPASS/0FAIL/0SKIP, isolated HTTP/browser/native database flows passed. Initial signing41680412136 correctly refused before loading the key because previous main CI skipped full build-and-test; after the new full success, only its failed job was rerun. Signed output is still PENDING, not distributed or physically accepted.

Render confirmed workspace tea-d9ie26vaqgkc739uudqg / existing srv-d9isenfavr4c73bdh52g. Observed LIVE35d6840e / dep-dbkuaas9v7es73fcrqs0, public health oktrue/exact revision; it descends from3721113c with no Chat source delta. Public Android manifest remains0.1.15/code16. No restart/deploy, environment/key/permission/schema change, production data write, real Chat send/read/ack/forward/Push, AI/provider or financial action by this takeover. New physical/LAB/USER topic acceptance remains NOT TESTED; overallN16 OPEN.

Bounded continuation after this handoff is main: verify the existing stable-signed artifact package/version/hash/pinned signer, update only versioned APK/public release manifest and own delivery records, require exact PR/main fullCI and the existing guarded deployment, then verify public health/manifest/APK bytes and request ONE combined new-topic phone check. No re-signing key setup, guard bypass, unrelated source fix or replay of accepted familiarUI tests. Checkpoint CHECKPOINTS/CHANGES/2026-11-03-chat-topics-visual.md. Single next action: finish and independently verify signed0.1.16 before publication.

03/11/2026 — FTEXT-PROMOTIONS-01 / ASSIGNED BEFORE SOURCE

Validated runtime35ad3b76 / documentation-only main reconciliation

Exact source35ad3b76623a282fbdd4c484df6cac5af41e9a95 passed fullPRCI41688582630/all5SUCCESS, server5485+backup8PASS/0FAIL/0SKIP; native recovery41688582669/job126100815669 passed59/0FAIL/0SKIP including concurrent promotion CASH/CARD commit, rollback, tamper refusal and controls; actual Windows41688582666/job126100815307 SUCCESS. Final focused29/0/0 also covers POS toFixed half-cent display parity while fiscal allocation remains exact BigInt cents. Earlier heads/runs superseded or cancelled are not counted as this final validation.

Merge was blocked only by concurrent peer documentation in main840525502f6bb7ce0b6cf74e871e1478b14cf745. All peer changes are preserved; no runtime source differs from the validated35ad3b76. Combined-head validation and exact main/normal guarded release still required. Promotion physical issuance remains NOT TESTED and parent remains OPEN under the same owner. No production payment, fiscal command, schema or settings change by this work.

Source candidate — FTEXT-PROMOTIONS-01 / AWAITING CI AND LAB

Before-source claim3608/head1a350279 passed applicable CI41684329371 and merged8aeabf1eab664998c427b1526d20f8a21208481b before runtime edits. Same retained owner/continuation. Candidate uses only server-resolved current-store LEAFLET/GIFT snapshots. Exact integer cents reconcile retail subtotal, original discount, final line totals and payment; at most two zero-discount existing S lines per product conserve quantity, department and VAT for cent remainders. No second discount subtraction or new vendor command. Current checkout rejects customer/loyalty/audience/mixed/fractional/general independent discounts as before. Existing Windows runtime and pairing need no replacement.

New requests bind a promotion-version marker to the saved original resolved checkout. Finalization reprojects and deep-compares the complete original plan before any business write, keeps original retail unit price/discount/promotion metadata, and reserves original product quantities once, regardless of fiscal line splitting. Existing receipt/code0/QR/card-proof gates, transactional rollback, original shift, settings/lifecycle/device/token/serial isolation, review/NO/late/replay/OUTPUT barriers remain. Legacy nonpromotion requests retain their former plan/hash and business path. No schema, migration, production SQL, settings, receipt or payment was issued in this work.

Local focused28PASS/0FAIL/0SKIP, including CASH/CARD offers, bundle remainder and zero gifts, mixed VAT, malformed/forged/mismatched snapshots and350 quantity/cent allocation combinations. Initial3 failures were incomplete synthetic card-profile fixtures, corrected without changing production guards. Linux PS7 cannot execute the full Windows fixture (explicit Windows work folder); exact actual Windows CI is required. Added actual command serialization assertions in the existing Windows fixture. Native PostgreSQL regression adds original-summary tamper refusal, stock-error rollback and racing CASH/CARD finalizers with exact sale/discount/promotion/quantity/payment/ledger/control checks. Native execution and full CI are pending; physical promotion issuance remains NOT TESTED, no manual PASS or old-transaction replay. Next: complete exact full/native/Windows CI, guarded release and separately controlled LAB acceptance.

Retained FTEXT-RESILIENCE-01 owner, bounded continuation fix/ftext-promotions-20261103. Owner reports promotion products refused by the current first-slice gate and explicitly authorizes correction. Current simple CASH/CARD latency USER PASS (6s CASH close,12s CARD paper), original101 NO, readiness/handoff/recovery and automatic OUTPUT remain protected; promotion issuance is FAIL/NOT IMPLEMENTED, not new LAB PASS.

Bounded scope after this claim merges: validate server-resolved LEAFLET/GIFT promotion snapshots and project their final values into existing zero-discount integer-quantity fiscal lines, exact cents and bounded deterministic splitting where division has a remainder. Preserve original business promotion/discount evidence and exact summary during fiscal finalization; no double subtraction, fake full-price sale, client-selected price or cross-store promotion. No vendor protocol/Windows transport/settings change, pairing, schema, production data write or diagnostic fiscal transaction. Customer/loyalty/audience/mixed/credit/IRIS/fractional/general manual discount remain outside scope. Exact source validation, native monetary/finalization/idempotency tests and existing full regression CI, normal guarded deployment then controlled LAB acceptance required. No promotion manual PASS until physical acceptance. Same owner retained, peers unchanged. Next: source only after this claim is merged.

03/11/2026 — FTEXT: κοινός τρόπος διασύνδεσης / Ριζαρείου USER PASS

Αρμόδιος παραμένει ο υπάρχων owner FTEXT-RESILIENCE-01 (fix/ftext-output-review-20261103). Αυτή είναι καταγραφή της εγκατεστημένης ροής, όχι νέα αλλαγή κώδικα. Server/package revision 6ebd9a423b492e5d32061aa68bb8297a396cce01, ιδιωτικό ενιαίο installer v10. Δεν αντιγράφουμε ρυθμίσεις, pairing ή διαπιστευτήρια άλλου καταστήματος.

Επαληθευμένη διαδικασία για εξουσιοδοτημένο χειριστή/τεχνικό στο συγκεκριμένο POS:

1. FTEXT+ App Parameters: πρωτόκολλο SOLIDUS(II)T, Folder C:\FText\, επέκταση txt, Result C:\FText\result.res. Στη Ριζαρείου Device Parameters: LAN, IP 192.168.1.103, serial DSM24014923. Αυτές είναι τοπικές τιμές Ριζαρείου, όχι καθολικές προεπιλογές άλλων εγκαταστάσεων.

2. Για αρχική προετοιμασία παλιού ιστορικού κλείνουμε FTEXT+ και connector, τρέχουμε το επιλεγμένου-POS ενιαίο setup, επιλογή 8, και περιμένουμε τελικό αποτέλεσμα/επιστροφή στο μενού. Στιγμιότυπο 03/11 14:07 Athens: movedFiles=14338, batches=89, fiscalExecution=False. Φάκελος εξόδου C:\FText_OUTPUT\<πλήρες settingsHash>, εκτός ενεργού vendor input. Δεν διαγράφουμε ούτε μεταφέρουμε χειροκίνητα αβέβαια/εκκρεμή αρχεία.

3. Ανοίγουμε FTEXT+, ελέγχουμε τον αρχικό ενεργό φάκελο, Device Parameters → Connect → OK → Save. Στιγμιότυπα 14:11–14:12 επιβεβαιώνουν σωστό Folder και επιτυχή σύνδεση.

4. Κρατάμε FTEXT+ ανοιχτό. Setup επιλογή 2 ελέγχει STATUS και στέλνει αποτέλεσμα στο MyWorkStation χωρίς απόδειξη/πληρωμή. Μετά επιλογή 3 ξεκινά τον ήδη συζευγμένο connector. Δεν χρειάζεται νέο pairing ανά εκκίνηση ή ανά απόδειξη. Κρατάμε FTEXT+ και connector ανοιχτά, επιτρέπεται ελαχιστοποίηση.

5. Στιγμιότυπο 14:14: connector connected, Register ready: verified nonfiscal STATUS, OUTPUT: 2 completed evidence files preserved. Αυτό επιβεβαιώνει πραγματική αυτόματη μεταφορά ενός ολοκληρωμένου STATUS ζεύγους. Η κανονική μεταφορά γίνεται στα κενά, με προτεραιότητα συναλλαγών/ετοιμότητας, μόνο για επαληθευμένα ολοκληρωμένα STATUS και επιλέξιμες committed CASH ομάδες. Αβέβαια, εκκρεμή, late/VOID/released ή μη επαληθευμένα στοιχεία κρατούνται. Δεν σημαίνει ότι κάθε αρχείο ή κάθε πληρωμή μεταφέρεται.

6. Κανονική πώληση υποβάλλεται μία φορά και αναμένουμε το αρχικό αποτέλεσμα. Σε αβέβαιη έκβαση δεν ξαναστέλνουμε. Για review χρησιμοποιείται το υπάρχον Ναι/Όχι/Αβέβαιο με τους κανόνες του manual· code101 δεν αποδεικνύει μη έκδοση. Φυσική ολική ακύρωση στην ταμειακή δεν ταυτίζεται με αποδέσμευση της εφαρμογής: ελέγχεται η πραγματική κατάσταση από αρμόδιο χειριστή. Στο κόκκινο readiness μήνυμα ελέγχουμε FTEXT+, connector και πραγματική κατάσταση αντί να παρακάμπτουμε τον έλεγχο.

Πραγματική επιβεβαίωση ιδιοκτήτη μετά την προετοιμασία: «6 δευτερόλεπτα μετρητά μέχρι να κλείσει», «12 δευτερόλεπτα κάρτα μέχρι να βγει η απόδειξη», κατόπιν «νομίζω ότι το πετύχαμε τρέχει πολύ καλά». Περιορισμένο USER PASS για αναφερόμενη φυσική βελτίωση/κανονική χρήση και παρατηρημένη προετοιμασία/STATUS OUTPUT. Προηγούμενη άμεση επόμενη πώληση εμφάνισε readiness refusal χωρίς αποστολή πληρωμής· ο ιδιοκτήτης διευκρίνισε ότι δεν είχε γίνει ολική ακύρωση στην ταμειακή. Η αιτία δεν αποδείχθηκε ανεξάρτητα. Δεν πιστοποιούμε πλήρη επίλυση όλων των διαδοχικών/αστοχιών από τη μεταγενέστερη γενική επιβεβαίωση.

Όρια: δεν έχουν μετρηθεί ανεξάρτητα οικονομικά/stock πριν–μετά ή exact request timing, όλα τα εγκατεστημένα module hashes, φυσικό automatic CASH OUTPUT, χρόνος CARD μέχρι ολοκλήρωση POS, all-day/restart/failure/late-receipt matrix. Το parent FTEXT παραμένει OPEN μόνο για αυτά τα υπόλοιπα. Δεν επαναλαμβάνουμε παλιές συναλλαγές, ειδικά την παλιά 9,20€, για τεκμηρίωση. Διατηρούνται tenant/store/POS/device/token/settings/serial έλεγχοι και μόνιμα no-replay journals. Δεν αποτελεί αναβάθμιση vendor FTEXT ή καθολική εγγύηση ταχύτητας.

Κοινή αναφορά για όλες τις σελίδες: docs/manual/ftext/PASS.md, CHECKPOINTS/CHANGES/2026-11-03-ftext-live-output-usage.md. Διαβάστε τα πριν από οδηγία/επανάληψη δοκιμής. Επόμενη ενέργεια: παθητική παρατήρηση φυσικής λειτουργίας και υφιστάμενων logs, όχι διαγνωστική πώληση.

3 November 2026 — FTEXT CASH101 original-cashier NO / scoped USER PASS; OUTPUT engineering live, selected-PC acceptance OPEN

Retained FTEXT-RESILIENCE-01 owner fix/ftext-rbs-outcome-20261031 / continuation fix/ftext-live-latency-20261102 / combined source fix/ftext-output-review-20261103. Before-source claims3592 and3593 merged before their respective changes. Source3594 finalac09021acd10a6fe8f4a4ec73b9d9430c5c6c088 passed fullPRCI41623473718/job125876234606: all5SUCCESS,5435server+8backupPASS/0FAIL/0SKIP; native recovery41623473712/job125874815760:58PASS/0FAIL/0SKIP; actual Windows5.1 run41623473705 SUCCESS. Initial941a97dc Windows failure was only ambiguous same-name fixture module selection; its full CI was cancelled when superseded, not counted PASS.

Merged6ebd9a423b492e5d32061aa68bb8297a396cce01 preserves peer remote source234a80aa. Exact fullmainCI41626122352/job125884392138 passed all5SUCCESS/5435+8/0FAIL/0SKIP; exact main Windows41626122420/job125883782635 SUCCESS. Normal guarded deploy41627848386/job125889738256 passed exact-CI/freshness checks, preserved rollback artifact13225699082 (SHA2568d963d9cc80d0966f3d763048709ae828bbc2e3c3e973507c6bc37fbf812aa0e), pinned one hook request and verified expected health11:37:12UTC. Renderdep-dbksbpdg1s2s73dl3nfg LIVE11:36:53.449508UTC; independent native public health returned oktrue/exact6ebd9a42. Newer main e6d1ed0f contains peer documentation only; owned runtime unchanged. No direct deploy, forced guard, production SQL write, schema change or fiscal command by this recovery work.

Scoped USER PASS: the owner explicitly confirms the POS unblocked after the original cashier's NO. Independent before/after original-request reads show CASH_OPERATOR_NO release bound to the original actor/result/settings, registerReadytrue as application-lock flag only, readinessVerifiedfalse, saleIdNULL, original REQUIRES_CHECK status/result/resultHash unchanged. Original report is canonical six-field101, not a proved fiscal rejection. No new checkout, payment, receipt, VOID, sale or replay was sent by this work. This accepts only the observed original-cashier application-hold release and retained original evidence; no independently measured shift/stock/control delta, fiscal cancellation, register readiness or speed PASS. Do not repeat this attempt for documentation.

Unified selected-PC installer replaced privately with version10,190636bytes,SHA256f9e141adc892ea2079c4904ffa1ac3ee9df0d6fd9dae0cf76df21c5e9f2c880d, revision6ebd9a42. All seven embedded module bytes equal the exact merged source; only Ftext/Cloud-Tools/Cloud-Connector/Setup/Cash changed, original Pair/Cloud-Test bytes and all original settings/pairing retained. No credentials or automatic connector start. Package execution is now observed: owner screenshot shows the updated selected-PC Setup8 running. All seven installed-file hashes and completed preparation/OUTPUT operation are not independently verified; no physical acceptance yet. OUTPUT default is outside vendor input in a same-volume sibling; acknowledged STATUS and original committed fiscal groups only, permanent no-replay barriers/journals, unknown/late/VOID/released evidence retained. Setup8 performs bounded automatic history preparation with FTEXT and connector closed and shows progress; regular metadata discovery does not suppress heartbeat/work polling. Original-input-folder USER hang versus immediate empty-test-folder startup remains an unresolved physical performance finding; partial archive did not resolve it. No vendor upgrade or speed guarantee.

Remaining OPEN: independent installed-module hash verification, completed closed-driver preparation/remaining-evidence review, original vendor input path restoration if still on its temporary test folder, current communication and naturally occurring trading/physical latency acceptance; all broader failure/restart/CARD/late receipt/resilience and automatic OUTPUT physical matrix. The completed CASH101 application-release subtask is no longer pending. Retained parent owner and all peer assignments/PASS remain. Manual updated only for the real scoped CASH review; OUTPUT instructions remain engineering criteria, not manual PASS. Checkpoint/active/tracker/pending and regenerated shared tracker PDF synchronized. Single next action: owner leaves the already-started Setup8 running with FTEXT/connector closed and supplies its final preparation screen before starting3; no diagnostic financial transaction.

Candidate validation follow-up — 3 November 2026

Initial source941a97dc passed native recovery41622555995, including the concurrent generic/device101 review and READ ONLY OUTPUT projection. Actual Windows41622555974 passed all existing transport/recovery/handoff/stop/installer cases and the new original-file OUTPUT test, then failed only because the new cloud fixture selected multiple same-name modules left by earlier tests. It now selects the exact exported discovery command's module; no production guard relaxed. Full CI41622555904 was still running; not a completed full PASS.

Current candidate adds one explicit Setup8 closed-FTEXT/closed-connector preparation, automatically iterating bounded verified history with progress and cursor-cycle termination, no STATUS/fiscal command and unknown groups retained. This addresses the existing large folder before slow STATUS can prevent routine idle cleanup; regular future OUTPUT remains automatic. Protect manual active-maintenance journals from interference. The output root uses the complete settings digest (already binds company/store/POS) without repeating long labels, preserving Windows5.1 path compatibility. New PS7 preparation fixture passes closed-driver refusal, automatic iteration/progress/termination and actual async loop polling. All server tests from correct server cwd:4494PASS/0FAIL/374environmentSKIP; earlier wrong-root invocation is not a source failure. Frontend build PASS. Final native/full/Windows CI and guarded deployment remain REQUIRED; new physical/OUTPUT/101 review acceptance NOT TESTED. No production release or hold release.

3 November 2026 — FTEXT CASH101 + automatic OUTPUT / source candidate / AWAITING NATIVE CI AND LAB

Same retained FTEXT-RESILIENCE-01 owner, combined branch fix/ftext-output-review-20261103. CASH101 claim3592/31edfcfd mergedf3594a6f after docsCI41619711078; supplemental one-install OUTPUT claim3593/ad41192d mergedb29aa08a after docsCI41620312002. Both claims were main before their respective source edits. No production release, hold release, fiscal command or new physical PASS.

Bounded source: exact six-field canonical code101/raw SHA256 CASH unknown becomes eligible for existing original-cashier NO/UNCERTAIN. Full canonical original result hash and all current company/store/POS/device/token/settings/lifecycle/serial checks remain; YES/foreign/changed/final/late/sale/VOID remain refused. NO releases application hold only, preserving basket and original status/result/hash. No automatic release, deletion or payment replay.

Automatic OUTPUT opts in through the normal seven-module package outputVersion1 (no setting/pairing change). Uses a same-volume sibling input_OUTPUT, scoped by company/store/POS/settings hash, with STATUS/CASH request folders. Successful current STATUS moves only after acknowledged upload; existing history uses authenticated bounded100-ID STATUS lookup. Committed fiscal history uses a new read-only20-ID lookup requiring SALE_COMMITTED/saleId, current claimed device/token/settings/lifecycle/serial, complete canonical verified receipt hash and original accepted handoff/command binding. Unknown/error/unacknowledged/late/VOID/released/non-handoff evidence stays untouched. No readiness renewal, claim or business write in metadata lookup.

Background metadata discovery never takes the folder mutex or suppresses heartbeat/claims. Original recovery/actual work/readiness win; one pinned group moves only in an idle fresh-readiness window. Per-group create-new/flush journal, hashes, timestamps, exact names, same-volume atomic moves, no overwrite/reparse, partial-move recovery. External durable request directories/active journal fence future fiscal replay before command generation, including restart. An output failure retains originals/journal and does not mark a valid readiness result failed. Manual STATUS archive/restore stays compatible. Historical drain is bounded and asynchronous; no all-files cleared or speed improvement claim.

Local Node20 focused28PASS/0FAIL/3isolated-databaseSKIP; broad FTEXT125PASS/0FAIL/10environmentSKIP before the final native fixture addition. Frontend build/TABLE_SERVICE PASS. New PS7 actual-file OUTPUT test passes original bytes/timestamps, busy/foreign/unknown rejection, collision, interrupted first move/resume and actual cash publication refusal; new cloud test passes bounded auth/scope/duplicate refusals and actual loop polling during asynchronous discovery. Existing PS7 manual STATUS archive/cloud archive tests pass. Existing generic

Cash smoke requires Windows paths and cannot run unchanged on Linux; actual Windows5.1 is REQUIRED, not substituted. An initial broad local invocation used the wrong root cwd and failed relative-fixture reads; corrected server-cwd full suite is running. Full exact PR/main/native/Windows CI, guarded exact healthy deployment and selected-PC package byte verification remain required. No CI-only manual PASS; shared PDFs/manual acceptance retained. Single next action: complete native validation, release the single bundle and then perform original operator review without resending the old payment. Physical speed, recovery and automatic OUTPUT acceptance remain NOT TESTED.

3 November 2026 — FTEXT automatic OUTPUT / same installation bundle / ASSIGNED BEFORE SOURCE

Same retained FTEXT-RESILIENCE-01 owner and current recovery page root; bounded combined source fix/ftext-output-review-20261103. Owner explicitly requests the previously agreed automatic OUTPUT work together with CASH101 review, so the selected Windows PC is updated once. CASH101 pre-source claim3592/31edfcfd mergedf3594a6f after applicable CI41619711078 (three SUCCESS/two correctly classified SKIP). No production release or application hold release yet.

Planned independent OUTPUT change: same-volume sibling FText_OUTPUT outside vendor input; exact current installation scope; automatically retain original bytes, timestamps and hashes in a durable create-new per-request journal, move only server-acknowledged successful nonfiscal STATUS pairs and SALE_COMMITTED matching original CASH/CARD files. Keep unresolved/error/unknown/unacknowledged/foreign/current markers, TXT/PENDING, VOID and stopped-attempt evidence in place. An authenticated bounded read-only history lookup proves completed fiscal requests and original hashes; it never claims work or renews readiness. Retain durable external replay barriers consulted before any future fiscal publication, including partial archive/restart; no wildcard deletion, overwrite, result rewrite or new fiscal operation. Incremental fresh completion plus infrequent bounded idle backlog work, with original folder exclusion and no per-poll full scan. Exceptions retain evidence and must not stop heartbeat or original recovery. Existing manual STATUS archive/restore remains compatible; no automatic restoration/replay.

Protect CASH/both CARD/NO/UNCERTAIN, original handoff/stop/readiness and all peer ownership. One current-package installer after exact full server/native/actual Windows CI, guarded healthy release and byte verification; preserve existing configuration/pairing. No official vendor upgrade is claimed. Source and physical improvement remain NOT IMPLEMENTED/NOT TESTED. Require negative/foreign/ack/hash/path/collision/interruption/restart/no-resend regressions and exact mounted review behavior. Current blocked transaction remains held; no production SQL/business-data write. Single next action: merge this supplemental claim before OUTPUT source edits; implement CASH101 under already merged3592 meanwhile. Manual PASS/shared PDFs remain unchanged until actual acceptance.

3 November 2026 — FTEXT-RESILIENCE-01 / CASH101 review continuation / ASSIGNED BEFORE SOURCE

Retained owner fix/ftext-rbs-outcome-20261031, continuation fix/ftext-live-latency-20261102; bounded branch fix/ftext-cash-101-review-20261103 / current recovery page root. Owner explicitly prioritizes releasing the existing blocked CASH attempt before further cleanup or automatic OUTPUT work. No transfer or duplicate ownership.

Observed USER FAIL: the POS remains in CHECK after session refresh. Original immutable device report is REQUIRES_CHECK with canonical unknown description plus code101 and a raw-result SHA256. Current ftextCashReviewable accepts only the four-field timeout shape; the authenticated six-field connector report is excluded, so existing NO/UNCERTAIN controls are absent. No completed sale or release was observed. This finding does not prove no fiscal receipt. Private request/store/operator identities and files are not published here.

Bounded planned correction: extend only the existing original-cashier CASH review predicate to the exact six-field code101 plus valid lowercase SHA256 rawResultHash shape, verify the hash of the complete original canonical result, and reuse existing transactional NO/UNCERTAIN decision,

actor/device/token/settings/lifecycle/tenant guards and retained basket. Never infer rejection from timeout/code101, permit YES, auto-release, delete evidence, change stored result/status/hash, finalize a released attempt or resend payment. All other codes/extra fields/malformed hashes/final or late receipts/sales/VOID/foreign actors remain held. Preserve four-field generic timeout, normal CASH/both CARD, original CARD NO, first-line rejection, handoff and readiness. No schema, Windows module/configuration, vendor setting, timing threshold or production SQL change.

Evidence reviewed: AGENTS, current owned tracker/active/pending records, ftext manual, 31Oct RBS outcome checkpoint and 02Nov latency preparation; current main60047750 and intervening owned runtime. Existing physical issuance/recovery PASS remains scoped; new CASH101 review and speed remain NOT TESTED/OPEN. Require meaningful synthetic positive/negative/full-hash/replay tests, actual outcome HTTP and mounted basket regression, native concurrent release/pending exclusion/no business writes, exact full PR/main CI and ordinary guarded exact healthy release. No new diagnostic sale or repeated old payment for acceptance. Final release and actual hosted result must be recorded separately. Single next action: merge this claim after applicable CI before source edits. Shared PDFs/manual PASS remain unchanged during engineering claim.

03/11/2026 10:45:48 Ελλάδας — AI-WALLET-COMMERCIAL-WAIVER-01 / SCOPED HOSTED LAB PASS

Same retained owner feat/ai-owner-wallet-20261022 / current /root / feat/ai-wallet-commercial-waiver-20261103; no transfer. Explicit owner approval and synthetic before record PR3580/head01759810 passed applicable docs CI (3SUCCESS/2classifiedSKIP) and merged97fb72fd16f1f8051dda7067f0333c4720e38ab9 BEFORE the action. Live revision2a8db9d5c4fcfa2742d8601c54f747bf1d918e53 / Renderdep-dbkilsnb9u1s73fgenpg verified native health; four affected runtime files byte-identical to source3563/accepted3a710176.

03/11/2026 14:45:58 Ελλάδας - AI-WALLET-COMMERCIAL-WAIVER-01 / SCOPED AUTHORIZED CUSTOMER LIVE PASS

Same retained owner feat/ai-owner-wallet-20261022 / current /root continuation feat/ai-wallet-commercial-waiver-20261103. The owner now explicitly approved the exact previously described private batch and amount, preserving the excluded holds, and a confirmation image in this chat. This supersedes only the prior approval boundary for that same batch; no broader financial or private-data publication authorization.

Fresh native health verified live6ebd9a423b492e5d32061aa68bb8297a396cce01/oktrue. All five affected route/repository/waiver/Admin files are byte-identical to accepted source3571/mainf0f8439442112d180f7546ff29ac2dced785b108; live revision full CI checks allSUCCESS. Source final64b24a49 fullPRCI41609525311 and exact mainCI41611891549 passed5421server+8backup/0FAIL/0SKIP, original normal guarded release41614134154. Current common ownership/checkpoints/manual/history reviewed before execution; no new runtime change.

One refreshed native scoped selection, matching preview, acknowledgement and ONE submit at03Nov12:45:58.775854UTC. Fresh private before values included wallet/version, selected original entries, all entry/audit hashes, notices, stock/movement/transaction/shift/sale signatures and LAB wallet control. Immediate final read matched before state. After: exact approved hold release, unchanged principal, version advances once, same entry count, ONLY selected existing entries SETTLED/customer charge0/commercialWaiver UNKNOWN supplier cost, immutable original tariff/reference/reservation/creation metadata preserved. Exactly one COMMERCIAL_WAIVER audit; all prior audit rows and other entries including explicit exclusions unchanged. Notices, settings and LAB wallet control unchanged. Full selected-store business signatures unchanged. Native success message and new wallet values match the read-only result. No new credit, provider replay, bank/card refund, invoice/stock operation or email.

SCOPED LIVE PASS closes the approved historical commercial-waiver action and previous approval-only pending task. Private customer identities, monetary amounts, audit/entry IDs, raw records and confirmation image remain excluded from this public repository; the image is shared only in the explicitly approved chat. Sanitized receipt: CHECKPOINTS/EVIDENCE/ai-wallet-commercial-waiver-20261103/approved-commercial-release-observation.json. Original synthetic financial LAB PASS remains protected; do NOT replay either completed action for documentation.

Remaining limits: excluded unresolved holds are not waived; recent activity history remains capped100 and oldest pending candidates100 with explicit more flag, max50 selections per request in one store. Hosted financial replay/concurrency were not repeated; isolated native coverage remains the corresponding proof. Broader wallet/manual tracker36 and unrelated owners remain OPEN. This is a qualified one-batch PASS, not a whole-wallet closure or authorization for another batch.

03/11/2026 — AI-WALLET-COMMERCIAL-WAIVER-01 / INSTALLED READ-PREVIEW PASS / REAL SUBMISSION OPEN

Same retained owner feat/ai-owner-wallet-20261022 / current /root continuation feat/ai-wallet-commercial-waiver-20261103; no transfer. Source3571 final64b24a49df8aa615b0665683a1355e0b4d335dd5 fullPRCI41609525311 all5SUCCESS:5421server+8backup/0FAIL/0SKIP; separate native recovery41609525358SUCCESS. Mergef0f8439442112d180f7546ff29ac2dced785b108 exact mainCI41611891549 all5SUCCESS, same5421+8/0/0. Normal guarded release41614134154/job125843318185 passed preflight/trigger/exact health; Renderdep-dbkqt3jbc2fs73a4n1q0 LIVE03Nov09:53:08.730297UTC. Independent native health oktrue/exactf0f8439442112d180f7546ff29ac2dced785b108.

SCOPED HOSTED PASS: existing authenticated Platform SuperAdmin native UI renders the independent oldest-pending collection beyond recent activity, explicit scoped selection and a matching preview with zero customer charge/UNKNOWN provider cost. Recent100 history remains unchanged. No customer names, identifiers, amounts, screenshots or raw private evidence are published. Sanitized technical receipt: CHECKPOINTS/EVIDENCE/ai-wallet-commercial-waiver-20261103/release-read-preview-observation.json. The existing one-entry synthetic financial LAB PASS and its before/after controls/manual/PDF remain protected and must NOT be repeated.

REAL FINANCIAL SUBMISSION NOT EXECUTED. Automatic approval review rejected the final submit because trusted explicit approval for that exact real batch and amount was absent; a prior synthetic LAB approval or an assistant summary cannot extend that authorization. Follow-up read-only wallet/entries/audits/notices matched the private before state exactly. Exporting a private financial screenshot and handing off the private browser view were both rejected; neither was shared. Resume through the canonical authenticated entry with a fresh read rather than relying on a retained browser view. No provider replay, new credit, payment, stock, invoice, configuration, email or actual customer release occurred.

Completed source CI/install/read-preview subtasks are removed from actionable pending scope. Single next action under the same owner: obtain trusted explicit owner approval for the exact already-prepared private preview; refresh original scope, eligibility, wallet/version and controls, then one native submit and exact before/after receipt. If anything changes, reconcile before acting; never broaden selection or retry a rejected financial action through another channel. Actual customer release, hosted financial retry/concurrency and broader wallet/manual36 remain OPEN. This is a retained-owner handoff at the approval boundary, not a full wallet PASS or a transfer.

One native UI preview, acknowledgement and submit at03Nov08:45:48.812623UTC in virtual MYWORKSTATION LAB / ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ / MAIN by authenticated Platform SuperAdmin. No physical POS operation; item/SKU/quantity/payment N/A. Original before control: open MAIN shift4caf44ac-f3f4-4e45-bd62-649457502745,0transactions/0cash/card/IRIS/total. Fresh immediately-before SELECT matched all published wallet/ledger/audit/notice/business signatures. Selected ONLY original B a2f1bc84-8d6a-43c9-96ea-a3e51e9577f3,930033microEUR; no provider request/replay.

Expected = observed: principal4610532 unchanged; reserved930033→0; available3680499→4610532; version45→46. Same14entries, only B changed to SETTLED/charged0/commercialWaiver UNKNOWN supplier cost. Original reservation/tariff/reference/createdAt preserved. Other13entry full-row hashes unchanged. Audits27→28: exactly one COMMERCIAL_WAIVER id95630930-8123-410a-ae40-9b0a8bcde98d/request9b383bef-86e4-4fd3-b8d9-f7c09bfe94a9; notice1/hash unchanged. Full stock/movement/transaction-excluding-attachment/shift/sale signatures and latest stock/movement times unchanged across all THREE LAB stores. Master/invoice/email flags remain OFF; no new credit/payment/stock/invoice/email. Native success message and balances4.610532/0 plus history “Απαλλαγή πελάτη”,0.930033released/customer0 verified. Evidence: CHECKPOINTS/EVIDENCE/ai-wallet-commercial-waiver-20261103/approved-lab-before.json and approved-lab-pass.json.

This closes ONLY one synthetic commercial-waiver acceptance; no bank/card refund and no claim of free supplier usage. Supplier cost remains UNKNOWN and assumed commercially by MyWorkStation. No hosted idempotency replay/concurrency or actual customer release performed. Source3571/final04a98b73f8f48247da303276885b16ea92a23434 retryCI41542186927 now all5SUCCESS;

exact main CI/normal guarded deployment and real approved batch acceptance remain OPEN. Complete wallet/manual tracker36 remains OPEN; existing postpaid/pricing/history/shared-cost PASS protected. Do not repeat this completed LAB transaction.

03Nov2026 — AI-WALLET-COMMERCIAL-WAIVER-01 / OWNER APPROVED SYNTHETIC LAB B / BEFORE ACTION

Same retained owner feat/ai-owner-wallet-20261022 / current /root executor. Owner explicitly typed approval in this continuation for the separately described synthetic LAB B930033microEUR commercial waiver. This newer narrow approval supersedes the old preserve-B instruction ONLY for that one LAB action; actual customer batch remains separate. No new provider call, credit, payment, invoice, stock, setting, email or supplier-cost confirmation is authorized by this test.

Current live2a8db9d5c4fcfa2742d8601c54f747bf1d918e53 / Renderdep-dbkilsnb9u1s73fgenpg LIVE03Nov00:31:46UTC; independent native health oktrue/exact2a8db9d5. Current full CI/normal guarded installation are green. Four affected wallet route/repository/waiver/UI runtime files independently byte-equal to accepted3a710176 core; intervening main history reviewed, no wallet runtime takeover.

Fresh baseline03Nov08:31:51.898994UTC (10:31:51Athens): virtual MYWORKSTATION LAB / ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ / MAIN, CloudChrome existing authenticated Platform SuperAdmin. No physical POS operation, item/SKU/quantity/payment N/A. Existing openMAIN shift4caf44ac-f3f4-4e45-bd62-649457502745 has0transactions/0cash/card/IRIS/total. Wallet version45/principal4610532/reserved930033/available3680499microEUR, master/emailOFF;14entries/27audits/1notice. Selected original B a2f1bc84-8d6a-43c9-96ea-a3e51e9577f3 REVIEW/charged0/original reservation930033, original usageNULL/tariff unchanged. All three LAB store stock/movement/transaction/shift/sale counts/digests and latest stock/movement times recorded in CHECKPOINTS/EVIDENCE/ai-wallet-commercial-waiver-20261103/approved-lab-before.json; other LAB stores are controls. StoreTransaction signatures exclude large attachment bytes, no byte-invariance claim for attachments. Full shift/financial state is synthetic.

Required sequence after this record is green/main: re-read baseline and continue only if identical; refresh native selected LAB preview for that ONE entry; verify930033/customer charge0/UNKNOWN provider cost; one explicit acknowledgement and one submit through the existing native UI. Expected principal/credits/debt/settings/notices unchanged, reserved930033→0, available3680499→4610532, version45→46, same14entries with onlyB final customer charge0 and commercial-waiver metadata, one append-only COMMERCIAL_WAIVER audit. Original tariff/reservation/reference/evidence preserved, and every business/control signature unchanged. Inspect exact resulting IDs/audit and read-only reopen; do not repeat a transaction after an uncertain result. If the fresh state changes, stop the identified action and reconcile rather than broaden scope.

Follow-up3571/final04a98b7 remains unmerged. CI41542186927 was cancelled at the25minute job limit after prolonged repository fetch; its new actual native old-pending/>100 regression passed before cancellation. Only that incomplete job has now been rerun, no successful jobs or runtime source changed. Actual customer selection/release still requires this follow-up exact full PR/main CI and normal guarded release. This is a BEFORE plan, not LAB PASS. After actual financial acceptance, immediately publish checkpoint/manual/active/pending/tracker/canonical PDFs with exact scope and retained broader OPEN items.

04/11/2026 - CASH-EVENT-SNAPSHOT-18 / SCOPED LIVE PASS: MULTI-SESSION BASIC AND EXISTING-READINGS GET; PARENT OPEN

Retained owner codex/cash-chat-reconciliation-20261026 / fix/cash-event-snapshot-reuse-20261103. The bounded report-timeout subtask18 is complete for the observed authenticated desktop scope. The parent CASH-UNIFIED-AUDIT-15 remains OPEN/ASSIGNED for source accuracy, document/event/expense reconciliation, card/bank/physical evidence and final financial acceptance. No transfer or competing ownership; existing scoped manual PASS and all peer work are preserved.

Actual04November Platform SuperAdmin/desktop Chrome acceptance on independently verified health ok/exact0d57653f03d2425189d1ae6ef3744e32e6b7b279: one basic reconciliation GET for the selected multi-session closed period returned its numeric report; one full GET using available stored readings returned the full report, raw findings and pending cross-checks. Neither showed the former generic unavailable/error or persistent spinner. This supersedes the earlier larger-period READ/P2028 failure ONLY for this observed read-completion scope. Observation was made after waiting for rendering; no precise elapsed latency, service-level guarantee, maximum-load/whole-program or other-role/device result is claimed. Full report availability does not certify its source accuracy or financial finality; pending evidence remains visible.

Fresh scoped before/basic-after/full-before/full-after checks cover12 target/control sessions: complete session financial/state rows, scoped transaction counts/fingerprints and review counts/fingerprints were exactly unchanged across both GETs. Attachment bytes were excluded from financial proof output. No paid AI button/provider request/retry, upload, paper/review/issue/checkpoint application write, financial/stock/fiscal/settings/permission or email action. Private source identities, staff, amounts, handwritten content, raw UI reports and screenshots are excluded from this public receipt; sanitized outcome only in CHECKPOINTS/EVIDENCE/cash-event-snapshot-20261104/read-completion.json.

Engineering proof: before-source claim3609/f1fcbfef passed applicable docsCI41690020222 and merged51540d5 before source. Source3622 exactd6e77152ac464c9370e144cba95ed87b95d6ff6a passed complete attempt2CI41702375999/job126173647290 all5SUCCESS/5488server+8backup/0FAIL/0SKIP, new868/869/native870 unskipped PASS plus build/browser/invariants/HTTP E2E. Attempt1 was cancelled at the unchanged25minute job limit after slow checkout, despite completed server tests; only that cancelled job was retried normally, with no source/timeout change. Normal expected-head mergea06dba1480ae394cb1093374d41de924438f8ebb passed exact mainCI41845438511/job126627790032 all5SUCCESS/5520+8/0/0; new871/872/native873 unskipped PASS. Its automatic guard41847574918 safely skipped physical deployment for newer peer production source. Successor0d57653 differs only in peer invoice runtime/test/docs; both owned cash production blobs and the new fixture are byte-identical. Exact successor mainCI41847674040/job126635512102 all5SUCCESS/5522server+8backup/0FAIL/0SKIP, same native873 unskipped PASS. Normal AUTOMATIC deploy41850110142/job126643968501 passed full-CI/freshness guards, preserved rollback artifact13335485067 SHA2566c036469094c830d758acb252a072630157ecf531fdf41f6d94568e97ade63a3, requested one pinned hook and verified exact healthy revision. No direct/manual deploy or guard bypass.

The implementation retains fixed16 stable-snapshot chunks, original per-session candidate/event windows and2001sentinels, line/completion1001bounds, all-date cross-session ambiguity, raw projection/order and source/report hashes, original ReadCommitted/unknown/standalone reads and prior17 exact monetary/review guards. The15second transaction limit is unchanged. Isolated native parity/scan-loop proof is separate from this real scoped read PASS. Completed performance18 is removed from active pending work; no parent financial/handwriting PASS, no replay of old provider or business actions. Usage/security/limits are in docs/manual/cash-control/PASS.md. Single next action under the same owner: review the existing unresolved source/matching and financial evidence; retain uncertainty, do not manufacture approval or repeat a paid reading merely to close it.

03/11/2026 — CASH-EVENT-SNAPSHOT-18 / IMPLEMENTED CANDIDATE / AWAITING EXACT NATIVE CI AND GET

Retained owner codex/cash-chat-reconciliation-20261026 / fix/cash-event-snapshot-reuse-20261103. Before-source claim3609 exactf1fcbfefd6c12b90499d5241eb5bb1872f821617 passed applicable docsCI41690020222 (threeSUCCESS/two classified runtimeSKIP), merged51540d5f9909cc5d62ebca3cc3f9d9ad917bd9da before any18source edit. Earlier claim heads passed docs CI but encountered actual peer-header merge conflicts; final same-flow anchoring preserves all unrelated peer headers. Existing explicit sanitized technical/code publication authorization retained; no private source details.

Bounded implementation only in cash-event-sales-source.js and cash-reconciliation-source.js: fixed16-session batches share heavy identity enrichment once per unique candidate union. Original per-session candidate SELECT/time window/order/LIMIT2001 and action SELECT/order/LIMIT2001 are retained. Raw invalid/overflow candidates stay independently LIMITED before linking; overlapping windows do not multiply link/completion rows. All-date company/store ledger/completion ambiguity and actor namespaces remain; completion ranking/groups are keyed by sale/session with original1001sentinel and indexed raw-item reads. Lines retain1001sentinel. There is no global result2001 truncation across the batch. Selected/context sessions are chunked under the existing500source fence rather than newly rejected. Same-snapshot collector is internal and enabled only by existing RepeatableRead/Serializable isolation sidecar, assigned before full projection; no DTO/hash metadata or cache survives invocation/schema/company/store/generation/apply boundaries. Standalone/ReadCommitted/unknown paths, prior17 arithmetic/fallback/review limits and the15second transaction budget are preserved. SQL errors propagate; missing internal batch results fail closed.

Node20.20.2 protected event/source/report and new focused checks33PASS/0FAIL/3native-environmentSKIP. New single-file PostgreSQL18.6WASM/actualPrisma6.19.3 SQL preflight3PASS/0FAIL/0SKIP: frozen exact pre18 event query plus source orchestration, raw sales/completions/events order/hash, whole source/sourceHash/canonical report/text/hash,18selected+2context and16chunking, overlapping windows/microseconds/outside-time conflicting links, optional actorName, signed expense, empty/foreign/zero/refund/reversal, all per-session/completion/line/event/candidate bounds and original/control immutability; isolated plan source scans once per chunk versus repeated frozen source queries. WASM is NOT native isolation CI/LAB proof. Exact native PR/main CI remains REQUIRED unskipped before release. One initial preflight failed because raw fixture DDL used the default schema while the actual ORM store lookup used its qualified schema; fixture now explicitly creates/selects its disposable schema. No runtime boundary was weakened.

Newest real acceptance remains larger-period basic/full LIVE FAIL with READ/P2028/503 after prior17release; a smaller-period basic GET returned without business changes. Both observations preserve target/control session/ledger/review fingerprints and dispatch no paid reader. This scale observation and redundant identity scans support this bounded hypothesis, not a measured assertion that one query consumed the full deadline or that18restores live reports. Existing scoped manual/PDF PASS and parent OPEN/ASSIGNED remain; no new manual/PDF financial PASS. No provider/paid retry, original source/read mutation, financial/stock/fiscal/setting/permission/schema/index/timeout/deployment action in this candidate. Single next action full exact native PR/main CI, then existing ordinary guarded healthy release and fresh authorized GET-only target/control acceptance.

03/11/2026 — CASH-EVENT-SNAPSHOT-18 / RETAINED OWNER / ASSIGNED BEFORE SOURCE; CURRENT LIVE READ FAIL

Same retained owner codex/cash-chat-reconciliation-20261026; bounded continuation fix/cash-event-snapshot-reuse-20261103. Existing explicit user authorization covers sanitized technical records/code/tests in this public repository and PR/merge after checks; private source identities, names, amounts, handwritten contents and diagnostic timestamps are excluded. No transfer or competing cash assignment.

Truthful prior17 engineering receipt: claim3577 merged89f58284d3366457de30222bc0616598787fa234 before source. Source3578 finalfa99fa9688fdabfe3cc118ddd9d5c0ce3e42d1cf passed fullPRCI41601984331 all5SUCCESS/5405server+8backup/0FAIL/0SKIP and native old-versus-reused source/report/hash parity. Normal merge695da72cb4b1e65b23c81cc8ce9189140ff694d2 preserved peers; exact mainbc37f7ee12c735656ca94ab5a860a988fb1149e9 fullCI41604814935 all5SUCCESS/5420server+8backup/0FAIL/0SKIP, native parity1063 and isolation trace1064 unskipped PASS. Our separate proposed deployment click was rejected by automatic approval review and was not executed or retried. Independent peer guarded release41607495623 was already running, passed existing full-CI/freshness/rollback/pinned-hook checks and verified exact healthybc37. No bypass or deployment action is authorized by this technical receipt.

Newest authenticated GET-only acceptance on healthy35d6840e43080dd519a730a27437100b277a3404 (cash runtime unchanged from validatedbc37) is LIVE FAIL: basic and existing-readings full multi-session reports failed; full diagnostic READ/P2028/503 CASH_RECONCILIATION_UNAVAILABLE at about15.5seconds. The prior query reduction did not establish a restored live report. Twelve target/control session, ledger and review fingerprints were exactly unchanged before/after both GETs. No paid button/provider dispatch or business mutation. Private activity samples located the event-ledger identity query family while requests were pending; short individual samples are not proof that this query alone consumed the transaction budget. Earlier scoped synthetic/manual PASS remains protected; full financial/handwriting acceptance and parent stay OPEN/ASSIGNED.

Read-only source diagnosis: readCashEventSales materializes the selected-store all-date active sale-ledger identities and completion identities once PER session, after a bounded candidate read; readReconciliationSources repeats this for selected/context sessions. Capability metadata is repeated too. This proves redundant scans/roundtrips, not a measured complete causal duration. BEFORE SOURCE bounded claim: cash-event-sales-source.js and cash-reconciliation-source.js plus existing focused/native tests and a dedicated native regression if needed. Add fixed-size batches of at most16 session descriptors within the same authorized RepeatableRead/Serializable source invocation; chunk all existing valid sources rather than impose a new global cap. Materialize ledger/completion identities once per batch and retain exact per-session candidate2001/event2001 and per-sale line1001/completion1001 sentinel fences, literal identity/prefix, all-date cross-session ambiguity, actor namespaces and exact projection/order/hash. No early session/date filtering of link identities. Standalone, ReadCommitted and unknown isolation retain legacy sequence; no cache across requests, schema/company/store/generation or apply stages. Prior17 arithmetic/review/fallback guards remain unchanged.

Required unskipped native frozen-current-reader versus new-reader parity: complete raw sales/events/evidenceHash, full source/sourceHash/report/text/hash, overlapping windows, links outside session/time, duplicate completions, line/candidate/event overflow, empty/foreign/zero/context neighbours, existing bounds and original/control immutability. Isolated EXPLAIN ANALYZE loops/querycounts prove fewer repeated scans; no hard timing assertion. Exact full PR/main CI and ordinary existing guarded healthy release precede authorized fresh GET-only acceptance. No timeout/schema/index/config/settings/permission/finance/stock/fiscal/provider/paid retry or original-reading mutation. No new manual/PDF PASS or parent closure. Status ASSIGNED/NOT IMPLEMENTED; single next action green/main this bounded claim, then one causal event-read optimization and required native regression.

03/11/2026 — CASH-SNAPSHOT-READ-17 / IMPLEMENTED SOURCE CANDIDATE / AWAITING EXACT NATIVE CI AND GET ACCEPTANCE

Same retained owner/branch fix/cash-snapshot-read-20261103. Before-source claim3577/head0eda4499b58b185379fde312701e4d6c01668770 passed applicable docsCI41597875427 (three SUCCESS; two documentation-classified runtime SKIP), merged89f58284d3366457de30222bc0616598787fa234 before runtime edits. The explicit user authorization covers sanitized technical claim/code/tests publication to this existing public repository and PR/merge after checks. Real/private source details remain excluded.

Two bounded runtime paths only: the existing scoped ledger query carries exact amount::text as an internal sidecar; pure bounded BigInt scaled-decimal accumulation reproduces the established SQL snapshot with signed expenses, ignored NULL amounts, reversed counts and driver-normalized MAX/GREATEST timestamp semantics. JSON numeric rounding is never summed into proof; unsupported source representations retain the original SQL fallback. Source/hash/DTO projection drops the sidecar. Ordered review rows use one501 sentinel read instead of COUNT plus another read, with the original hard500limit outside swallowed-state handling; a failed detailed read retains the exceptional old COUNT guard and unavailable/error boundary, not a claim of recovery from a PostgreSQL-aborted transaction. Reuse is enabled only under RepeatableRead/Serializable, observed by current_setting inside the existing first query and excluded before session/hash projection. ReadCommitted and unknown callers retain the complete original COUNT plus fresh SQL snapshot/review sequence, preserving apply() timing semantics. No cache survives a current source invocation or apply before/after stage. The15second transaction

budget, scope/lifecycle, original review arithmetic and financial/card/IRIS/source limits stay unchanged.

Local Node20.20.2 latest targeted balance/source checks11PASS/0FAIL/1isolated-environmentSKIP; protected report/automatic compatibility32PASS/0FAIL/0SKIP (overlapping coverage, not additive unique totals). New isolated native regression compares the frozen pre-reuse source to the actual reader inside one read-only RepeatableRead snapshot: entire source/sourceHash and canonical report/text/hash, decimal0.1/0.2 and high-precision JSON cancellation, negative/reversed/NULL/zero/bounds, microseconds/timezone, stale later request,500accepted/501refused, original/control immutability, exactly two fewer queries per RepeatableRead/Serializable session and unchanged full legacy query sequence in ReadCommitted. Native new/regression execution is NOT TESTED locally; complete exact PR/main CI must execute it unskipped before release. The runtime P2028 improvement remains a hypothesis until authorized GET-only acceptance measures the same full-report scope after exact healthy deployment.

No provider/AI dispatch or retry, upload/raw-reading change, review/approval/checkpoint/issue write, settings/permission/credential/licence, financial/stock/fiscal/email, schema/index or timeout action. Existing synthetic/manual PASS and peer changes preserved; no new manual/PDF PASS or parent closure. Shared canonical PDFs remain current-main acceptance baseline during source validation. Single next action: exact full native PR/main CI, normal guarded exact healthy release, then fresh GET-only target/control acceptance and truthful residual receipt under the same owner.

03/11/2026 — CASH-SNAPSHOT-READ-17 / RETAINED OWNER / ASSIGNED BEFORE SOURCE

Same retained owner codex/cash-chat-reconciliation-20261026; bounded continuation fix/cash-snapshot-read-20261103. No transfer or competing cash assignment. The user explicitly approved publication of this sanitized technical claim and bounded code/tests to the existing public xrhstosmanis-design/myworkstation-app repository, with PR and merge after checks. Real/private source data remains excluded. Current full evidence GET has a confirmed read transaction timeout: server diagnostic READ/P2028 at about15.2seconds with503/CASH_RECONCILIATION_UNAVAILABLE. This establishes transaction expiration, not the individual slow query or image-I/O cause. Real store/session/source identities, amounts, handwritten contents and private request details are excluded from this public engineering record. Earlier limited synthetic/manual PASS and source3553/full5310server+8backup CI/release remain protected; complete current multi-day/full financial acceptance remains OPEN.

Read-only current source evidence: readReconciliationSession already fetches the exact selected-session ledger, bounded to500rows, then performs a separate review COUNT and readCashReviewState independently scans the same ledger for its established review snapshot before reading the same review rows. Bounded source AFTER this claim is green/main: server/src/services/cash-review-balance.js and cash-reconciliation-source.js plus their focused/native tests (a new native snapshot-parity test allowed). Derive the identical existing snapshot only from the same already-loaded scoped ledger using exact decimal arithmetic, signed/reversed semantics and SQL-equivalent last-movement/date normalization; fallback to the existing SQL reader if a representation cannot be reproduced faithfully. Fetch ordered review rows once with501-row sentinel; retain the existing hard500limit outside swallowed-source catches. Preserve current review projection, source/report hashes, caller-visible shapes, raw/current source checks, source limits, company/store/session/lifecycle isolation and all monetary/card/IRIS/financial invariants. Reuse is only the local current-source invocation, never a cross-request cache or across apply before/after stages.

No schema/index, transaction timeout increase, provider/model/AI dispatch, paid retry, credential/permission/licence/settings, stock/fiscal/financial or email operation. Do not move original validation outside its snapshot or remove byte checks. Existing image reads are not asserted redundant without association evidence; no speculative paper cache or broad event-query rewrite in this slice. Protect every peer invoice, wallet, attended-remote, Chat and FTEXT assignment and existing canonical PDFs during before-source validation.

Required: meaningful native PostgreSQL old-SQL-versus-reused snapshots/sourceHash/report equality for0.1/0.2, negative credits, reversals, zero, timestamps, bounds and stale reviews; scoped original/control

immutability, query-count reduction and unchanged hard-limit/failure behavior. Local checks are not native/LAB PASS. Require complete exact Node20/native PR/main CI, ordinary guarded exact healthy release, then authorized GET-only target/control acceptance without provider or business mutations. Record measured result and exact residuals; no whole financial or handwriting PASS inferred. Current status ASSIGNED/NOT IMPLEMENTED/NOT TESTED. Single next action: publish this bounded claim green/main before runtime edits.

03Nov2026 — AI-WALLET-COMMERCIAL-WAIVER-01 / CANDIDATE SELECTION FOLLOW-UP CLAIM / NOT TESTED

Same retained parent owner feat/ai-owner-wallet-20261022 and current /root executor; bounded continuation feat/ai-wallet-commercial-waiver-20261103. Source3563/finalheada0106c304e68579131209bd312353fba6568b9fa passed fullPRCI41538108468:5318server+8backup/0FAIL/0SKIP, all5jobsSUCCESS; separate recovery41538108378 SUCCESS. Merged3a7101767d9205a4e6bbf1238f9a80c3cece5ca4; exact mainCI41540652773 running. No production financial mutation or hosted release acceptance.

Fresh read-only diagnosis: approved historical candidates fall outside the recent100 ledger display. Therefore the current selection UI cannot reach the requested historical batch; this is a concrete read-model gap, not a provider or settlement defect. Private customer counts, amounts and identities remain private. The existing recent100 activity history and its qualified PASS remain protected.

Before-source follow-up scope: repository.read adds a separate bounded oldest100 eligible REVIEW candidate projection, with explicit has-more indicator and unchanged company/selected-store boundaries. Return only already-authorized minimal movement display metadata. Admin waiver selector consumes that separate projection and clearly labels its bounded pending scope. Preserve recent history exactly, original waiver transaction/evidence/idempotency/session/lifecycle logic, supplier uncertainty, pricing/debt/configuration/notices and every business record. Add a native regression with more than100 newer settled movements proving old pending selection remains reachable and selected-store isolation remains intact. No schema, provider call, financial SQL, broad history expansion, retry or peer edit.

03Nov2026 — RETAINED OWNER HANDOFF / CORE INSTALLED / FINANCIAL RELEASE NOT TESTED

Same retained feat/ai-owner-wallet-20261022 owner and /root executor; no transfer/release. Initial source3563/finala0106c3 passed fullPR41538108468 and exact main3a7101767d9205a4e6bbf1238f9a80c3cece5ca4/fullCI41540652773:5318server+8backup/0FAIL/0SKIP, all five jobs SUCCESS. Normal guard41542400975/job125609654612 actually passed preflight/trigger/exact health. Renderdep-dbkheg142hec73ckhe20 LIVE02Nov23:11:04.591491UTC (03Nov01:11Athens); independent native /api/health returned oktrue/exact3a7101767d9205a4e6bbf1238f9a80c3cece5ca4. No manual deploy, key/configuration/schema or financial SQL.

Native read-only LAB preview observed02Nov23:12:44–23:14:20UTC: selected only original synthetic B; one candidate/release930033microEUR/customer charge0/explicit UNKNOWN supplier cost. Acknowledgement remained unchecked and final submit disabled. Wallet version45/principal4610532/reserved930033, flagsOFF, all14entries/27audits/1notice and all three LAB stock/movement/transaction/shift/sale count+digest controls exactly unchanged. The later prepared preview has the explicit proposed LAB commercial-waiver reason; still no acknowledgement or submit. Evidence CHECKPOINTS/EVIDENCE/ai-wallet-commercial-waiver-20261103/preview-only-observation.json. This is an observed preview only, NOT a financial-release LAB PASS, provider-cost confirmation, OCR PASS or manual closure.

Historical-candidate follow-up3571/final04a98b73f8f48247da303276885b16ea92a23434 is source-ready but AWAITING FULL CI41542186927; separate recovery41542186874 SUCCESS. Full build job125609773566 is delayed in repository fetch, not a proven source failure. It adds only the separate oldest100 pending projection and UI/tests; original transaction unchanged. Local focused7PASS/1nativeSKIP, mounted4PASS/0FAIL/0SKIP and buildPASS. No actual customer release until this exact follow-up/main/full CI and normal guarded exact release are verified. Protected initial source and all peer records/PDF baselines retained; old common-record omissions in the first candidate were corrected before merge, current PR has zero peer/common deletions.

The owner's approved private historical batch remains exactly sixteen uncharged, unsubstantiated REVIEW holds. Fresh read-only recheck matched its approved sum; no release/credit/debit occurred. The independently evidenced customer review, later Azure review, LAB B and all other companies remain unchanged. Do not recreate callers, guess supplier cost, add a credit on top of live reservations, retry a provider/invoice or write financial SQL.

Single immediate next action: obtain the owner's explicit decision on a separately identified commercial waiver of ONLY the existing synthetic LAB B930033microEUR. Prior instructions kept that old diagnostic hold intact and the real-customer batch authorization did not include it; no such approval has yet been received. The native proposal is prepared, unchecked/unsubmitted. If approved, first refresh and record fresh baseline, perform exactly the separately authorized LAB action, reconcile principal unchanged/hold-only release/one audit/original evidence/control and record exact acceptance. Native isolated CI already proves rollback/concurrency/replay/tenant/session/lifecycle; no corresponding hosted financial claim is made. Then complete follow-up3571 exact CI/main/guard and prepare only the separately approved private customer batch. Any real PASS immediately requires checkpoint/manual/active/pending/tracker/PDF synchronization. Parent wallet/manual36 remains OPEN and no competing page may take this scope.

Historical before-source claim action (completed at cf86b70): Single next action: merge this documentation-only same-owner follow-up claim after applicable CI, then implement the bounded candidate projection/labels and repeat exact full PR/main CI and ordinary guarded release. Financial LAB/real release remains NOT TESTED; old LAB B, evidenced customer review and later Azure remain untouched. Current canonical PDFs remain the main historical baseline for this non-PASS claim; synchronize completion/acceptance records and PDFs when an actual bounded PASS is earned.

03/11/2026 - CHAT-TOPICS-VISUAL-01 / COMBINED SOURCE CANDIDATE / AWAITING EXACT CI AND RELEASE

Retained owner codex/chat-native-readers-20261031, integration feat/chat-topics-visual-20261103, 2026-11-03T01:03:28+02:00. Before-source claim3567/51ea00a1/docsCI41540318256 and delegated-history clarification3570/5a73d7e7/docsCI41541573344 were green/main BEFORE corresponding edits. Three disjoint agents delivered backend6ca8bbc5, Android45aa43ff plus causal forward-receipt correction69f9edf1, webfc90f00d plus browser-fixturef944d3b4. Root integrated on5a73d7e7; source candidate, NOT INSTALLED and NOT USER/LAB PASS.

Implemented existing selected-store three-topic partition (CASH+SHIFT / INVOICE / remaining categories), parameterized filter BEFORE bounded timeline/search limits, immutable history, legacy omitted-topic compatibility, scoped reply-category inheritance with ordinary announcement replies remainingGENERAL, text/photo/voice/video topic propagation, explicit forward destination-topic and preserved historicalGENERAL retry binding. Web/Android reject stale/mismatched topic replies and preserve uncertain-send/forward stop; tab change confirms draft discard. Compact tabs/header/readable bubbles retain contextual tools/full-photo zoom and global announcements via explicit overflow. Version0.1.16-preview/code17 is SOURCE ONLY; public0.1.15 and accepted familiarUI remain separate unchanged delivery/user evidence.

Local Node20 focused combined47PASS/0FAIL/0SKIP; earlier backend36 and web24 passes are overlapping, not added counts. Client frontend buildPASS after materializing missing unchanged shared folder (initial local sparse-only resolution failure not a code defect). Android has no local SDK/Gradle/JDK compiler, and local Chromium download returned truncated archive; no compile/browser/device PASS invented. Existing actual Android Activity/model/geometry tests, real Chromium topic/viewport/media probe and isolated PostgreSQL/HTTP limit/search/reply/media/forward flow were extended without weakening prior checks; exact PR/main fullCI and Android run remain REQUIRED. Root full server test result pending at this entry. No production DB/schema/grant/Chat read/send/Push/provider/financial/stock/fiscal action. Cash/invoice/AI/security/iOS/N16 owners unchanged. Calls/E2EE/edit/delete/presence are separate future scopes, not part of this release. Explicit user exclusions preserved. Next: exact combined PR CI+Android, fix concrete failures, merge green, exactmain verification then ordinary guarded deployment/stable-signer/public artifact verification; ONE final combined update and no intermediate phone checks. Checkpoint CHECKPOINTS/CHANGES/2026-11-03-chat-topics-visual.md.

03/11/2026 — POS-ATTENDED-REMOTE-02 / SOURCE2.0.2 LIVE / AUTO ENROLLED / EXACT CI VERIFIED / OWNER RETEST OPEN

FINAL EXACT VALIDATION / RETAINED OWNER HANDOFF —03Nov2026. Source3603/head46037b52fce89c08871e8aa85eda275592d3ca20 and exact installed main8ffd0ac2c28795a1c27393816c8838cfb49aa48f both have full successful CI:41640021646 and41642362102, each5438server+8contract/0FAIL/0SKIP; native PostgreSQL whitelist/dynamic-after-start enrollment/device-command checks really executed. Exact-main Windows41642362387 SUCCESS with actual linked loopback/command lifecycle tests and verified2.0.2 package. Normal guard41644245311/job125945372076 subsequently SUCCESS: checked EXPECTED_REVISION8ffd0ac and CI_RUN_ID41642362102, then13:27:41.885610UTC “Revision is already healthy or superseded”; trigger/exact-wait steps SKIPPED. Latest Render history still only dep-dbktrs3bc2fs73abevk0 LIVE13:16:11.310406UTC at exact8ffd0ac. Independent final health13:29:28.141967UTC again oktrue/exact8ffd0ac. No second restart was requested or triggered by that guard. Preserve the earlier API-save deployment ordering deviation below; later CI/guard success does not retroactively make that early rollout a guarded deployment.

Central automatic eligibility is configured for existing/future active enrolled rows with exact live company/store/terminal/session validation and fresh local Accept, master still required, inactive/default/legacy safeguards preserved. Fresh read-only inventory13:26:56.632748UTC has9eligible active registered rows/2inactive. New ACHARNON-POS-01 row was created13:26:26.589390UTC, after server release, with active terminal/store/company but activatedAt=NULL; this is registration metadata only, not a physical activation/connection PASS or assistant-created enrollment. No static whitelist

update/restart was made for it. One-time native installation/open remains required; existing POS pages whose old disabled poll stopped need a refresh after rollout.

Owner download is exact-main MyWorkStation-RemoteAgent-V2.0.2-win-x64.zip,67442537bytes/SHA25659 08ba61d42a2640a8ea531f917c367a1a59323ab75d04496d0b1c768188585d; actual EXE SHA25610ce275575cf0e3f06975e61be6f320ea14ebab3a4cc1132fbf5f6c98682d8b8. ZIP CRC/MZ and official artifact13233531754 digest verified; saved complete package with DLLs. All source/configuration/automated-validation work above complete. Physical speed remains USER FAIL on old2.0.1/2–5seconds and2.0.2 OWNER RETEST OPEN; keyboard, files, disconnect/revocation and three physical PCs are NOT TESTED here, no manual/overall/LAB PASS. Retain owner feat/pos-attended-remote-20261103, current source feat/remote-enrollment-command-20261103 and receipt docs/remote-202-rollout-receipt-20261103. Single next action belongs to OWNER personally: close old Agent, extract complete2.0.2 package and open it locally, refresh POS, then create a NEW invitation from their own SuperAdmin browser/local operator Accept and measure harmless new blank-Notepad clicks/Greek typing. Assistant sends no new invitation, desktop/file input, payment/fiscal/stock request or direct SQL write; startup and concurrent business deltas are not measured here. Do not repeat any earlier receipt or payment for this test. Checkpoint CHECKPOINTS/CHANGES/2026-11-03-pos-attended-remote.md.

03Nov2026 — SOURCE2.0.2 LIVE / AUTOMATIC ENROLLED MODE SAVED / EXACT MAIN CI PENDING / USER SPEED FAIL OPEN. Retained owner feat/pos-attended-remote-20261103, source3603/head46037b52fce89c08871e8aa85eda275592d3ca20: fullPRCI41640021646 SUCCESS5438server+8contract/0FAIL/0SKIP, actual native PostgreSQL whitelist/dynamic-after-startup enrollment/command authority unskipped. WindowsPR41640021650 and exact-main Windows41642362387 SUCCESS including linked command wake/stale/STOP/uncertain-transport lifecycle tests. Source merged8ffd0ac2c28795a1c27393816c8838cfb49aa48f; intervening peer changes are documentation/evidence only, production-file compare from tested PR to installed main empty. Exact mainCI41642362102 still RUNNING at this observation, so do not claim its PASS or normal guarded source deployment.

Approved merge-only environment save REMOTE_SUPPORT_ENABLED=true + REMOTE_SUPPORT_ALL_ENROLLED=true returned success, replace=false preserving prior whitelist. UNEXPECTED RELEASE ORDER: contrary to the planned save-only assumption, that API save triggered Render API deployment dep-dbktrs3bc2fs73abevk0 at13:13:20.340803UTC, LIVE13:16:11.310406UTC BEFORE exact-main full CI completion. Assistant did not submit a separate deploy/force command; this provider side effect was not anticipated and was immediately disclosed to the owner. Independent health13:17:27.405457UTC oktrue/exact8ffd0ac. No rollback or second restart requested: runtime is identical to green full PR, current health good, await exact-main CI and existing guard which should skip an already healthy revision. This is an ordering deviation, NOT a guarded deployment PASS. Future environment writes must wait for exact main full CI; do not assume save-only behavior. Current in-memory sessions end on deployment and require fresh owner-origin invitation/local Accept. No invitation, desktop/file input or business/fiscal/stock action by assistant.

Readonly enrollment inventory13:00:03.19158UTC:8eligible active terminals,2inactive remaining closed. This is configuration/metadata and isolated regression evidence, not a physical connection/installation PASS at eight PCs. New active enrollments require no whitelist edit/restart; Windows Agent still must be installed/open locally, no silent OS installer/consent. Verified official exact-main Windows artifact13233531754/build41642362387:67442537bytes SHA2565908ba61d42a2640a8ea531f917c367a1a59323ab75d04496d0b1c768188585d, EXE10ce275575cf0e3f06975e61be6f320ea14ebab3a4cc1132fbf5f6c98682d8b8, ZIP CRC/MZ checked. Owner download MyWorkStation-RemoteAgent-V2.0.2-win-x64.zip saved; not yet requested physical retest while exact main CI pending. Owner confirms old2.0.1 physical2–5second delay; NEW2.0.2 keyboard/speed/files/disconnect/three-PC acceptance remains NOT TESTED/OPEN, no manual/overall PASS. Next: verify exact mainCI and guard outcome, then owner personally updates Agent and tests a NEW harmless blank Notepad session from their own SuperAdmin browser. Checkpoint CHECKPOINTS/CHANGES/2026-11-03-pos-attended-remote.md.

SOURCE CANDIDATE / AWAITING EXACT CI: retained owner feat/pos-attended-remote-20261103; source feat/remote-enrollment-command-20261103 after merged before-source claims3599 and3600.

Independent command delivery in Agent2.0.2 plus explicit automatic active-enrollment gate; no local consent/auth/heartbeat weakening, no silent installation or business/schema writes. Focused32PASS/0FAIL/2nativePGSKIP locally; exact full/nativePG/Windows CI and guarded release/config still required. Physical2–5second delay remains USER FAIL/OPEN and owner-only retest. Checkpoint CHECKPOINTS/CHANGES/2026-11-03-pos-attended-remote.md.

03Nov2026 — SAME-OWNER BEFORE-SOURCE COMMAND LATENCY EXTENSION / USER FAIL OPEN. Owner confirms installed Agent2.0.1 and physical click/typing response2–5seconds. Prior localhost frame-relay benchmark is not physical acceptance. Retained owner feat/pos-attended-remote-20261103, bounded continuation fix/remote-command-latency-20261103; eligibility continuation feat/remote-all-enrolled-20261103 remains approved and independently bounded under merged claim3599/main7b8c65d. Diagnosis: native input waits for frame upload completion and900ms idle capture interval. Claim a separate authenticated, bounded long-poll command delivery path with single-consumer queue and immediate post-input screenshot wake, keeping idle capture traffic unchanged. Preserve live authority checks before delivery, exact creator/operator/terminal/session binding, local Accept, stale-input discard, STOP/cancellation/15second loss, no replay, files/quota and legacy frame fallback. Require isolated HTTP exact-once/wake/revocation/disconnect tests, native Windows lifecycle/build and existing remote regressions plus exact full PR/main CI and normal guarded release. Native2.0.2 requires an owner-installed update; no silent installer or unattended access. No production invitation/input/files/financial/fiscal/stock action by assistant. Physical latency remains USER FAIL/OPEN until owner personally retests. No manual/overall PASS. Single next action: merge this before-source claim after green CI before latency runtime changes. Checkpoint CHECKPOINTS/CHANGES/2026-11-03-pos-attended-remote.md.

03Nov2026 — SAME-OWNER BEFORE-SOURCE EXTENSION / ALL EXISTING AND FUTURE ENROLLED POS / NOT IMPLEMENTED. User explicitly requests central activation for all current POS and automatic eligibility for newly enrolled POS. Retained feat/pos-attended-remote-20261103 owner; bounded continuation feat/remote-all-enrolled-20261103. This supersedes the Rizareiou-only eligibility decision for this approved rollout, not the owner-only personal-test instruction. Read current main8ee1027/AGENTS/owned checkpoint and remote routes; installed2.0.1 image observed, physical input/files/three-PC acceptance still OPEN. Native read-only terminal inventory:8active enrolled targets across active stores/companies and2inactive targets; do not reactivate or create terminals.

Bounded plan: explicit REMOTE_SUPPORT_ALL_ENROLLED=true mode, still requiring REMOTE_SUPPORT_ENABLED=true. Every operation retains live exact company/store/terminal SQL validation, active flags, demo exclusion, SUPER_ADMIN creator/session, enrolled operator/session and fresh local Accept. Newly enrolled active rows become eligible without env-list edits or restart; unknown/disabled/inactive/foreign targets remain rejected. Existing default-OFF/explicit-whitelist mode,15second loss closure, STOP/files/three-session limit and owner-only invitations remain protected. No automatic Windows installer/consent, role grant, database/schema/financial/fiscal action or other-owner edit. Agent2.0.1 remains compatible and must exist once per PC.

Required: negative/default/legacy gate regressions plus actual HTTP/native PostgreSQL test proving a terminal enrolled AFTER router startup becomes eligible while inactive/unknown/foreign/operator/revocation checks still fail closed. Full exact PR/main CI and ordinary guarded source release precede activation. Save only the approved global mode/enabled keys with merge semantics, preserving the old whitelist for rollback; apply with validated normal release, verify actual mode without creating invitations or desktop access. A server deployment ends current in-memory sessions; notify owner. This is a before-action claim, no code/configuration change or wider access yet. Owner retained and physical acceptance NOT TESTED. Checkpoint CHECKPOINTS/CHANGES/2026-11-03-pos-attended-remote.md.

Same retained owner feat/pos-attended-remote-20261103; bounded continuation fix/remote-direct-keyboard-20261103. SOURCE2.0.1 INSTALLED, physical keyboard/speed/disconnect USER RETEST OPEN. User explicitly performs the desktop tests personally; assistant sends no new real invitation, input or file action.

PR3590 finalb205cbf passed fullCI41620812954 (5427server+8contracts/0FAIL/0SKIP, native PostgreSQL remote checks unskipped) and Windows41620812819; merged234a80aadb4053097d8c83f5f649807270e67db7. Exact main fullCI41623046101 and

Windows41623046170 SUCCESS. Normal guard41625394012/job125881442381 verified full main/freshness, pinned234a80a at11:12:15UTC and verified healthy production. Renderdep-dbks33l9fdbs73c6pp00 LIVE03Nov11:14:20.881369UTC (13:14Athens). Independent native health11:15:04.900556UTC oktrue/exact234a80a; public lazy entry-BiIs3-rH.js independently contains the new direct-keyboard interface. This is engineering deployment verification, not physical USER/LAB PASS.

Click-to-focus plain/Greek typing and supported special keys, visible keyboard focus/release, ordered/cancellable same-focus text batching and manual fallback installed. Fresh frames forward on arrival; Windows2.0.1 requests a prompt result image after applied input while preserving idle capture interval. Local relay-only benchmark995–998ms→8–11ms excludes Windows/Internet/physical performance. Existing local Accept, creator-session binding,15-second loss closure, no fixed attended lifetime, three-target isolation, files/STOP and legacy trial preserved. No new terminal/configuration/schema/financial/stock/fiscal action. Store scope remains the previously approved Rizareiou pilot; no other store activation by this work.

Verified private package MyWorkStation-RemoteAgent-V2.0.1-win-x64.zip:67719601bytes/SHA256f671965091fa8529b6bae6db5e8f265041eaf7e25ea8000444c2ccf3fd15b713,7CRC-checked files, PE hash26c0c43609e07dc4ae2b93c362a1fbdcf9b62d3391ea07458bda2ac5256afc14; actual Windows build41617752245 on7bb94064, source-identical to exact merged native code. Separate new version prepared; original2.0.0 download preserved. Assistant has not installed/executed it on the store.

Newest physical USER FAIL remains the owner's09:59:14UTC termination; its historical cause is UNKNOWN. New fixed STOP-reason audit suffixes aid diagnosis and do not prove it fixed. Server restart/deploy still ends these in-memory sessions and requires a fresh invitation/local Accept. Ctrl/Alt/Windows shortcuts, dragging and secure desktop remain unsupported; no unattended reconnect or input replay added. Earlier proposed assistant Notepad test was CANCELLED before input; no assistant typing/file/financial test occurred.

Single next action: OWNER installs/opens the full2.0.1 package on RIZAREIO-POS-01, sends one new invitation from their own SuperAdmin browser, local operator Accepts, then owner tests direct typing and response themselves. Record their exact outcome; do not infer physical PASS or repeat a sale/register command for documentation. Actual sustained stability, physical typing/speed, independent STOP, three real PCs and bidirectional near-limit files/cancellation remain OPEN/NOT TESTED. Retain assignment until completion/named handoff. Full history/evidence: CHECKPOINTS/CHANGES/2026-11-03-pos-attended-remote.md. Candidate usage/limits: tools/windows-remote-agent/README.md. No new manual PASS.

03/11/2026 - CHAT-TOPICS-VISUAL-01 / ASSIGNED BEFORE SOURCE / ONE COMBINED UPDATE

Retained Chat owner codex/chat-native-readers-20261031; integration branch feat/chat-topics-visual-20261103; claim time 2026-11-03T00:43:34+02:00, baseline1edd4677db6f5ce688b15731280f72ed42e71be7. User explicitly requests separation of cash from invoices, prettier compact MyWorkStation appearance and delegates 2–3 parallel pages. Root coordinates three disjoint slices: server topic contract (chat_topics_audit), Android appearance/topic client (android_visual_audit), web appearance/topic client (web_visual_audit). All slices remain under the same retained owner, not independent takeover. Source work waits for this claim green/main.

Bounded scope: three tabs Συνομιλία/Ταμεία/Τιμολόγια in existing authorized selected-store Chat. Reuse immutable existing categories: CASH+SHIFT→CASH, INVOICE→INVOICE, all other categories including ambiguous PAYMENT→GENERAL. Optional validated topic filters apply BEFORE list/search limits; omitted topic retains old-client contract. Explicit text/photo/voice/video sends, quotes and authorized forward must retain selected topic, with stale-topic/identity/store response fencing and draft safeguards. Existing global pinned announcements remain clearly separate. No history migration, auto financial interpretation, invoice draft/job/AI action, financial writer or new role/module permission. Compact accessible branded UI preserves contextual tools, useful message height/keyboard, full-photo zoom and all recorded scoped USER PASS; no replay for paperwork.

Exact owned paths: server/src/routes/store-chat.js, server/src/chat-topics.mjs (new), server/src/chat-search-forward.mjs, server/src/chat-interactions.mjs (same-topic parent validation), server/e2e/chat-interactions-flow.mjs (actual isolated HTTP/PostgreSQL regressions), server/src/chat-voice.mjs and server/src/chat-video.mjs ONLY if their existing media category handling requires topic propagation; focused server/test/chat-topics*.test.* and existing Chat HTTP/isolated harness tests; client/src/components/store/StoreChatPanel.jsx, client/src/components/store/store-chat.css and new chat-topics.mjs helper if needed; android/app/src/main/java/gr/myworkstation/chat/MainActivity.java, ChatApi.java, ChatInteractions.java and new ChatTopics.java if needed, focused android unit/actual-Activity tests, android/app/build.gradle version0.1.16/code17. Root alone owns shared docs/checkpoint/release packaging. Existing cash-review/OCR/AI/first-entry/iOS/security/N16 owners retained. No personal/private groups, polls, stickers/GIF, folders/favorites/mute, contact/location sharing or disappearing messages (explicitly excluded by user). Calls/E2EE/edit/delete/presence are separate future scopes, not silently included in this bounded visual/topic change.

Current new scope NOT IMPLEMENTED / NOT TESTED / NOT INSTALLED. Existing familiar UI batch remains scoped USER-reported complete (PR3556), not overall N16 PASS. Required before one final combined phone check: real isolated PostgreSQL/HTTP topic-before-limit/search/invalid/tenant tests, old-client compatibility, reply/media/forward category correctness and no financial/provider side effects; mounted web and actual Android lifecycle/keyboard/geometry/topic-switch tests, existing source/media regressions, full exact PR/main CI, unchanged guarded exact web deployment and same-signer verified APK/public manifest. No intermediate user installation/test requests. No production DB/migration/seed/grant/Chat send/read/ack/Push/provider/business action authorized for diagnosis. Remaining overall N16 and independent owners unchanged. Checkpoint CHECKPOINTS/CHANGES/2026-11-03-chat-topics-visual.md. Next: publish this claim green/main, then implement the three coordinated slices and deliver ONE combined update.

03/11/2026 — INVOICE-SECOND-DRAFT-01 / PARALLEL REVIEW HOLD / PREPAYMENT CONTINUATION CLAIM

03/11/2026 - authoritative duplicate release receipt / INSTALLED / AWAITING LAB

Owner fix/invoice-duplicate-prevention-20261103 /root retained after the explicitly approved limited transfer. Prevention PR3558/head80fedb0 merged9e1a3db: exact PR41543218800 and main41545520174 passed all five jobs, 5,359 server +8 auxiliary tests, 0 failures/skips. Additional-member PR3573/head398107c merged21e60c0: exact PR41545507284 passed all five jobs/every step, 5,348 server +8 auxiliary tests, 0 failures/skips. Combined main21e60c0 CI41547911770/build125633171721 passed all jobs/every step, 5,388 server +8 auxiliary tests, 0 failures/skips. Independent review corrections freeze canonical order number and established payment/audit identity; real native receipt-writer, drift, retry/race and source-preservation cases passed. These are engineering proofs, not LAB acceptance.

Effective unchanged invoice source is installed in descendant2a8db9d5c4fcfa2742d8601c54f747bf1d918e53. Exact main CI41550612219/build125638852498 passed: 5,399 server +8 auxiliary tests, 0 failures/skips. Ordinary guarded deployment41553003858/job125645124405 pinned that revision at03Nov00:29:38UTC and confirmed exact healthy revision00:32:00UTC (02:32 Europe/Athens). This page independently reread /api/health: ok=true, version0.22.0+kat-test-pos, exact2a8db9d. Earlier9e1 and21e guards correctly skipped actual deployment for newer production source; skipped-success never established release. No manual/force deploy or guard bypass.

Current source holds uncertain duplicate variants before another supplier-payment insertion/draft creation and preserves exact checks, trusted payment reuse and first unpaid myDATA payment. Additional-member manual review retains one established canonical order/document/table/header/supplier/payment, all physical rows/originals and flat alias history; rejects posted/drifting/unknown families and unproven first-payment links. No actual customer invoice merge/delete/replay/approval, payment, stock, billing or email action occurred. Hosted measured LAB acceptance remains NOT TESTED; the whole duplicate task stays OPEN. No manual or functional PASS closure. Single next action: identify an eligible synthetic LAB family, publish fresh terminal/operator/shift/payment/stock/control baseline before one controlled action, then verify immutable originals/payment/stock and control. Never seed production SQL or replay the real trio for evidence. Other invoice/reopen/reader/report/inventory owners remain assigned. Full handoff: CHECKPOINTS/CHANGES/2026-11-03-invoice-duplicate-release-handoff.md.

03/11/2026 — INVOICE-SECOND-DRAFT-01 / REVIEW GAPS ADDRESSED IN CANDIDATE / AWAITING NEW NATIVE CI

Same transferred owner fix/invoice-duplicate-prevention-20261103, source continuation PR3558. Explicit parallel helpers completed read-only review and bounded delegated helper/test work; primary alone integrates. Before-source continuation3565/head6ea12e0 green applicable CI, mergef4272bf preceded shared helper, precheck and supplier-payment backstop edits. Other-expense camera/category schema/insert/UI and all peer owners remain untouched.

Current candidate uses shared conservative POS draft and ledger REVIEW queries. Fast precheck blocks uncertain draft/payment before client money, after the protected unpaid canonical myDATA branch. Positive supplier-payment transaction takes store lock then existing exact invoice-key lock, retains company-wide exact checks and checks active same-store/supplier-or-trusted-VAT/near-amount/numeric-suffix ledger candidates before insert. Description-only legacy input uses the existing server-derived invoice reference. Deferred positive payment applies the same check after its immutable same-ID replay and exact-payment checks; no unrelated payment/credit/bank algorithm changed. Missing issue date broadens draft REVIEW only; missing suffix cannot match zero. No auto identity substitution/merge, DDL, provider call or historical business mutation.

Node20 full local run4981tests/4623PASS/0FAIL/358infrastructureSKIP; frontend/TABLE_SERVICE buildPASS. Subsequent focused client abort, legacy description, deferred padding and actual pos-intake null/omitted-date regressions also pass their available local checks; native cases remain SKIP locally. Final unskipped native CI is REQUIRED. Original supersededa2bb255 CI41535631510/job125589797033 all5SUCCESS/5315server+8backup/0FAIL/0SKIP proves its earlier bounded query/route only; it does not

resolve the newly reviewed gaps or certify the new candidate.

Native added proofs cover actual precheck and client stop; actual transaction closure with concurrent distinct raw keys and exactly one ledger row; immutable original/source/payment/stock controls; deferred variant rejection and original replay; first unpaid myDATA compatibility (discovery adapter synthetic, not provider authenticity); explicit/unknown dates, zero/missing suffix, foreign/supplier/VAT/type/amount/reversed boundaries and own-shell exclusion. Core pos-intake test stubs unrelated row normalization/learning only and executes actual header parse/transaction/guard. No real operator/LAB acceptance or historical consolidation PASS.

Single next: final full native PR CI on the integrated source, resolve every failure, exact main CI and ordinary guarded healthy release before separately measured synthetic LAB. Keep release HOLD until those checks/review pass. Then separately claim stable-canonical third-draft reviewed continuation; pair UI/alias-family design remains unimplemented and real trio unchanged. Entire task OPEN. No manual/functional/PDF PASS closure; current-main canonical PDFs remain the protected historical baseline at this candidate stage. Main source handoff and original claim checkpoints retained.

Historical before-source continuation claim

Same transferred owner fix/invoice-duplicate-prevention-20261103 /root; user explicitly requested parallel helpers, which completed read-only independent source/test/consolidation audits. PR3558/a2bb255 remains HOLD, never merge/deploy as complete prevention: core guard alone runs after supplier payment, pos-intake missing date bypasses review, and a missing numeric suffix must not match zero. Old finalheadCI41535631510 is engineering only, not evidence resolving these findings. No historical invoice/merge/payment/stock action performed.

Bounded before-source continuation: shared conservative duplicate REVIEW helper in server/src/lib/pos-invoice-duplicate-review.js; commerce-pos-v244-core.js fallback/callers; commerce-pos-v244.js fast-duplicate-check only (never fast-header predicate); store-transactions.js SUPPLIER_PAYMENT checkInvoicePayment before-insert guard ONLY; pos-pending-invoices.js createPendingInvoicePayment prior-payment guard only, so the deferred early-return path cannot bypass prevention. Preserve existing company-wide exact checks, exact-payment reuse and legitimate first unpaid myDATA payment. Transaction backstop checks prior active positive same-store/supplier payment, equal numeric suffix and positive near-amount, returns review only; store lock precedes invoice-key lock to match existing core order. No inferred reuse, amount-only identity, fabricated issue date or automatic historical cleanup. No OTHER_EXPENSE schema/category/insert/camera, credit/negative/deferred payment algorithms (the positive deferred prior-payment guard alone is included), bank/settlement, pricing, provider, schema or stock changes. The separately assigned other-expense owner retains its schema/insert/UI scope in the same file; these sections do not overlap.

Exact tests: new native prepayment/duplicate helper regression plus existing pos-draft-duplicate-prevention-postgres, pos-unlinked-mydata-postgres and pos-pending-invoices-postgres extraction dependencies only where needed. Prove pre-payment stop, concurrent padding variants cannot insert two payments, exact retry preservation, first unpaid myDATA compatibility, missing-date review versus no-candidate first intake, numeric-zero/missing suffix, current-shell exclusion, all scope/type/amount/cancelled boundaries and source/payment/stock invariance. No native SQL/LAB PASS exists yet. Missing-date fix within the already claimed core/test surface is being prepared by named helper duplicate_tests_review; primary alone integrates/publishes. All new helper/precheck/financial-guard edits wait for this claim green/main.

Triple consolidation investigation found completed-pair UI hides remaining candidates; naive second merge risks changed canonical identity, alias chains and lost family summary. No consolidation writer/UI source is claimed by this continuation. Next after prevention: separate exact claim for stable-canonical reviewed additional NEW/DRAFT member, one action at a time, all originals/rows/aliases/payment/stock preserved. Historical pair owners, Gate3/PDF/header, unlinked receipt, credits, reports/monthly and inventory owners retained.

Single next action: publish this continuation with applicable green CI, then implement and independently review the bounded pre-payment/backstop corrections, full exact native PR/main CI, ordinary guarded exact healthy release and measured synthetic LAB acceptance. Keep PR3558 HOLD until review gaps addressed. No current manual or functional/PDF PASS closure; retain current-main PDF baseline during before-source claim. Checkpoint CHECKPOINTS/CHANGES/2026-11-03-invoice-duplicate-prepayment-claim.md. Assignment remains with this page through completion or named handoff.

02/11/2026 — CENTRAL-BACKOFFICE-ACCESS-01 / COMBINED PERSONAL UI OBSERVED / FULL ACCEPTANCE OPEN

Continuation of the retained Rizareio readiness / central BackOffice access owner. Receipt branch docs/backoffice-lab31-observation-20261102. The user explicitly approved adding inventory.history.read and inventory.expected.read to existing lab31 in MYWORKSTATION LAB / ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ (cmtpopbgo000trhb5ng9ytiru). Existing inventory.read and inventory.count remained; other stores and rights remained unselected in the saved form. User personally entered/submitted a replacement PIN after credential uncertainty. No credential value is recorded here. Saving was visibly confirmed; an initial subsequent login was rejected, then user-completed login succeeded. Shared-session changes interrupted the form on earlier attempts; no cause beyond the displayed session-change message was proven.

Observed combined-right personal UI: FINALIZED history and expected5/count4/difference−1; no cost or mutation controls. Refresh cleared selection and reopen remained correct. Exact loaded client revision was not captured; later healthy28755b6b is not substituted. Formal acceptance and full all-functions scope remain OPEN. Next: separately authorized minimal history-only/theory-only LAB checks. Checkpoint CHECKPOINTS/CHANGES/2026-11-02-lab31-history-observation.md.

03/11/2026 — POS-OTHER-EXPENSE-CAMERA-CATEGORIES-01 / HISTORICAL BEFORE ACTION / SUPERSEDED BY LIMITED LAB PASS BELOW

Same retained root central owner and fix/pos-other-expense-camera-categories-20261103 scope; no transfer or source implementation. The owner requested continuation after the remaining-work list. This is one identified nonfinancial catalogue lifecycle acceptance case in the existing virtual MYWORKSTATION LAB company cmtpopbgk000prhb5qc60zxus, selected store ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ cmtpopbgo000trhb5ng9ytiru. ManagementExpenseCategory is company-scoped: other LAB stores intentionally share the category catalogue. N40 CONTROL cmv2qanca000psigeizep8o9m is only a financial/stock projection control, not an unchanged-category control.

Authorized bounded sequence after this before-action record is green/main and fresh baseline is recorded: one central UI CREATE of the uniquely checked synthetic active category LAB-CATEGORY-20261103-ROOT-01; record actual returned/persisted UUID and timestamps; refresh/select that exact UUID in the actual existing POS Other expenses form with amount/comments blank, no file or acknowledgement and no payment submit; preserve the same category while reopening/refreshing the form. CREATE is fixture setup, not a separate completed PASS. Before one UI soft deactivation, root must record the actual current UUID/active state/time and fresh eight scalar projections in the local active checkpoint/evidence. Then use only the existing management soft-deactivate action once, verify the same UUID is retained inactive, and verify POS refresh removes it and clears stale selection. No hard delete, second fixture, real-company category or financial action. Report one final bounded result only after the lifecycle and controls are checked; no Gate4 exception is asserted.

Baseline and before each state-changing action identify the genuine authenticated actor, desktop cloud browser, current native public-health/backend revision (exact loaded client revision not independently captured), company/store and UTC observation time. Physical terminal/operator shift, SKU, quantity and payment method are not acted upon; those fields are not applicable to catalogue setup. Preserve existing MAIN/other-terminal session and N40 control data. Eight bounded read-only count/digest projections cover only explicit StoreTransaction, CashShiftSession, StockMovement and StoreProduct scalar fields for the selected LAB and N40 stores. Per-projection cap20000, complete flags and null digest on overflow prohibit a false complete comparison. The SQL excludes attachments, notes, raw full-row JSON and whole-database claims. Stock tables are company-bound through the existing Store relation. Fresh category rows/counts and exact-label uniqueness are captured separately. Actual before-CREATE evidence: native public health ok:true, backend revision 35d6840e43080dd519a730a27437100b277a3404 recordedAt 2026-11-03T17:05:43.086Z; genuine SUPER_ADMIN Χρήστος Μάνης, existing LAB support UI. At 17:07:38.229714Z the selected LAB scalar counts were CashShiftSession43, StockMovement95, StoreProduct110 and StoreTransaction134; N40 counts were all0, all eight complete:true. At

17:07:39.82802Z company catalogue total0/active0/exact intended label0. Exact hashes and observations are retained in CHECKPOINTS/EVIDENCE/pos-other-expense-camera-categories-20261103/catalogue-before-create.json; companion catalogue-scalar-controls.sql defines their limited fields. Central UI count0 and blank MAIN totals were observed before any CREATE; no values are inferred from the earlier empty-list acceptance.

The camera-opening USER PASS3583 and prior empty-catalogue LAB PASS3576 remain protected and are not repeated. No source/configuration/schema/migration/permission/credential/operator role/shift/stock/payment/invoice/provider/fiscal/reset or accepted-transaction replay is part of this case. Existing GET catalogue bootstrap is unchanged; no new DDL is introduced. The current canonical PDF and manual are retained during before-action preparation; the single final actual result will synchronize checkpoint, active list, tracker, residual-only pending roadmap, relevant manual and regenerated PDF. Populated choices/lifecycle are NOT TESTED before execution; category-linked payment persistence, ordinary roles/devices and physical photo/focus/quality remain OPEN regardless of a later no-payment catalogue PASS.

03/11/2026 — POS-OTHER-EXPENSE-CAMERA-CATEGORIES-01 / LIMITED LAB PASS / POPULATED NONFINANCIAL CATALOGUE LIFECYCLE

Same retained root central owner, fix/pos-other-expense-camera-categories-20261103; no source/runtime/configuration change. Before-action PR3606 finalhead6a349078cc8fd5921d4a084b56e46265ccc93bc5 passed exact run41682167446 (3SUCCESS + build-and-test/wholesale-isolated-lab expected DOCSKIP) and ordinary expected-head squash merged main d72937d703344b76f55e3eb16f1800e9cf7526cc before CREATE. One identified lifecycle case, LAB-CATEGORY-20261103-ROOT-01, completed through genuine SUPER_ADMIN Χρήστος Μάνης normal LAB support UI, desktop cloud browser, company cmtpopbgk000prhb5qc60zxus / selected ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ cmtpopbgo000trhb5ng9ytiru. The earlier support context invalidation caused no category write; root restored LAB through the normal Platform Admin chain and saved fresh before-CREATE controls17:21:33.031656Z/catalogue uniqueness17:21:42.512737Z before acting. N40 cmv2qanca000psigeizep8o9m is financial/stock projection control only; catalogue is shared by the LAB company.

Exactly one active synthetic row was created at2026-11-03T17:21:57.932Z: UUID0b3618e5-7549-4907-a5e9-01f94d1b9bf6, label LAB-CATEGORY-20261103-ROOT-01. Actual mounted POS Other expenses refresh offered and selected this persisted UUID (selected evidence17:22:39.895Z); completed normal refresh retained selection. This was REFRESH, not a separately performed reopen test. Amount/comments remained blank, attachments0, acknowledgement false and submitted false. Before soft deactivation root saved exact active row17:23:16.913028Z/eight controls17:23:17.335776Z in local phaseB checkpoint recorded17:23:17.525Z. One existing native management soft-deactivate updatedAt17:23:27.195Z retained the same UUID/description/createdAt with activefalse. After mounted POS refresh17:23:50.541Z, selection value was empty, selector disabled and only the empty placeholder remained. No hard delete, extra fixture, payment or real-company category write occurred.

Read-only comparisons after CREATE17:22:05.013696Z and after deactivation17:23:42.813353Z matched all eight before-state explicit capped scalar count/digests, complete:true: selected LAB CashShiftSession43, StockMovement95, StoreProduct110, StoreTransaction134; N40 each0. Exact fields/hashes and before/after rows are retained in CHECKPOINTS/EVIDENCE/pos-other-expense-camera-categories-20261103/catalogue-lifecycle-result.json and companion catalogue-scalar-controls.sql; this is not whole-row/whole-database invariance or financial acceptance. Original selected/cleared/inactive JPG and accessibility evidence retained unchanged. Native public backend health ok:true v0.22.0+kat-test-pos, revision35d6840e43080dd519a730a27437100b277a3404 recorded17:24:47.195Z; exact loaded client revision was not independently captured. Unchanged owned source blobs qualify prior implementation only, not a newly measured client SHA.

Close only populated nonfinancial category choice/refresh/soft-deactivation-retention acceptance for this SuperAdmin LAB context. Protect camera-opening USER PASS3583 and empty-catalogue LAB PASS3576 without repetition. Remaining OPEN: hosted category-linked payment persistence, independent ordinary Owner/operator/other-device acceptance, and physical photograph capture/focus/image quality. No shift/payment/stock/invoice/provider/fiscal/permission/credential/schema/reset or accepted-transaction replay. This final receipt synchronizes checkpoint, active list, tracker, residual-only pending, payments manual and canonical generated PDF while preserving peer content.

03/11/2026 - POS-OTHER-EXPENSE-CAMERA-CATEGORIES-01 / LIMITED USER PASS - CAMERA OPENING

Same retained root central owner. On 03Nov2026 Europe/Athens the owner replied exactly "ΕΙΝΑΙ ΟΚ" to the preceding instruction to refresh an empty-cart POS, open Payments > Other expenses > Capture from camera and test without submitting a payment. Record this as a scoped USER-reported PASS for camera opening/the requested non-payment start test. It is user confirmation, not an independently witnessed hardware or financial LAB test.

Source3564/e9314faa7d9457bc3cce95593a76ed2482d3351c is the previously verified delivered implementation, with its exact CI/guard/Render and limited empty-catalogue LAB evidence retained below. The user's exact loaded revision, device, store, operator and test time were not supplied; do not substitute current main or the prior LAB identities. No separately measured photograph capture, focus/image quality, populated central-category choice/refresh, category-linked hosted expense persistence, ordinary-role matrix or accounting/stock/fiscal result is inferred from this short confirmation.

Remove only camera opening from active pending work. Retain the existing owner and the untested residuals; preserve historical cloud "Requested device not found" as the earlier remote-device observation. No repeat camera test, payment, upload, category seed, source/runtime/configuration change, deploy or financial replay was performed to document this confirmation. The same receipt updates checkpoint, active list, tracker, payments manual, residual-only pending roadmap and regenerated canonical PDF. The following earlier PHYSICAL CAMERA OPEN receipt is superseded only for the user-confirmed opening scope.

03/11/2026 — POS-OTHER-EXPENSE-CAMERA-CATEGORIES-01 / ENGINEERING INSTALLED / LIMITED READ-ONLY LAB PASS / PHYSICAL CAMERA OPEN

Same retained root central owner. Claim3562 passed applicable docsCI41536559473 and merged1edd4677 before source. Source3564 finalheadf61285c8d41a127bb7c3683a590e74f3b935e165 passed full PR CI41540229707/job125603948287: all5SUCCESS,5327server+8backup/0FAIL/0SKIP. Normal expected-head squash merged e9314faa7d9457bc3cce95593a76ed2482d3351c on parent5a73d7e, preserving peer wallet/Chat/invoice work. Exact combined mainCI41542861415/job125612791410 all5SUCCESS:5335server+8backup/0FAIL/0SKIP, actual category-native test ok2639 at23:17:31.1079428UTC. Local actual Node20/React19 focused27UI PASS (14new+6completion+7payroll), backend5PASS/1nativeSKIP honestly retained; native execution was subsequently proven by both exact CI runs.

Normal workflow_run guard41545173954/job125619048361 allstepsSUCCESS: actual EXPECTED_REVISIONe9314faa/CI_RUN_ID41542861415, pinned trigger23:25:51.6524605UTC, exact healthy wait23:31:58.4481081UTC. Renderdep-dbkhnvt6e07s73a5bjvg LIVE exacte931 at23:31:46.475337UTC. Independent root native public health ok=true/exacte931 recorded23:32:11.439UTC and after review23:35:03.627UTC. No direct/forced deployment or guard bypass. Four owned source/test blobs remain bba8fd4394e61d16cfb29bd66ab0b6a7de832d98/de9e2e1df d6729977532b67c8fcb5f9c7c0e3437/d6bc7b802ba976c240f81843df0e02a6200a61ff/649d16cce2b54761 b726fd91620ecda795daf187.

Actual limited read-only LAB: genuine SuperAdmin Χρήστος Μάνης, desktop cloudChrome tab9, MYWORKSTATION LAB / ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ, explicit storecmtpopbgo000trhb5ng9ytiru. Entered Owner/Manager payments → Supplier → All payments → Other expenses, which mounts the SAME

StorePosPaymentsModal; this is not an independent ordinary Owner/operator login. At23:32:38.239–23:33:19.494UTC the category selector is visible and disabled because the real active catalogue is empty, with explicit central Management → Expense categories guidance. One native category-refresh click returned the same empty state without error; amount/comments blank, no file, responsibility false, no payment submission. This closes ONLY installed empty-catalogue visibility/guidance/refresh, not populated choices or money persistence.

Actual camera click in the cloud returned Requested device not found (recorded23:34:05.319UTC), with no video/hardware. This is a cloud-device limitation, not a new physical-camera PASS or product regression FAIL. The demonstrated delayed React-commit defect is fixed and tested in actual mounted regressions; physical PC capture/focus/image quality remains NOT TESTED/OPEN. Modal closed normally; fresh UI-only MAIN on the same existing29Oct19:04 LAB POS2 shift at23:34:59.885UTC shows count0/cash0/card0/IRIS0/expenses0/total0/in0/out0, matching the fresh post-release UI baseline. These are UI observations, NOT DB hashes, whole-database/stock invariance or financial acceptance. No amount, acknowledgement, category seed, receipt upload, business/provider/fiscal/stock/payment POST or accepted replay.

Durable actual native AX/JPG and engineering/acceptance receipt are in CHECKPOINTS/EVIDENCE/pos-other-expense-camera-categories-20261103/. Payments manual records only the real limited read-only usage; shared tracker PDF regenerated. Completed empty-catalogue review is removed from active pending work. Remaining same-owner scope: physical PC camera/photo review, populated central catalogue selection/refresh and independently accepted hosted category-linked expense under fresh authorized before/after/control; ordinary Owner/operator/devices remain NOT TESTED. No synthetic payment is requested merely for documentation. Existing payroll/refund/bank/supplier/evidence/idempotency/permission and all peer owners/PASS remain protected. Parent scope stays OPEN for these residuals. The source-candidate and before-source entries immediately below are historical and superseded by this receipt.

03/11/2026 — POS-OTHER-EXPENSE-CAMERA-CATEGORIES-01 / SOURCE CANDIDATE / AWAITING FULL CI AND LAB

Same retained root central owner and branch fix/pos-other-expense-camera-categories-20261103. Before-source claim PR3562/headcfa4f32b9aa9f8228aa122028050de1637015688 passed applicable docsCI41536559473 (three SUCCESS/two classifier SKIP) and merged1edd4677db6f5ce688b15731280f72ed42e71be7 before source. Current candidate changes only StorePosPaymentsModal.jsx, store-transactions.js and two new dedicated regression files. Independent source review CLEAR; no hosted/physical/financial PASS.

Cause reproduced against the original actual mounted React19 modal: resolving getUserMedia while React commit is delayed leaves the later video element without srcObject. Commit-bound stream attachment/play and explicit acquisition state now replace that timer, with close/unmount/store/section/late acquisition cleanup and visible errors. The SAME central active-category catalogue now has an always-visible selector, loading/empty/error/retry/refresh guidance and stale request/selection protection. Empty catalogue remains explicit, with no invented seeded values. Fresh selected IDs are sent only for ordinary OTHER_EXPENSE; no category is fabricated for standalone payroll or historical rows.

Existing optional transaction category column is now bound atomically: validate an explicitly supplied category as active in the current company with a shared row lock inside the existing transaction, then update only that newly inserted transaction in all three existing insert paths. Unknown/inactive/foreign category or inappropriate transaction type fails closed; absent category preserves legacy clients. Existing INSERT/business branches, amount/sign/evidence/session/rights/idempotency/review/bank/payroll/supplier logic remain protected. No new table/DDL/bootstrap/migration/catalogue or production state change.

Actual local Node20.20.2/React19 mounted UI:14PASS/0FAIL/0SKIP, including delayed commit regression, cleanup, failures, scope and categories. Backend focused5PASS and1native PostgreSQL SKIP; syntax PASS. Local PG18.6 binary availability did not permit nonroot initdb in this sandbox, so native execution is NOT TESTED locally, not PASS. The new native test covers all three insertion paths,

selected/foreign/inactive/malformed/absent category, transaction type, negative/refund/bank/legacy controls, duplicate/concurrent idempotency, binding rollback and deactivation lock. Require actual unskipped native CI and complete exact PR/main CI, then ordinary guarded exact healthy release before scoped LAB/physical acceptance. Existing payment menu/payroll/completion/camera and financial tests remain mandatory.

All other owners and accepted records remain unchanged. No financial/stock/fiscal/provider action, real payment, receipt replay, source deploy or new manual PASS. Shared PDF is retained during source validation; final engineering/acceptance receipt synchronization follows actual checks. Camera operation on the owner's physical device and real-store effects remain OPEN/NOT TESTED. Single next action: inspect complete exact source PR CI and unskipped native test before merge.

03/11/2026 — POS-OTHER-EXPENSE-CAMERA-CATEGORIES-01 / ASSIGNED BEFORE SOURCE / USER FAIL / NOT TESTED

ASSIGNED root central coordinator with helpers; bounded branch fix/pos-other-expense-camera-categories-20261103. Owner reports POS → Πληρωμές → Λοιπά έξοδα cannot activate the receipt camera and requests a dropdown sourced from the existing central Διαχείριση → Κατηγορίες εξόδων shown in image(20261102-221736).png. The screenshot shows an empty catalogue, not a submitted payment. Existing camera/QR, payment completion/menu, payroll, financial reports/reconciliation and invoice owners remain assigned and protected; this is an independent new other-expense activation/catalogue-binding correction, not a scope transfer.

Current main 5599895caf555abdc518cb157a7589cef69fbd04 and AGENTS, complete active list/tracker/pending/checklist, payments manual and relevant camera/completion/expense-catalogue checkpoints reviewed. Existing modal loads the central catalogue once, suppresses errors as an empty list and hides the selector when empty; selected category currently reaches only the description, while its existing nullable transaction column is omitted by the request/schema/insert. Camera uses a timer to attach the acquired stream after state updates; commit timing/play/cleanup cause must be reproduced, not presumed. User camera FAIL is reported; new runtime/LAB acceptance NOT TESTED, not CI PASS.

Bounded source after this claim is green/main: client/src/components/store/StorePosPaymentsModal.jsx and dedicated mounted UI regressions for reliable commit-bound camera attachment/play, close/unmount/late acquisition cleanup and errors; always visible active-category dropdown with explicit loading/empty/error, retry/refresh, current-scope stale-response/selection protection, using the SAME company catalogue and existing read permissions. Add optional expenseCategoryId to the existing OTHER_EXPENSE request and server/src/routes/store-transactions.js schema/transaction insert, validating an explicitly selected active same-company category inside the existing transaction before persistence; dedicated native PostgreSQL/regression proof. Absence retains legacy callers and independent payroll/refund/bank/supplier behavior. No new catalogue, schema/DDL, seeds or inferred category assignment to historical rows.

Preserve tenant/store/session/rights/module/lifecycle guards, management-only catalogue mutation, same-shift/stale-shift and evidence/responsibility policies, receipt quality/scan/focus, existing payroll/refund signs and payloads, supplier/draft/job identities, idempotency and success-only completion. No source outside these bounded paths without established cause/review; no financial/stock/fiscal/provider/production configuration action or accepted payment replay. No source or production state has changed under this claim. The current shared PDF is retained during before-source validation; synchronize the engineering and actual acceptance receipts/PDF after checks, with no new manual PASS before real acceptance.

Required: actual mounted camera delayed React commit/open/close/unmount/error and stream cleanup; category empty/loading/error/retry/refresh/active filtering/stale scope and selected value request; isolated native active/foreign/inactive/malformed/absent category persistence plus rollback and unchanged business controls; protected payroll/refund/menu/completion tests, complete exact PR/main CI and normal guarded exact healthy release. Then no-payment camera/category review and only separately authorized synthetic LAB persisted acceptance with prepublished fresh before/after/control. Physical camera, ordinary roles/devices and real-store financial acceptance remain OPEN/NOT TESTED until observed. Single next

action: merge this documentation claim green/main before source.

03/11/2026 — AI-WALLET-COMMERCIAL-WAIVER-01 / ASSIGNED BEFORE SOURCE / NOT TESTED

Retained parent owner feat/ai-owner-wallet-20261022; executor current wallet continuation /root, bounded branch feat/ai-wallet-commercial-waiver-20261103. Owner explicitly requested return/release of the previously investigated sixteen unsubstantiated legacy REVIEW reservations. This is a commercial customer waiver with MyWorkStation absorbing unknown supplier cost, not a provider-cost confirmation, cash refund, trial grant or new credit. Exact private target identities and amount stay private. The separately evidenced legacy review, later Azure review, LAB legacy review and every other company are excluded. No financial mutation has occurred.

Read-only current source b8a2255118b1500ebbf26fa68d8c215881ad67c3 has only providerCostConfirmed review settlement; it cannot truthfully express this waiver. Existing supplier-cost uncertainty must remain explicit. Distinct bounded source: dedicated SUPER_ADMIN waiver preview/submit route, transactionally locked repository operation with fresh session/company/store lifecycle checks, version CAS and exact selected entry/hold binding, stable idempotency identity and append-only audit; native selected-wallet UI and truthful history/summary labels. Preserve original immutable tariff, provider evidence, original reservation and caller identity. Release holds without adding credit, reducing principal or reviving provider settlement. No provider retry, schema/migration, pricing/model/key, shared-cost posting, invoice/business/stock/fiscal or email operation.

Protected: existing paid settlement, manual provider-confirmed review, credit/grant receipts, customer pricing, postpaid debt, activity attribution and all recorded scoped LAB PASS/manuals. Shared-cost review remains owned separately under the same parent and is not modified. Before actual customer release require exact full PR/main CI, normal guarded exact healthy revision and measured synthetic LAB waiver/replay/concurrency/tenant/control acceptance. Hosted/real release currently NOT TESTED. Real selection must be re-read and match the exact approved batch; changed or newly evidenced entries fail closed rather than broaden the batch. No direct production financial SQL.

Single next action: merge this documentation-only claim with applicable green CI before source; then implement the distinct waiver and meaningful native transaction/UI regression coverage. Parent wallet/manual36 remains OPEN. Current-main canonical PDFs remain unchanged for this before-source non-PASS claim; synchronize the engineering/acceptance receipt and PDFs at the required completion gate. Ownership retained until completion or named handoff.

03Nov2026 source candidate — AWAITING FULL CI / HOSTED NOT TESTED

Before-source claim3559/headeaa35a6fbab12348ab40d4fb915120769a578bb4 passed applicable docsCI41535700383 (three SUCCESS/two classifier SKIP), merged2e08c13bd6eddc9108504f254a9c6b967a392700 before edits. Same retained owner/branch. Dedicated commercial-waiver preview and submit lock lifecycle/store, current SUPER_ADMIN session, company wallet and sorted exact REVIEW entries. Preview binds original full row and diagnostic audit fingerprint plus version/generation. Submit releases selected holds only, preserves principal/credit/debt/configuration/notices/original tariff/reservation and original usage, records zero CUSTOMER charge plus explicitly UNKNOWN supplier cost, reason/actor/stable request ID and append-only commercial audit. Existing provider-confirmed review remains distinct. Same request exact replay no-ops; changed scope/evidence/actor/version/generation/decision refuses. Native UI selects explicit single-store rows, previews exact count/amount, requires acknowledgement, freezes submitted identity for ambiguous retry; history labels customer waiver separately. No new provider call or production financial action.

Node20.20.2 local focused21PASS/0FAIL/0SKIP; detailed history/native suite subset4PASS/0FAIL/1isolated-PostgreSQL-SKIP. Full local server4910tests/4568PASS/0FAIL/342infrastructureSKIP; frontend/TABLE_SERVICE buildPASS and server preparation/Prisma generationPASS. Local base18e3464 affects no changed-wallet originals: all five modified existing source blobs independently equal current5599895. Full CI must execute the new actual HTTP/real PostgreSQL transaction, concurrency, rollback, lifecycle, evidence-change and revoked-session tests unskipped. Local dependency preparation temporarily selected an already cached compatible PDF package; package manifests are restored and no dependency/lockfile change is proposed. Generated startup source is excluded. This is source validation only, not LAB/real release PASS.

Single next action: exact full source PR/main CI and ordinary guarded healthy release, then fresh measured synthetic LAB acceptance before the separately authorized private customer batch. Preserve all peer source/records and current canonical PDFs until synchronized engineering/acceptance receipt. No manual PASS or whole-wallet closure.

03/11/2026 — INVOICE-SECOND-DRAFT-01 / OWNER-APPROVED LIMITED TRANSFER / USER DUPLICATE REGRESSION OPEN

ΑΝΑΛΗΨΗ ΑΠΟ codex/invoice-second-draft-20261016 — ASSIGNED fix/invoice-duplicate-prevention-20261103 / current Work page /root. The owner explicitly approved this named transfer after the existing assignment conflict was explained. This transfer covers only the newly reported POS/background/myDATA duplicate invoice prevention and reviewed consolidation investigation. It does NOT transfer credit/cash-return acceptance, POS-MYDATA-UNLINKED-01, header latency/PDF page/reader work, Gate3, monthly reports or historical-pair repairs. The old owner is released only for this bounded transferred scope when this record is merged; retained scopes remain assigned to their existing owners.

User screenshot demonstrates three apparent same-receipt NEW orders across POS background and myDATA, with padded/unpadded numeric spelling. Physical originals, issue dates, supplier VAT, stored source identities and payment/stock effects are not yet independently verified: USER-REPORTED REGRESSION / NOT TESTED independently. Public documentation intentionally omits real commercial identifiers, amounts, MARK and screenshots. No deletion, merge, payment, upload, AI call, approval or stock/accounting/myDATA mutation has occurred.

Protected: one existing payment/draft, original files and physical product rows, exact series/type/date/supplier identity, explicit uncertain-header review, deleted-draft fences, tenant/store scope, transaction/store locks and once-only posting. Similar amount alone never authorizes merging. A repeated product line is not a duplicate invoice. Existing strict review/alias source and qualified limited read-only PASS remain protected; CI is not LAB PASS.

Next: merge this documentation-only claim after applicable green CI, then diagnose actual creation paths and reproduce a bounded causal failure with synthetic data before source edits. Candidate source scope is

duplicate identity/precheck/transactional creation safeguards and focused tests only, excluding the separately assigned fast-header predicate, page counting, OCR/provider/model, financial algorithms and schema. Exact source files/causal regression will be recorded before implementation. Actual historical consolidation requires fresh original comparison, explicit selected canonical record, existing financial/stock side-effect review and measured evidence; never automatic cleanup. Full exact PR/main CI, ordinary guarded exact release and measured LAB acceptance remain required. Existing central PDFs retain current-main baseline for this before-source claim; synchronize final engineering/acceptance receipt without erasing peers. Checkpoint: CHECKPOINTS/CHANGES/2026-11-03-invoice-duplicate-prevention.md. No functional PASS or manual closure.

04Nov2026 00:38 Athens - Controlled catalogue SQL read-load completed / NOT full POS endurance or capacity acceptance

Retained central root operational observer and POS-DB-LOCK incident owner; documentation branch docs/controlled-db-read-receipt-20261104. The owner requested an endurance check before the Acharnon opening. Actual bounded observation ACHARNON-POST-UPGRADE-READ-CONCURRENCY-20261104 ran03Nov22:27:46.230-22:37:46.285UTC (04Nov00:27:46.230-00:37:46.285Athens), elapsed600.055seconds:215 successful read-only SQL calls,0 failures, no abort. It is a ten-minute controlled DB catalogue-read observation, NOT an authenticated POS/HTTP/Prisma-pool/UI/sales/fiscal/provider workload, full endurance run or launch certification. Requested client parallelism1/3/6 does not independently prove that six SQL statements executed simultaneously.

Fixed selected existing catalogue SELECT projection joined StoreProduct/Product and returned3310rows on every call. EXPLAIN ANALYZE BUFFERS/FORMAT JSON measured execution, capped at5001rows; statement_timeout3000ms and lock_timeout500ms were transaction-local only. Fifty scheduled rounds used12-second intervals:5rounds at1client,20at3,25at6. The planned stop conditions were any query failure, SQL execution>1000ms,rows>5000, observed connections>60 or any lock waiter; none triggered. No query/workload source, global timeout or resource configuration changed. Initial cold EXPLAIN96.407ms is a separate observation, not a matched pre-upgrade baseline or proof of upgrade causality.

| Requested parallel clients | Completed SQL calls | SQL p50 / p95 / p99 / max (ms) | Connector/tool roundtrip p95 / max (ms) |

| --- | --- | --- | --- |

| 1 | 5 | 17.516 /22.536 /22.536 /22.536 | 1197 /1197 |

| 3 | 60 | 15.677 /48.874 /182.606 /182.606 | 1590 /2573 |

| 6 | 150 | 18.951 /117.439 /183.507 /186.633 | 1339 /2180 |

SQL execution and connector/network/tool roundtrip are different measurements; none is actual cashier/POS response time. Thirteen post-batch activity samples observed max20connections,0lockwaiters and0activequeriesover15s; these samples are not continuous concurrency peaks. At30-second metric cadence (21points), DB CPU max0.10311737of0.5=20.62%, memory371626000of1073741800bytes=34.61%; current app-instance CPU max7.57%,memory12.59%. Sampling can miss short peaks and these values do not certify future load. Exact-window DB-pattern and request5xx log scans each returned0matches/hasMorefalse. Returned HTTP500/503 metric series were0, while403/409 occurred; no all-requests-success or whole-system-error-free claim.

Before22:25:28.505908UTC and after22:38:15.229265UTC selected-store aggregates agree:3310products,0transactions,0movements,1shift,stock_sum0.0000. Final DB read had22connections/recoveryfalse/0lockwaiters. These are counts and stock-sum comparisons only, not complete row/price/stock-per-SKU/financial/whole-database invariance or other-store controls. Fresh health recorded22:38:49.487UTC returned oktrue and the same6088b7b2d1eb1b404205f15e93a7503bfcea268b revision observed before this test; that peer release followed the earlier compute-upgrade receipt, not a deployment by this diagnostic. No sale/payment, count/finalize, stock/fiscal/provider action, source deploy/restart, UI/global store-context, credential/permission or paid-resource change was performed.

Historical CAPACITY20 remains owned by codex/pos-startup-loading-20261008 and source codex/pos-capacity20-profiles-20261009. Its09Oct/27Oct evidence retains the84-action/22POS burst FAIL (refresh p95=4131.316ms,p99=4237.201ms) and the120-minute endurance NOT STARTED; this new SELECT-only observation neither supersedes that failure nor takes over its harness/source/thresholds. Historical SIGKILL attribution, representative sustained current-source capacity, full recovery and monthly future-execution residuals remain OPEN. The independent Acharnon catalogue import acceptance, prices/departments/aliases, operator/licence/devices and fiscal readiness remain with their existing owner; observed3310row cardinality does not certify them. No accepted transaction is replayed for evidence.

Sanitized original result: CHECKPOINTS/EVIDENCE/controlled-db-read-load-20261104/receipt.json,128420bytes/SHA256d356076d3734739d321e7d154076d88a3fe70ff0c6460c20fb4d0bebb4652ceb. Evidence includes the bounded query, per-call timings, activity/metric samples and explicit limitations; no result product rows or private catalogue/prices are published. Operational diagnostic receipt only: no functional LAB/LIVE/USER PASS, manual/PDF closure, new source/configuration claim or general launch/capacity approval. Applicable documentation CI and main merge complete central publication. Next remains bounded monitoring of normal use and the retained owner's separately claimed representative isolated diagnosis; no automatic business stress or real fiscal replay.

04Nov2026 00:10 Athens - Production DB compute upgrade VERIFIED / limited operational verification

Retained central D8/TODAY root executor and POS-DB-LOCK incident owner; documentation branch docs/production-db-upgrade-receipt-20261104. The owner-approved 04Nov00:00-01:00 Europe/Athens window was used once. Root selected the existing production database dpg-d9isee7avr4c73bdglog-a in the already confirmed workspace tea-d9ie26vaqgkc739uudqg and clicked the authenticated native Render Dashboard compute-only update at03Nov22:06:00.870UTC (04Nov00:06:00.870Athens). API at22:06:01.997637UTC observed updating_instance with target0.5c-1g. First recorded available22:08:01.907UTC and final available22:09:30.479UTC confirm basic_256mb -> 0.5CPU/1GB. Native Plan reload independently shows the selected USD19/month tier and unchanged5GB storage. Compute was USD6/month, nowUSD19 (+USD13); unchanged storageUSD1.50 gives reviewed totalUSD20.50/month. Poolingnone, HAfalse and storage-autoscalingfalse remained unchanged. No second update was sent.

Preflight: existing scheduled backup20261103T210055Z-6437 SUCCEEDED, completed21:03:47UTC,429442124bytes, SHA2569c23d90bad5cd64a56a1565b02b086626293565e252d477f6b151d4a18b5bb0b, dryRunPASSED. This is recorded backup/dry-run evidence, not an independently verified full restore. Read-only SQL22:04:08.958896UTC had recoveryfalse/connections22/max103/lockwaiters0/active-over15s0. During the change one read22:07:19.914UTC returned SQLSTATE08004/service unavailable; short connection interruption was expected, but downtime was not continuously measured and its duration is UNKNOWN. This observation is not a TLS configuration, OOM or SIGKILL diagnosis and caused no workaround/configuration change.

Actual first post-change SQL22:08:18.379164UTC: recoveryfalse/connections19/max103/lockwaiters0/active-over15s0. Stable final SQL22:09:30.400005UTC: recoveryfalse/connections20/max103/lockwaiters0/active-over15s0. Fresh application health recorded22:10:24.057UTC returned oktrue and the same revisionc7830ad2108603bdbab8739e8ce78164cc234b5f as before; it is corroborating application availability, not a substitute for those database reads. The bounded DB-pattern scan22:05:45-22:08:18UTC found no P2024/P1001/P1017/deadlock/ECONN/OOM/SIGKILL matches. Error-level scan22:08-22:09:30UTC contained one selected-store table-service-module-not-active message22:08:33.382405926UTC with no DB error code; it was left unchanged. Do not claim an error-free system from these sampled windows.

Only the approved compute tier changed. No app source/deploy/restart, database replacement/reset/restore/migration, credential/permission/profile/module/capture-control change or financial/stock/fiscal/provider/email action was performed. This is a VERIFIED COMPUTE UPGRADE with limited operational readback, not a functional LAB/LIVE/USER PASS, a repair of the historical SIGKILL cause

or a capacity/whole-recovery certification. The backup Shell was not resized. Historical incident/POS/selected-table recovery/monthly capture and every peer owner/PASS remain scoped and protected. The completed scheduled upgrade must not run again; remaining SIGKILL attribution, sustained representative capacity, full recovery and future scheduled execution remain OPEN with retained owners. Continue bounded monitoring under normal use and the separately claimed investigation; never replay accepted business actions for evidence.

Public sanitized evidence: CHECKPOINTS/EVIDENCE/production-db-upgrade-20261104/receipt.json and original plan-after.jpg. This documentation-only receipt changes no executable source or functional manual and leaves existing canonical PDFs intact; it does not close the broader POS-DB-LOCK or numbered/Gate scopes. Applicable documentation CI and main merge are required to complete central publication.

02Nov2026 — HISTORICAL production DB upgrade reschedule / superseded by 04Nov verified execution

Retained central D8/TODAY executor and POS-DB-LOCK incident owner. Explicit owner instruction moved the existing approved upgrade to 04Nov2026 00:00–01:00 Europe/Athens (03Nov22:00–23:00UTC). The old 03Nov00:00–01:00Athens slot is superseded and must not execute. Existing automation6ae86fea0f40819197557f5865f57802 was updated, not duplicated: enabled exact DTSTART;TZID=Europe/Athens:20261104T000000 and embedded execution guard both use04Nov; fresh update receipt2026-11-02T21:40:10.767745Z. No recorded execution is claimed; next_run_time was null at verification.

Approval remains limited to the same production database dpg-d9isee7avr4c73bdglog-a, basic_256mb to basic_1gb/0.5CPU/1GiB, compute USD19/month versus USD6 (+USD13/month), storage unchanged, with accepted short downtime. Before execution verify identity, current plan, access, backup and health; perform at most one normal supported plan change only inside the new slot, and do not repeat if already1GiB. Unsupported authenticated update capability means BLOCKED, never substitute a new database, credentials, gate bypass, source deploy, app restart, reset, restore, migration, permission or business action.

This is a scheduling correction only: no production upgrade/state/source/deploy or new functional PASS. Existing selected-table recovery and heartbeat/startup evidence remain scoped; whole recovery, effective in-memory execution and future01Dec capture remain OPEN. The capacity change does not resize the backup Shell and is not proven to repair the SIGKILL cause. Existing owners and accepted evidence are preserved. The single next action is the guarded upgrade preflight in the new window; no diagnostic business replay.

02/11/2026 — CASH-UNIFIED-AUDIT-15 / JOINT SECTION CANDIDATE SOURCE / AWAITING FULL CI AND LAB

Same retained owner and branch fix/cash-joint-handwritten-20261102. Before-source claim3551/head94f3c35a passed applicable docsCI41523450228 (three SUCCESS/two classifier SKIP), merged340182dcd815191d14c967776bfd2fea58b34ef0 before edits. Current bounded implementation adds conservative section candidates only: exact opening headings delimit sections (including empty/uncertain boundaries); at least two distinct exact fields; strict expense-total labels, never supplier receipt inference; no uncertain/duplicate/timed/conflicting recognized fields. Unique same-day/day-month scoped CLOSED ledger candidate retains original checksum, reading hash, source hash, ledger snapshot hash and physical line proof. Partial dates are clearly ledger-derived candidates, not canonical printed dates or persisted owner date approval. Header operator does not assign the whole sheet. Raw/durable readings and prior timed matches remain unchanged; original unresolved date/line/coverage checks still apply, with zero adjustments/approvals. Source and report hashes cover suggestions. Unknown/multiple/wrong-year/foreign/open/repeated evidence fails closed.

Focused Node20:55PASS/0FAIL/0SKIP, including14new section/projection/rendering regressions and41protected contract/automatic/report cases. Local full suite and exact native PR/main CI pending; new hosted behavior NOT TESTED/AWAITING LAB, not functional PASS. Initial isolated full baseline lacked

supporting checkout fixtures/root package and failed; this is not treated as code evidence; missing unchanged repository fixtures restored before complete validation. No provider or business action. Public fixtures are synthetic; real source identities/amounts/text omitted. Parent cash15 and invoice/uncertain-source/event/card/expense/final-result residuals remain OPEN/ASSIGNED. No manual PASS or shared-PDF replacement during source validation. Next: complete exact CI/main/guarded release then GET-only stored-reading acceptance and synchronized receipt.

02/11/2026 — CASH-UNIFIED-AUDIT-15 / JOINT HANDWRITTEN SHIFT CANDIDATES / ASSIGNED BEFORE SOURCE

Retained owner codex/cash-chat-reconciliation-20261026; implementation branch fix/cash-joint-handwritten-20261102. User confirmed the two partial handwritten dates refer to 2026, then requested cross-checking opening/closing cash, POS and expenses. This is user-provided context, not a printed/model year or confirmation of uncertain amounts. Read-only private ledger comparison supports multi-shift sections in a single original; stored extraction includes incorrect/uncertain labels and amounts. No source original/raw mutation, new paid call or financial change. Prior eight-request/eight-completion receipt3544 and scoped synthetic date/header LAB PASS3537 remain protected. Current source history through404b571 contains no intervening owned cash-runtime change; peer invoice, fiscal and recovery work retained.

Bounded source scope after this claim is green/main: new cash-paper-shift-candidates.js, additive integration in cash-paper-automatic.js and cash-reconciliation-report.js, meaningful synthetic tests. Segment only at exact recognized opening-cash headings, compare at least opening plus an independent typed/strict-label POS/EFTPOS/closing/expense field within that section, require coherent printed day/month/full date against scoped closed ledger shifts. Return only unique joint candidates, preserving source checksum, reading hash, section line range, ledger source hash and field proof. Document-level operator is not imposed on every section. Missing year can support a ledger-derived candidate date only; never mutate canonical printed date or infer upload-date year. Candidate is explicitly unverified, never MATCHED, human approval, financial adjustment or full coverage. Uncertain/malformed/conflicting fields, ambiguous candidates, foreign/open/invalid sessions and out-of-context evidence fail closed. No invoice/payment-reference proof or expense receipt claim from amount equality.

Preserve exact timed existing matches and duplicates, discovery/read limits, tenant/store/lifecycle guards, raw extraction/durable intent/no-retry, all financial/card/IRIS/stock/fiscal/idempotency/manual/continuation behavior and all separate owners. No schema, provider/model/timeout/price/auth/settings/email/UI-flow changes. Require focused regressions, complete exact PR/main native CI, normal guarded exact release then GET-only stored-reading acceptance with fresh target/control before/after. Candidate publication is not a new LAB PASS; full original accuracy/payment relevance, uncertain source, events/cards/expenses and final result remain OPEN. Current new behavior NOT IMPLEMENTED/NOT TESTED. Keep shared PDFs at current-main baseline during before-source claim; synchronize engineering/acceptance receipt after checks without replacing peer pages.

Single next action: merge this bounded claim after applicable CI, then implement the conservative joint candidate projection on the same stored readings. Same owner retained; no scope transfer.

2 November 2026 — FTEXT original-proof scheduling engineering release / physical acceptance OPEN

Same retained FTEXT-RESILIENCE-01 owner; continuation fix/ftext-live-latency-20261102, bounded source fix/ftext-proof-deadline-20261102, release receipt docs/ftext-proof-deadline-release-20261102. Source PR3540 final head c8139e39ce555a4054001e8caeaf2c51b8bc239e passed complete PR CI41507937853/job125492665669 and actual Windows5.1 CI41507937761. Merged source 8cd55db49e1329c0e697e9a92840729818162afa passed exact full main CI41510835496/job125502510582: all five jobs SUCCESS, 5256 server plus 8 backup PASS, zero FAIL/zero SKIP, complete isolated HTTP E2E; exact-main Windows5.1 CI41510835630/job125501946259 SUCCESS. Normal guarded deploy 41513282882 completed; independently observed health ok=true on the exact source revision at 2026-11-02T19:52:19.573269+00:00. No direct/forced deployment or production business-data mutation.

Only Cloud-Tools and Cloud-Connector change in the selected-PC package. Refresh scheduling uses the original acknowledged checkedAt/POST start, measured round-trip reserve and a maximum ten-second work window. Expired/replayed/failed/future proof cannot defer refresh. Original readiness/heartbeat, single-worker exclusion, first-publication, idempotency and all fiscal gates remain authoritative. Meaningful actual-runspace/main-loop and helper fixtures passed on Windows5.1; local PS7 and fourteen focused Node20 tests also passed. The one-line CI job execution budget permits the complete existing suite and changes no application timeout or check.

The existing selected-PC installer was replaced with version 9, 152300 bytes, SHA256 38f7a49b2c2ae90dc1f712fd0457ae648a4ed03f6ac9ddbd07571a58fd8aa505. All seven embedded module byte sequences match merged source; five unaffected modules, configuration bytes and installer envelope are unchanged. No credentials were added. No remote installation is claimed. Installing it remains an operator action between ordinary transactions, preserving FTEXT+ and existing pairing; no diagnostic sale, resend or archive is required.

Engineering availability is not physical speed/stability acceptance. Current latency remains OPEN/FAIL; updated-PC installation and improvement NOT TESTED. Historical scoped issuance/NO/recovery PASS and every peer owner/PASS remain protected. Do not reopen or duplicate their work. Single next action: the authorized operator starts the updated connector between transactions, then assess only naturally occurring trading evidence; no synthetic transaction is requested. The checkpoint, active list, tracker, pending roadmap and manual limitations are synchronized with the regenerated shared PDF. Exact receipt: CHECKPOINTS/EVIDENCE/ftext-proof-deadline-20261102/engineering-release.json.

2 November 2026 — FTEXT candidate retained / sufficient complete-CI execution budget

Same owner/sourcePR3540. Before-configuration claim3546 reconciled35a71d5 passed applicableCI41507363760 and merged1eb05ab before this one-line change. Increase only build-and-test job timeout15to25minutes, justified by two exact-source15minute cancellations after5256server+8backup/0FAIL/0SKIP. Every existing test/guard/command remains required. No app/server payment/readiness/heartbeat/driver timeout or production setting changed.

FTEXT runtime and the expanded real-loop test are byte-identical to d377946, which passed actual Windows5.1 CI41501034299 and local PS7 plus14focusedNode20 tests. Reconcile onto current shared main preserving every peer record/source/PASS. Original checkedAt/POST-start scheduling, measured reserve and10second maximum work window remain a hint only; original server readiness and immutable first-publication gates stay authoritative. Candidate remains NOT INSTALLED; require complete exact combined PR/main CI and normal guarded release before delivery. No further identical-budget rerun and no skipped test. Physical performance OPEN/FAIL, no real-store transaction or interruption. Shared PDF final receipt remains deferred during source validation.

2 November 2026 — FTEXT validation execution budget / bounded before-source claim

Same retained FTEXT continuation owner. Source PR3540 headd377946 remains NOT INSTALLED/OPEN. Actual Windows5.1 CI41501034299 passed the runtime and scheduling/real-loop fixtures. General CI41501034223 attempts1/2 both passed5256server+8backup/0FAIL/0SKIP, build/browser checks and many realHTTP flows, but each full job was CANCELLED before all E2E completed. Attempt2 job125478319622 started18:48:03UTC and completed19:03:04UTC:15minutes1second, matching the existing15minute build-and-test budget. Neither attempt is fullCI PASS. Only one unchanged retry was attempted; do not repeat an identical insufficient budget.

Bounded necessary validation-support change after this claim merges: change only build-and-test.timeout-minutes from15to25 in .github/workflows/ci.yml. All test commands, required jobs, assertions, deployment guard, fiscal/readiness/heartbeat/business timeouts and production settings remain unchanged. This permits the complete existing validation; it does not waive a gate or mark cancelled work successful. No takeover of unrelated CI/feature scope, no new fiscal operation or store interruption. Physical speed remains FAIL/OPEN. The published PDF is retained during candidate validation; regenerate the synchronized final receipt after validation and release.

Single next action: merge this documentation claim after applicable green CI, apply the one-line job execution budget change to the existing FTEXT candidate, then require exact complete PR/main CI and guarded release before package delivery.

03/11/2026 19:42–19:46 Europe/Athens — INVOICE-ROW-PROVENANCE-01 / LIMITED LAB PASS / HEADER TOTAL FAIL

Retained /root owner. SourcePR3604/0cacd5ce merged35d6840e43080dd519a730a27437100b277a3404 after full PRCI41640965590 5476server+8backup/0FAIL/0SKIP. Exact mainCI41643090900 5479server+8backup/0FAIL/0SKIP, all five jobs success; normal guarded deployment41644245311, Render dep-dbkuaas9v7es73fcrqs0 LIVE. Independent health before/after actual LAB returned exact35d6840. Focused137PASS, including41 actual-handler cases; no provider/network call or await added by the provenance patch. Before-source claim3601 and before-LAB receipt3611/3276fc63 were green/main before source/action respectively.

ONE first native LAB submission at17:45:17.775Z of new provenance-20261103-D.pdf, LAB-PROVENANCE-20261103-D / LAB METER TEST, two numbered physical pages. Operator selected INVOICE and CREDIT only after manually correcting the automatic page subtotal12.40 to the printed invoice24.80. Saved primary job ee559d2e-1807-48c2-852a-ff2bd78a6dba, attachment02964d39-86b3-43cb-86e8-f3181e141186, document a158e252-88d2-4753-b52f-e4a0409fd65c and order52b59efa-869d-48b3-8f99-f3f6e98ace94. At17:45:30.598559Z: background COMPLETED, two rows, no reconciliation difference; durable productLines retain [[sourceFileIndex0,sourcePage1],[0,2]], physical LAB-A/LAB-B order, quantity1 each/net10/VAT24%/gross12.40 each. One DRAFT document / NEW order, net20/VAT4.80/gross24.80, CREDIT/paymentTransactionId null. Both catalog items remain UNRESOLVED; this is NOT product matching, approval or full-invoice accuracy PASS. No purchase-item provenance columns or UI were added. LIMITED PASS only for persisted job source-file/page mapping and its associated two draft rows.

Published baseline17:26:38.832799Z was refreshed17:41:51.832607Z and immediately before CREDIT17:44:09.498552Z without drift. After17:46:03.398561Z: exactly+1 attachment/job/inbox/document/order and+2order lines. Transactions, all shifts, stock quantities, movements and every N40 control count/selected signature unchanged. Visible MAIN before0transactions/cash0/cards-IRIS0/total0. No money, approval, stock/fiscal/accounting/myDATA action or old paid/CREDIT replay. Evidence CHECKPOINTS/EVIDENCE/invoice-row-provenance-20261103/lab-result.json, before.json, immediate-before.json, after.json, synthetic fixture and screenshots. After submission the UI withdrew its data with “Η σύνδεση άλλαξε”; UI completion/fast-handoff duration is NOT TESTED. Backend persistence is

independently observed; never resubmit D to obtain a nicer screenshot.

NEW HEADER FAIL: the D header read took12111ms (17:42:23.612Z→17:42:35.723Z continuous browser-side timer including upload/observation), correct supplier/number/date but automatic12.40 instead of printed24.80, confidence89%. No performance/correct-header PASS for D. Previous correct11.642s/C and historical header PASS3596 remain exact historical samples, not universal guarantees; automatic PDF total correctness is reopened. Read-only actual-handler reproduction shows a two-page PDF with one row reconciling to subtotal12.40 returns via Azure alone, whereas empty rows reach the configured fallback24.80. The azureProductLines.length disjunct bypasses the single-page header guard; an existing test explicitly expects that unsafe PDF-table bypass. This is a causal local reproduction, not a captured hosted producer trace. Source metadata changes did not touch fast-header. Current operators must verify the four fields against the printed original, including total, before any actual payment.

Completed persisted-provenance acceptance is removed from pending scope. Original EFK, unnumbered completeness, UI file-versus-physical-page wording, cross-supplier initial accuracy, physical POS/settlement latency and other peer scopes remain OPEN with existing owners. No overall Gate3 PASS or scope transfer.

03/11/2026 — INVOICE-PDF-TABLE-HEADER-SAFETY-02 / SOURCE CANDIDATE / AWAITING FULL CI AND LAB

Retained /root owner; fix/invoice-pdf-table-header-safety-20261103, based on main3123b01170b7643f76ce9434d2ca109c3a4086f7. Before-source claim and actual previous LAB receipt PR3617/head5daf841f111f4285124bba3bb6ab9b6842610986 passed applicable docs CI41689336547 and merged3123b011 before these edits. Main history since healthy35d6840 reviewed: peer FTEXT promotion source and independent receipts retained; no intervening fast-header predicate changes. Actual D read remains FAIL:12.111s, automatic12.40 versus printed24.80. Previous correct11.642s sample is historical only. Persisted two-page row provenance limited LAB PASS remains protected; never resubmit D or any previously paid/CREDIT invoice.

Bounded causal correction: the existing known-single-physical-page PDF requirement now guards BOTH Azure early-return paths, including a reconciled table. A one-row table reconciling to page subtotal12.40 cannot bypass the configured whole-document header fallback for a two-page/unknown-page PDF. Image and known-one-page PDF header/table shortcuts, exact-file durable reuse, wallet fail-stop, company/store guards and all payment/draft/stock/fiscal/auth semantics remain. No model, timeout, full-product background, payment submission or fast-handoff change. The fallback may add the existing second header provider for the affected previously unsafe PDF shortcut; no universal latency benefit is claimed. It does not wait for background product extraction.

Actual-handler Node20 regression before source:35PASS/18FAIL; after source54PASS/0FAIL/0SKIP. Covers complete and partial header with one subtotal row for2/missing/zero/negative/string/invalid/nonfinite/null page counts; fallback24.80; numeric1 PDF shortcuts; image path; durable exact-file; wallet and foreign-store refusal. Two older source-contract assertions now require the added PDF guard rather than the unsafe old predicate; all original surrounding fallback/handoff checks remain. Focused197PASS/0FAIL/0SKIP across seven fast-header/multipage/provenance/durable-handoff/duplicate/tolerance test files. Independent read-only reviewer found no blocker and independently ran the initial53 handler cases; added missing-key regression now passes too. Engineering evidence only, no hosted PASS/manual change.

Known limit explicitly retained: ordinary fallback failure or absent fallback key can still return the useful Azure header/subtotal under existing policy. A new actual-handler test records ordinary failure, absent key and wallet refusal separately; this change restores fallback selection, not guaranteed provider correctness. Hosted producer trace for D was not captured. EFK, unnumbered completeness, UI physical-page wording, supplier matching, full cross-supplier accuracy and physical POS/settlement latency remain separate OPEN scopes with original owners.

Required next: exact full PR/main CI (all native/build/invariant/E2E gates), ordinary guarded deploy and exact healthy revision; then publish bounded LAB/control baseline before ONE fresh synthetic two-page header-only no-submit read. Require correct supplier/number/date/printed24.80 and measure continuous file-upload-to-ready duration. No payment/CREDIT/approval/finalization/stock/fiscal action, no old invoice

replay. New code is NOT INSTALLED / AWAITING LAB until those steps; CI alone never closes the actual header FAIL. Checkpoint CHECKPOINTS/CHANGES/2026-11-03-invoice-pdf-table-header-safety.md. Owner retained until exact recorded completion or named handoff; every peer owner preserved.

Combined-revision reconciliation: peer mainb74773485fd2e6f21b3c0792ec8d662a35674c95 added FTEXT promotion and independent import/cash-event claims. Preserve all peer records and every owned runtime/test blob unchanged. The first PR CI41698976232 was still running when superseded, not recorded as full PASS. Exact combined CI is required before merge/release.

03/11/2026 — INVOICE-PDF-TABLE-HEADER-SAFETY-02 / ASSIGNED BEFORE SOURCE / HEADER FAIL OPEN

ASSIGNED /root, retained header/PDF owner; next source branch fix/invoice-pdf-table-header-safety-20261103. Latest actual D FAIL and metadata PASS are recorded above/in the row-provenance checkpoint. No replay of D or any previous paid/CREDIT invoice. Candidate is one bounded return-predicate correction in server/src/routes/commerce-pos-v244.js and actual-handler tests in server/test/pos-fast-header-latency.test.js: apply the existing known-single-page PDF condition to BOTH complete-header and reconciled-table Azure early-return branches. A reconciled partial table is not proof of a complete multi-page invoice total. Update the existing unsafe page-count2 table-bypass expectation and cover multi/unknown counts with subtotal row12.40→configured header fallback24.80. Preserve image and known-one-page PDF shortcuts, exact-file durable reuse, wallet fail-stop, company/store guards, economic/financial/stock/draft/fiscal semantics and every peer owner.

Do not change model, timeout, full-product background reading, fast-handoff or payment submission. Owner requires short front-of-POS waiting: retain existing fast paths and measure the affected fresh multi-page header read; no speed guarantee or CI-derived latency PASS. Restoring the existing configured fallback is distinct from guaranteeing provider accuracy. Existing ordinary fallback failure/no-key behavior may still show an uncertain Azure subtotal and is outside this minimal candidate unless separately diagnosed/claimed. Exact full PR/main CI and normal guarded release are required, followed by ONE fresh header-only no-submit PDF read with bounded before/after/control. Require the printed24.80 and four correct fields; otherwise keep FAIL. Hosted acceptance of the next predicate is NOT TESTED. This documentation claim must merge green before editing; primary integrates, parallel review is read-only. Single next action: bounded predicate/test correction after this receipt, without another payment or CREDIT submission.

03/11/2026 — INVOICE-ROW-PROVENANCE-01 / GUARDED RELEASE / BEFORE SYNTHETIC LAB

Retained /root owner. Source PR3604 head0cacd5cee643fff381c643babc4f21573ff568ee passed full PR CI41640965590 and merged35d6840e43080dd519a730a27437100b277a3404; exact full main CI41643090900 SUCCESS (5479server+8backup/0FAIL/0SKIP). Normal guarded workflow41644245311 SUCCESS, Renderdep-dbkuaas9v7es73fcrqs0 LIVE and independent health exact35d6840e43080dd519a730a27437100b277a3404. Focused137PASS/0FAIL/0SKIP, actual-handler41PASS; no new provider/network/await on POS payment path. Header PASS3596 and measured fresh-header11642ms sample remain protected; no universal speed or payment-duration claim.

Before-state evidence CHECKPOINTS/EVIDENCE/invoice-row-provenance-20261103/before.json contains fresh bounded LAB/control ten-table counts/signatures and capture time. Virtual native BackOffice, authenticated Platform Admin, explicitly selected MYWORKSTATION LAB / ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ; no physical POS, sale, shift settlement or money movement. Planned ONE first submission of NEW synthetic provenance-20261103-D.pdf, invoice LAB-PROVENANCE-20261103-D, two numbered physical pages/two rows, net20/VAT4.80/gross24.80. Supplier LAB METER TEST, EFK0. Select INVOICE/CREDIT only; never Paid or a credit note. Expect one attachment/job/inbox/document/order and two draft lines, DRAFT/NEW and no linked payment. Retain job JSON coordinates [[0,1],[0,2]], same economics and row order. Transactions, shifts, stock/movements and all control signatures must remain unchanged. No approval/finalization/stock/fiscal/myDATA action. Refresh baseline immediately before the action; if it drifted, stop and reconcile before acting. No previous paid/CREDIT invoice replay.

Hosted provenance acceptance is NOT TESTED before this action. Source JSON preservation and intake parser tests do not certify purchase-item coordinate columns or a provenance UI. After one action, record exact job/document/order IDs, saved coordinates, before/after deltas, same healthy revision and actual outcome; synchronize manuals/active/tracker/pending/PDF only for observed scoped PASS. Preserve EFK, unnumbered completeness, physical-page UI and other peer owners.

03/11/2026 — INVOICE-ROW-PROVENANCE-01 / SOURCE CANDIDATE / AWAITING FULL CI AND LAB

Same retained /root owner, fix/invoice-row-provenance-20261103. Before-source claimPR3601/head ae0779f5413e6ee5dd07669b2e71d18645b771e9 passed docsCI41639746578 and merged4f52002c2d197f4b0c7437e5143139138e303504 before source edits. Actual old core PUT reproduction mapped [0,2] to missing coordinates while preserving12.40; initial actual-handler regression10PASS/28FAIL isolates the metadata defect.

Bounded source: optional strict nonnegative safe integer sourceFileIndex and positive safe integer sourcePage in shared core lineSchema and alternative reviewLine, plus conditional copies in ordinary review. No coercion/default/guessed page. Shared BackOffice PDF imports may exceed5pages, so metadata validation does not impose new POS file/page limits. No schema migration or new DB column; durable AiReaderJob resultJson remains the provenance record. Core intake normalization retains it; final purchase-item columns/UI provenance display are not added or certified here. No economic, draft/payment/stock/fiscal/security/duplicate/wallet guard change, no provider/network call or await added, fast-header/handoff source untouched.

Fresh Node20 focused137PASS/0FAIL/0SKIP, including41 new actual-handler tests (saved JSON/response, core intake parsing with actual economic normalization, mixed PDF/photo ordering, legacy absence, independent fields, page6, safe-integer boundary, malformed inputs before DB access, foreign store/locked document and equal read/write call counts). Independent reviewer found no blocker; intake tests stop at supplier resolution and do not claim full hosted final-item persistence. Full final PR/main CI, exact ordinary guarded release and measured hosted acceptance still pending: AWAITING LAB, not a new manual/performance PASS. Existing header LAB PASS3596, timing sample11642ms and all peer scoped results remain protected.

Next: full exact CI and guarded release; publish fresh bounded before/control values before one identified NEW synthetic no-payment CREDIT draft acceptance. Verify retained sourceFileIndex/sourcePage in persisted primary job JSON and expected once-only draft rows without finalization, stock or fiscal posting. Do not replay previously submitted CREDIT/real paid invoices. If safely measured hosted acceptance is unavailable, retain NOT TESTED. Other EFK/unnumbered/physical-page UI/general accuracy residuals keep existing owners.

03/11/2026 — INVOICE-ROW-PROVENANCE-01 / ASSIGNED BEFORE SOURCE / NOT TESTED

ASSIGNED /root, branch fix/invoice-row-provenance-20261103, bounded continuation of retained physical-PDF work; user explicitly requested the next step. Previous actual header-only limited LAB PASS on6ebd9a4 is recorded in merged PR3596/ff6fdbf9, with unchanged ten-table LAB/control evidence. Previous numbered physical-PDF-to-draft limited PASS on404b571 remains protected; never replay its CREDIT submission or any real paid invoice. Persisted row provenance is still FAIL/OPEN: sourceFileIndex/sourcePage are produced by the converter but dropped at API validation/persistence boundaries. Read-only inspection finds shared core lineSchema used by PUT product-lines and POST pos-intake, plus alternative ai-recheck reviewLine and its explicit ordinary-review mapper. normalizeProductLine already spreads metadata. No provider or business action in this claim.

Exact candidate scope: optional validated integer sourceFileIndex/sourcePage in server/src/routes/commerce-pos-v244-core.js and commerce-pos-ai-recheck.js, optional small shared provenance helper if needed, plus actual-handler persistence/intake regressions. Preserve absence for legacy rows; never infer coordinates from row position, guess page1 or overwrite existing evidence. Do not

change provider/model/prompt, page counting, UI labels, tax/excise/economic calculations, supplier matching, duplicate identity/review, deletion fences, wallet, draft/payment/stock/fiscal/auth/tenant/store semantics or schemas/migrations. Preserve the existing header guard and all peer owners, especially Gate3, VAT inbox, second-draft/duplicate and wallet scopes.

Validation: synthetic two-page PDF plus photo coordinates [[0,1],[0,2],[1,1]] must survive actual PUT saved JSON/response and core intake parse, including alternative background-linked and ordinary-review branches. Legacy missing coordinates remain missing; malformed/noninteger/negative coordinates fail before writes; foreign-store/linked-lock guards remain unchanged; amounts/line order stay exact. Focused Node20, full exact PR/main CI and normal guarded release required. No CI-only LAB/manual PASS. Hosted persistence acceptance must use one separately identified synthetic first submission only after exact live verification and published bounded before/control values; no payment, approval or stock/fiscal finalization. If that action cannot be safely measured, leave hosted scope NOT TESTED rather than replaying old data.

Owner clarification03Nov: POS payment must not wait for full product reading. This fix must add no provider call, network request, polling, synchronous full-page read or awaited background work to the front-of-POS payment path. Existing fast-header/deferred-handoff handler contracts must remain green; no hosted latency claim from CI.

Measured header timing03Nov2026 14:46–14:48 Europe/Athens on6ebd9a4: fresh synthetic two-page PDF C, continuous timer before file selection submission to ready UI11642ms; correct supplier/number/date/24.80, no manual edit/submission. Includes upload/processing and remote-browser observation overhead; not provider-only or physical POS/settlement time. Sample B upper bound18392ms has an observation gap and is not an exact duration. Ten bounded table counts/signatures unchanged for both actions in LAB and control. No performance PASS or universal latency guarantee. Evidence CHECKPOINTS/EVIDENCE/invoice-header-timing-20261103/timing-result.json. Original metadata-fix requirement remains: no new synchronous OCR/provider/network/await on payment critical path.

Next: merge this precise documentation-only claim after applicable green CI, then implement the bounded metadata preservation and regressions. Retained owner /root; other invoice residuals and existing scoped PASS remain unchanged. This is not a Gate3 ownership transfer or broader accuracy PASS.

03/11/2026 13:41–13:42 Europe/Athens — INVOICE-HEADER-PDF-SAFETY-01 / LIMITED LAB PASS / RESIDUAL OPEN

Owner /root retained. Actual authenticated native LAB check on healthy revision 6ebd9a423b492e5d32061aa68bb8297a396cce01 before and after; revision contains the guarded bc37f7e release and has no subsequent changes to commerce-pos-v244.js. Source PR3554, complete PR/main CI5414+8, combined full CI41604814935 5420server+8backup/0FAIL/0SKIP and normal guarded release41607495623 remain the engineering evidence; receipt PR3586 merged983dd8ad. Earlier browser authentication timeouts were a temporary access blocker; signed-in Platform Admin was positively verified in this continuation.

ONE fresh upload of header-safety-20261103.pdf, two numbered physical PDF pages, through selected MYWORKSTATION LAB / ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ → Πλήρες Backoffice → Πληρωμές Ιδιοκτήτη / Διαχειριστή → Πληρωμή Τιμολογίου → Νέο τιμολόγιο. Without manual field corrections, observed LAB METER TEST, LAB-HEADER-SAFETY-20261103-A, 2026-11-03, total24.80 (not page subtotal12.40); UI confidence91%. LIMITED PASS for these four automatic header fields on this fixture. Closed dialog without choosing document type, Paid/Credit or submitting. No new payment, CREDIT draft, supplier registration, approval, stock, fiscal or paid-invoice replay.

Bounded before11:41:41.494549Z / after11:42:39.360760Z: identical counts AND selected MD5 signatures for all ten measured tables in LAB and N40 control: transactions, shifts, stock, movements, purchase documents, orders, AI jobs, attachments, inbox and order lines. No full database invariance claim. Evidence CHECKPOINTS/EVIDENCE/invoice-header-pdf-safety-20261103/lab-result.json and synthetic screenshot. PDF UI still says one page for one file: this is NOT a physical-page-count UI PASS. Physical conversion/mapping was previously tested separately; persisted row provenance remains OPEN. Original

EFK, unnumbered completeness, cross-supplier initial row accuracy and latency/provider-call count remain outside this limited PASS and retain existing owners. Do not replay prior submitted CREDIT or real paid invoices.

Completed header-only acceptance removed from active pending scope. Single next action within retained owner: inspect the existing persisted page-provenance mapping candidate against current main without another submission; publish a separate precise claim before source changes. No overall Gate3 or invoice-accuracy PASS; preserve all peer owners and previous scoped results.

03/11/2026 — INVOICE-HEADER-PDF-SAFETY-01 / GUARDED ENGINEERING RELEASE / AWAITING AUTHENTICATED LAB

Retained /root owner. Before-source claim3552 green/main d3bf7a5a2; source PR3554 final headba6996b725e11cedf114f4cc30319cfa14927644 passed full CI41601462165 and merged16a864afcdee9c882c1e44edcdf13adbdd101c62. Exact full main CI41603652930 SUCCESS. Each full run: 5414server+8backupPASS/0FAIL/0SKIP, all five jobs, build/browser/invariant/realHTTP checks. Fresh Node20 focused135PASS/0FAIL/0SKIP, including37 actual-handler cases and the real two-page synthetic PDF regression; syntax and checkpoint-policy validation PASS. Original CI41529406558 stopped before full validation due missing active-list update; corrected in ba6996b7, not treated as a runtime/test PASS. Reconciliation preserves current main's competing-draft/payment-review guard and every peer runtime/owner/PASS.

Only complete-header-only bypass changed: images or PDF normalized numeric Azure page count exactly1. Multi-page/unknown-count PDF follows ordinary configured fallback. Pre-existing reconciled-table bypass, durable exact-file reuse, wallet fail-stop, tenant/store checks, sequential pages, payment/draft/stock/fiscal behavior unchanged. Own guarded run41605173533 deferred deployment because main had newer production source. Combined revisionbc37f7ee12c735656ca94ab5a860a988fb1149e9 contains PR3554 plus peer cash changes, with exact full CI41604814935 SUCCESS (5420server+8backupPASS/0FAIL/0SKIP). Subsequent normal guarded workflow41607495623 SUCCESS; Render dep-dbkq65nf3r2c73fke2hg LIVE; independently observed health ok=true on exactbc37f7ee12c735656ca94ab5a860a988fb1149e9. No direct/forced older deploy, production migration command or diagnostic payment/stock/finalization action.

New hosted acceptance NOT TESTED. Current dedicated browser opens the canonical Platform Admin sign-in screen and requires authenticated access before LAB selection. No new provider call, CREDIT submission, business mutation or real paid-invoice replay in this continuation. New synthetic fixture header-safety-20261103.pdf has two numbered physical pages, page subtotal12.40 and full24.80; its fresh identity avoids durable-cache masking. It is prepared for ONE header-only read after secure sign-in; do not submit a payment or another CREDIT draft. Refresh bounded before/after/control values immediately around that read. No CI-only/manual PASS added. Previous limited header-only and numbered-PDF count-to-draft LAB result404b571/manual/evidence3552 remains protected; no replay. Original EFK, unnumbered completeness and persisted-provenance residuals retain their existing owners and remain OPEN.

Single next action: secure Platform Admin authentication, selected LAB native invoice header-only read and observed four fields/total, then record actual outcome and before/after/control. Owner remains /root; no transfer or duplicate claim. Engineering is available, broader invoice accuracy/latency/provider-call count is not certified. This receipt synchronizes checkpoint, active/tracker/pending and generated central PDF; existing manuals retain actual scoped observations only.

03/11/2026 — INVOICE-HEADER-PDF-SAFETY-01 / CONTINUATION / AWAITING FULL CI AND LAB

Same retained /root owner and PR3554, remote branch fix/invoice-pdf-header-safety-20261102. Before-source claim3552 is green/main (d3bf7a5a2). Previous head0e8208b36475a48dc2fc0edf192837da62069690 CI41529406558 failed solely at Verify active list and checkpoint were updated: the active-list file was missing from the PR diff. Full build/server/browser/HTTP checks did not run; no full CI PASS claimed. This continuation adds the required active record and reconciles onto current main preserving all peer source, especially the newer competing-draft/payment-review guards. No change to the already reviewed PDF predicate/test behavior.

Source remains bounded to header-only bypass: images or PDF normalized numeric physical-page count1; multi/unknown PDF count follows ordinary fallback. Legacy reconciled-table bypass, durable file reuse, wallet fail-stop, tenant/store scope, sequential pages and financial/stock/draft identities protected. Historical Node20 focused135PASS/0FAIL/0SKIP, including37 actual-handler tests and the real synthetic two-page PDF regression. Fresh validation and exact full PR/main CI required after reconciliation. No model, timeout, UI, parser, schema or financial writer change. No new provider/business action, CREDIT submission, payment replay, approval or stock posting. Existing physical-count-to-draft limited LAB PASS404b571 retained; automatic subtotal selection remains FAIL/OPEN until header-only acceptance on the guarded release. Original EFK, unnumbered completeness and persisted provenance remain OPEN with their existing owners.

Next: full final PR CI, expected-head merge, exact full main CI, ordinary guarded release, then one fresh synthetic two-page header-only read with before/after/control; do not resubmit the already handled CREDIT draft. Central PDF/manual latest real LAB receipt3552 retained during source validation; synchronize final release evidence after actual acceptance. No new PASS.

02/11/2026 — INVOICE HEADER + PHYSICAL PDF PAGES / ENGINEERING RELEASE / LIMITED LAB PASS / RESIDUAL OPEN

Retained owner /root; source PR3545/head583994b968e1c98ad644aaae0b5cc30a462cd428 merged404b5719394c55b307c4cb39e209e58fa13dc249. Full PR CI41519798192 and exact main CI41522562900/job125542870525: all five jobs SUCCESS,5296server+8backupPASS/0FAIL/0SKIP, complete production/browser/realHTTP checks. Normal guarded release41524482377 SUCCESS; Render dep-dbkfm0qfngtc73f5pvpg LIVE at21:11:30UTC. Independent health reads before/after LAB returned exact404b571. Local153focusedPASS/0FAIL/0SKIP,4605fullsuitePASS/0FAIL/341infrastructureSKIP, server preparation and TABLE_SERVICE client build PASS. Interactive photo labels remain exact legacy default; attachment labels opt-in for background. Converter/recovery mapping is tested locally; persisted provenance is not claimed.

Actual bounded LAB evidence21:12–21:16UTC: synthetic header-only PDF correctly filled supplier/number/date/24.80 and was not submitted. Ten scoped business table counts/signatures unchanged before/after in LAB and control. One NEW numbered two-physical-page PDF submitted once as CREDIT (not credit note), after operator corrected automatic12.40 page subtotal to printed24.80. Exactly+1attachment/job/inbox/document/order and+2draftrows; DRAFT/NEW, net20/VAT4.80/gross24.80, paymentTransactionId null, assistant background COMPLETED without reconciliation difference. Transactions, shifts, stock quantity signatures, stock movements and all control counts/signatures unchanged. No approval/finalization or real paid-invoice replay. UI list independently shows one synthetic draft/two items/24.80. This closes only the bounded numbered-PDF count-to-draft case; do not repeat it for evidence. Manuals synchronized. Evidence CHECKPOINTS/EVIDENCE/invoice-physical-pages-20261102/verification.json and synthetic fixtures/screenshots. Initial full-row baseline materialized large attachment payloads and hit temporary-disk SQLSTATE53100; it was replaced by bounded scalar signatures. No full-database invariance claim.

FAIL/OPEN: two-page FAST header selected page subtotal12.40 instead of printed24.80. Header-only PASS is not a hosted latency/provider-call-budget PASS. Wallet metering was disabled; no usage-count proof is claimed. Stored productLines omit sourceFileIndex/sourcePage, and posBackground.pageCount1 is

attachment count; persistent provenance NOT VERIFIED/OPEN. Original unnumbered-PDF completeness and EFK failures remain OPEN. Read-only original-source audit: provider PDF lacks an excise column; stored XML has38invoiceDetails matching its own summary but no explicit per-line otherTaxesAmount. Different XML/PDF net bases are evidence only; do not infer EFK allocation or copy XML totals into draft fields. Private real-invoice identities/payloads excluded.

ASSIGNED BEFORE FOLLOW-UP SOURCE — INVOICE-HEADER-PDF-SAFETY-01, same /root owner, branch fix/invoice-pdf-header-safety-20261102. Bounded necessary correction: restrict the NEW complete-header-only bypass to images or PDFs whose existing normalized Azure physical-page count is exactly1; multi-page/unknown-count PDFs retain ordinary fallback. Preserve the pre-existing reconciled-table bypass, partial fallback, exact-file durable reuse, wallet fail-stop, sequential pages and financial/stock/draft identities. Only commerce-pos-v244.js predicate and actual-handler regression tests; no parser, model, timeout, UI, schema or writer change. Add real-handler single/multi/unknown-page PDF tests. Current two-page observation is a potential optimization regression, not proved historical behavior; source correction awaits this claim green/main. Single next action publish this receipt/claim with regenerated central PDF, then bounded guard source + full PR/main CI and normal guarded release; fresh header-only acceptance without another CREDIT submission. Persistent provenance, original EFK and unnumbered acceptance remain separate residuals; preserve every peer owner/PASS.

02/11/2026 — INVOICE HEADER CONTINUATION / ASSIGNED / NOT TESTED

ΑΝΑΛΗΨΗ ΑΠΟ fix/pos-invoice-header-latency-20261102 (stalled invoice conversation) — ASSIGNED /root in current continuation, same branch and PR3536. User explicitly requested continuation and three parallel read-only audits; only this primary page changes/publishes code. Scope remains the complete Azure header predicate and behavioral tests; partial fallback, reconciled-table bypass, wallet failures, exact-file reuse, sequential pages and all financial/draft identities protected. Read-only audit found two obsolete static assertions (fast-handoff-recovery and multipage-upload); both must change with handler tests. No hosted/provider/financial action or new PASS. Existing second-draft and VAT-inbox owners retained; original reported row/draft correctness remains OPEN and is not solved by header latency alone. Next: publish this continuation after documentation CI, then implement bounded source correction.

02/11/2026 — INVOICE HEADER + PHYSICAL PDF PAGES / SOURCE READY / AWAITING FULL CI AND LAB

Same retained /root owner and remote branch fix/pos-invoice-complete-header-20261102, existing PR3545. Before-source claims3536 and3547 are green/main; latest PDF claim83fbf944 mergedf38c16d07 before source. Existing header90267b0 fullPRCI41506583913 all5jobsSUCCESS/5278server+8backup/0FAIL/0SKIP remains protected; this combined revision requires fresh full PR/main CI. Current main and all peer runtime/manual/records inherited exactly outside owned paths.

Two bounded corrections: complete Azure payment headers return without a redundant provider while partial-header and verified-table paths remain; background PDFs use actual physical-page counts and retain actual attachment index plus internal PDF page on each line. Existing count API delegates to the bounded layout helper; more than5physical pages refuses before layout allocation/provider. Input labels describe attachments instead of claiming one page per file. Media bytes/resource counts, original jobs/files, model/timeouts, payment/handoff/queue/matching/stock and completeness/arithmetic/EFK guards unchanged. No new UI steps.

Validation: Node20 focused151PASS/0FAIL/0SKIP including16new real-PDF/image/recovery-matcher regressions and existing19helper/reader tests. Initial physical-ordinal-as-file-index temporary candidate was rejected by independent review and never published; integrated tests prove singlePDF[0:1,0:2], mixedPDF+photo[0:1,0:2,1:1], unchanged photo/default-converter behavior, wrong counts/malformed/oversized PDFs and duplicate provenance fail closed. Full local suite/build and exact native CI are pending at source preparation. No new live provider or business action.

Actual prior hosted diagnosis: one stored original two-sheet PDF, existing empty draft; durable diagnostic COMPLETED_WITH_REVIEW with supplied1physical page and zero product lines. Opening the existing assistant automatically ran one preview, which proposed38rows with omitted excise and an invalid total; none applied. This remains extractionFAIL and complete requestOPEN; count correction alone does not establish unnumbered-page completeness or EFK accuracy. Normal editor can invoke automatic reconciliation; no global DB/financial/stock invariance claimed. Private identities, numbers, amounts, originals and payloads not published. Preserve retained Gate3, VAT-inbox, second-draft and wallet owners. No manual PASS added.

Next: exact full PR/main CI, ordinary guarded release, then measured authorized synthetic acceptance; never replay a handled real payment. Central PDF is prepared from synchronized current records but published with the final release receipt, retaining the current main PDF during source checks to avoid peer overwrites. Hosted latency/new-draft/row acceptance NOT TESTED. Owner retained.

02/11/2026 — POS-BACKGROUND-PDF-PAGES-01 / ASSIGNED BEFORE SOURCE / NOT TESTED

Owner /root, continuation of the stalled invoice work, branch fix/pos-invoice-complete-header-20261102. User authorized continuation and three parallel assistants; only primary integrates source. Independent bounded source scope: count actual physical PDF pages in server/src/lib/pos-invoice-assistant-reading.js using the existing invoiceAssistantPageCount helper, state file/physical counts separately, and replace attachment-index page labels in invoice-assistant-image-views.js with attachment labels. Preserve original file/job identities, provider files/images/crops/rotation bytes/resource counts, 1–5 physical-page bound, wallet/tenant/store/completeness/arithmetic guards. No payment, draft, handoff, queue, tax/excise policy, schema, model, timeout or UI-flow change.

Source defect reproduced without live calls: unchanged background source treats one two-sheet PDF as one page, rejects correct two-page evidence and can accept a false one-page declaration. Temporary candidate12/12Node20PASS uses real PDF counting, row conversion and image transport with synthetic files; source/provider transport dependency injection only, not hosted acceptance. Hosted existing stored diagnostic says COMPLETED_WITH_REVIEW, zero lines, physical-page error with supplied1; original model JSON remains unavailable. Separate current assistant preview has omitted excise and is FAIL/unapplied, not solved by counting. Preserve Gate3, POS-VAT-INBOX-FAST-01, INVOICE-SECOND-DRAFT-01, wallet and other owners/PASS.

Header source3545/head90267b0 fullPRCI41506583913 all5jobsSUCCESS,5278server+8backupPASS/0FAIL/0SKIP, blocked by later shared-document conflicts only; source runtime unchanged. Claim merges before PDF source edits. Next action: publish claim after applicable documentation CI, then integrate bounded PDF correction and meaningful regressions into the existing source branch, reconcile shared records and require full final PR/main CI, ordinary guarded release and measured synthetic LAB acceptance. Complete user request remains OPEN; no new PASS.

Continuation clarification: source/test scope also includes invoice-assistant-page-count.js to expose a physical-page layout while preserving the existing count API. Every physical page must retain its actual sourceFileIndex (attachment) and sourcePage (internal PDF page), including mixed PDF/photo input. A review rejected the first temporary candidate's physical ordinal as file index; it was never published or applied. Add mixed source provenance regressions. No completeness/EFK policy change. Shared registries are updated beside this owner's existing header claim, preserving peer text; retain the current main central PDF during before-source reconciliation and synchronize the regenerated PDF with the subsequent source/release receipt.

02/11/2026 — POS-INVOICE-HEADER-LATENCY-01 / ASSIGNED BEFORE SOURCE / NOT TESTED

Owner /root with explicitly user-authorized parallel read-only audits; branch fix/pos-invoice-header-latency-20261102. User requires unchanged screens/buttons/order/payment workflow. Bounded independent scope: complete validated Azure payment header may return without product rows, preserving partial-header fallback, reconciled cached rows, wallet fail-stop, exact-file durable reuse and sequential page requests. Current fast-header needlessly requires product rows before returning a complete Azure header; this can invoke a second provider. Reported latency is USER FAIL; actual provider timing and corrected hosted behavior remain NOT TESTED.

Allowed source/test paths: server/src/routes/commerce-pos-v244.js fast-header return predicate only, focused new behavioral header tests and obsolete fast-handoff-recovery header assertion only. No client/payment/handoff/duplicate/worker/intake/stock/schema/fiscal/model/deadline changes. Retained INVOICE-SECOND-DRAFT-01, POS-VAT-INBOX-FAST-01 new-receipt acceptance, Gate3 and wallet owners are not transferred. Draft retry/deposit limitations are read-only findings awaiting reproduction and coordination, outside this source claim. Do not replay handled customer payments or infer allocation of an excess amount.

Protected evidence: 2026-09-17-pos-fast-header-only and 2026-09-15-pos-fast-header-sequential-lab-regression; 2026-10-15-pos-vat-inbox-fast limited header UI PASS and existing payment/advance manuals. Source base4b13473; independently observed healthy dbb46c0. Require claim green/main before source, meaningful handler regression cases, exact full PR/main CI and ordinary guarded release, then measured LAB header/draft acceptance before claiming fixed. Checkpoint CHECKPOINTS/CHANGES/2026-11-02-pos-invoice-header-latency.md. Single next action publish this before-source claim; complete request remains OPEN.

2 November 2026 — FTEXT deadline scheduling / before-source continuation

Continue the existing assigned FTEXT scope on fix/ftext-live-latency-20261102, as explicitly requested by the owner. Performance acceptance remains OPEN/FAIL; no new physical PASS or diagnostic financial transaction. Preserve other assignments and accepted behavior.

Bounded implementation: derive the next STATUS refresh from original acknowledged proof timestamps. Permit queued work while that proof remains valid, rather than immediately restarting STATUS after every successful join. Preserve the existing20second readiness and15second heartbeat limits, original evidence timestamps, single-worker/claim exclusion, handoff and idempotency gates. Expired, missing or negative proof triggers immediate refresh; never renew proof artificially. No vendor configuration, automatic archive, pairing or production business-data change.

Source NOT IMPLEMENTED. Require actual Windows fixtures, full PR/main CI and normal guarded exact release before a package. Physical improvement NOT TESTED. Next: merge this before-source record after applicable CI, then implement under the same retained owner. No action requested from the operating store. Regenerated shared PDF remains local pending synchronized release receipt; preserve published PDF bytes in this claim.

02/11/2026 14:34 Ελλάδας — INVENTORY-RECONCILIATION-01 / DIRECT RESULT EVIDENCE SCOPED LAB PASS / FULL REQUEST OPEN

Same retained owner; receipt docs/inventory-result-drilldown-pass-20261102. Actual native SA desktop LAB on exact healthy6d4937a910be74c3a79092aa3a86c81add296611. New result button opened TEST1's original movement details and its two historical correction/revoke records, focused the analysis, returned focus to the precise result, and cleared selection/closed members on explicit report refresh. Reopening remained correct. Actual10−5=5expected/count4, initial−1+correction0=final−1/unknowncost unchanged; six movement rows include one excluded opening baseline and five contributing outflows. No accepted+1/revoke or business fixture replay.

Fresh DBUTC12:28:44–12:34:27 before/after: all36complete source/control count/digests equal; raw countli ne/count4/expected5/unitCost0/time,stock4/latestmovement,MAINcash/card/transactions/total0,UIIRIS0,75 36otheraudit and exactly2existing review rows unchanged. Initial read connection57P03 was transient; complete fresh successful baselines preceded all acceptance actions. Scope is one existing single-code group/native SA desktop navigation; grouped multi-code, other roles/devices and pending-review/stale-store behavior are isolated native/mountedCI evidence, not new hosted acceptance. No new count, stock, sale, invoice, payment, charge, email, finalization, grant or review write.

Engineering: before-source claim3522/docsCI41435425308/mergef1e0bb7; source3524/head97ec1d2e/mergeb7225ce, fullPRCI41436507617 all5SUCCESS/5195server+8backup/0FAIL/0SKIP. One isolated Chromium Target.createTarget startup timeout was inspected; only that job rerun once unchanged and passed. Own mainb722 CI canceled in pending queue, never calledPASS. Descendant528 fullmainCI41439415075 passed5204+8 but normalguard correctly skipped older source after cash merge. Final combined main6d includes exact unchanged inventory content plus retained peer sources; existing manualCI41442153196/job125267071278 all5SUCCESS/5250server+8backup/0FAIL/0SKIP. No duplicate workflow submitted. Normal guarded release41444283424/job125273756732 allSUCCESS, Renderdep-dbk82fuc6qcc73dq8bmg LIVE12:27:26UTC, independenthealth exact12:27:58UTC; rollbackartif act13141735924/digest51b77bbb3715a4a1b93d15fd46589da516d012e6aa35ac2da63084f0d23e4bbd. No direct hook/force/gate bypass.

Evidence CHECKPOINTS/EVIDENCE/inventory-result-drilldown-20261102: fresh before/after, validation, CI/release provenance and three actual screenshots. Usage docs/manual/inventory/PASS.md; checkpoint2026-11-02-inventory-result-drilldown.md. The completed direct-navigation source/claim sections are removed from live pending; preserve all peer records/PASS and regenerate both central PDF mirrors from latest combined tracker. Full inventory task remains OPEN/ASSIGNED to same owner, no release or second claim. Separate global identity, physical warehouse/count-time/canonical writers, original invoice chronology/verification and access integrations remain with retained owners; broader hosted groups/scenarios stayNOTTESTED. Next: retained-scope gap review/coordination of those remaining canonical sources; never repeat this accepted navigation or historical business actions just for evidence.

02/11/2026 — INVENTORY-RECONCILIATION-01 / DIRECT EVIDENCE SOURCE CANDIDATE / AWAITING EXACT CI AND LAB

Before-source claim3522/head477b2a654bef5584f7defbdf14bb1e9945a9302c passed docsCI41435425308 and mergedf1e0bb745f8129e3d388ce3356864c55e1c24200 BEFORE source. Same owner/source feat/inventory-result-drilldown-20261102. Actual native final-group rows now have accessible buttons with expanded/controlled member targets; click opens all and only member-code details, focuses their analysis heading and shows relevant correction/LINK/REVOKE history from the current authorized DTO. Return restores focus to the result. Selection is fingerprint-bound and resets on refresh/pair/store changes. Pending review and busy state disable new navigation; no API/writer/export/math change. Scoped source only InventoryReconciliationPanel.jsx and inventory-reconciliation-mounted.test.js.

Node20.20.2 local evidence: regression fails on old source because result button is absent, passes after source. Final focused3/3PASS/0FAIL/0SKIP includes grouped umbrellas−244/+233=−11,

glasses−263/+240=−23, unrelated-history exclusion, every member exactly once, reopen/return focus, unknown values, refresh/pair/store reset, pending review lock/no resend, stale old-store reply refusal and retained UUID retry. Full suite4851tests/4513PASS/0FAIL/338native/infrastructureSKIP,124.54s; latest additional assertions rerun focused. Work build/TABLE_SERVICE PASS27.31s. No local native PostgreSQL acceptance claimed. Exact full PR/mainCI must execute all existing native inventory/authority/source invariants unskipped, followed by normal guarded release/health and measured hosted read-only LAB result navigation. NOT INSTALLED/HOSTED NOT TESTED until verified; no new manualPASS.

Preserve3518 actual correction/revoke PASS, original counts, all existing reports/exports/unknown costs, tenant/store/licence/role gates and other owners. No hosted review save, stock/count/invoice/sale/payment/charge/email/finalization. Whole requestOPEN, retained global identities/independent warehouses/physical original chronology/writer/access work unchanged. Canonical checkpoint2026-11-02-inventory-result-drilldown.md. Next exact source CI before release; do not replay accepted business fixtures or+1/revoke.

02/11/2026 — INVENTORY-RECONCILIATION-01 / DIRECT RESULT EVIDENCE / ASSIGNED BEFORE SOURCE

Same retained owner, feat/inventory-result-drilldown-20261102. Continue after actual hosted correction/revoke PASS3518/0b36f493, with immutable original counts/stock/financial controls and all prior read/export/cost acceptance protected. Read current main since3518, active/tracker/pending/checklist/manual and existing review/source/access checkpoints. No second claimant or permission/global-identity/warehouse/invoice/count writer takeover.

Concrete open requirement3: each final result opens the detailed movements that formed it. Existing group summary rows are plain text, while individual source details are separate collapsed sections. Bounded source AFTER this claim is green/main: a read-only accessible result button opens all and only that group's member-code movement/count/source details plus its contributing review history, highlights the selected group and supports return to result. Use only the already authorized report DTO; no new endpoint/request/role/cost visibility/math/export/writer/schema/storage or business action. Single-code and confirmed multi-code groups must work, including unknown/stale corrections. Selection must reset on store/pair/report changes; late old-store replies remain rejected. Review pending locks remain binding. Source files InventoryReconciliationPanel.jsx and focused mounted tests only, plus checkpoint/registries. No source edits yet; NOT TESTED/AWAITING CI and hosted read-only acceptance.

Required proof: actual mounted grouped umbrellas−244/+233 and correction-history glasses−263/+240 navigation opens every member once, excludes unrelated details/history, preserves totals/unknown costs, keyboard accessible target/return and resets selection on refresh/store change; existing stale replies/no-auto-load/export/mounted review invariants retained. Full exact PR/main CI, normal guarded exact healthy release, then measured read-only existing LAB report navigation with36source/control before/after and no new audit/source writes. Do not repeat accepted+1/revoke or historic business fixtures. Full specification remains OPEN; retained global identity/physical warehouse/chronology/writer/access tasks unchanged. Single next action after green claim: implement and test this bounded direct-evidence navigation.

02/11/2026 12:51 Ελλάδας — INVENTORY-RECONCILIATION-01 / SCOPED HOSTED CORRECTION + REVOKE LAB PASS / FULL REQUEST OPEN

Same retained owner; docs/inventory-review-hosted-acceptance-20261102. User-authorized3510 test completed once through actual native SA UI on healthya351362f3a5c436126bfcce8b2a547496470c036 (inventory source2512d6bb). LAB TEST1 initial−1 + synthetic report correction1 = final0; actual receiptf1c563d4fd011e59e56584673e54c0e613ab2ee1b9fd478c6ea55ffa0bb8c164 stored10:50:19.914UTC. Immediately revoked precisely it via native UI, receiptc542540f32c9596c5ded26ad2e9cff46c8e07a155d0c27d0c79d30bdd3c06840 stored10:51:14.438UTC: final−1/correction0 restored, initial count4/costunknown unchanged. Exactly2append-only review records preserve explicit synthetic reasons/evidence and original history. No blind resubmission: each timed-out click was an inspected confirm, accepted once.

Fresh before and after EACH action: all36 complete source/control counts/digests equal, stock4/lastmovementunchanged, raw expected5/count4/unitCost0 unchanged, MAINcash/cards/transactions/total0 and UIIRIS0,7536otheraudit unchanged. No stock/count/invoice/sale/payment/charge/email/finalization. This establishes only hosted single-product report CORRECTION/REVOKE; LINK and broader roles/devices/scenarios are NOT TESTED by this sample. Exact receipt/head/fingerprint, controls and screenshot in CHECKPOINTS/EVIDENCE/inventory-review-write-20261102; checkpoint2026-11-02-inventory-review-hosted-acceptance.md; usage docs/manual/inventory/PASS.md.

The3510 login/authorized-test residual is complete, not waiting consent/login anymore. Whole request remains OPEN/ASSIGNED to same INVENTORY-RECONCILIATION-01 owner. Preserve prior read/export/unknown-cost PASS. Remaining global product identity, independent warehouses/count-time writers, verified physical invoice chronology/originals and canonical source/access integrations stay OPEN with retained owners. No new source/schema/grant/role change or overall PASS. Next: retained-scope gap review against full specification; never repeat this accepted synthetic test or historic business fixtures to fill documentation.

02/11/2026 — CASH-UNIFIED-AUDIT-15 / REAL EIGHT-ORIGINAL BATCH OBSERVED; FULL DOCUMENT MATCHING ACCEPTANCE OPEN / SAME OWNER

Retained ASSIGNED owner codex/cash-chat-reconciliation-20261026. User completed manual native SuperAdmin sign-in and the current authenticated desktop page was verified. Existing explicit approval for ONLY the exact eight original real-store photos toOpenAI/existing AI tariff was retained. Fresh source identity/checksum/MIME/size set exactly matched all eight approved originals; complete private before snapshots for the three fixed closed shifts plus both LAB controls were recorded. Healthy deployed runtime remains4b1347300850b8082ea5d4eab88dc1259e8b21ab (Renderdep-dbkbvu2jnfac73a6q3q0); main18e34642f202c98a277e0902fef10a96293be19e has documentation-only changes since that protected source. No new code/deploy or competing scope.

One bounded automatic UI batch ran through the existing paid provider path from18:39:53.654–18:43:28.508UTC (20:39:53–20:43:28Athens). Exactly8distinct source intents and8terminal completions, each original once:7EXTRACTED_UNVERIFIED and1REQUIRES_REVIEW. No automatic provider retry or reupload. The seven stored extractions include four dated supplier documents, two handwritten readings with day/month but no verified year, and one zero-line reading described by the model as a QR-only image. Those descriptions are extracted evidence, not an independent accuracy certification of the originals. The uncertain result's underlying provider/parse cause was not proven; do not assume timeout or change limits. All eight per-source AI buttons became disabled, including the uncertain one.

After and after additional GET-only original-list/full-report refresh: source bytes/metadata unchanged;8REQUESTED+8COMPLETED remain exact, with no extra paid call. All five private money/count/ledger-digest snapshots are byte-equal to the fresh before snapshot, including cash/card/IRIS

and target/control counts. No cash/card/stock/fiscal/review/approval/offset/issue-closure/settings/email action was executed. The existing AI tariff is the authorized cost of the eight attempts; wallet amounts are not claimed unchanged. Real-store source/session/staff identities, amounts, raw text/photos and detailed event times are excluded from this public receipt; the private browser evidence is not committed.

Actual full projection remains PENDING, not FINAL:155unresolved document-evidence entries, an explicit100-of155display cap, and existing event/expense/card/next-shift checks. This is eight original files and line-level evidence, not155photos or155proven financial differences. Important acceptance gap: invoice headers, product/detail rows and generic notes are being treated as separate unresolved cash-line evidence; current provider transcription is not document-aware payment corroboration. No complete real-store reading accuracy, invoice-line correctness, automatic association, nonzero final outcome or physical bank/safe/refill/Netlink agreement is marked PASS. Existing synthetic one-stored-read match LAB PASS/receipt3537 and manual remain protected. The application/approval/session blocks recorded earlier are superseded by this actual run, not a reason to reread the paid originals.

Completed task removed from pending: initial authorized eight-original provider dispatch and durable terminal-state delivery. Remaining same-owner OPEN: review the one uncertain source without paid retry, obtain authoritative year/shift/time proof for incomplete handwritten dates, and prepare a bounded document-aware relevance/payment-reference matching correction using these SAME stored readings. Require proof before excluding QR/metadata or matching invoice totals; no blanket invoice-header exclusion, supplier-as-employee inference, amount-only matching, financial-window relaxation or presumed proof of an expense receipt. Do not modify the separate claimed invoice/OCR flow. Any follow-up source change needs a fresh bounded pre-change claim, focused/native/full exact CI and guarded LAB acceptance; do not use this observed batch as blanket functional PASS. Original extraction and source hashes stay immutable.

Single next action: review the stored gaps and scope the causal document-aware follow-up, with owner confirmation of missing original date/context where needed; do not rerun the eight paid reads. The broader cash15 assignment remains OPEN/ASSIGNED to the same owner, no transfer or release. Verified usage/observed limits are added to docs/manual/cash-control/PASS.md, with active/tracker/pending and central PDF status synchronized. Protected sourcePR3535/fullPRCI41481021929/mainCI41483259107 (5256server+8backup/0FAIL/0SKIP),guardeddeploy41485540793; original LAB receipt3537,auth handoff3541. New technical evidence CHECKPOINTS/EVIDENCE/cash-unified-audit-20261102/eight-original-read-observation.json.

02/11/2026 — CENTRAL-BACKOFFICE-ACCESS-01 / TWO INVENTORY READ RIGHTS RELEASED / HOSTED ACCEPTANCE AWAITING LAB

Same retained BackOffice access owner; source feat/backoffice-inventory-history-access-20261102, receipt docs/backoffice-history-release-receipt-20261102. Before-source claim3509 merged14a0dcae6 after green docsCI41408166469. Source3511 final headaf9c35b0b961204d1c3b46f8f2e26725c1efea6f/treee2f6c229aa71a451eac81999ea9d509615e6db3a preserves current peer inventory-review authorization3510 and FTEXT readiness3508 byte-for-byte; merged a351362f3a5c436126bfcce8b2a547496470c036. Exact full PR CI41411568740/job125166109272 and full main CI41413300019/job125171821416 each all5SUCCESS,5194server+8backupPASS/0FAIL/0SKIP. Real isolated PostgreSQL Owner-provisioned/PIN sessions verified independent history/theory/old-finalizer authority, foreign scope refusal, FREE counted-only history, late grant withdrawal/lifecycle transition, no audit/report/export/money/write escalation and protected business controls. Actual mounted shared inventory UI and browser/HTTP E2E passed. Local focused39PASS and Work/TABLE_SERVICE build also PASS; do not add overlapping totals.

Normal guarded deploy41414916194/job125176396011 required exact green main and physically requested pinneda351362f3a5c436126bfcce8b2a547496470c036 at08:43:30UTC, reached exact healthy revision08:45:43UTC. Rollback artifact13126214422,sha256:5d14d07cb1252eae47b74394999aa7be3db0c72f5d6d2fb890921024e15b0154, preserves prior healthy2512d6bb379b38306838ee449e494256d1f91aa9. Independent public/api/health

observation02Nov08:46:49.185936UTC (10:46Athens):HTTP200,ok=true,revisiona351362f3a5c436126bfcce8b2a547496470c036. This is engineering/release proof, NOT hosted functional acceptance or a new manual/numbered PASS.

Delivered23 exact rights, including independent inventory.history.read and inventory.expected.read, each requiring inventory.read. Owner-selected rights apply per real personal identity/store; old profiles/accounts gain no automatic right. Personal shared native inventory list/detail now supports authorized FINALIZED history and separately expected quantity/difference. Existing finalizer detail compatibility retained. No costs/retail/actors/raw snapshots or audit/investigation/reconciliation/PDF/XLSX route admission. Finalized personal screens cannot count/clear/bulk/finalize; unknown counts/differences remain unknown. Fresh grant/visibility/revision and lifecycle fencing refuse mixed reads. Existing200list/10000detail limits refuse oversized whole results; pagination remains OPEN. No native Owner math/writer, schema/worker, hosted grant/credential/business mutation or other-owner scope change.

HOSTED FUNCTIONAL ACCEPTANCE NOT TESTED/AWAITING LAB: this turn performed no authenticated hosted staff/Owner UI acceptance. Full all-functions BackOffice scope remains OPEN/ASSIGNED to the same CENTRAL-BACKOFFICE-ACCESS-01 owner, never closed or transferred by this receipt. Single next action: measured read-only LAB acceptance of minimal independently provisioned history-only, theory-only and combined rights in the actual shared UI, with fresh scope/privacy controls and explicit authorization before any hosted provisioning; do not replay accepted counts/stock/financial/provider actions. Remaining financial-field/actor/report/export permission adapters, pagination, broader344candidate coverage and explicit company/recovery authority remain assigned/open under their current owners. INVENTORY-RECONCILIATION-01 retains value/review/correction/link/export work and its separately authorized synthetic correction/revoke test3510; ordinary login pending is not missing consent. No test or operation in that scope was attempted here. Preserve all prior scoped manual/PDF PASS and peer FTEXT readiness ownership. Canonical checkpoint CHECKPOINTS/CHANGES/2026-11-02-inventory-history-permissions.md.

02/11/2026 — Personal inventory history/theory source candidate / AWAITING EXACT CI

Before-source claim3509/head8dbb8398/treee05c6e01 passed docsCI41408166469 and merged14a0dcae6 BEFORE source. Same retained access owner and bounded source branch. Two new independent keys inventory.history.read and inventory.expected.read require inventory.read; source catalogue23, review55families/344candidates. Existing profiles and accounts gain no automatic new right. Owner editor receives only the integrated keys.

Existing selected-store personal readers now admit FINALIZED list/detail only with history authority (preserving the old finalizer's existing detail exception). Theory visibility is independent from finalize; explicit DTO fields omit cost/retail/actors/events/raw scope/snapshot. Grant/session/company/licence and captured field/history revisions are checked around reads, with lifecycle generation/maintenance/retirement fencing. Canonical FINALIZED FREE history includes only counted lines. The actual native view/search/count table is reused; finalized personal views have no count/clear/bulk controls even with stale action flags. Uncounted personal rows and incomplete quantity differences display unknown, preserving Owner arithmetic and all report/value/review algorithms.

Local Node20.20.2: final native/mounted/privacy/old-cost group39PASS/0FAIL/0SKIP; broader earlier set62PASS/0FAIL/1nativeSKIP, overlapping not additive. Work build/TABLE_SERVICE PASS. PostgreSQL fixture extended for genuine Owner-provisioned/PIN-authenticated minimal rights, foreign scope, optional-field withdrawal during reads, lifecycle transitions, FREE filtering, denied audit/export/report/writers and unchanged line/stock/financial controls. Local native runtime unavailable (no DB; attempted temporary binary cannot load system ICU and cannot initialize under the available filesystem identity); no fake native PASS or weakened CI gate. Full exact PR/main CI must execute native proof unskipped before ordinary guarded healthy release. No hosted grant/credential/business write, schema/worker or native report/writer change. Hosted acceptance NOT TESTED/AWAITING LAB; no manual/numbered closure. Existing200history/10000detail row limits refuse whole over-limit results; full pagination remains a separate residual.

The independent report owner retains all reconciliation/value/review/correction/export and blocked hosted review-write scope. Remaining BackOffice matrix, cost/retail/actor/report permissions and explicit company/recovery authority remain OPEN with retained owners. Single next action is full exact source CI and release of this bounded two-right batch, then measured hosted read-only acceptance; never replay accepted counts/stock/provider/financial operations.

02Nov2026 — INVENTORY-RECONCILIATION-01 / TEST AUTHORIZED / WAITING FOR NORMAL LOGIN / NOT TESTED

Same retained receiving owner feat/inventory-cost-display-20261102; no release/second claimant. User request f6ce2729-ff51-4d70-94f7-d0808c42ff83 explicitly says «ξεκινα» in response to ONE synthetic report-only+1 on existing LAB TEST1/pair8f6dcacc→d9f81c39 and immediate ONE actual-receipt revoke. That exact test is now authorized; do not request the same correction permission again. Stock/count/financial/role/grant/email actions and unrelated links remain unauthorized.

Actual blocker is ordinary authentication: previous browser session absent; complete secure password/device form advanced to2FA, but the site returned «Η επιβεβαίωση έληξε. Συνδέσου ξανά.» No correction or revoke submitted. Fresh read-only SQL07:57:02.803063UTC gives0review rows; independently healthy2512d6bb. This is NOT a36control baseline or new functional PASS. Accepted3503/3505/3506 read/export/cost PASS, native5189+8/0/0 and original records remain protected. Administrative auth/authorization status only; accepted manual/PDF and peer FTEXT artifacts remain unchanged.

Single next action ordinary authentication handoff, visible signed-in verification, then fresh report source/head/36controls/stock/shift/other-audit/original-line before EACH of the two authorized audit-row actions. Verify one correction receipt, revoke exactly it, prove restored final result/only2append-only reviews and unchanged business data. Never replay on uncertain response; verify receipt. No bypass of2FA or direct/alternative mutation. Checkpoint2026-11-02-inventory-review-authorized-auth-handoff.md. Full warehouse/time/global identity/original-invoice/canonical-writer/access scope stays OPEN with retained owners; same owner remains assigned while login is pending.

02/11/2026 — CENTRAL-BACKOFFICE-ACCESS-01 / HISTORY + THEORETICAL VISIBILITY / BOUNDED ACCESS-ONLY CLAIM BEFORE SOURCE

Same retained BackOffice access owner, feat/backoffice-inventory-history-access-20261102. Continue merged field-contract3497 after recovery of the repository from its authoritative Git source. The independently owned report/value implementation3495 and later reviewed-result/missing-cost work are now merged; preserve its residual ownership and all new scoped PASS3504/3505 on2512d6bb. This is NOT a hand-back of report math/value/correction/link/PDF/XLSX work and grants no authority for hosted review writes. Read current full active/tracker/pending/checklist, own field contract, current reconciliation/cost records and inventory manual before this claim. Whole BackOffice rights scope remains OPEN.

Bounded first access-only source: two independent Owner-selected store rights, inventory.history.read and inventory.expected.read, each requiring inventory.read. Existing scoped personal list/detail endpoints only: history permits listing/opening FINALIZED stocktakes, while theoretical visibility permits expected quantity and computed quantity difference without conferring finalize. Existing finalizer's detail visibility remains unchanged; old defaults/accounts gain no right automatically. Actual real EMPLOYEE identity, exact store/company/licence/session/grant checks and field masks stay binding. Recheck captured field/history rights and lifecycle generation before/after reads, refuse mixed/stale responses, and keep finalized screens non-writing. Use the existing native layout/count table, never an Owner-role/API shim.

No native audit/investigation/reconciliation/export route admission, cost/retail/actor visibility, writer/count/finalize/stock/invoice/financial algorithm, schema, worker, provider, hosted grant/credential/business change. Source surface is shared staff permission/catalogue data, personal inventory reader, personal workspace/native delegated display flags and focused/native tests; one monthly all-rights fixture count updates21→23 without changing any monthly authority. The active report owner's

calculations/reviews remain untouched. Current catalogue21 before this claim; proposed two keys are NOT executable until integrated after this claim is green/main.

Required engineering proof: each right alone/read-only/count versus finalize, old finalizer compatibility, final/nonfinal and foreign-store/company/object scope, recursive absence of cost/retail/snapshot/audit identity fields, late grant withdrawal/lifecycle transition, stale mounted data and no audit/report/export/write escalation. Full exact PR/main CI and guarded exact healthy release before new hosted acceptance. New functions NOT TESTED/AWAITING LAB; no manual/numbered PASS closure. Single next action after green merged claim: implement this bounded two-right native personal history/quantity visibility adapter. All broader report/export/cost and other BackOffice permission coverage remains assigned/open.

02Nov2026 02:11 UTC — INVENTORY-RECONCILIATION-COST-04 / SCOPED LAB PASS / FULL REQUEST OPEN

Same retained receiving owner after narrow transfer3492 and before-source claim3504/e307d838. Source3505/b6ed568b/tree83567660 merged2512d6bb. Exact fullPR41372217192/job125045223227 and main41373653467/job125049468383 all5SUCCESS/5189server+8backup/0FAIL/0SKIP; actual mounted1446/1447 and native1490/1504/1514 executed. Ordinary guard41374971127/job125053158480 Verify/Trigger/WaitSUCCESS; Renderdep-dbjurph42hec73e4n6gg LIVE01:58:48UTC; independenthealth02:00:14 exact2512. No manual trigger/bypass.

Actual native SA support/CloudChrome3/virtual LAB/existing finalized pair8f6dcacc→d9f81c39 TEST1 read only: operational row/footer nowÁγνωστο/unvaluedcount1, quantities5/4/−1 and retail4.80 unchanged. Both actual CSVs verify blank cost, Full Audit blank difference value; first failed synchronization was not counted as evidence, one new read-only export produced the verified file. Reconciliation retains initial−1+review0=final−1/unknown money. Original lineunitCost0/theory5/count4/time unchanged; all36source/control full-row count+digests, stock4/latestmove, MAIN0sums/transactions,7536otheraudits and0reviews identical before02:00:40→after02:11:27UTC. No stock/count/finalize/invoice/sale/payment/grant/financial action, provider replay, email or charge.

Legacy table/CSV missing-cost FAIL is CLOSED for this observed desktop flow; source3 read/source/PDF10pages/XLSX12sheets/count-history PASS remains protected. Checkpoint2026-11-02-inventory-cost-display.md and source-evidence cross-reference, manual inventory/PASS.md, exact artifacts/checksums in CHECKPOINTS/EVIDENCE/inventory-cost-display-20261102 and both regenerated canonical PDF mirrors synchronized. Known positive-cost/delegated behavior has actual mounted/native CI proof, not invented hosted samples; physical originals/warehouse times/other devices are not newly certified.

Full INVENTORY-RECONCILIATION-01 remains OPEN/ASSIGNED to the same receiving owner, no release/second claimant. Hosted LINK/CORRECTION/REVOKE acceptance remains BLOCKED/NOT TESTED after automatic approval review rejected a hosted write under read-only actual DB authorization. No retry/bypass. Remaining physical warehouse/count-time capture, company-wide reusable identity beyond comparison links, physical-original invoice verification and canonical writer/access integrations stay with retained owners. Single next action wait explicit permission for one synthetic report-only+1 on this comparison and one actual-receipt revoke, with fresh head/source/36controls before each and zero business changes; do not accept confirm before authorization.

02Nov2026 — INVENTORY-RECONCILIATION-COST-04 / HISTORICAL CANDIDATE / SUPERSEDED BY 02:11 LAB RECEIPT

Same retained owner feat/inventory-cost-display-20261102 after BEFORE SOURCE claim3504/cbc5d0bf/docsCI41371187003SUCCESS/mergee307d838. Actual hosted3bc8734f source3 read/evidence/PDF10pages/XLSX12sheets/36unchanged controls PASS remains protected; legacy FastCount row/footer0.00€ is still the observed installed FAIL, not yet fixed in LAB.

Bounded candidate normalizes missing/nonpositive/nonfinite unit cost to unknown in read-only table/footer/selected-cost and blank legacy CSV/FullAudit cost fields. Adds visible unvalued-item count only

where values were already authorized; delegated masking, all quantity/retail and count/clear/bulk-zero/delete/finalize handlers unchanged. Minimal shared cost helper, no route/schema/grant/business writer change. Actual mounted table/export tests first reproduced0.00 UI/0 CSV, then11focusedPASS/0FAIL/0SKIP plus Work build18.12s. Correct npm server-workspace full local4846tests/4508PASS/0FAIL/338explicit infrastructureSKIP in175.78s, no simultaneous build; no unrelated test or threshold changed. Full exact PR/main CI with all3native inventory cases unskipped and ordinary guard/health required before same-pair read-only row/footer/CSV retest. No native or hosted PASS inferred from local checks.

Checkpoint2026-11-02-inventory-cost-display.md; source3 measured receipt3504/manual/evidence/canonical PDFs retained. Whole request OPEN/assigned: warehouse/time capture, reusable global identity, physical-original invoice/retained writers and hosted review-write acceptance. The latter remains BLOCKED by automatic approval review/read-only actual DB authorization; no retry/bypass or protected business replay. No stock/count/invoice/financial mutation, email or charge. Single next action exact fullCI, main/normalguard/health, measured read-only legacy cost/export acceptance and immediate manual/register/PDF closure.

02Nov2026 01:05 UTC — INVENTORY-RECONCILIATION-01 / SOURCE3 SCOPED LAB PASS / HISTORICAL COST FAIL CLOSED 02:11 / FULL REQUEST OPEN

Same retained receiving owner after approved narrow transfer3492; no release or overlapping owner. Source3503/0c2073a5 merged3bc8734f; exact fullPR41367109177 and main41368593139 all5SUCCESS/5187server+8backup/0FAIL/0SKIP/all3native executed. Ordinary guard41369820163, Renderdep-dbju01rbc2fs73ds1er0 LIVE00:59:36UTC, independenthealth01:00:10 exact3bc. Actual native SA support/LAB/read-only existing pair8f6dcacc→d9f81c39 TEST1 now10−5=5expected/count4/initial−1+correction0=final−1, unknown money; accepted self-consumption included once, original10/4/8/4 preserved. Real PDF10pages/XLSX12sheets match and retain1transaction/46documents/544lines/3events. All36source/control count+digests, stock4/latestmovement, MAIN0sums/transactions,7536otheraudits and0reviews unchanged before01:00:46→after01:05:12UTC. Scoped read/source/display/export PASS only; physical-original verification/stock eligibility/arrival coverage remains false, no confirmed loss or business replay. Manual/checkpoint/evidence/canonical PDFs synchronized in this receipt.

Actual separate FAIL: old InventoryFastCount row/footer still show0.00€ for missing cost while new report/initial summary correctly unknown. ASSIGNED BEFORE SOURCE feat/inventory-cost-display-20261102, same owner, checkpoint2026-11-02-inventory-cost-display.md; claim must be green/main. One bounded read-only cost/value projection and legacy CSV-null serialization fix in InventoryFastCount/InventoryV2Center with actual mounted/totals/export regression; no quantity/retail/count/finalize/clear/bulk-zero/delete/rights/writer change. Exact fullCI/main/normalguard/health then same-pair read-only retest and immediate closure required.

Hosted LINK/CORRECTION/REVOKE writes remain BLOCKED after automatic approval rejection: actual DB authorization is read-only. No retry/alternative mutation/confirmed hosted write PASS. Full request remains OPEN/assigned: physical warehouse/time capture, company-wide reusable identity beyond pair links, physical-original invoice verification and retained canonical invoice/count writer extensions/acceptance. Existing BackOffice/lifecycle/monthly/invoice owners retained. No production migration, real stock/financial action, email or charge. Next action green/main bounded cost-display claim, then implement it; later exact synthetic report-only+1/revoke still requires explicit authorization. Evidence CHECKPOINTS/EVIDENCE/inventory-reconciliation-source-evidence-20261102; source checkpoint2026-11-01-inventory-reconciliation-source-evidence.md/manual inventory/PASS.md.

02Nov2026 — INVENTORY-RECONCILIATION-EVIDENCE-03 / HISTORICAL CALENDAR CANDIDATE / SUPERSEDED BY 01:05 LAB RECEIPT

Same owner. Real new regression proved invoice-midnight falsely became late on the opening count day; red expectednull vs80 before, green after using existing shared Greece calendar-day utility. Actual count/transaction/posting instants remain separate, old documents remain uncertain; invoice issue days have no invented clock time. Cross-offset same-Greek-day duplicate/VAT candidate and native package-invoice midnight regression included. No writer/schema/rights change. Prior exact8d1170ad local full4843/4505PASS/0FAIL/338SKIP, full solo repass after unchanged DAILY QR timing; new focused39/36PASS/0FAIL/3nativeSKIP, Work build PASS, new full rerun pending.41366137645 is superseded, not final CI proof. Exact new full/native CI, main/guard/health and read-only LAB required. All source3502 read/export/cancel PASS and retained owners protected; hosted review mutations remain BLOCKED/NOT TESTED after automatic approval rejection on read-only actual DB authorization. No retry/bypass. Checkpoint2026-11-01-inventory-reconciliation-source-evidence.md; full remaining request OPEN/ASSIGNED.

02Nov2026 — INVENTORY-RECONCILIATION-EVIDENCE-03 / HISTORICAL SOURCE CANDIDATE / SUPERSEDED BY 01:05 LAB RECEIPT

Same retained owner feat/inventory-source-evidence-20261101; claim3501/151044ae/docsCI41362046332/merge9e26c89 before source. Read-only completed consumption/audited-return sources, exact posting precedence/late-sync identity, invoice quantities/packages/gifts/value-credit/canonical/duplicate checks and non-stock operational/price/barcode context implemented. Physical versus recorded-book expectations separate system zeroing; ambiguous/missing evidence does not produce a confirmed physical loss. Original count history/operator/source metadata, matching detailed UI/PDF/XLSX and explicit store-pool/unknown-warehouse scope. No count/invoice/stock/financial/schema/right writer takeover or email/charge.

Protected source3500 exact1e293f93 fullPR/main5176+8/0/0 and normal guard41363154340/live23:46:20UTC retained. Actual read/export/cancel scoped PASS3502/befd5fcf/docsCI41365053415/merge7e4e8374/manual/evidence/both PDF mirrors is complete and must not be replayed as a business transaction. Hosted LINK/CORRECTION/REVOKE write acceptance remains BLOCKED/NOT TESTED after automatic approval rejected accepting its confirmation on a read-only actual DB session; dismissed/form cleared/0reviews/all controls unchanged. No workaround authorized.

New local focused38/35PASS/0FAIL/3nativeSKIP; Work build/PDF QA passed. Prior local full4504PASS/0FAIL/338SKIP; later unchanged DAILY QR timing failure passes isolation, solo rerun pending. New native SQL/read invariance, direct+derived dedup, audited returns, boxes/gifts/value-credit/alias, late facts, foreign/global context and limits plus prior review authority/races must execute in full CI. Exact-main/ordinary guarded release/health before read-only LAB. No whole-task PASS; remaining independent warehouse/time capture, reusable identity beyond pair and retained writer/original-evidence scope OPEN. Checkpoint CHECKPOINTS/CHANGES/2026-11-01-inventory-reconciliation-source-evidence.md. Single next action publish candidate/run full unskipped CI.

2026-11-01T23:55Z — INVENTORY-RECONCILIATION-01 / SCOPED READ-ONLY UI + PDF/XLSX + CANCEL LAB PASS / REVIEW WRITES BLOCKED

Same owner, no release/second takeover. Installed1e293f931ec5b0f153ba60dddf4fe5c22181def2 after3500/d942 fullPR41360489566 and exactmain41361950951 all5SUCCESS/5176server+8backup/0FAIL/0SKIP including actual native1493. Normal guard41363154340/job125017681131 Verify/Trigger/WaitSUCCESS; Renderdep-dbjsrqjbc2fs73dpa8rg LIVE23:46:20.376543UTC, independenthealth exact1e293f93. Before-source evidence claim3501/docsCI41362046332 green/main9e26c89 remains assigned; its new source3 adapter is not yet deployed.

Actual native SA support, virtual LABcmtpopbgo000trhb5ng9ytiru, CloudChrome tab3, no POS/payment/physical-terminal transaction. Existing finalized pair8f6dcacc→d9f81c39, TEST1/b1466a68 only read. UI initial-2/correction0/final-2 and unknown money, originalcount4 preserved. Actual Greek PDF legible within page margins; actual XLSX6sheets agrees and now preserves numeric immutable COUNT/RECOUNT history10/4/8/4 (expected11/5/5/5). The earlier Decimal count-history export FAIL is CLOSED by this measured read/export retest. This proves read/display/export and cancelled confirmation only, not complete physical loss: known historical self-consumption is a separate missing source assigned to adapter3; mismatch remains visible and loss UNCONFIRMED.

Fresh before23:50:18.432773UTC/after23:55:13.435484UTC all16 LAB/N40control full-row count/digests identical. LAB counts43shifts/27countEvents/90sales/95moves/4stocktakes/18lines/110stocks/134transactions. Exact TEST1stock4/latestmove10Oct11:49:05.817 unchanged; openMAIN0cash/0cards/0transactions/sum0, IRIS numeric field unavailable but UI0 and complete row/transaction digests unchanged. Other7536WorkforceAuditLog rows same digeste68f8222ae067d7a09981bf532b7563b; controlstoreempty stays0. No stock/count/sale/finalization/payment/charge/email or old fixture replay.

One prepared report-only synthetic+1 confirmation was opened, but automatic approval review rejected accepting it: the actual database session is authorized read-only even for a hosted LAB audit-row write. It was dismissed, form cleared, persistedreviewrows remain0 and no indirect retry/bypass attempted. Hosted LINK/CORRECTION/REVOKE acceptance is BLOCKED/NOT TESTED, not a code FAIL and not granted by the conditional plan. Requires explicit permission for that exact hosted synthetic correction and its revoke. Native isolated write/race/session/idempotency proof remains separate CI evidence.

Checkpoint CHECKPOINTS/CHANGES/2026-11-01-inventory-reconciliation-reviews.md; manual docs/manual/inventory/PASS.md and evidence CHECKPOINTS/EVIDENCE/inventory-reconciliation-reviews-20261101. Only completed read/export/cancel scope leaves active pending; full source3, hosted review-write acceptance and broader requested scope remain OPEN/ASSIGNED to this owner. Do not replay protected inventory fixtures or mark whole task PASS.

01/11/2026 — INVENTORY-RECONCILIATION-REVIEWS-02 / SAME OWNER / ASSIGNED BEFORE SOURCE

Same receiving INVENTORY-RECONCILIATION-01 owner after explicit user-approved narrow transfer3492. The user requested the full inventory method, including confirmed cross-code identity and post-count corrections. This separate documentation-only claim authorizes the next reviewed-results source slice after THIS claim is green/main, while the independent first read-only candidate3495 completes its own exact combined CI/release. It supersedes only the earlier conditional plan's sequencing; it does not authorize merging an unverified first candidate or state-changing hosted tests. No second owner, schema or shared permission-writer takeover.

Exact new source: server/src/services/inventory-reconciliation-reviews.js plus corresponding contract/projection/native tests; own existing reconciliation calculation/source/handler, inventory-v2-audit route and InventoryReconciliationPanel adapter after the first source is incorporated. Branch feat/inventory-reconciliation-reviews-20261101. Use append-only existing WorkforceAuditLog records

scoped by company/store/lifecycle generation/exact finalized stocktake pair, explicit reason/evidence, actor/payload-bound request receipt, source fingerprint/review head and Store-row serialization. Native existing Owner/SA confirmation only; no staff/counter cost or review admission, no original count/stock/invoice write, email, charge, new table/migration/worker/rights/default or provider replay.

LINK/REVOKE must preserve original product identities; no description-based matching. CORRECTION adjusts the reported result only, preserves the initial count and references evidence; refuse unknown starting results and duplicate/conflicting replay. Canonical reviewed-group cost is explicit and missing/nonpositive cost stays unknown. Show initial + reviewed correction = final per group and derive separate shortage/surplus/net totals and exports from the final rows. Umbrella -244/+233 with a confirmed relation must yield -11; glasses -263/+240 must yield -23 without adding intervening sales twice. Both are NOT IMPLEMENTED/NOT TESTED at this claim.

Original first-source7b212cfb fullCI41354201196 all5SUCCESS/5162PASS0FAIL0SKIP including native case1491. Combinedeacb1f26/full41355936706 still pending; its runtime/test blobs remain identical. No deployment/LAB PASS inferred. Full/native/exact-main CI and normal guarded delivery required before any measured LAB review action. Formal compatible design docs/architecture/inventory-reconciliation-reviewed-results.md; checkpoint CHECKPOINTS/CHANGES/2026-11-01-inventory-reconciliation-reviews.md. Other BackOffice access owner contract and all invoice/lifecycle/monthly scopes remain retained. Single next action: green/main this claim, then implement the new review contract/repository/projection with isolated native invariance proof.

01/11/2026 — CENTRAL-BACKOFFICE-ACCESS-01 / AUDIT FIELD CONTRACT REVIEW / NARROW TRANSFER PRESERVED

Same retained access owner; docs/backoffice-audit-permission-contract-20261101. Newer user-approved claim3492/6352b57 transfers inventory audit/investigation/report value-field extension ONLY to INVENTORY-RECONCILIATION-01. PR3495 head7b212cfb is active and explicitly preserves delegated denial. This supersedes this page's older next-action ownership for that overlapping extension; no silent hand-back or second implementation. All other BackOffice permission scope remains assigned here.

Completed read-only field/endpoint review in docs/roadmap/BACKOFFICE_INVENTORY_READ_PERMISSION_CONTRACT.md: draft versus finalized history, nested expected/cost/retail/actor/source leaks, legacy raw snapshot/scope/free text, FREE CSV/JSON mismatch, missing-cost versus zero, paid Loss Detection/source rights, scoped fresh read/export/fingerprint and unchanged finalizer compatibility. Native implementation and actual hosted acceptance NOT TESTED/OPEN. Existing21 grantable rights/defaults unchanged; no new checkbox/key/route, code/worker/schema or hosted grant/credential/business action. Baseline main06a2f95 and independently healthy5c3e9eac, read21:56:49UTC. New monthly/C2 actual scoped acceptance3493 and shared-cost receipts/claims remain with their owners; no accepted test repeated.

Full all-functions access assignment remains retained, excluding the explicit transferred extension. Report/value implementation stays with the active3495 owner. Single next action: use the merged/stable canonical report DTO and the reviewed field matrix to claim a bounded access-only integration; do not bypass the current staff denial or fabricate placeholder rights while that contract is pending. No functional PASS/manual/numbered closure. This is completed classification work and a dependency record, not installation of the requested report permissions.

01/11/2026 — INVENTORY-RECONCILIATION-01 / OWNER APPROVED NARROW TRANSFER / ASSIGNED BEFORE SOURCE

ΑΝΑΛΗΨΗ ΑΠΟ CENTRAL-BACKOFFICE-ACCESS-01 — ASSIGNED feat/inventory-reconciliation-20261101 for the inventory audit/investigation/report value-field extension ONLY. The owner explicitly approved this overlap in the current conversation after the conflict was disclosed. All other BackOffice permissions, native clear/bulk-zero/delete, company authority, monthly capture/lifecycle, invoice/OCR and other assignments remain with their retained owners.

Requested scope: selected-store reconciliation between stocktakes, per-product count-time boundaries, evidence-backed movements and late entries, explicit identity/correction history, missing-cost handling, separate shortage/surplus/net results and authorized display/PDF/Excel. Preserve canonical count/finalize writers, blind-counter masking, original events, tenant/store/module/licence gates and all accepted flows. No automatic employee charge/email or real-store stock/financial mutation. LAB only with fresh before/after/control evidence; local/CI results are not LAB PASS.

Preflight baseline main d3f0f949fe9d568e1d687b1a4c9dc1b7df934dd9; public health observed ok=true/revision5c3e9eacb69ce2c0df801eb5dd9aecf04506d69e. Existing seven ledger/audit source-contract tests PASS; no new runtime/LAB acceptance. Existing investigation uses one stocktake start-to-finalization window, and number(value||0) collapses unknown costs to zero; neither proves two-stocktake reconciliation. Full requested implementation OPEN. Before-source claim must be green/main before runtime edits. Exact bounded first source: new reconciliation calculation/source/report modules and endpoint in existing inventory-v2 audit router plus existing InventoryV2Center integration, focused functional/native/store-isolation tests. No schema or invoice-writer changes in this first slice; durable identity/correction/schema extensions require a separately recorded compatible design before they can be called implemented.

Checkpoint CHECKPOINTS/CHANGES/2026-11-01-inventory-reconciliation.md. Single next action: publish this claim green/main, then implement the read-only same-identity stocktake reconciliation slice with honest coverage/missing-evidence status, retaining the full remaining request.

01/11/2026 — CENTRAL-BACKOFFICE-ACCESS-01 / THREE INDEPENDENT INVENTORY ACTIONS INSTALLED / FULL SCOPE RETAINED OPEN

Same retained owner. Source PR3481 is delivered in exact healthye1fcbe04d3097cc3fd856227307d2ad6cb05df0f. Owner-selected inventory.clear, inventory.bulk-zero and inventory.delete are now independently executable, each requiring inventory.read only. Grant catalogue21; old profiles/accounts receive no automatic new right. Review catalogue55families/342candidates remains non-authorizing. Same real EMPLOYEE identity and native InventoryV2Center/InventoryFastCount controls; ordinary counting, clearing, selected-zero and draft deletion are distinct rights. No role promotion, company authority, schema/worker change or hosted grant/credential/business write by this page.

Exact selected-store API admission and fresh transaction-time account/session/grant/license/module/lifecycle checks precede replay and mutation. Native parent/line locks, all-line versions and COUNT/RECOUNT/CLEAR semantics retained; durable actor/payload-bound operation receipts survive draft deletion. Identical retries retain the exact saved UUID/version/line set and uncertain replies freeze navigation. Finalized drafts cannot be changed; delete requires explicit confirmation. No stock posting by clear/zero/delete; finalization remains its separate existing right and canonical writer. Owner handlers/defaults, blind count/cost masking and every previously accepted Owner behavior preserved.

Final head 2149b4a3ed78ec254a90b534fb99f53dc8868ada, tree 8642da3572ce85ea0c2c054163eadc702988d439. FullPRCI41340962428/job124950965782 and exactmainCI41342282483/job124955066416 both all5SUCCESS,5136server+8backup/0FAIL/0SKIP with complete build/browser/HTTP. Initialf68dc6ed/41338933308 failed5121/2/0: review catalogue lacked two new action names and independent monthly personal-capture fixture expected18 instead21. Both contracts corrected without weakening authority tests or changing peer runtime; new native PostgreSQL action cohort passed even in that failed run. Intermediateb925/5f99 had no new full CI because peer record/PDF conflicts; final branch preserves main3c6 and all peer source/accepted receipts. Local sets overlap and are not additive; actual final unskipped CI above is authoritative engineering proof.

Ordinary guardeddeploy41343627981/job124958750840 SUCCESS: full exact-main CI/freshness guard, rollback artifact 13097883014, SHA256 dff15e060e80f053599e742dd3a859ca71172c2cd1c5e5f03bd2dea7738755bc, actual pinned trigger19:50:25UTC and exact healthy19:56:22UTC. Workflow-definition head9a990bb is later peer

documentation, NOT the deployed revision; actual target and health aree1fcbe04. Independent public/api/health HTTP200/ok=true confirmed exacte1fcbe04 at19:56:32UTC. Prior independent19:51 health wasb5eab88. This is release verification, not functional LAB/USER PASS. Evidence CHECKPOINTS/EVIDENCE/common-backoffice-permissions-20261101/inventory-actions-release.json.

Preserve peer monthly capture source b5eab88 and its separate DATA HOLD, C2 invoice-date claim3482, scoped AI-cost assistant acceptance3483 and provider/shared-cost audit3485. No accepted provider/payment/stock operation replayed. All peer runtime paths are unchanged; only the monthly fixture catalogue-length assertion changes18→21 while all genuine identity/capture denials and PG18 checks remain. Company authority/recovery proposal is still NOT INSTALLED. Hosted personal visual/write acceptance remains NOT TESTED/AWAITING USER; no manual or numbered PASS closure.

Full requested all-functions scope remains ASSIGNED/OPEN with CENTRAL-BACKOFFICE-ACCESS-01. Remaining inventory conversion, audit/investigation/value fields, import/zones/catalogue/delegation; broader native commerce/per-action coverage and separately reviewed company authority/app-worker-recovery compatibility remain OPEN. Single next action: classify the actual native audit/investigation read/export fields and expected/cost visibility before introducing any further executable right; preserve existing finalizer visibility and blind counters until a reviewed compatibility decision. Same owner continues, no second claim or transferred/unowned scope. Final receipt branch docs/backoffice-inventory-actions-release-20261101.

01/11/2026 — CENTRAL-BACKOFFICE-ACCESS-01 / THREE INDEPENDENT INVENTORY ACTIONS / SOURCE CANDIDATE

Same retained owner feat/backoffice-inventory-actions-20261101, continuation of3480/201a01a. Added inventory.clear, inventory.bulk-zero and inventory.delete independently, each requires inventory.read only. Grant catalogue21 in this source candidate; old profiles and all existing accounts gain no right automatically. Owner editor is data driven and now exposes each implemented checkbox. Real native InventoryV2Center/InventoryFastCount show only each granted action, including clear/selected-zero without ordinary counting. Actual EMPLOYEE/session/store identity retained; exact API admission and fresh transaction-time grant/license/module/lifecycle checks precede replay and writes. Parent/line locks, all-line versions, atomic COUNT/RECOUNT/CLEAR events, durable actor/payload-bound receipts and explicit draft-delete confirmation. Identical retries reuse the exact saved request; uncertain replies freeze navigation. Known rejections refresh scoped state. Owner native handlers/defaults unchanged. No schema, hosted grants/credentials or business writes.

Local mounted/UI suite20PASS/0FAIL/0SKIP; overlapping broader staff/native suite49PASS/0FAIL/3SKIP (isolated PostgreSQL absent locally); Work build PASS. Native PostgreSQL HTTP tests added for independent rights/denial, foreign line/store, atomic versions, normalized exact/conflicting replay, concurrent writers, transaction-time withdrawal, finalization protection and deletion replay with durable audit plus stock/financial controls. These DB checks remain NOT TESTED locally; full CI must execute them. No functional LAB/USER PASS, manual or numbered closure. Full exact PR/main CI and guarded healthy release still required. All-functions scope remains ASSIGNED/OPEN; remaining inventory conversion/audit/value/import/zones/delegation, broader native commerce and separate company authority continue with this owner.

01/11/2026 - C2 GENUINE OCTOBER REPORT / SCOPED LAB PASS / PARENT RESIDUALS OPEN

Retained C owner feat/invoice-month-audit-20261028 / original worker /root/invoice_new; bounded continuation feat/c2-stored-invoice-date-20261101, no ownership transfer. Exact installed5c3e9eacb69ce2c0df801eb5dd9aecf04506d69e/mainCI41348911362 all5SUCCESS5148server+8backup/0FAIL0SKIP; naturalguard41350280601/Renderdep-dbjqkgu7bikc7389ei10 LIVE21:10:13.807941UTC, exacthealthy21:10:32.1922161UTC. Genuine personal SuperAdmin/native support issuer, selected LAB/generation0/Cloud Chrome, actual report21:15:59UTC(UI seconds):12logical/7unposted/7uploaded-review/0duplicates/9identity-review/0credits/all-monthpending0. All12rows seen/unknown dates0; four31Oct opaque pairs retain UNPOSTED+review, orphan09Oct operator-header-only retains unknown amount/identity/open reconciliation. C2 actual report/five-date observation completed; not physical OCR/header, identity-complete or source-authenticity PASS. E1 preview manual remains separate. No independently measured report-before/after delta:18fresh controls below cover the subsequent D8 capture window. New usage docs/manual/monthly-invoice-audit/PASS.md; full receipt CHECKPOINTS/CHANGES/2026-10-28-invoice-month-audit-source.md. C2 desktop-report acceptance is removed from live pending scope; remaining roles/devices/physical accuracy and parent C/items8/9/E2E3 remain OPEN. Prior C2 claim/engineering text is historical below, not a new instruction to repeat acceptance.

02Nov2026 C2 bounded continuation - SCOPED LAB PASS for September/November and paging only. Genuine existing personal SuperAdmin/native support issuer, same selected LAB/Cloud Chrome desktop; native health11:34:57.091UTC oktrue/revisiona351362f3a5c436126bfcce8b2a547496470c036, report service blob765ebccbd6299dde16dc8e23e4818c9fe0c98ab5 unchanged. Actual November report11:33:16UTC0records/all summary counters0/pending originals all-months0. Native edited-month11→09 retained loaded2026-11 with explicit warning/refreshdisabled until new Check. September11:33:43UTC59records/50unposted/48uploaded-review/0duplicates/25identity/1credit, page1=50; native Next11:34:00UTC page2=9/noNext/same59summary,4unknown issue dates explicitly retained. UI timestamps are second precision. Only these real report/month/paging observations accepted; no raw9-domain sourcecounts or new complete financial/stock invariance, no physical source/identity/OCR accuracy or other roles/devices/races/coverage/cursor acceptance. No upload/payment/reprocess/AI/email/snapshot or grant/source write. October acceptance preserved/not repeated. Checkpoint and manual updated in the combined central documentation packet; parent and other residual owners remain OPEN.

HISTORICAL OWNED CLAIM / ENGINEERING EVIDENCE - SUPERSEDED ONLY FOR THIS ACCEPTED SLICE

Current C2 engineering status (01/11/2026, PR3484): source implemented after green before-source claim3482/ada1e65 and root SOURCE GO; retained owner/three source blobs unchanged. Original4ee888 fullCI41341285711 all5SUCCESS5138+8/0FAIL0SKIP; firstcombined693d fullCI41342780182 all5SUCCESS5143+8/0/0 with actual registered C2 case7, incoming inventory case17, genuine D8PG16/18/all21capabilities and Chromium. Documentation-forwardfe6 fullCI41344421069 was still IN PROGRESS when this revised candidate was prepared; no result inferred. The revised seven-path composition requires its own full CI and main full CI before ordinary guarded exact release. AWAITING LAB; no new USER/LAB/manual PASS. Unknown date/source quality stays HOLD; known stored operator date never certifies physical-date/source authenticity, posting or reconciliation. Exact source/runtime/CI history: CHECKPOINTS/CHANGES/2026-10-28-invoice-month-audit-source.md.

Documentation integration rule for this candidate: status is updated only inside this existing C2 block; all peer prefixes/suffixes/history retained. Current-main PDFs are preserved byte-for-byte as claim/history baselines and do not certify this candidate status; candidate PDF synchronization is deferred to the required real PASS closure. Before-source claim/PDF was already green main ada1e65. Any actual PASS closure MUST immediately update checkpoint, active/tracker/pending, relevant manual and canonical PDF in the same PR; no waiver of that gate. Parent C/report/email/inventory scope remains OPEN.

ASSIGNED retained C owner feat/invoice-month-audit-20261028, original worker /root/invoice_new under central coordinator codex/central-four-streams-20261018; current central helper executes only this named continuation. Documentation branch docs/c2-stored-invoice-date-claim-20261101. No ownership transfer or parallel invoice/OCR claim. Root authorized this documentation-only publication after PR3473 merged exact main b5eab88d79cb0a85a89033c22bb0429aaebad3c4. Independent design review CLEAR on plan6bb7db38711772f1d1aae1006f08fd0d6b4f27d49c58e938a8544ac52ae78303; root approved final plan1d38b3013f114feacc9e1a5d97d67ae39d66ff32065dd485a3d0ae17654a7e40 including explicit separate representation-map and protected posting regression. Source NOT STARTED; claim must be applicable-CI green/main and root SOURCE GO before source edits. No new LAB/USER/manual PASS.

Read-only October LAB investigation found four exact bidirectional source/order pairs with existing31Oct issue dates whose literal opaque alphanumeric identifiers fail the unchanged trailing-digit parser, plus one unresolved second-page finding with saved operator-header date and explicit primary pageJobIds membership. Existing originals remain stored; no new upload/reprocess/draft/payment/deletion is needed for this metadata correction. Page2 viewed original has body lines and no visible date/header: stored operator metadata is not physical-date/source-authenticity/line-reconciliation proof. Existing primary COMPLETED_WITH_REVIEW/reconciliationRequired and failed secondary remain unresolved. Strict source freeze currently correctly HOLDs unknown issue dates; no snapshot was captured by this investigation.

Exactly3 existing source/test paths after source GO: server/src/services/monthly-invoice-audit.js; server/test/monthly-invoice-audit.test.js; server/test/monthly-invoice-audit-postgres.test.js. A recognizes only exact scoped bidirectional supplier/opaque-literal/date/type representation links, preserving numeric/alias helpers. Opaque joins MUST NOT populate numeric validOrders or satisfy approved projection/posting proof: an APPROVED pair with plausible StockPosting remains unposted unless the unchanged independent proof qualifies. B reads only SQL-prebounded fixed V1 header/page metadata, actual terminal stage/status, explicit at-most5 distinct page IDs/indexes and existing validated DOC corroboration. Reject malformed/oversized/foreign/conflicting/competing/cyclic/ambiguous roles or attachment jobs; fingerprint every new projected field. Keep orphan row/status/identity review, unknown amount and reconciliation diagnostics. No raw JSON/original/OCR bytes in the report.

Derive corroborated issueDay BEFORE month selection; known issue date controls membership, receivedAt is selection fallback only when date remains unknown and never becomes issueDay. Test both month directions and unknown/HOLD. Canonical exact decimal corroboration preserves old credit/zero semantics. Raw rows/sourceCounts remain represented. Snapshot freezeEligibility/complete proof/payload, auth/tenant/licence, global identity helpers, posting/fiscal/payment/stock, D8 grants/jobs/control/capture, E1/E2/E3, intake/OCR/learning, lifecycle/schema/manifest/workers/workflows remain unchanged. No repair/rename/delete of other owners' accepted fixtures and no financial replay.

Current AGENTS/checklist/complete active/tracker/pending and C/E1/source-capture records inspected; all546 main-history commit metadata since installed C ac5850 through b5eab read across6 paginated responses. Preserve C installed technical receipt, E1 limited desktop-preview PASS, separate E2/E3 owners, D8 TODAY engineering/data-HOLD records and all incoming common-BackOffice/wallet/Chat/promotion scope. Required focused+native registered SQL/read-only controls and mandatory full CI, exact guarded delivery, then real selected-store report acceptance. CI is not LAB PASS. Actual first snapshot remains separate and requires unchanged strict eligibility plus genuine D8 action; unknown facts remain HOLD. Checkpoint: CHECKPOINTS/CHANGES/2026-10-28-invoice-month-audit-source.md. Whole C/report/email/inventory acceptance remains OPEN.

01/11/2026 - D8 TODAY FIRST CURRENT OBSERVATION / SCOPED LAB PASS / FUTURE AND RECOVERY OPEN

02Nov20:34UTC - worker heartbeat cryptographic verification; execution still OPEN

Retained D8/TODAY root executor. Actual WEBlisteningPID577/PORT10000/instancel7f6d/source8cd55db4 startup key verified one fresh backup-worker heartbeat with the existing pure validator and DB clock20:34:13.605UTC. Heartbeat20:30:56.923/age196682ms/protocolMWS_STORE_RECOVERY_CAPABILITY_V1/manifest59ca/workerRevisionaa1/rowdigestV1/storagePolicyVerifiedFieldtrue authenticated; observed20:34:13.666725. Generalexecutionfalse unchanged, no available()/controller/scheduler/worker/sweep/bootstrap invoked. Pure validation modules WERE imported; no key/MAC/URI/rawenv/heartbeat exported or persisted. Earlier helper refusal was a PGDATABASE URI-default descriptor error confirmed with a harmless dummy; explicit private PGenv correction preserved TLS/options, not app/config mutation or worker failure. Startup-key compatibility at DBcheck only: later in-memory consumption/admission/otherinstances/private timer/future01Dec remainOPEN; no new storage/retention/restore proof. Scoped grantrev2/gen0/firstDec/jobs0/snapshot1 unchanged before/after, not wholefinancial/stock invariance. Current evidence/manual/checkpoint synchronized; prior MACNOTREVALIDATED is dated history only. Allother owners/PASS remainprotected.

02Nov18:45UTC - actual listening-process startup configuration observed; execution OPEN

Retained D8/TODAY root executor. Read-only actualWEBPID576/PORT10000/instancekgdmj/source4b134730 at18:45:51.801349UTC showed protected monthly control canonical/valid/enabled, exact303042d6epoch/9d78fingerprint/1e0bactivationFingerprint/firstDec05UTC, captureprofileMONTHLY_INVENTORY_CAPTURE_V1 and generalexecutionfalse. PID-owned listener +allowlisted/procPIDstartupenvironment, not newShellenv. No source/env/restart/grant/job/capture/backup/provider action. This closes only listening-process startup-config observation: native parser consumption/effective in-memory process.env/scheduler closure/timer/otherinstances and actual01Dec execution NOT VERIFIED/OPEN. Worker heartbeat metadata matched59ca/aa1 but MACNOTREVALIDATED. Fresh18:40grantrev2/gen0/firstDec unchanged/jobs0/snapshots1; no wholefinancial/stock invariance. New evidence/manual/checkpoint current; earlier NOTRETESTED below is the dated01Nov observation only. Existing recovery/C2/capture PASS, generalfalse and allotherowners protected.

02Nov - selected-table archived original recovery scoped PASS; whole recovery OPEN

Retained D8/TODAY root executor. One separately identified selected-table test of existing scheduledarchive20261102T090030Z-9764 exactversion verified369731641bytes/SHA b96f09f4...cb63/AES256; actual privatePG18.6 pre-data+data ONLYMonthlyInventorySnapshot, no post-data/dependencies/app/production target. At11:36:36.724069UTC selectedCOPY1table/1row/46952bytes/0seq matched; exact fd3523ea candidate46050bytes/SHA88fb52a2...8686f1/alloriginalscope/time/hash/slot predicates matched11:36:36.893524. Final11:36:37.100363UTC originalverified+newtemporaryCleanuptrue. Prior fullarchiveattempt exitedrestore0 thenShellreset beforeCOPY/original/cleanup; causeUNESTABLISHED/oldcleanupUNKNOWN, not repaired by newcleanup. Selecteddata-original proof is not fullarchive/schema/FK/index/immutability/production/app/disaster recovery or physical-source truth. Sampledworkingpeak88170496/raw268447744(cache) is not absolute capacityproof. No newbackup/productionreset/business/config/source/paidresource action. ProductionDBupgrade separatelyapproved03Nov00:00-01:00Athens/+USD13month NOTEXECUTED; doesnotresizebackupShell/provecause. Existing capture/grant/firstDec and everyotherowner preserved. Evidence/currentmanual/checkpoint synchronized; only selectedoriginal/version acceptance completed, broader recovery/future/revoke/roles remainOPEN.

Retained D8 owner codex/central-monthly-capture-personal-ui-20261031/TODAY codex/central-monthly-capture-today-20261101, root executor. One actual native acknowledged Save returned STORED receiptfd3523ea-f95b-4f9f-bf3c-4e2de0e0e91c; fresh native GET reconciled sameid without secondPOST. October source observation21:20:00.511UTC=23:20Athens01Nov, stored21:20:00.918447UTC, LATE58800511ms from nominal01Nov05UTC. Current stock, not reconstructed07:00. Preview/Save/GET exact click timestamps were not separately captured: retain observed windows21:17:56.521058→21:21:31.903970UTC and exact DB times. Verified immutable46050bytes/SHA25688fb52a28b80384a4d45eef5716bc8ebf462c08bc3b62fcade5a3932696886f1, source5c3, coverage110products/12invoices/0pending; unknown amount/review retained, FORMAT_VALIDATED_STORED_ONLY/sourceAuthenticityVerifiedfalse. Raw9domaincounts NOT COLLECTED, not invented UI/receipt fields. All18six-table/3store controls exactmatch21:17:56.521058→21:21:31.820617UTC; snapshot0→1/monthlyjobs0→0/grantrev2firstDecunchanged. Other global executions NOT TESTED. Native grant firsteligible01Dec07Athens observed; runtimecontrol NOT RETESTED/no mutation by thiswork, protected14:33/0bc applied-proof retained only historically. TODAY first-capture acceptance removed from live pending; hosted original/version/recovery, actualfutureexecution/E2E3 and other retained residuals remain OPEN. DB19:43/19:52SIGKILLcauseOPEN/POS-DB-LOCK/no upgrade approved/no whole-systemPASS. Existing capture manual current title/status updated and old engineering marked HISTORICAL; full receipt CHECKPOINTS/CHANGES/2026-10-31-monthly-inventory-capture-personal-ui-claim.md. RealPASS closes PDF deferral with the exact8docs synchronized now. No source/business replay or private originals/payload/screenshots committed.

HISTORICAL OWNED CLAIM / ENGINEERING EVIDENCE - SUPERSEDED ONLY FOR THIS ACCEPTED SLICE

Same retained central owner codex/central-monthly-capture-personal-ui-20261031, source continuation codex/central-monthly-capture-today-20261101; root operational executor. Existing PR3473 head8773ee6f7001c97662abfd8baeddd46d259d73b6 completed actual fullCI41319256166 with all5SUCCESS: 5106server/0FAIL/0SKIP at15:16:42.3735825UTC and8backup/0/0 at15:17:40.7345454UTC; workflow completed15:18:58UTC. Genuine personal HTTP/races executed on hostPG16 actual160015 and the SAME full native flow on the existing PG18 image actual180006 (case2175,24.37s), not merely the old recovery-image proof. Actual Chromium case2211 passed15:12:11.5855751UTC/7.66s. Historical attempt1 FAIL remains below; its typed-wait fixture fix did not weaken assertions.

Current main201a01a5b9634f19b1b51c72ea4069a910219086 and all19commits since reviewed35968 were read. Incoming customer-cost metering, native staff inventory/cash screens and their complete release/claim/accepted records remain with their owners. They do not alter the monthly ten source paths, schema/manifest, capture purpose, grants/jobs/scheduler/control, worker or normal CI/deployment guard. Recovered exact ten source blobs retain reviewed aggregateSHA256acb33beb45e8eb337e9c802ad0bbef83975674f6a13c01fd64b4eb7caf349837. This normal forward integration changes documentation composition/PDF only relative to the tested monthly source; the combined current-main full CI, merge and exact ordinary guarded delivery are still required. No stale mergeability cache or old PDF may overwrite current peer records.

Real first capture is separately DATA HOLD: root's read-only October eligibility review identified INVOICE_ISSUE_DATE_UNKNOWN, which the unchanged complete-source coordinator refuses as STOCK_SNAPSHOT_INVOICE_SOURCE_INCOMPLETE. No issue date is guessed, no invoice/payment/stock record is repaired or replayed, and no incomplete snapshot is labelled complete. The user-approved current observation remains October/LATE with actual observation time when admissible, not reconstructed07:00 stock. No actual capture/immutable original/hosted recovery or future scheduled execution PASS is claimed; no fake principal/job, date backfill, reset/drain, forced sweep, email or new backup is authorized by this engineering receipt. Existing genuine grant and observed future configuration remain protected; current runtime/control freshness must be rechecked before operational action.

01/11/2026 - TODAY CAPTURE ATTEMPT 1 FAILED IN TEST FIXTURE / PG18 ROUTE PROOF PENDING

Source remains unmerged/AWAITING CI and LAB. Actual CI41317615108/head7258dcb/job124881445661 completed5104tests/5103PASS/1FAIL/0SKIP at14:57:44.0659UTC; four other jobsSUCCESS, backup test step not reached. Sole failure was native personal HTTP own-insert rollback fixture: PrismaP2010 cannot deserialize void returned by SELECT pg_sleep(3.2), before final authorization assertion. Both3.2s/2.1s waits now SELECT a typed integer FROM pg_sleep, retaining real DB delay and exact expiry/rollback assertions; no production authorization/business logic changes.

Coverage accuracy: normal CI host database is PostgreSQL16; the earlier separate PG18 recovery/image proofs did not execute this new HTTP/race cohort. Same claimed fixture now adds a mandatory-in-CI second execution of the SAME genuine native flow against the existing PG18 recovery image, official postgres entrypoint, synthetic private DB/password/random loopback port, bounded tmpfs/resources/readiness, allowlisted child environment, actual server_version_num18 assertion and required cleanup. Missing image/PG18 fails CI; local native host+PG18 remain explicitSKIP. Updated fullCI is required, not yet PASS. Actual production0bc future control/grant remain unchanged, snapshots/jobs/executions0 at the last observation. No today capture, source deploy or broad PASS.

01/11/2026 - FUTURE MONTHLY CONTROL VERIFIED LIVE / TODAY CAPTURE SOURCE AWAITING CI AND LAB

Retained central D8 owner/root executor. The separate user-requested TODAY capture implementation is prepared within the previously merged10path claim; source delivery is AWAITING CI/exact deployment/LAB. No actual snapshot, capture-now PASS, future-job PASS or hosted recovery is claimed.

Root verified normal0bc release: CI41314926667 all5SUCCESS, actual5092server+8backup/0fail/0skip; naturalguard41316214612/job124876761670 EXPECTED0bc/CI_RUN_ID41314926667 executed Trigger and exact healthy Wait14:33:43.7600207UTC. Renderdep-dbjkou67bikc73fovmb0 LIVE0bc40631d355f922d98af5cc99ce3ffb4d3e6e86 finished14:33:27.575321UTC. Actual new trusted runtime Node20.20.2/FULL59ca/generalRESETfalse/capabilitytrue/controlVALIDenabledtrue matches saved epoch303042d6-7d12-4461-9f13-fdb17af48cb8, issuedAt13:54:29.613UTC/notBefore2026-12-01T05:00:00.000Z and fingerprints. Complete installer inspect TARGET/eligibletrue/reasons[]/unchanged catalogue/global/fencegeneration0/no maintenance/retirement/operation; actual health exact0bc/oktrue. Root14:36:25.217530UTC read has one active revision2 grant, original firstDec1 slot, snapshots/jobs/executions0; eighteen business count/digest controls matched14:29:41.618664→14:36:25.334204UTC. Scope is six tables across3LAB stores, not whole fiscal/all-table PASS. Prior SAVED/NOT APPLIED notes remain dated history, superseded only for this verified control configuration.

TODAY uses genuine personal preview+explicit confirmation, server-derived October period, actual current stock observed now honestly LATE, immutable existingReceipt/null reconciliation and final post-wait authorization; it never reconstructs07:00, rewrites December eligibility, fabricates jobs/principals, changes stock or sends email. Local Node20 targeted backend30PASS/0FAIL; native PostgreSQL fixture1SKIP locally (unavailable), mandatory real nativePG18/fullCI/browser proof pending. Restricted manual covers only observed nativegrant+futurecontrol configuration; capture-now instructions await actual scoped capture PASS. Hosted original/version/recovery remains OPEN. Exact implementation/test boundary and root receipt: CHECKPOINTS/CHANGES/2026-10-31-monthly-inventory-capture-personal-ui-claim.md.

01/11/2026 — STORE-PROMOTION-CONFIG-01 / COMPLETE / SCOPED CONFIGURATION READBACK

Same owner ops/store-promotions-20261101; final receipt docs/store-promotions-complete-20261101. User resolved the source-code mismatch by explicitly requesting the existing local product names. The remaining actions used those existing tenant products and unchanged recorded barcodes. Six further canonical UI submissions created eight records; with the two earlier verified saves, each of the two explicitly requested stores now has exactly five active offers. Per-store progression1→3→4→5, correct modes/window/store names observed. Both final lists were independently read back after leaving/reopening Offers. The prior two saves were preserved, not replayed. Gift configuration selected the same existing product as the allowed gift; one unrelated internal duplicate remained unselected. Source identities, quantities, discounts, local SKU/retail and exact before/after evidence stay in the private execution journal, not this public repository.

Initial claim3467/head28b045191/docsCI41314612988 SUCCESS/merge8096c723 and partial receipt3468/headb9d99cc9/docsCI41315776298 SUCCESS/merge7a16e435 protected. Initial independently healthy ad111f6f; continuation public health independently confirmed0bc40631d355f922d98af5cc99ce3ffb4d3e6e86. This page did not change runtime, deploy, catalogue, base retail/barcode, grants, schema, stock, sale, payment or fiscal state. One background shift-read closed-connection message recovered through normal Refresh before the final submission; no failed/uncertain business submit was retried. Ongoing real sales are independent; stock/financial invariance, physical POS checkout and whole-module LAB/LIVE/USER acceptance NOT TESTED. This closes only the requested operational configuration/readback scope. No further identity clarification or offer creation remains. Remove this completed operational item from pending; preserve all N47/N48 and peer ownership. Manual records configuration-only usage. Checkpoint CHECKPOINTS/CHANGES/2026-11-01-store-promotion-config.md.

01/11/2026 - D8 NATIVE PERSONAL GRANT VERIFIED / FUTURE CONTROL SAVED, NOT APPLIED / TODAY CAPTURE CLAIMED

Same retained central owner codex/central-monthly-capture-personal-ui-20261031, root executor; bounded source continuation codex/central-monthly-capture-today-20261101. User's newer «ας κανει σημερα 1-11» authorizes a separate genuine one-time current observation today; this supersedes the earlier future-only prohibition solely for that explicit action, without rewriting the December grant/control. Source NOT STARTED / AWAITING CLAIM MAIN and later full CI/exact deployment/LAB. First actual immutable capture and hosted recovery remain OPEN.

Root's genuine personal SuperAdmin LAB screen created inactive grant11711b36-943f-4b63-906a-499dc4cdd6b4 at13:53:18.045133UTC, then enabled the same grant at13:53:52.913560UTC, revision1→2, activation9560bd7e-f4b3-4d38-95ba-597e40eddb6e. Actual firstIssueMonth2026-11/firstScheduledFor01Dec2026 05:00UTC. Eighteen six-table business count/digest controls across3LAB stores matched immediately before/after both actions; scope is not all-table/fiscal PASS. Future dedicated control was saved/read back with notBefore2026-12-01T05:00:00.000Z; running web remainsad111 and this value is NOT APPLIED. Natural guard41314733805 deferred2625 for newer production main at14:17:09.8164466UTC; no hook. FULL profiles/general RESET=false preserved; no snapshot/job/execution/email/reset.

New source claim is only a selected-store authenticated capture-now preview/POST in existing D8, with database-derived latest due period, strict genuine OWNER/SA session/paid admission in source and final writer, immutable receipt reconciliation and explicit UI acknowledgement. Today after07Athens means October period, nominal01Nov05:00UTC, actual observation now honestly LATE: current stock, not reconstructed07:00 stock. No caller-selected dates/principal/candidate, fake job or automatic POST retry. Exact10source/test paths, final post-wait checks, unchanged old APIs and remaining acceptance are in CHECKPOINTS/CHANGES/2026-10-31-monthly-inventory-capture-personal-ui-claim.md. Preserve peer common BackOffice/promotion/Chat scopes. Manual records only the actual create-INACTIVE→enable slice; capture-now/future execution/recovery have no PASS.

01/11/2026 — STORE-PROMOTION-CONFIG-01 / TWO SCOPED SAVES READ BACK / IDENTITY CLARIFICATION OPEN

Retained owner ops/store-promotions-20261101; receipt docs/store-promotions-handoff-20261101. Claim3467/head28b045191 docsCI41314612988 SUCCESS merged8096c723 BEFORE live configuration. Existing authenticated Platform SuperAdmin, normal canonical support UI, independently healthy ad111f6f9c69dee7dcce5713eed39abe72aab122. Two separate authorized saves, one existing barcode-matched product in each explicitly requested store, returned success and were independently read back active after leaving/reopening Offers. Each target list went0→1 with correct selected scope and period; existing retail displayed unchanged. No new catalogue/barcode or other-store write, sale, stock, payment, fiscal, role, schema or release action. Ongoing real business prevents any financial/stock invariance claim; checkout/physical engine effects NOT TESTED. Commercial terms and exact private baseline/readback journal are retained privately, not published here.

The requested plan is PARTIAL: four source product identities have different recorded barcodes; do not substitute old variants, add barcodes, create new products or duplicate the two completed saves. Same owner retained; remaining work is exact identity resolution, remaining authorized saves and independent readback. One precise user clarification is needed if no canonical exact mapping is found: whether the supplier plan also applies to the existing standard-barcode products or only the new source-coded packaging. No module-wide LAB/LIVE/USER PASS or N47/N48 replay/closure. Manual adds only observed operational guidance. Checkpoint CHECKPOINTS/CHANGES/2026-11-01-store-promotion-config.md. All peer assignments preserved.

01/11/2026 — STORE-PROMOTION-CONFIG-01 / ASSIGNED / READ-ONLY PREFLIGHT

Owner ops/store-promotions-20261101. User explicitly requests configuring the new supplier plan in exactly Rizareio and Diadoxou Pavlou. Independent operational configuration only; no source/schema/deployment, sales, stock, fiscal, payments, grants, mail or other-store writes. Existing canonical authenticated UI and tenant/store guards only. Before any save, verify product identity/barcodes, current offers, dates and selected stores; capture a private per-action before/after journal. Refuse unresolved product identity or overlapping offers rather than create duplicates. Supplier email, attachments, commercial terms and private store baselines must not be published in this public repository. Current state NOT TESTED; no offer saved. Checkpoint CHECKPOINTS/CHANGES/2026-11-01-store-promotion-config.md. Existing N47/N48 PASS and all other owners remain protected; no transaction replay for documentation. Single next: merge this docs claim with green CI, complete exact product preflight, then authorized configuration/readback through the existing UI.

01/11/2026 - LAB MONTHLY ACTIVATION EXPLICITLY APPROVED / FUTURE SLOT ONLY / FIRST CAPTURE ACCEPTANCE OPEN

Retained central D8 owner/root executor; docs continuation docs/monthly-activation-preflight-20261101. The user explicitly approved activation after the completed FULL-profile/readiness slice. Scope is only MYWORKSTATION LAB / ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ, companycmtpopbgk000prhb5qc60zxus/storecmtpopbgo000trhb5ng9ytiru/generation0. Root entered through the real personal SuperAdmin support issuer, selected this store and performed the actual authorized D8 GET: no personal grant exists; create-INACTIVE is offered. No token, credential or fabricated actor is used. Root's13:33:27.616023UTC baseline has snapshots/grants/jobs/executions0 and the exact nonmaintenance/nonretired/no-operation FULL fence; the selected MAIN shift displays zero transactions/cash/card/IRIS/total. These limited observations are not an all-business/stock/sibling PASS.

The bounded next sequence is one genuine personal create-INACTIVE, fresh readback/CAS revision, then explicit MONTHLY_INVENTORY_CAPTURE enable for that same grant. The manager derives firstIssueMonth/firstScheduledFor from current database time. Since01Nov07:00Athens has passed, the expected first slot is01Dec2026/07:00Athens (2026-12-01T05:00:00.000Z), for issueMonth2026-11. Bind the canonical dedicated process control's notBefore to the actual enabled grant's exact firstScheduledFor normalized to UTC milliseconds; create its distinct UUIDv4 epoch/issuedAt from the actual service clock, preserve exact key order and validate it before Save only. Keep FULL profile and general RESET execution=false. Apply through one existing exact-main full-CI/normal guarded release; no direct deployment or dormant-process mutation, cron trigger or forced sweep. No job or capture is due now.

Explicit sequencing decision: D4's earlier proposed first-manual-capture/hosted-recovery sequence is not falsely marked completed. The later user-approved future activation is staged behind the exact natural-slot time fence, while first immutable capture/readback and hosted version/readback/recovery acceptance remain OPEN. There is no supported public manual capture endpoint; do not fake a principal, backdate a job or use RESET to manufacture proof. Existing normal12:00 backup succeeded after schema installation, but its monitor/TOC/HEAD metadata is not a real restore or original-snapshot proof. No broad PASS, actual capture, email, financial/stock/fiscal action, new backup or new code is authorized here. Fresh control/identity/schema/worker/scope checks still fail closed. Exact contract and stop/revocation behavior: CHECKPOINTS/CHANGES/2026-10-31-monthly-inventory-capture-personal-ui-claim.md.

01/11/2026 - MONTHLY FULL PROFILES AND SIGNED READINESS VERIFIED / CAPTURE OFF / AUTOMATION OPEN

The explicitly approved D7 profile-transition slice is complete. Same retained central owner/root executor; docs receipt docs/monthly-profile-delivery-receipt-20261101. Existing worker aa1cb kept its image/deploy/schedule and applied FULL on its normal12:30 run; root's actual in-service verification changed from BASE-only to FULLtrue. Web ad111f6f9c69dee7dcce5713eed39abe72aab122 is LIVE with MWS_STORE_LIFECYCLE_PROFILE=MONTHLY_INVENTORY_CAPTURE_V1, actual general execution='false' and monthly capture control unset. Pure selected-manifest description/current signed capability confirms FULL59ca657191a03dfeb751e907d95abe4291a3fc61da30c9d0602a116ed78757c2, Nodev20.20.2 and capabilitytrue. The explicit service-wide RESET-availability hold stays; no Blueprint sync or restoretrue is inferred.

Root submitted one full CI41307061118, attempt1: all5SUCCESS, actual5084server+8backup/0FAIL/0SKIP. Automatic guard41308272858 classified the documentation-only head and SKIPPED deployment, so it executed no hook. Root then ONCE used the existing normal deploy-render workflow_dispatch41308575722/job124854052270: EXPECTEDad111, CI_RUN_IDEMPTY exact-main full-CI lookup, actual Trigger confirmation12:54:26.6766246UTC and exact healthy Wait12:56:39.7059158UTC. Renderdep-dbjjd0h42hec73d6o0ug becameLIVE12:56:25.560308UTC via deploy_hook. No supplied CI-ID pin, direct Render bypass, duplicate hook or second full CI is claimed.

Root's new actual full inspector returned TARGET/guards/enrolled/currentFULL/generation0/eligibletrue/reasons[], with unchanged cataloguefde78bff.../global11e193b..., maintenancefalse/retiredfalse/opnull. Independent actual health returned oktrue/exactad111. Final read-only13:00:30.515614UTC (15:00:30Athens) confirms snapshots0/grants0/jobs0/executions0 and exactly the LAB FULL fence. Only monthly operational metadata was compared; financial/stock/sibling invariance is NOT TESTED. No capture/grant/monthly activation/email/reset/drain/fiscal action or installer replay occurred. The first actual healthy FULL/false/capture-OFF deployment is the compatible baseline, subject to artifact retention; the old EBE BASE/true health checkpoint is not an approved fallback. Personal approval, activation, first immutable capture and hosted recovery acceptance remain OPEN. This is configuration/readiness completion only, no USER/LAB/manual/whole monthly PASS. Full receipt: CHECKPOINTS/CHANGES/2026-10-31-monthly-inventory-capture-profile-claim.md.

01/11/2026 - MONTHLY PROFILE TRANSITION APPROVED / FRESH PREFLIGHT CLEAR / WORKER SETTING SAVED / WEB PENDING

The user explicitly approved the concrete D7 packet: existing-worker FULL profile, web FULL profile with the general RESET-availability hold=false, and one exact-main force-full CI/ordinary guarded release. Same retained central D7 owner/root executor; docs continuation docs/monthly-profile-approved-preflight-20261101. This approval does not cover personal grants, monthly capture/control activation, reset/drain/start, email or financial/stock/fiscal actions. Installation is already complete and must not be repeated.

After the elapsed window, root rechecked actual healthy EBE ebe022701126f571dc5b5986af05f17935637ea8 and its complete trusted-service inspector: TARGET/guards/enrolled/currentFULL/generation0/eligibletrue/no reasons, maintenancefalse/retiredfalse/operationIdnull, unchanged cataloguefde78bff... and global11e193b... . Read-only12:23:12.033954UTC shows snapshots/grants/jobs/executions0 and one selected LAB FULL fence. Independent source comparison confirms wallet-postpaid and staff-shift changes do not alter the closed catalogues, columns, installer, profile selector, worker or wallet schema; postpaid reuses existing company-owned records/JSON, not new tables or ownership expansion. Current EBE full CI41304525017 has all5jobs SUCCESS. Later maine1ddf4a4 adds only staff-release documentation, preserved here.

Root saved the worker FULL profile using the observed Save and apply on next run option; fresh read-only UI confirmed the exact value and all original9keynames preserved plus the one new key. At12:27:03.237465UTC the worker image/deploy remained aa1cb/dep-dbj90815efls73dpvrbg;

the12:25:22.434468UTC heartbeat was still BASE, so fresh FULL runtime/HMAC verification awaited the next natural cron. No manual run, rebuild or new worker deployment. Web settings and full-CI/release execution remain pending. Fresh approved sequence remains worker existing aa1cb image FULL via Save and apply on next run, natural cron and true in-service FULL HMAC verification; then web FULL plus general execution=false via Save only and one force-full CI on this final merged reviewed main head with its ordinary guard. Healthy EBE equals the earlier source head, so the guard's same-revision refusal is preserved, not bypassed. Keep monthly control unset and the explicit global RESET hold; no Blueprint sync/reinstall/backward BASE rollback. Other owners' controls and current keys remain untouched. Overall monthly item9/hosted recovery/first-capture acceptance remain OPEN. Exact scope, checks and failure boundary: CHECKPOINTS/CHANGES/2026-10-31-monthly-inventory-capture-profile-claim.md.

01/11/2026 - MONTHLY PROFILE TRANSITION PACKET READY / EXECUTION NOT APPROVED / AUTOMATION OPEN

Retained central D7 owner codex/central-monthly-profile-20261031; root executor, documentation continuation docs/monthly-profile-packet-20261101. The approved LAB CAPTURE3 installation is complete and is not repeated. This next concrete packet requests only compatible web/worker FULL-profile configuration and readiness, with monthly capture/control/grants/email OFF and an explicit global web RESET-availability hold (STORE_LIFECYCLE_EXECUTION_ENABLED true to false). It does not authorize a reset, personal grant, snapshot, scheduler activation or email.

After explicit approval and a fresh clear deployment/operation window: apply worker MWS_STORE_LIFECYCLE_PROFILE=MONTHLY_INVENTORY_CAPTURE_V1 to existing aa1cbcf8ed8461d4abb565376857508217fd6539 image using the observed Render option Save and apply on next run; let the normal five-minute cron run publish a fresh FULL signed capability. Then save web FULL profile plus general execution=false using Save only, and run one existing force-full main CI for the exact final merged packet revision, allowing only its ordinary guarded release after success. No direct web deploy, guard weakening, manual cron run or duplicate hook. General false intentionally holds reset availability across the web service; it does not block independently authorized monthly personal management. Keep the explicit service override authoritative and do not sync the Blueprint's older execution=true during this hold. Restore true only through separate named review.

Full scope, fresh conditions, exact LAB/hash bindings and fail-closed fallback are in CHECKPOINTS/CHANGES/2026-10-31-monthly-inventory-capture-profile-claim.md. A pre-transition BASE/true Render rollback is not an approved fallback over the installed FULL schema. Retain DDL/history, resolve forward without activation, and establish the first healthy FULL/false/capture-OFF deployment as the compatible baseline. No profile/configuration mutation or full-CI dispatch has been performed by this packet preparation. Overall monthly item9 and hosted recovery/first-capture acceptance remain OPEN; no USER/LAB/manual/business PASS.

01/11/2026 - MONTHLY CAPTURE3 / LAB INFRASTRUCTURE INSTALLED / AUTOMATION OPEN

Same retained central monthly owner (D6/D9), executor root; documentation continuation docs/monthly-install-receipt-20261101. After the user's explicit final install-only approval, the existing trusted Render Web Shell on srv-d9isenfavr4c73bdh52g ran the reviewed CAPTURE3 operator at actual source4c05a9442d03941d35585a1e39a0aceef3dc01a1. Target only MYWORKSTATION LAB / ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ: companycmtpopbgk000prhb5qc60zxus / storecmtpopbgo000trhb5ng9ytiru. Fresh complete in-service inspector returned BASE/eligibletrue/no reasons/guardsfalse/no enrollment. One process-only install enablement and the actual inspector's0600 regular packet admitted one atomic installation: all3MonthlyInventorySnapshot/MonthlyInventoryCaptureGrant/MonthlyInventoryCaptureJob tables plus shared row/TRUNCATE protections across194scoped tables, and selected LAB enrollmentgeneration0 under current FULL59ca657191a03dfeb751e907d95abe4291a3fc61da30c9d0602a116ed78757c2. This was shared production-schema infrastructure, not isolated one-row LAB data.

Actual operator returned installedtrue/enrolledtrue/createdEnrollmenttrue/three createdtables. Independent subsequent in-service inspection returned

TARGET/guardstrue/enrolledtrue/eligibletrue/reasons[] with maintenancefalse/retiredfalse/operationIdnull. Read-only SQL2026-11-01T09:50:58.834393Z confirmed exactly the one selected fence, generation0/currentFULL, snapshots0/grants0/jobs0/executions0. Trusted-service public /api/health after installation returned oktrue/exact4c05 (approximately09:53-09:54UTC; no exactHTTPDate measured). No second install, reset/drain/start/capture, personalgrant, scheduler/control activation, email or financial/stock/fiscal action. No business before/after baseline was measured: financial/stock/sibling invariance is NOT TESTED, never inferred from zero monthly rows.

Installation evidence supersedes only earlier absent-table/no-enrollment/install-OPEN facts for this exact target. Overall monthly item9 stays OPEN; no USER/LAB/manual/business PASS or numbered closure. Web still defaultBASE (profileenvUNSET), Nodev20.20.2; pre-existing general execution flagtrue was left untouched, dedicated capturecontrolUNSET and installenableUNSET outside the one command. Actual in-service HMAC verification before installation was BASEtrue/FULLfalse; worker aa1cbcf8ed8461d4abb565376857508217fd6539 still advertised BASE. No secret/MAC readout or profile/deploy change. Next: review the concrete compatible web+worker FULL-profile transition and fresh signed readiness before any separately approved personalgrant/activation/capture. Do not repeat installation or ask again for install-only approval. No retroactive01Nov07:00Athens job/catch-up; natural future eligibility must bind the actual activation. Monthly invoice email remains a distinct purpose. Full receipt: CHECKPOINTS/CHANGES/2026-10-31-monthly-chat-catalogue-compatibility-claim.md.

01/11/2026 — AI-WALLET-POSTPAID-01 / SCOPED LAB PASS / REAL AMOUNT PENDING

01/11/2026 — READ-ONLY BILLING-SCOPE AUDIT / DISCLOSURE REVIEW OPEN

AI-COST-PASS-THROUGH-01 - SOURCE INSTALLED / SCOPED ASSISTANT AND SHARED-COST PREVIEW/OWNER REVIEW LAB PASS / REMAINDER OPEN

SHARED-COST-APPROVAL-01 SCOPED HOSTED SYNTHETIC PERSISTENCE PASS02Nov2026UTC19:01-19:04 (21:01-21:04Athens): unique SYNTHETIC-OWNER-20261102-1901 /2026-10 history initially0; server nextversion1/150EUR. Exactly one save19:02:48UTC retained Aapproved-draft59.62/Bwaived59.61/Cpending30.77, actor and timestamp, without redistribution or actual charge. Wallet closed, whole page reloaded, reopened with blank financial company selector, explicit LAB reselected. Fresh history19:04:02UTC returned exactly one sameversion1/same actor/time/amounts/decisions; no editable result or automatic approval revival.

Remote before snapshot52dc75ff1cf144988b4a66379fdbb3aaf5407534 published BEFORE save. Fresh selected virtual LAB before19:01:51/after19:03:42UTC exactly unchanged: available3680499/reserved930033/settled409468/credits5020000micro,14entries/9calls/debt0, master/invoice/emailOFF/additive rates0 and only old disabled-email notice. Native central password+2FA completed; earlier wrong support-context denial/login handoff superseded operationally, not bypassed. No source/auth-policy/schema change, real customer financial read, paid/provider replay, actual allocation/posting, credit50EUR, SMTP or new financial operation. Current exact healthy4b1347300850b8082ea5d4eab88dc1259e8b21ab confirmed /api/health; all8 owned source/test blobs unchanged from source3523. Full exact mainCI41483259107/job125407658146 PASS5256server+8backup/0FAIL/0SKIP, guarded release41485540793/job125414963660 Trigger/WaitSUCCESS. Earlier sourcePR/main exact CI and release proofs remain historical; no peer flow is certified by this acceptance.

PASS ONLY synthetic durable save and read-after-reload, exact preserved decisions/actor/time, no editable-result revival and measured virtual LAB invariance. Hosted retry/concurrency/stale-generation and real commercial acceptance remain NOT TESTED (native PostgreSQL role/version/lifecycle/idempotency/rollback cases are CI proof only). Real allocation/control, actual shared monthly posting, external EUR tariffs, funding50EUR/first financial email and parent36/general wallet remain OPEN. Same retained owner feat/ai-owner-wallet-20261022/executor root. Evidence CHECKPOINTS/EVIDENCE/shared-cost-approval-20261102/{before.json,acceptance.json,persisted-after-reload.jpg}, checkpoint CHECKPOINTS/CHANGES/2026-11-02-shared-cost-approval.md and manual docs/manual/ai-owner-wallet/PASS.md; both central PDFs regenerated. Single next action: separately bounded actual-cost posting policy/implementation bound to the persisted owner decisions, never an AI funding grant; no real posting without exact owner-approved documented EUR inputs.

SHARED-COST-REVIEW-01 SCOPED HOSTED TEMPORARY REVIEW PASS01NovUTC/02NovAthens2026: before-source claim3490/CI41352549173/merged3f0f94; source3491/forward75dcd46 fullCI41354601991 and exact main e950259f665d4e4fea439ecb57221d33c01e7163/fullCI41355817818 both5150server+8backup/0FAIL/0SKIP. Fresh virtual LAB before21:14:03/after21:16:10UTC unchanged: available3680499/reserved930033/settled409468/credits5020000micro,14entries/9calls/debt0, master/invoice/emailOFF/additive rates0. No API/persistence/posting in preview; no new paid/business/financial/email operation.

LIMIT: automatic approval review rejected structured private real-customer financial/control extraction; no retry. That comparison is NOT TESTED, with no private amounts/contacts published. PASS covers only synthetic hosted UI and virtual LAB invariance; real allocations/enrollment, external EUR tariffs, actual monthly posting, actual funding/first email and parent36/general wallet remain OPEN. Before-source claim3486 was green/main before implementation; local focused10PASS includes both unchanged financial control-order regressions; CI zero-request/stale-result tests are not separate hosted claims. Evidence CHECKPOINTS/CHANGES/2026-11-01-shared-cost-preview.md, CHECKPOINTS/EVIDENCE/shared-cost-preview-20261101, manual docs/manual/ai-owner-wallet/PASS.md; shared PDFs regenerated. Retained owner feat/ai-owner-wallet-20261022; same executor root, no transfer or replay.

Historical read-only provider/shared-cost audit01Nov2026, before this preview source: available original billing records and authenticated native Render resource usage now reviewed; compute/databases/disks/builds/cron/bandwidth and backup storage are separate cost categories, including separately costed test resources. Private amounts/accounts stay outside the repository. Prepaid AI funding is not consumption; historical/current/pending/projected costs stay distinct. Stored video/chat media consumes infrastructure even without an AI video call. At that earlier audit, the draft active-service-day allocation with once-only50percent and no duplicate direct usage was not implemented or posted. The newer hosted preview above supersedes only that preview implementation status; actual posting remains OPEN. Missing provider packages/EUR basis, remaining resource attribution and accepted allocation/enrollment rule remain OPEN. No new paid test or customer/cloud mutation. See CHECKPOINTS/CHANGES/2026-11-01-ai-cost-provider-allocation-audit.md; protected scoped assistant receipt3483/CI41340537023/merge3c6c73a retained.

Retained owner feat/ai-owner-wallet-20261022; same executor root, no transfer/replay. Source PR3475 merged ef9e0e7; installed exact201e4c21cd3c2a480a94b194a7b350523633e9f0, full mainCI41326081468:5118server+8backup/0FAIL/0SKIP, ordinary pinned guard41327819201 healthy16:47:58.3792866UTC. Engineering source/release is complete. See CHECKPOINTS/CHANGES/2026-11-01-ai-customer-cost-coverage-implementation.md and exact new receipt CHECKPOINTS/CHANGES/2026-11-01-ai-customer-cost-lab-acceptance.md.

01Nov2026 selected-store assistant LAB PASS: exactly one native message, one settled PLATFORM_CUSTOMER_ASSISTANT charge2592micro (entryf9a25d29-303a-4b83-8b1e-94f804e9c51b), available3683091→3680499micro equals settled406876→409468micro; history13→14/calls8→9. Old reserved930033 and credits5020000/debt0 unchanged. Final persisted master/invoice/email OFF and all3additional prices0. Actual requester/store/usage4918input+352output shown. Normal fresh MFA login resolved initial support-context block before any message. Private real-company control unchanged; no actual customer activation, credit, repayment or email. Preserve prior accepted B/C/D/E, postpaid3466 and old REVIEW; do not repeat transactions to recreate evidence. Manual/PDF receipt is scoped, not overall

wallet or all-cost PASS.

Remaining OPEN: verified EUR provider tariffs for SERPER_GOOGLE/GOOGLE_CSE and staff connection/price, live acceptance of staff/search/invoice-search entries when configured, actual shared infrastructure/platform/SMTP enrollment and financial posting (preview rule now approved), broader wallet REVIEW/model/other-role acceptance and accurate first-email disclosure before real-customer activation/funding/mail. Source guards block unpriced paid search; this is readiness observation, not provider invocation PASS. Plain cash arithmetic/automatic report generation has no AI call; no paid AI video-analysis path identified, without declaring hosting/video/email costs free. Inclusive agreed50percent tariffs reused unchanged; verified new external base cost applies50percent once, additive rates stay0. Global internal work has no invented customer debtor. No source/schema/production SQL/env/license/fiscal/stock/payment changes in this receipt. Parent full-manual item36 remains OPEN.

01/11/2026 - COMMERCE-COMPACT-NAV-01 / DEPLOYED / AWAITING USER VISUAL

Authoritative technical delivery receipt · 2026-11-01T15:33:03+02:00.

Implementation and release are complete; only owner visual acceptance remains. Source3451 initial00b0bb7 / fullCI41291787489 and reconciled3774b4a81f534b9debf5d1055e018e40abffb475 / fullCI41293119062 both SUCCESS:5050server+8backup PASS,0FAIL/0SKIP. The initial merge was refused for a shared-record conflict after AI wallet claim3452; reconciliation preserved the identical CSS blob e66e32aafade1fe7f0e6918283614e8fdbe48135 and existing local geometry evidence. Source merged650b4dca3d66dc16b5020197e7a2ec475bef4575; exact main CI41293954312 SUCCESS, including the independently owned intervening FTEXT finalize source. No takeover or physical FTEXT acceptance is claimed.

Current independently healthy live revision ad111f6f9c69dee7dcce5713eed39abe72aab122 is19commits ahead/0behind merge650b4dca, with no later edits to commerce-home-modern.css. Exact current fullCI41307061118 / job124849851364 SUCCESS:5084server+8backup PASS,0FAIL/0SKIP. Normal guarded deploy41308575722 / job124854052270 SUCCESS; Render dep-dbjjd0h42hec73d6o0ug LIVE, finished2026-11-01T12:56:25.560308Z. Independent public /api/health observed ok=true and exact ad111f6f. Root-referenced served /assets/entry-D6cIwnBO.css contains the compact .commerce-hub:not(.order-suggestions-view) selectors with42px desktop and44px coarse-pointer minimums. This is independent delivery verification, not a signed-in actor/menu or physical screenshot PASS. No new deployment, CI dispatch, account grant or business action was initiated for this receipt.

The screen-only first-panel navigation uses content-width wrapping buttons,6px gaps and inline18px icons/arrows while keeping the original18px readable text and existing palette, active/locked/focus states. Original menu handlers, module/store/auth guards, hidden order-suggestions navigation, print styling and selected-function content remain unchanged. Local synthetic real-Chromium geometry remains12cases PASS at1920/1366/1280/1024/768/390: nav440→186px at1920 and800→234px at1366, no horizontal overflow, all25buttons bounded and touch targets≥44px. Those measurements are synthetic geometry evidence, not the owner's exact physical viewport.

Same owner fix/commerce-compact-nav-20261101 retained. Single next action: refresh the commercial window and obtain owner visual confirmation that the smaller buttons match the requested reference and leave adequate room below. No stock, financial, fiscal, payment or invoice action is needed for this visual check. USER/hosted actor/physical visual acceptance remains NOT TESTED; do not reuse the separate Diadoxou operator-warehouse USER PASS. Manual unchanged until actual visual acceptance. Prior source-candidate/full-CI/deploy-pending text below is historical and superseded by this receipt.

Historical source and claim evidence.

Implementation after green/main claim3449.

Claim head d40a5abdfa43179ed1e26882cce0fb786a05abfb / docsCI41291243788 SUCCESS merged86b1c667ec57aeee5ef39701d27d9c37c849175b before source. One CSS-only change in commerce-home-modern.css changes the first-panel strip to content-width wrapping buttons with42px minimum,44px on coarse pointers,6px gaps and inline18px icons/arrows. Existing18px readable labels,

palette, active/locked/focus/hover states and original handlers/module/store guards remain. Screen-only rules exclude the order-suggestions view and leave print styling untouched.

Work-safe build PASS / TABLE_SERVICE verified. Isolated real Chromium138 on the actual built CSS and synthetic25-button markup:12 before/after cases at1920/1366/1280/1024/768/390px PASS. Nav heights1920:440→186px and1366:800→234px; content starts earlier at every width, all25 buttons remain bounded with no horizontal overflow, font18 unchanged, touch targets≥44px, active/disabled colors and hidden order-suggestions navigation retained. Synthetic local render, not a hosted menu/action/actor PASS. Initial mobile probe needed a viewport meta tag; fixture corrected and all12 cases rerun. Evidence CHECKPOINTS/EVIDENCE/commerce-compact-nav-20261101/ includes geometry, screenshots and verification.json. No account/data/business/stock/financial or runtime change. Exact full PR/main CI and ordinary guarded independent healthy deployment remain required before visual user acceptance. Same owner retained; single next action: exact full source CI and release.

Historical before-source claim.

Owner fix/commerce-compact-nav-20261101, claimed 2026-11-01T10:59:31+02:00. Explicit owner screenshots show the 25 commercial navigation buttons at approximately64px height in five full-width columns, consuming five rows and hiding most of the selected function below. Owner requests the compact sizing of the existing upper tabs, preserving readable text and gaining usable content area. Independent CSS/layout scope only: CommerceHub's first-panel .commerce-module-strip, including existing dynamically injected launchers. No ownership of financial/stock/report/Chat workflows, permission/module/store selection, menu handlers or other pages' source.

Read-only finding: commerce-home-modern.css has stacked grid/button overrides, ending in five-column 64px dark cards. Canonical CommerceHub and extensions share the same strip. Implement content-width wrapping compact buttons around34-38px with unchanged readable typography, icons, active/locked/focus states, preserving submenu launchers and narrow-screen wrapping/touch usability. Do not hide functions, shrink the actual content, replace the existing application or alter API/auth/data.

Current main ec9798197f83294ed6b84b6ab1bac139874b79b1 and AGENTS/own active, tracker, pending/manual read; prior POS-OPERATOR-INVENTORY-01 Diadoxou USER PASS is being closed in the same documentation PR, independent of this new layout request. COMMERCE-COMPACT-NAV is NOT IMPLEMENTED / NOT TESTED; no new live acceptance. Before code, publish this claim green/main. Then bounded CSS change, actual Chromium geometry/interaction at desktop and narrow/touch widths plus Work-safe build and exact full PR/main CI; ordinary guarded healthy release before visual acceptance. No business writes or new grants. Single next action: finish claim publication, then compact only the commercial strip. Checkpoint CHECKPOINTS/CHANGES/2026-11-01-commerce-compact-nav.md.

02/11/2026 - CHAT-FAMILIAR-UI-01 / SCOPED USER-REPORTED ACCEPTANCE COMPLETE / NO REPLAY

Retained maintainer codex/chat-native-readers-20261031. Asked to return to the conversation list and reopen the same Chat without tapping the photo, the user answered «nai einai kleisth». Record USER-REPORTED PASS for no automatic old-photo reopening after that navigation. Together with previously published user confirmations (3519,3526,3542,3549), this completes this narrow familiar-Chat/whole-photo acceptance batch: contextual menu and compact keyboard/composer layout, full-photo zoom/pan/reset, search/quoted reply/reactions, reported Diadoxou two-account delivery/read/announcement acknowledgement/forwarding, background-return close, allowed rotation-close branch and now list/reopen cleanup. Do not repeat any accepted check/send/upload/read/ack/forward for paperwork.

Classification remains scoped USER REPORT, not independently observed LAB/API/all-device/forensic acceptance. Model/OS/installed build/hash, actual account identities/forward target/current action store, action time/runtime and before-after server/financial/stock counts remain independently unidentified. Version0.1.15/code16 and Diadoxou are conversation/release context, not new device attestation. Existing technical source/signing/release receipts remain separate. No new Chat/business/grant/runtime/deployment action by this receipt. Overall N16 and other security/session/iOS/assistant owners and residuals stay OPEN/unchanged; only CHAT-FAMILIAR-UI-01 phone acceptance is complete and removed from active pending. No handoff or new owner is needed for

completed work. Next for this completed scope: reopen only a newly reported concrete regression; no further repeat phone test. CP/manual/test plans, common numbered/tracker lists and canonical PDFs synchronized. Evidence CHECKPOINTS/EVIDENCE/chat-familiar-ui-20261101/navigation-acceptance-20261102.json.

02/11/2026 - CHAT-FAMILIAR-UI-01 / ROTATION-CLOSE USER PASS / NAVIGATION ONLY OPEN

Retained owner codex/chat-native-readers-20261031. In the instructed rotation case (photo may adapt OR private preview may close normally), the user reports «οταν το γυρναω κλεινει η προβολη». Record USER-REPORTED PASS for the allowed CLOSE branch only. This is expected temporary-preview lifecycle behavior, not a reported regression needing a source change. Do not infer that the alternate image-fit-after-rotation branch, zoom-state preservation, RAM disposal, server read/ack counts or every device was tested. Actual model/OS/installed hash/account/current store/action time/runtime remain independently unidentified; release0.1.15 and Diadoxou are conversation context, not new independent device evidence.

Background-return and earlier functional/two-account USER reports stay protected and are not replayed. Remove rotation from active pending; ONLY return to conversation list and reopen Chat without the old photo reappearing remains in this narrow physical scope. Other N16/security/iOS/forensic owners and overallOPEN unchanged. No new message/upload/read/ack/forward, grant/business/runtime/deployment action by this documentation receipt. Next action: only that remaining navigation observation, no accepted photo/rotation/background/send replay. Evidence CHECKPOINTS/EVIDENCE/chat-familiar-ui-20261101/rotation-confirmation-20261102.json.

02/11/2026 - CHAT-FAMILIAR-UI-01 / BACKGROUND-RETURN USER PASS / NAVIGATION-ROTATION OPEN

Retained owner codex/chat-native-readers-20261031. Asked to open an EXISTING Chat photo, go to the phone home screen and return, then report whether the temporary photo closed, the user replied «εκλεισε». Record USER-REPORTED PASS ONLY for closing that preview after home/background and return. Prior Diadoxou Pavlou functional/two-account confirmation remains protected; the same-phone/store context is inherited from the conversation, not independently reidentified during this action. Actual model/OS/installed hash/account/exact action time/runtime, RAM disposal/forensics, read/ack or other server deltas are NOT independently measured. Expected release context0.1.15 remains distinct from installed build proof. Not a LAB/API/security/all-device PASS.

Do not repeat this background-return check or earlier accepted functional/send/media checks. Only the already unconfirmed navigation-away and rotation cases remain in this narrow physical scope; other N16 owners and overallOPEN remain unchanged. No new message/upload/read/ack/forward/Push, permission, business, runtime or deployment action by this receipt. Manual/current pending/test plan and canonical PDFs synchronized. Evidence CHECKPOINTS/EVIDENCE/chat-familiar-ui-20261101/background-return-confirmation-20261102.json. Next action: address only those unconfirmed navigation/rotation observations when available; preserve this PASS without replay.

02/11/2026 - CHAT-FAMILIAR-UI-01 / DIADOXOU USER-REPORTED FUNCTIONAL PASS / NO REPLAY

Same retained owner codex/chat-native-readers-20261031. After previously confirming phone checklist1–4, the user stated «το δοκιμασα στην διαδοχου ειναι οκ». Asked explicitly whether delivery/read, announcement with «Το διάβασα» and forwarding worked in Diadoxou Pavlou with TWO DIFFERENT accounts, the user answered «ολα». Record USER-REPORTED PASS for those named functional checks, supplementing the prior contextual menu/compact keyboard layout/whole-photo zoom/search/quoted reply/reaction confirmation. Store attribution is now user-reported Diadoxou Pavlou; two distinct accounts are explicitly reported, their names/roles are unidentified. Do not call this LAB PASS: the user tested the real store, not a synthetic LAB session run by this agent. No new test/send/read/ack/forward/Push or business action by this receipt.

Requested app context0.1.15/code16 remains separate from independently verified installed build. Model/Android/APK hash, account IDs, forwarding destination, exact action times, actual runtime during the user's test and before/after server/audit counts are NOT independently identified. No financial/stock invariance, duplicate-delivery audit, API/tenant negatives, token revocation, iOS/all-device or forensic PASS is inferred. Published source/signing/CI receipts remain separate engineering evidence. Existing non-overlap owners and overall N16 OPEN retained.

The confirmed functional checks are completed and removed from active pending instructions; never replay sends or acknowledgements to repair metadata. Manual and common registries reflect this scoped USER report. Only previously unconfirmed preview background/navigation/rotation privacy cleanup remains in this owner's physical residual; no new broad paired functional test is requested. Other N16/security residuals keep their existing owners. Single next action: preserve the functional PASS and address only that unconfirmed residual when the physical observation is available, without redoing accepted entry/reopen/media/message actions. Evidence CHECKPOINTS/EVIDENCE/chat-familiar-ui-20261101/diadoxou-confirmation-20261102.json.

02/11/2026 - CHAT-FAMILIAR-UI-01 / HISTORICAL LIMITED USER PASS 1-4 / THEN PAIRED ACCEPTANCE OPEN

Retained owner codex/chat-native-readers-20261031. User replied «ειναι οκ» directly after the single phone checklist1–4 and then «ξεκινα» to continue. Record USER-REPORTED PASS ONLY for message contextual menu, +/overflow and conversation/composer space with keyboard, whole-photo opening/zoom/pan/double-tap/reset, message search, quoted reply and reaction add/change/remove. This is the user's report, not an independently observed device session or a new measured LAB/API result. Requested release context0.1.15/code16; actual installed version/hash, device/model/Android, selected store/identity, exact action time and deployed revision during the observation were not independently identified. Do not infer them from published APK or current server health. Evidence CHECKPOINTS/EVIDENCE/chat-familiar-ui-20261101/user-confirmation-20261102.json. Existing technical release/source/signing receipts remain historical engineering evidence.

Do not repeat accepted1–4, earlier entry/reopen/voice/media or sends/uploads solely to collect metadata. Remaining single combined batch: identify an authorized synthetic test store and two DIFFERENT authorized users before a new send; named application-delivery/read separately, one labelled synthetic announcement/pin/explicit «Το διάβασα», one explicit reviewed-and-once-confirmed forward to a separately authorized TEST Chat, plus unconfirmed photo background/navigation/rotation privacy cleanup. No real-store diagnostic send or new grants. Missing second authorized destination means forwarding NOT TESTED, not a permission bypass. Ambiguous network outcome is inspected before any retry. No phone model is required to retain the reported limited PASS, but missing scope stays explicitly unidentified. Other API/session/revocation/forensic/iOS/assistant/N16 owners and overall N16 OPEN retained. Single next action: obtain test store and two existing identities, then complete only the remaining batch and centrally record observed outcomes. No new send/read/ack/Push, role, business, schema, runtime or deployment action by this documentation receipt.

01/11/2026 - CHAT-FAMILIAR-UI-01 / ENGINEERING AVAILABLE / ONE COMBINED PHONE ACCEPTANCE OPEN

Retained owner codex/chat-native-readers-20261031, source feat/chat-familiar-ui-20261101. Documentation synchronization docs/chat-familiar-ui-delivery-20261101, PR3494; runtime validation is recorded separately below. Android0.1.15-preview/code16 and Web publicly verified. Message actions appear on press/long press, attachments/ready replies under +, search/announcements/settings and existing Web installation/store/share controls under overflow. Existing named delivery/read, quotes, reaction set-replace-remove, announcements and explicit acknowledgement, history search and destination-review-confirm forward remain available with unchanged permissions. Visible reaction summaries and receipt status retained; menu opening/photo gestures do not send/react/forward/read/ack. Whole photo initially fits without cropping, bounded1..6 pinch/pan, double tap, explicit zoom/reset/close; private preview cleared on background/navigation and stale store/token/older-photo responses rejected. No capture/scanner, backend/schema/auth/session lifetime, permission, runtime/key/guard or peer-owner change.

Before-source claim3446/docsCI41286977906 merged0c282b687a20bf4a7011d05619a452a5678e8382 before code. Source3447 final headbdf9c8d315adae9c2c8a4b97617041cd39704463 fullCI41312235220 and Android41312235219 SUCCESS; source main2625a7913ccfa162dfa2342d976de6e172110a8f exact fullCI41313547280 SUCCESS. Actual5089server+8backup/0FAIL/0SKIP, full browser/HTTP/native boundaries and Android capture1/full55 passed. Actual Chromium390x844/360x740/390x420 full-image markers/real two-finger pinch, compact conversation-space and visible composer verified; screenshots visually reviewed. Native actual Activity gestures/private menu cleanup/full-window bounds/large-font geometry passed. Initial policy refusal, dismissed-view timing/private cleanup correction, synthetic bitmap disposal correction and visual header/glyph refinements remain historical evidence, never availability proof.

Stable signing41313678816 artifact13086882925 pinned exact-main full CI before key access, compile/unit/lint/capture/full55 and apksigner verification. Independent ZIP digest/APKv2 leaf certificate/compiled binary package-version16/ZoomPhotoView/message/full-photo/history-forward methods/hash/bytes verified. APK SHA2562603a8f385e53178fe35c6bcb2a0d81c3c50c082cb9fda859c641ceeb1a6231b, 3703820bytes; certificate17c4d56123c6015a58343faba73d26a8b7d085a1baff7e680500767ae084ea97 unchanged; Android treef9bafe0cb663f77edaca2ca818da40e48aa0e2c2. Distribution3471 head0a03d5c73eaff990aa97000a1ff36ed48e4ff918 fullCI41315987296, merged9d7ebe588ca46742de0ab6f8ace5117ad98afb70 exact fullCI41317300926 SUCCESS. Normal guarded deploy41350280601, Renderdep-dbjqkgu7bikc7389ei10, independently observed live5c3e9eacb69ce2c0df801eb5dd9aecf04506d69e. Public health, manifest object AND bytes, APK byte-equality/hash/bytes and public download UI verified. No direct deploy/env/key access outside existing workflow or real Chat send/read/ack/Push/email/business mutation. Evidence CHECKPOINTS/EVIDENCE/chat-familiar-ui-20261101/.

Publication freshness guard41318518424 correctly deferred the older distribution revision because newer peer runtime source existed on main; Trigger/Wait were skipped, not a release. Full combined-main CI41348911362 at5c3e9eacb69ce2c0df801eb5dd9aecf04506d69e then passed every applicable job with actual5148server+8backup/0FAIL/0SKIP. Android/source Chat/download artifacts remained unchanged across the peer-only descendant delta. The ordinary guarded workflow and public health above identify the actual combined revision; no docs-only CI was substituted for full source verification.

Physical/LAB/USER acceptance remains NOT TESTED. ONE combined actual-phone batch only: docs/testing/chat-familiar-ui-20261101.md includes this compact layout/photo requirement plus still-pending0.1.14 named delivery/read/quote/reaction/pin/explicit acknowledgement/history/one explicit forward to an authorized TEST Chat. Older0.1.13/0.1.12 checks remain absorbed, not passed. Earlier accepted entry/reopen/voice/media/appearance/auth/Push USER PASS preserved without replay, device/hash not independently identified. No new manual/PASS entry from CI. Finite encrypted revocable sessions, uncertain-send/no-auto-replay and exact company/store/module/session fences retained. Node22 HOLD, CHAT-FIRST-ENTRY residual owner, other native/iOS/assistant/N16 owners and overall N16 OPEN preserved. Single next action: one combined physical batch and central recording of actual outcomes;

owner retained until completion or named handoff.

01/11/2026 - CHAT-FAMILIAR-UI-01 / HISTORICAL ASSIGNED BEFORE SOURCE / NOT TESTED

Retained narrow Chat owner codex/chat-native-readers-20261031; branch feat/chat-familiar-ui-20261101, 01Nov2026 09:58 Europe/Athens. Explicit user request: familiar Viber-style conversation with message actions on press/long press, attachments under +, compact overflow tools, full uncropped photo opening with pinch zoom/pan/reset. Scope ONLY existing Android/Web Chat presentation and photo viewer, no acquisition/scanner/iOS/assistant ownership. Current main0646fd4 and new peer report activation/operator inventory receipts reviewed; all peer scopes preserved. Existing Android0.1.14/code15 history/forward public engineering evidence and previous limited USER PASS remain protected. User now reports controls occupy too much conversation area; new layout/photo requirement NOT IMPLEMENTED/NOT TESTED. No new physical/LAB/manual PASS. Existing single expanded phone acceptance remains one combined check after this update, no intermediate/replayed accepted entry/media/send.

Preserve exact selected company/store/token/epoch fences, current server role/module/settings checks, finite encrypted revocable sessions, FLAG_SECURE/private preview cleanup on background/logout/navigation, explicit human read/announcement acknowledgement, named delivery/read distinctions, quoted replies/reaction set-replace-remove, explicit authorized destination-review-confirm forwarding with uncertain-send/idempotency safeguards. Menu opening and photo gestures must not send/react/forward/ack or implicitly mark read. Retain visible existing reaction counts and receipt status; all permitted actions remain discoverable through accessible message menu including keyboard/accessibility alternative. Photo initially FIT inside available viewport without cropping, pinch/pan bounded, reset and close available. No new camera/storage permission, file download right, durable private cache, schema/backend/business change or runtime/deploy/signing guard modification. Node22 HOLD and N16 central owner/residuals unchanged; overall N16 OPEN.

Next action after this claim is green/main: implement compact Android/Web controls and secure full-image zoom, run mounted/browser and actual Android gestures/lifecycle/full regression, exact full source/main CI, unchanged stable signing and normal guarded publication with independent public verification. Then one combined physical acceptance including still-pending0.1.14 scope; owner retained until completion or named handoff. Checkpoint CHECKPOINTS/CHANGES/2026-11-01-chat-familiar-ui.md.

01/11/2026 — AUTO-REPORT-SUPERADMIN-RECIPIENTS-01 / REAL RIZAREIO ACTIVATION PASS / DELIVERY NOT YET OBSERVED

Authoritative continuation after user action-time confirmation «ΕΝΕΡΓΟΠΟΙΗΣΕΤΑ ΟΛΑ»: only the two already saved Rizareio recipients and DAILY/WEEKLY/MONTHLY. Same retained central report owner codex/central-auto-dispatch-20261022/executor root, receipt docs/report-rizareio-activation-20261101. Source3432 and LAB/claim receipt3439 remain protected. This completes the bounded no-invitation implementation plus requested selected-store activation; actual future delivery/inbox/complete financial reconciliation remains NOT TESTED, not a reason to repeat recipient invitations or accepted LAB actions. Broader cash/lifecycle/SMTP/monthly/backup and every peer owner stay retained.

Current main4c05a9442d03941d35585a1e39a0aceef3dc01a1 reviewed since55c2d7a; peer Chat distribution/history/forward and tracker heading repair preserved. All ten report runtime/test blobs remain exactly accepted2e934356. Existing fixed Render service srv-d9isenfavr4c73bdh52g/workspace tea-d9ie26vaqgkc739uudqg confirmed. Prior green/main3439 explicitly claimed only AUTOMATIC_REPORT_ACTIVATION_CONTROL; applied through provider merge replace=false, preserving other keys. Fresh activation issued2026-11-01T07:30:22.933Z, notBefore2026-11-02T05:00:00.000Z (07:00Athens), enabledtrue; exact time/fingerprint in activation-control.json. Old grants cannot match the new epoch. Raw control/epoch/env secrets and private recipient addresses are excluded from public evidence.

PERMANENT DEPLOYMENT PROVENANCE DEVIATION: the Render MCP environment-update operation automatically triggered API deploy dep-dbjel48ae00c73e0kqa0 at07:30:25.240216UTC, contrary to the

save-only assumption. The response was inspected immediately; the incorrect provisional SAVE ONLY journal statement is explicitly corrected. No cancellation tool is exposed. No retry, second mutation, hook, restart, guard modification or bypass was attempted. Exact4c05a944 becameLIVE07:32:43.157090UTC and independent /api/health returned ok=true/exactsameSHA. Its delta from already healthy/fully validated aaf3dce was documentation only; report/runtime blobs unchanged. Full exact-main CI41284858846 was already running but completed only07:43:38UTC: all5SUCCESS, actualbuild124784210253 logs5050server+8backup/0FAIL/0SKIP, native/mounted/realHTTP E2E executed. This is POST-TRIGGER validation, NOT CI-before-deploy and NOT an ordinary guarded deployment. Future connector configuration changes must assume immediate automatic deployment and require exact successful CI BEFORE mutation. This deviation is never erased by later green CI. Real recipient approvals were held until exact fullCI and exact healthy readback succeeded.

Actual authenticated Chrome SuperAdmin /platform-admin, 01Nov09:44:23Athens: first existing recipient approved through «Έγκριση και ενεργοποίηση» with all3frequencies. Actual response explicitly says approved/automatic sending activated/no invitation; header thenENABLED, futurecutoff02Nov07. Second existing recipient approved09:44:59; firstapproval preserved. Close/reopen readback confirms both approvedSuperAdmin rows with original timestamps, all3selected persisted, ackcheckboxfalse and header «Η αποστολή έχει ενεργοποιηθεί για επιλέξιμες περιόδους». Cutoff stays02Nov07. One active RIZAREIO-POS-01/slots1+2/7+15/nullthird unchanged; no reportsettingsSave. No invitation/code/recipient action or forced/manual report SMTP. Actual dispatch awaits a complete newly authorized closed period and existing source/license/lifecycle gates. First eligible DAILY2Nov07→3Nov07Athens, WEEKLY2Nov07→9Nov07, MONTHLY1Dec07→1Jan2027 07; older/partial periods are not sent.

Read-only controls after activation: original ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ stillOFF with original verified/active-consent row; N40stillOFF/zeroactive recipients. Neither was reauthorized under fresh epoch. No business/stock/payment/fiscal/physical shift/SKU action or financial invariance measurement. Source READY/inbox/actual message acceptance/physical POS/mobile not tested. One privacy-safe status-only screenshot attempt failed Page.captureScreenshot timeout; no image artifact or invented visual evidence. Evidence activation-journal.md, activation-control.json and activation-native-ci.txt; real addresses remain private to the confirmed user/UI, not this public repository.

PASS is limited to actual selected-store administrative activation/persistence/all3periods/no-invitation and control OFF isolation. No outstanding user approval or invitation remains for this activation. Next remaining observation: actual eligible future delivery and inbox acknowledgement; do not force past data, repeat transactions, or request another blanket authorization. Full manual36/whole reports/other owners remain OPEN.

01/11/2026 — AUTO-REPORT-SUPERADMIN-RECIPIENTS-01 / INSTALLED / SCOPED HOSTED LAB PASS / REAL ACTIVATION OPEN

Authoritative outcome superseding this slice's earlier NOT IMPLEMENTED/AWAITING CI/LAB entries. Retained owner codex/central-auto-dispatch-20261022, executor root; source PR3432, receipt docs/report-admin-hosted-20261101. No other owner or broader delivery/cash/lifecycle/SMTP scope is closed. Mandatory invitations are superseded ONLY for the explicitly authorized SuperAdmin flow; historical optional invitation acceptance is not a blocker for this flow and is not newly claimed PASS.

Accepted source2e934356740108afd372172164deae0b1680898d CI41252374347 SUCCESS5024server+8backup/0FAIL/0SKIP. Combined96ea8e5ee94f3f5efc184b7a0a37b34f511fd012 CI41253507877 SUCCESS5039+8/0/0; normal source merge55c2d7a912313ad8589f8258ad9dc5084fa8ad49. Exact mainCI41254579730 attempt1 build124695174687 actually5039server+8backupPASS/0FAIL/0SKIP, new native parent412/all5subcases executed. Wholesale124695174688 stalled at apt-get update and hit20min infrastructure timeout; attempt1 is not whole PASS. Attempt2 completed all5SUCCESS, wholesale124700036964 reran successfully, previously successful exact-SHA build retained; no assertion/workflow/guard weakening. Ordinary guarded release41256506408 allstepsSUCCESS; Render dep-dbj8dd0ae00c73dgb2ag LIVE2026-11-01T00:26:05.583250Z. Independent /api/health ok=true exact55c2d7a. Runtime/source/test hashes unchanged from reviewed green source.

Actual hosted authenticated Chrome SuperAdmin, canonical /platform-admin, 01Nov02:29–02:34Europe/Athens. Fresh N40 CONTROL20261010 identified separately inside MYWORKSTATION LAB:0recipientrows/no savedsettings/0terminals/OFF. Main ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ retained as untouched control. Two distinct synthetic example.invalid addresses saved via «Αποθήκευση και ενεργοποίηση», all3periods selected, no old grant checkbox and no invitation/code/recipient action. Actual messages confirm approvals+periods saved and CENTRAL DISPATCH OFF/no invitation. Both approvedSuperAdmin rows persisted after close/reopen, first timestamp02:29:49 and second02:30:08, shared grant cutoff stayed02:29:49. Revoking A approval made only A inactive; B remained approved. Soft-revoking A subsequently invalidated B through existing legacy store-wide authorization invalidation, correctly rendered inactiveSuperAdmin rather than recipientconsent. B then soft-revoked; explicit «Κλείσιμο αυτόματων αποστολών» acknowledged. Final N40zeroactive recipients/OFF/no settingscreated; synthetic audit rows retained, not claimed physically deleted or byte-identical baseline. No SMTP/invitation sent. Real-store recipients/authorizations and central configuration untouched.

Control readback: MAIN1/2/3,7/15/23,reviewed=false; fixed30Oct preview1source/settings3/HOLD and one original verified/active-consent recipient unchanged. No physical terminal, operator shift, SKU/quantity/payment/stock/fiscal transaction used. Financial invariance was not independently measured by UI. Screenshot capture failed twice with Page.captureScreenshot timeout; no screenshot artifact or visual-proof claim. Text/native readback and timestamped journal retained. PASS only for administrative Save/shared list/persistence/truthful provenance/revoke/cleanup/control isolation, not actual READY delivery, inbox, irregular openings, physical POS/mobile or whole report reconciliation.

Same selected store recipient list is used for DAILY/WEEKLY/MONTHLY. Actual SuperAdmin approval is distinct authority, never forged mailbox verification/recipient consent. Remaining bounded action: one coordinated final activation for the user's two already saved real-store addresses after action-time confirmation of sensitive financial destinations. No new invitations required. Runtime explicitly observed centraldispatchOFF: a separately reviewable configuration cutover is required before real automatic sending, not a code failure or a missing recipient invitation.

Configuration preparation claim (not applied): only AUTOMATIC_REPORT_ACTIVATION_CONTROL on existing service srv-d9isenfavr4c73bdh52g / workspace tea-d9ie26vaqgkc739uudqg, provider merge replace=false preserving every other key. Fresh UUID/issuedAt at actual application and next07:00Europe/Athens strictly later as notBefore; do not reuse old epoch/cutoff. Fresh epoch invalidates all old grants, so no other store silently activates. Existing guarded deployment only after exact-main fullCI; no direct hook/restart/bypass. Real destination approval only after new epoch is live and fresh scope readback. No configuration mutation, SMTP, deployment for this claim or real authorization yet. Overall actual delivery remains OPEN with retained owner. Evidence CHECKPOINTS/EVIDENCE/report-superadmin-recipients-20261101/{verification.json,hosted-journal.md,combined-native-ci.txt}.

01/11/2026 — AI-OWNER-WALLET-01 / DETAILED HISTORY INSTALLED / SCOPED LAB PASS

Retained owner feat/ai-owner-wallet-20261022; bounded continuation feat/ai-wallet-activity-details-20261031 completed. This is the authoritative outcome for detailed history; earlier NOT IMPLEMENTED/AWAITING LAB entries below are historical. The whole wallet remains OPEN with the same owner. Receipt branch docs/ai-wallet-activity-lab-pass-20261101. No unrelated assignment is released.

Source PR3426 final b8b3925e9b013c26c66cb3010caf136a74a97cfd fullCI41249512281 SUCCESS:4997server+8backup/0FAIL/0SKIP/all5jobs, actual native PostgreSQL/browser/HTTP E2E; recovery41249512271 SUCCESS7/0/0. No direct hook, runtime/env/schema or guard bypass. Later peer main changes are preserved; acceptance refers

specifically to installed946fa.

Actual hosted Chrome SuperAdmin acceptance01Nov01:32–01:48 Europe/Athens, MYWORKSTATION LAB / MAIN, existing LAB POS2 shift used only as control. Read-only new history9rows before E:324013microEUR final charges,930033pending reservation,5000000credit. Five filter checks separated REVIEW, purpose mismatch, credit author, MAIN and unknown source, then reset. Original legacy callers remain explicitly unknown; credit author/manual resolver are separate from original requester.

One new synthetic ACTIVITY-LAB-20261031-E/SYN-E1/qty1/PIECE/net12EUR/VAT0, one upload/intake, one original automatic assistant preview. Entry db81bfdb-b149-4ecc-9339-7b5320224979 SETTLED, purpose INVOICE_ASSISTANT, surface INVOICE_WORKSPACE, DIRECT, actual authenticated SUPPORT/SUPER_ADMIN caller; caller matches configuration audit and document creator, not effective OWNER. New document de3b1f93-d649-4da2-b1da-313bf716a299, order3e964b80-edd5-437f-aa3e-4c75c58473d5, job3560ca7b-c96b-47d8-ae51-74be8f81a1d1 remain one DRAFT/NEW/AWAITING_APPROVAL. CREDIT means unpaid payment terms, not a credit note; paymentTransactionId NULL. No apply/product creation/approval/payment/stock/fiscal/email or second provider request.

Original tariff9719input/9716cachewrite30m/662output tokens independently gives82863microEUR; actual charge and balance debit exactly82863, all3additional fees0. Balance4675987→4593124; reserved930033unchanged; version32→33enable→35one reserve+settle→36restore. Master/invoice/email OFF restored and native readback confirmed; prices remain0. Every original9wallet entry, old B hold and accepted C/D remain byte-identical; real-company wallet/entries/audits/notices unchanged (absent wallet stays absent). All3LAB store stock/movements/transaction/product digests, products110/suppliers62/open shift and its0transactions/cash/card/IRIS/total unchanged. Only MAIN gained one attachment/job/document/order/line. Each mutation had fresh before/after controls privately persisted before continuing.

Native final history10rows:406876final/930033pending/5000000credit; new purpose+support+MAIN+SETTLED filters yield1row/82863final/0pending/0credit. User identity, actual role, provider/model and exact breakdown visible; expanded native details bind the original document and tokens. Safe screenshot excludes personal names. Evidence CHECKPOINTS/EVIDENCE/ai-owner-wallet-20261022/activity-e-acceptance-20261031.json and activity-history-20261101.jpg; full private raw controls remain private. Instructions docs/manual/ai-owner-wallet/PASS.md. Canonical tracker PDF regenerated.

Scope PASS: installed detailed Admin history, actual support initiator/document binding and exact single-call charge, legacy unknown, separate holds/credits, native filters and measured business controls. NOT TESTED hosted: physical POS/operator, delegated or actual OWNER session, other payment/header/full/recheck/background routes, mobile device, email delivery, real-store OCR accuracy and all model/cache/long-context tiers. Native isolated source coverage is separate evidence, not hosted acceptance. Initial pre-draft ai-recheck image reading remains unmetered/OPEN. Historical REVIEWs require original evidence, never reconstructed caller, refund, repricing or retry by guess. No real-customer activation, credit or price changed. Broader wallet, Rizariou agreement/funding and old REVIEW investigation remain with retained owner; single next action is review original unresolved usage evidence without replay, under a separately measured scope. No further call is needed for this completed history acceptance.

31/10/2026 — AUTO-REPORT-TWO-SHIFTS-01 / INSTALLED / SCOPED HOSTED LAB + USER SETTINGS PASS

Bounded correction owner fix/automatic-report-two-shifts-20261031 completed after approved transfer/green claim3416. Source3418 finalhead d962bd7e16cdad2ccf0289c32a84385e3af828fc CI41242839435 SUCCESS; merge c2af89a72cea3b9c8d9964b15172fb9f09a84aea exactmainCI41243812623 SUCCESS (4972server+8backup PASS/0FAIL/0SKIP). Ordinary guarded deploy41245048490 preflight/pinned trigger/exact health SUCCESS, healthy c2af89 confirmed31Oct21:52:43UTC; independent health200/ok/revision matched. No direct hook, force, schema or guard bypass.

Actual authenticated SuperAdmin Chrome acceptance31Oct~21:54–21:58UTC at canonical /platform-admin: fresh LAB baseline7/15/23 MAIN1/2/3 reviewed=false/version1. New save MAIN1/2 + blank third succeeded/no email; native required/valid false/true without3 and true/false with3 (invalid draft not submitted). Reopen showed persisted blank third and1/2, daily30Oct preview source1/settings2 HOLD for ambiguous/previous-open/missing1/2; no universal-third hold. Fresh N40 control remained0terminals/save-first/previewdisabled/default23, no write. LAB then restored7/15/23 MAIN1/2/3 reviewed=false, refresh and preview source1/settings3 HOLD. Monotonic version1→2→3 intentional; no old unchanged Save replay.

USER requested Rizareio configuration started absent/default7/15/23/no rows. Saved exact active RIZAREIO-POS-01 only, slots1/2,7/15/null, reviewed=false; native success/no email and refresh readback confirmed. Daily30Oct preview source5/settings1 HOLD ambiguous/overlap/previous-open. This is limited configuration/HOLD acceptance, not whole-day READY or financial acceptance. Both existing recipients still unverified/no active consent, dispatchOFF. No recipient/invitation/consent/authorization/activation change or email; broader recipient acceptance/SMTP/delivery remain OPEN with existing owners. Invitations expire10minutes; refresh invitations only with recipient readiness and selected frequencies, recipient confirms personally.

PASS only for optional-third two-shift Save/readback, native required-third refusal, store isolation, guarded runtime and retained HOLD. Actual late-midnight READY is isolated native CI evidence, not a live complete-day acceptance. Opening boundaries7/15 remain explicit; fully irregular/early openings still require review. No payment/stock/SKU/physical shift/fiscal operation; financial source invariance not independently measured by hosted UI. No physical POS/mobile/other-role/actual delivery acceptance. Checkpoint CHECKPOINTS/CHANGES/2026-10-31-automatic-report-two-shifts.md; evidence hosted-journal.md + verification.json. Broader central dispatch/cash/lifecycle and every unrelated owner retained. Bounded AUTO-REPORT-TWO-SHIFTS-01 removed from pending only; next remaining action is recipient confirmation, not another source rewrite.

2026-11-01T00:52:34.018194+02:00 — AUTO-REPORT-SUPERADMIN-RECIPIENTS-01 / USER-DIRECTED CONTINUATION / ASSIGNED BEFORE SOURCE

01/11/2026 — AUTO-REPORT-SUPERADMIN-RECIPIENTS-01 / EXACT SOURCE CI PASS / SHARED INTEGRATION

Same retained central report owner/root. Exact source3432/head2e934356740108afd372172164deae0b1680898d fullCI41252374347 all5jobsSUCCESS; actual build124688690255 logs5024server+8backupPASS/0FAIL/0SKIP. New native parent412 and all5subcases executed PASS, including truthful inactive provenance assertion; actual mounted/admin-valid-proof cutoff tests executed. Not a hosted acceptance or installed release.

Normal merge refused because the shared pending registry changed during validation. Reconcile current main50146f3f094d846f52b2801f1e60de0332aaf1c4, preserving all peer wallet provenance, POS operator warehouse, monthly Chat catalogue/security, Node window and new Chat search/forward records and PDFs. All six owned runtime and four test blobs remain byte-for-byte the accepted source; no test weakening, force merge or guard bypass. Progress is nested within this owned claim so future peer prepends remain independent. The exact combined PR/main full CI and normal guarded healthy runtime are still required before the new no-send LAB test. Production destinations/settings/authorization/SMTP remain untouched. Single next: validate this combined head.

01/11/2026 — AUTO-REPORT-SUPERADMIN-RECIPIENTS-01 / SOURCE CANDIDATE / AWAITING FULL NATIVE CI AND HOSTED ACCEPTANCE

Before-source claim3430 reconciled head89f025dcbdc0ccbbc205dd2a6f44c33bc62869f5 passed docsCI41250270846 SUCCESS and merged2c9eacce863fce4c6b7946666bdec2b9405265ac BEFORE source edits. Same retained central integration owner/executor root. Intervening owner-action/FTEXT records preserved; no unrelated source edited.

Implemented separate report-superadmin:<actual actorId> provenance and MWS_REPORT_SUPERADMIN_AUTHORIZATION_V1 domain in existing compatible authorization storage. API/UI truthfully show SUPER_ADMIN approval; verifiedAt/verifiedBy are never fabricated. Exact company/store/email/recipient identity/version/authorization revision/lifecycle/frequencies/issuer/time proof; explicit current locked SuperAdmin, strict schema and CAS across recipient/authorization/grant/policy. One transaction adds/approves address and selected-period grant/policy, without SMTP. Existing current authorization/grant/policy reused without writes or cutoff rewind; other recipient rows preserved. Existing valid recipient proof stays RECIPIENT unless explicitly superseded for changed periods. Outstanding invitation proof is cleared on new administrative approval. Revoked addresses are not silently restored. No schema/catalog/provision/backup or public invitation change.

Eligibility and actual delivery-start metadata have distinct explicit administrative authority assertions; mailboxVerified/consentActive are not forged true. Legacy mailbox/consent assertions remain required for legacy records. Same scope/version/lifecycle/current principal+session/external epoch+OFF/source HOLD/closed-day/cutoff/immutable slot/no replay/uncertain SMTP gates remain. Main UI now offers email→Save and activate, keeps optional invitation/code tools secondary, same store recipient list, explicit approval revoke, truthful external OFF and epoch-mismatch header.

Local Node20 focused18PASS/0FAIL/3native-infrastructureSKIP; all automatic reports201PASS/0FAIL/14native-infrastructureSKIP. Full local server completed4353PASS/0FAIL/330native-infrastructureSKIP; frontend build PASS/TABLE_SERVICE. Final epoch-header adjustment separately rechecked by3 mounted UI tests PASS/0FAIL. Exact full native CI remains required. New native PostgreSQL/actual HTTP fixture must execute unskipped in exact full CI: role/URL scope/injection refusal, existing unverified address atomic approval, separate second recipient/no-op/cutoff invariance, revoke/edit invalidation, two-client CAS, commit rollback, unchanged foreign/business control and zero invitations. New source/payload/start tests cover admin-only authority with recipientVerified=false/consentActive=false, proof tamper, principal/lifecycle/cutoff/source HOLD and revoke before start. Mounted new flow records one administrative POST, no invitation/request, truthful approval/OFF and late-store response discard; existing legacy tests retained.

SOURCE PREPARED / NOT INSTALLED / NO NEW HOSTED PASS. Production recipients/consent/authorization/policy/grant/external control untouched; no email, financial/stock/shift/fiscal operation or old test replay. Existing two-shift settings/PASS retained. Full exact PR/main CI, ordinary guarded healthy release and new no-send LAB acceptance precede any actual destination activation. Final actual enablement must remain explicit and scoped to the user's two intended addresses; external controls must not accidentally release other preexisting grants. Single next: full native CI and review of this source candidate.

Same retained integration owner codex/central-auto-dispatch-20261022, central executor root; continuation fix/report-superadmin-recipients-20261101. User explicitly supersedes mandatory invitation for SuperAdmin-managed destinations: they hold the recipient addresses and require email/save/activate with no recipient action, same stored destination list on each automatic period. This is a new administrative authorization basis, never fabricated mailbox verification or recipient consent. No Owner/employee extension. Existing two-shift hosted PASS3418/3428 protected; historical invitation acceptance stays separate, existing valid proofs untouched unless the administrator explicitly changes that recipient authorization. Current main8e1128e6 and history since hosted c2af89/e08bc54 reviewed; intervening FTEXT stop source does not alter report runtime. Existing manual/active/tracker/pending report ownership reviewed; no competing second owner or release of backup/cash/lifecycle/SMTP peers.

Bounded source after green/main: NEW explicit SuperAdmin-authorization helper/writer, automatic-report-dispatch-policy.js, automatic-report-eligibility.js, automatic-report-delivery-lifecycle.js narrowly adding distinct trusted administrative authority assertion (legacy mailbox gates retained), routes/automatic-report-dispatch.js and AutomaticReportDispatchManager.jsx. Persist explicit report-superadmin:<actorId> authority in the existing provenance string column with a separate canonical proof domain binding company/store/email/recipientVersion/authorizationRevision/lifecycle/frequencies/actor/time. Legacy table/column names remain compatibility storage, but API/UI expose authorization basis and issuer truthfully; verifiedAt/verifiedBy never fabricated. No DDL/migration/catalog/backup changes, no public-token auth bypass or preexisting public invitation weakening. Tests: pure provenance/tamper/cutoff, mounted no-invitation Save/scope discard, actual HTTP current SuperAdmin denial, native PostgreSQL atomic save/grant/policy/readback/rollback/revocation/concurrency/control, and full existing report gates/CI.

One scoped management transaction validates explicit SuperAdmin action and expected recipient/authorization/grant/policy revisions, stores address+administrative authorization and selected-period grant/policy atomically, preserves all other recipients, does not send any mail, and never changes external activation control. No activation/catchup on GET or automatic promotion of existing unverified addresses. Shared automatic recipients remain store-scoped and version/lifecycle/revocation bound. External OFF, incomplete-source HOLD, paid-module/licensing, current principal/session, post-authorization cutoff, immutable slot/no replay and ambiguous SMTP guards retained. No emails to real recipients or production authorization action until installed and exact native/LAB acceptance; user action-time confirmation will be needed before any actual newly authorized sensitive financial destination is enabled through browser.

Status NOT IMPLEMENTED/NOT TESTED. Existing manual remains historical accepted usage, not new behavior. Checkpoint CHECKPOINTS/CHANGES/2026-11-01-report-superadmin-recipients.md. Single next: publish green/main claim, implement the bounded administrative path, full CI/exact guarded runtime, then isolated LAB no-send acceptance before real destination activation. All unrelated owners preserved.

31/10/2026 - POS-OPERATOR-INVENTORY-01 / SCOPED USER PASS / DIADOXOU CONFIRMED

Authoritative owner confirmation · 2026-11-01T10:56:21+02:00.

The owner reported exactly: «ΝΑΙ ΕΙΝΑΙ ΟΚ ΤΟ ΔΟΚΙΜΑΣΑ ΣΤΗΝ ΔΙΑΔΟΧΟΥ». This confirms the requested operator warehouse use from POS at Διαδόχου Παύλου as a scoped USER PASS. It supersedes the pending real-user confirmation for this delivered feature; do not request the same acceptance again or replay a business transaction for documentation. Remove this bounded item from PENDING_WORK. The deployed technical receipt, source3427, release verification3444 and full exact live CI41284858846 (5050 server+8 backup PASS/0FAIL/0SKIP) remain evidence of implementation delivery.

Acceptance is owner-reported, not an independently observed transaction or stock-control LAB. Exact operator, physical terminal, client revision at the time of use, individual actions/products, stock or financial before/after and the full per-action/tenant/revocation matrix were not supplied and remain NOT TESTED as physical/live measured claims. The independent health read while recording this confirmation was ok=true, revision4c05a9442d03941d35585a1e39a0aceef3dc01a1; this does not identify the physical client's loaded revision. No new account/module grant, stock/financial/fiscal action, source change or deployment was performed for this closure.

Manual docs/manual/pos/PASS.md now records who may use the feature, the opening flow, default-off right, action rights and visible-stock-only boundary, plus troubleshooting and the exact limits of the USER PASS. Same owner fix/pos-operator-inventory-20261031 closes this bounded delivered requirement. Other assignments and existing decimal-keyboard/consumption-launcher PASS remain unchanged. Single next action: no repeat of the accepted test; address a separately identified new issue if reported.

Historical technical release and implementation evidence (superseded only for pending user confirmation).

Authoritative technical release receipt · 2026-11-01T09:44:38+02:00.

The former release blocker is resolved. The live revision is 4c05a9442d03941d35585a1e39a0aceef3dc01a1, confirmed by an independent /api/health read (ok=true) on 01/11/2026. Exact main full workflow_dispatch CI41284858846 / build-and-test124784210253 SUCCESS: 5050 server + 8 backup tests PASS, 0 FAIL, 0 SKIP, including native PostgreSQL, Chromium and real HTTP flows. The source PR3427 full CI41252087179 had 5024 server + 8 backup PASS before merge50146f3; the live revision is 28 commits ahead / 0 behind that merge, with no later edits to the operator-inventory files in that comparison.

The prior normal guarded release of source revision aaf3dce10b7d19fb700fb1f30a4e464cf498e67b passed exact full CI41260513845 and deploy workflow41261365197 / job124715186597, reaching Render dep-dbj9d2ou01pc73eqp6vg LIVE at 2026-11-01T01:33:45.165289Z. Current Render dep-dbjel48ae00c73e0kqa0 is LIVE at 2026-11-01T07:32:43.15709Z, trigger api, revision4c05a944. The aaf3dce→4c05a944 comparison contains only checkpoint/evidence/roadmap/PDF changes, no production source. The current API-triggered deployment was independently observed, not initiated by this owner; it is not mislabelled as a new guarded deploy. No duplicate CI dispatch, deploy hook, environment/runtime change or deployment was initiated in this continuation because exact current full CI was already running and the service was already healthy.

Independent served-asset check: /assets/main--Q_6fgnJ.js loads entry-D6nmC0za.js, which contains permissions.inventoryPos, the «Αποθήκη από POS» label and PosInventoryOverlay-DCurUn_e.js. The served overlay contains the bound /api/store-pos/stores/:storeId/inventory namespace, X-Inventory-Generation and «Το στοκ είναι μόνο για προβολή». This verifies technical delivery, not functional operator or physical-terminal acceptance.

The implemented default-off «Αποθήκη από POS · χωρίς αλλαγή στοκ» right opens the existing archive from Functions POS → Αποθήκη. Actual STORE_OPERATOR identity/session/profile/store/object/licence/module/lifecycle and existing per-action rights remain binding; retail rights cover priced SET, barcode transfer and delivery nullable-price overrides. Stock is visible/read-only and direct stock operations, count/finalize/transfer/destruction/stock-moving merge and nonzero opening/import stock are denied. No Owner token bridge or blanket account grant was introduced.

Real account grants=0; real module changes=0; hosted business/stock/financial/fiscal actions=0. Operator LAB, real operator login and physical-terminal acceptance remain NOT TESTED. Existing decimal-keyboard and consumption/destruction visual PASS are preserved and are not reused as acceptance for this feature. Manual unchanged because no functional LAB/USER PASS is claimed. Owner fix/pos-operator-inventory-20261031 retained. Single next action: enable the explicit right only for an identified intended operator, then verify the operator warehouse and action rights with fresh recorded before/after and unaffected controls before any hosted write; never replay old accepted business fixtures. All prior implementation/CI-cancellation notes below are historical and superseded for current technical release status.

Historical implementation and handoff evidence (superseded by the receipt above).

Authoritative handoff · 01/11/2026 (Europe/Athens).

Implementation is merged, not deployed. Source PR3427 exact head fb634f5a7a9363883570256e061bae81d6fee952 / full CI41252087179 SUCCESS: 5024 server + 8 backup tests PASS, 0 FAIL, 0 SKIP; native PostgreSQL namespace, unchanged Chromium and real HTTP flows passed. Latest local rights batch 28 PASS / 0 FAIL / 0 SKIP; Work-safe client build PASS. Merge50146f3f094d846f52b2801f1e60de0332aaf1c4 includes intervening monthly Chat lifecycle catalogue work b9ce60a without taking over its ownership.

Exact main CI41253122609 was CANCELLED while pending behind CI41252677187 when newer documentation main33a2d314254618bd25d4378b2c23b189b45daa9f entered the same queue. It did not run a build-and-test job and is not a main PASS. The connector retry endpoint returned HTTP403, "This workflow run cannot be retried"; no workflow-dispatch tool is available. No deploy hook, environment/runtime change, guard bypass or manual deployment was attempted. Independent health read before this handoff: ok=true, revision946fa417b858fbece65c9ded6cb8db506bca91b0; Render dep-dbj7inetlv9c73ceoq0g LIVE, finished2026-10-31T23:29:19.811485Z. This is the previous revision and

DOES NOT include the new operator warehouse.

The implemented default-off permissions.inventoryPos checkbox is labelled «Αποθήκη από POS · χωρίς αλλαγή στοκ» and opens the existing archive in Functions POS → Αποθήκη. Actual STORE_OPERATOR identity/session/profile/store/module/object/lifecycle and per-action rights remain binding. The latest hardening requires retail rights for priced SET, barcode transfer and nullable delivery price overrides. Stock is visible/read-only; direct stock writes, count/finalize/transfer/destruction/stock-moving merge and nonzero opening/import stock are denied with transactional rollback and buffered HTTP responses. No real account/module grant, hosted business/stock/financial/fiscal action or new LAB/USER/physical-terminal acceptance occurred. Operator LAB and physical acceptance NOT TESTED. Existing decimal-keyboard and consumption/destruction visual PASS are preserved; no new manual PASS is claimed.

Owner fix/pos-operator-inventory-20261031 retained; not released or transferred. Single next action: run the existing MyWorkStation CI workflow manually on the latest main through GitHub Actions (full-CI workflow_dispatch), then wait for its successful exact build-and-test and the ordinary guarded Render release; verify independent exact health/assets before requesting separately scoped real operator acceptance. Do not rerun old accepted business fixtures or activate an unidentified real operator.

Historical implementation evidence (superseded by the authoritative handoff above).

Source implementation / AWAITING FULL CI AND LAB

The new default-off permissions.inventoryPos checkbox opens the existing Archive from the POS Functions menu. editDescription is now an explicit checkbox alongside the retained retail/barcode/new-product rights; no existing account is granted anything. A dedicated exact-action /api/store-pos/stores/:storeId/inventory namespace retains the credential identity and validates current credential/profile/session/employee/store/company, licence/modules, object membership, action rights and browser lifecycle generation. Canonical router factories share one RepeatableRead transaction; nested service transactions reuse it, errors and commit failures roll back before an HTTP success is sent. Stock quantities and movement counts are compared inside that transaction. No Owner identity, generic module grant or general-token fallback is introduced.

Action coverage: own-store archive/search/filter/pagination, stores/catalog/details/statistics, movements/purchases/price history, local retail, metadata/card/barcode transfer, existing bulk card, composition and delivery; new card with opening stock zero; generic/full-format zero-stock import (special source-profile migrations remain central-only); scoped CSV, label/flyer printing and existing separately-authorized POS orders launcher. Store retail/active updates preserve company base retail/active; shared metadata keeps its existing company semantics. The operator UI locks stock and denies transfer/merge; the server exact allowlist excludes stock adjustment, count/finalize, transfer, destruction, supplier return and unknown paths, and rejects forged stock fields/nonzero workbook stock. Existing independently authorized POS sales/consumption/invoice actions remain unchanged.

The operator API pins current session, actor, store and lifecycle, aborts/invalidates closed views and polls live access while open. Legacy document-level inventory actions explicitly ignore operator-marked shells; scoped React actions receive row objects and the bound API, never infer IDs/store from table position or use an Owner token. The archive is lazily loaded so existing POS module initialization, scanner, consumption launcher and no-print behavior retain their existing paths.

Validation so far: Work-safe frontend build PASS; focused actual POS/archive, permission editor, unchanged Owner/VAT/source-workbook/import/bulk/transfer/no-print batch: 92 tests, 89 PASS / 0 FAIL / 3 explicit native-infrastructure SKIP. An initial full local run exposed compatibility regressions, which were corrected and rerun in focused tests; that initial run is FAIL, not a release receipt. The second full local run completed: 4653 tests, 4326 PASS / 0 FAIL / 327 explicit infrastructure SKIP; exact PR CI with PostgreSQL is still pending. It is local evidence, not LAB PASS or a native receipt. Native PostgreSQL HTTP coverage is added for live grant/revocation, own-store retail/barcodes/bulk/import, unchanged stock/financial controls, forged stock/cross-store denial, trigger-induced stock rollback and deferred commit failure; local native infrastructure is unavailable, so native tests are explicitly NOT TESTED locally and must run unskipped in CI. No hosted/physical operator acceptance, real grant, business write, deploy or LAB PASS is claimed. Manual remains unchanged. Next: complete focused/full checks and native PR CI, then exact main CI and normal guarded healthy deployment before scoped acceptance.

Native SQL receipt and browser correction (PR3427, before release). Exact head bb6463ce5e913c8da55eb3f7e414ba1e5237095f / CI41246986998 / job124672617752: server tests 4984 PASS / 0 FAIL / 0 SKIP, including the new native operator namespace test. This is synthetic CI, not LAB. The overall workflow FAILED the unchanged Chromium SET footer visibility assertion: the new disabled fieldset wrapper interrupted the existing direct-child flex layout. The wrapper is removed; rights now disable the original controls individually, preserving the existing SET layout selectors and browser assertion. Native destruction/transfer harnesses were adapted to named router factories; business routines and their assertions remain intact. A further actual mounted check verifies disabled stock/composition controls and the original direct SET flex child. Closing the archive refreshes the already-loaded current-store POS catalog through its existing read API, so subsequent catalog prices update while the existing basket stays intact; the launcher waits for an initialized store catalog. Local follow-up: 11 focused boundary/client tests PASS, and 4 original archive/card mounted tests PASS. Final full browser CI, exact main CI, guarded release and real operator acceptance remain pending. Evidence CHECKPOINTS/EVIDENCE/pos-operator-inventory-20261031/verification.json. No real account right/module was changed and no hosted business action occurred.

Implementation after published claim3421

Initial94eb354e/docsCI41242824950 was green but conflicted with newer shared records and never merged. Reconciled exact77773604/docsCI41243312224 SUCCESS merged6b34016 before source. Other owners and PDF preserved. Reuse canonical routers through DB-injected factories with unchanged default Owner mounts; a separate STORE_OPERATOR namespace will validate current grant, actor/store/object/module/lifecycle and run canonical non-stock operations in one bounded DB transaction. No Owner role/token bridge. Stock invariants and per-action permissions remain server-enforced. Full action coverage and native/mounted tests still pending; no LAB or source completion claimed.

Owner fix/pos-operator-inventory-20261031. Explicit new user request: operator can open full warehouse from POS, with operator rights, except stock changes. Current main4a177813 read with AGENTS, active/tracker/pending/numbered/POS manual and retained owner-access/Inventory39/new-product scopes. Independent STORE_OPERATOR inventory-entry and server-boundary subtask; CENTRAL-BACKOFFICE-ACCESS-01 remains with its owner for delegated BackOffice identities and financial writers. No second ownership of that matrix, bulk-card semantics, invoice/stocktake/fiscal/payment algorithms or existing product creation rules.

Read-only finding: InventoryArchivePanel already has the full archive UI; its readOnly mode removes all edits, so it does not satisfy this request. /api/inventory-archive explicitly denies STORE_OPERATOR; /api/owner-products Owner guard denies it as well. Product details/catalog can return company-wide stores/aggregates. Legacy document-level inventory context actions use the general token and inferred URL store, so they cannot be reused unchanged inside operator POS. New work must not merely reveal UI or promote the operator to OWNER.

After this claim green/main: explicit per-operator «Αποθήκη από POS» right, default false, current live profile/session/store/module checks, one POS launcher into the existing archive with actor-bound API context. Reading/search/filter/print/export/card history and permitted non-stock product actions use this exact selected-store boundary and original canonical services. Existing per-action price/barcode/new-product permissions remain binding; no generic inventory grant overrides them or auto-enables old rights. Support non-stock card/bulk/labels/composition/delivery and zero-opening-stock creation/import only where each executable canonical action is safely bound; enumerate full action coverage and do not claim completion for missing paths. Deny unavailable actions explicitly rather than use an Owner token or broad URL-prefix allowance. Preserve company-shared product metadata semantics while excluding other-store prices, stock, purchases, sales aggregates and object IDs from operator-only reads/actions.

Stock must be visible but locked: deny stock adjustment, stocktake create/count/finalize, transfer, destruction/supplier return, stock-moving merge and nonzero opening/apply-stock imports through this warehouse boundary, including crafted direct requests and payload fields. Existing separately authorized POS sale/return/consumption/invoice workflows remain unchanged; this new right never grants them. Do not mutate existing quantities or activate any real-store permission/module during implementation. Shared/fallback credentials, Owner role impersonation, stale readbacks, other-store IDs and global DOM

action/token leakage must be refused. Closing/revoking/switching store clears archive context and returns focus without losing the existing basket or issuing a business command.

Required: actual mounted full archive/operator-menu tests, native HTTP/SQL deny-by-default and live revocation/tenant/object/store/payload tests with exact stock/financial controls unchanged for permitted metadata edits, full PR/main CI and normal guarded exact healthy release. CI is not LAB PASS. Hosted new grant or write acceptance must be separately identified with fresh before/after controls; no credentials, production SQL/schema/seed/migration, stock/financial/fiscal transaction or accepted-fixture replay in preparation. Preserve the completed POS-CONSUMPTION-ENTRY visual USER PASS and decimal keyboard PASS. Manual unchanged until real scoped acceptance. Same owner retained through source/release/acceptance. Single next: complete implementation verification and native full CI before release; the published claim is already green/main. Checkpoint CHECKPOINTS/CHANGES/2026-10-31-pos-operator-inventory.md.

01/11/2026 — CENTRAL-BACKOFFICE-ACCESS-01 / NATIVE INVENTORY + CASH SOURCE DELIVERY / FULL PERMISSION SCOPE RETAINED OPEN

Same retained owner. Native inventory and cash presentation batches are implemented and merged; complete all-functions permission coverage remains ASSIGNED/OPEN. Current executable grant catalogue is still18, candidate55families/340actions still only review material. No new rights, profile defaults, role promotion, schema/recovery-worker change, hosted grant/credential or production financial/stock/fiscal action by this page. Company authority remains distinct and unimplemented; preserve every peer owner and native business algorithm.

Inventory3477: finalhead8444d2bb2d942eba44911fef05daa4b329fbc5b2/tree48c8b9384999c764a40de3c4d9474bcb490b253f, fullPRCI41323171784/job124898013306 and mainCI41324373994/job124901440283 both all5SUCCESS,5096server+8backup/0FAIL/0SKIP plus complete build/browser/HTTP; merge5148885b3ef25582bede56fa75565b332a447631. Initial58f243b8/41323007915 CANCELLED after supersession, no PASS reused. Actual InventoryV2Center/InventoryFastCount now handle personal inventory through selected-store redacted reads and existing canonical writers. Automatic scoped list, read-only search, native additive scanner versus absolute pencil, multiple barcode lookup and existing create/finalize reason/confirmation. Personal inventory never renders cost/price; blind counters also get no expected/difference columns. Expected fields require both actual data and finalization authority. Native Owner-only zones/grants/free conversion/mobile/delete/clear/bulk/product/import/export/print remain unavailable to personal sessions. Same count event/version and ambiguous-operation verification/navigation freeze; finalized state read-only. Owner defaults and accepted Owner stocktake behavior preserved. Local38/0/0 and Work build passed, overlapping with other focused sets, not an additive unique total.

Cash3478: heade5e216a7930ee1c55d4e23be350e18b8aa7f20bb/tree56f6adb98fbdc1a63fe11be481b779682911e5a6, fullPRCI41324957178/job124903176019 all5SUCCESS,5118server+8backup/0FAIL/0SKIP and complete build/browser/HTTP; merge201e4c21cd3c2a480a94b194a7b350523633e9f0 includes peer AI customer-cost source3475/ef9e0e7 unchanged. Actual CashControlPanel/CashReconciliationPanel now render the existing cash.read report, native periods/issues/handoff/history and verified-copy. No Owner overview/day-summary/document/paper/AI/investigation reads, write/import/export form or unsupported history-page requests; no invented zero card. Old store/period result hidden and invalid reply rejected before copy. All Owner defaults, accepted reviews, export path and arithmetic preserved. Local46/0/0 and Work build passed; not a hosted acceptance claim.

Release proof: Exact combined mainCI41326081468/job124907694187 all5SUCCESS,5118server+8backup/0FAIL/0SKIP and full build/browser/HTTP. Normal automatic guarded deploy41327819201/job124911447565 SUCCESS: fresh exact-main preflight, rollback artifact13092525292/SHA256c9ecda6b62028e18cfb5e6f721e9b8d607216ead7b191ff12d7ff9196ad2d16f (previoushealthy35968eda), pinned trigger16:45:35UTC and exacthealthy201e4c21 at16:47:58UTC. Independent public/api/health HTTP200/ok=true confirmed exact201e4c21cd3c2a480a94b194a7b350523633e9f0 at16:49:09UTC1Nov2026. Installed source includes

both native UI batches and peer3475 unchanged; no hosted functional PASS inferred. Inventory automatic deployment41325507171/job124904541369 performed no physical release: preflight at16:18:18UTC refused older5148 because newer production sourceef9 was on main. Overall workflow SUCCESS is not evidence of installation. Final combined exact CI and pinned healthy evidence above supersede that preflight-only outcome. Peer running CI and freshness protection were preserved. Evidence CHECKPOINTS/EVIDENCE/common-backoffice-permissions-20261101/native-release.json.

Peer docs3479/1467d536 preserve the exact shared engineering release and explicitly unexecuted customer-cost LAB/environment handoff. All four peer files were merged unchanged; no new source, grant, funding or other owner scope was taken.

Hosted personal visual/read/write acceptance remains NOT TESTED/AWAITING USER; this code/CI/release verification is not LAB/USER PASS. Manuals and numbered checklist remain unchanged, no accepted transaction or grant replayed. Broader CommerceLauncher navigation, remaining executable per-action editor/backend integrations and company-scope/recovery compatibility remain OPEN. Same owner retained for the full residual. Single next action: integrate the remaining native inventory operations as distinct executable Owner-selected permissions with exact canonical transaction guards, before expanding the other families; no automatic grant or broad route bridge. Exact next-operation review: docs/roadmap/BACKOFFICE_INVENTORY_ACTION_AUTHORITY.md. Shared commerce navigation and company authority follow their explicit native/data/recovery review. Checkpoints 2026-11-01-common-backoffice-permissions.md and 2026-11-01-common-cash-backoffice.md; current ledger and both compatibility packets preserve the exact boundaries.

01/11/2026 — CENTRAL-BACKOFFICE-ACCESS-01 / NATIVE CASH READ VIEW CONTINUATION / SAME RETAINED OWNER

Same full-scope owner, feat/backoffice-native-cash-20261101; no second claim or permission expansion. Parent inventory batch3477 remains independently under exact fullCI; do not merge or call that batch installed until its own gates pass. This continuation reuses actual CashControlPanel/CashReconciliationPanel presentation for the existing cash.read right only, using the exact existing selected-store/period redacted endpoint. Native review/import/export/paper/investigation/overview actions remain unadmitted and must not mount or request. Preserve Owner defaults and accepted cash reviews/arithmetic, session/store/module/generation boundaries and every financial invariant. No new route/key, schema/worker change, hosted grant or business-state action. Current native inventory branch38/0/0 local evidence is not cash acceptance. Cash hosted acceptance NOT TESTED/AWAITING LAB; full requested rights scope stays OPEN. Compatibility packet docs/roadmap/BACKOFFICE_CASH_AUTHORITY_COMPATIBILITY.md records the distinct data models and exact denied operations. Local mounted Owner/personal/read-only/stale-response/period/copy and native route regression, full exact CI/main and guarded healthy release required.

Native cash source candidate: actual CashControlPanel and CashReconciliationPanel reused for cash.read, with the existing exact selected-store personal report endpoint. Shared Owner heading and date-period fields; verified report/issues/handoff history/copy. No fake overview/day-summary zero cards, no Owner document/paper/AI/investigation/pairing reads, no review/import/export controls or history-page requests unsupported by that endpoint. Old report is hidden immediately when store/period changes; invalid period/store replies cannot be accepted or copied. Ordinary Owner defaults, native endpoint selection, review payloads and algorithms preserved. Local Node20 mounted read-only/native Owner/copy/period/stale/route regression46PASS/0FAIL/0SKIP and final Work build PASS; exact full PR/main CI, normal guarded release and hosted acceptance required. Existing18 executable rights unchanged; whole all-functions scope remains OPEN.

Parent inventory3477/head8444d2bb2d942eba44911fef05daa4b329fbc5b2/tree48c8b9384999c764a40de3c4d9474bcb490b253f passed fullPRCI41323171784/job124898013306, all5SUCCESS with5096server+8backup/0FAIL/0SKIP and complete build/browser/HTTP. Merged5148885b3ef25582bede56fa75565b332a447631; its mainCI41324373994 is running, physical inventory release/hosted acceptance not yet claimed. Initial inventory58f243b8/CI41323007915 superseded, no success inferred for that old head.

01/11/2026 — Native inventory continuation before source / same retained owner

Continue the explicitly published next action from merged receipt3476/f9ef03ea, docsCI41320835609 and main41320974965 SUCCESS (runtime deliberately skipped). Installed35968eda verified after full5093+8 CI and guarded41320104728. Same CENTRAL-BACKOFFICE-ACCESS-01 owner, source branch feat/backoffice-native-inventory-20261101; no new or transferred claim. Full current AGENTS, own release/compatibility record, current main history and applicable native inventory/session acceptance reviewed. Existing Owner additive scanner versus absolute pencil correction, reasoned finalization/read-only/stale locks and existing personal18 capability/ambiguous-request guards remain protected. No accepted LAB action repeated.

Bounded next source: use actual InventoryV2Center layout and InventoryFastCount for personal inventory through explicit controlled inputs/callbacks. Suppress unintegrated zone/grant/free/delete/clear/bulk/import/export/product/print actions and all unavailable cost/price/expected-derived fields, preserving read/count/create/finalize as distinct existing rights. Keep the selected-store redacted read and canonical guarded writers, identical event/version verification and pending navigation freeze. No schema or new grant/API admission. Hosted acceptance NOT TESTED/AWAITING LAB; full requested function coverage remains OPEN. Mounted Owner/personal comparison and existing ambiguity/revocation/session regression required, then full exact PR/main CI/ordinary guarded release; no manual/PASS closure from CI.

Source candidate: actual InventoryV2Center now hosts the same native layout/history/work area and actual InventoryFastCount in controlled personal mode. Selected-store redacted list loads automatically on opening; create/finalize forms retain the existing explicit event/reason/confirmation contract. Native scanner uses additive quantities and pencil uses absolute correction, preserving Owner semantics and four-decimal personal inputs. All personal count writes still pass the existing parent coordinator, version/event identity and uncertain-response verification. Read-only mode has search without count controls; expected/difference columns require both explicit finalization authority and actual returned data; cost/price columns remain absent. Personal mode never mounts Owner catalogue/zones/QR grants/mobile/export/import/product-event/clear/bulk/delete/print paths. Existing Owner defaults, count semantics and native finalization unchanged. No new backend route or grant. Local Node20 final scoped native/session/guard regression38PASS/0FAIL/0SKIP and final Work build PASS. Earlier overlapping focused sets are not additive totals. Exact full PR/main CI, guarded release and hosted acceptance remain required; AWAITING LAB, whole all-functions scope OPEN.

01/11/2026 — CENTRAL-BACKOFFICE-ACCESS-01 / SHARED NATIVE FOUNDATION RELEASE / FULL SCOPE RETAINED OPEN

Common fullmainCI41318666982/job124884397102 SUCCESS all5jobs,5093server+8backup/0FAIL/0SKIP, full Work build, browser and real isolated HTTP flows. Automaticdeploy41320018519 classified documentation-only and deployjob124888073249 SKIPPED: no physical release from that run. Normal manual guarded deployment41320104728/job124888327884 SUCCESS: exact main preflight, preserved rollback artifact13089530583 (SHA2565a24d1806159edf3e9c224e37156328084af2510ee41cf444ea966e7b1f77838; previoushealthy0bc40631), pinned trigger35968eda and exact healthy at15:18:30UTC. Independent public/api/health HTTP200/ok=true confirmed exact35968eda7b1cef8be50f1d073e648efcb6c32b8e at15:19:41UTC1Nov. Release evidence CHECKPOINTS/EVIDENCE/common-backoffice-permissions-20261101/release.json and deploy-success.jpg. This is release verification, not functional LAB/USER acceptance.

Same retained CENTRAL-BACKOFFICE-ACCESS-01 owner. Shared native foundation is delivered; full user request remains ASSIGNED/OPEN. Existing18 executable store/action capabilities and role defaults unchanged. Candidate55families/340actions are review inventory only, not selectable or admitted rights. Same BackofficeShell/BackofficeStores and native StoreCloudPage shifts/payments reused with exact granted navigation; unrelated native tools/polling/administrative actions absent for personal sessions. No hosted grants, credentials, schema/SQL or financial/stock/fiscal business writes by this page. No functional

LAB/USER PASS inferred and no manual/numbered closure.

Foundation PR3463/head76009ebd4fe6e6d7cd536741e2539c0622827c45/treecb03f0dfe78d3cedcc233d9af181cb6fab604cba fullPRCI41313776328/job124869720758 all5SUCCESS,5092server+8backup/0FAIL/0SKIP; merged0bc40631d355f922d98af5cc99ce3ffb4d3e6e86. FullmainCI41314926667/job124873182940 SUCCESS with same counts/full build/browser/HTTP. Initial41311810240 FAIL5086/1/0 and skipped later stages remains recorded, fixed only stale test matcher with real mounted preservation coverage.

Native shortcut PR3472/headf6734955a87bdbf0a62aca7d3755bf5ce7f4838c/tree058df70a66720a5e0d103db9891c94c15bedee33 fullPRCI41316411845/job124877498372 all5SUCCESS,5093server+8backup/0FAIL/0SKIP and full build/browser/HTTP; mergeddcd54f8cbe9ce1581f26942690c97887f1be7c97. Its pushmainCI41317679429 and laterdocs41317785427 cancelled pending by shared concurrency, not PASS. Common manualfullmainCI41318666982 at35968eda7b1cef8be50f1d073e648efcb6c32b8e reused without duplicate/cancel; 359 containsdcd with only peer documentation since, and exact owned runtime files unchanged.

Remaining: native InventoryV2Center/InventoryFastCount blind-count/action/ambiguous-write adapter, native CashControlPanel/CommerceLauncher navigation, all applicable per-action editor and canonical backend integrations, separate explicit company authority with app/worker/recovery compatibility, grouped direct-API/revocation/regression coverage and hosted visual/functional acceptance. Preserve each independent module owner's business logic and monthly FULL worker/profile ownership. Compatibility packet docs/roadmap/BACKOFFICE_COMPANY_AUTHORITY_COMPATIBILITY.md is PROPOSAL/NOT INSTALLED, including existing8-column manifest review and precise native inventory data/action mismatches. Single next action for this retained owner is the native inventory adapter, not a role promotion, bulk grant or broad route bridge. Checkpoint CHECKPOINTS/CHANGES/2026-11-01-common-backoffice-permissions.md; same owner continues full residual, no second claim.

01/11/2026 — CENTRAL-BACKOFFICE-ACCESS-01 / COMMON OWNER BACKOFFICE + ALL FUNCTIONS / RETAINED OWNER CLAIM BEFORE SOURCE

ASSIGNED same retained owner, continuation feat/backoffice-common-permissions-20261101. Explicit new user correction: staff must see the identical Owner BackOffice and all BackOffice functions must have explicit permissions, separately per person/store/action. User rejects the separate reduced staff workspace. This supersedes the earlier six-section presentation; it does not invalidate the existing18 server-protected actions or establish functional acceptance. Latest shift-read release ebe02270 remains installed/AWAITING USER; no read/write USER PASS inferred.

Read main fd854b05, full AGENTS/current active/tracker/pending/checklist, relevant checkpoint/manuals and common history including independently owned monthly FULL transition3460/3461. Preserve all peer ownership and business algorithms. This owner claims shared access/navigation/catalogue and each native admission integration only, not parallel redesign of monthly/stock/invoice/payment/fiscal/Chat/Workforce logic. No second app, role impersonation or blanket route-prefix admission. Keep actual EMPLOYEE personal identity, live session/grant revocation, zero automatic new rights, selected-store/object/company/licence/lifecycle checks, actor/audit/idempotency and every native financial/stock/fiscal guard.

Work order within this full assigned scope: inventory the actual Owner pages and actions (including secondary dialogs/import/export/print/settings), use one shared Owner/staff shell/navigation/module screens, extend the Owner permission editor with executable per-action rights, integrate exact canonical server operations with fresh transaction-time checks, then grouped regression/full exact PR/main CI/ordinary guarded release and measured LAB acceptance. Store and company-wide authority are distinct; a store grant must never authorize company/global data or ownership/platform administration. All requested BackOffice modules remain in the inventory; unaudited operations remain denied and must not be presented as functioning grants. Platform/SuperAdmin itself is not an Owner BackOffice role.

Acceptance: same visual/component navigation as Owner with only granted stores/functions/actions; read/create/edit/delete/approve/finalize/cancel/import/export/print/configure as each native function provides; direct URL/body/object/store/tenant attacks denied; live revocation/late responses cannot expose old scope; existing accounts gain no rights automatically; all old18 actions and ordinary Owner behavior preserved. No hosted grants/credentials/business writes by this page. New UI/all-functions coverage NOT TESTED/OPEN; no manual/PASS closure. Checkpoint CHECKPOINTS/CHANGES/2026-11-01-common-backoffice-permissions.md. Single next action after merged claim: produce actual function/action inventory and implement shared shell/module authorization without replacing native modules.

01/11/2026 14:22 Europe/Athens — CENTRAL-BACKOFFICE-ACCESS-01 / PERSONAL SHIFT READ RELEASE INSTALLED / AWAITING USER / RETAINED OWNER

Same retained owner fix/staff-shift-read-20261101, release receipt docs/staff-shift-read-release-20261101. New user screenshot confirms installed personal BackOffice reached Rizareio/Chalandri / RIZAREIO-POS-01 but shift read failed; no financial/stock acceptance inferred. Actual legacy module interceptor reproduced HTTP200/null without calling overview after denied Owner-only licence probe. Changed only delegated client interception/UI rules and initial failed-read presentation; canonical server company/store/live-grant/licence/terminal/default-deny guards, strict response identity checks and every financial algorithm/writer remain unchanged. Ordinary Owner disabled/enabled-module behavior and stale/late-store protections remain covered.

Source PR3458 exact headedb16198139f1040c0491491fe0136d571980e54/tree89d7782da6b127cd82b573cb7203fd75c3148f2c: full CI41303663987/job124839823774 all5SUCCESS,5084server+8backup/0FAIL/0SKIP, browser/build/full HTTP flows. Mergedebe022701126f571dc5b5986af05f17935637ea8. Full main CI41304525017/job124842383551 all5SUCCESS, same5084+8/0/0 and complete flows. Earlier source CI41303338119 stopped at missing source-PR active-list delta; runtime was skipped there, not PASS. Corrected before final full CI. Local Node20 targeted interceptor/mounted/route/capability/session regression30/0/0 and Work build passed; initial ungenerated Prisma client was corrected locally, no schema or production DB action.

Ordinary automatic guarded Deploy41305765063/job124845761297 SUCCESS: full-CI/freshness preflight12:18:40UTC; rollback artifact13083113602 preserved; pinned trigger12:18:43UTC; exactebe02270 healthy12:21:06UTC. Independent no-cache /api/health12:22:00UTC returned ok=true and identical exact revision. Evidence CHECKPOINTS/EVIDENCE/owner-backoffice-permissions-20261031/staff-shift-read-release.json. No direct hook/Render bypass, credentials, grants, hosted business writes, production SQL, migration, seed or repeated transaction.

OPEN/ASSIGNED: installed correction, personal read-only acceptance AWAITING USER. Cloud browser has no authenticated session; user's remote AnyDesk screen is not controllable here. Single next action: reload existing installed MyWorkStation, choose Rizareio/Chalandri and intended terminal, open Πωλήσεις και βάρδιες and refresh; confirm store-scoped data or a genuinely verified empty shift without the previous error. Do not open a shift, change permissions or repeat financial/stock actions to bypass a read failure. Preserve all earlier18-right installed/source/native evidence; grouped hosted writer/role/revocation/control acceptance and broader store readiness remain OPEN with this owner. No new hosted functional PASS, no manual or numbered PASS closure, no completed pending task removed. Latest common tracker PDF regenerated without deleting peer records. Checkpoint CHECKPOINTS/CHANGES/2026-10-31-owner-backoffice-permissions.md.

01/11/2026 — CENTRAL-BACKOFFICE-ACCESS-01 / PERSONAL SHIFT READ USER FAIL / RETAINED OWNER BEFORE SOURCE

Same retained owner, branch fix/staff-shift-read-20261101. New actual user screenshot image(20261101-113506).png shows installed personal BackOffice, Rizareio/Chalandri, RIZAREIO-POS-01, manager profile: refresh FAIL «Η ενημέρωση δεν αντιστοιχεί στο επιλεγμένο κατάστημα», followed by an unverified no-open-shift message. Login/navigation observed only; financial/stock effects NOT TESTED. No new grant, credential or hosted business action by this page. Current health revision85d8cec43b5332319eed1151299384bb4265b1c7.

Bounded diagnosis: legacy module-ui-enforcement probes /api/license/current, which delegated accounts correctly cannot access; its missing-module GET fallback synthesizes HTTP200/null for /api/transactions and /api/cash. StoreTransactionsPanel correctly refuses missing store identity. Preserve that identity guard and all server company/store/live-grant/licence/terminal/default-deny gates. Route delegated requests through canonical server authorization without consulting owner-only cached modules; retain ordinary Owner behavior. Also distinguish failed initial read from verified empty shift. Add executed interceptor/component regression for authorized reads, denied/revoked reads, foreign identities and ordinary disabled-module behavior. No financial algorithm/schema/fiscal/mutation changes. Earlier18-right source/native/release evidence and every peer claim remain protected.

ASSIGNED/OPEN, not fixed or LAB PASS. Required: green exact PR/full combined main CI, ordinary guarded exact healthy release, then read-only personal selected-store/terminal acceptance. No opening/closing shift or transaction to bypass the failure. Final receipt must retain remaining hosted writer acceptance. Checkpoint CHECKPOINTS/CHANGES/2026-10-31-owner-backoffice-permissions.md.

01/11/2026 01:33 Europe/Athens - CENTRAL-BACKOFFICE-ACCESS-01 / ACTION RIGHTS INSTALLED / OPERATOR LAB OPEN / RETAINED OWNER

Same retained Rizareio readiness owner fix/owner-action-permissions-20261031; receipt docs/owner-action-rights-release-20261101. Source PR3423/headc711316c passed fullCI41248939925/job124678415118 all5SUCCESS:5005server+8backup/0FAIL/0SKIP, actual mounted/browser and complete HTTP flows. Merged47f59e6f. Its mainCI41250164005 passed5005server+8backup and many HTTP flows but was CANCELLED before completion, never whole PASS. Reused the already-running newer common full workflow_dispatch CI41251255862/job124685672884 at946fa417: all5SUCCESS,5011server+8backup/0FAIL/0SKIP and full HTTP flows. Common history includes wallet source3426, FTEXT release3429, report/Chat/Node claims; all20 owned runtime blobs remain identical to the green source. Preserve later monthly catalogue source3414/b9ce60a2, POS operator inventory source3427/50146f3f and every owner/PASS/manual; these later sources are not claimed deployed by this receipt.

Automatic Deploy41252434685 correctly skipped its documentation-head classifier. Normal main Deploy was dispatched once through GitHub UI because the connector has no workflow-dispatch operation:41252493732/job124688773943 SUCCESS. Full-CI/freshness guard23:27:23UTC; rollback artifact13061543721 preserved; pinned trigger23:27:25UTC; exact946fa417b858fbece65c9ded6cb8db506bca91b0 healthy23:29:27UTC31Oct =01:29:27Athens01Nov. Independent browser /api/health returned ok=true and the same revision. No direct hook, force/reset, env/schema/production SQL or guard bypass.

Read-only installed UI23:31UTC/01:31Athens: existing SuperAdmin support context MYWORKSTATION LAB / ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ, accountlab31, actual profile Απογραφέας, active. Fresh direct staff-access navigation avoids opening the store financial overview. Form exposes18 capability checkboxes including independent invoice edit/approval, supplier/expense/cash rights, current-shift non-fiscal cancellation and counted close. DOM read confirms exactly2 selected:inventory.read/count; only LAB store checked, both control stores unchecked. No role/grant/credential field changed or Save clicked. This is installed-form observation through support access, NOT ordinary Owner login, personal operator or financial/stock LAB PASS. Native tests are isolated CI, not hosted acceptance. Photos and exact metadata:

CHECKPOINTS/EVIDENCE/owner-backoffice-permissions-20261031/action-rights-release.json, action-rights-form-installed.jpg, action-rights-matrix-installed.jpg and action-rights-deploy-dispatch.jpg.

Available navigation: Owner -> Χειριστές και δικαιώματα -> Πρόσβαση BackOffice -> Νέος χειριστής or Δικαιώματα / Απενεργοποίηση; choose store/profile and each explicit action, then Αποθήκευση πρόσβασης. Profile remains a suggestion, not a permission ceiling; no automatic new rights. Username plus personal4-12digit PIN is sufficient, separate strong password optional. Existing account rights remain unchanged until Owner saves their own choices; changed policy requires a fresh personal sign-in.

Limits retained: edit existing NEW invoice metadata/lines and scoped existing-product match only; no assistant/new invoice/new line/product-card/shared learning/reopen/whole delete/total override. Approvals use canonical posting. Staff payments remain PENDING_REVIEW and cash requires separate right. Cancellation is only original NON_FISCAL same open shift/selected terminal CANCEL, no RETURN/fiscal extension. Counted BackOffice close retains EFTPOS/count/shortage/pending guards and personal actor; original POS opener-card/PIN rules remain. Broader module coverage and real-store readiness remain OPEN/ASSIGNED, no manual/numbered PASS closure. Central PDF synchronized from the latest common tracker without deleting peer records.

Final retained-owner handoff: single next action is Owner's intended LAB-only permission selection and secure personal sign-in, followed by one grouped selected-store/role/revocation/action acceptance with fresh documented before/after and unaffected control before any hosted writer. No historical transaction repeated for evidence. Owner remains assigned; no parallel takeover or silent release. Checkpoint CHECKPOINTS/CHANGES/2026-10-31-owner-backoffice-permissions.md.

31/10/2026 23:00 Europe/Athens — CENTRAL-BACKOFFICE-ACCESS-01 / ACTION RIGHTS EXTENSION / ASSIGNED BEFORE SOURCE

Same retained Rizareio readiness owner; continuation fix/owner-action-permissions-20261031. Explicit user instruction: proceed with the missing delegated invoice editing/approval, payment entry, sale cancellation and normal shift closing. Current main7a2dbdf5 and intervening common history, active/tracker/checklist/pending, original owner-permissions checkpoint and invoice/payment/POS/session manuals reviewed. Existing ten rights and installed form remain protected; broad correction is OPEN, no advanced writer LAB PASS. Historical login/read evidence is not repeated.

Bounded scope: explicit per-store action capabilities, dependencies and owner matrix; existing staff workspace/navigation and canonical module forms; exact server admission and fresh transaction-time grant checks in the existing invoice draft/approval, store transaction, sale reversal and normal cash close routes/services, plus focused mounted/native regression coverage. Preserve actual EMPLOYEE identity, existing account/session revision/revocation/audit, role presets independent of grants, zero new default rights, selected-store/object/company/licence/lifecycle checks and original writer audit/idempotency. No blanket Owner promotion or prefix access. Expose a checkbox only with its executable canonical operation. Payment review/approval, financial reversal, fiscal return/internal-return, administrative force-close, OCR/provider/learning, fiscal execution and other owners' algorithms remain outside this permission integration. Preserve original payment evidence, terminal/open-shift/EFTPOS, finalization and stock invariants; no schema/migration or production SQL.

No hosted grant/credential/business mutation is part of preparation. New actions are NOT IMPLEMENTED / NOT TESTED at claim. Require full PR/main native CI, ordinary guarded exact healthy release, then separately identified LAB acceptance with fresh before/after and unaffected control before claiming any financial/stock PASS. Existing owner assignments remain unchanged; authorization integration is not a takeover of invoice/payment/shift/fiscal business scopes. Same retained owner through completion or explicit named handoff. Next action after this claim is green/main: integrate the actual canonical action paths and usable forms, denying every absent/unknown right. Checkpoint CHECKPOINTS/CHANGES/2026-10-31-owner-backoffice-permissions.md.

31/10/2026 — AUTO-REPORT-TWO-SHIFTS-01 / EXACT SOURCE CI PASS / SHARED RECORD RECONCILIATION

Same owner fix/automatic-report-two-shifts-20261031. Source3418/head442940967b88f3645369759c40510f459a601c93 fullCI41241654412 all5jobsSUCCESS; build124656872114 records4972server+8backupPASS/0FAIL/0SKIP. Actual native settings HTTP565 and new mounted598/policy599–602 executed PASS, including null save/GET/READY midnight-close and original/control invariance. Local full Node20 completed4322PASS/0FAIL/326native infrastructureSKIP; Work build/TABLE_SERVICE PASS. Source-only claim3416 remains green/main before edits.

Normal merge correctly refused after documentation-only peer receipts3417/3420 changed shared registries. Reconcile atop main4a1778134bb66bedca7549e6e389933eeaf116df, preserving every newer peer checkpoint/manual/PDF and all eight owned runtime/test blobs byte-for-byte. No forced merge, runtime change, test weakening or guard bypass. Exact combined PR/main full CI and guarded healthy release still required. No hosted write or LAB PASS; recipients/consent/dispatch untouched. Same owner retains this correction. Single next: validate the combined revision before installation, then new two-shift LAB acceptance.

31/10/2026 — AUTO-REPORT-TWO-SHIFTS-01 / SOURCE CANDIDATE / AWAITING NATIVE CI AND HOSTED ACCEPTANCE

Owner fix/automatic-report-two-shifts-20261031 retained after explicit owner-approved transfer. Before-source claim3416/head98e577706cc0b17323d2f638e7b81e76fca941ac passed docsCI41241214024 SUCCESS and merged d06be9e7415b52b786481058902285e33ac6836e BEFORE all runtime/test edits. Reviewed main history since the last scoped19Oct monthly HOLD LAB result: operator summary805fe6cd, overlap3469b7ed, read-only snapshotbaecae11, writer lockad87ec72, dispatch integrationa0b4a8e1 and reviewed-cash0712a85c remain protected. No overlap/lock/auth/dispatch/cash-review writer change.

Source allows explicit null third hour only without a terminal expecting slot3. Numeric07/15/23 configurations and mixed three-shift/delivery remain valid. No mandatory universal third; per-terminal last afternoon opening covers until next business morning, actual23:00/00:20 closure remains in its original opening-day source. Incomplete business day/open/missing/unknown/foreign/duplicate/overlap still HOLD. UI blank third serializes null, native form requires third only when selected, null readback remains blank; neutral header points to real dispatch panel and does not invent ON/OFF. Existing settings schema tests replace only superseded universal-third invalid examples with required-third/null refusals; old default three-shift/native/mounted protections remain.

Node20.20.2 original-source new regressions:0PASS/5FAIL after successful dependency/Prisma preparation; corrected focused18PASS/0FAIL/0SKIP. First earlier import attempt failed for ungenerated local Prisma (infrastructure, not a product assertion). All automatic-report tests207total/194PASS/0FAIL/13isolated-PostgreSQL environmentSKIP. New actual registered HTTP/isolated native regression added to existing settings fixture for two-shift save/GET/READY midnight-close, invalid-third/Owner refusal, same original/control source rows and original-store settings. It has NOT run locally and must run unskipped in exact full CI. Full local suite and frontend build pending at this entry; do not infer a result. Original and focused TAP under CHECKPOINTS/EVIDENCE/automatic-report-two-shifts-20261031/.

Only source/tests/records; NO production settings/recipient/invitation/consent/activation/email/financial/stock/shift/fiscal/schema operation. Existing accepted LAB settings not replayed. Engineering candidate only, NOT INSTALLED/AWAITING LAB; no manual PASS. Remaining: exact full PR/main CI, ordinary guarded healthy revision, new scoped LAB/USER two-shift save/reopen/preview with fresh baseline, then verify actual recipient consent/activation separately. Fully irregular early openings remain explicit review, not guessed slot mapping. Same owner retains this bounded correction; all other owners remain. Single next action: exact full/native CI before installation.

31/10/2026 22:54 Europe/Athens — AUTO-REPORT-TWO-SHIFTS-01 / OWNER-APPROVED TRANSFER / ASSIGNED BEFORE SOURCE

ΑΝΑΛΗΨΗ ΑΠΟ codex/central-auto-dispatch-20261022 / codex/central-four-streams-20261018 — ASSIGNED fix/automatic-report-two-shifts-20261031 (personal-assistant/Rizareio conversation). Owner explicitly approved this bounded transfer after the code diagnosis; no parallel ownership of these changes. All other central dispatch, recipients/consent/SMTP, cash and lifecycle owners retain their scopes.

Observed USER FAIL31Oct: one active RIZAREIO-POS-01, three operators, TWO expected shifts, usually07–15 and15–23/or00 with variable closing. Form rejects blank third hour; configuration schema demands a terminal with slot3 and readiness emits THIRD_SHIFT_NOT_CONFIGURED. Static header incorrectly claims sending is OFF independently of actual dispatch state. This is a real form/configuration failure, not financial or delivery PASS. Actual recipient confirmation/delivery and any successful report-settings save remain NOT TESTED.

After this claim is green/main, exact bounded source: client/src/components/platform/AutomaticReportSettingsManager.jsx; server/src/services/automatic-report-settings.js configuration schema ONLY (preserve lifecycle/Store-lock/CAS writer); server/src/services/automatic-report-policy.js readiness ONLY. Add server/test/automatic-report-two-shifts.test.js and server/test/automatic-report-two-shifts-mounted.test.js plus a registered HTTP/native PostgreSQL regression in the existing automatic-report-settings-postgres.test.js if needed. Existing policy/mounted assertions may be updated only for the intentionally superseded universal-third requirement/static OFF copy, preserving all original three-shift, scope, version, rule, lifecycle, closed-day, open/unknown/overlap and financial boundaries.

Allow explicit null third hour only when no configured terminal requires slot3. Preserve old07/15/23 numeric configuration and mixed store/delivery policy. Two-shift slot2 continues through the next saved business-day boundary; actual closing23:00/00:00 does not imply a third opening. A missing/open/foreign/overlapping/unknown source remains HOLD; readiness never sends or certifies money. Show neutral settings-only header directing actual activation state to Automatic deliveries. No guessed schedule/codes, production settings/activation/recipient/email/financial/stock/fiscal/schema mutations or existing LAB fixture replay. Fully irregular opening-hour mapping beyond the saved boundaries remains explicitly NOT TESTED, not silently inferred by ordinal/operator name.

Required: actual mounted blank-third save/reopen payload + third-required refusal + unchanged store-switch/no-send; policy two-shift late-midnight close READY and missing/open/duplicate/overlap guards; old three-shift/DST/week/month/security regressions; native actual Save/GET/read-only preview for two shifts with original/control invariance. Full PR/main CI and ordinary guarded exact healthy release before hosted acceptance. No new manual PASS until actual scoped LAB/USER observation. Checkpoint CHECKPOINTS/CHANGES/2026-10-31-automatic-report-two-shifts.md. Single next: green/main this claim before runtime/test edits.

31/10/2026 - POS-CONSUMPTION-ENTRY-01 / LIMITED USER VISUAL PASS / COMPLETED

Owner fix/pos-consumption-entry-20261031. User replied «ειναι οκ» after the installed explicit-button correction and refresh instruction. Recorded31Oct23:06Athens (21:06UTC); this is confirmation of the new entry's appearance only. Exact physical device, client revision, store/terminal, refresh gesture and subsequent modal actions were not independently identified. No stock, price, consumption/destruction submission, turnover, shift or fiscal acceptance is inferred; no business transaction replayed.

Retained owner fix/pos-consumption-entry-20261031; receipt docs/pos-consumption-entry-release-20261031. Explicit user screenshot/clarification: operations were reachable but the existing store-labelled launcher looked like a heading. Before-source claim3410/head6d45763f/CI41237633802 SUCCESS merged58eb226 before edits. Source3411/head78d5ac1e/fullCI41237884002 SUCCESS merged28f64d8faa9bb4ea4f384c978be895a7684e394c. Exact mainCI41239006235 SUCCESS. Both full runs:4961server+8backup/0FAIL/0SKIP; original security/licensing/HTTP/native/Chromium flows retained.

Local Node20 focused7/0/0, Work build/TABLE_SERVICE PASS. Ordinary guarded deploy41239947674/job124651641491 SUCCESS; Render dep-dbj54n4s728c738rrr60 LIVE31Oct20:43:02UTC (22:43Athens), independently healthy exact28f64d8/oktrue. No guard bypass.

This closes only the bounded entry-affordance complaint: visible «Ιδιοκατανάλωση / Καταστροφή» button, outline/tinted background/chevron and secondary current-store context. Existing callback/menu/business rules remain unchanged; prior removed-WASTE-slot and historical menu-content PASS retained. Original mounted/Chromium tests are engineering evidence, not the user's physical evidence. Earlier cloud PIN limitation remains historical and was not bypassed; user confirmation now supersedes only this entry's visual RETEST. Whole compact-header/appearance/POS and other owners remain separately OPEN.

Previous receipt3415/headfa408689/docsCI41240569200 SUCCESS merged7a2dbdf5. Checkpoint CHECKPOINTS/CHANGES/2026-10-31-pos-consumption-entry.md; evidence CHECKPOINTS/EVIDENCE/pos-consumption-entry-20261031/verification.json; tested user instructions docs/manual/pos/PASS.md. Completed entry residual removed from pending; active/tracker/numbered and three canonical PDFs synchronized. No new source or live business action. No remaining work for this narrow visual complaint; broader scopes retain their owners.

2 November 2026 — FTEXT source unchanged / shared PDF publication moved to final release receipt

Main continued documentation-only throughf1e0bb745f8129e3d388ce3356864c55e1c24200 (cash-source-batch and inventory result-navigation claims). Preserve all peer claims and records. Retain the latest main output PDF byte-for-byte in the SOURCE PR to avoid repeated binary conflicts during long full CI; the before-source claim/audit already synchronized the PDF in merged3516. This is not a new physical acceptance or a PASS closure. The final engineering-release receipt must regenerate the canonical PDF from the fully merged pending roadmap and synchronize checkpoint/active/tracker/pending/manual limitations before handoff. No physical result is omitted. Runtime/test bytes remain exactly the green18624a7 candidate; new source changes are not introduced by these record merges. Whole FTEXT stays OPEN/assigned and NOT INSTALLED pending exact combined/main CI and guarded release.

2 November 2026 — exact STATUS-history candidate checks PASS / shared documentation reconciliation

Retained owner. Source PR3517/head18624a7ccf2855da5533beb5ee149a2c28c9e131 passed actual Windows5.1 run41432995743/job125235934873 (new archive/acknowledgement fixtures and original CASH/both CARD/NO/UNCERTAIN/handoff/stop/recovery/installer protections), native recovery41432995672/job125235936214:50PASS/0FAIL/0SKIP, and full PR41432995782/job125236834785:5194server+8backupPASS/0FAIL/0SKIP, all5jobsSUCCESS and complete HTTP E2E. A preceding Windows run failed only because the additional acknowledgement fixture selected three same-name modules left by earlier fixtures; it now selects the exact imported module path. Local reproduction with multiple imports passed. No production guard was relaxed.

Main concurrently advanced only documentation through44e160364c596b6fe0fa813425e2a7ed7afe018c (inventory hosted acceptance, Chat phone confirmation and shared-cost approval claim). Preserve every peer record/PASS/assignment. Text auto-merges; regenerate only the conflicted canonical output PDF. All runtime/test files remain byte-identical to the green18624a7 candidate. Require exact combined PR/main CI and guarded exact healthy release before the updated selected-PC installer. Engineering NOT INSTALLED; physical archive/speed NOT TESTED and FTEXT OPEN. Checkpoint CHECKPOINTS/CHANGES/2026-11-02-ftext-latency-audit-preparation.md.

2 November 2026 — FTEXT STATUS-history implementation candidate / NOT INSTALLED / AWAITING WINDOWS + NATIVE CI

Retained owner fix/ftext-rbs-outcome-20261031; bounded source fix/ftext-status-history-20261102. Before-source audit/spec PR3516/head67585e221fe5b861e6b409ac91bb92df5b467187 passed docsCI41427515462 (3SUCCESS/2correctSKIP), merged2d3d7625cff9ccd4b95e5f5350ea34100ef00912 before these edits. Implements authenticated read-only successful STATUS audit acknowledgement lookup (100 IDs/batch, exact current installation, no heartbeat/readiness/business write), local dry-run and reversible STATUS-only archive with same-volume atomic per-file moves, durable pinned journal, hashes/timestamps, original-marker protection,100-pair/one-hour safety tail,1000-pair batch cap, collision/path/reparse denial, interrupted-move recovery and rollback. Setup options5/6/7 preview/archive/restore; connector must be closed and fiscal/input folder quiescent. A known completed current STATUS marker may remain intact and its pair is always excluded. No automatic loop maintenance, fiscal-file cleanup, proof re-dating, new pairing or vendor/timer change; seven-module package retained. Normal connector runtime loop and Cash fiscal commands are unchanged.

Local PS7 archive fixture covers real moves, unknown/original marker protection, foreign scope, unacknowledged retention, foreign input/fiscal marker refusal, junction/symlink denial, partial move/restart, changed evidence and collisions before exact restore. Actual Windows5.1/native full checks and guarded exact release remain REQUIRED, not inferred from local runs. Source is NOT INSTALLED;18,445-file/slow-STATUS performance hypothesis is NOT accepted as fixed. Whole FTEXT remains OPEN/assigned. Checkpoint CHECKPOINTS/CHANGES/2026-11-02-ftext-latency-audit-preparation.md. Single next: pass exact Windows/native/full PR/main checks and review the candidate before any updated package or physical maintenance.

2 November 2026 12:11 Athens — FTEXT full available-evidence audit / implementation prepared / LATENCY FAIL OPEN

Retained owner fix/ftext-rbs-outcome-20261031 / continuation fix/ftext-readiness-scheduling-20261102; bounded next implementation fix/ftext-status-history-20261102. All seven installed module hashes now independently match released a351362f Windows bytes. USER clarifies WATER0.50 paper and POS message finish together at reported28s; exact stopwatch/request identity and independent printer timing remain unconfirmed. New Windows5.1 passive report:18,445 files, one enumeration1316.6ms; six STATUS cycles in60.064s, five5.769–6.543s and one18.439s.49.575s observed STATUS intervals. Same scoped server audit correlates15.849s pickup with dispatch0.443s after STATUS completion. Continuous serialized STATUS is a confirmed pre-dispatch wait mechanism; large-directory effect and vendor/LAN/register split remain unproven. No installed-version mismatch or verified upgrade solution.

Prepared one causal change first: dry-run/reversible archive of verified CLOSED nonfiscal STATUS pairs outside vendor input, with same folder mutex, protected pending/fiscal files, hashes/durable recovery/rollback and quiescent bootstrap. No deletion/replay, arbitrary timer widening, concurrent fiscal/STATUS, stale proof re-dating or relaxed20s readiness/15s heartbeat. Scheduling follows only after a measured feasible response budget; UI1800ms polling is separate from physical delay. Actual Windows5.1 protected-file/failure/restart tests and full exact CI/normal guarded release precede any PC package/action. This record is preparation only: no new runtime/archive move/production change/diagnostic sale. Physical speed remains FAIL/OPEN, wider FTEXT retained ASSIGNED. Checkpoint CHECKPOINTS/CHANGES/2026-11-02-ftext-latency-audit-preparation.md; derived metadata CHECKPOINTS/EVIDENCE/ftext-latency-audit-20261102/status-observation.json. Single next: implement the bounded reversible STATUS-history maintenance after this record is green/main.

2 November 2026 11:08 Athens — FTEXT updated-PC communication observed / CASH0.50 UI28s LATENCY FAIL / OPEN

Same retained owner and released a351362f/v7 installer. After the download/option3 handoff, owner screenshot10:51:47 shows connector startup10:50:56, continuing connected messages and four verified STATUS messages without intervening pending. Read-only current same-device proof08:53:33UTC: heartbeat08:53:32.778, distinctSTATUSf11b2d91112d4ebd84a94dc9cdd1fea5 checked08:53:32.144/received08:53:32.368/code0/serialDSM24014923/fiscalExecutionfalse. At09:08:15UTC another distinct95c89ea8b1dc41e696b0f3da5656b279 checked09:08:15.264/received09:08:15.605 and current heartbeat09:08:15.566. Limited USER/LIVE current communication acceptance only; screenshots/actions do not independently hash installed modules or certify uninterrupted/all-day/failure behavior. Existing package delivery evidence remains exact; no vendor update or new pairing.

New authoritative owner report: CASH, ONE WATER0.50,28seconds until the message disappears from the POS. This is UI completion timing, not an independently pinned paper-print timestamp. Performance FAIL remains OPEN; the update did not establish acceptable latency. Two new existing CASH0.50/one-line rows are SALE_COMMITTED:535b4b0a created08:52:11.605/dispatched15.403/accepted16.099/final33.813 (pickup3.798s,accept0.695s,afteraccept17.715s,total22.208s);192b4998 created08:53:49.442/dispatched59.038/accepted59.536/final08:54:17.821 (pickup9.596s,accept0.498s,afteraccept18.285s,total28.379s). The earlier one-time PREPARED snapshot for192b4998 was transient, not a stuck or unexecuted request. Both original rows subsequently completed. Because both have identical amount/line count, exact user stopwatch-to-ID mapping remains unconfirmed. Do not resend either sale. No new before/after financial/stock/control baseline, independent paper timing or physical speed PASS.

Source inspection shows the idle readiness worker suppresses new claims while it owns the STATUS wait. That preserves serialization but leaves a pickup wait when a customer arrives during the check. Remaining response interval after acceptance is also large; no attribution to vendor versus register, operator/UI/network/finalizer is proven by server timestamps alone. Whole FTEXT remains OPEN/assigned; retain20s readiness/15s heartbeat, original evidence/no-resend, CASH/both CARD/NO/UNCERTAIN/handoff/stop guards. No speculative fiscal/timeout/proof-policy change or new diagnostic receipt. Single next action: clarify whether the paper printed before the message disappeared, and if needed collect the latest original file metadata with the existing read-only collector; then claim any bounded causal scheduling/driver correction before source. Current communication acceptance does not close latency or wider resilience. Manual, active/tracker/pending/PDF updated together.

2 November 2026 10:48 Athens — FTEXT readiness scheduling ENGINEERING LIVE / selected-PC update AWAITING USER

Retained owner fix/ftext-rbs-outcome-20261031 / continuation fix/ftext-readiness-scheduling-20261102; receipt docs/ftext-readiness-release-20261102. Before-source claim3507/d7ee7ed0/docsCI41401821017 merged3bdc8030. Source3508 initial2a456fd passed Windows41407616600/job125153108963 and full41407616657/job125153533590:5189server+8backup/0FAIL/0SKIP. Shared-PDF conflict after peer inventory-history documentation was reconciled without runtime changes. Finalb4cb87f180b111928f3488b0c0fd59df0f2278a8 passed exact full41409556009/job125159650921 all5SUCCESS/5189+8/0/0 and Windows41409555972/job125159218672 SUCCESS; mergedb9a312eb77b7a108bccf070351edba7da19be602.

Exact b9 Windows41411291238/job125164699578 PASS includes actual readiness runspace/loop, original CASH/operator/strict-CARD lost-response/restart, handoff, stop and all seven-file installer fixtures. Its mainCI41411291217/job125165197881 passed5189server+8backup/0FAIL/0SKIP but was CANCELLED at the final HTTP E2E stage08:28:55UTC; never call that whole run PASS. Do not infer who cancelled it. Newer independently owned inventory-history source3511 integrates the unchanged FTEXT runtime/tests. Integrated maina351362f3a5c436126bfcce8b2a547496470c036 exact fullCI41413300019/job125171821416 all5SUCCESS:5194server+8backup/0FAIL/0SKIP and full HTTP E2E. Original FTEXT runtime/test blobs are identical to the green source. Preserve every other

owner/source/permission/PASS record; their physical acceptance is not claimed here.

Normal guarded Deploy41414916194/job125176396011 preflight/exact pinned trigger/expected health ALLSUCCESS. Renderdep-dbk4qcnf3r2c738moce0 LIVE exacta351 finished08:45:25.402712UTC; independent no-cache HTTP200/oktrue/exacta351 at HTTPDate02Nov08:47:04GMT=10:47:04Athens. No forced deployment, old-source rollback, guard bypass, production SQL/business mutation, fiscal replay or diagnostic charge.

Canonical private Rizareio_Ftext_Cash_Setup.cmd replaced in place version6→7 after verified release:118028bytes/SHA256 dc5aadfeddb7382a3e98536d1cdbd7db8884b1c070f43ad3ffdc59d0a88adf1e. All7 embedded runtime modules match exact released/validated files byte-for-byte. Only Cloud-Connector and Cloud-Tools differ from prior package; Ftext/Cash/Pair/Cloud-Test/Setup preserved. Same ACTIVE tokenVersion6/current confi guration/settingsHash4231356f6dc75c59a8ba083ac779c087681acd2535f77060ffd54eab4348ee89/serialD SM24014923/workFolderC:\FText, original card profile and VAT departments independently read back unchanged. No credential or automatic start. Read-only unresolved queue empty immediately before handoff. Instruction: with no transaction in progress, keep FTEXT+ open, close only old connector, download the UPDATED same file, run and choose3; never pairing1 for this unchanged installation. Selected-PC execution/module hashes, fresh STATUS and stable physical operation/speed under the new package remain NOT TESTED until actual user evidence. No repeated sale for documentation.

Actual Windows5.1 metadata collector output is now matched to two existing CASH IDs: b62b4acd server pickup0.822s/total16.598s, same-PC publication-journal→RES14.089s/RES→report0.064s; c2a7313b pickup15.421s/total34.603s, local17.607s/0.067s. No host-clock subtraction or stopwatch identity inference. Original timestamps/limits in matched-morning-stages.json. This supports examining both pre-dispatch scheduling and the driver/register response interval; it does not prove a specific physical root cause or improvement from this update.

Owner asks whether vendor FTEXT+ needs upgrade. Observed version25.02/license until20Oct2027; public Solidus software/FAQ pages reviewed, no verified newer release or compatible update package established. Vendor driver/firmware/LAN/license untouched. Official vendor support remains separate from this MyWorkStation connector release. Known missing old STATUS result still holds; never automatically remove/re-publish it or fiscal input. Current20s readiness/15s heartbeat, old-proof age, authenticated scope, original evidence, CASH/both CARD decisions/NO/UNCERTAIN, stop/handoff and idempotent finalization remain protected.

Whole FTEXT stays OPEN/ASSIGNED. This closes engineering delivery only; recurrent physical readiness and CASH19s/CARD activation35s performance remain OPEN/AWAITING selected-PC update and ordinary-user evidence. Existing scoped historical issuance/NO/recovery PASS remains protected. Single next action: receive updated-PC connector output and independently verify distinct fresh same-register STATUS/current heartbeat, then observe normal legitimate use without replaying a receipt or charging for diagnosis. No CI-only behavior is added as manual PASS.

2 November 2026 — FTEXT exact source checks PASS / shared-record reconciliation

Same retained owner. Source3508/head2a456fd00de46c5162b3fff2b1d28541961b5ae3 passed exact Windows5.1 CI41407616600/job125153108963, including new real runspace/loop and all original CASH/operator/strict-CARD lost-reply/restart/stop/handoff/installer fixtures. Exact fullPR41407616657/job125153533590 all5SUCCESS:5189server+8backupPASS/0FAIL/0SKIP and full HTTP E2E. Main concurrently advanced with inventory-history permission documentation14a0dcae only; merge was correctly refused for the shared PDF. Preserve those owner records, auto-merge text and regenerate canonical PDF. All owned runtime/test bytes remain identical to green2a456fd; no changed source, relaxed check or forced merge. Require exact combined PR/main CI and normal guarded exact health before PC package. Engineering NOT INSTALLED, physical stable readiness/speed OPEN. Checkpoint CHECKPOINTS/CHANGES/2026-11-02-ftext-readiness-scheduling.md.

2 November 2026 — FTEXT readiness scheduling candidate / NOT INSTALLED / AWAITING WINDOWS CI

Retained fix/ftext-rbs-outcome-20261031, continuation fix/ftext-readiness-scheduling-20261102. Before-source claim3507/d7ee7ed0 passed docsCI41401821017 (3SUCCESS/2correctSKIP) and merged3bdc80302b0ba2f59245f601606cdbe1faa06cee before all runtime edits. No other owner scope changed.

Candidate uses one owned PowerShell runspace for authenticated nonfiscal STATUS waiting. Main loop keeps scoped heartbeat/work polls progressing in recovering/no-new-claims mode until worker completion. Join and validated boolean result precede ordinary discovery/fiscal transport; original local fiscal report recovery remains first and shutdown joins/stops/disposes before releasing connector mutex. New current STATUS waits up to30seconds; existing recovered-marker age checks retain original createdAt and require a distinct round trip when stale.20second readiness/15second heartbeat and original no-resend/identity/lifecycle/license/card/stop/handoff guards unchanged. Missing original result is still held; no automatic marker/fiscal deletion/republication, pairing/config/server/schema/production data change. Worker completion schedules next idle STATUS without the former extra5second gap, after one ordinary work poll has first opportunity to claim existing work. This is not proof of physical speed or stable shop acceptance.

Local PowerShell7.4.13 parser all FTEXT scripts PASS; actual runspace delayed6second success/false/error/invalid/stop and actual main-loop heartbeat/no-new-claim/single-worker/join/disposal fixture PASS. First fixture run failed because its config was a hashtable rather than PSCustomObject and its synthetic sleep counter used the child script scope; corrected only fixture representation/counter, no production weakening. Node20.20.2 existing FTEXT128/119PASS/0FAIL/9explicit native-infrastructureSKIP; Work frontend build/TABLE_SERVICE PASS12.83seconds. Actual Windows5.1, complete remote native/full PR/main checks and guarded exact release remain REQUIRED/NOT RUN at this entry. Installed PC package is unchanged. Whole FTEXT and physical recurrence/CASH19s/CARD activation35s remain OPEN; no new diagnostic sale. Checkpoint CHECKPOINTS/CHANGES/2026-11-02-ftext-readiness-scheduling.md. Single next: actual Windows/native/full CI before main/release and matching official selected-PC package.

2 November 2026 — FTEXT-RESILIENCE-01 / recurring readiness USER FAIL / ASSIGNED BEFORE SOURCE

Retained owner fix/ftext-rbs-outcome-20261031, continuation fix/ftext-readiness-scheduling-20261102. Explicit owner instruction to correct the recurrent shop blockage. No second owner or takeover. Current main2a0df1d, active/tracker/pending/checklist, FTEXT manual and readiness/latency/handoff/review/stop/finalization checkpoints reviewed. Whole FTEXT stays OPEN.

Observed Rizareio/RIZAREIO-POS-01 morning2Nov: stale overnight nonfiscal STATUS272a748dcdf94b08a34acf4dfa7e1625, last successful56a4cc434f8748cd90aa8569f4e855b7 yesterday23:56Athens, current connected heartbeat. Vendor CONNECT returned OK, unchanged IP192.168.1.103/serialDSM24014923. Input C:\FText/txt/protocolSOLIDUS(II)T unchanged. Explorer search found no matching272a748d filenames (search limitation, not absolute absence). With connector stopped, owner was instructed to preserve marker as .mws-ftext-status-old-272a748d.json, then start existing paired connector. Successful STATUS messages and ordinary printed CASH resumed, but recurring red readiness refusal returned. This temporary recovery is NOT stable readiness PASS. Owner reports19seconds CASH and later printed CARD after another connector restart; request-specific stopwatch identity and financial/stock before/control NOT TESTED. Do not repeat sales for documentation.

Actual metadata collector Windows5.1 output received2Nov08:16Athens,12 groups. Today c2a7313b intent06:11:35.3606616Z/publish35.8836239/result53.4905834/report53.5571684; b62b4acd intent06:12:46.8974177Z/publish47.5479052/result06:13:01.6367021/report01.7010853. Publication-journal-to-result17.607/14.089seconds; result-to-report0.067/0.064. These file metadata intervals do not identify physical driver versus register processing or card activation; copied/restored timestamps can mislead. Read-only server at06:30UTC confirms latest2295bfea/52cbd1d5/15c9b6dd SALE_COMMITTED. At06:32 the4.80basket was refused before any new request; last server request

remains06:27:29. Original fiscal files unchanged, no SQL write/replay/cancellation/financial mutation. Subsequent owner restart/CARD printing does not close this FAIL.

Bounded correction after THIS claim is green/main: move idle nonfiscal readiness waiting off the work-poll/heartbeat loop using one owned Windows5.1 runspace. While a STATUS worker is active, poll in recovering/no-new-claims mode; original local fiscal recovery remains first. Serialize local folder operations with existing mutex, join worker before any possible fiscal work and dispose on exit. A newly initiated STATUS can wait for its actual verified response without losing heartbeats; recovered old markers retain original time and require a distinct fresh round trip. No re-dating old evidence. Keep20second readiness/15second heartbeat limits and all authenticated same-company/store/device/settings/token/lifecycle/license, original cashier/card decision, original result/hash, no-resend, stop/handoff and finalizer guards. Do not automatically delete/re-publish unresolved STATUS or any fiscal input. No automatic new sale, vendor restart, pairing/config/schema/database change.

Exact surfaces: tools/windows-ftext/Cloud-Tools.psm1, Cloud-Connector.ps1, existing Windows smoke/recovery fixtures and focused Node contracts only if needed. Preserve seven-module package format. Required: actual Windows5.1 single-worker, heartbeat progress during wait, no new claim during worker, delayed current response, old/restarted unavailable response denial, worker failure/disposal, original CASH/operator/strict-CARD recovery and immutable files across lost replies. Full exact PR/main CI, native/Windows suites and ordinary guarded exact healthy release before new official matching PC package/physical acceptance. Current installed code/package is unchanged; new engineering NOT IMPLEMENTED/NOT TESTED, physical stability/speed OPEN. Single next action: green/main claim, then implement and verify bounded scheduling correction. Latency attribution beyond this scheduling defect remains separately OPEN.

1 November 2026 late - FTEXT-RESILIENCE-01 / CASH17s and CARD activation35s USER LATENCY FAIL / OPEN

Retained owner fix/ftext-rbs-outcome-20261031 / continuation fix/ftext-finalize-ui-latency-20261101; diagnostic receipt docs/ftext-evening-latency-20261101. Owner reports approximately17seconds for CASH receipt issuance and35seconds from POS until the card machine activates. These are different endpoints from total card completion. They supersede the earlier13second complaint as the current reported performance limit; no physical speed PASS. Ordinary issuance/NO/recovery history retains its exact scope. No new sale or before/after financial/stock/control measurement was made, and no specific server request was independently matched to these user stop-watch reports.

Read-only selected Rizareio/RIZAREIO-POS-01 sample:20 latest rows on1Nov at extraction,12 completed CASH,7 completed CARD and1original CARD REQUIRES_CHECK. CASH pickup0.178-8.672seconds, dispatch-to-accept0.478-0.710, accept-to-final update7.387-14.634. Completed CARD pickup1.058-10.837seconds, dispatch-to-accept0.471-0.531, accept-to-final update31.808-43.872. The last interval includes result handling/finalization and, for operator CARD, the explicit decision; it does NOT measure terminal activation. Delays also occur on one-line baskets: CARD2.70/one line has pickup10.401, accept0.489, then35.613 to final update; CASH1.60/one line has pickup1.139, accept0.486, then10.972. Line count alone is insufficient to explain the delay. Sanitized original IDs/timestamps/spans are retained in the dated evidence JSON. Status RECEIVED minus client checkedAt is not automatically network time: recovered STATUS deliberately retains original start time and client clocks may differ.

Current code review: the connector performs cloud work polling and synchronous nonfiscal STATUS in the same loop. A readiness call may wait5seconds, or two such waits when consuming old evidence, plus authenticated HTTP and loop sleep. This is a structural candidate for pickup stalls, NOT a proven cause for these exact receipts. Preserve the20second freshness/15second heartbeat and original evidence gates. The cash-result endpoint already auto-finalizes ordinary CASH; the earlier immediate-read UI correction is a bounded fallback UI optimization and cannot explain or certify the physical17/35second complaint. No speculative timeout/protocol/readiness/pairing/Windows change, new fiscal command, cancellation, financial/stock write or production SQL mutation.

Independent public health observed ok=true/revision5c3e9eacb69ce2c0df801eb5dd9aecf04506d69e; reviewed repository main d3f0f949fe9d568e1d687b1a4c9dc1b7df934dd9. Exact loaded UI/installed module hashes and physical card-activation timestamps were not pinned. Existing standalone private Rizareio_Ftext_Timing_ReadOnly.cmd was reread in full and remains the3148byte metadata-only collector. It reads names/sizes/UTC creation/modification times of12 latest original cash-file groups, writes a new Desktop JSON outside C:\FText and emits no network/fiscal command or raw receipt/credential content. Existing synthetic checks remain historical; actual Windows execution/current output NOT RECEIVED. This metadata cannot establish payment/cancellation/no-execution and copied/restored times may be misleading.

Single next action: receive the metadata JSON from the selected Rizareio PC using the existing collector, then match its original request IDs to this scoped server snapshot and separate publication-to-result from cloud/UI/operator time. No repeated diagnostic receipt or payment. If further STATUS/driver/terminal evidence is needed, keep it read-only and separately bounded. Actual latency correction remains NOT IMPLEMENTED/NOT TESTED for this new complaint; whole FTEXT stays OPEN/assigned. This is a diagnostic/USER FAIL record only, not source deployment or physical performance acceptance.

FTEXT-RESILIENCE-01 — immediate finalization observation ENGINEERING LIVE / physical latency OPEN

Observed 2026-11-01T12:10:51.704944+02:00. Claim3448/headf505fe54 passed docsCI41290924940 and mergedec979819 before source. Source3450/head0d02fe87 passed fullPR CI41291224345 (5066server+8backup/0FAIL/0SKIP) and native41291223098 (50PASS/0FAIL/0SKIP); mergedffc375de. Source main41293465669 passed all5jobs. Its guarded deployment41294555905 correctly skipped because newer commerce source650b4dca was on main; no guard bypass or older deployment. Integrated full mainCI41293954312 passed; guarded Deploy41295666745 passed; Renderdep-dbjgt0qjnfac73fvb2rg LIVE exact650b4dca3d66dc16b5020197e7a2ec475bef4575. Independent public /api/health ok=true exact same revision. Newer owner code is preserved.

The hook reads the SAME scoped request immediately after successful finalize. Only validated id/store/kind and SALE_COMMITTED reaches the existing once-only completion callback. Single-flight includes both calls; scope/unmount checks follow each await; bare saleId, still-CONFIRMED, foreign/malformed reply and failed read never clear the basket. Original polling recovers lost replies without a new checkout. Existing CASH/both CARD decision, NO/UNCERTAIN, release/cancel and original-evidence gates remain. Local Node20 FTEXT128/119PASS/0FAIL/9native-environmentSKIP and real mounted19 PASS, client build/TABLE_SERVICE PASS; exact remote full/native tests above supply required actual environment checks. Server/Windows/protocol/readiness/financial/schema/production data unchanged. No Windows installer update required. Receive the web change with the POS Refresh action (window reload) during an idle empty-basket gap with no pending transaction; keep FTEXT+ and the paired connector running.

This removes at most the normal extra1800ms post-finalize UI polling interval, not an established physical-print root cause or measured shop improvement. Owner clarified that paper and dialog finish approximately together at13seconds for CASH. Exact user sample ID/time was not pinned; no new diagnostic sale, independent financial/stock delta or physical speed PASS. Earlier8second acceptance is historical. The complaint and whole FTEXT remain OPEN under retained owner fix/ftext-rbs-outcome-20261031 / continuation fix/ftext-finalize-ui-latency-20261101.

Private standalone diagnostic Rizareio_Ftext_Timing_ReadOnly.cmd, Librarylibfile_a98d8bd4dd0081918e4a ad403c8b47cb/version0,3148bytes/SHA25621dd7e30b9f12da481fe3400db7406b931bfc9610c46d4bced68 b45d6ad6a368, is available for the selected PC. It reads names/sizes/UTC creation+modification metadata for the latest12 original cash-file groups and writes only a new Desktop JSON outside C:\FText. No network, receipt contents, credentials, original file changes, fiscal command or pairing. PowerShell7 Linux parser/functional fixtures passed:12group bound, metadata-only output, original hashes unchanged, output-inside-FText rejected. Actual Windows5.1 execution/PC report NOT TESTED/NOT RECEIVED. This is diagnostic metadata, not fiscal execution/cancellation proof; copied/restored times may be misleading. Single next: receive that existing-file JSON from the Rizareio PC and match its request IDs to selected-store original timestamps before choosing any further causal change. Do not repeat a receipt or shorten a safety

timeout.

1 November 2026 10:55 Europe/Athens — FTEXT-RESILIENCE-01 / finalization UI wait ASSIGNED BEFORE SOURCE

Retained owner fix/ftext-rbs-outcome-20261031; continuation fix/ftext-finalize-ui-latency-20261101. Owner reports printed CASH receipt with13seconds delay and explicitly instructs continuation. Exact user sample/request/time not independently pinned; no new financial/stock delta, failure-path PASS or complete timing acceptance. Ordinary printed receipt remains supported; current latency complaint stays OPEN. Earlier scoped8second USER result is historical, not a current speed guarantee.

Read-only existing selected Rizareio/RIZAREIO-POS-01 CASH requests b33c029e (08:47:08UTC,0.50) and845a5f8c (08:31:20UTC,17.20) are confirmed/SALE_COMMITTED: creation-to-final update9.702/9.989seconds, creation-to-dispatch1.631/0.452, dispatch-to-accept0.618/0.556, accept-to-final update7.453/8.982. Latest offer negotiated stopVersion1, showing an updated connector; not exact installed-package proof. These server spans do NOT isolate physical printing, driver/result HTTP/commit/UI or identify the reported13second sample. No production writes or repeated sale.

One proven bounded cause in useFtextCashCheckout: after successful authenticated finalize POST it waits until the next1800ms interval to read SALE_COMMITTED. Claim immediate scoped GET after successful finalize, validate exact request/store/kind and SALE_COMMITTED before existing completion callback. Preserve current interval, single-flight, original POST/idempotency, operator-CARD decision, NO/UNCERTAIN/release/cancel, retained basket and stale-store/request guards. Ignore late responses after scope/unmount; never complete from bare saleId, guessed status, CONFIRMED alone, foreign response or failed GET. Lost finalize response recovers through original polling, never new checkout/fiscal input. No server/Windows/protocol/timeout/readiness/pairing/financial/schema/production SQL change. This can remove only one unnecessary UI interval; physical13seconds/root attribution remains OPEN. Separate local timestamp evidence will be needed if physical paper stays slow.

Before source: green/main this claim. Then mounted real-hook delayed-finalize/current-scope/foreign/lost-response/once-only/CASH/both CARD gate regressions, full CI/build and ordinary guarded exact release. No Windows installer update required. Engineering NOT IMPLEMENTED/NOT TESTED; physical improvement AWAITING USER, no diagnostic sale. Whole FTEXT stays OPEN. Checkpoint CHECKPOINTS/CHANGES/2026-11-01-ftext-finalize-ui-latency.md.

FTEXT-RESILIENCE-01 — unpublished stop engineering release / physical AWAITING LAB

Observed 2026-11-01 00:49 Europe/Athens. PR3425/headfd0109fd: general41247502258, native41247502198 (49PASS/0FAIL/0SKIP) and actual Windows41247502515 PASS. Full server4991+backup8 PASS/0FAIL/0SKIP; actual HTTP E2E including the fixture-date credit assertion PASS. Merged8e1128e6055818e3092d4537af88c99a65c3c56d. Main CI41248384346 and Windows41248384347 PASS; guarded deployment41249525533 PASS. Renderdep-dbj6v68ae00c73dcnih0 live exact8e1128e6055818e3092d4537af88c99a65c3c56d; independently observed /api/health ok=true exact revision. Official private Rizareio_Ftext_Cash_Setup.cmd updated in place to version6; SHA256ddff3a4ceefec7571b17c93082c0becadfab465591210cd8716ca3468ebd8e1e, 113764bytes; all7 module hashes match that exact deployed source, ACTIVE device/settings unchanged. This is engineering delivery, NOT installation or physical acceptance.

FTEXT-RESILIENCE-01 remains OPEN / retained owner fix/ftext-rbs-outcome-20261031, continuation fix/ftext-unpublished-stop-20261031. Engineering release only: original-cashier PREPARED/unclaimed and negotiated stopVersion1 OFFERED stop before authorization. Original row lock decides stop versus accept; original status/result/hash/plan and basket retained. ACCEPTED and legacy uncertainty remain held. Windows terminal stop is permanent, scoped, durable and replayable after lost response/crash/restart, with no fiscal publication, cash-result, financial/stock mutation, or deletion of original evidence. Normal CASH/both CARD/readiness/handoff/reviewed NO/UNCERTAIN preserved.

Official seven-module package must match the verified deployed source and current ACTIVE device settings; retained pairing, no credentials and no automatic connector start. OFFERED stop requires matching idle PC update; actual shop installation and physical stop/failure matrix remain NOT TESTED. Existing ordinary-sale USER PASS is preserved; do not repeat a sale for documentation. Timing observations remain unproven attribution; no shortened safety threshold. Single next: matching idle installation followed by separately scoped physical acceptance without intentional outage at the operating shop.

2026-10-31 21:16 UTC — FTEXT-RESILIENCE-01 / unpublished stop continuation ASSIGNED BEFORE SOURCE

Retained owner fix/ftext-rbs-outcome-20261031; continuation fix/ftext-unpublished-stop-20261031, explicitly instructed to start the remaining work. No parallel takeover of other owners. Existing reviewed-CASH source3409/main57bd495 and receipt3419 remain protected. Owner subsequently reports an ordinary sale completed without a problem; payment method, request ID, amount and exact time were not independently pinned. Limited resumed-normal USER PASS only; no new physical failure/NO/UNCERTAIN acceptance or financial/stock delta. Do not replay it for documentation.

Bounded next causal change: original-cashier stop of an original request that is provably PREPARED/unclaimed, or a negotiated OFFERED request whose execution authorization was never accepted. Serialize stop versus claim/accept under current device/request locks. Preserve original status/result/hash/plan and append immutable application-stop evidence; exclude released PREPARED rows from every claim. Never stop legacy DISPATCHED, ACCEPTED, receipt/result/sale/VOID, foreign/stale/device/token/settings/lifecycle or unknown local publication. No fiscal resend, payment/stock/finalizer/schema/production SQL change or fabricated cancellation/readiness/bank result.

OFFERED stop requires explicit new-client capability recorded on that original offer. Matching Windows client must verify original intent/active identity, absence of publication journal and fiscal files, durably record a bound terminal stop receipt before clearing only its own active marker, and recover the SAME stop proof after lost replies/restart without publication. Never delete original fiscal evidence or clear another request. Old clients/jobs retain the original safe hold; do not enable OFFERED stop for them. Local rollback/evidence restoration remains unsupported without fencing/reconciliation. Already ACCEPTED uncertainty stays held for original evidence; timeout alone cannot establish no execution.

After claim is green/main: server stop/ack contract, current request view and scoped POS action, negotiated capability and Windows durable terminal handling, actual HTTP/mounted/native race and Windows crash/restart tests. Require stop-wins versus accept-wins, rollback/replay, failed acknowledgement before/after durable stop, malformed/foreign/published evidence, no financial tables/writes, old protocol refusal and all current CASH/both CARD/readiness/handoff/NO regression coverage. Full exact PR/native/Windows/main CI, guarded deployment, then matching idle Windows update before OFFERED availability. Engineering and physical acceptance NOT IMPLEMENTED/NOT TESTED at claim. No deliberate outage or diagnostic payment at the working shop. Latency stage evidence in previous checkpoint remains observational; attribution/instrumentation is separate, with no shorter safety thresholds. Single next action: publish this bounded claim before source, then isolated stop/accept race reproduction. Whole FTEXT stays OPEN. Checkpoint CHECKPOINTS/CHANGES/2026-10-31-ftext-unpublished-stop.md.

31/10/2026 21:03 UTC — FTEXT RBS-style CASH review engineering LIVE / physical review AWAITING LAB

Owner fix/ftext-rbs-outcome-20261031 retained; receipt docs/ftext-rbs-outcome-receipt-20261031. Before-source claim3407 merged609cd640 after docsCI41236869440. Source3409 final9ab0290ada0a36f00967948177a7d24933fbd210 passed exact fullCI41238962526/all5SUCCESS (4967server+8backup/0FAIL/0SKIP), native recovery41238962358 (34PASS/0FAIL/0SKIP including concurrent CASH review), actual Windows41238962336. Main57bd49550cb53f9ad036841f3ae876b541eabd25 passed exact fullCI41240158502/all5 with4967+8/0/0 and Windows41240158539. Ordinary guarded Deploy41241095573 succeeded; Renderdep-dbj5bpmtlv9c73c99vq0 LIVE21:02:23.169855UTC and independent public health returned oktrue/exact57bd495. No guard bypass or direct deployment. Concurrent monthly/Chat/consumption/cash-owner records and source retained.

Installed bounded behavior: original cashier may record NO/UNCERTAIN for the exact stored canonical unknown CASH report, with current company/store/POS/device/token/settings/lifecycle/serial binding. NO atomically releases only the application hold and retains basket/original status/result/hash/plan/history; UNCERTAIN stays held. No new fiscal command, sale/payment/stock/VOID or guessed bank/cancellation/readiness result. Missing replies, actual final/late receipts, sale, VOID, wrong actor/scope/configuration and YES on unknown CASH are refused. Existing successful CASH, both CARD modes, original CARD NO and durable handoff remain protected. Released attempts cannot finalize. This is a server/client update; no new Windows installer, settings, pairing or protocol change was made. Reload the POS during an idle empty-basket gap to receive its new UI. These are engineering usage/acceptance criteria, not a new manual PASS.

Read-only timing observation of12 existing ordinary completed Rizareio requests (9CASH/3CARD), not agent-created tests:7CASH server creation-to-final-update5.199–13.517seconds;2CASH34.757/35.997seconds, including21.585/22.424seconds between dispatch and immutable acceptance, then6.786/6.963seconds to final update. CARD28.177–30.248seconds server-side. This separates recorded stages but does not prove a root cause or isolate bank/operator/driver/network/commit. Not UI click-to-close timing, independent physical-print acceptance, a financial/stock delta or an improvement caused by this release. Snapshot spans preceding production revisions; exact extraction timestamp was not captured. Original timestamps/IDs, calculated intervals and limits preserved in CHECKPOINTS/EVIDENCE/ftext-rbs-outcome-20261031/timing.json. Earlier user15/35second reports and prior ordinary printed receipts remain scoped USER evidence. No receipt repeated for documentation and no production SQL write.

Remaining OPEN: isolated LAB acceptance of new CASH NO/UNCERTAIN with required before/after/control evidence; physical late/failure/restart matrix; missing-dispatch-reply reconciliation/fencing; causal attribution of pre-acceptance delay and any separately claimed optimization. Do not shorten safety checks or replay a fiscal input to hide latency. Current whole FTEXT is not certified PASS; new reviewed-CASH physical path NOT TESTED, and no CI-only behavior added to manual. Existing manual PASS preserved. Single next action: prepare the bounded isolated LAB review acceptance while retaining original evidence; no deliberate outage or repeated diagnostic sale at the working shop. Checkpoint CHECKPOINTS/CHANGES/2026-10-31-ftext-rbs-outcome.md. Receiving owner is not changed; this is the retained-owner release/handoff receipt.

31/10/2026 20:00 UTC — FTEXT-RESILIENCE-01 / RBS outcome parity / ASSIGNED BEFORE SOURCE

ΑΝΑΛΗΨΗ ΑΠΟ fix/ftext-payment-resilience-20261030 / fix/ftext-durable-handoff-20261031 — ASSIGNED fix/ftext-rbs-outcome-20261031, explicit owner request in current recovery conversation. No parallel ownership of this bounded outcome UX scope. Preserve all other owners and durable handoff work.

Owner explicitly approves matching the RBS operator flow: confirmed success completes once; reviewed unsuccessful attempt returns the retained basket with immutable history; uncertain outcomes stay visible

and never resend automatically. Bounded first change: allow original-cashier NO/UNCERTAIN for the exact stored generic unknown CASH response, retaining the original request/result/hash and excluding any confirmed/late fiscal receipt, sale, VOID or other release. Existing operator CARD flow remains protected. Missing dispatch replies remain held until original execution can be reconciled/fenced; a timeout alone cannot prove failure and must not grant another fiscal execution. No transport, timing thresholds, Windows settings, payment replay, production SQL or financial/stock/schema change. Source and physical acceptance NOT TESTED at claim. Full native/server/Windows/build CI, guarded exact release and isolated LAB acceptance required before new behavior is called PASS.

Latest scoped USER PASS: owner confirms resumed normal CASH and CARD printed receipts and additional ordinary trading. Reported approximately15seconds CASH/35seconds CARD; these are user observations, not instrumented stage timings or a speed improvement. Earlier ~8second three-CASH observation remains historical. No transaction repeated for documentation; independent baseline/control stock and financial deltas NOT TESTED. Installed exact revision for these later reports not independently pinned. Existing reviewed NO/late CASH/readiness/durable evidence invariants remain protected. Checkpoint CHECKPOINTS/CHANGES/2026-10-31-ftext-rbs-outcome.md. Single next action: publish this claim before source, then reproduce and extend the reviewed CASH outcome path in isolation.

31/10/2026 — AI-OWNER-WALLET-01 / THREE ADDITIVE CUSTOMER PRICES / LIMITED HOSTED LAB PASS

Retained owner feat/ai-owner-wallet-20261022; continuation feat/ai-wallet-customer-pricing-20261031. All three requested company prices are implemented together: additional percentage, fixed EUR per paid AI operation, fixed EUR once at the first assistant call on an authorized persisted invoice draft (FIRST_ASSISTANT_DOCUMENT). The existing tariff already contains the approved50% markup; the new percentage is explicitly additional and confirmed. Saving prices never activates billing or credits money. Zero defaults preserve the old tariff; original reservation policies and manual confirmed-final-total REVIEW semantics remain immutable.

Claim3379 green/main preceded source. Source3381/dad7976272e609b0b88204fbcb35124caa770700: fullCI41207119453 all5SUCCESS,4871server+8backup/0FAIL/0SKIP; actual native PostgreSQL/HTTP/concurrency fixture ran. Recovery41207119467:7PASS/0FAIL/0SKIP. Normal merge fb1a0ae5. No guard, writer or schema change.

Actual31Oct15:00–15:04UTC (17:00–17:04Athens), Cloud Chrome desktop, authenticated SuperAdmin/support, virtual MYWORKSTATION LAB / ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ only. Action: read existing01Aug–31Oct report, expand September, open all/month/day missing-product lists, toggle WITH_VAT/ALL, download CSV and open standalone print. No sale/return/payment/approval/product/stock/fiscal action, no physical terminal/printer operation. Existing LAB TOAST/CAFE and EXCEL1/2 only; quantities and payment methods unchanged.

Observed monthly approximate Margin/gross/net: October56.56%/8.36/-248.98; September63.86%/29.50/-283.70; total62.09%/37.86/-532.68. Each provisional cell visibly includes≈ and Εκτίμηση, coverage90.11%, original missing9/99 retained. Day27Sep51.50%/2.96/2.96 is explicitly approximate. Protected fully-costed26Sep remains79.66%/0.35/-312.65 without estimate marker and25Sep net3.01 remains unchanged. Original sales68.90/purchases2115.00/payments5533.50,7returns/3cancels and zero-VAT expenses gross618.78/net570.54/documentedVAT48.24 agree with baseline. No sales-minus-purchases substitute or fabricated zero cost.

Native CSV2monthly rows/26columns: original21columns preserve all18 unaffected values and blank canonical profit/margin;5additional labelled numeric estimate/coverage/unestimated columns agree with UI (all unestimated0). Standalone print contains the same monthly/day/total amounts, every provisional value explicitly marked, protected known-day values and0% expense convention. Missing-product drilldown:4distinct products/9lines for all; September and27Sep each correctly2products/4lines, excluding October EXCEL rows. WITH_VAT hides net-sales cells but retains clearly marked profit. Screenshot, actual CSVs, print text and control evidence under CHECKPOINTS/EVIDENCE/owner-profit-provisional-20261031/.

Fresh database before15:00:46.518167Z and after15:02:50.334004Z: identical counts AND whole-row hashes for all7 scoped sources:Sale90,SaleLine99,Product110,PurchaseDocument71,PurchaseDocumentLine713,StoreTransaction134,StockMovement95. Active MAIN/LAB POS2 control

remains0transactions/cash0/card0/IRIS0/total0 before/after. Earlier pre-release baseline had one fewer draft purchase and line; rebaselined before this acceptance, never attributed to report actions or claimed unchanged across that interval. Approved purchase count12/gross2114.9976 unchanged. No protected transaction replay.

PASS is limited to this installed read-only provisional display/model/export/drilldown scope. LAB has no normalized-unit sale fixture; exact package24/6, repeated weighted product, discounts/landed excise, nullable/foreign/mismatched source, catalog no-double-conversion, original-date returns and orphan/no-basis fences have native CI proof, not new live purchase posting. Actual-cost null protection,0% expense policy and all broader financial27/numbered25 ownership/residuals remain. Independent ordinary Owner, mobile/tablet, physical print, inventory correctness and real-store accounting acceptance NOT TESTED. Only this completed independent request is removed from active pending work. Manual profitability/PASS.md, active/tracker/numbered and all3canonical PDFs synchronized in this closure.

31/10/2026 — FTEXT-DURABLE-HANDOFF-05 engineering release / selected-PC acceptance OPEN

Retained FTEXT-RESILIENCE-01 owner. Claim3380/head8fe5375 passed docsCI41206354755 and merged3838ed8 before journal refinement. Source3376 finalheada887cc6bceb4f8591efa4b5c14c86a7a683571e7 passed fullCI41206926415/all5 (4869 server PASS/0FAIL, native negotiated CASH/both CARD stable authorization/concurrent clients subtest PASS), Windows5.1 actual-module41206926463 and native recovery contract41206926490. Merged20db21008e024ca35509d220503eb551f8b3b136; exact-main Windows41208139869 passed. Its main fullCI41208139847 was externally cancelled14:07:47UTC, NOT a test failure or completed validation. Later integrated mainaccf3ddd839c1255139dfd181b5ccb4f770555ff contains20db and preserves newer wallet/other-owner work; FTEXT source/modules unchanged. Exact integrated fullCI41208544864 passed all5. Normal guarded deployment41209698959 completed; Renderdep-dbivj4cs728c738edupg LIVE2026-10-31T14:24:04.551207Z; independent health oktrue/exactaccf3ddd839c1255139dfd181b5ccb4f770555ff. No guard bypass/direct deployment/production SQL/fiscal test transaction.

Official same-POS CMD version3 replaced the same LibraryID libfile_c384ea96bd188191991e06a62e7ad338 with expected version2, returned metadata applied. Package 102076bytes SHA256 4ca2996aa0af754d227b2d28d5f35333240e51c1ba81e91ed7ed88ed0e0a78f1, source revisionaccf3ddd839c1255139dfd181b5ccb4f770555ff; all7 embedded modules match the deployed revision byte-for-byte, same current settings hash4231356f6dc75c59a8ba083ac779c087681acd2535f77060ffd54eab4348ee89/device ACTIVE tokenVersion6, no credentials, no automatic connector/fiscal start. Installed PC version3 and real fault/receipt acceptance are NOT TESTED until owner confirms idle update. Previous accepted v2 / three normal CASH receipts/no reconnect/~8s USER PASS stays protected and remains in manual, with after-record consistency only and no invented baseline/control stock/shift delta PASS. No new CI-only behavior was added to manual.

Released bounded behavior: only new negotiated OFFERED delivery can be rediscovered; original intent/active evidence precedes one committed immutable authorization; lost acknowledgement before local publication retrieves that same proof read-only. CreateNew/Flush(true) journal precedes fiscal input and its presence, even malformed/partial, prevents every later publication. Current authentication, tenant/device/token/settings/lifecycle/serial and freshness gates remain. Legacy DISPATCHED, missing active evidence, after-journal uncertainty, driver-consumed input and ambiguous physical/bank outcomes are never blindly replayed. Restore/deletion/rollback of local evidence under the same token is unsupported; restore requires fencing/reconciliation. This is not physical hardware exactly-once or universal failure certification. First-S OVER LIMIT auto-release remains HOLD: public manufacturer/support searches did not establish FTEXT+25.02 batch-stop/no-payment semantics. User changed hardware limits and prior scoped recoveries are preserved.

Remaining ASSIGNED: selected-PC idle download/run option3 once, preserve existing pairing and all original fiscal files; read-only current readiness confirmation; separately bounded physical CASH/CARD/NO/late-result/network/restart acceptance with before/after/control evidence before any new LAB transaction. No deliberate outage or synthetic payment at the working shop. Whole FTEXT stays OPEN. Single next action: owner installs the reviewed matching package during an idle gap; then confirm the actual installed behavior without repeating completed purchases. Checkpoint CHECKPOINTS/CHANGES/2026-10-31-ftext-durable-handoff.md.

31/10/2026 — FTEXT-DURABLE-HANDOFF-05 amendment BEFORE SOURCE / candidate3376 HOLD

Retained same FTEXT-RESILIENCE-01 owner and continuation fix/ftext-durable-handoff-20261031. Three normal CASH receipts/no reconnect/~8s USER PASS recorded by3368/main629e443 remains authoritative and unchanged. Candidate3376/head71e6fb8 is DRAFT, NOT INSTALLED: one-shot server acceptance alone moves the lost-response ambiguity to the grant reply and does not recover that pre-publication failure. Its previous unique-grant/no-authorization-replay plan is superseded by this bounded amendment; physical fault acceptance remains NOT TESTED.

Amended design: commit a single immutable authorization bound to existing nonce/original command hash/current device-token/settings/lifecycle/serial. With the original durable local intent AND active marker present, a lost reply may retrieve the SAME committed authorization read-only, never create/renew another authorization. Before creating any fiscal pending/txt file the Windows connector must durably CreateNew and Flush(true) an irreversible original publication journal. Presence of that journal, even partial/malformed, prevents all later publication, including crash, driver consumption, missing result/report and module restart. No local original active evidence means no accepted-request redelivery/reconstruction. Only negotiated OFFERED may be rediscovered; legacy/default DISPATCHED remains unchanged. Each local recovery must recheck exact original identity and current authenticated configuration; no report/fiscal/business finalizer is fabricated.

Durability boundary: journal/intent/active evidence must never be deleted, edited, copied from another installation or rolled back to an older backup while its token remains active. Restored/lost local runtime evidence requires installation lifecycle/token fencing and operator reconciliation, not automatic execution. No claim of physical hardware exactly-once or resilience to arbitrary disk/backup rollback. After journal creation any uncertainty remains held/read-only; this phase cannot infer no charge/no receipt or safely retry a physical command. First-S OVER LIMIT release remains HOLD pending authoritative driver semantics. Current installed v2 remains untouched until exact full/native Windows and PostgreSQL CI, source/main verification, normal guarded deployment and matching package acceptance.

Allowed source after this amendment is green/main: refine existing candidate handoff service/cloud/cash modules and actual HTTP/native PostgreSQL/Windows fixtures. Required regression: lost authorization reply before journal yields at most one original publication on recovery; repeated authorization reads are byte/identity stable and never mutate acceptance; concurrent acceptance creates one authorization; any existing journal (valid/partial/foreign), consumed input, missing result/report, restart or missing original active marker produces zero re-publications; legacy, tenant/token/settings/lifecycle/serial, readiness, CASH/both CARD/NO/late-result/closed-shift/control-record protections remain. No production outage/test payment, new schema, pairing, fiscal limits, bank assumptions, stock/payment/sale mutation. Whole FTEXT remains OPEN. Single next action: green/main this amendment, then implement and validate the bounded journal protocol. Checkpoint CHECKPOINTS/CHANGES/2026-10-31-ftext-durable-handoff.md.

31/10/2026 — INVENTORY-BULK-POS-PRICE-01 / USER PASS — Ριζαρείου και Διαδόχου

Ο χρήστης επιβεβαίωσε: «ΠΕΡΑΣΕ ΤΑ ΑΛΛΑΞΑ ΚΑΙ ΣΤΗΝ ΡΙΖΑΡΙΟΥ ΚΑΙ ΣΤΗΝ ΔΙΑΔΟΧΟΥ». Καταγράφεται USER PASS της αναφερόμενης ομαδικής αλλαγής άδειας τιμής POS και στα δύο πραγματικά καταστήματα. Κλείνει η συγκεκριμένη εκκρεμότητα πραγματικής αποδοχής μετά το παλαιό timeout· δεν ζητείται επανάληψη ήδη επιτυχημένης πράξης. Retained implementation owner: fix/inventory-bulk-permission-large-20261031. Δεν κλείνει συνολικά το Inventory39 ούτε άλλες αναθέσεις.

Πηγή είναι η επιβεβαίωση του χρήστη, όχι νέα παρατήρηση ή εγγραφή από αυτή τη σελίδα. Ακριβής αριθμός ειδών, τελική τιμή Ναι/Όχι, ώρα/συσκευή/ταυτότητα χειριστή, δεσμευμένο receipt και revision της δικής του ενέργειας δεν μετρήθηκαν ανεξάρτητα. Δεν αποδίδεται μετρημένη αμεταβλητότητα stock/τιμών/οικονομικών στις πραγματικές ενέργειες. Η προηγουμένως επαληθευμένη εγκατάσταση 42ae4a3db371943fb0109aa815fac8a1b6bd9f33, η χωριστή μετρημένη LAB επαναφορά και οι native έλεγχοι 8.000/10.000 ειδών παραμένουν τα δικά τους τεκμήρια. Καμία επανάληψη πραγματικής μαζικής αλλαγής ή άλλη επιχειρησιακή εγγραφή για την καταγραφή αυτού του USER PASS.

31/10/2026 - POS-DECIMAL-KEYBOARD-01 / LIMITED HOSTED LAB PASS / USER DEVICE RETEST OPEN

Retained owner fix/pos-decimal-keyboards-20261031; receipt docs/pos-decimal-keyboard-release-20261031. Before-source claim3373/CI41204888690 merged4d54a948. Normal guarded41201059265/job124536843141 SUCCESS, rollback preserved, dep-dbitt4s9v7es738j9bc0 LIVE12:32:12UTC. Independent HTTP exact42ae/oktrue and DB12:33:04 zero lock/long-query controls before native actions; post-test HTTP still42ae. Four affected wallet runtime files match accepted source.

Measured native MYWORKSTATION LAB / MAIN / LAB POS2 / existing authenticated SuperAdmin,31Oct12:34–12:45UTC: temporary master+invoice ON20→21, one separately identified new image SOL-LAB-20261031-C/SYN-C1 qty1PIECE/unit14EUR/VAT0, original checksum-bound attachment/job, one unapproved CREDIT DRAFT/NEW POS_OCR_DRAFT/one unresolved line, paymentTransactionIdNULL. Initial image reader produced no wallet movement: that separate route is NOT a metering PASS. No old invoice or B replay.

ONE original automatic assistant preview C returned completed comparison: its one physical row and totals14EUR agree; synthetic diagnostic status noted. Exactly one new INVOICE_OPENAI entry cdac4c32-ddaf-4d98-8003-f3e3946e5047 SETTLED, gpt-5.6-sol,9397input/0cached/9394writes/672output, uniform default30m provenance retained with original tariff version. Independent integer calculation80973microEUR equals charged amount and exact balance debit4964032→4883059. Its original hold was fully released, wallet21→23. Pre-existing B REVIEW930033microEUR remains separately unchanged. No new review audit/notices/retry/apply/product/stock/payment/approval/fiscal/email/learning action. Existing entries/foreign wallet/history and all three LAB sales/transaction/stock/shift/product controls agree; MAIN90/134/95 and open shift0transactions/0cash/card/IRIS/total. Only planned intake added one order/document/line/attachment/job. Native OFF23→24 added one config audit only, preserving final balance/old hold/history; LAB master+invoice/email nowOFF. The C draft/job/line stayed exactly unchanged after preview.

Evidence CHECKPOINTS/CHANGES/2026-10-31-ai-wallet-sol-review.md; CHECKPOINTS/EVIDENCE/ai-owner-wallet-20261022/sol-uniform-cache-lab-20261031.json, sol-uniform-cache-ci-20261031.txt, sol-uniform-cache-assistant-pass-20261031.jpg and distinct C fixtures. Practical instructions docs/manual/ai-owner-wallet/PASS.md. Private before/after controls remain separate; no real-customer financial data published.

Residuals remain assigned/OPEN: historical customer REVIEW reconciliation and B hold resolution require original bound evidence, no guessed/manual financial SQL; initial image-reader metering and PDF file_data validation are separate observations; per-customer pricing UI, actual Owner-session detail, delivered email/thresholds, other models/cache12h/mixed/long-context hosted acceptance and OCR/product/approval scope are not closed. Existing Azure/GPT5/configuration PASS and all other owners preserved. No whole-wallet or broader Gate3 PASS. The earlier LIVE FAIL/next-source notes below are historical for this completed bounded correction; do not repeat the paid test or reclaim other assigned work.

31/10/2026 14:53:28 Athens — FTEXT-DURABLE-HANDOFF-05 ASSIGNED BEFORE SOURCE / NOT IMPLEMENTED

Retained FTEXT-RESILIENCE-01 owner; continuation branch fix/ftext-durable-handoff-20261031. User explicitly requests continuation after3normal CASH receipts and8second/no-reconnect USER PASS. Base mainb9e33d1 includes all other owners. Scope only the ambiguity when a new request is committed as DISPATCHED but its HTTP claim response is lost before local durable intent exists. Current legacy behavior intentionally refuses redelivery, so no payment repeats but application can remain held. Preserve this legacy safety contract and all accepted CASH/CARD/NO/recovery/readiness behavior.

Bounded design claim: opt-in handoffVersion1 negotiated only by the updated Windows client through exact-local-settings authenticated combined work poll. New CASH and both CARD modes may receive an immutable nonce/command-hash-bound OFFERED handoff substate inside existing checkoutJson when first claimed. Only these explicitly negotiated, current device/token/configuration/lifecycle/serial requests with no result/sale/VOID/decision and still OFFERED may be offered again after lost delivery. Old/unknown DISPATCHED, ACCEPTED, REQUIRES_CHECK, confirmed, released and foreign requests must never be generally redelivered. Before any fiscal pending/txt file, Windows durably writes its original3-key intent/active request and obtains a new one-shot server execution grant bound to original command hash/nonce/current identity. Fresh-readiness is required before granting execution; a current OFFERED/no-grant response may request a nonfiscal STATUS refresh before retrying acceptance. The device-locked transaction changes OFFERED to ACCEPTED once; subsequent acceptance calls cannot grant execution again. New protocol result reporting requires that grant; no grant endpoint calls a fiscal command or financial finalizer. No schema, pairing/credential, register programming, sale/payment/stock/VOID/cancel change.

Explicit safety limit: a lost grant acknowledgement AFTER server acceptance or a crash AFTER grant remains fail-closed/held for original evidence, not automatic resend or a claimed solution. A grant is never renewed or replayed into permission to publish; original intent/tombstone/files remain durable and immutable. Legacy client/default endpoints and all existing unresolved requests are unchanged. This phase targets provably pre-execution lost delivery only; it does not infer bank outcome, fiscal cancellation or absence of a receipt. Unpublished first-S OVER LIMIT automatic release remains HOLD pending authoritative batch-stop evidence. Whole FTEXT stays OPEN.

Allowed source after this claim is green/main: bounded handoff service and existing cash-request/work-poll/result routing; current Windows cloud/cash modules and negotiated callback before publication; pure/actual HTTP, isolated native PostgreSQL and actual Windows5.1 fixtures. Test before/after-commit lost offer/grant responses, local orphan intent/marker, concurrency/one grant, zero fiscal inputs without grant, exactly one permitted file publication, restart after accepted grant never republishing, legacy/no-version/old DISPATCHED refusal, foreign/hash/settings/device/token/lifecycle/serial denial, CASH/both CARD formats and current readiness/NO/late-result/closed-shift/control-stock invariants. No deliberate outage or synthetic payment at the live shop; current v2 keeps running. Exact full/native/Windows CI and normal guarded release precede a matching opt-in package and separately agreed idle physical acceptance. NOT IMPLEMENTED/NOT TESTED at claim. Checkpoint CHECKPOINTS/CHANGES/2026-10-31-ftext-durable-handoff.md. Single next action: green/main this partial-PASS plus bounded claim, then isolated lost-delivery reproduction and implementation.

31/10/2026 14:53:28 Athens — FTEXT-CONNECTOR-LATENCY-04 scoped CASH USER PASS / THREE NORMAL RECEIPTS

Owner explicitly reports approximately8seconds from payment click until the dialog closes, versus earlier approximately15seconds. In reply to whether the receipt printed, sale completed and connector did not need reopening/reconnection, owner confirmed «ναι εκανα3πωλησεις». Read-only selected Rizareio/RIZAREIO-POS-01 records identify the three latest normal CASH requests at12:43:33/12:43:56/12:44:56UTC:65f1d0f6 (0.50),ffdf9bcb (10.50),d64ad58d (19.20), total30.20. Each is SALE_COMMITTED with exactly one same-client COMPLETED/ISSUED Sale, one matching CASH Payment and one StoreTransaction posting. The four sale lines have four corresponding POS_SALE stock movements with quantities matching7sold units. These are after-record consistency/deduplication observations, not measured before/after cash-shift or stock delta PASS; no pre-action control baseline was taken for the owner's ordinary sales. Server creation-to-finalization intervals2.915/6.193/3.222seconds are a different measurement from user-reported physical/UI8seconds. No old sale was recreated for evidence.

Deployed source42ae4a3/PR3357, guarded41201059265/Renderdep-dbitt4s9v7es738j9bc0 and matching CMDv2/90932bytes/hash9397e4a54fce8fbc252c2e5adad4befe4eb9de1c19e84ee07c6172dbedef5d4e. At12:46:31UTC, heartbeat current and same-register STATUS0/oktrue/fiscalExecutionfalse checked12:46:27.1579 received12:46:30.007: approximately2.85seconds rather than earlier approximately18seconds. This scoped USER PASS closes selected-PC update and ordinary CASH/no-per-receipt-reconnect/timing acceptance only. Supersedes those prior AWAITING USER markers; history below remains dated. Does not certify CARD timing, deliberate network/driver failure, lost one-shot response, automatic Windows login startup or whole FTEXT resilience. Preserve all older scoped PASS. Single next action: isolated durable handoff subtask below; do not repeat these3legitimate sales.

31/10/2026 21:37 Europe/Athens — CENTRAL-BACKOFFICE-ACCESS-01 / OWNER RIGHTS INSTALLED, FORM OBSERVED / LIVE ACCEPTANCE OPEN

Retained Rizareio readiness owner; source3370/head5a36f321 passed exact fullCI41228861281:4914PASS/0FAIL/0SKIP plus backup8; mergedafbf419e. Production route-composition follow-up3400/head21241d32 passed fullCI41230784884/job124624645231:4933PASS/0FAIL/0SKIP plus backup8; merged89ddf196. Original common mainafbf419e fullCI41230000823 passed4932/0/0+backup8. Pending main89ddf196 CI41232022988 was superseded/cancelled by later documentation3401; no full-source or LAB acceptance inferred from its docs-only success.

Latest common sourced6aac017544e993919af9f56ee84c4579ca6f0b1 preserves both Owner corrections and all concurrent Chat, cash, lifecycle and invoice-preview records/PDF. Shared full main workflow_dispatch CI41233152725/job124631582221 completed SUCCESS:4939PASS/0FAIL/0SKIP plus backup8/0/0, all five jobs green. Native canonical create/count/finalize passed19:17:40UTC; actual Owner-guard delegated product options/create passed19:22:37UTC. The completed full run was reused after observing it already queued; no duplicate CI dispatch. Automatic deploy41234313450 correctly skipped its documentation-head classifier. The normal main Deploy workflow was dispatched through GitHub UI because the connector has no workflow-dispatch operation:41234431891/job124635188807 retained exact full-CI/freshness guard, rollback checkpoint and pinned deployment. Guard passed19:30:19UTC, exact hook requested once19:30:21UTC, expected revisiond6aac017 verified healthy19:32:54UTC (21:32:54Athens). No direct hook, secret access, force/reset or safeguard bypass.

Read-only hosted observation21:34–21:37Athens, existing Super Admin support session / MYWORKSTATION LAB / ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ cmtpopbgo000trhb5ng9ytiru / cloud browser tab4: new left menu Χειριστές και δικαιώματα; unified Πρόσβαση BackOffice and Χειριστές POS; New operator/list; existing lab31 edit form with role selector, explicit per-store matrix and all ten executable rights. lab31 remains STOCKTAKER with only inventory.read and inventory.count; other two LAB-company stores remain unchecked. No role/capability/credential edited or staff save submitted. No sale/count/finalization/payment/shift-close explicitly submitted; financial/stock before-after NOT TESTED. This is installed source plus observed form, not ordinary Owner login, live grant/revocation/operator/writer acceptance or whole LAB PASS. No previous

personal login test repeated. Evidence CHECKPOINTS/EVIDENCE/owner-backoffice-permissions-20261031/source-and-release.json, owner-rights-form.jpg, owner-permissions-matrix.jpg and guarded-deploy-dispatch.jpg; only synthetic LAB form/public workflow metadata saved.

Available core rights: invoice archive/export/original read; sales/shift-centre read; product read/create/separate opening stock; stocktake read/count/create/finalize; cash report read. Role suggestions remain separate from explicit rights and existing grants are not expanded. Advanced invoice/payment/shift mutations and unrelated settings remain denied to delegated users. Owner changes require renewed personal login; short username+4–12 digit PIN remains available with optional separate password. POS administration preserves its established identities and policy.

Single next action: Owner selects the intended LAB-only rights for the existing lab31 (or a user-created personal account), saves their own choices and completes secure personal sign-in for grouped role/store/revocation and approved writer acceptance with fresh before/after where required. Agent has not selected additional rights or submitted credentials. Full correction/real-store readiness stays OPEN/ASSIGNED to this page, with advanced delegation and hosted acceptance explicit residuals. No manual or central PASS closure; preserve the latest shared PDF while OPEN. This release receipt is the retained-owner handoff; no parallel takeover.

31/10/2026 — CENTRAL-BACKOFFICE-ACCESS-01 / ROUTE COMPOSITION CORRECTION / AWAITING CI + RELEASE + LAB

Retained Rizareio owner, continuation fix/backoffice-staff-product-route-composition-20261031 based on common mainafbf419e56bcdb7ab3022dd696de13963f71ddbd. Source3370/head5a36f3212f68ee02d641df590a7828f90bd592c3 passed exact fullCI41228861281/job124618850556:4914PASS/0FAIL/0SKIP plus backup8PASS; mergedafbf419e. Main fullCI41230000823 queued behind an earlier common source run; no installed/full LAB product acceptance claimed. Concurrent cash handoff3395 and lifecycle profile3396 source, their records and latest PDF preserved.

Additional production mount review found that inventoryArchiveImportRoutes runs its Owner guard before the read archive router, and requireOwnerProductAccess runs before the canonical new-card router. Thus standalone canonical service/UI tests were insufficient to prove these two delegated HTTP paths reachable; no hosted permission test or new LAB failure is inferred. Bounded wiring correction under the existing core-integration assignment: products.read exact GET archive root skips the import router entirely, leaving every import/write denied. The first existing Owner product guard finishes ONLY trusted delegated products.create GET/new-card/options and POST/new-card through the unchanged shared options/creator services, before unrelated Owner bootstrap/audit routers; no role elevation or blanket next into Owner routes. Current grant/session/store/licence/lifecycle checks remain inside those services, including transaction-time create and separate opening-stock admission. Existing Owner and POS guards/handlers remain unchanged. Archive final grant check now follows its last VAT-option read so late revocation cannot expose the response.

Added actual Express composition test with the original import router, actual archive handler and Owner guard in production order, asserting successful scoped read/options, no legacy schema/business writer, import/unknown/foreign-store/untrusted-role denial, unchanged Owner continuation and revoked read withheld after final VAT query. Focused9PASS/0FAIL/1native-envSKIP. Extended the real PostgreSQL creator fixture to exercise the actual Owner guard HTTP entry for delegated options and creation, retaining financial/control-store and atomic creator proofs. Full final CI and ordinary guarded exact release remain required; no live account/grant/credential/business action. Broad acceptance stays OPEN/ASSIGNED, no new manual/PASS closure. Single next action: green full/native follow-up PR/main CI, then verify exact healthy installation and owner/operator UI.

31/10/2026 — CENTRAL-BACKOFFICE-ACCESS-01 / CORE OWNER RIGHTS SOURCE / AWAITING EXACT CI + RELEASE + LAB

Same retained Rizareio owner and PR3370. Published product source72b9155369e688e56d1833d979ae826e68c2745d completed exact fullCI41225874231/build124610081368: 4901PASS/0FAIL/0SKIP plus backup8PASS. This is source validation, not hosted product/LAB acceptance.

Owner administration now combines BackOffice account creation/role/store/action matrix and the existing POS operator administration in one entry, with explicit store selection before POS loading. POS identities/rights remain their original system. Ten executable BackOffice rights cover invoice archive/export/original read; actual sales/shift-centre read; product archive read, full new card creation and separate opening stock; stocktake read/count/create/finalize; cash report read. All role presets remain suggestions; existing accounts/grants are not expanded. Unknown module actions, invoice edit/approve/delete, payment/reversal/shift closing and settings remain default-denied for delegated users. This is the bounded executable core, not a claim that every Owner operation is delegable.

Normal filtered navigation mounts existing invoice, transaction, inventory archive and full product-card modules. Read-only sales avoids online-sale reconciliation and unrelated pickers; server flags and UI both forbid writes. Invoice original is constrained by both inbox and attachment company/store, with a safe delegated preview. Permissions/session/module state rechecked before read responses and inside canonical write transactions. New stocktake creation reuses the existing snapshot writer with an optional idempotency UUID in existing scopeJson, required for delegated staff, advisory lock and matching-payload replay. Finalization reuses the original locked transactional writer with explicit separate grant, cause and confirmation; uncertain result is verified by GET without a second finalize submission. Count-only users retain blind expected quantities; finalizers can review quantities and finalized outcome. No production schema/migration, data change, grant save, credential entry or LAB business action performed.

Focused mounted/policy/sales tests22PASS/0FAIL/1native-envSKIP. Native isolated tests added for invoice attachment cross-store refusal and canonical create/count/finalize, one replayed parent/one audited stock movement with unchanged financial and other-store controls. Full final source/main CI, ordinary guarded exact healthy release and grouped Owner/operator LAB acceptance remain required. No new manual/PASS closure; broader correction and real-store readiness remain OPEN. Next action: publish complete source, verify exact full native CI, release through ordinary safeguards, then verify owner UI and explicit operator permissions. Assignment remains with this page.

31/10/2026 — CENTRAL-BACKOFFICE-ACCESS-01 / EXISTING PRODUCT MODULE INTEGRATED IN SOURCE / AWAITING FULL CI + LAB

Same retained Rizareio owner and source PR3370. Foundation head046e65745f1f07f5d83b8e74271cd9d90b77bf2f full CI41204045733 completed SUCCESS. Current main2ef626a0afa8c85e3ffa68e4e125f9a16d1edd7c and all intervening POS keyboard, FTEXT journal, cash and owner profit source/receipts preserved. Temporary workspace maintenance removed unpublished local module files; recovered published foundation from3370, reconstructed the bounded product integration and reran checks. No user data, credentials or business transaction was reconstructed or submitted.

Executable rights now include products.read, products.create and products.opening-stock separately from existing inventory.read/inventory.count/cash.read. Role remains a label/preset; no role-based privilege inheritance. Dependency validation is shared: creation requires product read; opening stock requires creation and read. Existing stored accounts/grants are unchanged. Server request admission remains exact/default-deny; archive GET binds to the selected store and revalidates live grant before response. Existing full product-card creator revalidates current grant/session/licence/lifecycle INSIDE its native transaction; nonzero opening stock requires the separate grant before any write or replay. Existing idempotent request/fingerprint, VAT identity, store-only card, real User attribution, barcode/supplier/audit atomicity and all POS/Owner writers remain protected. No schema/migration.

Personal BackOffice now uses the normal application navigation and mounts the existing InventoryArchivePanel read-only, with no edit/import/transfer controls; a separately authorized operator opens the existing InventoryNewProductCard. Opening stock is disabled and sent as zero without its separate right. Stable selected-store API binding rejects late responses; navigation/exit is disabled during product save. Existing stocktake/cash functions remain admitted only by their actual grants. General owner CommerceLauncher rejects delegated staff entry; no blanket exposure of its owner-wide routes. Unknown writes, existing product edits, imports, transfers, invoice approvals, finance and settings are still denied.

Reconstructed client/TABLE_SERVICE and server preparation builds PASS on Node24.22.1 (Node20 remote CI required); focused checks rerun, native cases remain to be executed in isolated remote PostgreSQL. Added actual mounted read-only archive/role dependency checks and native shared-creator case covering missing/create/stock rights, distinct store, one replayed movement/User FK and grant withdrawal before transaction. Full local/remote results will be appended. No hosted account/grant/stock/financial mutation or new LAB/manual PASS.

This is an executable bounded module integration, not completion of every BackOffice module/action requested. Wider module integrations and roles, complete Owner/operator/revocation LAB acceptance, exact guarded release and real-store rollout remain OPEN. Next action: exact full/native CI for the updated PR, fix failures, then continue reviewed module integrations without expanding unknown legacy routes. Same owner remains assigned; no acceptance test is requested before exact release. Preserve latest shared PDF while this source remains OPEN; no manual/numbered closure.

31/10/2026 — CENTRAL-BACKOFFICE-ACCESS-01 / OWNER CORRECTION / ASSIGNED BEFORE SOURCE

Same retained Rizareio readiness owner; continuation fix/owner-backoffice-permissions-20261031. User explicitly rejected the narrow separate stocktaker screen and requires the OWNER to create operators in BackOffice, choose each role, stores, visible functions and allowed actions. This supersedes the product acceptance of the three-profile workspace, not the protected authentication/tenant/POS invariants. No product completion is claimed from successful PIN login.

User-supplied screenshots31Oct14:52–14:53 Europe/Athens show successful personal lab31 login, LAB selected, stocktaker role, stocktake load returning no open stocktakes. These establish only the displayed login/read flow; exact screenshot runtime revision not independently measured. No quantity, stock, payment or finalization was entered. Full live grant/revocation/foreign-store and writer acceptance remain NOT TESTED. Do not repeat the login just for evidence.

Current main0fdc75388 and intervening shared history, complete active/tracker/pending/checklist, prior central-access/PIN checkpoints and session manual reviewed. Existing owner account creation and revision/audit/revoke machinery work but only three capabilities are supported; role presets are also hard ceilings. Existing POS OperatorManagementPanel is a different credential/profile system and must not be accidentally replaced, grant POS access or have its verified permissions changed. Existing CommerceLauncher and StoreCloudPage contain owner-only actions and company-wide fetches: do not expose them wholesale by promoting EMPLOYEE to OWNER/MANAGER or trusting hidden buttons.

Authorized correction: one owner-facing operator administration entry; role presets plus independently configurable per-store operation rights; readable section/action matrix; normal BackOffice navigation filtered to granted functions; server admission for every operation and object/store scope; deny missing/unknown rights. Keep credentials short-PIN-compatible, existing account IDs/grants (no automatic privilege expansion), current sessions/revocation/audit/licence/lifecycle, Owner/SuperAdmin MFA and all POS behavior. Role label is not an authorization bypass. Separate explicit view/create/edit/delete/approve/finalize capabilities where the function supports them. Owner manages security; operator cannot delegate themselves.

Implementation region: shared/backoffice-staff.mjs, existing staff account/access/routes/bootstrap and their tests, existing BackofficeStaffAdmin/Workspace/navigation/styles and focused integrations with actual module components/routes. Each module integration must be reviewed for company/store scoping and transaction-time authorization before exposing a writer. No blanket URL-prefix allow or fake selectable capability with no executable operation. No schema or migration without separately reviewed lifecycle

impact. Other module owners/source and concurrent receipts remain intact.

Acceptance: real Owner creates/edits/disables a LAB-only operator; selected roles are presets and rights remain explicit; operators see/run exactly allowed functions; direct API forbidden action/cross-store/object access refused; absent rights never mean all; changed/revoked policy invalidates existing session; late store responses withheld; view-only cannot write; each newly integrated write retains existing audit/idempotency/financial and lifecycle safeguards. Require full PR/main CI and ordinary guarded exact release before grouped LAB. Broad request remains OPEN until the actual module/action matrix and live evidence are complete. Next action after this claim merges green: implement owner-controlled permission policy and UI in bounded, validated integrations.

Checkpoint CHECKPOINTS/CHANGES/2026-10-31-owner-backoffice-permissions.md. Assignment stays with this page, no parallel takeover and no whole LAB/manual PASS.

31/10/2026 — CENTRAL-BACKOFFICE-ACCESS-01 / OWNER POLICY FOUNDATION PREPARED / NOT COMPLETE OR INSTALLED

Retained Rizareio owner; source fix/owner-backoffice-permissions-source-20261031. Before-source correction claim PR3369/headf34b98ac783d484d3e5331ed95379f8922a4faec passedCI41203580906 and mergedb9e33d1f930ff625fb7d9ce4376d2aa5aa762d18. Source foundation now separates the persisted explicit capabilities from profile presets on both server validation and live grant admission. Selecting/changing a role no longer silently changes rights; applying its suggestion is an explicit separate action. New store selection starts with zero rights. Duplicate/unknown rights and count without read refuse. Existing stored identities/grants are not migrated or expanded; default-deny routes, session revoke/CAS/audit, password/PIN, Owner/MFA and POS stay intact.

Owner UI now uses Χειριστές και δικαιώματα, New operator, and readable per-store section/action checkboxes available independently of profile. This foundation still covers ONLY the previous three executable capabilities inventory.read, inventory.count, cash.read. It is NOT the complete requested normal BackOffice module/action integration; existing separate staff workspace remains unchanged. Do not ship or request another user test as if the rejected product were corrected. No fake selectable module rights or role elevation added.

Focused mounted/policy/login/logout/MFA checks35PASS/0FAIL/0SKIP; staff subset14PASS/0FAIL/1native-envSKIP. Frontend/TABLE_SERVICE build PASS. Added native PostgreSQL HTTP case for owner-defined cross-profile view rights, explicit count refusal, foreign-store/admin refusal, edited rights revoking old session, new MANAGER with zero rights still denied, financial/stock controls unchanged. Native case and complete remote CI remain pending. Local full suite4231PASS/0FAIL/318native-environmentSKIP (4549tests). No hosted credentials/grant/business action by this continuation.

Remaining required work: integrate the owner's operator administration with the actual BackOffice modules and usable per-action rights, normal authorized navigation, roles beyond the current bounded presets where needed, preserve all existing module-specific tenant/store/licence and transaction-time writer checks; then full PR/main CI, exact ordinary guarded release and grouped Owner/operator LAB acceptance. Existing personal login/read screenshots are retained evidence only. Broad correction OPEN; owner remains assigned. Next action: complete full/native CI for this foundation, then implement the actual module/action integrations without exposing legacy owner-wide routes wholesale.

Draft source PR3370 / head046e65745f1f07f5d83b8e74271cd9d90b77bf2f / full CI41204045733 started; not merged or installed. Keep this a draft until the broader module/action integrations are completed and validated.

31/10/2026 14:34:18 Athens — FTEXT-CONNECTOR-LATENCY-04 SERVER RELEASED / PC UPDATE AND TIMING ACCEPTANCE OPEN

Authorized urgent connector update, retained FTEXT-RESILIENCE-01 owner. Claim3356/90be67a passed docsCI41197915342 and merged670210b before source. Source3357 finalhead04be4001cd0266214744dea0e2d5e37580cceba0 passed fullCI41198789176/all5, native FTEXT41198789105/30PASS0FAIL0SKIP and Windows5.1 fixture suite41198789094, then merged42ae4a3db371943fb0109aa815fac8a1b6bd9f33. Exact main fullCI41199931951/all5 and main Windows41199931722 passed. Normal guarded deployment41201059265 succeeded, Renderdep-dbitt4s9v7es738j9bc0 LIVE12:32:12.885UTC; independent /api/health oktrue and exact42ae4a3 verified. Later main2c6cf04 is documentation-only; no deployment guard bypass. Earlier ancestor32bfe94 mainCI41199782907 was cancelled solely to release the queue for integrated42ae4a3, after proving32bfe94 is its ancestor; all wallet/other-owner source is preserved and validated by exact42ae4a3 fullCI.

Installed server supports one authenticated scoped work poll instead of sequential ping/VOID/CASH/late/error polling. Exact local settings/hash must match before any queue read/claim. Original durable local report suppresses all new claims;20s STATUS/15s heartbeat, current device/token/settings/lifecycle/license, one-shot dispatch, original evidence and all CARD/fiscal/accounting guards remain. Matching official selected-POS Windows package is now available as MyWorkStation-Ftext-RIZAREIO-POS-01-20261031.cmd, version2,90932bytes,SHA256 9397e4a54fce8fbc252c2e5adad4befe4eb9de1c19e84ee07c6172dbedef5d4e. All7 embedded production modules verified byte-for-byte, revision42ae4a3, no credential/automatic fiscal start, same settings hash and ACTIVE tokenVersion6/current live settings independently matched. No new pairing or vendor/register programming.

Selected-PC instruction delivered: during an idle gap, keep FTEXT+ open, close only the previous connector, download the updated CMD again, select3 once and keep the new connector running; do not select pairing1 again. Package uses1s successful idle wait,5s local nonfiscal STATUS wait and refresh5s after completion, preserving old pending STATUS age and requiring a new round-trip for stale recovered STATUS. Readiness failures retry without stopping the loop; safe stage and numeric register code distinguish failure. The last scoped read-only unresolved queue was empty before handoff. No real payment/receipt reissued, fiscal command, production SQL mutation or inferred sale/payment/stock delta during this update.

SERVER RELEASE and PACKAGE AVAILABLE are engineering/operational evidence only. User has not yet confirmed this PC update or a timed receipt under the new package. Approximately15s reported delay, recurrent lost-readiness observations and STATUS101 are not relabelled physical PASS. Whole FTEXT remains OPEN for actual timing/continuous operation and controlled CASH/both CARD modes driver/network/late/restart acceptance. Windows automatic login startup remains NOT TESTED. Lost one-shot response before durable local intent stays fail-closed; unpublished automatic first-S OVER LIMIT release remains HOLD pending authoritative batch-stop semantics. Prior scoped CASH/NO/reviewed first-line rejection/printed receipt and readiness activation PASS remain unchanged; no blanket RBS parity or complete resilience claim. Checkpoint CHECKPOINTS/CHANGES/2026-10-31-ftext-connector-latency.md. Single next action: selected-PC update, verify fresh automatic communication, measure the next ordinary legitimate receipt without recreating a historical transaction, then record only actual user/financial evidence.

31/10/2026 — OWNER-EXPENSE-ZERO-VAT-01 / LIMITED READ-ONLY LAB PASS / COMPLETED

Owner fix/owner-expense-zero-vat-20261031; source PR3360. Before-source claim3359 merged94c32f1. Initial f48020e1/fullCI41199788992:4861server+8backup/0FAIL/0SKIP. Shared-registry conflict retained; reconciled final85316476/fullCI41200854613:4864+8/0/0, merged906f20d0. Exact mainCI41201990925:4864+8/0/0. Ordinary guard41202952304 correctly deferred older906 because newer Android source was on main; no bypass. Newer0fdc753887821c3050174f284ce700fefc87a990 retains every owner-report runtime blob; exact fullCI41202964821:4864+8/0/0. Normal guarded release41204097193/job124545595339 requested that revision13:08:22UTC and confirmed exact healthy13:13:30UTC. Independent public health confirmed exact0fdc before actual review.

Actual31Oct15:14–15:16Athens, authenticated SuperAdmin support desktop, virtual MYWORKSTATION LAB / ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ only. Existing01Aug–31Oct report before/after: October gross expense305.58 retains recorded documentedVAT48.24 and now net257.34; September gross313.20 is now net313.20/VAT0; totals gross618.78/net570.54/VAT48.24. Original sales68.90, purchases2115.00, payments5533.50, missing costs9/99 and7returns/3cancels unchanged. Day26Sep keeps margin79.66% and gross profit0.35; full expense313.00/VAT0 now yields net-312.65 instead of unknown. Day25Sep net3.01 also observed in print. Monthly/total profit correctly remains unknown for missing sales costs.

Actual native CSV downloads960bytes before and1027bytes after:2monthly rows/21columns. All18 unaffected columns match exact original strings; new net expenses257.34/313.20 and VAT48.24/0 match UI. Actual standalone print contains the same day/month/total amounts and zero-rate convention; no native printer/PDF acceptance. Warning opens exactly12 original contributing entries; no new expense/approval/payment or document edit. Other-expense form shows new help, blank amount, no document selected; cancelled without submission. Fresh active MAIN before/after:0transactions/cash0/cards0/IRIS0/total0/expenses0. No financial/stock/fiscal action or protected fixture replay. Hosted DB-wide hashes/stock, independent ordinary Owner, mobile and physical devices NOT TESTED; native CI proves isolated SQL/HTTP scope, credits/reversals, documented installments/cent allocation and unchanged ledgers.

This new owner instruction intentionally supersedes historical unknown-expense suppression only: without usable VAT analysis, full OTHER_EXPENSE amount is expensed at0% for management reporting. Valid documented VAT allocation and original records remain unchanged. Never fill missing sales costs with zero to produce a margin. Whole financial27/numbered25 remains OPEN with codex/task27-resume-20261005 and all other owners preserved. Only this independent requested policy is complete; no repeat of protected LAB fixtures. Manual profitability/PASS.md, active/tracker/numbered/pending and canonical PDFs synchronized by this receipt. Evidence CHECKPOINTS/EVIDENCE/owner-expense-zero-vat-20261031/.

31Oct2026 13:36 Athens — FTEXT-CONNECTOR-LATENCY-04 ASSIGNED / current recovery owner

User reports connector must be opened/connected for every receipt and approximately15s dispatch delay; screenshot shows recurring generic recovery failures despite successful STATUS. Read-only production evidence31Oct11:33–11:36UTC: device heartbeat active/readinessRequiredtrue; STATUS reports separated15–30s and one133s gap; sampled checkedAt11:31:19.901 received11:31:38.493 (18.6s), while freshness gate20s; actual server rejects checkout at11:26:10 and11:33:04 with FTEXT_REGISTER_NOT_READY. This contradicts any inference that activated readiness alone completed resilience. Prior physical scoped CASH/CARD/NO PASS stays scoped; no new real PASS.

Retained FTEXT-RESILIENCE-01 owner continuation branch fix/ftext-connector-latency-20261031, prioritizing this bounded independent subtask before unpublished first-line auto-release candidate. Claim BEFORE SOURCE: consolidate authenticated device heartbeat/work discovery into one scoped polling request instead of ping plus void/cash/late/error sequential requests; preserve current credentials/settings/license/lifecycle/serial, exact original evidence, single dispatch semantics and all CARD/fiscal/financial safety. Keep old endpoints/backward compatibility. Updated Windows loop uses the combined response, bounded short idle wait and scheduled fresh nonfiscal STATUS; authenticate identity

before local fiscal work, keep durable pending results/restart recovery first, isolate readiness/recovery failures without invented success, expose safe failure stage rather than secrets. No relaxation of20s readiness/15s heartbeat, no stale-status authorization, DISPATCHED redelivery, fiscal retry, sale/payment/stock/VOID/cancel/schema/production SQL writes. Windows automatic startup is separately NOT TESTED; do not promise per-PC startup without physical verification.

Source surfaces after this claim is green/main: FTEXT device routes/services and scoped Node/HTTP/native PostgreSQL tests; Cloud-Connector/Cloud-Tools and Windows smoke/fault tests; package generated only after exact full/native Windows CI and ordinary guarded release. Confirm combined no-work poll uses one cloud request, pending local report bypasses fresh claim, original one-shot and fresh-readiness gates remain, errors do not stop loop, no duplicate fiscal publish across lost response/restart. Current user-installed package remains unchanged until verified release. Existing unpublished first-line auto-release candidate remains separate and HOLD pending authoritative protocol evidence that rejected first S cannot leave later fiscal commands executed. No automatic absence-of-receipt inference is included here. Whole FTEXT OPEN. Checkpoint CHECKPOINTS/CHANGES/2026-10-31-ftext-connector-latency.md. Single next action: green/main bounded claim, implement/verify combined polling, deploy normally, then matching PC package and actual timed receipt acceptance.

31/10/2026 — Historical installed release and measured scoped LAB receipt

Retained owner fix/inventory-bulk-permission-large-20261031; receipt docs/inventory-large-permission-release-20261031. Claim3353 merged before source3354; final2b37c531 PRCI41198064459 and main2d80052/CI41198824482 each4847server+8backup/0FAIL/0SKIP. Concurrent source/docs advanced main; cancelled/skipped46814/94c32/manual queued runs are not release proof. Exact combined42ae4a3db371943fb0109aa815fac8a1b6bd9f33 full mainCI41199931951:4862server+8backup/0FAIL/0SKIP/all5green. Guarded workflow41201059265/job124536843141 verified full CI/freshness, pinned hook and exact health12:32:24UTC. Renderdep-dbitt4s9v7es738j9bc0 LIVE12:32:12UTC; independent no-cache health confirmed same revision before acceptance. Both permission helper blobs exactly equal3354. No deployment guard bypass.

Actual CloudChrome/SuperAdmin/virtual isolated LAB storecmuk8gxui000ppabfykdxwb1y, no physical terminal/open store shift; existing synthetic LAB-EXCEL-20260909-01 only. Fresh12:49:36.238672UTC flagfalse/audits2 -> ONE native ALL/YES12:50:01.924185 flagtrue/audits3/receipt59ef5c83-dd09-4312-a86a-4eb5725f68d6; actual product-card checkbox checked. Fresh12:50:55.302438UTC true/audits3 -> ONE native selected-one/NO12:51:25.790740 flagfalse/audits4/receiptdabac37e-a240-445c-ae77-38672c23546e; card checkbox unchecked. Native success messages observed; one request/receipt/action, exact new SQL updatedCount1. Final12:51:34.315591 product fully restored except expected updatedAt. All before/after snapshots and exact receipts in CHECKPOINTS/EVIDENCE/inventory-bulk-permission-large-20261031/.

Base/store price1.20, isolated stock1/controlMAINstock4, all StoreProduct fields/timestamps,15movements/latest10Oct11:49:05.817,43company shifts,109otherProducts, full ledger/sale/payment hashes and sums and11company price-history rows exactly unchanged across both actions. No sale/payment/stock/fiscal/invoice/role action. Existing return-from-card list refresh quirk retained; refreshed list before restoration, no unrelated fix. Initial old support view expired after deployment; canonical PlatformAdmin retained valid session and selected LAB again; no auth bypass. Native8000/inactive/audit/rollback/replay/selected100/held-stock-row/6s delay PASS; independent10000 completed426ms in exact main CI (204ms PR,348ms earlier main), not production-scale timing.

Historical installation/LAB receipt: the one-product persistence/restore measurements below remain scoped LAB PASS. Real-store acceptance subsequently received USER PASS for Ριζαρείου and Διαδόχου as recorded above; the old Διαδόχου timeout is historical, not a current RETEST request. No real-store operation was repeated by this page. Company-card scope/operator rights and mixed/VAT/SET/price/financial paths remain unchanged. No whole Inventory39/other-owner closure.

31/10/2026 — INVENTORY-BULK-POS-PRICE-01 — CLOSED SCOPED LAB PASS

Owner work/bulk-pos-price-edit / receipt docs/bulk-pos-price-permission-receipt. Claim3330 merged985d5cff before source; source3334 original1d2e2376 CI41188535663 and synchronizeda75cad68 CI41189455309 full PASS. Shared main advanced; cancelled push runs108e/4285 were NOT treated as release evidence. Exact combined9644e95809ac0f0f1a80b1125dccfbed53aa3bed manual fullCI41190777427 SUCCESS:4779server+8backup/0FAIL/0SKIP, native603-product/tenant/control/KEEP/replay/rollback/POS-denial, build/invariants/HTTP/browser E2E. Ordinary guarded workflow41191604346 verified full CI/freshness, pinned hook and exact health SUCCESS; Renderdep-dbirtcm7bikc73dn0rh0 LIVE31Oct10:12:53UTC. Independent no-cache health verified exact9644. Automatic deployment classification of doc-only head was correctly skipped before this normal guarded workflow dispatch; no direct Render deploy or guard bypass.

Actual CloudChrome/SuperAdmin/virtual MYWORKSTATION LAB, isolated label storecmuk8gxui000ppabfykdxwb1y, no open store shift/physical terminal. ONLY existing synthetic LAB-EXCEL-20260909-01/productb1466a68-c47b-47cc-9139-69e6f9f7f978; no sale quantity/payment action. Fresh before10:15:34.229788UTC false/receipts0 -> ONE native ALL/YES save10:15:48.978365 false→true/receipt44b67e4c-ec58-48eb-bb86-7a85b9976415/request275dc580-0a89-4acb-890e-28dbfcaac00c. Real product card reopened and existing checkbox checked. Fresh restoration baseline10:17:23.302482 true/receipts1 -> ONE native selected-one/NO save10:17:30.115774 true→false/receipt7fb173d9-726d-4052-86e9-18ec92369949. Real card reopened and checkbox unchecked. Final10:17:37.634730 false/receipts2; metadata matches initial except expected updatedAt. Exact Audit before/after and allProducts true/false correspond to each action. No duplicate submit or replay.

Independent snapshots before/after each action: base/store price1.20, isolated stock1/one movement/latest10Oct08:15:01.673 and shared MAIN control stock4/14movements/latest10Oct11:49:05.817 unchanged. All43company shift hashes, full ledger/sale/payment aggregates and hashes, other-product hash and zero price-history rows exactly equal. Same Product flag is intentionally company metadata shared with MAIN, disclosed in form; store price/stock rows including updatedAt stayed byte-for-byte equal. No financial/stock/fiscal/role/invoice write. Evidence CHECKPOINTS/EVIDENCE/inventory-bulk-pos-price-20261031/*.json. Native desktop ALL form and selected form were observed; initial getByLabel automation locator did not match, actual accessible combobox locator succeeded before any save. No application failure inferred. Browser screenshots rendered correctly, but screenshot file synchronization was unavailable; durable database/observed-UI records retained.

PASS limited to permission-only ALL enable and selected disable/persistence/restore in the one-product virtual store. Cross-page603/inactive/tenant/concurrent retry/rollback are native CI evidence, not mass live application; physical/mobile/POS price write and all real stores NOT TESTED here. Existing permanent-price/operator changeRetail enforcement and all prior inventory/VAT/merge/POS PASS/owners retained. No whole inventory Gate closure. Manual inventory/PASS.md, active/tracker/numbered/pending and central PDFs synchronized in this receipt; completed independent pending entries removed. No remaining implementation/installation acceptance for this scoped request.

31/10/2026 12:51 Europe/Athens — CENTRAL-BACKOFFICE-ACCESS-01 / SHORT PIN INSTALLED, FORM OBSERVED / LIVE ACCOUNT ACCEPTANCE OPEN

Retained owner Rizareio readiness / feat/central-backoffice-access-20261029; continuation fix/backoffice-short-pin-20261031. Source PR3339 merged602ff7ea after exact PR/main CI4782PASS/0FAIL/0SKIP plus backup8PASS. Newest common source802d570dd0048558b53ee77ec753d2252210bd63 passed full mainCI41192839430/job124513994277:4842PASS/0FAIL/0SKIP plus backup8PASS and all five jobs green; native PIN-only case passed again10:35:35UTC. Ordinary guarded deployment41193853815/job124515985808 requested the exact revision10:44:10UTC and confirmed it healthy10:49:04UTC; public health independently confirmed the same revision. No bypass/manual deployment. All later parallel records and source retained.

Hosted read-only observation at MYWORKSTATION LAB / ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ, existing SuperAdmin support session, cloud browser tab4: list still has0 personal accounts; new form labels password optional, actual required attribute absent, PIN pattern[0-9]{4,12}, clear username+PIN-only guidance. Prepared synthetic name Δοκιμή απογραφέα LAB, short username lab31, only selected LAB store with STOCKTAKER inventory.read/inventory.count; both credential fields blank, no submission. Screenshot CHECKPOINTS/EVIDENCE/backoffice-short-pin-20261031/pin-first-form.jpg, SHA2565888cd4e07176b212698302136444b72955abaee3e615d0178ac545cde979586. No credential read/copied/entered, account/grant mutation or financial/stock action by this page. Existing accounts/longer PINs, optional strong password and Owner/SuperAdmin/MFA/POS behavior protected by regression. This is installed source plus observed form, NOT hosted account/login/count/revocation or whole LAB PASS.

Single next action: user leaves optional password blank, enters their own4-digit PIN and submits the prepared LAB-only account, then securely completes personal username/PIN sign-in for grouped role/store/session acceptance. New credential entry/submission requires user control under browser policy. Same owner retains OPEN assignment; wider live acceptance and Owner PIN alias remain OPEN, no manual/numbered PASS closure. Checkpoint CHECKPOINTS/CHANGES/2026-10-31-backoffice-short-pin.md. Central registries/PDF synchronized with this bounded release receipt.

AI-OWNER-WALLET-01 — 31Oct2026 / BOUND POSITIVE CACHE-WRITE FAIL / SAME OWNER BEFORE CAUSAL CORRECTION

Retained owner feat/ai-owner-wallet-20261022; continuation fix/ai-wallet-uniform-cache-20261031. Newest real observation overrides earlier AWAITING LAB plans: invoice assistant Sol remains LIVE FAIL. Diagnostic3326 and zero-write3328 are delivered, not a functional Sol PASS. Source3328 c05d25474b4a06f01378e1291b5a7ba45ae39fe8 merged21b48455d11c55544381fb9e49a5eab92ab3de7a; actual installed9644e95809ac0f0f1a80b1125dccfbed53aa3bed passed full main41190777427:4779server+8backup,0FAIL/0SKIP and ordinary guarded41191604346/dep-dbirtcm7bikc73dn0rh0. Independent HTTP exact SHA and DB zero lock/long-query controls verified before native actions. Four wallet runtime files byte-identical to accepted source.

Measured native LAB, existing SuperAdmin / MAIN / LAB POS2,31Oct10:13–10:30UTC: master+invoice ON17→18 and OFF19→20, one audit each, no money/history/business delta from configuration. One new synthetic supplier LAB METER TEST only. New PDF A failed file_data validation before any charge/job/attachment; never replayed. Distinct new image B (SYN-B1 qty1 PIECE/unit12EUR/VAT0) read one line, produced one checksum-bound original attachment/job and one unapproved CREDIT DRAFT/NEW POS_OCR_DRAFT with one unresolved line; paymentTransactionIdNULL, no product/stock/payment/approval/fiscal/email action. Initial image reader produced no wallet movement; this is NOT a metering PASS for that separate route.

ONE original native Sol preview B at10:27UTC returned HTTP200/modelgpt-5.6-sol but became REVIEW. Newly bound private audit records9399input/0cached/9396cache-write/778output, both TTL bucket fields

absent, exact input cap9399/output30000. No retry, charged0, original930033microEUR hold retained. All three LAB sales/transactions/stock controls unchanged (main90/134/95; orders56→57 only for the planned draft), no foreign wallet mutation. Real-store business activity is independent and is not claimed unchanged. Historical customer REVIEW entries remain untouched. LAB now master+invoice/email OFF, version20, original balance retained, exactly the B hold remains.

Demonstrated cause: positive aggregate cache writes are valid without lifetime buckets for a uniformly known request policy. Official current guide https://developers.openai.com/api/docs/guides/prompt-caching uses prompt_cache_options.ttl, default30m, optional per-breakpoint overrides; its uniform examples report only aggregate writes. Installed invoice-assistant-pos.js has no cache options/breakpoints/hidden previous-response or conversation references. Therefore this new request's policy is determinable; mixed/unknown requests are not.

Bounded next source: snapshot only allowlisted derived request cache policy with the original hold, preserve immutable tariff prices/version and model/prompt/output30000, and use a proven uniform30m/12h request policy only when the provider omits the optional write partition. Any supplied malformed partition, missing/null/noninteger total/read, overlap, model/bounds/unpriced usage still fails closed; mixed/unknown/hidden-history policy still needs authoritative provider partition. Record partition provenance in settled usage and bounded diagnostic evidence, never raw prompts/files/options/errors/credentials. No schema/price/env/global/company-policy change, historical repair or financial SQL. Reproduce this actual shape RED→GREEN and require native PostgreSQL/full exact PR+main CI/build/E2E, normal guarded release/independent health, then ONE distinct new synthetic C request; never replay B. Its existing hold must remain separately identified.

Checkpoint CHECKPOINTS/CHANGES/2026-10-31-ai-wallet-sol-review.md and private before/after controls contain every phase. Same item remains assigned/LIVE FAIL; per-customer prices paused; other owners, FTEXT/inventory/reader/cash/PIN work and prior Azure/GPT5/configuration PASS preserved. Publish real acceptance with manual/all common registers/PDF immediately; no whole-wallet PASS.

31/10/2026 — CASH-CONTINUATION-14 / LIMITED LAB PASS / METADATA CONTINUATION CLOSED

Retained cash owner codex/cash-chat-reconciliation-20261026. Source3336/35b709e1 full PR CI41189110384:4762server+8backup/0FAIL/0SKIP, merged42c48c4. Actual combined source9644e95809ac0f0f1a80b1125dccfbed53aa3bed exact full main dispatch41190777427/all5SUCCESS:4779server+8backup/0FAIL/0SKIP, native automatic source/continuation case779 executed PASS. Guarded deployment41191604346/job124509398468 resolved exact9644e958, preserved rollback, requested pinned deployment10:10:58UTC and reached exact healthy10:13:11UTC. Independently observed /api/health ok:true/exact9644e958 before acceptance; all3owned runtime blobs match reviewed source. Later shared source/settings actions by other owners are outside this receipt.

Pre-action baseline published3337 and merged85ba793 before metadata write; fresh before10:39:26UTC recorded in active checkpoint and evidence. Authenticated Platform SuperAdmin/CloudChrome, MYWORKSTATION LAB,27Oct2026 full day, MAIN/LAB POS2 original rowa3494bb3-61cf-447c-9707-27311f35708c: one closed row/cash0/cards0/automatic0, manual unreviewed, headROOT/history0, reportHash9102a26299fbef34c3534bb3a558eba090a275d948a646e6711530de5c58f4ca. New default notes empty, no false manual-confirmation prompt.

Exactly one CHECKPOINT10:39:41.592UTC (12:39Athens): resumeFrom28Oct with the explicitly synthetic open document question. UI success, history0→1 CHECKPOINT only. Refresh and collapse/reopen preserve28Oct and the exact open note; no second POST, CONFIRM or financial action. Copy exactly equals visible canonical text and the completed36258byte nine-sheet XLSX report text. Original first6worksheets (original/manual/automatic shift/employee/day) value-for-value unchanged; reportHash unchanged, head advanced only to4d8fc688dfd11d4b108ddcfe6427d61678eefed2591bd220ed1e0c00ceb8634c. Original row remains manually unreviewed with cash0/cards0. N40CONTROL27Oct rows0/cash0/cards0 and no foreign continuation/note. Evidence CHECKPOINTS/EVIDENCE/cash-continuation-20261031/before.json,

after.json, workbook-check.json, report.txt and continuation-pass.jpg.

This closes only automatic-result continuation/default-note persistence for the measured metadata-only LAB case. No SKU, quantity or payment applies; no sale/payment/stock/fiscal/settings/issue-closure/email action submitted. Raw current transaction counts, global stock/IRIS/payment ledgers and independent financial deltas NOT TESTED. Native SQL immutability proof is CI, not broader LIVE financial acceptance. Real nonzero/real-store/other-role/device acceptance, provider-original safe/refill/Netlink evidence, durable per-issue responses/closure and actual delivered email remain OPEN under the same owner. Manual/active/tracker/pending and regenerated PDF synchronized in this receipt. Do not repeat the saved checkpoint or any accepted transaction merely for evidence.

31/10/2026 — CENTRAL-BACKOFFICE-ACCESS-01 / PIN-FIRST SOURCE PREPARED / AWAITING CI + RELEASE + LAB

Retained owner Rizareio readiness / feat/central-backoffice-access-20261029; continuation fix/backoffice-short-pin-20261031. Before-source amendment PR3338 merged9644e9580 after docsCI41190533275 PASS. New personal accounts accept username +4–12 digit PIN with optional separate strong password; absent password uses a unique unrecoverable random hash, never the PIN/default. Existing accounts, old passwords/long PINs, Owner/SuperAdmin/MFA and POS auth preserved. Durable five-attempt username/15-minute limit, scoped grants/licence/lifecycle/session checks unchanged. Six bounded source/test files only; no schema or ordinary auth-route change.

Local34 focused checks PASS/0FAIL/0SKIP, actual mounted PIN-only form/credential validation plus original workspace/logout/MFA tests; client/TABLE_SERVICE/server production build PASS on Node24.22.1. Full local suite and exact Node20/native PR/main CI are pending. Native added test covers PIN-only identities, distinct bcrypt password hash refusing PIN as password, scoped signed session, durable cross-IP username lockout, optional password update and original/control finance. These are engineering results, not live LAB PASS. No user credential read/submitted or account/grant/financial/stock change. Current form remains unsaved; do not use it as a test until exact new deployment. Preserve current main PDF during this OPEN source publication; regenerate with exact release/acceptance receipt. Whole scope OPEN/ASSIGNED; no manual or numbered closure. Next: green full/native PR/main then ordinary guarded exact health, inspect deployed form, user-entered PIN-only LAB acceptance and usage instructions.

31/10/2026 — CENTRAL-BACKOFFICE-ACCESS-01 / SHORT PERSONAL PIN AMENDMENT BEFORE SOURCE / OPEN

Same retained owner Rizareio readiness / feat/central-backoffice-access-20261029; continuation fix/backoffice-short-pin-20261031. User explicitly requests shorter personal credentials after the hosted form refused a six-character password. Existing installed source supports personal PIN login but creation unnecessarily requires both a ten-character password and a six-digit minimum PIN. Latest hosted observation31Oct: no account exists; synthetic lab.stocktaker.20261031 form is unsaved, scoped only to ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ. No credential read/copied, no account/grant/stock/financial action submitted. Health verified71f27cafa294b427a8c5734e4518e6e009c775db; full account/role LAB acceptance remains NOT TESTED.

Bounded requested correction: accept a personal numeric PIN of4–12 digits and allow account creation with username+PIN without a separate password. A supplied optional password keeps existing10-character/72-byte policy; absent password receives a unique unrecoverable random password hash, never the PIN or a fixed/default password. Existing accounts/passwords and longer PINs stay valid; Owner/SuperAdmin email/password/MFA, POS PINs, role/store/license/lifecycle enforcement and five-attempt durable username/15-minute lockout stay unchanged. Shorter PIN is the owner's requested usability choice; no wider grant or Owner elevation.

Exact source regions after this amendment is green/main: server/src/services/backoffice-staff-accounts.js only PIN/input/create password-hash handling; client/src/components/BackofficeStaffAdmin.jsx only optional password submission/label and PIN limits/help; client/src/main.jsx only personal PIN input hint/validation. Extend server/test/backoffice-staff.test.js, backoffice-staff-postgres.test.js and

backoffice-staff-ui.test.js plus existing Login tests as needed for real validation, PIN-only creation/login, non-PIN fallback password isolation, unchanged old password/long PIN, durable failed-attempt refusal, current scope/revocation and native audit/no secrets. No schema, migration, existing inventory/cash writer, general auth or licence changes. Other assigned owners and historical PASS retained.

Require focused/native and complete PR/main CI, ordinary guarded exact healthy deployment, then fresh hosted PIN-only form/account/login acceptance with user-entered credentials. CI is never LAB/manual PASS. No production account provisioning by agent; user completes new credential entry/submission. Single next action: publish this bounded amendment green/main, then implement and validate the PIN-first flow. Whole scope stays OPEN/ASSIGNED; no manual/numbered acceptance closure.

31/10/2026 — POS-BULK-PERMISSION-TIMEOUT-01 / RELEASE VERIFIED / UNIFIED ACCEPTANCE HANDOFF

Before-source claim3348 / docsCI41194481837 merged2142d1046. Diagnostic source3350 head2691ea84a9c8ab54eb148516c6840be3611c68a6 / fullPRCI41196421557 job124523791408 and exact-main26af0bf2d8ab270ac1d1db620e0460f98a69e8ad / fullCI41197361941 job124526420650 each SUCCESS4845server+8backup/0FAIL/0SKIP, all five jobs green. Ordinary guarded deployment41198096845 job124528296944 pinned26af at11:45:54UTC and verified exact healthy revision11:50:50UTC; independent public health also returned oktrue/exact26af. No direct deployment, guard bypass, schema/resource/env or production business write. This installs error-only phase/count/process-event-loop diagnostics; it is NOT a functional fix or whole POS/capacity PASS.

Native evidence distinguishes two classes: frozen original Product row wait6seconds fails IN membership SELECT, so that alone does not reproduce the historical UPDATE boundary; a separate controlled5.5second callback delay does reach UPDATE, emits one private bounded receipt and leaves exact product/store/audit state unchanged. Main measured5507ms total/5504active,110selected. A distinct10000-product save plus audit/control readbacks completed453ms with10000correct before/after entries and unchanged price/stock/foreign controls; this is isolated CI, not production latency or scale acceptance. Pure/mixed/omitted flag privacy and broken-log-sink behavior were checked. Initial41194830277 was4843PASS/1own over-specific assertion FAIL/0SKIP; superseded41195857048 was CANCELLED, never whole-run PASS. Exact scoped evidence is retained in CHECKPOINTS/EVIDENCE/pos-bulk-permission-timeout-20261031/receipt.json.

Newer authoritative bound incident is already assigned in claim3353/maina1ecfe7e and CHECKPOINTS/CHANGES/2026-10-31-inventory-bulk-pos-price-large.md: retained owner reports live Διαδόχου ALL/YES failure on6739total products (6731active displayed,141enabled at its read), P2028 at11:19:36UTC after7086ms; user confirms100-selected saves, with two retained receipts11:20:12/11:20:59. These newer measurements belong to that owner, not a new test by this page or an individual payload reconstruction of the earlier10:27/10:28 errors. Existing small LAB PASS and successful100s remain protected; no actual ALL or stock/financial PASS inferred.

Ownership reconciliation: ΑΝΑΛΗΨΗ ΑΠΟ fix/pos-bulk-permission-timeout-20261031 — ASSIGNED fix/inventory-bulk-permission-large-20261031 for the unified remaining behavioral correction/release/acceptance, under existing3353/3354. Diagnostic page performs no further runtime edits. Receiver's candidate3354 f3a201f9 passed all five CI jobs41197177245; receiver itself reconciled main diagnostics in2b37c531aa126070470e146c0d61533233b96557, with post-integrationCI41198064459/job124528429843 SUCCESS4847server+8backup/0FAIL/0SKIP and all five jobs green. Receiver merged3354 as2d80052bf2e4c09417afd7f4e0b7150114707db6; this page observed that merge and did not initiate it. Read-only review confirms the permission-only SQL/update/audit path,20second scoped budget/2second lock wait and Greek409 mapping preserve mixed/default behavior and bounded error evidence. The native callback probe was correctly moved to the unchanged mixed path; it must not require the repaired pure path to retain old P2028 behavior. No separate integration patch or parallel implementation was published by this page.

The optimized writer is now technically released in common runtime42ae4a3db371943fb0109aa815fac8a1b6bd9f33, qualified by full mainCI41199931951/job124534437975 SUCCESS4862server+8backup/0FAIL/0SKIP and all five jobs green.

Its two production helper blobs exactly match the reviewed3354 implementation. Ordinary guarded deployment41201059265/job124536843141 pinned42ae at12:26:59UTC; Renderdep-dbitt4s9v7es738j9bc0 became LIVE12:32:12UTC and the guard verified exact healthy42ae12:32:24UTC. Independent public HTTP200 at12:33:48UTC returned oktrue/exact42ae. The current main8K regression and separate10K save/audit/control readback426ms both passed; none is a real-store scale or financial acceptance claim. Intermediate cancelled main runs were not counted as PASS; no deployment guard or CI requirement was bypassed.

Single next action remains with3354's retained owner: one separately identified hosted permission-only acceptance with fresh before/after/control records, followed by any real business action only under the original user intent and fresh measurements. Preserve real141/100-success history; never replay a failed or successful real ALL action merely as a diagnostic. Actual large-catalog/physical/full-capacity acceptance remains OPEN/NOT TESTED by this page. This receipt removes this page's duplicate pending block by transfer, not by functional PASS; receiver's LARGE CATALOG assignment/manual limitation remains authoritative until new evidence. Prior shift-reader3333 delivery and all other owners are unchanged.

31/10/2026 — INVENTORY-BULK-POS-PRICE-01 — IMPLEMENTED / AWAITING CI AND LAB

Owner work/bulk-pos-price-edit retained. Before-source claim PR3330/head3596cd18/full docs CI41188189442 SUCCESS merged985d5cff before source. Added existing allowPosPriceChange to Inventory bulk as KEEP/YES/NO; selection defaults to selected rows. Explicit ALL mode covers every Product associated with selected store, including inactive/all pages/without search filters, and server rejects every other operation in ALL mode. Same company Product metadata as existing checkbox, disclosed in the form; no StoreProduct/price/stock/fiscal/role/schema writes from permission-only requests. Bulk entry can open with no selected rows for ALL; selected mode still refuses empty selection. Existing store-scoped role/module checks, locks, replay receipts and atomic Audit remain; batch flag update records exact per-product before/after. Replaying ALL returns original receipt without touching newly added products. Existing POS product flag plus operator changeRetail checks unchanged.

Local Node20.20.2: focused7PASS/0FAIL/4nativePostgreSQLSKIP and frontend build/TABLE_SERVICE invariant PASS. Actual mounted Archive exercises legacy KEEP price save, selected YES/NO, empty selection refusal, ALL/KEEP refusal, hidden stale category omission and existing VAT/merge/store-switch behavior. Initial mounted test selector accidentally clicked readonly delivery checkbox; corrected to row-selection column, no production defect inferred. New native test covers603products/multiple pages/inactive, company/store controls, concurrent replay, changed-payload/actor conflict, exact audit, old-client omission, POS enable/denial, newly added product replay exclusion and final-Audit-failure rollback. Existing native bulk/SET fixtures add existing flag column only. Native tests await full CI; local has no isolated PostgreSQL. No LAB/business writes, new functional/manual PASS, sale/payment/stock/fiscal action or accepted transaction replay. Previous bulk/permanent-price/manual PASS and other owners retained. Single next: full exact PR/main CI, ordinary guarded deployment/exact health, then fresh measured synthetic LAB permission-only save/readback/control (no sale).

31/10/2026 — INVENTORY-BULK-POS-PRICE-01 — ASSIGNED / NOT TESTED

Owner work/bulk-pos-price-edit. User explicitly requested existing product checkbox allowPosPriceChange in Inventory bulk correction, enable/disable selected products or all products of the selected store. Independent additive subtask; existing INVENTORY-BULK-VAT-01, merge, POS permanent-price and all other owners retained. Baseline main873d4ea. Existing single-card boolean and permanent-price server check confirmed; bulk schema/UI omit it. Existing15Oct permanent-price LAB PASS and bulk UI/22Oct bounded VAT PASS remain protected; new boolean bulk behavior NOT TESTED.

Plan: optional strict boolean with KEEP omission; same transactional selected-company/store membership, authorization, idempotency and before/after audit. Explicit all-store-products selection is limited to this permission alone, including all pages, no price/stock/VAT/active/SET write. Existing checkbox is company Product metadata, disclosed in form; existing role permissions remain required. No schema, migration,

payment, fiscal or production data diagnostic action. Require mounted UI, isolated transaction/tenant/replay/rollback and existing POS denial regressions, full CI, exact guarded release and measured virtual LAB acceptance before claiming functional PASS. Read AGENTS/current registries/manuals and relevant15Oct bulk/permanent-price checkpoints/history before source. Next: merge this claim before source.

31/10/2026 — CASH-EXCEL-DOWNLOAD / LIMITED LAB PASS

Retained cash owner codex/cash-chat-reconciliation-20261026, continuation docs/cash-excel-download-pass-20261031. At 09:17 UTC (11:17 Athens), authenticated Platform SuperAdmin selected ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ, full day27Oct2026, and used the existing Έλεγχος με επανυπολογισμούς → Excel με επανυπολογισμούς. The actual completed browser download returned35275bytes; ZIP integrity and all9worksheet XMLs read successfully. Original MAIN/LAB POS2 row a3494bb3-61cf-447c-9707-27311f35708c remains cash0/card0, no manual approval. Automatic shift/employee/day sheets each retain one calculated zero result; original manual employee/day sheets remain empty, original row remains unreviewed and original metadata pending1 is preserved. Report worksheet agrees with visible canonical text. No new transaction, review, settings, allocation, email or stock action. Independent financial/stock before-after reconciliation and native Excel visual opening NOT TESTED.

This closes only the prior cloud completed-download failure for this exact current browser/synthetic report. The29Oct failed downloads remain historical; root cause/reproducibility on other devices is unknown. Nonzero completed attribution, actual real-store/full email acceptance, provider-original Netlink/safe/refill proof and durable per-issue replies/closure/continuation remain OPEN. No runtime change, no claimed universal browser/physical PASS. Evidence CHECKPOINTS/EVIDENCE/cash-excel-download-20261031/receipt.json. Current deployed revision was not independently recorded at action time; do not substitute repository HEAD.

31/10/2026 — POS-OWNER-SHIFT-READER-20261030 / DELIVERED / LIMITED LAB READBACK PASS

Bounded reader follow-up completed by retained fix/owner-shift-reader-20261030; delivery docs/pos-reader-delivery-20261031. Source3333/cf81ead/merge4285cb4, exact full41189607859 all5SUCCESS4,772server+8backup/0FAIL/0SKIP. Independently observed current-main9644 full41190777427 all5SUCCESS4,779+8/0/0 and guarded release41191604346 verified exact9644 healthy; owned blobs unchanged. Actual31Oct12:13–12:16Athens read-only SuperAdmin/LAB old #865e6a48 one sale1.40 and control #3a186861 six/net2.20; journals, current categories, payment projections, stored amounts and freshly reloaded15-row list agree. No new business action; no hosted raw DB/stock delta or whole capacity/physical PASS. Initial Chrome failures/merge/retry history retained in checkpoint. Completed reader pending subtask removed; wider incident/capacity and other owners remain OPEN. Manual docs/manual/shift-reports/PASS.md and evidence owner-shift-reader-20261031 updated; central PDF regenerated with this receipt. Later personal-PIN work remains another owner's scope, not covered by this9644 reader acceptance.

Checkpoint CHECKPOINTS/CHANGES/2026-10-30-owner-shift-reader.md; newest owned status supersedes historical source/reader OPEN entries below only for this bounded reader.

31/10/2026 — POS-OWNER-SHIFT-READER-20261030 / NATIVE EQUIVALENCE VERIFIED / COMBINED CI REQUIRED

Same retained owner fix/owner-shift-reader-20261030. Initial exact d95b8bac CI41188314153/job124499889574 executed4,763PASS/2FAIL/0SKIP. Both failures were unchanged Chromium startup/Target.createTarget timeouts in DAILY1920/device-setup before UI assertions. Actual original-versus-candidate native PostgreSQL identity, complete registered detail output, source-table digests, historical isolation and synthetic scale all PASSED unskipped. Plan materialization1 versus original correlated141loops; synthetic32.443ms original/1.573ms candidate is not hosted timing. Full local Node20 server workspace4,012PASS/0FAIL/311infrastructureSKIP; initial root-directory invocation was invalid fixture setup and retained only as history.

One retry of only failed job124499889574 started as124502130180; before completion, independent main changes produced real three-registry/PDF merge conflicts. Reconcile on current main preserving all other owners and immutable runtime/test blobs406fcfb52/f1a06000e; new exact CI supersedes the interrupted retry, not an assertion waiver. Relocate only this owned status within the existing incident section so future unrelated top prefixes merge independently. Preserve current main canonical PDF in this source-only/non-PASS PR to avoid repeated cross-owner regenerated-PDF conflicts; regenerate with the delivery/hosted receipt. No completion/manual/PDF-synchronized PASS is claimed here.

No code/test/oracle/threshold change, production action, provider/business replay or capacity acceptance. Next: complete exact combined full CI, ordinary guarded main release and read-only existing LAB historical/control acceptance; publish final receipt and PDF. Existing nine-column lock prevention protected; broader owners retained.

31/10/2026 — Interrupted POS incident continuation resumed

ΑΝΑΛΗΨΗ ΑΠΟ «Έλεγχος σφάλματος POS» / fix/pos-lock-convoy-20261030 — ASSIGNED fix/owner-shift-reader-20261030, resumed by the explicitly requested receiving conversation. Same bounded scope and protected evidence below; no parallel source work. Read-only production health31Oct returned ok:true/revision4e52eec9bc610524e39063dfc77323b521a72e06. Original claim PR3311 exact3abe09b CI41056655940 SUCCESS but remained unmerged; attempted merge405 revealed additive registry conflicts after other owners advanced main. Resolve by retaining current main registries byte-for-byte after this incident prefix. No runtime change or new LAB PASS. Next: green/main reconciled claim before source.

30/10/2026 — POS-OWNER-SHIFT-READER-20261030 / ASSIGNED BEFORE SOURCE / NOT TESTED

Retained incident owner fix/pos-lock-convoy-20261030; continuation fix/owner-shift-reader-20261030. User explicitly approved the remaining analytical shift report optimization on30Oct2026. Existing9column lock prevention3301/06e27daf and native65statement PASS remain protected. Other cash/financial/lifecycle/security/capacity owners are unchanged.

Read-only source cause: owner-shifts.js GET /:sessionId/detail scans completed store sales and repeatedly tokenizes the same full-store StoreTransaction descriptions in a correlated evidence UNION. Prior actual incident reader remained active for many minutes. No new timing claim from current inspection. Preserve historical12Oct limited LAB PASS/manual, exact ledger token matching, exclusion of original-sale reversal references, valid same-company/store session evidence, audit links, unique-session ambiguity exclusion, mixed-payment once-only sale identity, historical rows outside time windows and all existing response/financial fields/role/session guards.

Exact bounded source after this claim green/main: server/src/routes/owner-shifts.js ONLY selectedSales read SQL; NEW server/test/owner-shift-reader-equivalence.test.js; existing server/test/owner-historical-shift-isolation.test.js ONLY additive original-versus-candidate/native no-write/full-response regressions if necessary. No schema/bootstrap/index/pool/config/global timeout/auth/permissions/writer/UI or unrelated projection change. Candidate materializes scoped ledger

token evidence once, unions valid audit evidence and groups one unique session per sale before joining completed same-store/company sales. No guessed date cutoff, row cap, token normalization change, new sale assignment or conflict relaxation. No production EXPLAIN ANALYZE of the old unbounded reader or business replay.

Required engineering: frozen original SQL versus candidate actual PostgreSQL fixture equality for every selected sale ID and complete registered detail output, mixed/duplicate/reversed/negative references, null/punctuation/prefix/foreign/malformed session evidence, multiple terminals/closed/old sessions, conflicting audit/ledger evidence and no evidence. Native before/after source table digests must match. Synthetic scaling/EXPLAIN evidence establishes work reduction without flaky wall-clock-only PASS; full exact PR/main CI and ordinary guarded release/exact revision required. Read-only hosted report acceptance remains separate and must be honestly scoped; no new business/manual PASS from CI alone. Original SQL oracle stays frozen in the test, not a candidate-derived oracle. No actual sale/payment/stock/fiscal or accepted invoice replay.

Checkpoint CHECKPOINTS/CHANGES/2026-10-30-owner-shift-reader.md. Single next action: green/main this exact before-source claim, then implement bounded query and native equivalence proof. Whole performance/capacity scope remains OPEN.

AI-OWNER-WALLET-01 — 31Oct2026 / SAFE REVIEW EVIDENCE SOURCE / AWAITING FULL CI AND HOSTED DIAGNOSIS

Before-source claim3325/c6eeef778f583fe71f3acaa9be12dc4f2d44d9ba passed docsCI41184296116 and merged785923d8bd2647c1d1de1bd6c44cdb59d106a77d before runtime edits. Same retained owner/continuation fix/ai-wallet-sol-review-20261031. New hosted Sol incident remains LIVE FAIL, not fixed by this diagnostic source.

Added private bounded usage evidence to existing USAGE_REVIEW audit when an original RESERVED entry transitions to REVIEW. Safe stage distinguishes provider transport/result, usage validation, exact-request bounds and settlement. Allowlisted numeric usage and presence flags, original response/model and accepted model/limits/tariff identity retain diagnostic attribution; arbitrary provider errors, text/output/files, credentials/headers/URLs are not saved. Repository re-sanitizes and writes status+audit in the same existing company/entry lock transaction; duplicate/foreign/settled reviews cannot add an audit, audit failure rolls back REVIEW while preserving original RESERVED hold. Legacy review callers remain compatible. No new schema/table/column/manifest, public API fields or permission.

No change to parser acceptance, tariff computation, cache partitions, long-context/model/bounds guards, model/prompt/output30000, company policy, money/credit/email, retry or successful return behavior. Successful usage still settles once. Historical customer REVIEW entries are untouched; timestamp matching remains insufficient for financial resolution.

Actual local Node20 focused6/6PASS,0FAIL/0SKIP, provider stages/privacy/idempotent sanitization/success/no retry/retained holds. Native PostgreSQL test added for concurrent exact-one audit, original entry/company binding, exact unchanged money/notices/foreign controls, resanitization and audit-write rollback; syntax PASS. Native execution/full PR+main CI/recovery/build/E2E and ordinary guarded installation REQUIRED. No new paid call, invoice upload, LAB/company configuration, funding/business or historical settlement action. Single next action exact full CI/release, then one new synthetic LAB assistant request with fresh private controls to expose the actual incompatible usage field. Only then bounded demonstrated correction and separately measured settlement acceptance. Checkpoint CHECKPOINTS/CHANGES/2026-10-31-ai-wallet-sol-review.md; common registers/PDF synchronized. No functional/manual PASS claim.

AI-OWNER-WALLET-01 — 31Oct2026 / SOL INVOICE USAGE REVIEW / LIVE FAIL / ASSIGNED BEFORE SOURCE

Retained owner feat/ai-owner-wallet-20261022; bounded continuation fix/ai-wallet-sol-review-20261031. Owner explicitly requested correction after successful invoice-assistant calls are reported as usage-needs-review despite funded customer wallet. New incident is LIVE FAIL for gpt-5.6-sol metering/response delivery, not a reversal of measured GPT-5/Azure or configuration-switch PASS. Per-customer pricing request is paused. Current main4e52eec9bc610524e39063dfc77323b521a72e06 and history since switch receipt e5d676d reviewed; no wallet source changed in the intervening FTEXT/inventory commits. All unrelated owners/scopes preserved.

Read-only provider Logs shows a completed original Sol invoice answer and input/output usage while matching-time customer entries have REVIEW/zero final charge/usageNULL. Time matching alone is not immutable response-to-entry attribution. Neither final supplier cost nor a specific parser failure has been proved. Do not publish customer document content, finances, identifiers or provider payloads. Existing parser enforces exact cache-write lifetime partition, model alias and input/output reservation bounds; provider wrapper currently collapses every post-call validation/transport/settlement failure into generic REVIEW without safe diagnostic evidence. Official current prompt-cache reference confirms both write lifetimes and no additive double charge; absence of measured write data must not become an invented zero or guessed rate.

First bounded causal change after this claim is green/main: preserve a strict allowlist of numeric provider usage, response/model IDs and stable failure-stage/reason in existing REVIEW audit detail, without prompts, output, files, secrets, headers, URLs or arbitrary errors. Preserve fail-closed hold/settlement and existing access; avoid schema/new table or lifecycle changes. Add reproducible provider/parser tests and actual SQL audit/rollback coverage. Then obtain exact safe usage from ONE separately identified NEW synthetic hosted LAB assistant call on exact green/guarded installed revision; no customer invoice replay. Use that observed contract to correct only the demonstrated incompatibility, require focused/native/full PR+main CI and ordinary guarded release, and verify exact settlement/debit/zero remaining new hold on a separate new synthetic LAB request. Do not label diagnostic source CI as functional PASS.

Protect existing Owner, Azure/GPT-5, cache-write/long-context partition, original price/model/context/output30000 request, company switch, authorization/license/lifecycle/idempotency and no-paid-retry behavior. No weakening cache/model/bounds validation, invented usage, automatic refund, manual financial SQL, new funds, email, payment, stock, invoice approval/finalization, fiscal or unrelated FTEXT change. Historical REVIEW entries remain immutable pending exact provider/reference reconciliation; no inference from timestamps alone, no repeated paid generation to recover missing evidence. Any safe historical resolution needs separately bound original proof and exact once-only audit.

Before each LAB write/provider action capture private wallet/entries/audit/notices, selected-company/store and unaffected foreign/sibling business controls. Terminal Cloud Chrome, SuperAdmin; shift/SKU/quantity/payment N/A to configuration/read-only synthetic invoice test. Restore LAB master/invoice OFF after measured action while preserving money/history. Publish actual PASS/FAIL/NOT TESTED checkpoint/manual/common registers/PDF green/main. Whole wallet/Owner-session/email/other-model residuals remain assigned/open. Checkpoint CHECKPOINTS/CHANGES/2026-10-31-ai-wallet-sol-review.md. New source NOT IMPLEMENTED; single next action green/main claim then safe diagnosis and bounded fix.

31/10/2026 13:03:56 Athens — FTEXT-RESILIENCE-01 / fault-recovery continuation ASSIGNED BEFORE SOURCE

Retained recovery page owner fix/ftext-payment-resilience-20261030; continuation branch fix/ftext-fault-recovery-20261031, explicitly authorized by owner to start the remaining comprehensive correction and isolated CASH/CARD fault checks. Preserve scoped printed CASH, original-cashier NO, reviewed CASH first-line rejection/resumed trading and activated fresh-readiness LIVE/USER PASS, all other owners and all RBS behavior. Current read-only health is oktrue/revision802d570dd0048558b53ee77ec753d2252210bd63; main2142d10 includes subsequent unrelated bulk POS permission timeout fix. Existing current FTEXT Node20 audit84total:77PASS/0FAIL/7 native environment skips. This is engineering evidence only; no new physical/financial PASS.

Independent phase1 subtask FTEXT-FIRST-LINE-AUTO-03: authenticated current device may deliver its exact original intent/report/RES through the existing read-only late-evidence channel for a single-line CASH code2 OVER LIMIT rejection of exactly the first S command. Verify current company/store/POS/device/token/settings/lifecycle/serial, exact command/amount, original immutable stored result/hash, raw file hashes and absence of sale/final receipt/VOID/conflicting release. Support both the existing exact4-property unknown report and the exact6-property originally reported code2/rawResultHash shape. For the latter preserve raw report identity while checking the canonical typed original result hash; do not relax the4-property late-success verifier. Append separate device-provenance application-release evidence, with no fabricated human no-receipt/readiness/bank/cancellation attestation, no fiscal resend, sale/payment/stock/finalizer or schema change. Manual SuperAdmin review contract and all CARD/NO/YES/strict-POS safeguards remain unchanged. No automatic generic timeout, other error, multi-line or CARD rejection release.

Bounded source after this claim is green/main: original-file verifier and CASH first-line release service; device late-evidence routing/ack; a scoped POS notification of the verified OVER LIMIT after application release (other outcomes unchanged); Windows read-only file reader and production loop ack; synthetic pure/HTTP/native PostgreSQL/Windows fault coverage. No production SQL writes, new pairing, register programming, VOID or deliberate live outage. Test original4/6 reports, malformed/canonical/hash/foreign/current scope denial, error-before-first-onlyS boundaries, concurrency/replay/zero business writes, retained code0 CASH/both CARD formats, original cashier decisions, immutable local files, lost acknowledgements and restart without duplicate fiscal publication. Exact full/native/Windows CI, ordinary guarded release, then matching Windows package before any new physical acceptance.

Remaining fault matrix: driver closed/stale readiness before checkout; lost heartbeat/API/report acknowledgement; delayed original receipt with CASH and both CARD modes; browser/connector restart with durable original intent/report; original-cashier NO/YES; closed-shift/idempotency/control stock. Existing covered paths are inspected rather than recreating accepted real transactions. Lost one-shot claim response before durable local intent remains a separately held ambiguity requiring a bounded protocol design; do not redeliver DISPATCHED or infer no payment. First-line auto release, fresh physical fault/restart/card acceptance are NOT IMPLEMENTED/NOT TESTED at this claim. Whole FTEXT stays OPEN. Checkpoint CHECKPOINTS/CHANGES/2026-10-31-ftext-fault-recovery.md. Single next action: green/main this retained-scope claim, then implement phase1 and isolated fault matrix.

31/10/2026 — FTEXT-RESILIENCE-01 / selected Windows protocol and fresh readiness LIVE PASS / residual OPEN

Retained owner fix/ftext-payment-resilience-20261030. Installed9644e95809ac0f0f1a80b1125dccfbed53aa3bed independently reconfirmed healthy31Oct10:39UTC; exact source/full/native/Windows and ordinary guarded release evidence remains in the preceding recovery receipt. Original CASH rejection recovery/resumed trading PASS3343/main11a4f174 remains protected; no repeated sale or fiscal recovery by agent.

New read-only live evidence supersedes the10:20/10:27 inactive-readiness observation: selected Rizareio device ACTIVE, current authenticated heartbeat, ftextReadinessRequiredtrue. Distinct same-register

STATUS evidence checked10:39:18UTC/received10:39:20UTC and checked10:40:28UTC/received10:40:30UTC has code0/oktrue/fiscalExecutionfalse, different request identifiers/report hashes, matching configured serial. At10:40:44UTC latest status age16seconds and heartbeat age1second, within the deployed readiness contract. Actual selected-POS Admin refresh then displayed Connector Connected and «Έτοιμη · πρόσφατος αυτόματος έλεγχος», successful STATUS12:41:30Athens. These observations confirm current selected-PC readiness protocol activation and fresh nonfiscal register communication; no stale26Oct STATUS was used as fresh evidence. Raw identifiers/hashes remain private. Prior package delivery: official v1, all7 module bytes verified, unchanged settings/pairing, no credentials or automatic startup.

Scoped LIVE PASS: updated Windows readiness protocol is active for this POS, fresh communication accepted and readiness shown separately from heartbeat. New checkout/claim readiness gating source is installed. No real stale/offline denial, deliberate driver/network interruption, late CASH/CARD receipt or restart acceptance transaction was performed here; these remain NOT TESTED. No new sale/payment/stock/fiscal action initiated by agent; no new financial-delta PASS inferred from this read-only readiness observation. Lost one-shot claim before durable local intent and automatic first-line error2 device release remain outside the accepted scope. Whole FTEXT-RESILIENCE-01 stays OPEN for those physical residuals; this is not universal hardware certification. Manual docs/manual/ftext/PASS.md updated with this limited observation.

31/10/2026 — FTEXT-CASH-FIRST-LINE-02 / scoped recovery and resumed CASH LIVE USER PASS / CLOSED

Retained owner fix/ftext-payment-resilience-20261030; claimmain7154c9c preceded source. SourcePR3327 head6c7bcdee passed full41188630172/all5, native41188630165/30PASS0FAIL0SKIP and Windows41188630163. Merged aec27d6 passed exact main41189565515/all5. Newer owners runtime merges required a current integrated release: final9644e95809ac0f0f1a80b1125dccfbed53aa3bed passed forced-full main41190777427/all5. Ordinary guarded41191604346 SUCCESS; Render dep-dbirtcm7bikc73dn0rh0 live31Oct10:12:53UTC; independent health200/oktrue/exact9644. Earlier AEC guard safely declined newer production sources. No bypass or direct production SQL write.

Selected Rizareio original single-line CASH100 first-S error2/OVER LIMIT recovered through the installed same-POS SuperAdmin original-three-file/no-receipt form. Before10:14:04UTC: original request REQUIRES_CHECK, saleIdNULL, original sale count0, releaseNULL, original shift OPEN CASH6/51.30 CARD3/25.90, affected SKUstock0/movements0. One app release recorded10:15:56.482UTC; after10:16:11UTC: same original resultHash/status and saleIdNULL/sales0, same shift OPEN CASH6/51.30 CARD3/25.90, stock0/movements0. Separate proof retains exact original files/hash and actor/time; mode VERIFIED_FIRST_LINE_REJECTION/readinessVerifiedfalse. Admin visibly shows no pending payment for this POS. No new fiscal command, sale/payment/stock entry or cash/card movement. No sibling terminal exists. Owner subsequently confirmed resumed trading and a new printed receipt. A distinct later CASH100 request completed10:17:20UTC exactly once with one CASH100 payment and one movement of -1 for the affected item. Read-only10:20:36UTC reconciliation: old rejected attempt still saleIdNULL/sales0/original hash retained; CASH7/151.30 (+1/+100 from the new sale), CARD3/25.90 unchanged, affected stock-1/movements1. This is scoped recovery/resumed-CASH LIVE and USER PASS, not physical cancellation/readiness or bank outcome. Original identifiers/raw files remain private. Manual docs/manual/ftext/PASS.md updated in this receipt.

User reports technician changed hardware limits; no maximum value or independent physical limit acceptance by agent. No repeated purchase for diagnosis. FTEXT-RESILIENCE-01 remains OPEN: prevention source is installed; updated official selected-POS package delivered with all7 embedded module bytes verified, same settings hash/pairing, no credentials or automatic start. At10:20:34UTC the device heartbeat is current but readinessRequired remains unset and last STATUS is26Oct; the new automatic readiness protocol is not yet activated. User was given the updated package/close-old-connector/option3 steps. New-protocol Windows execution, fresh STATUS/delayed CASH+CARD/network/restart acceptance remain NOT TESTED. Lost one-shot claim before durable local intent remains held for authorized review. Automatic first-line error2 device release is not implemented; this PASS covers the narrow reviewed original-file form. Prior scoped printed CASH and original-cashier NO recovery PASS remain protected; whole FTEXT is not

universally accepted.

31/10/2026 — first-line CASH rejection / historical before-source LIVE FAIL / superseded by scoped recovery above

Retained owner fix/ftext-payment-resilience-20261030, new independent subtask FTEXT-CASH-FIRST-LINE-02. Original cashier reports no printed receipt for a new single-line CASH100 attempt. Supplied original report matches stored immutable generic report hash; original RES is padded code2, OVER LIMIT, InputLine exactly the first/only S line for100.00/department3. No final receipt/QR/payment result or sale exists. Before08:54:50UTC: original shift OPEN, CASH6/51.30 CARD3/25.90, original SKU stock0/movements0; no sibling terminal exists. Original identifiers/raw files remain private. No fiscal retry/cancellation, sale/payment/stock write or device programming by agent.

Claim before source: bounded same-POS SuperAdmin recovery of an unissued single-line CASH rejection, with original intent/report/RES binding to the exact first S command and specific verified error2/OVER LIMIT only. Append audited application release; preserve original result/hash and require no sale/final receipt/VOID/released conflicts. No inference of fiscal cancellation/readiness or bank outcome. No generic CASH timeout release, no payment replay, no automatic new purchase. Protected prior manual CASH receipt/NO recovery and pending locks remain unchanged. Exact native/full/Windows checks and ordinary release before live recovery. New source NOT IMPLEMENTED; physical/current CASH recovery remains BLOCKED. CHECKPOINTS/CHANGES/2026-10-31-ftext-payment-resilience.md.

31/10/2026 — historical original-cashier NO recovery / scoped LIVE + USER PASS

On installed4e52eec9bc610524e39063dfc77323b521a72e06, original cashier released the same previously recorded NO at08:18:38UTC (10:18Athens) after full reload/Return. Owner confirmed «ξεκίνησε». Original request remains immutable REQUIRES_CHECK/NO/resultHash, no linked sale or payment; separately audited application release is OPERATOR_NO/readinessVerified=false. No bank decline, fiscal cancellation or new readiness attestation is inferred. The current blocking incident is CLOSED; fresh atomic NO interaction and wider prevention remain separate NOT TESTED scopes.

Measured before07:54:56UTC: original sale0, original shift CASH3/45.20 CARD1/12.00, affected SKU stock-3/movements3. After08:23UTC: original sale0 and release present; CASH4/47.20 CARD2/20.60 and original SKU-5/movements4. These changes reconcile to two distinct subsequent owner trading requests: CASH2.00 at08:19:10UTC with one original-SKU movement-2, and CARD8.60 at08:21:49UTC with a different-SKU movement-2. Both have their own completed sale/payment/request identities; neither is the rejected attempt. No transaction repeated for evidence and no agent financial action. No sibling terminal exists; cross-terminal control NOT TESTED. Exact PR/native/main/guarded/health receipts retained in checkpoint CHECKPOINTS/CHANGES/2026-10-30-ftext-reviewed-no-recovery.md and tested instructions in docs/manual/ftext/PASS.md. Whole FTEXT remains OPEN.

31/10/2026 — FTEXT-RESILIENCE-01 / historical source candidate / source now installed; physical acceptance remains OPEN above

Retained independent owner fix/ftext-payment-resilience-20261030. Claim/main4e52eec9bc610524e39063dfc77323b521a72e06 preceded source. Current original-cashier NO integration PR3317 is technically installed: exact PR41182169989/all5 and native41182169971 SUCCESS, main41182846570/all5 SUCCESS, ordinary guarded41183508504 SUCCESS, Render dep-dbiq5hp42hec73b6uv80 live31Oct08:13:44UTC and independent health200/oktrue/exact4e52eec. Today's historical original-cashier NO was released08:18:38UTC and owner confirmed resumed trading, with no original sale. This limited recovery USER PASS is recorded separately; fresh atomic NO and wider prevention are not accepted by that observation. Original unknown/NO/hash/no-sale remains preserved. Previous30Oct scoped CASH LIVE/USER PASS remains closed/manual retained.

Candidate prevention: signed current device polls for its original unknown CASH/CARD receipt; reads immutable intent/report/RES without dispatch; server verifies exact original hashes/CP1253 command/serial/amount/AADE receipt and card format; appends device-bound evidence separately, preserves original result/hash and uses existing atomic finalizer. Operator CARD still requires original-cashier YES after real fiscal proof; strict CARD still needs matching masked POS proof. Released/NO/VOID, foreign/stale config/token/lifecycle, duplicate receipt and closed-shift/stock gates remain protected. Network/API loss retains original files and retries; missing error files no longer get permanently suppressed.

New Windows protocol announces readinessVersion1 on authenticated ping, monotonically activating a selected-device readiness requirement without changing settingsHash or credentials. While idle and no unresolved operation exists, it requests only nonfiscal STATUS every10seconds with2second read timeout and durable existing transport marker. New checkout creation and one-shot dispatch for both methods require successful same-register STATUS received/checked within20seconds plus heartbeat within15seconds. A heartbeat alone cannot renew readiness, and an old launcher cannot downgrade an activated policy. Before updated Windows installation, existing installations retain their previous contract; no silent rollout or new pairing. Existing receipt recovery/finalization uses requireOnline=false and is not blocked by readiness expiry. Admin shows actual readiness separately from Connected. A driver can stop after the latest sample; late receipt recovery handles that race, not a guarantee against hardware/network failures.

Local Node20 complete FTEXT82total:75PASS/0FAIL/7 native environment skips; Work client build PASS. Added actual device HTTP auth/schema/pending-finalization tests; original-cashier late CARD decision tests; real PostgreSQL CASH/CARD concurrent evidence/finalization, closed-shift rollback, one payment/stock movement and control stock; actual installation stale-STATUS/fresh-heartbeat/no-request/monotonic policy checks; native Windows read-only CASH/both CARD modes/retry/no-command tests and production-loop lost-HTTP harness. No local PostgreSQL or Windows5.1 exists; exact native/full/Windows CI remains mandatory. No production mutation or physical sale/STATUS by agent. New source NOT INSTALLED; new package/physical readiness, delayed-result and network/restart acceptance NOT TESTED. Whole FTEXT remains OPEN; no CI-only manual PASS.

31/10/2026 — FTEXT-LATE-CASH-01 / scoped LIVE + USER PASS; recurrence prevention ASSIGNED

Authoritative recovery receipt: installed revision ae844840c16014e0654f4d537c91d085640d446f, source PR3323+3324. Exact PR/main general and native FTEXT CI passed; ordinary guarded release41111814320 reached Render live dep-dbiek259fdbs73c3eem0; independent health200/oktrue/exact revision. On30Oct21:07Athens the original printed CASH receipt was recovered once through the selected-POS SuperAdmin file form. Owner confirmed «πέρασε». Before19:07:12UTC: original shift OPEN, no linked sale, CASH7/66.10, CARD17/127.90, tracked stocks0/0 and zero movements. After19:07:45UTC: one original sale, one CASH5.50 payment and one completion audit; CASH8/71.60, CARD17/127.90 unchanged; exactly one movement per original SKU, quantities -2/-1. Original result/resultHash retained. UI: no pending payment. No new fiscal dispatch, VOID, duplicate sale or direct financial SQL. Raw customer identifiers/files remain private. No other terminal exists in that store, so cross-terminal control NOT TESTED. The scoped late-CASH recovery is CLOSED; whole FTEXT remains OPEN.

ASSIGNED - fix/ftext-payment-resilience-20261030 (this recovery page), owner explicitly requested prevention for CASH and CARD31Oct. Independent new scope FTEXT-RESILIENCE-01: truthful readiness before fiscal dispatch; authenticated read-only late-receipt transport and immutable evidence; exactly-once existing finalizer; clear actionable POS state. CARD/NO PR3317 remains owned by fix/ftext-reviewed-no-20261030 and is not taken over. Preserve original operator-confirmation/strict-card evidence and NO/release boundaries, CASH recovery PASS, all RBS/tenant/device/token/settings/lifecycle/shift/stock gates. A timeout cannot prove no charge or fiscal cancellation. No payment replay or guessed bank result. Source NOT IMPLEMENTED, Windows installation/physical CASH+CARD failure/restart acceptance NOT TESTED. New scope requires exact native/full CI, guarded source release and selected-PC connector update before physical acceptance. Checkpoint CHECKPOINTS/CHANGES/2026-10-31-ftext-payment-resilience.md.

31/10/2026 — recurring CARD NO incident / integration continuation AWAITING FRESH CI

Owner fix/ftext-reviewed-no-20261030 retained. User reports CARD/no printed receipt/customer left without product; read-only original request confirms original-cashier NO, generic unknown, no sale/release/late error. Current production ae844840 lacks PR3317. Head38da804 exact full41081427648/all5 and native41081427661 passed. Ordinary merge405 conflicts against subsequent CASH recovery; resolved only additive registry prefixes/PDF regeneration and combined request-view releaseMode with main pending-selector helper. Retain all late-CASH source/native tests and original NO-only source/native tests, no policy redesign. Fresh exact full/native/main CI and guarded release required; incident remains BLOCKED, no payment/fiscal action/financial SQL by agent. Independent readiness/late-success scope remains separate.

30/10/2026 — NO-only correction implemented / AWAITING NEW EXACT CI

Latest explicit owner instruction supersedes the three-acknowledgement candidate: NO alone returns to the same basket, with no second prompt, readiness check or separate release action. The original outcome transaction now appends the eligible application release atomically; replay/concurrent NO is idempotent. The release is marked OPERATOR_NO/readinessVerified=false and contains no invented no-receipt/no-charge assertions. registerReady remains solely the existing application-lock compatibility predicate, not physical verification. Confirmed fiscal receipts/sales, foreign/stale scope/settings/lifecycle, VOID and YES final-proof safeguards remain protected; no financial/fiscal resend or write is introduced.

Local restored Node20.20.2 complete FTEXT suite74total:67PASS/0FAIL/7 PostgreSQL environment skips. Actual mounted NO uses only its outcome POST, closes immediately and preserves the basket; historical pending return opens no confirm dialog. Actual PostgreSQL regression now tests concurrent atomic NO+release, rollback if fresh context fails, preserved original evidence/no invented physical attestations and next PREPARED request without business tables. Historical pre-upgrade unreleased NO fixtures remain explicit isolated fixture setup to preserve existing late-error/VOID/poll starvation coverage. The new native case runs inside the existing evidence test file, with no workflow configuration edit. The previous head94a2693 green counts are historical and do not accept this correction. Production still uses the accepted incident repair; this NO-only change is not installed and needs exact native/full PR/main CI, guarded release and separate acceptance.

30/10/2026 — Explicit owner correction: NO alone, no second check

The owner explicitly rejected the added checks («Δεν θέλω να έχει τον έλεγχο..στην rbs δεν έχει») and confirmed «Αυτό ακριβώς» after the proposed NO-direct-to-same-basket behavior. This supersedes the three-acknowledgement UX in the previous candidate. Implement an atomic original-cashier NO plus application release for the same eligible unknown/verified-error operator-card request, without another prompt or release click. No no-receipt/no-charge/readiness assertion is invented; the compatibility pending-lock field is explicitly distinguished from physical verification in the release record. Keep actual confirmed receipt/sale, VOID, scope/settings/lifecycle, YES final-proof and idempotency guards. Existing current production incident fix remains accepted; this correction is NOT TESTED and is not installed.

30/10/2026 — FTEXT-REVIEWED-NO-01 / implementation prepared / AWAITING EXACT NATIVE CI AND LAB

Owner fix/ftext-reviewed-no-20261030. Before-source claim PR3316/headc8464d1 passed docs CI41067587761 and merged1b537f0bf3a9e80e48634ae273642bf1af96a989. Implemented original-cashier reviewed-unknown NO recovery with all three explicit acknowledgements, current company/store/POS/settings/lifecycle/serial/card-profile binding, immutable separately audited OPERATOR_VERIFIED_NO_SALE release and no financial/fiscal finalization. Known verified-error readiness flow remains compatible; missing/false review, foreign/stale/strict/confirmed/sale/VOID/UNCERTAIN paths refuse. Scoped polling also recognizes an already released request and clears stale pending UI once while preserving the basket, with no new checkout/finalize/release request.

Local Node20.20.2 focused22total:21PASS/0FAIL/1 native PostgreSQL environment skip; complete Work client build PASS, including TABLE_SERVICE verification. Initial mounted runs lacked esbuild in the first dependency tree; corrected only local dependency resolution, reran existing/new tests without weakening assertions. Actual mounted POS confirms cancelled review makes no write, accepted review sends exactly the three acknowledgements, basket retained/no checkout/finalize and stale released polling recovers without a write. New actual PostgreSQL test exercises original request/decision services, missing/foreign/stale rejection, before equality, concurrent identical release, immutable original fields, no financial tables, no VOID, no historical evidence starvation and a separate next PREPARED request. Explicit FTEXT native workflow now includes this test without removing any existing test.

New review branch is AWAITING real unskipped PostgreSQL/full exact PR and main CI, ordinary guarded release and separate LAB/user acceptance. No production settings/data or physical sale/payment/VOID/test action was issued. Today's prior incident USER PASS/manual remains protected and does not accept this newly implemented path.

30/10/2026 — FTEXT-LATE-CASH-01 / installed recovery, support selector LIVE FAIL / corrective candidate

Retained recovery owner fix/ftext-support-pending-20261030. Source3323/head816fe41 passed exact full PR41103072578 and native41103072048; mergedda557a2 passed exact main41104952321 and ordinary guarded release41106593044/dep-dbie26c9v7es73d81j4g. Independent health200/oktrue/exactda557a2. Recovery has NOT executed and original request remains REQUIRES_CHECK/no sale. This is not LIVE PASS.

Actual selected-POS support inspection returns an older already operator-released CARD before the current unknown CASH, hiding the newly installed form. Correct only the unresolved-selector eligibility: exclude registerReady=true releases before ORDER BY/LIMIT, matching original pending-creation/polling guards. Keep all rows and old evidence unchanged; no financial/fiscal operation or source recovery-policy change. Actual native regression now retains the historical CARD via the real release service, verifies selection of subsequent CASH and foreign-store/POS refusal with before/after row equality. Existing concurrent late receipt/finalization tests retained. Exact new PR/native/main CI and guarded release required. Startup/automatic prevention remains follow-up OPEN.

30/10/2026 — FTEXT-LATE-CASH-01 / candidate implemented / AWAITING EXACT NATIVE CI AND RELEASE

Owner fix/ftext-late-cash-proof-20261030, bounded independent continuation of claim3322/main4a7f724. Owner explicitly prioritized existing printed CASH recovery before prevention. Claim was documentation-only; its CI remained queued at merge and is not represented as green. Production remains unchanged and incident is NOT RECOVERED.

Adds a Platform Super Admin-only selected-POS original-file recovery endpoint and form. Verifies bounded canonical original intent/timeout-report hashes, exact original CP1253 command, current paired device/token/settings/lifecycle, CASH plan/amount, final serial/day/counter/AADE signature amount/time and duplicate receipt. Appends separately audited ftextLateCashReceipt in existing checkoutJson; original result/resultHash remain byte-equivalent, with no resend/VOID/new fiscal command or schema change.

Existing finalizer verifies the effective receipt and posts the original sale/payment/shift/stock atomically and idempotently. Original open shift and existing product/stock/auth/license gates retained. Ordinary receipt reuse protection recognizes late proof too. Parent UI scope/unmount withdraws late reads and responses. CARD/NO PR3317 ownership and all RBS behavior unchanged.

Local Node20 focused9PASS/0FAIL; complete FTEXT66PASS/0FAIL/6 PostgreSQL environment skips after local-only Prisma client generation. Work client build PASS with TABLE_SERVICE verification. Added actual PostgreSQL test in existing native cash file covering concurrent immutable append, foreign/token denial, closed-shift and stock-failure rollback, exact-once original business posting, sibling stock control and reused-receipt refusal. No local PostgreSQL is available, so native acceptance is NOT TESTED locally. Added actual mounted file form tests and HTTP employee refusal; exact full/native CI and main/guarded deployment remain mandatory before production recovery.

Next: complete exact CI, deploy ordinary guarded source revision, refresh before baseline, use same authenticated Super Admin recovery with already supplied files, verify one original sale/shift/payment/stock result and POS unblock; never submit another payment. Startup/preflight/automatic late polling prevention remains subsequent OPEN work.

30/10/2026 — FTEXT-LATE-CASH-01 / ASSIGNED - fix/ftext-late-cash-recovery-20261030

Owner explicitly requests immediate recovery first, prevention afterwards. Independent CASH late-success scope only; PR3317 CARD/NO remains with its existing owner. User-confirmed physical receipt after FTEXT reopened; uploaded original intent/report/result match request, settings and command hashes. Current application remains REQUIRES_CHECK/no sale: LIVE FAIL for late-success recovery, no new LAB PASS. Preserve original result/hash, one-shot dispatch, tenant/device/settings/lifecycle, original shift and unique receipt guards. Implement separately audited late CASH receipt evidence and existing idempotent finalizer only after exact CI/guarded release; no resend, VOID, fabricated fiscal result or direct financial SQL. Checkpoint CHECKPOINTS/CHANGES/2026-10-30-ftext-late-cash-recovery.md. Physical recovery and prevention are NOT TESTED; production unchanged.

30/10/2026 — FTEXT-REVIEWED-NO-01 / RBS-style operator recovery / ASSIGNED BEFORE SOURCE

Owner fix/ftext-reviewed-no-20261030, explicitly requested by Χρήστος after confirming the incident is OK and requiring the RBS-style operator workflow to prevent another prolonged store lock. This is a bounded continuation; all unrelated FTEXT/other-owner scopes and protected CASH/RBS/strict-card/final receipt/idempotency PASS remain retained.

Current difference verified in source: RBS explicitly reviewed NO can end an uncertain application request, while FTEXT requires a bound PAY44/48 file even after original-cashier NO/readiness. A delayed or unavailable original error file can therefore prevent self-service recovery. New owner-requested application review path: only original-cashier NO on the exact immutable generic unknown OPERATOR_CONFIRMATION CARD result, no sale/final receipt/POS payment evidence/VOID, with explicit no-receipt, no-approved-charge and register-ready acknowledgements and current settings/lifecycle binding. Append separate actor/time/result/settings-bound review evidence using the existing operator-release record; retain original outcome and do not assert fiscal cancellation or bank decline. Known verified PAY-error release keeps its existing contract. YES still requires actual final fiscal proof; UNCERTAIN remains held. No automatic fiscal replay, fake sale, payment or stock/finalization action.

Bounded source after this claim is green/main: release service and request view/route, selected-POS readiness UI and focused/native/mounted regression coverage. Require missing/false acknowledgements, foreign cashier/tenant/terminal, stale lifecycle/settings, confirmed/sale/VOID/strict-profile refusal, replay/concurrency and absence of financial tables/writes; native full CI and ordinary guarded deployment before any new LAB acceptance. New reviewed-unknown path NOT TESTED/AWAITING IMPLEMENTATION; whole connector remains OPEN. Checkpoint CHECKPOINTS/CHANGES/2026-10-30-ftext-reviewed-no-recovery.md.

30/10/2026 — Polling incident CLOSED / limited recovery USER PASS

Owner fix/ftext-poll-released-takeover-20261030. Owner explicitly confirmed «EINAI OK» after original-cashier release and resumption of trading on released778d3f05a86e7d6c0b7799405a4a0be6e6ebb26e. Independent read-only observation: original rejected request received bound late ERROR48 at13:47:55.868UTC and explicit operator release at13:49:09.721526UTC, retaining original resultHash/NO/REQUIRES_CHECK/saleIdnull; two later distinct normal requests reached SALE_COMMITTED/code0. These were owner trading actions, not agent-replayed tests. This closes only this polling starvation/recovery incident and the observed return-to-basket flow. No independently measured stock/financial deltas, every hardware error, all terminals or whole connector PASS is inferred. Tested usage is in docs/manual/ftext/PASS.md. Prior engineering receipt below is retained; its pending-cashier note is superseded by this observation. New requested RBS-style recovery is separately claimed, not accepted by this PASS.

30/10/2026 — Polling repair RELEASE VERIFIED / original error evidence recovered / AWAITING CASHIER ACCEPTANCE

Retained bounded owner fix/ftext-poll-released-takeover-20261030. Explicit takeover claim PR3313/main0db9d47 preceded source. Source PR3314 exact head49b4212346951a984040ced335ebe660ed1f2540 passed full CI41062090006 (all5jobs SUCCESS,4692server+8backup PASS/0FAIL/0SKIP) and native FTEXT41062090016/job124084094772 (28PASS/0FAIL/0SKIP). Native regression uses actual PostgreSQL request/decision/release services and verifies the previously starved unknown NO, tenant/device/token/lifecycle boundaries, read-only polling, immutable append and retained pending lock. No source/test weakening or unrelated owner edit.

Squash merged/released778d3f05a86e7d6c0b7799405a4a0be6e6ebb26e. Exact main CI41063917786/job124090634586 all5SUCCESS,4692server+8backup PASS/0FAIL/0SKIP; browser/invariants/native and real HTTP E2E passed. Production service blob e2c81e6d0d899662990cee6655002868115332c4 and native test blob44a188b882ab9e643e859df680cb6de64b780755 match inspected PR source. Ordinary guarded deployment41065647360/job124096330777 completed actual freshness/full-CI checks, rollback checkpoint, pinned trigger and exact-revision wait (none skipped). Render dep-dbi9urm1egvs73fau4vg LIVE2026-10-30T13:47:46.877655Z, deploy_hook, exact778d3f0. Independent public health oktrue/exact778d3f0 verified after rollout. No manual deploy, guard bypass or production SQL write.

Read-only actual-selector comparison before rollout reproduced the cause: old selector chose a historical operator-released direct error; corrected selector chose the current original unknown NO. At2026-10-30T13:47:55.868Z the existing paired physical connector successfully appended late ERROR48 evidence to the previously blocked current request. Independent read confirmed original resultHash, NO decision, REQUIRES_CHECK and saleIdnull retained; operator release still absent at this observation. No package/settings/pairing change, new fiscal command, charge, sale, stock or finalization action was initiated by this page. ERROR48 is not proof of bank decline or fiscal cancellation.

Next single action delivered to the owner: original cashier on the same physical POS refreshes and uses the existing Return-to-basket action only after confirming register/EFTPOS readiness. The explicit cashier release and actual resumed trading remain NOT TESTED/AWAITING USER, not automatically declared successful from code delivery or the evidence append. The whole FTEXT integration and all other owner residuals remain OPEN; protected limited CASH and recovered-NO UI manual PASS remain unchanged. No new manual PASS or broad Gate closure is claimed. This receipt updates the owned checkpoint/shared registers and generated tracker PDF only.

30/10/2026 — Polling repair implemented / AWAITING EXACT CI AND RELEASE

Owner fix/ftext-poll-released-takeover-20261030; explicit takeover merged PR3313/main0db9d47 before source. One causal SQL predicate excludes operator-released registerReady=true rows before oldest-row selection, matching the existing pending-request eligibility. Device/settings/lifecycle binding, original evidence, release/VOID and finalizer remain unchanged. Added actual PostgreSQL regression: historical released direct error then new unknown NO; select current request, reject foreign device/token/company/store/terminal/lifecycle, prove poll read-only, append exact evidence without changing original result/decision/sale and retain pending until explicit review. Only synthetic request table exists, so financial/stock writes fail.

Local Node20 focused:12PASS/0FAIL/1 native PostgreSQL skip (no local PostgreSQL). Initial HTTP test failed because first dependency tree lacked generated Prisma; rerun with existing generated dependencies passed unchanged tests. Native regression/full exact PR/main CI and guarded deployment still required. Physical recovery NOT TESTED. No production or financial action, package/settings change or fiscal dispatch. Existing limited CASH and recovered-NO UI PASS preserved.

30/10/2026 — Explicit owner handoff

ΑΝΑΛΗΨΗ ΑΠΟ fix/ftext-poll-released-20261030 — ASSIGNED fix/ftext-poll-released-takeover-20261030. Χρήστος explicitly authorized this page to take over because the previous page stopped. Preserve the same bounded scope, existing claim PR3313, all protected PASS and all unrelated owners. No production or financial action occurred.

30/10/2026 — FTEXT-POLL-RELEASED-01 / polling starvation regression / ASSIGNED BEFORE SOURCE

Owner fix/ftext-poll-released-20261030 under the current explicit user repair request. Narrow independent regression only; all other codex/rizareio-ftext-bridge-20261022 integration scope remains retained. No customer incident details or identifiers are included here.

Causal source finding: the late-error evidence poll selects the earliest NO/REQUIRES_CHECK row without excluding an already operator-released attempt. A historical released direct-error row without a late-error field passes the SQL filter, fails the subsequent unknown-report binding, and returns null before examining a later eligible original unknown NO. Status/financial outcome of a real incident remains NOT TESTED here; no live acceptance claimed.

Bound source after this claim is green/main: server/src/services/ftext-error-evidence.js plus focused/native regression tests. Exclude already operator-released rows before ORDER BY/LIMIT. Preserve every device/token/settings/lifecycle binding, original result/hash/decision, immutable append, operator release, VOID and finalizer. Test synthetic earlier released direct-error row followed by current original unknown NO and prove only the latter is selected, with unrelated scopes and financial tables unaffected. No schema, Windows dispatch, credential, production data or financial/stock writer change. Existing manual CASH/communication/recovered-NO presentation and strict fiscal gates stay protected. Full exact PR/main CI and ordinary guarded release required; runtime recovery and broader UX acceptance remain OPEN. Checkpoint CHECKPOINTS/CHANGES/2026-10-30-ftext-poll-released.md.

AI-OWNER-WALLET-01 — 30Oct2026 / SUPERADMIN INVOICE SWITCH / SCOPED HOSTED LAB PASS

30Oct2026 12:36–12:38UTC, same retained owner feat/ai-owner-wallet-20261022; completed bounded continuation feat/ai-invoice-billing-switch-20261030. The owner-requested in-app per-company invoice billing switch is installed and measured ON/readback/OFF/readback PASS. This supersedes only this switch's prior SOURCE PREPARED/ASSIGNED/AWAITING LAB notes; whole-wallet Owner-session, other hosted model/tier and delivered-email residuals remain OPEN with the existing owner.

Source PR3310 head6186b9152919d44c737c08a7bae72ae1da04e8d4: exact fullCI41053366088 SUCCESS,4692server+8backup tests,0FAIL/0SKIP; actual mounted form/native PostgreSQL policy/configuration/concurrency/pending-settlement tests and full recovery41053366539 passed. Mergedc029c4ecd6f59f59c0987eb53d9135fc6dfd7d19; exactmain41054814131 independently repeated4692+8,0/0, frontend/build/invariants/HTTP E2E SUCCESS. Ordinary guarded deploy41055982865 actually executed Verify/Trigger/Wait SUCCESS; Renderdep-dbi8sr6i0phs73d69elg LIVE12:34:39UTC on that exact revision. Independent /api/health returned oktrue/exactc029c4e; independent DB waitingLocks0 and LAB pending/review0 before acceptance. No direct deployment bypass, schema/lifecycle/env/price/model/capacity change.

Authenticated native SuperAdmin, Cloud Chrome /platform-admin, explicitly MYWORKSTATION LAB / ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ. Shift/SKU/quantity/payment N/A: configuration-only, no provider/invoice/funding/business action. Fresh private baseline12:36:20UTC: masterOFF/invoiceOFF/emailOFF, balance4964032microEUR/reserve0/version15. ONE save masterON+invoiceON ->12:36:52 version16, exactly one CONFIGURED audit with invoiceEnabledtrue/originalversion15; native active-state text and deselect/reselect persisted both checked. Fresh OFF baseline12:37:11, ONE save restoring bothOFF ->12:37:36 version17, exactly one CONFIGURED audit with invoiceEnabledfalse/originalversion16; native reload/reselection persisted inactive/unselected. Each action preserved money, other wallet fields, all entries/notices, foreign wallet/audit and all three LAB store controls. LAB main Sale90/StoreTransaction134/StockMovement95/PurchaseOrder56 unchanged; sibling controls unchanged. Original real company's master/invoice activation retained and verified by read-only native selection, no save. Real trading business counters are not a global inactivity claim.

Explicit policy now persists in existing immutable CONFIGURED detail ordered by serialized wallet version, with row-locked reservation recheck; old omitted-field clients and legacy fallback preserved. Global kill switches/master agreement, strict SuperAdmin/company checks, existing module licenses, unchanged price/model/output30000 contract and pending-call original-tariff settlement remain protected. No cache-delayed disable, new permissions, credit, receipt, email generation, invoice replay/approval/payment/stock/fiscal action. Earlier real Azure/OpenAI debit PASS retained without replay.

Usage: canonical Platform Admin -> Υπόλοιπα AI πελατών -> explicit Εταιρεία -> Χρέωση AI τιμολογίων -> Αποθήκευση ρυθμίσεων. Actual billing also requires Χρέωση AI στον πελάτη ON. This central company setting applies to all its stores; local non-AI OCR is free. Native readiness blocks unavailable new enables; disabling preserves history/funds. No per-company server env edit required. Known limits: this is configuration/UI/persistence PASS, not new provider/other-model/Owner-session/email/OCR-accuracy acceptance. Screenshot capture timed out; no protocol workaround or action replay; native DOM plus independently measured SQL retained.

Evidence CHECKPOINTS/EVIDENCE/ai-owner-wallet-20261022/invoice-admin-switch-lab-20261030.json; private before/after controls SHA256417a08f0c37e5699101195c375c0d5cf0c36a1b4dafe8864c2370bcf2da7f82d. Checkpoint CHECKPOINTS/CHANGES/2026-10-30-ai-wallet-invoice-admin-switch.md; tested instructions docs/manual/ai-owner-wallet/PASS.md. Completed switch task removed from active pending; unrelated owners and residuals preserved; common registers/generated central PDF synchronized.

AI-OWNER-WALLET-01 — SUPERADMIN INVOICE SWITCH SOURCE PREPARED / AWAITING FULL CI AND LAB

30Oct2026 same retained owner/branch feat/ai-invoice-billing-switch-20261030. Before-source3308/e56ec737 CI41051615933 SUCCESS merged306de6832bb0af4cbabda6736500f4726cc2d5ed before runtime edits. Existing actual invoice billing3304/3305 and all unrelated owners/source preserved; no provider replay, environment/company setting, funding, schema or business action by this source continuation.

Implemented explicit optional invoiceEnabled in the existing strictly validated SuperAdmin PUT and Admin form. Existing immutable CONFIGURED detail stores the boolean and original optimistic wallet version under the existing company row lock; omitted fields preserve prior policy, absence retains legacy rollout.

Policy orders by monotonically serialized wallet version rather than transaction timestamps. Both invoice provider adapters, Owner feature metadata and Admin readiness resolve the same fresh policy; the repository repeats the policy check under its reservation lock, so a late disable prevents a new hold while already-reserved usage still settles. Malformed policy fails closed. Existing global kill switches stay authoritative, original Owner path and all prices/model/context/output behavior unchanged. No table/column or lifecycle-manifest change.

Activation validates exact configured/default invoice models, all token/page rates, both providers/global gate and the existing assistant30000-output allowance before mutation. Invoice-only disable can preserve an already-enabled unchanged Owner/email configuration during a provider outage; it cannot turn on Owner billing or modify email by bypass. Other original readiness checks stay intact. New labelled “Χρέωση AI τιμολογίων” control explains selected-company/all-store scope, saved versus effective master state and preserves disable; existing save flow, no funding controls used.

Actual local Node20 focused37/37PASS,0FAIL/0SKIP across real invoice adapter/request-reservation/cache policy and mounted SuperAdmin form. Mounted test verifies selected-company ON/OFF, no cross-company save, cancelled/late response fencing, missing-readiness enable refusal and available disable. Existing broader local wallet test could not load absent scratch-only notification dependency; no full local-suite claim. Added actual native PostgreSQL/HTTP tests for authorized/unauthorized/invalid/stale/concurrent policy writes, exact single audit/version delta with funds/ledger/notices preserved, legacy omitted-field/fallback, invalid prices/no-write, unavailable-provider disable, late reservation refusal, retained pending settlement, reversed timestamp ordering and corrupt-policy refusal. Native execution and full frontend/PG/build/E2E remain REQUIRED in exact PR/main CI, then ordinary guarded installation.

No hosted new switch PASS yet. Single next action full exact source CI/review, green merge and exact guarded release, then the already-published configuration-only LAB ON/readback/OFF restoration with fresh private controls and no provider generation or accepted invoice replay. Existing target activation remains legacy-compatible until explicitly changed by the owner. Whole-wallet residuals/other owners unchanged. Checkpoint CHECKPOINTS/CHANGES/2026-10-30-ai-wallet-invoice-admin-switch.md; common registers/PDF synchronized.

AI-OWNER-WALLET-01 — 30Oct2026 / SUPERADMIN INVOICE BILLING SWITCH / ASSIGNED BEFORE SOURCE / NOT TESTED

Same retained owner feat/ai-owner-wallet-20261022; bounded continuation feat/ai-invoice-billing-switch-20261030. Explicit new owner request: provide an in-app button/switch so Platform SuperAdmin can enable/disable invoice customer billing for any explicitly selected company without an agent/server environment edit. Existing selected-company activation3305/63c0dea and measured Azure/OpenAI LAB3304/7bb1dc6 remain accepted; never replay their invoices, grants or provider calls. Current mainb836872683d04fee14440c3c3b6f9e605cabd032 includes the other inventory owner's source; preserve every unrelated scope. New switch is NOT IMPLEMENTED/NOT TESTED yet.

Bounded design: keep existing global wallet/invoice kill switches, prices and current company allowlist as legacy fallback. Persist an explicit per-company invoiceEnabled boolean in the existing immutable CONFIGURED wallet audit detail, under the existing company wallet row lock and optimistic version check. Latest explicitly configured wallet version is authoritative; absence preserves legacy behavior, explicit false overrides it. No new table/column, production SQL repair, schema/lifecycle-manifest change or speculative migration. Add a bounded repository policy read; both invoice provider adapters and authenticated Owner/Admin metadata resolve the same durable policy. No cache that delays a disable. In-flight reservations still settle under their original immutable tariff; disabling cannot release unknown holds or alter money/history.

Extend only existing SuperAdmin company configuration PUT and AiOwnerWalletAdmin form. New labelled “Χρέωση AI τιμολογίων” control plus explicit saved/effective state, readiness and existing save button. Global master wallet agreement remains required for actual charging. Validate requested invoice enable against current global gate, actual configured OpenAI/Azure and exact token/page tariffs/default model contracts before mutation. Missing/invalid configuration blocks a new enable; disable remains available. New control changes no pricing/model/context/output/module/email/funds or other-company policy.

Preserve old clients that omit invoiceEnabled, stale-version refusal, selected-company cancellation, strict schemas and current SuperAdmin/owner/tenant authorization. No credentials/secrets exposed.

Required engineering evidence: actual PostgreSQL configure/policy ordering, omitted-field compatibility, explicit false legacy override, concurrency/stale version, one audit/version increment and unchanged money/entries/notices; unauthorized Owner/operator/cross-company refusal; invoice OpenAI/Azure composition with durable policy while original Owner adapter remains unchanged; readiness invalid/missing/duplicate rates fail before writes/providers; mounted real Admin form selected-company/on-off/stale-response behavior. Full exact PR/main CI/native/build/invariants and ordinary guarded exact source installation before hosted LAB.

Required hosted acceptance is configuration-only: fresh private before/after/foreign-wallet and LAB business controls, existing MYWORKSTATION LAB/store ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ, authenticated SuperAdmin, terminal/shift/SKU/quantity/payment N/A. One native save of master+invoice ON with existing funds/email unchanged, read-only reload persistence; fresh baseline then one save restoring both OFF, read-only reload. No provider generation, invoice upload/replay, credit/receipt, stock/payment/fiscal/approval, email or role change. Existing actual debit PASS is retained without replay; scope closes only the new control after measured native acceptance/manual/registers/PDF green/main. If any new FAIL occurs retain it and correct only this scope. Whole wallet/Owner-session/email/other-model residuals remain assigned and open.

Before runtime edits THIS claim must pass applicable CI and merge main. Single next action then implement the bounded audited company-policy path and native/UI regressions. Checkpoint CHECKPOINTS/CHANGES/2026-10-30-ai-wallet-invoice-admin-switch.md. No second page ownership or whole-wallet closure.

AI-OWNER-WALLET-01 — 30Oct2026 / SELECTED REAL-COMPANY INVOICE BILLING ACTIVATED / SCOPED LIVE CONFIGURATION PASS

Retained owner feat/ai-owner-wallet-20261022 / fix/ai-wallet-invoice-request-reserve-20261029. Measured Azure/OpenAI LAB acceptance3304 exact8061eb758db96913ff4a2fc7f39dc0dbb18e1f82 passedCI41044781211 and merged7bb1dc6adcfa2687bfcdec805c45571307674d87 BEFORE real-company rollout. Receipt includes manual, synthetic evidence, both configuration/acceptance checkpoints and synchronized registers/PDF; unmerged3299 was superseded without discarding concurrent owners. Exact merged-mainCI41044967277 SUCCESS. All2341 production runtime blobs at7bb1dc6 equal fully checked/hosted sourcee950d9b; exact fullsourceCI41041653691 and normal guard41042881821 verification remain protected.

Fresh private before11:01:14.233758UTC: selected authorized real company's existing walletON, LAB walletOFF, all holds0; exact wallet/entries/notices/audits and store controls persisted before action. Scoped Render replace:false changed ONLY AI_OWNER_WALLET_INVOICE_COMPANIES from LAB to the already-authorized selected real company; LAB excluded. Existing token/page tariffs, Owner settings/funds/email/modules, all secrets and other companies untouched. No new credit/receipt, customer provider request, real invoice replay, payment, stock, fiscal, approval or email action.

Operation returned APIdeploymentdep-dbi7hv9srm7s73dfpdgg/revision7bb1dc6adcfa2687bfcdec805c45571307674d87; actuallyLIVE11:03:40.120455UTC. Independent publichealthoktrue/exact7bb1dc6. Native fresh PlatformAdmin company selection/readback explicitly states billing covers Owner assistant AND invoice AI, company charging checkboxchecked and both provider configurations present. Private after11:04:29.833658UTC wallet, ledger, notices and audits exactly unchanged from before; both reserves0, LAB stillOFF. Separate database11:03:43UTC0blocked/0otheractive. This is observed LIVE configuration/persistence PASS after measured LAB billing, not a real customer invoice processing or OCR accuracy PASS. No direct Render trigger, source change or guard bypass; deployment provenance is the supported configuration API.

Immediate requested selected-company activation is COMPLETE: future eligible Owner-assistant and invoice OpenAI/Azure calls consume that company's existing AI balance according to the approved immutable50percent-markup schedule. The dated fixed EUR conversion and Azure retail-reference

limitation remain disclosed in the candidate; no account-provider-bill assertion. Native administration retains agreement toggle and money/history. LAB stayedOFF/excluded; its two synthetic jobs remain unapproved, three legitimate charges31816microEUR preserved, no repeated accepted action. Private customer identity/finances stay outside public repository.

Broader actual Owner-session detail, hosted other-model/cache/long-tier/low-empty behavior, actual email delivery and invoice extraction accuracy remainOPEN/NOT TESTED; no whole-wallet/checklist closure or release of the retained owner. No additional provider call needed merely to prove this scope change. Manual docs/manual/ai-owner-wallet/PASS.md now includes the verified activated-state check and limitations. Checkpoint CHECKPOINTS/CHANGES/2026-10-30-ai-wallet-invoice-activated.md; common registers and generated central PDF synchronized. Single next action for this activation: no user action required; normal new invoice usage follows existing review/approval workflow. Future wider tests remain separately identified and measured.

AI-OWNER-WALLET-01 — 30Oct2026 / SCOPED HOSTED LAB BILLING PASS / REAL INVOICE ROLLOUT NEXT

Same retained owner feat/ai-owner-wallet-20261022 / fix/ai-wallet-invoice-request-reserve-20261029. Installed invoice configuration and full source evidence below remain protected. This supersedes installation-pending and expired-auth blockers only, not a functional invoice billing PASS. PR3299 original green docsCI40964635281 was left unmerged during authentication; this receipt reconciles its evidence over current main without discarding concurrent owners.

30Oct existing native Platform SuperAdmin email/password+2FA sign-in completed and positive signed-in page verified. Fresh authenticated LAB metadata: Ownergpt-5-mini ready/hold477085microEUR, invoice OpenAI/Azure configured, main overridegpt-5, FAST/FULL/ASSISTANT default; Azureprebuilt-invoice/API2024-11-30. Exact7 wallet/request-reserve/readiness/route blobs at subsequent guarded source06e27daf and config runtimee950d9b16bb20f3f5666d858a1bc59098bf53e9f equal accepted source. No model/context/output/prompt changes.

Fresh private before-configuration30Oct10:36:39.339298UTC: two existing wallets, four entries, no pending holds; LAB4995848microEUR/chargingOFF/emailOFF/version7. Full selected-customer and LAB ledger/notices/audit/store controls persisted privately. Database10:36:27UTC0blocked/0otheractive. Scoped Render replace:false saved ONLY dedicated AI_OWNER_WALLET_INVOICE_TARIFFS and AI_OWNER_WALLET_INVOICE_AZURE_TARIFFS from the already-approved fixed retail-reference candidate, request-reserve=true, invoice-companies=[existing LAB], invoices-enabled=true. Existing Owner/shared prices, secrets, mail and unrelated keys preserved. No credit, receipt, payment, stock, fiscal, business or

permission write. Approved50percent resale markup/dated fixed FX and Azure retail-reference caveat remain unchanged; no account-bill verification claim.

Environment operation itself returned APIdeploymentdep-dbi76kgae00c73bdthm0/revisione950d9b16bb20f3f5666d858a1bc59098bf53e9f; LIVE10:39:10.514788UTC. Independent publichealthoktrue/exacte950d9b observed. No direct deploy trigger or guard change. The API selected newer concurrent inventory source; exact-mainCI41041653691 MUST complete successfully before any state-changing LAB/provider acceptance. Its source owner remains unchanged. Native fresh LAB readback explicitly includes invoice billing; selected real company remains excluded. Fresh10:40:40.744664UTC wallet and entries byte-identical to baseline, LAB sales90/transactions134/stock95/purchases56 and both other LAB stores unchanged. No new provider call or synthetic upload. Source installed is not measured invoice charging PASS.

Single next action after exact-current fullCI and normal guard verification: refresh/private-record baseline, enable only existing LAB wallet once with no funds/email change, upload only NEW synthetic ai-wallet-lab-20261029-01.png SHA2563aa7688b6426a2744ff266b93fe1a0c39e8498aedeba93cef6a0757503608c94, perform one explicitly requested read, independently reconcile provider usage/immutable tariff/exact debit and zero holds, restore LAB chargingOFF. Native reader is present below its scrollable commercial navigation; clicking the existing stage heading brings its form into view. Old invoices and accepted Owner call are not replayed. Publish precise scoped acceptance/manual/common registers/PDF green/main before adding only the authorized real company to invoice rollout. Actual invoice/Azure/OpenAI debit, real Owner-session detail and broader email/threshold delivery remain NOT TESTED/OPEN. No overall/manual/checklist closure or scope release. Checkpoint CHECKPOINTS/CHANGES/2026-10-30-ai-wallet-invoice-lab-configuration.md.

30/10/2026 — POS-LOCK-CONVOY-20261030 / GUARDED TECHNICAL RELEASE VERIFIED / READER FOLLOW-UP CLOSED 31Oct (LIMITED LAB)

Retained incident owner fix/pos-lock-convoy-20261030. Approved before-source transfer3300/claim9270e8e, CI40964887697 SUCCESS, merged5c725c8 before source. Source3301 corrected head791ee9dfea19b6418daffa217e750034f40ddb9c passed fullCI40966893292/job123774228457:4652server+8backupPASS/0FAIL/0SKIP, all five jobs SUCCESS including actual Chromium/wholesale/native/HTTP and expanded hot-table E2E. Squash merge06e27dafd31708af1f5c433f545fdf4c50914973; exact-main CI40968644468/job123779995184 independently verified4652+8/0/0 and all five jobs SUCCESS. All three source/test blob hashes match the reviewed candidate exactly.

Actual isolated native fixture passed65 original caller definitions (previous56 plus9 exact ledger initialization entries). It reproduces held reader -> queued redundant StoreTransaction ALTER -> blocked third ordinary ledger read, then proves guarded existing-column checks request no exclusive table lock and third reads succeed with the original reader still held. Original missing-schema type/default/nullability/data, concurrent initialization, rollback, dropped-column, search-path and error checks remain. This is engineering PostgreSQL proof, not a real-store financial or all-capacity LAB PASS.

Ordinary workflow_run deployment40969857817 (not a manual deploy) passed full-CI/freshness/rollback/trigger prerequisites and installed Renderdep-dbhsvu1srm7s73dsb14g, LIVE2026-10-29T23:02:13.391804Z (30Oct01:02:13Athens), exact06e27daf. Independent production /api/health returnedoktrue/version0.22.0+kat-test-pos/revision06e27daf. Adjacent read-only database observation:0blocked queries and0active queries older30sec. This verifies technical installation/current availability only, not sustained concurrency or a physical operator session/financial reconciliation. No diagnostic sale/payment/invoice replay/stock/fiscal action, extra manual seed/migration, pool/plan/config/Node/auth/role change. Existing ordinary startup bootstrap hooks are unchanged and still execute during normal deployments; their data effects are not claimed absent.

Delivered bounded prevention: the9 exact already-installed StoreTransaction definitions skip unnecessary ALTER using the current caller client/search path. Missing columns execute unchanged original SQL; unknown ledger columns/changed definitions/multi-action statements keep their original path. No

financial/business query or schema/index definition changed. The demonstrated redundant-ledger-DDL amplification cause is technically prevented for these installed columns; do not generalize to every DDL/slow-query class or whole POS/Gate/capacity acceptance. No new manual PASS or numbered closure; preserve the shared central PDF and all existing accepted business evidence.

31Oct follow-up: the separately claimed original owner-shift Sale reader is delivered by PR3333 with scoped LAB readback recorded in CHECKPOINTS/CHANGES/2026-10-30-owner-shift-reader.md. Wider performance/capacity/security/shutdown remains with its retained owners; no repeat of accepted transactions.

30/10/2026 — POS-LOCK-CONVOY-20261030 / OWNER-APPROVED NARROW TRANSFER / BEFORE SOURCE

ΑΝΑΛΗΨΗ ΑΠΟ codex/pos-startup-loading-20261008 — ASSIGNED fix/pos-lock-convoy-20261030, current POS incident conversation. Owner explicitly approved this named transfer on30Oct2026. Transfer covers ONLY preventing recurrence of the29Oct21:38–21:48UTC Sale reader / StoreTransaction existing-column ALTER lock convoy. Original wider performance/capacity/shutdown owners remain retained; no second parallel owner for this incident slice.

Observed live failure: Sale SELECT with correlated regexp_split_to_array held reader1436962; redundant ALTER StoreTransaction ADD COLUMN IF NOT EXISTS invoiceDocumentNumber queued1436966; eight following reads waited, occupying Prisma pool9 and causing P2024/auth503. Emergency action in this conversation: Render restart requested and positively recorded; guarded pg_cancel_backend cancelled only the exact active reader, with pid/query checks. Readback showed0blocked/0long queries, healthoktrue/ce5ec3a, authenticated transaction reads200. This is bounded recovery evidence, NOT permanent functional PASS or proof of every store's financial state. No diagnostic sale/payment/stock/fiscal or invoice replay.

Before-source scope: audit exact caller definitions; extend existing hot-table guard narrowly for audited StoreTransaction existing columns, retaining missing-column definitions/current-client search-path/no cache and error propagation; substitute only relevant schema execution sites. Identify original Sale query and prepare a separately bounded optimization only after equivalent actual SQL/result/tenant/session proof. Do not guess date limits, truncate history, alter pool/config/paid plan/global timeouts, authentication, permissions, financial writers, schema definitions, indexes or other owners. No production migration/seed/manual source deploy.

Required isolated PostgreSQL proof: held StoreTransaction reader + old redundant ALTER + third reader reproduces convoy under test-only timeout; new existing-column path allows reads without AccessExclusiveLock; missing/dropped-column/concurrent/search-path/rollback/error and original schema/data equivalence. Existing POS shift own/all/company/store/terminal/old-session and financial invariants remain protected. Full exact PR/main CI, ordinary guarded release, exact revision and read-only live lock/API evidence precede any permanent completion claim. CI alone is not LAB PASS. Scoped actual hosted acceptance remains NOT TESTED. Broader100store readiness and Node security release remain separate; preserve its agreed timing.

Checkpoint CHECKPOINTS/CHANGES/2026-10-30-pos-lock-convoy.md. Publish claim green/main before runtime edits. Single next action: merge this claim after checks, then implement audited bounded guard and causal native regression. No new manual/numbered PASS.

29/10/2026 - CASH-AUTOMATIC-RESULT-13 / LIMITED LAB PASS / CLOUD DOWNLOAD OPEN

Retained owner codex/cash-chat-reconciliation-20261026. Source #3284 exact6b2e2e1 full CI40956722742:4613server+8backup,0FAIL/0SKIP; merged3db98a4. Integrated main69198a7 exact fullCI40959327048:4634server+8backup,0FAIL/0SKIP. Normal guarded deploy40960468909 verified exact69198a7 healthy. Later main changes through43048bb are documentation only; the six owned runtime files are unchanged from3db98a4. No forced release, schema, permission, financial, settings, provider or real-mail action.

Actual read-only desktop Chrome/Platform SuperAdmin acceptance29Oct, after21:52:53UTC (23:52Athens), recorded in CHECKPOINTS/EVIDENCE/cash-automatic-result-20261029/receipt.json. LAB store cmtpopbgo000trhb5ng9ytiru / ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ / operatorLAB POS2 / MAIN. Existing27Oct closed row originally cash0/cards0 and manual pending1: refreshed report now produces automatic cash0/employee0 without CONFIRM, human signature or remaining manual gate. Clipboard exactly matches canonical text. Actual owner-email preview opens the canonical automatic result as a prompt; it was dismissed, never sent. Existing29Oct row preserves original shortage9.40EUR/cards0 and remains pending the next close, outside calculated totals. N40CONTROL29Oct remains rows0/cash0/cards0 before and after. No transaction, stock action, allocation, approval, revoke or financial input was repeated. Full raw stock/transaction-count deltas were not measured in this read-only UI batch.

Cloud workbook download is NOT PASS: both the pre-source baseline and installed-source export displayed the created toast, but the browser download event failed and no completed workbook file was obtained. Workbook construction, canonical text and separate employee/day shortage/surplus have native/unit CI proof; this is not current live completed-download proof. The attempted chrome://downloads diagnostic was blocked by browser URL policy; no workaround was attempted. Root cause is unverified; do not label an application defect or restore whole-XLS PASS from the toast. Keep current transport/user-device acceptance OPEN. Historical28Oct export PASS is dated, not a universal current-browser claim.

Remaining OPEN under the same owner/#3243: verify completed download through the ordinary HTTPS app on a supported/user browser; if reproducible, claim a bounded diagnosed client/download fix before source edits. Live nonzero cash attribution, real delivered email, actual real-store acceptance, full physical/bank/safe/refill/Netlink source proof and durable per-issue replies/closure/continuation are not covered by this limited PASS. Do not repeat the accepted zero-row read/copy/preview or any earlier transaction merely to fill these gaps. Do not create Estia or any other store. Manual docs/manual/cash-control/PASS.md, active, tracker, pending and central PDF are synchronized in this receipt PR; until green/main this administrative receipt is pending.

29/10/2026 21:52 UTC — CENTRAL-BACKOFFICE-ACCESS-01 / INSTALLED, READ-ONLY UI OBSERVED / AWAITING PERSONAL LAB ACCEPTANCE

Retained owner Rizareio readiness / feat/central-backoffice-access-20261029. Personal-account source PR3280 is installed in healthy production69198a7c2d1b41d1d1dd24ddccf9cfb958dee8fa. Newest full mainCI40959327048 PASS:4634 tests,0FAIL,0SKIP plus backup8PASS, Windows and isolated wholesale/HTTP/browser checks. Ordinary guarded deploy40960468909 succeeded; exact healthy revision observed21:51:12UTC and independently rechecked. Technical receipt3291 merged43048bb, docsPRCI40959960335 and docsmainCI40960222801 green. Other owners/source preserved.

Read-only hosted observation21:52UTC: existing SuperAdmin support session, MYWORKSTATION LAB / ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ (cmtpopbgo000trhb5ng9ytiru), cloud browser tab6, no operator shift action. New menu opens personal accounts, empty list loads without error, blank new-account form renders name/username/password/PIN and all three explicit same-company store choices. No field/credential/grant entered or submitted. Screenshot CHECKPOINTS/EVIDENCE/central-backoffice-access-20261029/personal-access-form.jpg, SHA256 9ffaee76c1ccb63220ca2d46b7a7112d824ccfeb444698e37ab3c68417e70a19. This is read-only UI observation, not live account/login/role/count/revocation or whole LAB PASS; no balance/stock delta inferred. Existing Owner/MFA and POS behavior remain protected. No manual or numbered PASS closure.

Single next action: user specifies named test account(s) and enters their new credentials in the prepared LAB form, selecting only the authorized LAB store/profile; the browser credential policy requires user entry/submission. Then this same owner completes grouped live login/role/store/session/revocation acceptance with fresh before/after evidence for any write. Real employee rollout, Owner PIN alias, wider manager and cash-review writers remain OPEN/not enabled. Scope remains ASSIGNED to this owner; no parallel takeover. Checkpoint CHECKPOINTS/CHANGES/2026-10-29-central-backoffice-access.md.

AI-OWNER-WALLET-01 — SOURCE GREEN MERGED / CONDITIONAL LAB-FIRST ACTIVATION / NOT YET ENABLED

29Oct2026 retained owner feat/ai-owner-wallet-20261022, continuation fix/ai-wallet-invoice-request-reserve-20261029. Before-source claim3286 greenCI40957257444 mergedc8891625 before source. SourcePR3288 exact47d9689492d20b215f22e7fc2faeaa043c86dded fullCI40958950461 SUCCESS:4650server+8backup PASS,0FAIL/0SKIP, all5jobsSUCCESS; separate native40958950368 SUCCESS. Merged5e1e2d5d5e7e3cf5aa7eb0e8cd231e1db19b99f5. Exact-main fullCI40960880203 is still IN_PROGRESS; ordinary exact installation NOT VERIFIED. Local Node20 focused33/33PASS. No hosted invoice-billing PASS inferred from engineering checks.

Implemented opt-in authoritative input-token preflight for immutable inline invoice text/images/PDF, unchanged requested output caps, worst-cache/long-context holds, fail-stop before generation on invalid counts and durable REVIEW for overruns. Legacy/Owner/full-model paths remain compatible. Dedicated AI_OWNER_WALLET_INVOICE_TARIFFS and AI_OWNER_WALLET_INVOICE_AZURE_TARIFFS preserve existing Owner schedule keys. Optional AI_OWNER_WALLET_INVOICE_COMPANIES scopes adapters and Owner/Admin metadata, permitting LAB-first rollout without billing other companies. No model, prompt, context capacity, output cap, schema or business/fiscal algorithm changed.

Read-only native Admin confirmed the user-selected customer and original Owner settings/funds; private identity/finances are not published. LAB remains4.995848EUR/reserve0/chargingOFF/emailOFF with its original settled Owner call. No credit/save/provider generation/upload/payment/stock/fiscal/role/email action by this continuation. Owner screenshots verify Azure North Europe/S0 Standard/no Web Pre-built commitment. Official retail-reference8.7997EUR/1000pages gives13200microEUR/page after approved50percent markup. User instructed START after this exact retail-reference quote; candidate is a fixed reference resale schedule, not an assertion of the account's final supplier bill. All three exact invoice models/aliases, cache-write lifetimes,272000long-context threshold and accepted fixed23Oct EUR conversion are in CHECKPOINTS/EVIDENCE/ai-owner-wallet-20261022/invoice-tariff-candidate-20261029.json. No production price or feature flag applied yet.

Observed separate live blocker BEFORE installation: LAB pool timeout10sec/limit9 and read-only21:42UTC database9other connections/8blocked/oldest348sec, an ALTER queued behind an older query. Later21:48UTC read-only observation showed0blocked/11other connections/oldest23sec; no backend cancellation, restart, migration or repair by this page, and no causal repair PASS. Publichealth remainedoktrue/ce5ec3a6b37c3844aa57298a88a787ed05ec1def throughout. Left LAB polling through canonical Admin. Recheck query health before any metered action; an HTTPhealth alone is insufficient. Existing server/performance owner remains retained.

CONDITIONAL BEFORE-ACTION RECORD: ONLY after exact-main full checks and ordinary guarded installed source/blob verification, re-read actual invoice model metadata and pending holds. If unchanged and database healthy, merge ONLY the two NEW dedicated invoice tariff keys from the recorded candidate, AI_OWNER_WALLET_INVOICE_REQUEST_RESERVE_ENABLED=true and AI_OWNER_WALLET_INVOICE_COMPANIES=[the existing synthetic LAB company]. Preserve all existing Owner/shared tariffs, secrets, mail and unrelated keys. Activate the invoice global gate only with the LAB-only allowlist present on the verified new runtime. Record fresh LAB/selected-target wallet/ledger/notice/audit and business controls before config and before each subsequent state change. No new credit, fake receipt or permission change.

Then one separately identified NEW synthetic invoice preview/read in the existing LAB, within its existing balance, with no payment/finalization/stock/fiscal action and no replay of any accepted invoice. Reconcile each Azure page/OpenAI usage/immutable tariff, exact debit, zero remaining holds and unaffected controls; unknown results retain holds and are not retried. Restore LAB chargingOFF, preserving legitimate settled usage. Publish the precise scoped hosted PASS/manual/common registers/PDF green/main before adding ONLY the user-selected real company to invoice rollout. If any prerequisite or actual-provider/count/usage proof fails, keep real-customer invoices excluded and record the concrete error. All runtime customer invoice charging remains NOT ENABLED at this receipt. Whole wallet, actual Owner-session detail and broader notice/threshold delivery remain OPEN. Single next action: exact-main CI and normal installation,

then the conditional measured sequence. No overall/manual/checklist PASS or scope release. Checkpoint CHECKPOINTS/CHANGES/2026-10-29-ai-wallet-invoice-activation-readiness.md.

29/10/2026 — CENTRAL-BACKOFFICE-ACCESS-01 / MERGED, FULL MAIN CI PASS / AWAITING GUARDED RELEASE + LAB

Retained owner Rizareio readiness / feat/central-backoffice-access-20261029. PR3280 head f99cf19bdc71d0e8ce8918c6e5666919141a94c1 merged as016b15d23c8fcf177cc397c93018d8f345b0105f. Complete PR CI40955352297 and mainCI40957101537 PASS:4627 tests,0FAIL,0SKIP plus backup8PASS, Windows and isolated HTTP/browser flows. Main wholesale initially stopped at Chromium Target.createTarget before navigation; scoped retry123746730245 PASS with successful jobs retained. Dedicated PG18 wallet40955352263/Ftext40955352229 recovery contracts PASS. These are automated technical results, not live LAB PASS.

Delivered personal EMPLOYEE-backed username/password or PIN accounts with explicit per-store MANAGER/STOCKTAKER/AUDITOR subsets of inventory.read/inventory.count/cash.read, current session/grant/license checks, safe account audit/revocation and dedicated logout preserving POS state. Owner/SuperAdmin existing login/MFA retained; no Owner PIN alias, Owner elevation, broader manager/cash-review writes or real employee rollout. No production account/credential/grant or financial/stock posting performed. Exact release remains unverified: health last ce5ec3a, source deploy40959356395 safely skipped by freshness guard (newer production source) while newer shared main69198a7 undergoes fullCI40959327048. Preserve all concurrent owners/source; no bypass or pinned old deployment. Single next action: follow ordinary newest full CI/guarded deployment to exact healthy revision, inspect LAB page, then user-entered credentials and scoped LAB role/session/store acceptance. Scope stays OPEN/ASSIGNED; no manual or numbered PASS closure. Checkpoint CHECKPOINTS/CHANGES/2026-10-29-central-backoffice-access.md.

AI-OWNER-WALLET-01 — INVOICE PRICING AND REQUEST RESERVATION / ASSIGNED CONTINUATION / NOT TESTED

29Oct2026. Retained owner feat/ai-owner-wallet-20261022; continuation fix/ai-wallet-invoice-request-reserve-20261029. User explicitly continues activation for the selected Diadochou company. Before source/configuration: preserve the existing Owner tariff, funds, settled entries and all other owners. Invoice charging remains OFF. Screenshot evidence identifies the existing Azure Document Intelligence resource in North Europe, S0 Standard, with no Web Pre-built commitment (pay as you go). Official Retail Prices API research returned EUR8.7997 per1000 S0 Pre-built Pages; this is a retail reference, not an account invoice assertion. Approved50percent markup yields13200microEUR/page rounded upward. No tariff applied.

Read-only source inspection found reservation uses full model context and full tariff output maximum even for a bounded invoice request. Bounded planned correction: invoice-only exact OpenAI input-token preflight for immutable self-contained requests, reserve the measured input upper cost plus the EXISTING requested output cap, fail closed on invalid/unknown counts; keep legacy full reservation for unsupported mutable/conversation/tool inputs. Preserve model, prompts, context capacity, output caps, Azure physical-page metering, durable unknown holds, tenant scopes and disabled compatibility. No local estimates, model downgrade, duplicate provider generation, funding, invoice upload/payment/stock/fiscal action or email.

Required acceptance: causal tests for exact request reservation, cached/write/long-context worst-case bounds, missing counts and errors before generation, overrun REVIEW, insufficient balance, tenant OFF and unchanged Owner adapter; full CI/native/browser/build then ordinary guarded exact release. Separately measured new synthetic LAB invoice metering before customer invoice activation. Existing invoice/manual PASS transactions must not be replayed. Invoice/Azure full billing remains NOT TESTED. Single next action: publish this before-source claim green/main, then implement the bounded reserve correction and prepare exact configured-model tariffs. No whole-wallet PASS or scope release.

29/10/2026 — CASH-AUTOMATIC-RESULT-13 / HISTORICAL BEFORE-SOURCE CLAIM - SUPERSEDED BY LIMITED RECEIPT

Retained owner codex/cash-chat-reconciliation-20261026; planned feat/cash-automatic-result-20261029. Explicit owner asks automatic investigation and results, with unresolved questions staying OPEN. No new store/Estia creation. Foundation12/source3278 has exact4582+8/0/0 proof on7bc3baf; reconciled833fa760 current fullCI40950440841 is pending. This independent continuation may be coded ONLY after THIS claim green/main, and integrated only on the green foundation12 source. No new LAB PASS or mail.

Read-only source discovery found a remaining legacy manual-only gate: Platform cashReportEmailData SQL sets reviewValid=false whenever CashControlReview is absent; POST send-email separately rejects every false reviewValid. Thus foundation12 arithmetic alone does not remove mandatory manual work. Do not claim full automatic completion from its helper-only test or CI. Distinguish authoritative ABSENT legacy review (explicit SQL null decision and null timestamp, no reviewer) from stale/unknown review. A fresh scoped calculated receipt may proceed with absent manual review, retaining original review absence, explicit pending questions, canonical snapshot fingerprint, unchanged recipients/consent and send boundaries. Existing stale/manual-invalid/unknown/changed-source holds stay mandatory. No current setting, SMTP, consent, grants or dispatch scheduler is changed.

Bounded next source: NEW server/src/services/cash-automatic-result.js only pure effective arithmetic eligibility and non-netted per-day/employee summary; existing cash-reconciliation-report.js only precompute automatic contradictions before connected-offset invalidation, effective automatic result/prose/derived summary, preserving original hashes/history/manual reviewed flags and immutable finance. Existing cash-reviewed-automatic-contract.js only strict optional derived DTO and recomputed-summary validation; cash-reviewed-email.js only distinguish absent from stale legacy approval. Existing server/src/routes/platform-admin.js ONLY the redundant legacy approval condition in the existing /cash-control/stores/:storeId/send-email handler (use the single validated readiness outcome), no auth/other route/entity changes. Existing cash-reviewed-archive.js ONLY additive automatic-result/per-employee/day export from the same verified derived summary; old manual-reviewed sheets remain unchanged. No financial writer or fabricated CONFIRM/actor signature. No source outside these paths without amendment.

Automatic cash eligibility requires fresh complete exact arithmetic, closed eligible shift/required next shift, valid immediate handoffs, safe unchanged manual allocations/explanations and known employee identity. Numeric contradiction invalidates the entire connected manual offset component before projection, never just one half. Equal amounts/time alone never generate an offset. Missing receipts/card/Netlink clarification stay open independently; bank/card values never reduce cash. Stored source, plan and original financial records are not rewritten; calculated cash results remain explicitly automatic, distinct from human approval. Latest/uncertain/identity-ambiguous rows remain pending. Difference-only/POS-only configured semantics remain protected; do not convert them into FULL cash rules.

New tests server/test/cash-automatic-result.test.js; additive existing cash-reconciliation-report.test.js, cash-reviewed-automatic.test.js, cash-reviewed-email.test.js, cash-reviewed-email-routes.test.js, cash-reviewed-archive.test.js, cash-reconciliation-postgres.test.js, cash-reviewed-automatic-postgres.test.js and assistant-reviewed-cash.test.js only actual common-text/derived-result preservation. Keep route admission/injected transport tests, old manual write/revoke/stale/role/tenant/lifecycle assertions and native original/control before/after proof. No real SMTP or business transaction in engineering. Exact full PR/main CI and normal guarded healthy release required before scoped read-only LAB report/export/preview. Fresh before/after baseline before any state-changing acceptance; no replay of accepted financial/input actions. CI alone is not LAB/manual PASS.

Remain OPEN independently: full provider-original telecom/Netlink and safe/refill/deposit proof, persisted per-issue answers/closure/continuation, actual real-store/business/full email acceptance. Source unavailability must remain visible rather than invented proof or automatic issue closure. This slice completes the automatic-result/legacy-gate integration of available cash facts, not those missing external proofs. Single next action after green/main claim: implement the bounded automatic result and actual registered-route absence-versus-stale proof on the integrated foundation12.

Checkpoint CHECKPOINTS/CHANGES/2026-10-29-cash-automatic-result.md.

31/10/2026 - CHAT-FIRST-ENTRY-01 / LIMITED USER PASS: STORE LINK AND APP REOPEN

Retained owner codex/chat-first-entry-20261029. In this conversation owner said «ειναι οκ» and then explicitly «ναι» in reply to the precise question whether the link opens the correct store and the application remains signed in after close/reopen. This closes only those reported physical steps. Device/OS, store/account, installed APK hash/version, exact time and runtime revision were not independently identified; previous technical0.1.11/69198a7c delivery remains separate evidence, not a claim that this phone was independently identified. No replay for documentation. Actual30-day idle expiry, operational revocation, forensic storage and every device remain separately NOT TESTED; old accepted native/media/voice/push results and other owners are retained. Manual docs/manual/native-chat/PASS.md now describes the confirmed usage and limits. No new PIN/message/media/business action performed by this receipt.

01/11/2026 - CHAT-SEARCH-FORWARD-01 / ENGINEERING AVAILABLE / ONE EXPANDED PHONE ACCEPTANCE OPEN

Retained owner codex/chat-native-readers-20261031, branch feat/chat-search-forward-20261101; updated 01/11/2026 03:35:15 Europe/Athens. Android0.1.14-preview/code15 publicly available at https://myworkstation-app.onrender.com/downloads/chat-android/. Delivered together: selected-store server history search (literal body/filename,20 per stable page) and explicit authorized destination selection/review/confirm forwarding for text/photo/PDF/voice/video, alongside prior named delivery/read, quoted replies, reaction set/replace/remove and pinned announcements/explicit «Το διάβασα». Current access/settings apply to both stores; a single-store operator has no extra destination. No new recipient access, automatic forwarding, original private source/author metadata, inherited read/ack/reaction/task/AI/pin/completion/quote, or implicit search receipt/ack. Search is time-bounded; no measured production-wide backoffice speed claim.

Before-source claim PR3433/merge946fa417 passed exact docs CI41251091802 before code. Source PR3434/head84f84dfd099e2b61b413a8205a89f41907c8b6c2 full CI41256750055 SUCCESS and Android41256750041 SUCCESS; exact source main063579c975dc9133890d2974fad8cf9016322cd8 full CI41257899411 SUCCESS. Actual PostgreSQL/HTTP400 tied-timestamp history rows exactly once, wildcard/SQL literal search, company/store/module/revoked-session boundaries,8-concurrent forward retries/conflicting keys/audit rollback and exact media copying passed. Actual Chromium search and forward-review geometry/zero synthetic writes passed at390x844/360x740/390x420. Full existing native lifecycle/recovery/installation/old-catalogue HOLD checks retained with exact additive forwardBinding review across BASE/Snapshot/CAPTURE3, one nullable non-owning payload hash and4-key history index; no new relation or ownership/deletion expansion, no automatic old-plan transition. Initial failed candidate CI and Android test-timing correction are historical evidence below, not availability proof.

Stable signing41257953318 artifact13064516297 pinned this source, exact-main full CI before key access, compile/unit/lint, actual audio/video capture1 and full52 instrumentation, apksigner verification with unchanged owner certificate. Independent ZIP digest/APKv2 certificate/compiled binary package+version/history+forward methods and APK hash/bytes verified. SHA2568e7a7c9f088d56f6b02e2732f7b469acf25c8d0b6bb8bebc411d910c7a71599d;3703820bytes; certificate17c4d56123c6015a58343faba73d26a8b7d085a1baff7e680500767ae084ea97; Android tree1a2fc7bcde0e4d643ed6e2a3c6e64b0e2ea11c41. Distribution PR3442/head71f1461180596c5af2faf5063334e48febf2f8f4 fullCI41259646527 and mergeaaf3dce10b7d19fb700fb1f30a4e464cf498e67b full-main CI41260513845 SUCCESS. Ordinary guarded deploy41261365197, Renderdep-dbj9d2ou01pc73eqp6vg, observed liveaaf3dce10b7d19fb700fb1f30a4e464cf498e67b. Independent public health/exact revision, manifest object AND bytes, APK byte-equality with the verified signed artifact passed; public download/explicit synthetic store-intent UI observed without opening native Chat or sending. Evidence CHECKPOINTS/EVIDENCE/chat-search-forward-20261101/.

Physical/LAB/USER acceptance remains NOT TESTED. Only ONE expanded final phone batch remains, per docs/testing/chat-search-forward-20261101.md: two different authorized users for named delivery/read,

same synthetic announcement for quote/reaction/pin/explicit acknowledgement, history search and ONE explicit forward to another authorized TEST Chat. CHAT-VIBER-BATCH-01/0.1.13 and CHAT-NATIVE-READERS-01/0.1.12 physical checks are absorbed here; no separate interim phone check or false PASS. Previously accepted first-entry/reopen/voice/media/appearance/ready-reply/auth/push USER PASS retained with device/hash not independently identified; not replayed for paperwork. Finite encrypted revocable sessions, unknown-send/no-auto-replay and all company/store/module/session guards retained. No real recipient Chat send/read/ack/Push/email or manual production business mutation during engineering; only isolated synthetic fixtures. Node22 technical HOLD and other native/iOS/N16/assistant owners/residuals unchanged; overall N16 OPEN. Single next action: one grouped actual phone acceptance and central recording of real observed outcomes; retained owner until completion or named handoff.

01/11/2026 - CHAT-SEARCH-FORWARD-01 / HISTORICAL BEFORE-SOURCE CLAIM / HISTORY SEARCH AND EXPLICIT FORWARD

CHAT-SEARCH-FORWARD-01 ASSIGNED to retained owner codex/chat-native-readers-20261031, branch feat/chat-search-forward-20261101, 01/11/2026 01:02:55 Europe/Athens. Owner explicitly said «ΞΕΚΙΝΑ» after the proposal to start message search and forwarding to another authorized conversation. Bounded new scope: server-backed history search in the selected store, Web/Android search UI with stable bounded pagination and stale query/store/session rejection; explicit destination selection plus confirmation and one idempotent forward of existing text/photo/PDF/voice/video to another currently authorized store Chat. No automatic forwarding, new recipient access, direct messages, calls, edit/delete, presence, email or other native/iOS/assistant ownership. Existing mobile authorized-store discovery is reused; a current single-store operator has no other eligible conversation. Destination names/content are never inferred from an unverified client ID. Owner remains assigned until completion or named handoff.

Current evidence: public Android0.1.13/code14 engineering delivery remains verified by PR3397/3402/3406, pinned signer and exact public bytes; full CI4939+8 and47 Android instrumentation passed. Its physical combined acceptance remains NOT TESTED and is deferred into one expanded final batch after this new combined update, without a separate intermediate0.1.13 check. Previous limited first-entry/reopen/media/ready-reply/appearance/auth/push USER PASS retained without independently identified device/hash, no replay for paperwork. Current source audit against b604752: no intervening Chat route, Android or StoreChatPanel source change. Web currently filters only its loaded100/200-message window; no server history-search or forward route exists. All current registry sections read for ownership; no overlapping search/forward claim found. Other owners and overall N16 OPEN retained.

Required boundaries: source AND destination current company/store/role/module/session checks, active eligible destination discovery and fresh POST recheck; cross-company only where the existing unrestricted SuperAdmin discovery/access already permits it, no Owner/company-switch bypass. Destination attachment flags and source download restrictions apply. Forward creates a GENERAL message by the current actor, labelled forwarded, without transferring original read/delivery/ack/reaction/task/AI/pin/completion/quote state or revealing original private store/author metadata to the recipient. Unique per-actor request key binds source/destination and returns the same committed message on retry, conflicting reuse rejected; send/audit/intent atomic, Push only once after the first commit. No client attachment re-upload or real forward during engineering tests. Search is read-only, scoped, bounded to20 results per page, literal parameter-bound input and stable keyset cursor; store/time index and query timeout prevent unbounded enrichment/work. No automatic read/announcement acknowledgement and no durable private search/history/destination storage; clear private UI on background/navigation/logout and reject stale results.

Required before availability: pure/mounted Web and real PostgreSQL/HTTP tests for old history/pagination/escaping, tenant/module/revoked sessions, destination/settings enforcement, concurrent idempotent forwards and conflicting keys, content-only copying and no search mutations; actual Android UI/search/forward/lifecycle/security tests and retained full media/session/appearance regression; Node20 build, exact full PR/main CI, unchanged stable-key signing/guarded Render delivery, independent public manifest/APK/cert/health verification. New functionality NOT IMPLEMENTED/NOT TESTED before this

claim is green/main. No manual/PASS entry from CI. One combined physical acceptance only after the full new update. Single next action after this claim merges green/main: implement and deliver both additions autonomously, then retain only that grouped phone check.

31/10/2026 - CHAT-VIBER-BATCH-01 / HISTORICAL0.1.13 ENGINEERING / PHONE CHECK ABSORBED INTO0.1.14

CHAT-VIBER-BATCH-01 retained owner codex/chat-native-readers-20261031; branch feat/chat-viber-batch-20261031; updated 31/10/2026 22:10:02 Europe/Athens. Owner instruction remains one combined update and one final check. Android0.1.13/code14 is publicly available at https://myworkstation-app.onrender.com/downloads/chat-android/. Delivered/read names, quoted replies, current-user reactions (thumbs-up/check/heart, replace/remove), and native pinned announcements/explicit «Το διάβασα» are delivered together. Owner/SuperAdmin controls reuse existing pin and acknowledgement settings; no automatic human read/announcement confirmation. Delivery means receipt by an authorized application, not Push/device-universal or human reading.

Before-source claim PR3390 green/main6e8c957 preceded code. Source PR3397/head058ec34115824ca8a1e4d7b3458b3b92f51053b5, full PR CI41230278081:4938server+8backup/0FAIL/0SKIP and real PostgreSQL/HTTP isolation/idempotency/media flow PASS. Bounded-before-enrichment query proved exactly2 rows for limit1 plus an older read pin across400 historical messages; partial pin index, no measured production latency claim. Android41230278130 and stable signing41231397456 each compile/unit/lint and actual capture1/full47 instrumentation PASS, including new owner controls at320/360dp/font1.0/1.3. Local Node20 build/focused32 and Java6 tests PASS. Source mergedb693a2656ffbcaaed1d96c680182de16692258f7, exact full-main CI41231351417 green. Signing first correctly refused before key access while exact CI pending; same-SHA/ref retry after green, guard unchanged. Independent ZIP digest/APK bytes/hash/APKv2 certificate/compiled version14/0.1.13/interactions class verified. Stable certificate17c4d56123c6015a58343faba73d26a8b7d085a1baff7e680500767ae084ea97; APK3687436bytes SHA2569b684af688dde18b129755641df6ef6b1ef9c2f7926c639c4e96f167644b6c02; Android source treed32799847678d28a1cb6790c7d7c7d0fa776b8b8.

Distribution PR3402 mergeda71c80c33f7dcd45f78fa2b253d7baab24b5e428; exact PR CI41233898095 and full-main CI41235058707 green. Ordinary guarded deploy41235884915, Renderdep-dbj4clgae00c73d6m5d0, exact livea71c80c33f7dcd45f78fa2b253d7baab24b5e428. Independently observed2026-10-31T19:55:20.707804+00:00: health ok/exact live revision, public manifest equals repository and public APK is byte-for-byte the verified signed artifact. Browser landing version and synthetic store-link intent inspected without native launch or real Chat read/send. Evidence CHECKPOINTS/EVIDENCE/chat-viber-batch-20261031/ contains source-validation.json, verified-signing.json, public-verification.json and public-download-0.1.13.jpg. Old APKs retained; no direct deploy/guard bypass/production DB command from sandbox.

ENGINEERING verification only. Combined physical/LAB/USER acceptance remains NOT TESTED/AWAITING LAB; no new manual/PASS claim. Single next action for this retained owner: one combined two-authorized-user same-store acceptance per docs/testing/chat-viber-batch-20261031.md, covering names/delivery/read, quoted reply, reaction set/replace/remove and owner pin/explicit acknowledgement. CHAT-NATIVE-READERS-01 physical check is absorbed here, no separate intermediate phone request. Existing limited first-entry/reopen/media USER PASS retained without independently identified device/hash and not replayed for paperwork. Finite encrypted revocable sessions/auth/module/company/store and unknown-send/no-replay protections retained. Other native/iOS/N16/assistant owners and untested30-day expiry/revocation/forensics/device residuals remain unchanged; overall N16 OPEN. No real recipient message/read/Push/email or business mutation performed during engineering verification.

31/10/2026 - CHAT-VIBER-BATCH-01 / HISTORICAL BEFORE-SOURCE CLAIM / ONE COMBINED RELEASE AND ACCEPTANCE

CHAT-VIBER-BATCH-01 ASSIGNED to retained owner codex/chat-native-readers-20261031, branch feat/chat-viber-batch-20261031, 31/10/2026 19:41 Europe/Athens. Owner explicitly directs: «ΘΕΛΩ ΝΑ ΤΑ ΠΕΡΑΣΕΙΣ ΟΛΑ ΜΑΖΙ ΚΑΙ ΜΕΤΑ ΝΑ ΚΑΝΟΥΜΕ ΕΛΕΓΧΟ ΣΕ ΟΛΑ ΜΑΖΙ». One combined Android/web/backend release and one final phone acceptance batch; do not stop for individual user acceptance between features. Internal engineering tests/CI remain mandatory. Existing CHAT-NATIVE-READERS-01 names move into this combined phone acceptance without claiming PASS. Its owner remains the same. Other native/media/iOS/N16/assistant owners and existing limited voice/photo/video/ready-reply/entry/reopen USER PASS remain protected.

Agreed scope after this claim is green/main: quoted-message replies across text/photo/voice/video; one current-user reaction per message (thumbs-up, check, heart), replace/remove explicitly; actual recipient-client delivery acknowledgement distinct from explicit read, shown with names/counts without inferring delivery from server save or Push; Android parity for existing pinned announcements and «Το διάβασα» using existing Owner/SuperAdmin pin and per-store acknowledgement settings. Web already has pin/ack: reuse, preserve and integrate replies/reactions/delivery. Native announcement creation/pin/ack must respect existing roles/settings. Replies/reactions/delivery are additive store-scoped server data, nullable reply linkage plus unique per-message/user receipt/reaction tables in existing idempotent Chat schema bootstrap, not destructive sandbox DB migration. No role/license/auth lifetime/AI/POS/financial/stock/fiscal/provider/email change. No native/iOS takeover or real recipient send. Current source audit: Android last reader-name source ab1d091; server last first-entry source85a2aa5; no newer overlapping interaction owner found in current registries/history.

Protect exact company/store/user authorization, finite revocable encrypted sessions, stale account/store/epoch rejection, secure dialogs, draft clearing on navigation/background/logout, no durable private message/name/media storage, existing unknown-send stop/no replay and media bounds. A quoted parent must exist in the same authorized store; missing/foreign parent fails without a new message. Client delivery ACK means authenticated application received a response, not every physical device, Push delivery or human reading. No automatic read/announcement confirmation. Old clients remain compatible with additive fields/routes.

Required engineering: real PostgreSQL/HTTP tenant/role/module/session and atomic reply/receipt/reaction tests, idempotent delivery and replacement/removal, malformed/foreign inputs, mounted web behavior and stale-store rejection, actual Android Activity reply/reaction/announcement/delivery/lifecycle tests plus all existing media regressions, exact full PR/main CI, unchanged guarded Render release, pinned same-signer APK and public artifact/manifest/health verification. Only afterward one combined new-feature phone batch; no replay of old successful sends for paperwork. Current new batch NOT IMPLEMENTED/NOT TESTED, no new manual PASS. Public0.1.12 remains the last verified distribution. Checkpoint CHECKPOINTS/CHANGES/2026-10-31-chat-viber-batch.md. Single next action after green/main claim: implement all agreed interactions autonomously and deliver one combined update before asking the owner to test.

31/10/2026 - CHAT-NATIVE-READERS-01 / HISTORICAL ENGINEERING0.1.12 / PHYSICAL CHECK ABSORBED INTO CHAT-VIBER-BATCH-01

CHAT-NATIVE-READERS-01 ENGINEERING AVAILABLE / AWAITING PHONE. Owner codex/chat-native-readers-20261031 retained; updated 31/10/2026 15:53:06 Europe/Athens. Public Android0.1.12/code13: https://myworkstation-app.onrender.com/downloads/chat-android/. Own messages expose «Διαβάστηκε από N» with authorized same-store names; private dialog rejects stale identity/store/epoch and clears on exit/background. No new API/write, automatic read, delivery inference or persistent message/name storage. Source PR3362, exact source-main CI41202964821 green; Android CI41201100715 and stable signing41202991148 each full41 instrumentation+actual capture1 PASS. Existing prior first-entry/reopen/media USER PASS retained; device/hash not independently identified.

Distribution3374 merged7332c0de8f3a1dc8b4d8fb01467de079fafa7de4; full PR CI41204962335 and exact main CI41206046498 green. Ordinary guarded deployment41206962144/Renderdep-dbiv2cks728c738d69hg, exact live7332c0de8f3a1dc8b4d8fb01467de079fafa7de4. At 2026-10-31T13:52:15.389561+00:00 public health ok, manifest identical to repository and public APK byte-for-byte identical to signed artifact:3687436bytes/ SHA256eaa1f8343de16765711dcc8c3e6ed748fba35a53d355ec21745cf155cdec3a5b. Prior stable signer independently matched; no guard bypass. Full source/signing/initial unrelated CI failure receipt: CHECKPOINTS/CHANGES/2026-10-31-chat-native-readers.md and CHECKPOINTS/EVIDENCE/chat-native-readers-20261031/.

ENGINEERING only; named-readers physical/LAB/USER NOT TESTED. Single next action: update and inspect names on an existing already-read own message, confirm list closes on exit/background; no new read/send or replay of accepted voice/entry. Manual does not claim this untested feature. Overall N16 OPEN; other native/iOS/N16 owners and first-entry residuals preserved. Quoted replies/reactions/device-delivery acknowledgements remain separate later unimplemented scope.

31/10/2026 - CHAT-NATIVE-READERS-01 / HISTORICAL BEFORE-SOURCE CLAIM

Historical before-source claim, superseded by the current ENGINEERING AVAILABLE / AWAITING PHONE receipt above. Owner codex/chat-native-readers-20261031, branch feat/chat-native-readers-20261031. Explicit user request: start the agreed Viber-like additions after checking existing behavior; voice is already present and accepted. Audit: server already returns authorized same-store readers with names; web already shows reader names, pinned announcements and acknowledgement; Android only shows generic «Διαβάστηκε». No new request to reimplement these existing web/media features. No overlapping new read-name scope found in current retained Chat records. Existing native owner keeps other scopes; first-entry owner remains for only its untested residuals.

Bounded first source slice AFTER this claim is green/main: Android MainActivity message metadata/readers dialog only, new small ReadReceipts helper, focused unit and actual-activity tests, build.gradle version13/0.1.12, subsequent unchanged stable-key signed APK/download manifest and truthful usage copy. Show named readers of own sent message, ignore sender/self records, deduplicate reader IDs, tolerate malformed entries, retain unknown/empty state without claiming delivery. Names come only from already authorized same-company/store API response; no additional API/network write, automatic read marking, schema/auth/license/server/web/POS/financial/stock/provider/email change. Dialog stays private and clears on normal background/navigation/logout/store change; stale identity/store/epoch cannot open it. No persistent message/name storage. Preserve accepted voice/photo/video/quick replies and first-entry/encrypted renewal.

No claim of true device delivery: server acceptance, device delivery and explicit read are separate states; real delivery acknowledgements are a later independently scoped addition. Quoted-message replies and reactions remain subsequent requested gaps, not implemented/PASS here. Required: malformed/self/duplicate/read-state tests, actual activity dialog/FLAG_SECURE/zero-write/stale-store/navigation checks, existing Android lifecycle/media regression,

exact PR/full-main CI, ordinary guarded release and stable signed public APK/certificate/hash/source verification, then only new read-name phone acceptance. CI is not USER/LAB PASS. Current engineering/phone status NOT TESTED. Checkpoint CHECKPOINTS/CHANGES/2026-10-31-chat-native-readers.md. Single next action after green/main claim: implement and deliver only this named-reader slice autonomously; no new user permission required.

29/10/2026 — CHAT-FIRST-ENTRY-01 / TECHNICAL PUBLICATION COMPLETE / AWAITING DEVICE

Owner codex/chat-first-entry-20261029 retains only the independently claimed first-entry/sharing/session-renewal slice. SourcePR3276 merged6fb7e556ed19552acf34bf8eeea4a3289666110a after exact full/native checks. DistributionPR3287/head70d4588198cb50de9d9bd964e2ec7152274e5288 passed all5jobs in40957549944 (4627server+8backupPASS/0FAIL/0SKIP), merged69198a7c2d1b41d1d1dd24ddccf9cfb958dee8fa; exact-main40959327048 all5SUCCESS (4634server+8backupPASS/0FAIL/0SKIP). Stable-signed run40952680821 attempt2 passed compile/unit/lint, real capture and38Android activity/regression tests before pinned owner-key signing. Source Android tree1cd5eeeeff6c5746ba19792a297896286939370c. All other assignments and prior accepted native/media/push/auth results retained.

Ordinary guarded workflow40960468909 SUCCESS, Render dep-dbhrtk6gekts73c6api0 LIVE2026-10-29T21:51:07.566359Z exact69198a7c2d1b41d1d1dd24ddccf9cfb958dee8fa. Fresh public verification2026-10-29T21:52:13.104046Z: health ok:true/exact revision, public release.json exactly equals repository metadata and downloaded public APK byte-for-byte equals signed artifact. Android0.1.11-previe w/code12/packagegr.myworkstation.chat.preview,3687436bytes/SHA256c796604a87c1fcd2634c7b220e1b d4ea1238048504a8a77b8f552668bcbbc082; pinned certificate17c4d56123c6015a58343faba73d26a8b7d085a1baff7e680500767ae084ea97 independently matched. Real public browser shows0.1.11; selected-store page exposes exact explicit intent handoff, generic page remains generic. Evidence CHECKPOINTS/EVIDENCE/native-chat-first-entry-20261029/publication-verification.json and public-download-0.1.11.jpg. Official download https://myworkstation-app.onrender.com/downloads/chat-android/.

Technical usage now distributed: authorized SuperAdmin/Owner selects store -> Chat -> Share Chat/QR; employee follows store download link -> installs/updates -> returns to link -> Open Chat -> verified store/name/personal PIN. No PIN/token in link, no automatic replacement of an authenticated account. Employee connection is encrypted locally and automatically renews the same revocable chat-only session on resume/active use, with30day finite idle window. Explicit logout, current credential/role/employee/store/company/module checks remain authoritative; already-expired legacy12h token requires one normal login. General Owner/SuperAdmin/BackOffice session policy is unchanged by this slice. Older APKs retained.

This is TECHNICAL PUBLICATION, NOT functional/LAB/USER/whole-native PASS. No new manual PASS, no real PIN login/message/financial/stock/fiscal/provider/email action. Pending item remains ASSIGNED, not removed. Physical selected-store new install/return/Open Chat/PIN, same-signer update, app close/reopen connection persistence and operational revocation/idle-window acceptance remain AWAITING DEVICE; do not repeat earlier accepted media tests. Single next action: owner performs only these remaining phone acceptance steps; record actual scoped observation/manual/central closure afterward. This authoritative technical receipt supersedes older pending-engineering/publication wording for this slice only; no other owner's scope is closed.

29/10/2026 — CHAT-FIRST-ENTRY-01 / SOURCE CANDIDATE / NOT INSTALLED

Same owner codex/chat-first-entry-20261029. Before-source claim3273/head062cd0d7 passed exact documentation CI (classification/Windows checks success, runtime jobs correctly skipped) and merged4498b64b13a353a8a071a8bd3259b436ed56389f before source. Implemented selected-store sharing/QR in existing authorized chat panel, bounded explicit post-install Android intent handoff (visible only for supporting manifest versionCode>=12), strict noncredential store parser and existing directory/PIN screen with server store name. Authenticated session cannot be switched by incoming link; generic/manual/account paths preserved. Candidate native0.1.11/code12, public release.json/APK unchanged until signed delivery.

Employee-only chat connection uses30day finite rolling window, encrypted native token restore/renew on resume and foreground activity, same revocable session row and credential-stamp/current active employee/store/company/role checks plus paid Chat check on every authorization. Conditional GREATEST expiry update never clears revokedAt or renews expired/foreign rows; no PIN/password stored and no changes to general Owner/SuperAdmin/BackOffice authentication. Thirty days without successful online renewal requires sign-in; do not call this unexpiring authentication. Ordinary logout/PIN/role/employee/module revocation remain authoritative. Legacy already-expired12h token needs one normal PIN login after update. No financial/stock/fiscal/API key/provider/message/email or production action.

Local Node20.20.2 focused39tests:36PASS/0FAIL/3nativePGSKIP. Mounted decoded selected-store QR, explicit clipboard/share, store switch, generic/download-manifest compatibility and version-gated/no-auto-launch handoff pass. Actual JWT scope/window/current module refusal/conditional renewal tested. Frontend build passed previously onNode24; required Node20 build result is tracked next. Added native isolated PostgreSQL concurrent-logout/expiry/foreign renewal and actual Android activity first-entry/no-account-switch/encrypted lifecycle renewal tests; these MUST run unskipped in full/native CI, not yet verified. No Android SDK/JDK locally, no physical install/login acceptance. No manual/functional/whole feature PASS.

Exact fullPR/nativeAndroid/PG/mainCI, code review, ordinary guarded release and stable-signed APK/hash/manifest distribution remain REQUIRED. Do not release web handoff as a supported installed feature while old publicAPK0.1.10 lacks handler. Physical selected-store installation/Open Chat/PIN/reopen and expiry/revocation acceptance remains AWAITING DEVICE. Checkpoint CHECKPOINTS/CHANGES/2026-10-29-chat-first-entry.md. Same owner retains assignment. Single next action: resolve exact full/native CI then signed/guarded release; no user confirmation needed for routine engineering continuation.

29/10/2026 — CENTRAL-BACKOFFICE-ACCESS-01 / ASSIGNED BEFORE SOURCE / NOT TESTED

Implementation continuation 29Oct: new personal accounts and per-store MANAGER/STOCKTAKER/AUDITOR capability subsets, hashed separate PIN/password, durable throttled personal login, current UserSession/grant checks and default-deny staff domain, minimal draft-count workspace and read-only existing cash-report projection. Owner administration is revision-checked/atomic with audit and session revocation. Existing count writer receives only one in-transaction staff-admission call; ordinary POS/Owner paths unchanged. Lifecycle extension retains grants on reset and keeps company/security records outside per-store ownership. Source prepared, NOT INSTALLED / AWAITING full native PR/main CI and exact ordinary deployment then scoped LAB. Local full suite4072PASS/0FAIL/299environmentSKIP; final focused51PASS/0FAIL/3nativeSKIP; frontend/TABLE_SERVICE and server preparation PASS on Node24.22.1 (repository Node20 CI still required). Added native HTTP/session/FK/catalogue/count/replay/late-revocation/control tests, not yet executed locally. No production account, privilege, schema command, financial/stock posting or new manual/LAB PASS. Pending: actual named people/store assignments, native acceptance, deployed revision, grouped LAB UI/login/role proof; broadened manager writes/cash-review mutations are NOT enabled. Retained owner feat/central-backoffice-access-20261029.

Owner: Rizareio readiness conversation, branch feat/central-backoffice-access-20261029. Explicit owner instruction: personal username/password/PIN and rights for owner, responsible manager, stocktaker and auditor; MUST be central for all companies/stores, not a Rizareio exception. New expanded requirement, not reopening accepted Gate8 POS behavior. Historical Gate8 PASS and all retained owners remain protected.

Read-only evidence: User has existing password/session/MFA and roles; StoreOperatorProfile already has username/backofficeAccess/menu flags, but these do not establish complete independent delegated BackOffice login and server-enforced stocktaker/auditor scope. Current store screen confirms3PIN/3cards, no pendingPOS, terminalOFFLINE; no production grant/user/session/financial/stock change performed. New delegated flow is NOT TESTED/NOT INSTALLED.

Scope: additive central delegated BackOffice account administration, own personal identity, explicit active same-company store grants and named manager/stocktaker/auditor capability profiles, current database policy enforcement/revocation and audit. Keep existing Owner/SuperAdmin/MFA and POS credentials/login behavior intact. Reuse User/UserSession password identity; no role-name elevation, inherited Owner support context, generic company-wide staff fallback or trust in client menu flags. New dedicated staff workspace must show only granted operations and reject unknown/foreign/unauthorized routes server-side, including direct API calls and object-ID references. Personal PIN stays hashed and separate from password; no secret in ordinary account lists/audit. Provision actual people/credentials only when their identities/store assignments are specified, never invent account privileges.

Before runtime edits: reconcile complete active/tracker/pending/manual and auth history, publish this claim green/main. Bounded source plan: NEW staff-access service/policy/routes and shared capability contract; additive runtime schema bootstrap using existing migration conventions only after lifecycle classification review; narrow authenticated middleware hook and route/bootstrap mount; additive existing user-admin entry and dedicated staff workspace/login routing; focused real HTTP/isolated PostgreSQL/browser tests. Existing inventory and cash financial writers, retained main session boundary, StoreCloudPage, POS/fiscal/printing/scanner/dispatch/provider implementations are not taken over; integration must reuse them through explicit least-privilege admission. Any necessary expansion gets a separate before-source checkpoint.

Required acceptance: owner own-company visibility; stocktaker count-only with finalization separately denied by default; auditor reports/review only with transaction/stock/settings writes denied; manager explicit actions and stores only; cross-company/cross-store/object-ID/unknown-route refusal, stale-session/demotion/disabled-user/grant withdrawal immediately refused, password/PIN isolation, immutable audit and UI stale-store cancellation. Full PR/main CI and ordinary guarded exact deployment, then isolated LAB account/role acceptance before production rollout. CI is not functional LAB PASS. No real store sales/card charges/stock finalization, employee setup, module/license activation or permission grant for evidence.

Checkpoint: CHECKPOINTS/CHANGES/2026-10-29-central-backoffice-access.md. Single next action: complete green/main claim, then implement one bounded central account/admission slice. This owner retains scope until completion or named handoff.

29/10/2026 — CASH-AUTOMATIC-AUDIT-12 / HISTORICAL BEFORE-SOURCE CLAIM - SUPERSEDED BY LIMITED RECEIPT

Retained owner codex/cash-chat-reconciliation-20261026; planned branch feat/cash-automatic-audit-20261029. Explicit owner request: implement automatic cash investigation instead of requiring manual confirmation for every shift. Latest clarification: unresolved issues remain OPEN in the report; they are not automatically resolved and do not require all other work to stop. No Estia store creation, mapping or blanket historical discount approval. Baseline4498b64; existing limited native/external-input PASS preserved. 29Oct read-only LAB observation: one closed LAB POS2 row initial shortage9.40EUR/card0/pending1; manual email preview refused unreviewed shift. No financial/review/setting/email action was executed. That observation is not a whole-workflow FAIL/PASS.

First bounded causal slice after THIS claim green/main: automatic read-only arithmetic and immediate handoff assessment from current scoped original shift fields plus bounded ledger; distinguish calculated

result from manual review and unresolved evidence. Recompute opening/closing operational sums, cash sales/expenses/transfers, expected cash, declared variance, separate card/EFTPOS arithmetic and explicit IRIS ambiguity; missing/unknown/stale/conflicting or overflowing facts stay unresolved, never become zero. Compare only real same-company/store/terminal immediate predecessor/successor; equal opposite amounts alone never prove a counting error or authorize allocation. Existing explicit verified OFFSET/CONFIRM/revoke history and original sourceHash/planHash/financial ledgers stay protected. Expose the automatic result and open issues in the same canonical prose/copy/export/strict automatic DTO. Open document/event/card/identity questions remain visible; numerical calculation is not employee debt or forged human approval. No fabricated reviewer signature.

Exact source scope: NEW server/src/services/cash-automatic-audit.js; existing cash-reconciliation-source.js only additive original-field snapshot/automatic evidence, cash-reconciliation-report.js only read-only automatic assessment integration/prose/hash; cash-reviewed-automatic-contract.js only strict optional safe DTO; cash-reviewed-email.js only current-source provisional readiness retaining existing recipient/consent/preview/fingerprint/transport gates. NEW server/test/cash-automatic-audit.test.js; additive server/test/cash-reconciliation-report.test.js, cash-reviewed-email.test.js, cash-reviewed-automatic.test.js, cash-reconciliation-postgres.test.js and cash-reviewed-automatic-postgres.test.js only actual new assessment/native source regression. No generic cash-control writer, auth, schema, migration, fiscal/provider/stock/invoice, dispatch/scheduler/settings or permission changes. Existing native fixture SQL/mounted archive harness may be read, but edits beyond these paths require a new before-source amendment.

Required proof: balanced and nonzero exact ledger arithmetic, transfers/expenses/reversals, IRIS separation, missing values and overflow, real next shift/open/overlap/foreign/delivery chain, unchanged cash/cards/manual reviews, no automatic offsets from equal amounts, scoped open issues surviving export/DTO/mail, stale source and identity refusal; unskipped native PostgreSQL source and unchanged originals/control. Full exact PR/main CI and normal guarded exact healthy release before scoped measured LAB. CI is not LAB PASS. Each state-changing LAB action needs prepublished baseline, no accepted sale/review replay. Actual new source and LAB are NOT TESTED.

Remaining subsequent slices stay OPEN with this same owner: full telecom/Netlink original-source reconciliation, safe/refill/deposit/document proof, trustworthy automatic counting-error allocation where evidence exists, persistent per-issue closure/continuation, complete real-store/business/email acceptance. This claim does not silently certify all five owner requirements or enable mail. Single next action: publish this before-source claim green/main, then implement the bounded source.

Checkpoint: CHECKPOINTS/CHANGES/2026-10-29-cash-automatic-audit.md.

29/10/2026 — CHAT-FIRST-ENTRY-01 / FIRST SETUP, STORE SHARING AND PERSISTENT CHAT LOGIN / ASSIGNED BEFORE SOURCE

Owner codex/chat-first-entry-20261029. User explicitly requests implementation: easiest selected-store QR/link setup, Super Admin sharing for each store, Owner sharing only own stores, and staying signed in. Independent new onboarding/session-renewal slice; prior native media/push/signing/2FA/role/tenant/revocation PASS retained. Existing native owner retains all other scopes. No accepted tests repeated.

Bounded source: NativeChatDownload/StoreChatPanel and existing Platform selected-store entry only sharing; public Android download page only scoped post-install Open Chat; new validated native store-entry helper + MainActivity/manifest entry wiring; existing chat-only employee session issuer/authorization and store-chat route only bounded revocable rolling session renewal, Android encrypted token renewal/restore only. No POS/financial/invoice/stock/business writer or general BackOffice authentication changes. Never store PIN/password or put credentials in links. Incoming links cannot silently replace an authenticated session. Employee active/store/company/role/credential-stamp/session revocation/module checks stay mandatory. Long-lived chat-only connection with finite idle window and explicit logout/revocation preserved; no unexpiring general access token. Owner/SuperAdmin general session extension is not included without separately scoped auth review.

Required before release: strict URI/tenant/stale-account tests, actual mounted share/QR and download/no-auto-launch tests, native Android unit/lint/build/emulator setup/session regression, server native HTTP/session expiry/revocation/concurrent renewal/logout tests, exact full CI/main and ordinary guarded release, stable-signed APK update/hash/manifest verification. New first-install and stay-signed-in device acceptance NOT TESTED; no feature installed/PASS from this claim. Current source0.1.10 stores connection encrypted but employee JWT expires12h. Generic download QR loses store context. Claim checkpoint CHECKPOINTS/CHANGES/2026-10-29-chat-first-entry.md. Single next action after green/main claim: implement bounded flow; no runtime or production state change yet.

29/10/2026 - CITIZEN-LABEL-RASTER-01 / EXACT TECHNICAL RELEASE / AWAITING PHYSICAL DIRECT PRINT

Retained owner codex/canon-lide400-scan-diagnostics-20261027. Source PR3272 exact final head2791de176bf037f69c0b72b2b4fb923eae021cd0 passed all5jobs CI40946967154/job123705252065:4573server+8backup PASS/0FAIL/0SKIP, including actual Chromium raster test ok2488. Expected-head squash merged750c2564909c3bcdfedb512a1359d8f8480048fc; exact merged-main CI40948773878/job123711762714 also all5PASS with4573+8/0FAIL/0SKIP. Production source blob44b8325ceae0169f9bf8a17c2356be171b68b17a and test blobb2629ce85b7d7786f946dfdddcac728533a2acdc match the locally inspected source and remain unchanged through the released descendant. Prior fixture failures and their corrections below remain historical evidence, not hidden or counted as PASS.

Concurrent chat/cash source changes advanced main before deployment. Runs40950621543 and40952039222 correctly declined stale revisions; their successful workflow status with SKIPPED trigger/wait was NOT a deployment. No guard bypass or rollback was attempted. Actual released descendant ce5ec3a6b37c3844aa57298a88a787ed05ec1def includes750c2564 with no EAN renderer/test changes. Its exact full mainCI40953041609/job123730421994 passed all5jobs:4606server+8backup/0FAIL/0SKIP, actual raster Chromium ok2514. Ordinary guarded deploy40955679300/job123735152996 executed freshness/fullCI guard, rollback checkpoint, actual pinned trigger21:13:06UTC and exact healthy ce5ec3a6 at21:15:11UTC. Other owners and their acceptance scopes remain retained.

Independent public read29Oct21:26:17.785453UTC: /api/health HTTP200/oktrue/revisionce5ec3a6b37c3844aa57298a88a787ed05ec1def. Canonical /platform-admin and public asset chain were read without authentication/business writes. Served /assets/entry-jBtu4Mnk.js2799 642bytes/SHA25647192298ed1cb220bc1da08d08965328ff6b4cb70916eb99cd1464e6fd88c7f2 contains all3 markers labelReady, PNG_UNAVAILABLE and «Η ετικέτα είναι έτοιμη για εκτύπωση ως εικόνα.». This proves released web source, not authenticated UI or Windows/native physical printing. Later main documentation/source is not falsely identified as the measured deployed revision.

The common two existing label paths now prepare one locally decoded PNG before enabling explicit print, preserving configured mm sizes, valid EAN and store settings/permissions/Audit callers. No automatic print or new business/financial/stock/fiscal/native-scanner writer. Local Node20 actual Chromium, normal and packed modes, checksum/isolation, minified initializer, frontend build and one-image/one-page PDF geometry were checked; these are engineering tests only. Native OS/browser-menu printing is not claimed to be application-controlled.

Authoritative hardware scope: the earlier owner-confirmed scanner installation followed by actual scan and the CITIZEN Acrobat Print As Image/80x40/Actual size/one-copy physical output plus normal stop remain limited USER PASS. Earlier direct Chrome/Edge blank continuous feed is the pre-fix USER FAIL. NEW direct MyWorkStation raster output remains NOT TESTED/AWAITING USER; no new hardware/manual PASS, whole setup or Gate closure. Existing manuals/PASS claims stay limited to observed routes. Reboot/Startup/new pairing/physical multipage/actual Super Admin setup-screen verification and printed-barcode hardware readback remain separately NOT TESTED. No accepted scan, Acrobat print or financial action is repeated for paperwork.

Single next action: on the owner's Windows PC with CITIZEN CT-S310II (TZ30-M01/CT-S310IIETEBK), close the old preview, refresh the app and open the existing LAB NEPO500ML/5201219000118/0.50EUR label.

First verify the new ready-as-image message; then one explicit direct print using the already tested driver80x40 form, one copy/100%/no margins. Observe actual content and normal stop; barcode readback only when a reader is available. Stop a blank continuous feed rather than repeat. No sale, payment, invoice submission or stock mutation is required or authorized by this print acceptance. Owner retains this assigned independent regression until actual acceptance or named handoff. Checkpoint CHECKPOINTS/CHANGES/2026-10-29-citizen-label-raster.md.

29/10/2026 - CITIZEN-LABEL-RASTER-01 / ASSIGNED BEFORE SOURCE / DIRECT PRINT USER FAIL

Owner: retained device-setup conversation codex/canon-lide400-scan-diagnostics-20261027; bounded regression branch fix/citizen-label-raster-20261029, explicitly requested by owner «ΞΕΚΙΝΑ ΤΗΝ ΔΙΟΡΘΩΣΗ». Existing EAN-13 scope was closed; this reopens only the new CITIZEN direct-print failure, not tenant settings or other barcode work. Other owners, including StorePosPanel, remain unchanged.

29Oct Windows user evidence: setup dialog/download/helper installation completed; user reported real scan «ΕΙΝΑΙ ΟΚ» after install. Printer settings opened Windows, official Citizen driver installed, Windows test page printed. Physical label identifies TZ30-M01 / CT-S310IIETEBK, queue CITIZEN CT-S310II; user confirmed continuous 80mm roll. Direct Chrome and Edge output, including custom 60x40 and80x40 forms, repeatedly fed blank continuous paper: USER FAIL. PDF content independently inspected as one roughly60x40mm page. Adobe Acrobat Print As Image, driver MyWorkStation-80x40, Actual size, one copy printed NEPO500ML /5201219000118 /0,50EUR. Owner photo shows content; «Μόνος του κανονικά» confirms normal stop. Scoped physical USER PASS only for that Acrobat route, not browser fix or barcode scanner readability. Exact physical terminal/installed driver hash/deployed client revision at test not independently recorded. Reboot/startup, new pairing, physical multipage and Super Admin setup screen remain NOT TESTED. No financial/stock PASS or replay.

Source plan after claim main: only client/src/utils/ean13-label.js plus NEW focused server/test/pos-ean13-label-raster.test.js (and isolated browser fixture if needed). Render existing validated EAN/store/product/price into one bounded local raster image, wait for complete rendering before explicit print, refuse rendering errors without vector fallback. Preserve shared API, configured mm sizes, checksum/95 modules, selected-store settings/permissions/Audit and existing preview fields. No StorePosPanel, scanner/native installer/API/schema/auth/settings/financial/fiscal changes. Acrobat success motivates a raster candidate; it does NOT prove the driver cause or browser hardware success.

Preserved: earlier EAN isolation200/403/403, negative checksum, Greek text/price and two callers; all old scanner/setup/POS PASS.
Checkpoints2026-09-27-pos-ean13-label-print.md,2026-09-27-ean13-label-isolation-final.md and2026-10-28-easy-device-setup.md/manuals read. Current main history through86a5b5b inspected; label renderer unchanged in retained history. Public health read29Oct returned ca58f2fa81261c02871f11c471c9d2552bc2009b/oktrue; exact user-test client revision unknown.

Required before user testing: local actual browser raster/text/barcode/geometry/no-auto-print/error checks, retained checksum/isolation regressions, frontend build, full PR/main CI and ordinary guarded exact release. Candidate remains AWAITING LAB until one direct MyWorkStation label physically prints and stops, then actual barcode readback. No repeat of accepted scan/Acrobat print merely for documentation. Checkpoint CHECKPOINTS/CHANGES/2026-10-29-citizen-label-raster.md. Assignment retains this owner until completion or named handoff.

28/10/2026 — DEVICE-SETUP-EASY-01 / TECHNICAL RELEASE / AWAITING REAL INSTALLATION AND PHYSICAL LABEL ACCEPTANCE

Before-source owner/claim3247 remains codex/canon-lide400-scan-diagnostics-20261027. Source PR3248 exact head c1f096cb623d1739ab74a367996633b6e637d39f passed all five full-CI jobs40693419547/job122834388053:4459 server and8 backup tests,0FAIL/0SKIP, including actual desktop/narrow Chromium setup-dialog test ok890. Windows40693419550/job122833786560 passed actual worker BMP/JPEG/HTTP, native helper compilation/isolated fixtures, and reconstruction/hash/source check plus execution of THE EXACT public pinned binary (log13:08:13Z: Exact published helper integrity and isolated Windows tests PASS). Expected-head merge produced0418582ec5a1c1c5be8fb0401a98065191a72823; independently matched merged tree90860a12f7965e90f8eeb0075768bb980ac37042 to reviewed tree. Concurrent printable-support guide and retained cash source are preserved. Native artifact provenance and earlier failed csc-path attempt remain in the source checkpoint, not silently replaced by final PASS.

Exact merged-main CI40695210978/job122840536616 succeeded with all5jobs,4459server+8backup tests,0FAIL/0SKIP, including actual setup Chromium ok890. Ordinary guarded release40696733563/deploy job122845546427 succeeded: exact full-CI/freshness preflight, actual pinned trigger at13:29:47Z and healthy exact0418582ec5a1c1c5be8fb0401a98065191a72823 at13:32:10Z. No manual deployment or safeguard bypass.

Independent public verification at2026-10-28T13:34:11.664Z used the actual client fetchDeviceSetup helper against public production URLs (curl transport mapped to normal Response) and verified23requests (manifest+22parts), each part and final executable SHA256/MZ/size:45706240 bytes,ad94ae0b2432eba49e60b4ede8572910db9b763ce33afba83b5378d4344faf14, filenameMyWorkStation-Scanner-Setup.exe. Before/after /api/health both HTTP200,ok=true,exact0418582e. Public main-B_KKoo0M.js350263bytes SHA256e248031869543aaab5ac0ea7e79c28e97330e52bd5420d4a66fbc227256ae3db contains the scanner/setup launcher, executable name and Windows printers URI; public entry-Bb67ZlHt.js2766297bytes SHA256cab13dd1cc8f009a71b7f02c86c3f34e2a4ba84065628b3662d244780d543148 contains the existing selected-store label settings with its printer setup launcher. This is deployed-source/asset integrity evidence, not authenticated actual UI, browser-native download permission, native installation or hardware PASS.

TECHNICALLY INSTALLED / AWAITING USER: scanner intake offers Εγκατάσταση σαρωτή / εκτυπωτή; selected-store Super Admin label settings offer Εγκατάσταση εκτυπωτή καρτελακίων. Explicit download produces one .exe; the operator opens it and chooses installation or official Windows printer settings. Scanner installation preserves existing CurrentUser pairing; a running old connector must be closed once before installation. Existing paired working scanner does not need repeated pairing, invoice upload or payment to prove this release. If a refresh is needed to receive the new UI, first preserve/finish unsaved selected pages; do not discard an in-progress invoice.

Remaining acceptance: actual Windows installation/startup/pairing persistence, real scanner operation after install, real printer/official driver selection and correctly sized physical price-label output. These remain NOT TESTED; no new USER/LAB/manual PASS, no automatic driver installation, print, scan, label-setting write, invoice/payment/stock/fiscal/auth mutation or Windows trust-policy bypass. The helper remains unsigned and normal organization/Windows policy applies. Existing one-page Canon/header/preview USER PASS and prior tested multi-page-control fixture remain protected, without claiming independently observed physical2–5page acceptance. No repeated invoice/payment or accepted transaction is authorized merely for evidence. All other owners remain retained. Older AWAITING RELEASE/distribution statements below are historical and superseded only by this technical release receipt. Same owner retains DEVICE-SETUP-EASY-01 for the single next action: actual operator installation and physical-device acceptance.

Checkpoint CHECKPOINTS/CHANGES/2026-10-28-easy-device-setup.md.

Receipt reconciled over concurrent cash-display main6bbf006742e15aeb6f5492af68bbc4ee12c2801a; its source/tests/checkpoint and all retained claims are preserved unchanged. Cash source has its own exact CI/release acceptance; this documentation-only receipt does not attest to it or require re-running any transaction.

28/10/2026 — DEVICE-SETUP-EASY-01 / TESTED WINDOWS PACKAGE PINNED / AWAITING EXACT RELEASE AND USER ACCEPTANCE

PR3248 retains the before-source owner/claim3247. Native source b71e67220200d421de90766e18020ee2fb2d81dc passed Windows40690717370/job122824482633 including real embedded extraction/reuse, temporary Windows shortcut, preserved pairing, rollback/refusal checks and an actual small-form layout fixture. Full CI40690717465 also succeeded. Initial Windows csc path failure40689193481 was corrected without reducing assertions; intermediate40689857666 passed. Final artifact12817710443 outer ZIP45499744 bytes SHA256 9b524b2a81de94567d5deab546599972fff8debbd9c894ee91d07b6c43a29432 was downloaded and CRC/hash checked. Its executable45706240 bytes SHA256 ad94ae0b2432eba49e60b4ede8572910db9b763ce33afba83b5378d4344faf14 matches native Git blob146bf6e8b0fd40b126f0e1f0e0c154fe943b5682 and unchanged scanner sources. It is now pinned under client/public/downloads/device-setup/v1 as22 bounded parts plus manifest, assembled/verified into one .exe by the explicit in-app download. Final Windows CI MUST reconstruct and execute this exact pinned binary, not merely test a fresh build.

Local Node20 regression10PASS/0FAIL/0SKIP, including real Chromium desktop/narrow native-dialog focus/Escape/viewport/reachability/no-auto-fetch, mounted store-change cancellation, byte/hash/size/URL refusal and original scanner/preview/label PUT behavior. The browser test found content-box dialog overflow; box-sizing and native close/focus restoration were corrected before publication. No native source changed after the pinned artifact. Exact final PR/mainCI, normal guarded deployment and public manifest/part verification remain required before requesting user testing. Earlier SOURCE CANDIDATE/BINARY DISTRIBUTION PENDING entries are historical, superseded only for artifact availability by this record.

AWAITING USER: real current-user installation/startup/pairing preservation and actual scanner operation; printer device/official driver selection plus price-label output on the physical printer. CI is not hardware PASS. No automatic print, driver download, scan, label settings write, invoice/payment/stock mutation or security bypass. Installer is unsigned; normal Windows/organization trust policy remains. Accepted one-page Canon/header/preview and all other retained owners remain protected. Keep this independent setup item assigned to codex/canon-lide400-scan-diagnostics-20261027 until acceptance or named handoff. Checkpoint CHECKPOINTS/CHANGES/2026-10-28-easy-device-setup.md.

Reconciled over concurrent INSTALL-SUPPORT printable-guide main3c49a9cf542a0e3fd40073fce460ffcb5a41cb19; all its source/evidence and prior cash scope preserved unchanged. Final exact-head gates are rerun after reconciliation.

28/10/2026 — DEVICE-SETUP-EASY-01 / SOURCE CANDIDATE / BINARY DISTRIBUTION PENDING

Retained setup owner codex/canon-lide400-scan-diagnostics-20261027. Before-source claim3247/head69837c1828d65a43c97f9fbdb3ad437262e7ad22 passed applicable docsCI40686731517 and mergedadfd46ba130f913b6b8c68865a91eb725df239b4 before source. Concurrent cash source0e79b515 is preserved; no retained cash/install-support/lifecycle/fiscal/label writer edited.

Candidate: native generic Windows helper embeds the existing published scanner, validates SHA256/manifest/ZIP paths/counts/sizes, stages an immutable per-user version, preserves root pairing, updates only the per-user Startup shortcut and requests worker start after explicit install. Prior pointer/version is restored on startup failure. An open existing connector must be closed before installation; no forced process kill, elevation/security bypass or automatic scan. Printer choice opens official

ms-settings:printers for normal user-directed Windows device/driver addition, never automatic print/settings save or arbitrary driver download. Installer self-tests use actual temporary shortcut creation, real embedded extraction/reuse, pairing preservation, simulated rollback, traversal/reserved-path/checksum/size refusal and injected printer launch, with no real Startup/hardware action.

Web candidate adds explicit setup launchers in the existing scanner and Super Admin label-settings controls only. A local dialog explains the two paths, requests a fixed-origin bounded manifest/parts only on click, verifies each SHA256/size and final executable digest/MZ before producing one .exe download, cancels on close/store/disabled/unmount and never claims installed from download. The Windows URI is explicit; unavailable Windows/browser/driver support is not readiness. Existing label dimensions/printerName/PUT and scan/pair/run logic remain unchanged. No server/API/schema/role changes.

Local actual Node20:5 setup tests PASS/0FAIL/0SKIP (streamed excess/corruption/unsafe URL/count/abort, unchanged executable bytes, mounted no-auto-download/store-stale/close and label selected-store PUT preservation); existing scanner mounted regression1PASS; preview/real-control five-page/actual Chromium4cases tests3PASS. Actual Windows compilation/helper isolated tests, full exact CI and public distribution are still REQUIRED. No native install/driver/price-label print or new hardware PASS.

The public pinned generic executable/manifest parts are NOT YET added: do not merge/deploy a download button pointing to an unavailable package. Obtain the tested Windows artifact, verify native source Git blobs and executable hash/size, add bounded public parts and manifest, then rerun Windows (including the exact published executable) and full PR/mainCI/normal guarded release. The helper is not Authenticode-signed by this workflow; existing Windows/organization trust policy stays authoritative, no bypass instruction. Real operator installation/pairing/driver/label output acceptance remains OPEN. Other owners and accepted scanner/header/preview remain protected.

Checkpoint CHECKPOINTS/CHANGES/2026-10-28-easy-device-setup.md. Same owner retained until actual acceptance or named handoff.

28/10/2026 — DOCUMENT-SCANNER-PREVIEW-01 / LIMITED USER PASS / COMPLETED

Following the delivered preview and explicit request to inspect the selected image and try zoom, the owner confirms "ειναι οκ". This closes ONLY the reported on-PC image preview/zoom acceptance, alongside the prior Canon LiDE400 one-page intake/correct-header USER PASS. This is owner confirmation without a new screenshot, measured geometry, exact zoom level, physical terminal/store/operator/shift/time or independently captured installed/client hash. Do not convert it into full OCR/product-line/cross-supplier, physical2–5page, all-model/device, install/reboot or financial/stock PASS. No scan/payment/replay was requested to complete this record.

Delivered source3242/main79b251496211f00830f16f2ef95703111e408405, exact PR40676116060 and main40677458915 final attempt2 green4439server+8backup/0FAIL/0SKIP. Main's browser-startup timeout and unchanged job-only retry remain qualified in the earlier receipt. Normal guarded release40679299748/job122785691616 exacthealthy79b25149 and independent public health/lazy-entry proof preserved. Receipt3244 merged864bb5c3; fresh mainc8645d7b differs only by the retained cash-events claim. No runtime/business action in this PASS receipt.

Manual docs/manual/document-scanner/PASS.md gains the confirmed local preview usage and boundaries. Current preview AWAITING USER is superseded; completed preview residual is removed from pending. No repeat of the accepted scanner/header/preview flow for evidence. Broader capture/native/installation/physical multipage scopes and other owners remain OPEN/protected. Retained owner codex/canon-lide400-scan-diagnostics-20261027 takes the separately bounded user-requested device-setup slice below; no handoff or whole Gate closure.

28/10/2026 — DEVICE-SETUP-EASY-01 / ASSIGNED BEFORE SOURCE

Explicit user requirement: installation must be easy from buttons inside MyWorkStation for document scanners AND price-label/tag printers, rather than ZIP/manual-file instructions. Receiving independent setup owner codex/canon-lide400-scan-diagnostics-20261027; future branch feat/easy-device-setup-20261028. This is packaging/setup presentation only, not a transfer of retained INSTALL-SUPPORT profiles/lifecycle, KAT StoreMode activation, RBS/FTEXT/fiscal/production-ticket routing or label permissions/format/financial writers. Existing StoreLabelSettingsManager has size/name configuration and explicitly relies on the normal Windows/browser print destination; no model/driver is independently identified. Keep those settings/gates unchanged.

Exact scope after THIS claim is green/main: NEW tools/windows-device-setup/Setup.cs, README and isolated Windows installer self-tests; existing .github/workflows/document-scanner-windows.yml ONLY additive packaging/test of the native helper from its already tested scanner publish. NEW client/src/components/store/DeviceSetupPanel.jsx and NEW client/src/lib/device-setup-download.js; existing DocumentScanButton.jsx ONLY setup launcher (normal scan/pair/run logic unchanged); existing client/src/components/platform/StoreLabelSettingsManager.jsx ONLY explicit setup launcher (same scoped save/dimensions/printerName/role contract). NEW focused server/test/device-setup*.test.js. NEW pinned generic binary distribution under client/public/downloads/device-setup/ with manifest/SHA256/size and bounded parts if needed, populated only from verified Windows CI. No server/index/API/schema/auth/production settings or other retained source edits.

Contract: one downloaded native Windows helper, no ZIP extraction or PowerShell commands for the operator. Per-user scanner install/startup with existing DPAPI pairing preserved, one-time existing pairing kept, no automatic scan/upload/payment. Printer button opens the official Windows Add Printer flow for user-selected installed/vendor-supported driver; it cannot silently identify/install arbitrary models or mark hardware ready. Existing MyWorkStation label settings/normal print selection stay authoritative. Generic executable/payload contains no store credentials, pairing records, private document/image or user config. Validate embedded ZIP paths/sizes/integrity before writes; stage/version installation safely, preserve prior working setup on failure, bounded explicit handling of an already running connector, no admin/security/ExecutionPolicy bypass or arbitrary command/URL. Public download is generic code only; no tenant information.

UI: explicit install/setup choices, readable progress/error, no download/native launch on mount, source/store/unmount cancellation and no false installed/PASS from a download. Same-origin pinned assets, bounded counts/size, digest verification before final download, no arbitrary URLs/redirects, no secrets or credentials. Existing data selections must remain untouched. Native helper cannot change application payment/label/settings or print without an explicit user action.

Required: actual Windows compile/extract/manifest/path traversal/oversize/refusal/rollback/pairing-preservation/install/update/shortcut fixture tests with no real user Startup or hardware action; existing real loopback connector tests; actual mounted button/store/cancel/download-integrity/no-business-call tests and retained label/scanner regressions. Full PR/mainCI, normal guarded exact release and verified public binary before new actual Windows installation/driver/label output acceptance. No driver/model or production installation PASS from CI. Current capture preview/header PASS protected. Single next action after claim merge: implement this bounded helper and launchers; physical scanner/printer setup and price-label output remain AWAITING USER until tested. Other owners retained.

28/10/2026 — CASH-KIOSK-IMPORT-11 / LIMITED ACTUAL XLS INPUT–REPORT–EXPORT–REVOKE PASS / REMAINDERS OPEN

Retained owner codex/cash-chat-reconciliation-20261026; docs/cash-kiosk-lab-pass-20261028; parent #3243 remains OPEN. Actual authenticated desktop Platform SuperAdmin Χρήστος Μάνης, only ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ/cmtpopbgo000trhb5ng9ytiru,DAY27Oct00:00–23:59 Greece. Observed28Oct17:22–17:31UTC; receipt 2026-10-28T17:33:59.534117+00:00. Source #3261/head48bcaa7/main dfd5183 fullPR40719599122 attempt2/job122935825851 and exact main40723862270 attempt2/job122956649792 each4509server+8backup/0FAIL/0SKIP. Newer invoice source ac5850c0d9c5e5b170500badded0a9cb10537b19 preserves all eight cash runtime blobs, fullCI40729155657/job1229620619034539+8/0FAIL/0SKIP including unskipped native original/replay/role/lifecycle/control test. Normal guarded40731246705/job122968066948 SUCCESS,exact healthyac5850c17:11:51.511UTC. Baseline #3263/head02ccf3af929b5abde30379f93d3b68651aa1e917 docsCI40734419214 SUCCESS merged a474c553e184ddaeb8ce1017682813bfe4c8ce49 BEFORE first input. Every input/revoke has a recorded BEFORE and AFTER observation below. Earlier candidate/awaiting-LAB entries for THIS bounded input/prose/export/revoke flow are historical and superseded by this limited result, not by a global finance PASS.

Receipt reconciled over concurrent documentation944dfad199eda08a6ecb0ae72d461c5ab6466446. Its installed POS/invoice receipts and new invoice-email-preview claim are preserved through a clean three-way merge; no shared runtime or another owner’s source was edited.

Actual synthetic original XLS flow:0→1(events sequence1,incomplete report)→2(journal sequence2 with explicit LAB-436/LAB_KIOSK_28OCT binding). File selection alone did not import; explicit attestation/submission required. Full pair produces exactly one zero-price sold line for LAB KIOSK IMPORT 20261028,27/10/2026,21:09:17 Greece,qty1,retail2EUR/final0EUR/reduction2EUR,transaction865001,explanation/disposition/camera request. Separate price event has no invented quantity/transaction/application and retains exact “Δεν επιβεβαιώθηκε εφαρμογή της αλλαγής στις διαθέσιμες πωλήσεις”. Changing to N40 CONTROL20261010 and refreshing shows0sources/0closed shifts/0cash-card differences/no external section; returning/reloading LAB retains both sources and same findings. This proves observed UI scope/persistence, not the complete tenant/role/hardware matrix.

Actual copy and downloaded6-sheet XLSX contain the same1198characters of canonical prose. Verified archive row native shift a3494bb3-61cf-447c-9707-27311f35708c:initial/offset/residual cash0,card0,unreviewed financial totals blank; employee/day reviewed sheets remain headers only. Informational2EUR reduction never becomes cash debt,card difference or native employee allocation. Native1shift,original shortage0/surplus0/POS–EFTPOS0,pending1 excluded reviewed totals stay unchanged throughout. Explicit analysis-only revocations,each with reason/confirmation and before values,produce2→1(journal removed,incomplete)→0(events removed,no external section). Final fresh list0rows/0alerts,review amountblank/counting checkboxfalse,report restored to native baseline. No original/history deletion; actual UI eligibility is observed, original-byte retention is independently proven by unskipped native PostgreSQL CI rather than a hosted original-download test. Final synthetic files are not active in analysis.

Evidence CHECKPOINTS/EVIDENCE/cash-kiosk-imports-20261028/:input-manifest.json and two exact originals already published in baseline;source-ci-receipt.json;lab-observations.json;copied-report.txt;actual lab-reviewed-export.xlsx and export-verification.json;lab-report.jpg(before cleanup) and lab-cleanup.jpg. No private real-store upload,sale/return/VOID/discount/shift close/review/offset/stock/fiscal/provider/setting/permission/email action. Native sale/IRIS counts,physical cash/stock quantities/movements and independent hosted generation numeric value NOT TESTED; no financial delta inferred from absent measurements. Hosted acceptance covered actual original XLS inputs and real XLSX export; XLSX input,resource/DST/role/duplicate/tamper matrices have parser/native CI proof,not a claim of every hosted scenario. Existing native6bbf006/month13shifts8.90EUR limited PASS remains protected and unreplayed.

Completed parser/input/prose/export/revoke pending slices10/11 are removed from PENDING_WORK in this same receipt; manual docs/manual/cash-control/PASS.md and central PDF synchronized. Still OPEN with the

same cash owner: exact historical Estia approved transactions and actual MyWorkStation store mapping (no blanket beer/chocolate/BLU exemption),real trusted-promotion/water evidence and full actual business/report/email acceptance. Existing dispatch readiness/recipient/consent rules and withdrawn preview-first requirement are unchanged; no automatic-email settings enabled and no message sent. The older global financial workbook and other financial residuals are not closed by this slice. No other writer ownership transferred. Single next action for #3243: retrieve/verify exact prior Estia cases/store identity before any new exception mapping; do not repeat accepted synthetic/native transactions. Checkpoint CHECKPOINTS/CHANGES/2026-10-28-cash-kiosk-imports.md.

28/10/2026 — CASH-KIOSK-IMPORT-11 / EXACT RELEASE AND BEFORE-ACTION LAB BASELINE / AWAITING ACCEPTANCE

Retained owner codex/cash-chat-reconciliation-20261026; docs/cash-kiosk-lab-baseline-20261028; parent #3243. Source #3261/head48bcaa7 merged dfd518392f501c0aee3257ccd2a8bc7598039b99 after full PR40719599122 attempt2/job122935825851:4509server+8backup/0FAIL/0SKIP. Exact main40723862270 attempt2/job122956649792 also4509+8/0FAIL/0SKIP. First PR attempt had three unrelated Chromium startup failures, and first main attempt was cancelled; no assertions/code were weakened for either retry. Native Kiosk original/replay/role/lifecycle/control test ran unskipped. Concurrent invoice main ac5850c0d9c5e5b170500badded0a9cb10537b19 preserves all eight cash runtime blobs, passed full40729155657/job122962061903:4539server+8backup/0FAIL/0SKIP. Normal guarded40731246705/job122968066948 succeeded, exact healthy ac5850c at2026-10-28T17:11:51.511Z, independently confirmed public health. Obsolete df-target run40729436750 was cancelled at17:05:35UTC through authenticated GitHub UI while still fetching repository, before guard/trigger/production action, releasing the normal queue. No force deploy, rollback, workflow/config/security change. Evidence CHECKPOINTS/EVIDENCE/cash-kiosk-imports-20261028/source-ci-receipt.json and stale-deploy-cancelled.jpg.

Before-action baseline recorded 2026-10-28T17:15:43.922128+00:00: authenticated Platform SuperAdmin Χρήστος Μάνης, desktop cloud Chrome/platform-admin, only synthetic ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ store cmtpopbgo000trhb5ng9ytiru, DAY2026-10-27,00:00–23:59 Greece. Newly reloaded actual UI shows1existing closed LAB POS2/MAIN shift22:48–19:24, original shortage0EUR/surplus0EUR/POS–EFTPOS0EUR, no undocumented expenses,1pending excluded reviewed totals,0displayed active Kiosk sources and no external-source report section. Report/review fields blank, counting checkbox false. Separate N40 CONTROL20261010 same-day read:0closed shifts,0visible original cash/card differences,0active source rows and no source errors. Returned selected scope to LAB; no business or evidence write yet. Native per-shift sale/IRIS counts, stock quantities/movement timestamps, physical cash and lifecycle-generation numeric value are not independently observed in this UI, so NOT TESTED; this is evidence-input/report acceptance only, not financial/stock acceptance. No affected native product, payment method or terminal transaction; imported external identities must not become native cash allocations. Existing native6bbf006 limited PASS stays protected and is not replayed.

Publish this baseline/evidence plan green/main BEFORE the first import. Immediately before every state-changing input/revoke, refresh current selected-store/report/source values and record them in this checkpoint; perform one identified action, then record actual after values. Only the two synthetic original files in input-manifest.json are permitted: lab-kiosk-events-20261028.xls (4096bytes,SHA256bf7ddb2438ffedad737832d5caa83ef421953f36cf4b84be216486a903382bfa), lab-kiosk-journal-20261028.xls (4608bytes,SHA2560a957efb3c82755776daeb50a52b214bf4f9777e99ef30b73134f2351ae248f0). Period27Oct, product LAB KIOSK IMPORT20261028 (actual literal contains spaces: LAB KIOSK IMPORT 20261028), external shift LAB-436/operator LAB_KIOSK_28OCT, transaction865001,27/10/2026,21:09:17 Greece,qty1,retail2EUR/net0EUR. No native sale is created. Expected active sources0→1(events incomplete)→2; complete pair must show exactly one zero-price sold line plus one unconfirmed event, not invent a transaction/quantity on the event and not add2EUR to cash/cards. Verify read persistence, canonical copied/exported prose if available and read-only N40 isolation. Then explicitly revoke only these synthetic sources from analysis, preserving original/history, with before/after records and sources2→1→0; report returns to baseline. No private real-store upload, sale/return/VOID/discount/shift

close/review/offset/financial/settings/provider/permission/email action. No repeated old accepted transaction for evidence. Actual new input/manual PASS remains NOT TESTED until observed.

Only bounded input/report acceptance is authorized. Broader #3243 remains OPEN: exact historical Estia approvals/store mapping, actual automatic-promotion/water proofs, real-store/full report/email acceptance and older global financial workbook are separate remainders. No blanket category/product exemption, no arbitrary employee assignment or duplicate financial count. All concurrent owners and handwritten Chat path remain unchanged. Checkpoint CHECKPOINTS/CHANGES/2026-10-28-cash-kiosk-imports.md. Single next action after this baseline green/main: execute the measured synthetic import/report/revoke flow on the exact healthy source.

28/10/2026 — CASH-KIOSK-IMPORT-11 / INTEGRATION CANDIDATE / AWAITING NATIVE CI AND LAB

Retained owner codex/cash-chat-reconciliation-20261026; source feat/cash-kiosk-import-20261028. Original before-source scope3255/head29622505f202a70ddcd48f7377ce34d82343f668 fullCI40709804308/4472server+8backup/0FAIL/0SKIP merged1c45800 before import code. Exact parser-mainCI40711905995 SUCCESS. Additional archive-harness claim3260/heade0aee02da00500f7dd0814655aff3aac0f843714/docsCI40716285827 SUCCESS merged34e5b6017bd7bf1f91431b02315fe39c89a39b8a before touching its one named existing test. Concurrent POS empty-editor/layout main1d5aa484 preserved. No new hosted acceptance or actual report email.

Candidate provides explicitly scoped XLS/XLSX input and original-byte plus normalized-fact provenance in the new CASH_KIOSK_SOURCE/IMPORT namespaces only, using existing covered attachment/audit tables. No schema/bootstrap, generic chat, invoice, module/auth, provider, fiscal or financial writer changes. Auth is repeated against persisted actor/store/license inside the store/lifecycle-locked write transaction. Once-only import/revoke, exact replay conflicts, original-file retention and durable reuse receipts protect unknown outcomes, including retries after deliberate revocation. Records remain in historical windows; active-file/byte limits apply to overlapping declared source periods. Raw originals are re-hashed with stored normalized facts on canonical reads and never sent in the report/automatic envelope. Source failures and missing/conflicting inputs stay visibly unavailable/limited, never false zero.

Same external informational evidence is included once per selected report in reportHash, prose and strict reviewed-automatic projection; archive/copy/assistant consumers use that canonical text. Original sourceHash/planHash, confirmed cash amounts/cards and financial ledgers stay unchanged. Separate Kiosk shift/operator/transaction namespaces remain explicit. No historic Estia category-wide exception or invented water approval. Native confirmed-promotion and exact-proof comparator behavior remains protected; broader actual business exceptions and historic precise evidence still need real verification. Files do not acquire native employee/cash allocations.

Actual mounted source panel requires file kind, declared period, selected-store attestation and explicit source shift/operator for journals, with no auto-upload/retry. Existing busy gate serializes import with review/download actions; late store/period completions are ignored and unknown outcomes require refresh. Explicit revoke removes only analysis eligibility while originals/history remain. The archive harness now compiles the actual new child module with real React and resolves its import; every old assertion and hook/ref identity preserved. The initial parent test clicked the older counting-confirmation label; its selector now targets the new full attestation label. No production behavior was weakened for the harness.

Retained parser-scope3254 also gains a bounded normalized-result budget before worker postMessage, preventing a small spreadsheet from returning an oversized parent object. Initial resource fixture used BIFF8 writer strings that were truncated to255chars by the test writer and therefore did not reach the bound; switched that specific synthetic stress input to actual XLSX. Final Node20 cash-consumer sweep259tests:239PASS/0FAIL/20isolated native-infrastructureSKIP; focused mounted/domain tests passed; Work-safe client build PASS. The new actual PostgreSQL registered-route/two-client/original-hash/fresh-role-revocation/lifecycle/once-only/revoke/control proof must run unskipped in fullCI. CI is not LAB PASS; no new manual PASS from synthetic checks.

Exact fullPR/mainCI and normal guarded healthy revision are required before measured LAB. Planned acceptance uses only identified synthetic event/journal files in ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ, with published current baseline, exact source counts and unchanged visible original balances; no private real-store upload, sale/shift/review/offset/settings/provider/email action. Whole request #3243 remains OPEN/ASSIGNED. Single next action: verify this exact combined source in full native CI, preserve concurrent owners through main, then normal guarded release and the declared measured input/report flow. Checkpoint CHECKPOINTS/CHANGES/2026-10-28-cash-kiosk-imports.md.

Candidate reconciled over concurrent POS no-print-permission main606a3bc3506b35c602518dcd16c09bb0659509c5. Its role/profile/checkout source and every retained owner are preserved; no shared cash runtime path changed in those concurrent commits.

28/10/2026 — CASH-KIOSK-IMPORT-11 / ARCHIVE HARNESS COMPATIBILITY AMENDMENT BEFORE EDIT

Retained owner codex/cash-chat-reconciliation-20261026. Parser3255/head2962250 fullPRCI40709804308 passed4472server+8backup/0FAIL/0SKIP and merged1c45800; its mainCI40711905995 also SUCCESS. Import/report implementation remains an unpublished candidate on feat/cash-kiosk-import-20261028 under the already green before-source claim3255. No new LAB/manual/email PASS. Current main1d5aa484 preserves independent POS empty-editor and layout source. Existing native cash6bbf006 limited PASS protected.

Meaningful local expanded cash-consumer sweep:258tests,236PASS,2FAIL,20isolated native infrastructureSKIP. Both failures are in server/test/cash-reviewed-archive-ui.test.js: its data-URL transform explicitly resolves only React and archive helper imports, and cannot resolve the newly added relative CashKioskImportPanel.jsx module. Original download behavior was not executed by these two failures; do not call them financial or hosted regressions. Focused actual mounted integration and financial/projection tests64PASS/0FAIL/1nativeSKIP; Work-safe client build PASS. Native source/route proof still requires real CI PostgreSQL.

Add ONLY existing server/test/cash-reviewed-archive-ui.test.js to the current import integration scope: compile the actual new child component to an importable data URL with the real React module, and resolve that new relative import in the existing actual-panel harness. Do not stub the production component, delete/weaken assertions, change old hook/ref identities, skip tests or change archive/download semantics. This docs amendment must be green mergedmain BEFORE that one test file is edited. All existing and claimed import/runtime paths remain as previously bounded; no extra writer/permission/provider/lifecycle/financial scope. Single next action after amendment merge: fix this exact loader dependency, rerun existing actual archive tests and the cash consumer sweep, then publish full integration candidate for exact CI/main/guarded release and measured LAB. Checkpoint CHECKPOINTS/CHANGES/2026-10-28-cash-kiosk-imports.md.

28/10/2026 — CASH-KIOSK-IMPORT-11 / SELECTED-STORE INPUT AND CANONICAL REPORT CLAIM / BEFORE SOURCE

Retained owner codex/cash-chat-reconciliation-20261026; future branch feat/cash-kiosk-import-20261028; parent #3243. User instructs completion of the external-event rule in MYWORKSTATION. This is the next narrowly bounded independent cash consumer/input slice, not a transfer of retained native/chat/invoice/dispatch/financial writers. Existing cash native6bbf006 limited LAB/manual, parser claim3254, four concurrent POS/invoice scopes and all other owners remain protected. No integration code is present in this claim. It must merge green/main before the new paths are edited.

Exact future source: NEW server/src/services/cash-kiosk-imports.js (bounded request validation, original-file/normalized-fact provenance, import/revoke/idempotency, read-only canonical evidence). Existing server/src/routes/cash-reconciliation.js ONLY additive selected-store /kiosk-sources list/import/revoke endpoints behind unchanged authorizeCashPaper; no index/global middleware edits. Existing server/src/services/cash-reconciliation-repository.js ONLY once-per-materialization read of external informational evidence. Existing cash-reconciliation-report.js ONLY optional report-level external evidence

in reportHash and short no-table prose; cash-reviewed-automatic-contract.js ONLY strict safe projection/serialization of that same optional evidence. NEW client/src/components/shared/CashKioskImportPanel.jsx; existing CashReconciliationPanel.jsx ONLY import/mount/refresh for that panel after the selected-store report loads. NEW server/test/cash-kiosk-imports.test.js, cash-kiosk-imports-postgres.test.js, cash-kiosk-imports-ui.test.js. Existing relevant cash repository/automatic test fixtures may gain only the new empty-source query stub if strictly necessary, retaining every old assertion and recording exact touched path before change.

Persist only a NEW CASH_KIOSK_SOURCE documentType in the existing DocumentAttachment table and a NEW CASH_KIOSK_IMPORT audit namespace in existing WorkforceAuditLog, with original bytes/checksum and immutable normalized facts tied to actor, explicit selected company/store, lifecycle generation and declared source period. No schema/bootstrap/migration, existing attachment-type reader or invoice/chat writer is edited. Existing lifecycle policy already covers both tables; do not change it or bypass maintenance/generation/backup controls. No raw bytes/private source rows in report/automatic envelope. Native/chat upload MIME support stays unchanged; existing handwritten-photo/PDF chat path continues. The new cash-specific Excel input does not take the retained generic Chat writer.

Require original-byte checksum and normalized-fact canonical hash verification, strict scope/identity/size/count validation, bounded active files/history and byte budgets, explicit kind plus journal source shift/operator binding and selected-store confirmation. The filename is only a hint, never store or identity proof. Repeated input must reuse an exact prior receipt, reject changed replay/conflicting binding and permit explicit evidence revocation/correction without deleting original history. One store-row/lifecycle-locked transaction, fresh persisted authorization before writes, no asynchronous business/provider work or financial action. Reads must not ensure schema or mutate audit state; absent/failed/partial sources remain visible unknown/limited rather than all-clear. Period filtering uses explicit Greece wall dates, external identities never acquire native allocations. Preserve current financial sourceHash/planHash/review arithmetic/cards and original ledger; only observational reportHash changes.

Expose a clear selected-store file input for XLS/XLSX with exact source-binding controls, explicit import/revoke action, progress/error/unknown-outcome handling and current source list. Store/period/unmount changes invalidate late results; no auto-upload/retry, no default all-store scope. Canonical report, archive/copy/assistant and reviewed automatic consumer must see the same short event prose and source coverage, without another count into cash or cards. Native trusted-promotion and specific water-proof semantics stay unchanged; do not infer historic Estia approvals from item/category names. Source events lacking quantity/transaction remain unconfirmed; missing journals and unresolved overlapping event exports stay explicit LIMITED.

Required proof: actual original XLS/XLSX parse and round-trip/hash/read, registered native PostgreSQL route/current-role/foreign scope/license denial, once-only two-client replay/conflict/revoke/lifecycle behavior, unchanged financial/stock/control snapshots, canonical report and strict automatic projection including tamper/stale-source checks; actual mounted UI store/late response/no-auto-upload/input/unknown-outcome protection and existing cash regressions. Full exact PR/mainCI, normal guarded exact release before any measured LAB. State-changing LAB needs a separately published exact baseline and only identified synthetic files; never upload private real-store records into LAB or replay old financial transactions. No manual PASS from CI. Actual delivery/email settings/recipients remain untouched. Whole request OPEN/ASSIGNED until actual acceptance; single next action after this claim green/main is the bounded implementation above. Checkpoint CHECKPOINTS/CHANGES/2026-10-28-cash-kiosk-imports.md.

28/10/2026 — CASH-KIOSK-XLS-10 / PARSER SOURCE CANDIDATE / INPUT AND REPORT INTEGRATION OPEN

Retained owner codex/cash-chat-reconciliation-20261026. Before-source claim3254/head457089677eec85dc819a4e1aae4d4ab411189cc9 passed applicable docsCI40705935013 and merged10df367323266602965e150560d6f3eb39cb4270 before either new runtime/test path. Two-path independent candidate only: cash-kiosk-xls.js and its test. No retained writer, API/UI, schema, input whitelist, financial, stock, dispatch or configuration change. Native6bbf006 limited LAB PASS remains protected; external input/canonical report integration and actual hosted acceptance remain OPEN/NOT TESTED. This module is not yet connected to the application.

Resource-limited worker reads bounded OLE XLS or preflighted XLSX ZIP, refuses formulas/links/errors/unknown headers/partial sales and uncertain DST, hashes original bytes and requires explicit company/store/source plus journal Kiosk shift/operator binding. Excel serials use explicit Greece wall clocks and workbook1904 epoch; no host-timezone interpretation. Preserves repeated physical item lines: real Kiosk Είδη field is a product count and may be1 while two identical physical lines legitimately sum to the sale. Duplicate imports/overlapping events are deduped as multisets without deleting genuine repeated events; conflicting transaction or file bindings refuse comparison. Kiosk identities are namespaced and never native IDs. Catalogue edits remain unconfirmed, returns/held/deletes excluded; zero-value and actual journal reductions remain informational with0financial adjustment and exact trusted exceptions only.

The actual inspected event export lacks quantity/transaction IDs. Adapter explicitly leaves application unconfirmed rather than inventing missing matching fields from a plausible sale. Actual source sample parsing was read-only in a deliberately UNBOUND-SAMPLE namespace, not assigned to a real store:102price events including embedded permanent changes,198retail-sale transaction blocks; both readable. Aggregate111informational findings is parser engineering evidence only, not a real cash audit or employee allocation. No private source files committed. Initial wrong import and mistaken physical-line/product-count equality were found and corrected locally; latest exact focused Node20 suite22PASS/0FAIL/0SKIP, including inherited native financial/projection regressions. One test initially relied on result order across different shifts; now selects the unconfirmed code directly without weakening the no-match assertion.

Require full exact PR/main CI before technical completion; no manual/LAB PASS from these tests. The worker does not upload, persist, send or execute formula/macro/provider/business operations. Full workflow #3243 stays OPEN. Single next action: publish and verify this exact parser candidate, then claim the narrowly bounded authorized selected-store import/canonical report integration before editing those existing paths. Existing native/chat/dispatch owners and four concurrent POS/invoice claims remain unchanged. Checkpoint CHECKPOINTS/CHANGES/2026-10-28-cash-kiosk-xls.md.

28/10/2026 — CASH-KIOSK-XLS-10 / BOUNDED EXTERNAL PARSER CLAIM / ASSIGNED BEFORE SOURCE

Retained owner codex/cash-chat-reconciliation-20261026; independent branch feat/cash-kiosk-xls-20261028; parent requirement #3243. User explicitly says ΞEKINA after native limited PASS. Baseline1c0f093 preserves the four new independent POS/invoice claims; cash native6bbf006 limited read-only PASS/manual and all retained owners remain protected. The real system-events and shift436 journal XLS samples exist and were inspected read-only. File adjacency does not prove store identity. No external parser/source integration or new LAB acceptance is claimed.

Exact first bounded source ONLY after this claim green/main: NEW server/src/services/cash-kiosk-xls.js and NEW server/test/cash-kiosk-xls.test.js. Pure read-only XLS/XLSX schema adapter and external-domain comparator using existing xlsx dependency. No route, upload/chat/native/financial writer, schema, permission, settings, dispatch or shared runtime consumer edits. Existing source/native audit stays unchanged. Chat MIME/input/canonical integration is a subsequent separately claimed coordinated slice, not implicitly acquired here. Ownership review confirms retained store-chat/native assignments, which this standalone module does not edit.

Require explicit caller-provided selected company/store provenance, source checksums, typed Kiosk shift/operator/transaction identities distinct from native UUIDs; grouped system-event headers and repeated transaction/item journal headers; numeric Excel serials as Greece wall clocks (1900/1904 workbook systems), exact seconds, explicit ambiguous/nonexistent DST-time refusal, no host-timezone inference. Parse only price/discount and completed retail-sale item facts; exclusions hold/delete/return stay out of this added comparison. Preserve duplicate physical item lines, distinguish repeated exports from conflicting same-transaction records, and never use catalogue events as proof of a sale. Missing quantity/transaction evidence or ambiguous candidate means the mandated unconfirmed wording, not invented correspondence. Zero-value sold lines are findings unless exact trusted permitted water own-use proof; automatic exceptions require exact evidence, no item/category blanket exemptions. Informational0financial adjustment, no cash/card netting or liability allocation.

Bound bytes/sheets/rows/cells/text/ZIP inflation, do not execute macros/formulas or follow links; malformed/partial/unsupported source is explicit unavailable/limited rather than all-clear. Meaningful tests must cover real header shapes, zero/reduction/permanent edits, distinct IDs, money/quantity/seconds, DST, ambiguity, duplicate reupload/conflicting records, formula refusal/resource bounds and unchanged financial semantics. Inspect actual private samples locally without committing them. Full exact PR/mainCI required; module-only engineering checks are NOT authenticated LAB, input/report/email acceptance or installation of external upload support. No manual PASS from unit checks. Remaining whole request stays OPEN; single next action after this claim merge: implement and verify only these two independent paths, then publish exact next integration scope before editing retained writers. Checkpoint CHECKPOINTS/CHANGES/2026-10-28-cash-kiosk-xls.md.

28/10/2026 — CASH-EVENT-SALES-09 / LIMITED NATIVE READ-ONLY LAB PASS / EXTERNAL XLS OPEN

Retained owner codex/cash-chat-reconciliation-20261026; source #3246/0e79b5 and midnight fix #3250. Final fix head48c749fadf68eeff0fb96564a3364693d25df501 passed fullCI40696771248:4460server+8backup/0FAIL/0SKIP; merged6bbf006742e15aeb6f5492af68bbc4ee12c2801a. Exact mainCI40698247176 all5jobs SUCCESS with4460+8/0FAIL/0SKIP. Normal guarded release40699799055/job122856332420 pinned6bbf006 and reported exact healthy6bbf006 at13:54:29UTC. No force/rollback. Concurrent scanner/support documentationaedc565 preserved; no new runtime source after this release is claimed.

Actual authenticated read-only LAB28Oct2026 approximately13:54–13:55UTC, same selected ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ and October2026, refreshed Έλεγχος με επανυπολογισμούς once after release.13existing closed shifts; eight findings still present:2zero-value LAB EXCEL TEST2 lines,3price reductions,3unconfirmed event/catalog cases. The specific existing sale05061018-0b7d-4fcb-8a61-08a5486b9611 now shows12/10/2026,00:13:46 rather than24:13:46. Original shortages8.90EUR, surplus0,13separate card lines with zero difference, all13pending excluded reviewed totals. No additional financial allocation; no sale, shift close, review, offset, settings, provider, export or actual email action. Synthetic LAB records are not real employee debts.

LIMITED PASS only for actual native finding display, exact selected-store/period, corrected midnight camera text and unchanged visible original balances. The earlier midnight display FAIL is closed for this exact observed case. This is not full matching/physical reconciliation, approval of all discounts or complete financial/stock before-after acceptance. Actual automatic promotion/water exceptions, real mail, external XLS input and full workflow remain NOT TESTED/OPEN. Updated manual and evidence receipt in same change; pending removes only completed native-display tranche. Original protected PASS and other owners unchanged.

External events/journal XLS files were located and their real schemas inspected, but are not ingested by MyWorkStation yet. Current store Chat accepts images/PDF only. Before extending another writer, review its current claim and publish the narrowly bounded independent input/adapter scope; source Kiosk IDs must remain distinct from native IDs and store/file identity must be evidenced. No blanket Estia exemption. Whole CASH-EVENT-SALES request #3243 remains OPEN/ASSIGNED, not complete. Single next action: publish a scoped claim for the external Kiosk XLS/XLSX adapter and its authorized store-input/report

integration; do not repeat the completed native read-only test or accepted financial actions. Checkpoint CHECKPOINTS/CHANGES/2026-10-28-cash-event-sales.md; manual docs/manual/cash-control/PASS.md; evidence CHECKPOINTS/EVIDENCE/cash-event-sales-20261028/receipt.json.

28/10/2026 — CASH-EVENT-SALES-09 / INSTALLED / LAB MIDNIGHT DISPLAY FAIL

PR3250 previous head2f88d5f7d37c02604911d25f9afd13a302fe8adc passed fullCI40694612546:4454server+8backup/0FAIL/0SKIP. Merge was refused only for concurrent shared-registry/PDF changes from scanner source0418582. Current candidate preserves that owner and moves this flow entry before the existing cash section; runtime/helper/test paths had no concurrent change. Fresh exact CI still required after integration; no corrected-clock LAB PASS yet.

Retained owner codex/cash-chat-reconciliation-20261026. Source #3246 head7a83468d7cd9fcd07ae72737e1a6fa08c4535f7f passed fullPR CI40683210187:4451server+8backup/0FAIL/0SKIP including native zero-sale source proof. Merged0e79b515a8505273627de02207789c0fcf5cf855. Exact mainCI40684699309 first failed wholesale Chromium Target.createTarget startup timeout, cash4451+8 passed; retry attempt2 all5jobs SUCCESS. Normal guarded deploy40686513647/job122810225783 healthy exact0e79b5 at12:20:06UTC. Later normal guarded deploy40691387009/job122826888468 healthyb8773ac909f1001be3987d84335571d5717a1c8e at12:55:38UTC; all five cash runtime paths byte-identical0e79-to-b877. No force/rollback.

Actual authenticated read-only LAB28Oct13:10UTC: Platform Admin → Ταμεία → only ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ → October2026 → Έλεγχος με επανυπολογισμούς.13existing closed shifts, original shortages8.90EUR, surplus0, card0; pending13 excluded reviewed totals. Eight native findings displayed: two existing zero-value LAB EXCEL TEST2 sales (1Oct10:44:20/12:51:17), three water-price reductions, one unmatched price edit, two permanent catalog edits explicitly unconfirmed. No sale, review, offset, provider, settings or email action. These are synthetic LAB records, not real employee debt. Display/financial invariants observed, but no whole-flow PASS: one12Oct midnight sale rendered24:13:46 instead of00:13:46 in production Intl.

LAB FAIL limited to new exact camera-time formatting. Existing read-only manual remains protected; no new manual PASS until corrected display verified. Causal fix within existing claimed cash-event-sales.js/test paths: reuse existing shared Greece h23 formatter, no shared helper change, no date/transaction/financial mutation. Exact fresh CI/main/guarded release and read-only midnight retest required; do not repeat financial transactions.

External samples now located in Library: system-events files and matching-format shift journals (including436). XLS stores grouped event categories and Excel serial local wall clocks; journal has repeated transaction/item headers. Files do not by themselves prove a MyWorkStation store mapping. External XLS ingestion remains NOT IMPLEMENTED; existing store Chat attachment writer accepts images/PDF, and native/chat writers are retained outside this cash claim. Keep exact previous Estia cases unconfirmed until identified; no blanket exemptions. Whole workflow remains OPEN. Next: publish causal midnight formatter fix, verify same existing LAB finding, then define owned external-adapter integration without taking another writer's scope.

28/10/2026 — CASH-EVENT-SALES-09 / SOURCE CANDIDATE / AWAITING CI AND LAB

Retained owner codex/cash-chat-reconciliation-20261026. Before-source claim #3245 headc8981338e62c631716ff3ba2e73df1685cae5b79 passed applicable CI40680691450 and mergedc8645d7bcc1e7ffd44456378511031dec02bc95e before runtime edits. Independent read-only source candidate on feat/cash-event-sales-20261028. No deployment, LAB PASS, financial action, settings change or email claimed.

Adds bounded exact-session native price-event/completed-sale comparison and short canonical/automatic report prose. Reads PosSaleActionAudit and Sale/SaleLine with explicit StoreTransaction or StoreOperatorAudit POS_SALE_COMPLETED linkage; the latter covers wholly zero-total sales with no

payment. Multiple session IDs refuse attribution. Event matching requires time/product/quantity/value/actor and available sale/line identities; catalog edits stay unconfirmed rather than inferred sales. Zero-value items require disposition/explanation and exact camera time; no general water-name exception. Exact trusted water own-use or automatic-discount confirmations are supported by pure comparator; native automatic proof additionally requires recorded promotion ID/type and a unique matching completion item. Caller-supplied audit approval flags are ignored. Prior Estia Kiosk cases still need exact source identities; no blanket category exemption. Returns/holds/deletes and original Netlink behavior untouched.

Findings, coverage and source digest enter reportHash/projection but do not alter financial sourceHash, cash confirmation, original/reviewed totals, offsets or cards. Unknowns and bounded overflow are explicit, not zero agreement. No raw audit details or attachment bytes cross the automatic envelope. Same report rendering is revalidated there. Local actual Node20.20.2 focused/broad cash tests37PASS/0FAIL/3isolated PostgreSQL SKIP; new native PostgreSQL test awaits actual CI database. Initial local Prisma import failed because dependencies were installed without generation; local prisma generate then rerun passed, no database mutation. Full exact PR/main CI and guarded release remain required. No manual PASS is added from synthetic checks.

Remaining: exact deployed read-only LAB preview/coverage, full Excel import/header mapping and real sample acceptance, precise earlier Estia confirmation identities, broader report/email acceptance and original cash workflow. First in-system slice is not full implementation of external Excel ingestion. Existing cash read-only manual/PASS and all other owners preserved. Next: full CI including new unskipped native source proof; then normal guarded release and a scoped read-only preview. Checkpoint CHECKPOINTS/CHANGES/2026-10-28-cash-event-sales.md.

28/10/2026 — CASH-EVENT-SALES-09 / ASSIGNED BEFORE SOURCE / NOT TESTED

Retained owner codex/cash-chat-reconciliation-20261026; branch feat/cash-event-sales-20261028; requirement #3243. Owner explicitly instructs implementation of system-event price/discount comparison with completed sales and zero-value lines. Current baseline 79b251496211f00830f16f2ef95703111e408405. Existing read-only LAB PASS and all other owners remain protected. New source NOT IMPLEMENTED / NOT INSTALLED / NOT TESTED. No repeated financial LAB, provider, settings or email action.

Bounded first source after this claim green/main: NEW server/src/services/cash-event-sales.js and cash-event-sales-source.js; existing cash-reconciliation-source.js, cash-reconciliation-report.js and cash-reviewed-automatic-contract.js only read-only finding delegation/projection/prose/fingerprint. NEW server/test/cash-event-sales.test.js and cash-event-sales-source.test.js; existing cash reconciliation/automatic tests only meaningful regression coverage. Native PosSaleActionAudit and linked completed Sale/SaleLine are the authoritative in-system equivalents; no new import/write API, table or migration. Excel adapter/real Kiosk header acceptance stays OPEN until real sample schema is available, rather than inventing columns. No unrelated cash-control.js, POS, scanner, invoice, fiscal, Netlink, chat, recipient, consent or dispatch changes.

Require exact company/store/session sale linkage, bounded source coverage, explicit missing/ambiguous evidence, exact event/sale identity or multi-field match without arbitrary operator/shift mapping. Permanent catalog event is not a sale. Report all completed-sale zero-value items except specifically documented permitted water own-use; no product-name-only exemption. Confirmed automatic discounts require specific evidence, never blanket beer/chocolate exemption; prior Estia cases not identifiable from available sources stay unverified. Exclude holds, deletes and returns from this new check; existing Netlink check preserved. Short no-table prose includes exact time and all available identification/quantity/prices/reduction/transaction, never invented missing fields. No financial adjustment or double count. Exact mandated unmatched wording retained.

Owner correction28Oct: previous blanket authorization to send completed reports to verified designated recipients applies unless a specific preview/no-send instruction is given. No new per-email confirmation requirement is introduced; existing application readiness/consent/configuration guards remain. Email

invitation was accepted and status refreshed to verified/active consent on28Oct; automatic sending still disabled, source incomplete, actual report email remains NOT TESTED. Prior28Oct unverified status is historical.

Proof required: zero-value/exemption/unknown-price, discount, catalog-vs-sale, ambiguous/foreign/differing IDs, bounded failure, unchanged cash/cards and canonical serialization regressions; full exact CI/main/normal guarded release then scoped read-only LAB. No CI-only PASS in manual. Whole cash workflow and actual Excel import acceptance remain OPEN. Next: publish this claim green/main before runtime edits. Checkpoint CHECKPOINTS/CHANGES/2026-10-28-cash-event-sales.md.

28/10/2026 — DOCUMENT-SCANNER-PREVIEW-01 / TECHNICALLY RELEASED / AWAITING USER IMAGE REVIEW

Retained capture owner codex/canon-lide400-scan-diagnostics-20261027. Before-source claim3241 merged5d617930. Final source3242/headc44bb2fe2366a76992111a23377210e632583ddb merged79b251496211f00830f16f2ef95703111e408405. Reviewed and merged trees exactly0580f544f6df93908779ec118d0cc22b5554d867. Exact fullPRCI40676116060/all5SUCCESS:4439server+8backup PASS/0FAIL/0CANCEL/0SKIP, including actual mounted preview, real scanner-control five-page fixture and actual Chromium4cases; existing12camera pointer/cleanup cases, native HTTP/archive/wholesale/invariants passed. Parent runtime diff independently reduces exactly to import, row wrapping and preview mount; no acquisition/header/financial handler changed.

MainCI40677458915 attempt1 build122779820750 actual4439server+8backup PASS/0FAIL/0SKIP. Separate wholesale122779820719 failed before its test at Target.createTarget timeout; same reviewed tree had passed that exact job in PRCI. One exact job rerun122783137246 passed unchanged, final attempt2 all5jobsSUCCESS. Initial rerun request while the workflow still ran was safely refused; no code/assertion/timeout change or guard bypass. Earlier source6025f446/40674275358 had3legacy component-bundling failures due CSS import; corrected by self-contained preview styles without changing those old financial tests. Exact old3tests passed locally after baseline dependencies were retrieved;5unselected cases in that targeted command were not executed. New local3tests including actual Chromium passed unskipped. All these remain engineering evidence, not physical preview PASS.

Ordinary guarded release40679299748/job122785691616 SUCCESS, exact healthy79b25149 at11:24:28UTC/13:24:28Athens. Independent public verification11:26:16UTC returned oktrue/exact79b25149 and the lazy React entry /assets/entry-DGYHCTGV.js contains document-page-preview__viewport,2764143bytes, SHA2564fa6594cfa667bf47e391556d89cc448ada0ec0a99ce5649cc48029266942975. The small bootstrap delegates to this chunk; absence from bootstrap alone was not a release failure. Proof CHECKPOINTS/EVIDENCE/document-capture-scanner-20261026/preview-release-79b25149.json. No manual Render action, production DB/business/settings/provider/payment/scanner action here.

Explicit in-form original-image preview, close,50–400% zoom/full-image scroll are now technically delivered for supported already selected images; unsupported PDF/external sources keep existing file rows. Viewing never invokes scanner/upload/header/AI/payment. The Windows connector package is unchanged. Existing one-page/header USER PASS and the owner's clarification that next scan unlocks after header reading remain protected. Real2–5page hardware/whole-image legibility and new preview on the user's PC remain OPEN; no whole capture/Gate3/numbered-item closure or new preview manual PASS.

Completed preview implementation/CI/release is removed from active pending work; residual is USER inspection in a safely opened new form after normal application refresh. Refresh discards current unsaved selected pages, so do not force it while the owner needs them. Opening an old form without refresh keeps the old bundle. Do not rescan an accepted invoice, replay header/provider or pay/submit merely to fill evidence; use the next naturally selected original for preview acceptance. Manual records only the earlier confirmed scope and qualifies its no-preview observation as historical. Same owner retained; no handoff or takeover of other residuals.

28/10/2026 — DOCUMENT-SCANNER-PREVIEW-01 / SOURCE CANDIDATE / AWAITING CI AND USER IMAGE REVIEW

Full source CI40674275358/head6025f446 FAILED:4436PASS/3FAIL/0CANCEL/0SKIP. All three failures were legacy pos-vat-inbox-ui component bundling errors from the new CSS import with write:false/no output path; no payment assertion was relaxed. The same preview rules are now embedded in the new component, removing the external CSS dependency, and its own tests now use that same bare bundling mode instead of a CSS-empty loader. Fresh actual Node20 mounted/real scanner five-page/Chromium tests3PASS/0FAIL/0SKIP; exact new fullCI remains required. Initial2673ebd9 run40673782648 was superseded/cancelled on test strengthening, not a full PASS.

Retained capture owner. Before-source claim and limited Canon one-page/header USER PASS PR3241/headb4908ccba97f5f56b9854fbcaae4c31108212049 passed applicable CI40672599194 and merged5d617930ac3a4afad34397a95bbeb33bc98512e6 before source. Manual remains limited to confirmed one-page/header; full image/preview USER PASS not claimed.

Candidate adds explicit in-form original-image preview with0.5x–4x bounded zoom, full-image scroll and close in the existing Premium Fast selected-page row. Uses already retained originalDataUrl, falling back to dataUrl only when no distinct original exists; supported data-image formats only, no external/SVG/PDF source, fetch/FileReader/scanner/header/OCR/payment or original-byte mutation. Image errors leave the selected page intact. Source/store changes close and clear the view; the existing store-keyed parent is preserved. Parent changes are only import, row wrapping and preview mounting; all acquisition, preparation, fast-header, ordering/removal and financial handlers unchanged. Unsupported files retain existing row behavior.

Local actual Node20.20.2:3PASS/0FAIL/0SKIP. Mounted component covers original/processed, unsupported/external refusal, error, bounded zoom/reset/close, scope/source change and unmount. Actual Premium Fast parent with the real DocumentScanButton and scanner client, mocked loopback and isolated reader/media adapters appends five pages with unique request IDs and remaining counts5/4/3/2/1, then blocks a sixth. Each selection makes its existing header call; preview open/zoom/close adds no API/payment call and retains the files, with store-key reset. Owner clarified that the real scan button becomes available again after header reading finishes; no real five-page acceptance is inferred. Actual Chromium143 runs4portrait/landscape and1366x768/390x844 cases: full natural dimensions/aspect ratio, contained image, real pointer targets>=48px,200% scroll/close/store reset and zero fetch. These are engineering fixtures, not actual optical/OCR/financial acceptance.

Local fixture corrections retained: missing baseline parent file was retrieved; virtual import resolver corrected to cover parent-directory imports; browser zoom selector originally hit the labelled group rather than button and was made button-specific, with all pointer/zoom assertions preserved. Packed browser font ownership extraction failed in scratch; official packaged bytes were decompressed to the task workspace, no application security setting changed. Browser cleanup waits for process exit. No production/financial/AI/scanner action during development.

Required next: exact full PR/mainCI including unskipped actual Chromium preview, normal guarded exact release; then existing-image preview/legibility acceptance without rescanning or paying merely for evidence. Candidate NOT INSTALLED/AWAITING USER. Same owner retained; other capture/native/Gate3/payment/supplier owners and prior limited PASS remain protected.

28/10/2026 — DOCUMENT-SCANNER-PREVIEW-01 / ASSIGNED BEFORE SOURCE

Retained capture owner codex/canon-lide400-scan-diagnostics-20261027; future source fix/scanned-page-preview-20261028. After the owner confirmed the displayed header and reported that no preview exists, the owner requested continuation. Same-page selected-original inspection is the bounded independent capture subtask; Gate3 OCR/payment/supplier writers and all other owners remain locked/protected. Publish this claim green/main before source changes.

Exact source scope: new client/src/components/store/DocumentPagePreview.jsx and its CSS; client/src/components/store/StoreSupplierInvoicePremiumFast.jsx ONLY import and selected-page-row preview mount using the already retained originalDataUrl or same-source dataUrl and store scope; new server/test/document-page-preview.test.js plus isolated actual Chromium rendering harness only if required for viewport/zoom verification. Preview only already retained image bytes, explicit local open/close and bounded zoom/full-frame scroll; no fetch, FileReader, scanner invocation, OCR/header replay, upload/payment, page order/removal, original data mutation or arbitrary URL. Unsupported PDF/format keeps the existing file row without false image acceptance. Do not change selectFiles/prepareDocumentFile/fast-header or any financial handler.

Preserve limited USER PASS below. Required: mounted original-versus-processed selection, unsupported/external-source refusal, actual rendered open/zoom/close, store/source change and unmount cleanup, full-frame/portrait/landscape/desktop/narrow viewport controls and zero network/provider/business calls; existing invoice/capture regressions/fullCI and normal guarded exact release. Full-image physical legibility remains OPEN, not inferred from CI. No new manual preview PASS until user acceptance. Single next action after this claim merges: implement only this retained-image preview, verify and release, then inspect an existing selected image without another scan/payment.

28/10/2026 — CANON LIDE 400 / LIMITED USER PASS: ONE PAGE INTAKE AND DISPLAYED HEADER / IMAGE REVIEW OPEN

Retained owner codex/canon-lide400-scan-diagnostics-20261027. After instructions to run Canon_BMP_Fix.zip and scan once, user supplied image(20261028-102357).png showing the existing POS supplier-invoice form with one page selected and populated header fields. The owner then explicitly confirmed "ΣΩΣΤΟ ΕΙΝΑΙ". The second image(20261028-102539).png shows1/5page and a scanned JPEG file row. LIMITED USER PASS for the reported physical Canon LiDE400 scan reaching the existing form and the owner-confirmed displayed header. Private invoice/supplier values and raw screenshots are not published. This is owner evidence, not an independently instrumented hardware trace or full OCR/cross-supplier PASS.

The owner correctly reports that this form has NO image preview: only the selected file row is visible. Prior assistant instruction to open a preview here was incorrect. Entire-page edges, orientation, small-text/color legibility and actual pixel dimensions remain NOT TESTED; do not infer them from correct header fields. Exact physical terminal/store/operator/shift/test clock and installed executable hash/client revision were not independently captured. Filename timestamps are evidence labels, not verified scan times. No payment or finalization is shown or requested; no ledger/stock before-after reconciliation was performed. Backend header-reading/upload/provider behavior is not established by these screenshots; do not claim zero upload or zero charge.

Verified delivered source remains PR3239/head235d7c49488d94d9768dbf7e544757c10def0623/main1d5f6e225fd517c08e7f650260ca9f3cf68833cc; exact Windows40667406012, fullPR40667406011 and main40668942340 green, ordinary guarded40670393582 exacthealthy1d5f6e22. Artifact12806583677/47014584bytes SHA256000b948700e073553ac4491b88fb077d412e4d95d63f8568f29789d4b7f96c7b. Release receipt3240 merged24a407abd6c30a673197abc086c9415529183e54. Existing BMP/JPEG handling, full-frame dimensions and7MiB/14MiB bounds, pairing/origin/replay/explicit intake remain protected; no source or business change in this receipt.

This supersedes old AWAITING physical one-page delivery/header status ONLY. Do not repeat this accepted one-page/header test or submit/pay an invoice for documentation. Manual docs/manual/document-scanner/PASS.md records only that scope. Full-image visual review, multi-page acceptance, installation/reboot and other hardware/camera/native residuals remain OPEN with their existing owners; no whole DOCUMENT-CAPTURE-SCANNER-01/Gate3/numbered-item closure. Current remaining scanner action: obtain a safe way to inspect the already captured original image if the owner requests full-image acceptance; no second scan/payment merely to fill evidence. Same owner retained; this is not a handoff.

28/10/2026 — CANON LIDE 400 / BMP NORMALIZATION TECHNICALLY RELEASED / PHYSICAL RETEST OPEN

Retained owner codex/canon-lide400-scan-diagnostics-20261027. Bounded source PR3239/head235d7c49488d94d9768dbf7e544757c10def0623 merged1d5f6e225fd517c08e7f650260ca9f3cf68833cc. Reviewed and merged Git tree are exactly7ea01fd7cc6a10f1ce17e49fd4d3e8cce79cea8a. Exact full PRCI40667406011 and mainCI40668942340 all5jobs SUCCESS:4436server+8backup PASS/0FAIL/0CANCEL/0SKIP,12actual Chromium camera cases and isolated HTTP/wholesale/archive/invariant checks. Windows40667406012/job122745279091 SUCCESS: actual A4 BMP26092134bytes conversion, dimensions/corner colors, small/noisy BMP, pixel/unfittable rejection, original JPEG and loopback/DPAPI tests. These are engineering/synthetic proofs, not physical scanner acceptance.

Ordinary guarded deployment40670393582/job122755478488 SUCCESS, expected1d5f6e22; exact health oktrue/version0.22.0+kat-test-pos/revision1d5f6e225fd517c08e7f650260ca9f3cf68833cc at10:16:41UTC/12:16:41Athens. Freshness/fullCI guard and rollback checkpoint retained; no forced/manual Render action. Standalone artifact12806583677 from exact235d7c49:47014584bytes/336entries, SHA256000b948700e073553ac4491b88fb077d412e4d95d63f8568f29789d4b7f96c7b independently verified, ZIP CRC complete. Package Canon_BMP_Fix.zip prepared and saved; no installer executed here.

Newest physical evidence remains FAIL from the preceding diagnostic screenshot: invalid-jpeg/inputBytes26092134. Actual input format was not inspected; BMP remains the supported, exact-byte-count hypothesis addressed by this candidate, not a hardware-confirmed fact. Older wording calling the WIA bytes JPEG is superseded by this observation. No new physical/quality/OCR/manual/whole-flow PASS. Existing7MiB/14MiB limits and pairing/origin/replay/full-page/nonfinancial safeguards retained; no payment/upload/fiscal/stock/send action or accepted transaction replay.

Single next action: close old connector, extract the new package and manually launch its executable with existing pairing, then one explicit test-sheet scan into the existing preview. Verify entire page, orientation, small text and colored details before any separately requested submission; capture bounded console error if it fails. Do not pay/send an invoice to test acquisition. Same owner retained until this physical acceptance or named handoff. This documentation receipt updates shared status only; no new runtime or business behavior.

28/10/2026 — CANON LIDE 400 / PHYSICAL FORMAT FAILURE / BMP FALLBACK CANDIDATE

Retained scanner owner codex/canon-lide400-scan-diagnostics-20261027; follow-up branch fix/canon-wia-bmp-20261028, within the existing diagnosis/correction claim merged before source. User ran Canon_Limit_Diagnostics2 and supplied image(20261028-094216).png: pairing retained, console stage=compress-image, reason=invalid-jpeg, inputBytes=26092134, width=0, height=0. Physical acceptance FAIL. Zero dimensions mean validation stopped before decoding; they do not prove a zero-size image. Scanner model is user-reported Canon LiDE 400; Windows user Administrator visible, exact physical terminal/store/operator/shift/time and image format not independently measured. No invoice/payment submitted by this page; financial/stock effects NOT TESTED, not inferred. No new hardware/quality/manual PASS.

Prior diagnostic source #3237 merged0ae9fc06fc464d1510865b721474eb393363f8a2; exact mainCI40596671477 all5jobs SUCCESS; guarded deploy40598066776/job122519024392 SUCCESS, exact healthy0ae9fc06 verified again before this edit. Current main equals that revision; history since capture5feb831c reviewed, independent cash/POS/ftext/support changes preserved. Invalid-jpeg establishes rejection by the JPEG signature check, not the precise returned format. Microsoft Item.Transfer documentation explicitly allows preferred-format fallback when the requested format is unsupported (https://learn.microsoft.com/en-us/previous-versions/windows/desktop/wiaaut/-wiaaut-iitem-transfer). The byte count also matches a 2480x3507 24-bit BMP plus54byte header; this is a testable BMP hypothesis, not inspection of the user's pixels.

Bounded candidate accepts only JPEG or structurally bounded BMP, converts BMP in memory through the existing Windows decoder/JPEG encoder and original dimensions/entire frame at qualities90/85/80/75. BMP dimensions are bounded BEFORE decoder allocation. Existing64MiB input/48MP/7MiB output and browser14MiB total limits remain; no client/server limit increase, resizing/cropping, arbitrary file/URL, image file or upload/payment. Unsupported/corrupt/unfittable images still fail explicitly. Protect exact Origin/Host, pairing persistence, one explicit page/one scan in flight, replay/cancellation, tenant/store and existing financial/OCR paths.

Windows self-test must exercise actual 26092134byte A4 BMP to JPEG, exact dimensions/corner colors, small BMP conversion, noisy oversized BMP, excessive-dimension refusal and unfittable refusal; existing noisy JPEG and actual loopback/DPAPI protocol tests remain. Exact Windows/full PR/mainCI, normal guarded exact deployment and a fresh separately identified physical preview/legibility review remain REQUIRED. Candidate is AWAITING CI AND LAB, not fixed. Single next action: verify this bounded source and package, then one nonfinancial physical scan with full-page preview; no send/payment/replay to prove scanner acquisition.

28/10/2026 — CASH-PENDING-EMAIL-08 / TECHNICALLY INSTALLED / LAB EMAIL OPEN

Retained owner codex/cash-chat-reconciliation-20261026. Claim #3235 headb3e33fb CI40579929360 SUCCESS mergedcd7f6f28. Source #3236 head94b6d0c CI40580578852 SUCCESS merged4ec1e154a3140f98b06dbecaa9e93d027a4efa34. Exact main CI40581944084 SUCCESS, job122463739178 4436 server plus8 backup tests PASS/0 FAIL/0 SKIP. Normal guarded deploy40583559739/job122469188632 SUCCESS and health exactly4ec1e154; later guarded deploy40586347505/job122478746369 healthy exactly167fd55c54569c99c66793fa4eddd70a8c612d7e, a descendant carrying the same cash paths. No force or rollback. Actual tested delivery remains NOT TESTED; prior limited read-only expense-report LAB PASS remains.

Authenticated read-only LAB baseline 28Oct2026: Platform Admin → MYWORKSTATION LAB → ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ → Αναφορές ταμείων. Configuration version1: day07:00, shifts15:00/23:00, terminal MAIN required slots1/2/3, reviewedReconciliation unchecked. Automatic send disabled; xrhstosmanis@gmail.com shown unverified with no active consent. Existing saved-settings daily preview for26Oct reports one shift, an ambiguous/overlapping or previous incomplete shift, and missing required slots. Therefore no clean source-ready automatic report or real email test was performed. No settings changed, invitation or email sent, no sale or financial record changed; this is observation not LAB PASS. Unverified recipient and incomplete source must not be bypassed. Actual option-enabled preview, properly scoped consent and delivery remain OPEN. Old accepted LAB settings save must not be repeated; a fresh documented before/after baseline and separate scoped acceptance plan are needed before any new state-changing LAB action. Checkpoint CHECKPOINTS/CHANGES/2026-10-27-cash-pending-email.md.

27/10/2026 — CASH-PENDING-EMAIL-08 / SOURCE CANDIDATE / NOT DEPLOYED

Retained owner codex/cash-chat-reconciliation-20261026. Claim #3235 headb3e33fb exact CI40579929360 SUCCESS mergedcd7f6f28 before source. Source candidate on feat/cash-pending-email-source-20261027 permits known, internally consistent AWAITING_REVIEW/AWAITING_NEXT_SHIFT rows only in the existing per-store opt-in provisional report; pending rows remain explicitly marked and excluded from reviewed totals. Unknown amounts/cards, stale or invalidated source, inconsistent statuses, source/generation/authorization failures stay held. Existing recipient, consent, mail boundary, original cash/card separation and legacy defaults unchanged. Focused47 tests PASS/0 FAIL/0 SKIP including actual injected mail adapter text and hard-hold cases. No actual email, production setting change, financial/provider transaction or new LAB PASS. Exact PR/main CI, guarded deployment and scoped measured actual preview/email acceptance remain required; whole workflow OPEN. Checkpoint CHECKPOINTS/CHANGES/2026-10-27-cash-pending-email.md.

27/10/2026 — CASH-PENDING-EMAIL-08 / ASSIGNED BEFORE SOURCE

Retained owner codex/cash-chat-reconciliation-20261026, branch feat/cash-pending-email-20261027, baseline a36f8e6c0e78991bb2ca4b889f54a6a66652c5b3. Owner asks MyWorkStation to email the demonstrated report including shifts explicitly under review. Existing opt-in reviewedReconciliation path holds whenever any row is unreviewed, even when original cash and card data are known; the canonical report already marks pending rows and excludes them from reviewed totals. Limited read-only expense-report LAB #3232 remains PASS; actual scheduled or manual email acceptance NOT TESTED.

After this claim is green and merged before source, bounded paths: server/src/services/cash-reviewed-automatic-source.js and cash-reviewed-automatic-contract.js; tests server/test/cash-reviewed-automatic.test.js, cash-reviewed-automatic-flow.test.js, cash-reviewed-automatic-postgres.test.js and automatic-report-cash-payload.test.js. Change only opt-in reviewedReconciliation to permit current authorized, complete-source, fingerprinted provisional reports containing AWAITING_REVIEW or AWAITING_NEXT_SHIFT, with existing canonical explicit pending wording, pending exclusion from reviewed totals and separate cash/cards. Preserve hard holds for unavailable/stale/recheck, unknown source balance or card values, inconsistent row status, source/tenant/authorization/generation/head/fingerprint mismatch, invalid periods and unclosed/incomplete source. Pending document/card evidence must remain clearly reported and never treated as resolved. Retain no-send-on-unverified recipients, licensing, explicit configuration, provisional policy, consent, immutable payload, idempotency, SMTP security and legacy behavior. No actual settings save, financial transaction, provider call or real mail in engineering. Independent exact PR/main CI, guarded deployment and a measured scoped LAB preview/mail test remain required; CI is not LAB PASS. No new tables or permission expansion. Checkpoint CHECKPOINTS/CHANGES/2026-10-27-cash-pending-email.md.

27/10/2026 — CANON LIDE 400 / OBSERVED SIZE FAILURE / BEFORE FIX

Owner codex/canon-lide400-scan-diagnostics-20261027 retains scanner scope. User ran the new standalone connector with preserved pairing and pressed Scan once. Screenshot at approximately 22:34 Athens shows UI SCAN_FAILED/no upload and local console stage=image-too-large, InvalidOperationException, HRESULT 0x80131509. WIA transfer and byte extraction returned, but JPEG exceeded the existing 7 MiB limit. Actual size, image quality, invoice content and exact dimensions were not measured. Physical scanner acceptance FAIL; no upload or payment claimed. This is concrete size rejection, not proof of the exact scanner driver configuration or all later processing.

Scope: bounded image-size handling in the Windows WIA connector, preserving one explicit scan, entire page, in-memory handling, 7 MiB per page / 14 MiB total browser limits, origin/pairing, no automatic uploads/payments, and no financial/OCR changes. Prefer bounded in-memory recompression at original dimensions with explicit failure if it cannot fit; protect scan readability and clear errors. Prove oversized synthetic JPEG recompression and refusal paths in Windows CI, existing protocol/pairing/replay tests, then fresh full CI, guarded release and a new separately observed non-financial Canon scan. No quality/OCR/physical PASS until actual review. This claim records the existing authorized scanner fix and must be published before source edits. Checkpoint CHECKPOINTS/CHANGES/2026-10-26-document-capture-scanner.md.

27/10/2026 — CASH-REPORT-EXPENSE-PROSE-07 / LIMITED READ-ONLY LAB PASS / EMAIL OPEN

Owner codex/cash-chat-reconciliation-20261026 retained. Claim #3225 merged807e4d3 before source. Source #3228 head5b78db4 exact PR CI40571522204 SUCCESS (4436 server +8 backup, 0 FAIL / 0 SKIP); merged1d36b6419e0cb25f40e1efad185610b98a572c30. Exact main CI40573424118 SUCCESS; normal guarded deploy40575048898/job122439238538 SUCCESS, last health reported exact1d36b641. No force or rollback.

Actual authenticated LAB read-only 27Oct2026 approximately20:10–20:12 UTC on canonical Platform Admin: selected ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ, October 2026, 13 existing closed shifts, then expanded Έλεγχος με επανυπολογισμούς. The server report displayed shift times, separate POS–EFTPOS, original shortage8.90/surplus0.00, all13 rows pending and five expense-without-document findings associated to existing shift sessions (100,20,3,1,23 EUR). These are historical synthetic LAB records, not real-store results; transaction occurrence dates can differ from their session closure day and no causal inference was made. No new sale, shift, reconciliation confirmation, settings save, actual email or provider call. Limited PASS ONLY for authenticated read-only display of the new fields on this revision; no assertion that all receipt classifications, automatic mode, email content/delivery, operator liability, or paper completeness are accepted. The existing manual read-only PASS is retained.

Automatic reviewed mode is explicit per store and holds if rows are unreviewed. The example requested by the owner includes pending shifts: actual product email with these pending findings and the exact desired prose is NOT TESTED and not yet demonstrated; no user/production settings were changed to enable it. Continue with scoped LAB email/preview evidence and remaining automatic sending requirements under separately documented baselines; do not claim finished or replay prior protected financial actions. Keep scope OPEN/ASSIGNED. Checkpoint CHECKPOINTS/CHANGES/2026-10-27-cash-report-expense-prose.md.

27/10/2026 — CASH-REPORT-EXPENSE-PROSE-07 / SOURCE CANDIDATE / NOT DEPLOYED

Retained owner codex/cash-chat-reconciliation-20261026. Claim #3225 exact CI40569266384 SUCCESS merged807e4d3 before source. Source PR #3228 headcc704e CI40569905008 FAILED: global Greece time policy found two new clock formatters missing hour12:false. Locally corrected both; focused 18 tests PASS. Rebase preserves scanner owner #3227 and all other changes. This is a source candidate; no deploy, new LAB PASS, actual email or financial action. Full exact PR/main CI, guarded release and scoped cash LAB remain required. Whole workflow OPEN. Checkpoint CHECKPOINTS/CHANGES/2026-10-27-cash-report-expense-prose.md.

27/10/2026 — DOCUMENT-CAMERA CI FAILURE / SCOPED DIAGNOSTIC CLAIM BEFORE TEST CHANGE

Owner codex/canon-lide400-scan-diagnostics-20261027; branch fix/camera-ci-pointer-diagnosis-20261027. Owner requests continuation until the Canon hardware diagnostic is ready. Scanner diagnostics PR #3222 passed full PR CI and Windows connector CI and merged e8579e26; exact main CI 40560090184 failed twice in document-camera-browser-flow at cancellation: closed=false, stopped=false, calls=0. No main full CI PASS or exact guarded release is claimed. A later documentation-only green skipped full tests and deploy, so it cannot replace that evidence. The same runtime tree passed earlier PR CI, but timing is an unconfirmed hypothesis; preserve all failed evidence and never weaken the assertions.

Claim only diagnosis and correction of the synthetic Chromium camera pointer/cleanup test or a directly established camera cancellation regression, under the existing capture owner. Before touching test or runtime code, publish this claim. Record coordinates and event/DOM timing, reproduce the failure and establish cause before a bounded change; preserve real pointer testing, camera cleanup, all capture and payment behavior. Full fresh CI and reviewed guarded release are required. Canon hardware cause, installed diagnostic build and physical PASS remain UNKNOWN/NOT TESTED; no invoice upload, payment or other financial action. Checkpoint CHECKPOINTS/CHANGES/2026-10-26-document-capture-scanner.md.

27/10/2026 — CASH-REPORT-EXPENSE-PROSE-07 / ASSIGNED BEFORE SOURCE

Owner codex/cash-chat-reconciliation-20261026 retained; branch feat/cash-report-expense-prose-20261027; 2026-10-27T19:19Z; baseline dc1cdf2c64870aefb2220eb37011e1829d2cff65. User requires the actual emailed MyWorkStation report to show shift/date/operator, original and reviewed results, separate POS–EFTPOS, documented missing receipts and signature in concise prose. Actual 26/10 Diadochou view showed 3 pending shifts, 3 expenses without documents and no recent chat attachments. This observation is not LAB PASS or a determination of liability.

Claim before source: server/src/services/cash-reconciliation-source.js and cash-reconciliation-report.js, cash-reviewed-automatic-contract.js, plus targeted cash-reconciliation and automatic contract tests. Reuse existing scoped expense-document evidence; expose only bounded safe finding fields, dates and cents; preserve reversed and attached/linked classifications, current source freshness and fingerprints, tenant and session scope, true unknowns, current human confirmation/hold gates and distinct card/cash. Do not include attachment contents, supplier secrets or invent explanations. Add concise original/reviewed totals and factual pending expense findings; do not interpret expenses as causes, silently offset, certify unreviewed results or label pending reviewed. Do not alter default legacy mail, settings, recipients, financial transactions, provider, schema, access or SMTP boundaries. Extend scope with another green main claim before modifying other files.

Proof: deterministic report and strict automatic envelope tests for no document, photo-only, linked matched/unverified, reversals, unknown, stale changes, scoped selection, serialization and mail body; existing cash/offset/authorization regressions, exact full CI and normal guarded deployment. Actual selected-store preview/email requires separate scoped LAB; no paid provider, real email, financial action, production setting mutation or premature LAB PASS. Next: publish this claim with green CI before source edits. Checkpoint CHECKPOINTS/CHANGES/2026-10-27-cash-report-expense-prose.md.

28/10/2026 - IMMEDIATE-POS-INVOICE-PLAN-01 / A1-A2-B-C-E1 TECHNICALLY INSTALLED / ACTUAL USER ACCEPTANCE OPEN

Source of the new requirement is the owner's uploaded handwritten PDF NEA PRAGMATA GIA AMESH YLOPOIHSH_20261028_0001.pdf, reviewed visually because its extracted OCR text is unreliable. Central coordinator codex/central-four-streams-20261018; POS workers/scopes A1, A2 and B use sole source worker /root/pos_ui_new, while independent report scope C uses /root/invoice_new. Current baseline 0d002356d0d3677d01bba61c70eccbfcd788b504. This claim must pass applicable CI and merge to main before runtime edits. The four bounded causes below will use separate source PRs; A1, A2 and B are three distinct POS source PRs. No general transfer of POS, KAT, header, payment or fiscal ownership is asserted, and no absent prior-owner agreement is invented. The owner's new request authorizes only the narrow scopes explicitly listed below; retained owners and accepted behaviors outside that scope remain intact.

A1 - POS-LAYOUT-REQUESTS-28: PDF items 2, 3 and 6. Branch fix/pos-layout-requests-20261028, worker /root/pos_ui_new. Move the existing single last-completed-transaction indicator to the requested top area of the basket; make the relevant POS buttons more compact while preserving usable pointer targets and keyboard access; place cash and card controls at separate non-neighboring positions with matching DOM and visual order. These are presentation requirements, not a report of a failed payment. Exact source/test scope is client/src/components/store/StorePosPanel.jsx (only these presentation sections), client/src/components/store/pos-ui-v2.css, server/test/pos-last-transaction.test.js and server/test/pos-ui-v2-layout.test.js. No second completion indicator, financial-state reinterpretation, new payment call, tender payload or callback change. Required proof includes single indicator/location/reset and scoped amount-state regressions, existing font/calculator/viewport variants, cash/card hit-target separation and continued reachability of all 20 quick/root keys and the same synthetic basket, without a checkout or business request.

A1 technical receipt 28/10/2026 - INSTALLED TECHNICAL SCOPE / ACTUAL USER ACCEPTANCE OPEN. Source PR3257 head06afb8548836b6e62e93f104258264a1d87edf1f passed exact CI40710047364

/ job122893049663:4466 server+8 backup PASS/0FAIL/0SKIP, including all six actual Font20 cases2730-2735 and retained Chromium geometry. Merged main1d5aa484992af92f6e3b998ff521d0dc4bd4f0b4 includes A2 and retained cash sources; exact main CI40713704101 / job122906934937 passed4494+8/0/0, actual A2 editor2628 and six Font20 cases2758-2763. Ordinary guard40715605409 / job122912499075 actually triggered and waited for that exact revision. Render dep-dbh181bbc2fs73bqnqi0 was LIVE1d5aa484 at2026-10-28T15:27:55.835710Z; root independent no-cache health15:28:59Z returnedHTTP200/ok=true/exact revision (publisher corroborated15:29:04Z). This establishes engineering integration and technical installation only. Actual authorized-user visual/physical/payment acceptance is NOT TESTED; no new USER/LAB/manual PASS or transaction replay.

Retained appearance/modern-layout owner feat/pos-ui-v2-appearance-3012 and the selected-design coordination remain authoritative in CHECKPOINTS/CHANGES/2026-10-22-pos-ui-v2-appearance.md and 2026-10-22-pos-ui-v2-selected-modern-design-3012.md. Retained header owner fix/pos-header-collapse-20261016 and last-transaction owner codex/pos-last-transaction-20261012 remain protected. The latter has limited owner-reported USER PASS on 12Oct22:48:39 Athens for completed amount and tap-to-zero, recorded in CHECKPOINTS/CHANGES/2026-10-12-pos-last-transaction.md and docs/manual/pos/PASS.md. Preserve that amount/reset meaning, one indicator, scoped memory/frame and late-response protection, all original checkout/payment/scanner/menu/focus behavior and every protected transaction identity. Do not repeat accepted sales to demonstrate a layout change.

A2 - POS-EMPTY-EDITOR-28: PDF item 4. Branch fix/pos-empty-editor-20261028, same sole worker /root/pos_ui_new. The owner reports that the arrow controls do not allow adding a product. A read-only synthetic mounted diagnostic importing the exact current components reproduced a narrower cause: an assigned quick-key arrow opens its editor; an empty quick key is disabled and editor open() returns when no button exists; dispatching the empty hot-zone click also leaves the editor absent. Zero API calls were made. This is a synthetic UI FAIL, not an observed production transaction or physical LAB FAIL. The root scratch diagnostic pos-ui-new-readonly/reproduce-empty-key.mjs retains the reproduction; its earlier exact-main3c49 component bytes were checked unchanged against the current 0d002356d source base.

A2 technical receipt 28/10/2026 - INSTALLED TECHNICAL SCOPE / ACTUAL USER ACCEPTANCE OPEN. Source PR3256 head40d2f484a262f06ca50929a633023e6c9e20ca05 passed exact CI40709456154 / job122891005789:4476 server+8 backup PASS/0FAIL/0SKIP, including actual Chromium editor2616. Merged main0d1f9991314916a4102aacea6542520c7ec0de99 preserves retained cash source. Legitimate descendant A1 main1d5aa484992af92f6e3b998ff521d0dc4bd4f0b4 includes these source blobs; exact combined main CI40713704101 / job122906934937 passed4494+8/0/0 and actual editor2628. Ordinary guard40715605409 / job122912499075 actually triggered/waited exact1d5; Render dep-dbh181bbc2fs73bqnqi0 LIVE2026-10-28T15:27:55.835710Z, root no-cache health15:28:59Z HTTP200/ok=true/exact1d5 (publisher15:29:04Z). Existing scoped layout PUT and client-side stale-layout refusal are preserved; server concurrency semantics are unchanged, with no server CAS guarantee asserted. Actual authorized-user editor/save/physical acceptance is NOT TESTED; existing KAT configuration was not changed, and no new USER/LAB/manual PASS is claimed.

Exact A2 scope is client/src/components/store/PosModernCatalog.jsx, client/src/components/store/StorePosButtonEditor.jsx, client/src/components/store/store-pos-button-editor.css, NEW server/test/pos-button-editor-empty-slot.test.js, server/test/pos-modern-catalog-mounted.test.js, server/test/pos-modern-catalog-keyboard.test.js and server/test/pos-configured-category-count-ui.test.js (only existing opener/host fixture compatibility, retaining every alias/ID/scoped-layout-PUT assertion). Provide an explicit keyboard-accessible edit control only for a current editPosButtons grant, separate from the product-selling target. Correct only reachability and safe initialization of a blank slot draft, choosing an existing same-store product; do not create a product, save automatically or mutate the input layout. Preserve assigned-key behavior, existing store-specific IDs/aliases, nested categories, permission checks, existing scoped layout PUT and client-side stale-layout refusal; server concurrency semantics are unchanged. Required synthetic proof covers assigned/empty slot, absent/false/revoked permission, normal sale click, keyboard, no API before Save, a single mocked scoped existing layout PUT after Save, unchanged source layout, store switch and 20-root navigation. Retained KAT owner ops/kat-catalog-import-20261020 / feat/kat-pos-photo-layout-20261021 and

CHECKPOINTS/CHANGES/2026-10-21-kat-pos-photo-keys.md remain authoritative: actual saved KAT layout v3702 has bounded configuration PASS for 20 quick positions, 20 roots, 7 children and 242 mapped IDs. Do not overwrite that configuration, publish GLOBAL, invent products/prices or label editor/physical clicks as previously accepted. Source tests use isolated synthetic data; no real catalog write is part of this claim.

B - POS-CLOSE-WITHOUT-PRINT-PERMISSION-28: PDF item 7 and explicit separate-permission answer. Branch fix/pos-no-print-permission-20261028, worker /root/pos_ui_new; serialize the shared StorePosPanel edit with A1. The user explicitly answered that this action is allowed only with a separate permission. Add a dedicated closeWithoutPrint operator checkbox, absent/false by default, admitted only when the current persisted profile value is strictly boolean true, and a dedicated runtime grant such as POS_CLOSE_WITHOUT_PRINT. The existing generic profile JSON PATCH already stores permission fields; no schema, login/credential or operator-management backend expansion. Current-profile authorization must refuse unauthorized STORE_OPERATOR requests at both existing POST /api/store-pos/stores/:storeId/waste and POST /api/store-pos/stores/:storeId/table-orders/:orderId/waste before their business handlers execute. A store-operator MANAGER role does not replace this explicit grant. Preserve ordinary administrative access and existing company/store/operator/session/terminal boundaries. Hide the UI entry without the grant and reject a retained callback after revocation; a checkbox display or stale token is not server authorization. Do not grant a permission to a real operator as part of the source work.

B technical receipt 28/10/2026 - INSTALLED TECHNICAL SCOPE / ACTUAL USER ACCEPTANCE OPEN. Source PR3259 head3cc5c8b0c0e193d48cb7c25a96f0a7a0ffc2ce8d passed exact CI40714405306 / job122908669071:4499 server+8 backup PASS/0FAIL/0SKIP, including all five actual dedicated-permission cases2378-2382. Merged main606a3bc3506b35c602518dcd16c09bb0659509c5 preserves A1/A2 and retained cash; exact main CI40717539266 / job122921071938 passed4499+8/0/0 and the same five cases. Ordinary guard40720557944 / job122930183843 actually triggered pinned606a and waited for expected healthy revision, independently checked by root. Render dep-dbh1ogoae00c73dkpa90 LIVE606a at2026-10-28T16:03:37.056595Z; root independent no-cache health16:05:25Z HTTP200/ok=true/exact606a (publisher16:05:09Z). Dedicated closeWithoutPrint remains strict boolean true/default false, checked against current persisted profile before both business entrypoints. No real permission grant or no-print transaction was performed. Actual authorized-user/financial acceptance is NOT TESTED; no new USER/LAB/manual PASS.

Exact B scope is client/src/components/commerce/OperatorManagementPanel.jsx, client/src/components/store/StorePosPanel.jsx (no-print entry/callback gate only), server/src/middleware/auth.js (dedicated current-profile permission projection only), server/src/routes/store-pos-catalog.js (dedicated guard at the two existing entrypoints only), server/test/operator-checkbox-acceptance.test.js, server/test/pos-close-without-print.test.js, NEW server/test/pos-close-without-print-permission.test.js, and existing server/test/helpers/pos-modern-fixture.mjs ONLY to explicitly grant closeWithoutPrint:true in the already-authorized geometry fixture so all eight footer controls remain tested. Retained codex/operator-checkbox-audit-20261009 / CHECKPOINTS/CHANGES/2026-10-09-operator-checkbox-audit.md owns the other role/permission flows; retained codex/pos-close-without-print-20261008 / CHECKPOINTS/CHANGES/2026-10-08-pos-close-without-print.md owns existing business semantics, with table-service ownership intact. Preserve NON_FISCAL/CASH-turnover, WASTE stock/reporting, current server prices, request endpoints/bodies/whole-table reason, duplicate-click and failure-retained-cart behavior. No stock, cash, fiscal, accounting, table or WASTE-handler redesign. Required proof: checkbox default/roundtrip and other retained values; strict true versus false/absent/string/number; fresh server grant/revoke and foreign/stale-scope denial before zero business effects; authorized existing payload unchanged; actual mounted entry/callback revocation. Update only the old authorized no-print and geometry test fixtures to explicitly grant the new permission without deleting protected behavioral assertions; adjust operator-checkbox counts to 25/23 with an explicit new default-false field and persisted-true coverage, not weaker assertions. No real no-print action, automatic retry/offline queue or accepted transaction replay.

C - INVOICE-MONTH-AUDIT-01: first functional read-only monthly-review slice of PDF item 8; items 9-10 remain later phases. Branch feat/invoice-month-audit-20261028, sole worker /root/invoice_new. Implement an actual BackOffice screen titled «Έλεγχος τιμολογίων μήνα», not an

unmounted policy. The owner's new report request permits this bounded addition, not general ownership transfer of invoice intake, OCR/Gate3, payment/common drafts, cash reporting, scheduler/dispatch/recipients, scanner/device setup or lifecycle/backup. Existing owners and accepted assistant pathway remain protected. This slice does not send a message, schedule work, persist a historical snapshot, call OCR/AI/provider or change document/payment order. The user explicitly clarified item 10 means better reading only.

C technical receipt 28/10/2026 - INSTALLED TECHNICAL SCOPE / ACTUAL USER ACCEPTANCE OPEN. Source PR3258 final head95f33182b0e30072e70bb89a6ad0d1087691c841 passed all five exact CI40724934418 jobs. Actual job122948350493:4539 server+8 backup PASS/0FAIL/0SKIP, native registered PostgreSQL1879 with all seven subcases and actual desktop/mobile/native-keyboard Chromium1887 PASS. Normal expected-head squash merge produced main ac5850c0d9c5e5b170500badded0a9cb10537b19, exact clean combined tree0f09c5db71ac0661cc08ac9cba94525aaf200e0a preserving A1/A2/B and fresh cash source/owner bytes. Exact main CI40729155657 all five jobs SUCCESS; actual job122962061903 independently checked by root:4539+8 PASS/0FAIL/0SKIP, native1879 and Chromium1887 PASS. Earlier ordinary guard40729436750 / job122962382410 was cancelled during full-history fetch before preflight or deployment. The subsequent ordinary workflow_run guard40731246705 / job122968066948 completed SUCCESS: actual preflight pinned CI_RUN_ID40729155657 and expected ac5850, actual deployment trigger17:08:37.137Z and expected healthy revision17:11:51.511Z, independently read by root. Render dep-dbh2o56k1f9s73dmtfp0 was LIVE exactac5850 at2026-10-28T17:11:34.649527Z. Root independent no-cache health17:12:35Z returned HTTP200/ok=true/exactac5850; publisher corroborated17:12:31Z. No manual dispatch or deployment bypass was used. Actual authorized-user report acceptance is NOT TESTED; no USER/LAB/manual PASS. Earlier failed CI and corrected runtime/privacy/keyboard-driver evidence remains historical. Automatic email, durable snapshot and OCR accuracy remain OPEN.

Exact C source/test scope - ten paths: NEW server/src/services/monthly-invoice-audit.js; NEW server/src/routes/monthly-invoice-audit.js; server/src/index.js ONLY new router import and one authenticated INVENTORY-gated mount under /api/reports with existing route order/behavior preserved; NEW client/src/components/commerce/MonthlyInvoiceAuditPanel.jsx with self-contained presentation; client/src/components/commerce/CommerceHub.jsx ONLY import, INVENTORY-gated launcher and panel using validated explicit activeStoreId; NEW server/test/monthly-invoice-audit.test.js; NEW server/test/monthly-invoice-audit-postgres.test.js; NEW server/test/monthly-invoice-audit-ui.test.js; NEW server/e2e/monthly-invoice-audit-fixture.jsx; NEW server/e2e/monthly-invoice-audit-browser-flow.mjs. No legacy stores[0] fallback or company-wide mode. No existing intake, common-draft, pending-invoice, scheduler, automatic-report, lifecycle, schema or workflow file is changed. Real browser verification runs through the new server test, mandatory in CI, without ci.yml edits. Any further compatibility-test edit needs a named before-source amendment.

The GET-only /invoice-month-audit route validates strict month/store/page inputs and sends Cache-Control:no-store. Enforce current persisted actor role/company/store restriction, active selected store and applicable existing company/store entitlements; reject STORE_OPERATOR and missing/foreign/inactive selection. Client filtering is not authorization and no role is granted. Use one read-only RepeatableRead source transaction, no ensure/bootstrap/DDL, cleanup side effect or mutation lock. Summary SQL covers the complete declared source; details use deterministic keyset paging without turning a page limit into incomplete counts or false zero. Resource/source limits must report incomplete/unknown and prevent an all-clear. Use document issue month with explicit bounds; missing issue dates are unknown, while arrival/registration/payment dates are separately labelled rather than substituted. As-of/source metadata identifies a generated live read, not a durable historical snapshot.

The existing trusted pending-obligation reader is reused unchanged. Pending-original obligations appear in a separate prominent «Όλοι οι μήνες» section with complete aggregate counts, the first 50 detail records and an explicit truncation indicator. They are NOT included in the selected document-month counts. An exact month-filtered pending interface remains a future coordinated change; the main document-issue-month audit retains complete summary SQL and deterministic paging. MISSING_ORIGINAL findings from that unchanged pending reader therefore belong to the separately labelled all-months section, not a silently substituted payment/arrival month. Test this separation, counts beyond 50 details, visible truncation and unavailable-source coverage.

Source domains include PurchaseDocument/PurchaseOrder with explicit posting/alias links, deferred-payment retained source evidence and received myDATA/DocumentInbox where applicable. Read-only optional-schema probes must expose unavailable coverage rather than silently declare no problems. Collapse representations only through validated same-company/store explicit links and consistent original identity: source document, order, approved projection, myDATA row and confirmed alias can be one physical invoice. Broken/contradictory links remain review; confirmed aliases are not duplicate invoices. Distinct logical invoices with corroborated supplier/series/number/date/type/total may be POSSIBLE_DUPLICATE for human review, never automatic merge/delete. Preserve credit/reversal/cancellation facts, missing versus different VAT and genuine repeated product lines. Reuse only existing pure identity helpers, not ensure/merge/posting functions.

Keep findings separate: MISSING_ORIGINAL, UPLOADED_AWAITING_REVIEW, UNPOSTED_DOCUMENT, POSSIBLE_DUPLICATE and IDENTITY_OR_LINK_REVIEW. Unposted is not unpaid. Required proof includes registered GET/native PostgreSQL current-role revocation and scope/licence denial, absent optional schema, full summary beyond a detail page, identity/alias chains counted once, distinct possible duplicates, contradictory links, unknown dates/month boundaries and concurrent-source consistency. Actual mounted panel must reject absent/stale store/month selection, abort late responses, distinguish edited from loaded period, escape labels and expose coverage/errors; real Chromium synthetic browser evidence and exact full PR/main CI are required before guarded technical release. No business/audit/financial/stock/fiscal writes, provider/send or real document replay is included, and no CI result creates a manual/LAB PASS.

C following phases remain OPEN: item 8 explicitly requests an email on the last day of each month; later delivery requires verified recipients, agreed local time and existing consent/recipient safeguards plus coordinated scheduler integration, not a choice of email versus SMS. This does not authorize a real email during development. Item 9 immutable monthly warehouse/invoice-obligation snapshot requires lifecycle/backup/retention coordination, and item 10 causal reading-accuracy improvement requires the established supplier evidence. A provisional last-day reminder is not a complete closed-month report; a current ledger-as-of or generated source hash is not frozen historical storage. No automatic external email, paid provider invocation, new upload/payment or final posting is performed by this claim.

E1 - INVOICE-AUDIT-EMAIL-PREVIEW-01 / LIMITED READ-ONLY LAB PASS / AUTOMATIC EMAIL E2/E3 OPEN. Same retained root-coordinated E1 owner; exact scope/evidence below.

E1 limited read-only LAB PASS 31/10/2026 - AUTHENTICATED DESKTOP PREVIEW ACCEPTED / AUTOMATIC EMAIL E2/E3 OPEN. Retained root-coordinated E1 owner feat/invoice-audit-email-preview-20261028; receipt branch docs/e1-preview-lab-receipt-20261031. Actual existing legitimate SuperAdmin support session, Cloud Chrome desktop, virtual MYWORKSTATION LAB / ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ only. Pointer October preview20:27:26Athens displayed14entries/9unposted/6uploaded-review/0possible-duplicates/11identity-link findings/0credits,14detail rows/all-month pending originals0. Real native keyboard month selection and Enter September preview20:31:24 displayed59/50/48/0/25/1, first50details with truncation visible/all-month pending0. These are current observed UI counts, not independent accounting/OCR/classifier or reconstructed historical proof. Both showed one verified masked recipient, current monthly-frequency consent0, purposeConsent:NOT_ASSUMED and sendingOFF, separate report/recipient observation times and provisional month-end23:59Athens wording. Native month change cleared old preview; returning October cleared September. Closed overlay without saving; original MAIN remained0transactions/cash/card/IRIS/total. Root independent no-cache HTTP200/oktrue/exact8b76cad4c16c571239940d8038bb248e3cae2819/EXIT0, HTTPDate31Oct18:31:19UTC; five E1 runtime/UI files byte-identical installedca58f2fa to8b76, actual index import/mount89/283 separately reviewed. Original source3266/fullPR40739082475/main40741750232 and ordinary guarded40744257217 delivery remain protected. Fresh read-only SQL18:26:38.405419→18:32:24.509989UTC matched all explicitly recorded business/control projections: full selected Sale90/Payment90/PurchaseDocumentLine713/StockMovement95/CashShiftSession43/StoreProduct110; bounded StoreTransaction134/PurchaseDocument71 projections; sibling-label stock/movement1each; company Product110 id+updatedAt only. Not whole Product/whole DB or AuthAudit/session-last-seen invariance. Initial Playwrightfill did not commit native React month state, not an applicationFAIL; real arrows/Enter succeeded. Two October JPGs/hash checks retained; one September selection screenshot

failed transfer, no all-device/artifact-reliability PASS. No send/invitation/provider/consent/settings/grant/schema/install, sale/return/payment/stock/approval/finalization or accepted fixture replay. Limited PASS only this selected-store/month desktop preview and read-only controls; independent Owner/staff/foreign role, mobile/physical, financial/OCR accuracy and delivery NOT TESTED. E2 purpose-specific persistence/grant/consent/idempotency/lifecycle and E3 guarded scheduling/mail activation/real acceptance remain OPEN with codex/cash-chat-reconciliation-20261026; no ownership transfer, CASH consent reuse or whole item8 closure. Checkpoint CHECKPOINTS/CHANGES/2026-10-28-invoice-audit-email-preview.md; evidence CHECKPOINTS/EVIDENCE/invoice-audit-email-preview-20261031/; usage docs/manual/invoice-audit-email-preview/PASS.md. Completed E1 desktop-preview acceptance is removed from pending; all remaining automatic-email/device/OCR/inventory owners retained.

Historical E1 before-source claim: Sole worker /root/invoice_new, branch feat/invoice-audit-email-preview-20261028, checkpoint CHECKPOINTS/CHANGES/2026-10-28-invoice-audit-email-preview.md. Root reviewed the bounded actual-UI/read-only-GET proposal. Source starts only after this separate claim passes applicable CI and merges, and C has exact merged source/main CI green (met). The coordinator explicitly removed C Render LIVE as a prerequisite for isolated E1 engineering after prolonged guard checkout; C release continues independently without bypass. No email/send, scheduler, persistent snapshot, consent/grant, schema or provider work is authorized by E1.

The user settled email at the last calendar day 23:59 Europe/Athens to the same already-verified store-report recipients, and separate first-day 07:00 Athens durable warehouse snapshot. E1 provides only an explicit monthly-audit-panel preview action showing escaped subject/plain body, complete-source counts where known, first50/truncation and separate «Όλοι οι μήνες» pending findings. Findings do not block preview. Incomplete coverage is unknown, never zero/all-clear. Current observedAt is NOW, nominalScheduledAt is labelled provisional; no fake historical asOf or final-month accounting assertion. The unchanged C reader and separately timestamped read-only recipient summary use separateSnapshots:true. Masked verified identities, sendingEnabled:false and purposeConsent:NOT_ASSUMED do not grant MONTHLY consent or reuse CASH consent. Existing retained LAB recipient verification/consent limits remain unchanged; no real message is sent.

Exactly 13 source/test paths:

1 NEW server/src/services/invoice-audit-email-period.js

2 NEW server/src/services/invoice-audit-email-payload.js

3 NEW server/src/services/invoice-audit-email-preview.js

4 NEW server/src/routes/invoice-audit-email-preview.js

5 server/src/index.js — ONLY new import and authenticated INVENTORY-gated exact GET route mount /api/reports/invoice-audit-email-preview; preserve other route ordering and shared mounts

6 client/src/components/commerce/MonthlyInvoiceAuditPanel.jsx — ONLY explicit preview action, escaped preview content, current-scope isolation and self-contained presentation

7 NEW server/test/invoice-audit-email-period.test.js

8 NEW server/test/invoice-audit-email-payload.test.js

9 NEW server/test/invoice-audit-email-preview.test.js

10 NEW server/test/invoice-audit-email-preview-postgres.test.js

11 server/test/monthly-invoice-audit-ui.test.js — add actual mounted preview/current-scope regressions without weakening retained C assertions

12 server/e2e/monthly-invoice-audit-fixture.jsx — add synthetic read-only preview response and request evidence

13 server/e2e/monthly-invoice-audit-browser-flow.mjs — add actual pointer/keyboard preview checks; retain mandatory C desktop/mobile/first-render privacy/native keyboard checks

GET accepts explicit selected store/month only and rejects send/recipient/activation/asOf fields. Require current persisted personal User, admitted role, company/store and current INVENTORY entitlement; STORE_OPERATOR is denied and existing auth handles other token classes. UI masks old preview in the first committed render on store/API/month mismatch, aborts late responses and preserves C report-month semantics, native keyboard and all original privacy assertions. No raw email export, attachments, OCR/provider/private payload or unauthenticated report link. Required exact PR/main CI includes real registered GET/native PostgreSQL and actual desktop/mobile Chromium, no environment skip as successful proof. No manual/USER/LAB PASS follows from engineering CI.

Protected owners: codex/cash-chat-reconciliation-20261026 keeps cash reports/settings/recipients/consent/grants/dispatch/transport/scheduler; feat/store-shifts-inventory-clear-20261018 keeps lifecycle/reset/delete/backup/retention. C identity/posting/pending reader and invoice intake/common-draft/OCR/Gate3/device owners are unchanged. Serialize the narrow index.js mount through sole publisher, preserve all fresh-main bytes. E2 purpose-specific persistence/grants/idempotency/lifecycle and E3 guarded scheduler/mail activation/real acceptance stay OPEN; item9 durable snapshot and item10 reading accuracy remain separate, with payment order unchanged. No source beyond these13 paths without a named before-source amendment.

D1 - MONTHLY-INVENTORY-SNAPSHOT-CONTRACT-01 / MERGED INTERNAL FOUNDATION / ACTUAL MONTHLY CAPTURE OPEN.

D1 technical integration receipt 29/10/2026 - ENGINEERING FOUNDATION TECHNICALLY INSTALLED / NO FUNCTIONAL SNAPSHOT OR USER-LAB PASS. Source PR3269 exact head77069f8b22b0c865ea51e92dc5c7749f49198ab7 and reviewed treeaa82d0050ffd7e12f6027100aef78ba76ce6e113 passed full CI40760985560. Initial attempt failed three existing Chromium startup/Target.createTarget timeouts (4568PASS/3FAIL/0SKIP); unchanged-source rerun completed all five jobs SUCCESS, actual build job123288602585:4571server+8backupPASS/0FAIL/0SKIP. Normal expected-head squash merge produced86a5b5b32cdcf9942044b48b608be5fc52e49ed0 on parent34a8917, exact reviewed treeaa82d005. Exact merged-main CI40940258338 allfivejobsSUCCESS, actual job123681995303:4571server+8backupPASS/0FAIL/0SKIP, required native/browser/build/archive/realHTTP checks executed. Root independently read exact CI evidence and confirmed source/tree preservation. Ordinary workflow_run guard40942053322/job123687790646 completed SUCCESS: root independently read actual CI_RUN_ID40940258338/EXPECTED86a5 pinned preflight, deployment trigger29Oct19:40:37.1022058Z and exact healthy-revision wait19:45:52.9340213Z. Root independently queried Render dep-dbhq2d0n74is73eo51gg: LIVE exact86a5b5, finished19:45:37.235214Z. Root own no-cache GET /api/health at19:46:22Z returned HTTP200,ok=true,exact86a5b5b32cdcf9942044b48b608be5fc52e49ed0, shell exit0. This verifies engineering source integration/delivery only, not a functional stored snapshot. No manual deploy, rollback or guard bypass. This supersedes older source-candidate/awaiting-CI wording only for this bounded internal foundation.

D1 remains unmounted pure date/format/candidate validation only: candidateOnly:true,persisted:false,FORMAT_VALIDATED_ONLY. No source reader, stock capture, DB/storage/schema, route/UI, scheduler, recipient/consent/provider/email or business mutation. Its20000row/4MiB refusal bounds are engineering limits, not measured production capacity. Actual monthly capture, source authenticity/current authorization, permanent retention/reset/restore, automatic delivery and USER/LAB/manual acceptance remain NOT TESTED/OPEN. Item9 is not complete; the fixed first-day07:00Europe/Athens schedule remains agreed.

Historical before-source D1 claim (completed only for the bounded source integration): Same root-coordinated Work-page, source worker /root/snapshot_scope, branch feat/monthly-inventory-snapshot-contract-20261028. Checkpoint CHECKPOINTS/CHANGES/2026-10-28-monthly-inventory-snapshot-contract.md. Source starts only after this exact independent claim has applicable green CI and merges. This is an internal pure immutable-format/date foundation, NOT stored capture, source authorization or whole item9 PASS. Actual monthly capture remains NOT TESTED; no runtime/UI installation or USER/LAB/manual PASS is claimed.

Exactly four NEW source/test paths: server/src/services/monthly-inventory-snapshot-period.js; server/src/services/monthly-inventory-snapshot-payload.js;

server/test/monthly-inventory-snapshot-period.test.js;
server/test/monthly-inventory-snapshot-payload.test.js. No existing runtime, C reader/SQL, route, index, UI, schema, source reader, storage repository or scheduler file is included. Source PR updates only its own checkpoint/active evidence; central PDF synchronization occurs for claim and eventual technical receipt, without changing unrelated owners or numbered/manual PASS.

Period: strict issue-month2000-2099 maps to next month's first day07:00 Europe/Athens; stock observation time is separate. Pure explicit observation-time input refuses pre-due capture and labels late observation truthfully. No timer, Date.now, cron, catch-up or reconstructed historical inventory. Payload: detached/frozen versioned canonical UTF8 JSON candidate from explicitly supplied complete trusted projections; strict company/store/generation/revision, unique scoped product/obligation IDs and exact full source row/count coverage, deterministic ordering and whitelisted metadata. Decimal strings/BigInt preserve signed quantity and supplied operational retail/latest-approved-purchase costs without Number coercion, rounding, FIFO/WAC or missing-cost-to-zero. Unknown cost and mixed-unit totals stay explicit. Stable SHA256, unchanged inputs, bounded product/detail/source counts and canonical4MiB; proposed20000products is a refusal bound, not a capacity promise.
Incomplete/over-limit/private/foreign/duplicate data is refused, never a complete partial snapshot or all-clear. A syntactically valid candidate proves no authorization, persistence or actual capture.

Pinned details: string-only decimal inputs (up to18 integer/12 fractional digits), canonical signed zero/trailing zeros and exact unrounded BigInt arithmetic; malformed quantity refuses, bounded malformed/missing monetary values remain null with UNKNOWN reasons/counts. Oversized raw input refuses before expansion (ID160, label512, SKU128, unit48 UTF8 bytes and fixed reason labels); no mixed-unit grand quantity. Limit20000 complete rows per collection and4MiB canonical total. Hash fields are excluded from their own fixed canonical projections;
candidateOnly:true/persisted:false/FORMAT_VALIDATED_ONLY proves no authorization or real capture. Input2099-12 schedules2100-01; any positive delay is late, without invented grace.

Both sourceHash and payloadHash bind company/store/generation/month/nominal slot/actual sourceObservedAt/source revision/basis, not only row data. Source observation accepts only canonical explicit ISO timestamps. Exactly due is ON_TIME; any later instant is LATE with exact delayMs, and pre-due refuses. If any price/cost is unknown, the corresponding complete valuation total is null; a separately named known subtotal never represents full valuation. No silent truncation is allowed.

Invoice facts come from the future C-owned trusted in-transaction adapter, with previous issue month separate from all-month pending originals. Do not reimplement invoice identity/posting classification or pretend C's first50 detail/pending page is a complete freeze. Pending/unposted/duplicate findings remain allowed; unposted is not unpaid. Pure tests cover Gregorian/Athens boundaries, before-due/late truthfulness, precise signed/unknown values, stable hashes and input detachment, duplicate/foreign IDs, count/source incompleteness, private fields and early resource bounds. Full exact PR/main CI and independent review remain required for engineering integration; no DB/provider/browser/functional acceptance is claimed from pure tests.

Retained owners unchanged: feat/store-shifts-inventory-clear-20261018 / consolidated feat/store-lifecycle-central-execution-20261019 keep durable relations, manifest/columns, reset KEEP/REMOVE, generation/enrollment, backup/private retention/full-selective restore, workers and provisioning; codex/central-auto-dispatch-20261022 keeps scheduling/start-stop/recipients/consent/dispatch; C owner keeps actual invoice reader/SQL/adapter extraction. Current e3e175 history/registries show no D handoff; old archive/empty-scope transfers do not cover MonthlyInventorySnapshot. No storage/schema/DDL/ensure, settings/grant, email/provider, stock/payment/fiscal operation or accepted-test replay. D2 durable functionality still requires a published exact lifecycle/scheduler/source-adapter handoff and reviewed generation/reset/history/restore contract; generic audit/CASH payload reuse cannot bypass it. Automatic email/E2/E3, durable item9, OCR and devices remain OPEN.

C2 - MONTHLY-INVOICE-SNAPSHOT-PROJECTION-01 / TECHNICALLY INSTALLED / ACTUAL DURABLE CAPTURE OPEN.

C2 technical integration receipt 29/10/2026 - TECHNICALLY INSTALLED / EXACT MAIN CI AND ORDINARY RELEASE VERIFIED / NO DURABLE SNAPSHOT OR USER-LAB PASS. Claim PR3275/CI40945429152 merged dafd06e before source. Source PR3281 exact head d573e4a713ae49f6c1f6c211807f5cc146fc7abb passed all five full CI40950313957 jobs; root independently read actual build job123717020866:4595server+8backupPASS/0FAIL/0SKIP, actual native parent1934 with all seven subcases and pure1935-1941 executed PASS. Native proof includes75pending/61invoice full SQL projection, exact D1 composition with synthetic stock, unchanged legacy50/status/fingerprint, held snapshot/concurrent source and role controls, missing schema/zero intents,20001row refusal and guarded JSON aggregation/NULL-money byte bounds. These are isolated engineering checks, not production capture or physical acceptance.

Normal expected-head merge produced ce5ec3a6b37c3844aa57298a88a787ed05ec1def, tree f150990b82bb91fea204a8c2a679d1fbc88dd39b, on current parent15f72c60f4aab29d67d655e27e976963bbbc2616. Root compared all four source/test blobs and own source checkpoint to the reviewed freeze, with only the own C2 active paragraph integration; incoming cash source3278 and its green CI40950440841, cash claim3283 and every other owner remain preserved. Exact merged-main CI40953041609 passed all five required jobs; root independently read actual build job123730421994:4606server+8backupPASS/0FAIL/0SKIP, including native parent1945 with all seven subcases executed PASS. Ordinary workflow_run guard40955679300/deploy job123735152996 pinned CI_RUN_ID40953041609 and EXPECTED_REVISIONce5ec3a6b37c3844aa57298a88a787ed05ec1def; actual Render request29Oct21:13:07.5077482Z and exact healthy wait21:15:11.0236084Z succeeded. Render dep-dbhrdougekts73c4u4fg was LIVE on that exact source revision, finished21:15:04.045549Z. Root independently verified no-cache public health29Oct21:16:29Z (23:16:29 Europe/Athens), HTTP200/oktrue/exactce5/exit0. This confirms technical source delivery only; no actual durable snapshot or business acceptance. No manual deployment or guard bypass.

Bounded source outcome: existing C/deferred readers share their canonical source/classification/decision cores; the unmounted complete invoice/pending metadata adapter retains exact decimal text, actual read-only RR transaction/time admission and truthful coverage. Existing public C GET and legacy pending50/numeric/status/fingerprint behavior remain protected. No source stock reader, permanent storage/schema/DDL, route/UI, scheduler/recipient/consent/provider/email or business/create/capture/ACK writer is added. D1 candidate flags remain candidateOnly:true,persisted:false,FORMAT_VALIDATED_ONLY; actual durable monthly capture, stock source, lifecycle/history/reset/restore, scheduling and whole item9/USER/LAB/manual acceptance remain OPEN.

Historical before-source C2 claim (completed by PR3275/main dafd06e): Same root-coordinated Work-page and retained central owner codex/central-four-streams-20261018; branch feat/monthly-invoice-snapshot-projection-20261029, sole source writer assigned by root after this exact claim passes applicable CI and merges.
CHECKPOINTS/CHANGES/2026-10-26-pos-deferred-invoice-payment.md explicitly retains invoice worker/root/next_reports and original ownership of pos-pending-invoices.js. This is a bounded same-owner continuation of installed C/deferred readers, not a lifecycle/scheduler transfer. Checkpoint CHECKPOINTS/CHANGES/2026-10-29-monthly-invoice-snapshot-projection.md controls the exact contract.

Exactly four source/test paths after claim green/main: existing server/src/services/monthly-invoice-audit.js and server/src/services/pos-pending-invoices.js; NEW server/test/monthly-invoice-snapshot-projection.test.js and server/test/monthly-invoice-snapshot-projection-postgres.test.js. Factor one C authorization/source/classification core and the EXISTING pendingProbe/decision CTE into shared private readers; no second identity/posting/pending classifier. Add an internal full metadata projection composable in one caller-held actual READ ONLY Repeatable Read/Serializable transaction. Recheck current persisted user/store/company/support/licence in that same snapshot; deny operators. PostgreSQL transaction_timestamp/clock_timestamp entry and exit verify age0..30000ms; caller now/asOf/observedAt is refused. Label transactionStartedAt separately from actual readStartedAt/readFinishedAt and authorization as assessed in the held snapshot, never exact MVCC cutoff/current-live/signed capture proof.

Preserve original C GET/classifier/paging/fingerprint/date and existing pending callers' fixed50rows/Number/status/count/fingerprint behavior. Full pending mode shares the exact

source/provenance/tombstone/status decisions, exposes full schema-capability completeness and returns exact SQL decimal TEXT before JSON numeric decoding. Complete counts/materialized rows must match; fixed20000row and4MiB metadata limits refuse before projection, never truncate or invent clean zero. Selected-month canonical invoice primary money comes from its original decimal text, not rounded totalCents. Unknown or outside-month chosen-primary issue dates make freezing ineligible while preserving original group/primary/any-linked-source selection; no date substitution/drop/reclassification. All-month pending remains separate. Missing optional text maps to D1-compatible missing values, with fixed IDs/UTF8/enums and no private/source bytes.

Require real native RO/RR and concurrent-snapshot/current-role/licence/scope controls,51plus pending/full invoice output, exact decimals, missing-capability/zero-intent/count/oversize/date refusal and actual composition of eligible C2 output into unchanged buildMonthlyInventorySnapshotCandidate with explicitly synthetic stock/truthful time. Existing C/pending native/UI/unit regressions remain unchanged; exact full PR/mainCI, independent review and ordinary guarded exact release required. No business/create/capture/payment/close/ACK writer or D1 module changes. No HTTP/UI/index/schema/DDL/storage/lifecycle/backup/manifest/reset/history/restore/scheduler/recipient/consent/email/provider/financial/stock/fiscal changes or accepted replay. Durable D2 still requires retained lifecycle/scheduler handoff; C2 is complete source-metadata preparation, not stored capture or item9/USER/LAB/manual PASS.

D2 technical integration receipt 30/10/2026 - CODE LIVE / EXACT MAIN CI AND CURRENT HEALTH VERIFIED / API DEPLOYMENT PROVENANCE DEVIATION / NO PRODUCTION TABLE OR ACTUAL CAPTURE. PR3292 final headfd412b552d490dd01b703d07763254add25ae071/tree52ef1ddee2e0ac8a69e3c2ee2a30d033eed82b5e passed all five exact full CI40960723251 jobs: root actual build1237535807214649server+8backupPASS/0FAIL/0SKIP, native1925host+mandatoryPG18 full/selective private archive/reset/history and native1941all seven storage subcases PASS. Normal merge main e950d9b16bb20f3f5666d858a1bc59098bf53e9f has exact clean combined tree46422756c98659bdbb0ec59ad84f2f3b277684a9 on parentce5be42e2c9afad832bfe9d601845986fda6aa85; incoming source/owners/canonical PDF and all own source blobs are preserved. Exact merged-main CI41041653691 passed all five required jobs: root actual build1240161049344667server+8backupPASS/0FAIL/0SKIP, native1943 full host+mandatoryPG18 private archive/reset PASS27.412seconds and native1959all seven storage subcases PASS1.072seconds. Root independently verified Render dep-dbi76kgae00c73bdthm0 LIVE exacte950, created30Oct10:37:06.577401Z/finished10:39:10.514788Z with API trigger BEFORE main CI completed. Actor is unattributed; this page made NO deploy API call. Subsequent ordinary guard41042881821/deploy124019833718 pinned e950/CI41041653691 but at10:45:15.4443565Z reported "Revision is already healthy or superseded" and SKIPPED BOTH actual Trigger/Wait steps; no executed guarded release is claimed and no redeploy was performed for evidence. Root then verified full-main CI plus its own no-cache/cache-busted HTTP200/oktrue/exacte950 health, shell exit0, server HTTP Date30Oct10:47:50GMT (12:47:50 Athens). Code LIVE and post-deployment CI/current health are verified with the deployment-provenance deviation explicit. This is the internal immutable storage/history/recovery foundation only: proposed catalogues remain explicit, canonical lifecycle catalogues/worker selection stay unchanged, and no production table, bootstrap, enrollment, stock source/capture caller, scheduler, email or USER/LAB/manual/whole item9 completion is inferred. Root's fresh30Oct10:35:35.663413Z (12:35:35 Athens) read-only production metadata found MonthlyInventorySnapshot and StoreLifecycleFence ABSENT; existing enrolled-fence admission remains a real prerequisite, not an automatic generation0 grant. Exact evidence: CHECKPOINTS/CHANGES/2026-10-29-monthly-snapshot-storage-takeover.md.

D3 technical integration receipt 30/10/2026 - INTERNAL PIPELINE TECHNICALLY INSTALLED / EXACT PR-MAIN CI AND ORDINARY GUARDED RELEASE VERIFIED / PRODUCTION ACTIVATION OPEN. Historical D3 before-source claim - gate satisfied by PR3303/mainf8007c / SAME-OWNER CONTINUATION. Sole owner/branch codex/central-monthly-inventory-capture-20261030, same root retaining D1/C2/D2; no other lifecycle/scheduler ownership transfers. Claim CHECKPOINTS/CHANGES/2026-10-30-monthly-inventory-source-capture-claim.md names exact bounded source/test paths and becomes effective only after applicable green CI and main merge, with D2 exact code LIVE/post-deployment main CI/current health verified and its API-origin/skipped-guard provenance deviation explicitly retained. Read ALL selected-store StoreProduct assignments including inactive/signed

stock with complete scoped links/counts, exact existing operational price/cost basis, bounded latest-cost tie detection and BigInt PACKAGE division; bounded latest-cost ambiguity/nonrepresentable PACKAGE costs remain D1 INVALID/null with fixed named stockCostLimitations counts in the existing sourceCoverage JSON, preserving complete quantity/population and unknown valuation; malformed numeric/unit/denominator or incomplete sources HOLD. The explicit repository/readback amendment validates exact keys, integer bounds and sum against candidate INVALID cost counts, preserves original four-field legacy coverage and original replay metadata, and adds no SQL column/DDL/catalogue change or rounding/fallback masking. Compose complete stock and C2 in one actual READ ONLY RR transaction with existing enrolled generation, DB transaction start>=first-day07:00Athens due and total age<=30000ms; build unchanged D1 at the FINAL actual DB read finish, close read transaction, then use D2's fresh authorized generation-fenced immutable writer. Trusted server revision only; no supplied browser clocks/source proofs. D2 supplied-facts receipt/candidate flags stay honest. No HTTP/UI, schema/default activation, global lifecycle install/enrollment, scheduler/provider/email, financial/stock operation or accepted-test replay. Actual capture, production rollout and whole item9 remain OPEN. Single next action after this exact before-source claim merges: implement and natively verify the bounded source/coordinator slice.

Historical D2 before-source claim - OWNER-DIRECTED NARROW TAKEOVER / gate satisfied by PR3290/main0e3ad692. 29/10/2026 Europe/Athens. The owner explicitly answered «ΕΓΚΡΙΝΩ» to this page's concrete request to take over monthly snapshot storage, history and recovery. ΑΝΑΛΗΨΗ ΑΠΟ feat/store-shifts-inventory-clear-20261018 / feat/store-lifecycle-central-execution-20261019 - ASSIGNED codex/central-monthly-snapshot-storage-20261029, central root coordinator. This is an owner-directed narrow reassignment, not a fabricated old-owner release. It becomes the effective before-source record only after applicable green CI and main merge. Checkpoint CHECKPOINTS/CHANGES/2026-10-29-monthly-snapshot-storage-takeover.md controls exact paths and preservation rules.

Scope ONLY the new MonthlyInventorySnapshot immutable storage relation/repository, its exact column/raw-ID classification, generation/reset history exception and recovery coverage. All other lifecycle/reset/delete/provisioning/worker scope and codex/central-auto-dispatch-20261022 scheduling/activation remain retained. D1/C2 technical receipts and existing USER/LAB/manual evidence are preserved. The prior D2 formal REQUEST below is historical as to this narrow ownership decision; its technical two-phase/exact-byte/due/precision constraints remain the baseline. No scheduler/mail/provider, production DDL/reset/restore, paid resource, financial/stock operation or whole item9 acceptance is authorized by this claim. New storage/history/recovery implementation and actual native proof are NOT TESTED; no stored snapshot or USER/LAB PASS is claimed. Source may begin only after this claim merges green. Single next action: implement and natively verify the bounded storage/history/recovery slice under the new named owner, preserving unrelated owners.

Historical D2 formal handoff REQUEST (ownership decision superseded only by the owner-directed narrow takeover above) / NOT AN OLD-OWNER RELEASE. Root reviewed the concrete storage/history/recovery/two-phase proposal in CHECKPOINTS/CHANGES/2026-10-29-monthly-snapshot-storage-handoff-request.md. It requests the retained lifecycle owner review the exact MonthlyInventorySnapshot relation/columns, history-reset exception and recovery coverage, then name a sole receiving executor if accepted. It approves no schema, source path, migration, DDL, production action, retention duration, scheduler activation or takeover; no receiving owner is fabricated. Durable D2 remains OPEN with existing owners. Root invoice scope retains D1/C2; source PR3281 is merged and technically installed with exact full PR/main CI and ordinary guarded release verified as recorded above. The single next lifecycle action is review of this concrete REQUEST, not implementation under an assumed transfer.

Shared-file and remaining-scope boundaries. /root/pos_ui_new is the only writer to the claimed StorePosPanel presentation regions; PIN sections are untouched. Item 1 is superseded by the latest explicit user correction: «ΛΑΘΟΣ ΜΟΥ ΕΙΝΑΙ ΟΚ.. ΔΕΝ ΕΒΑΖΑ ΤΟ EFTPOS ΚΑΙ ΔΕΝ ΑΝΟΙΓΕ». Status USER CLARIFICATION / MISSING-EFTPOS PREREQUISITE RESOLVED: no PIN runtime defect is established and no runtime change is claimed. The private screenshot shows the LAB POS2 close form, PIN choice and EFTPOS input, not an actual completed shift close or exact revision. Do not publish that screenshot, infer a real-close USER/LAB PASS or replay a closure. Item 5 stays with DEVICE-SETUP-EASY-01 and its retained scanner/device owner. Item 7 is bounded by separate cause B, with its shared StorePosPanel source edits

serialized with A1. Item 8 gains only the read-only report slice C here; notification remains separate. Item 9 durable snapshots and item 10 reading-accuracy changes remain later separately claimed phases; the owner clarified item 10 is better reading only, with no payment-order change.

Authoritative 28/10/2026 technical status: A1/A2/B/C/E1 are technically installed with exact PR/main CI, ordinary guard, Render LIVE and independent root-health evidence in their own subsections. Actual authorized-user acceptance remains OPEN. Automatic email/E2/E3, durable warehouse snapshot, OCR accuracy and device-owner residuals remain OPEN. No USER/LAB/manual PASS, actual email, scheduler activation, purpose grant, schema, stock/payment/fiscal operation or production transaction is inferred from technical installation.

Checkpoint CHECKPOINTS/CHANGES/2026-10-28-pos-immediate-ui-plan.md.

27/10/2026 — INSTALL-SUPPORT-PRINT-GUIDE-01 / USER-AUTHORIZED NARROW TAKEOVER / BEFORE SOURCE

28/10/2026 - PRINT GUIDE TECHNICALLY INSTALLED / ACTUAL USER AND PHYSICAL PRINT ACCEPTANCE OPEN

User-authorized narrow claim #3226 preceded source. PR #3229 exact reviewed head 2f09dc7f5f54b3a32a5213a5416bf6f9ecb0f280 passed full CI 40687951276 (job 122815867240): all five jobs SUCCESS, 4,453 server and 8 backup tests PASS / 0 FAIL / 0 SKIP. Normal expected-head merge produced main b8773ac909f1001be3987d84335571d5717a1c8e with the exact reviewed tree 149998083c61fb600cd8dfa80ebb8534e176040d. Exact merged-main CI 40689830869 (job 122822007940) also passed all five jobs with 4,453 server and 8 backup tests / 0 FAIL / 0 SKIP. Both exact logs contain the real Chromium isolated one-page PDF regression (ok 1090).

Ordinary guard 40691387009 / deploy job 122826888468 completed SUCCESS, including actual trigger and exact-revision wait (not a skipped deploy). Render service srv-d9isenfavr4c73bdh52g / workspace tea-d9ie26vaqgkc739uudqg deploy dep-dbgv0hmgekts738tv1a0 became LIVE at b8773ac909f1001be3987d84335571d5717a1c8e on 28Oct12:55:18Z. Independent root no-cache GET /api/health at12:55:44Z returned HTTP200, ok=true, exact b877; publisher corroborated12:56:06Z with the same result. No manual deploy, rollback or safeguard bypass.

Installed technical scope: the existing selected-store support overview offers an explicit printable static Greek fault guide. The output is a separate document built from fixed text only, not the application DOM or store data. It does not register an incident, invent contact data, disclose PINs/credentials or perform API, device, payment, stock or fiscal actions. Popup failure feedback and keyboard focus handling are covered by mounted tests. The Chromium regression used synthetic data at desktop and narrow viewport sizes, a real popup and CDP print-to-PDF; it verified one page, Greek text and exclusion of background/store sentinels. The fixture intercepts the native print call to avoid a modal dialog, so this evidence does not verify a native print dialog, physical printer or mobile operating system.

Status TECHNICALLY INSTALLED / AUTHENTICATED ACTUAL UI AND PHYSICAL PRINT ACCEPTANCE NOT TESTED. No USER, LAB, manual or hardware PASS is claimed and no manual/PASS entry is created from CI. Full INSTALL-SUPPORT remains OPEN: durable profiles, incident operations, attachments and lifecycle integration are not delivered by this slice; retained lifecycle owner and all other assignments remain unchanged. Older AWAITING CI/NOT INSTALLED paragraphs below are historical source preparation, superseded only by this narrowly scoped technical release receipt.

Checkpoint CHECKPOINTS/CHANGES/2026-10-27-install-support-print-guide-source.md.

The user explicitly authorized this conversation to take over the specific support page for a printable guide titled «Σε περίπτωση βλάβης». This direct user instruction replaces the usual prior-owner handoff only for this narrow print-guide scope. Previous retained central owner codex/central-four-streams-20261018 / worker /root/priority_support; receiving owner /root/support_design under central coordination. Existing ownership, history and acceptance for all other support work remain intact. Based on main 28da2047c4678f137d463de24d72d5dcdc92783f. This documentation claim must pass applicable CI and merge before source work begins.

Scope: a printable guide within the existing InstallationSupportProfile selected-store overview, using only currently authorized data already supplied to that component. Source scope limited to client/src/components/platform/InstallationSupportProfile.jsx, client/src/components/platform/installation-support-profile.css, and server/test/installation-support-profile-ui.test.js for meaningful focused tests, including unchanged protected flows and the existing focus trap. Additionally, NEW server/e2e/installation-support-fault-guide-fixture.jsx and NEW server/e2e/installation-support-fault-guide-browser-flow.mjs are authorized for isolated local browser evidence. No workflow ownership or .github/workflows/ci.yml edit is transferred; the browser flow is run locally. Print content must not invent store data, health or support status; absent facts remain clearly unknown. Protect tenant/store isolation and prevent credentials, PINs, tokens or other secrets from appearing. Preserve existing profile and launcher behavior; no other source edits under this claim. Verify rendering and print behavior in an isolated browser and retain any real-world printing/acceptance as OPEN until actually checked.

This does not transfer lifecycle or persistence ownership. No schema, database, backend, new API, authorization, store lifecycle, shared policy, reset/delete, backup/restore, device, payment, stock, fiscal or incident workflow changes. Retained lifecycle owner feat/store-shifts-inventory-clear-20261018 must separately review and hand off any future lifecycle or persistent-schema work. Persistent support profiles, incident operations, attachments and the full support module remain OPEN. Claim status: BEFORE SOURCE / NOT IMPLEMENTED / NOT INSTALLED / NO LAB OR USER PASS. Preserve other owners and their evidence; require independent review, exact CI and normal guarded release before describing source as delivered.

Checkpoint CHECKPOINTS/CHANGES/2026-10-27-install-support-print-guide.md.

27/10/2026 — INSTALL-SUPPORT-INCIDENT-POLICY-01 / PURE RULES MERGED AND RELEASED / FULL FEATURE OPEN

The storage-neutral incident policy and its tests were merged in PR #3215 at main 6994cf89d71792acb03a5bf53bd99968e65a13aa, following before-source claim #3212. The reviewed PR head f03dbc0aa0ef8f2849e45aa93c91c9ec1d0cab0b passed full CI 40550024605 (4,423 server tests and 8 backup tests, 0 failed, 0 skipped); exact merged-main CI 40552934117 passed (4,432 server and 8 backup, 0 failed, 0 skipped). Nine focused policy tests passed. Initial PR CI 40544002076 had five unrelated missing-jszip failures; retained cash owner resolved the direct test dependency in #3218 before the successful rerun on a new reviewed source head.

Release evidence: descendant 5bc05299c7d8fac038c04aa61f7e07030f5fe546 passed exact main CI 40555687515 (4,435 server and 8 backup, 0 failed, 0 skipped); ordinary guard 40558790722 job 122382031726 triggered and waited for that revision. Render deploy dep-dbgeobqfngtc738qmtlg is LIVE at 5bc from 2026-10-27T18:29:47Z. Independent no-cache health at 19:03:37Z returned HTTP 200, ok=true, revision 5bc. Earlier guard 40554920020 skipped its deployment because newer production source existed; its success was not treated as a deployment. Synthetic capacity results do not establish production capacity or endurance acceptance.

Scope and remaining work: this is pure unmounted code, not an operational incident feature; no API, database, schema, UI, permissions or actual business action was introduced. A named confirmer is unverified text until future server identity validation. Replay depends on a trusted receipt and future atomic persistence; a historical result need not be current state. Persistent INSTALL-SUPPORT, real incident handling, tenant authorization and durable transactional audit remain OPEN. Canonical lifecycle integration requires the retained lifecycle owner's review and scoped handoff. No actual LAB, user, manual or hardware PASS is claimed. All other owners and active work remain unchanged.

27/10/2026 — DOCUMENT-CAPTURE-SCANNER-01 / OWNER-DIRECTED TAKEOVER / HARDWARE FAIL

At 2026-10-27T17:44Z the owner explicitly authorized this conversation to take over scanner integration because the former page is unavailable. Receiving owner: codex/canon-lide400-scan-diagnostics-20261027; branch fix/canon-lide400-scan-diagnostics-20261027. This is a direct owner-directed transfer, not a claim that the former owner published a handoff. Scope: diagnose and correct the Windows WIA connector failure observed with Canon LiDE 400, preserve existing origin, pairing, explicit scan, image limits, no automatic upload/payment and all other camera/invoice/OCR/financial behavior.

USER OBSERVATION / FAIL: Windows scanner diagnostic reported success; Canon utility reportedly scanned; the MyWorkStation connector was paired and the physical scanner moved after the scan button, then the UI reported scan failure and no upload. Connector console displayed no diagnostic details. Cause remains unknown: the code collapses WIA exceptions into SCAN_FAILED; JPEG size/format and COM transfer are hypotheses only. Exact installed connector build and deployed web revision are not independently verified. No invoice/payment was submitted in the failed attempts. No hardware PASS.

Next: publish takeover before source changes, identify the failing stage without logging invoice content or credentials, make one bounded correction, run Windows CI and guarded deployment, then a separately identified non-financial physical acceptance. Do not replay accepted invoices or perform payment/stock/AI submissions. Existing capture scope and other owners remain protected.

27/10/2026 — INSTALL-SUPPORT-INCIDENT-POLICY-01 / ASSIGNED BEFORE SOURCE / PURE CONTRACT ONLY

CI JSZIP 01 — 27/10/2026 — ASSIGNED BEFORE CONFIG

Owner: codex/cash-chat-reconciliation-20261026; branch fix/cash-ci-jszip-20261027. Full automatic-cash PR3214 head771e8b3d CI40545007879 failed 4409 PASS / 5 FAIL / 0 SKIP, all five failures ERR_MODULE_NOT_FOUND for jszip in existing assistant DOCX/export test files; native isolated PostgreSQL reviewed cash offset passed unskipped. Current main server/package.json does not declare jszip, while those existing tests import it directly; npm install has no root lockfile and current dependency graph no longer provides it transitively. This is build/test dependency evidence only, not a new LAB PASS.

Claim ONLY adding jszip ^3.10.1 to server/package.json devDependencies so the five existing tests can import the package they already use. Do not change assistant/export source, test semantics, user data, runtime financial behavior, product dependencies, deployed configuration or other owners. Publish this claim green/main before that configuration edit. Check clean-install dependency resolution and the five existing tests, then require exact full cash PR CI and guarded main CI/deploy; actual cash LAB remains separately NOT TESTED. Keep cash scope ASSIGNED and existing PASS untouched. Checkpoint CHECKPOINTS/CHANGES/2026-10-27-cash-test-jszip.md.

Owner codex/central-four-streams-20261018, independent worker /root/support_design, branch codex/install-support-incident-policy-20261027; assignment 2026-10-27T18:25:15+02:00. User requested continuation until final real checks. Existing INSTALL-SUPPORT read-only overview #3209 remains technically installed with actual UI acceptance OPEN; this is a distinct preparation for the documented incident requirement, not a transfer of lifecycle, device, support-access, technician, or other owner. Based on fresh main 85a45b30d70b4df557f28bd1094e53fca720da43. Publish this before-source claim with applicable green CI and normal main merge BEFORE editing any source/test path; until then SOURCE NOT STARTED / NO INTEGRATION / NOT INSTALLED / NO LAB PASS.

Exact source/test scope ONLY: NEW server/src/services/installation-support-incident-policy.js and NEW server/test/installation-support-incident-policy.test.js. Implement deterministic, storage-neutral pure rules for incident status transitions: NEW → IN_REVIEW → IN_PROGRESS or WAITING → AWAITING_CONFIRMATION → CLOSED; return from IN_PROGRESS to WAITING and vice versa when appropriate; reopen CLOSED to IN_REVIEW only with a bounded nonempty reason. A closure requires a bounded factual resolution and a separately named confirmer, without inventing a requirement that confirmer differs from actor. Invalid

states/transitions or missing actor, confirmation, reason or malformed/overlong/control-character inputs refuse with clear deterministic results. Validated actor identity/scope is supplied by the future caller; this library does not authenticate, authorize, grant roles or decide store membership.

Retry decisions must not assert durable idempotency from process memory: an exact duplicate can be identified only from an explicitly supplied trusted previous receipt with the same operation identity and same normalized request; changed reuse conflicts. Missing receipt cannot certify that prior work did not occur. No implicit clock/randomness, no network, API/route/mount, database/DDL, persistence/cache, existing source modification, role or permission expansion, files/uploads, provider, email, financial/stock/fiscal/shift or real business action. A real integrating service remains responsible for tenant/company/store authorization, concurrency/version, durable operation receipt, transactional audit, safe attachment handling and rollback.

Meaningful independent tests: every supported and refused transition, prerequisites for close/reopen, bounded text/control/empty inputs, invalid or missing actor, exact receipt replay vs changed-operation conflict vs no-receipt, normalization/determinism and unchanged input objects. No skipped failures, no CI-only manual or LAB PASS. Require independent review, exact full PR/main CI and ordinary guarded release before any claim of delivered code; as an unmounted pure contract, release is not an operational incident feature or full module.

Full durable INSTALL-SUPPORT remains OPEN, including permanent store profile, incident storage, technician ACL, actual workflow, attachments, maintenance and PDF/Excel. Canonical lifecycle requires reviewed table/columns, ownership, reset/delete semantics, backup/restore and matching worker manifest hash; retain owner feat/store-shifts-inventory-clear-20261018 and require a separate owner-reviewed narrow handoff before shared lifecycle or persistent schema edits. Existing overview/other owner claims and accepted Gates remain protected. Next action after claim merged: implement and test exactly the two pure paths, no runtime wiring.

Checkpoint CHECKPOINTS/CHANGES/2026-10-27-install-support-incident-policy.md.

27/10/2026 — INSTALL-SUPPORT-01 / READ-ONLY OVERVIEW TECHNICALLY INSTALLED / AWAITING ACTUAL UI ACCEPTANCE

Retained central owner codex/central-four-streams-20261018 / worker /root/priority_support; receipt prepared 2026-10-27T13:49:01+02:00 from fresh main 61e66bf4740bc42dc821865ddffd98ece2ceec76, preserving capacity receipt #3210 and every existing owner/record. Before-source claim #3207 exact head7c711ea01f87710973fa0bcbf383e366c73566ad / CI40493756183 SUCCESS / merged be970acf34daa13ea6188ef14e312e70003ffdf4 preceded the four-path implementation. Source #3209 head5d0c67e51657eb512ac82e4e6764812dd5fbdb0d normally merged c5da2fc96f94d75ef99ac89a3c689266b59918a0. Source and complete latest-main reconciliation reviewed independently. No source/config/schema or operational mutation in this documentation-only receipt.

Exact PR CI40495193086 all five jobs SUCCESS; build/test job122159129600: 4414 server tests plus8 backup tests PASS / 0 FAIL / 0 SKIP; client build12.59s, TABLE_SERVICE entry-DFDONUtg.js, required native/browser/invariant/archive/real HTTP and Windows checks. Exact main CI40496649022 all five jobs SUCCESS; job122164008145: same4414+8 PASS / 0 FAIL / 0 SKIP; build12.45s and same TABLE_SERVICE verification and required full checks. The new actual mounted React/JSDOM tests execute unskipped. Local Node20.20.2 focused5 PASS / 0 FAIL / 0 SKIP; guide and scheduler are inert fixtures, so those components' real backend/device behavior is not claimed. Work-safe local build PASS10.59s / TABLE_SERVICE entry-hqwBFSS9.js. First sparse-only local build failed because unchanged shared/greece-time.mjs was absent in isolated checkout; exact-base shared files restored before successful build; no production fallback or source weakening.

Ordinary guarded release40497963249/job122168222739 SUCCESS. Render existing service srv-d9isenfavr4c73bdh52g / workspace tea-d9ie26vaqgkc739uudqg deploy dep-dbg8s4ajnfac73fk1m60 LIVE source revision c5da2fc96f94d75ef99ac89a3c689266b59918a0 at27Oct11:46:23.677468UTC (13:46 Athens). Root independent unauthenticated no-cache GET /api/health27Oct11:47:10.099751UTC HTTP200/oktrue/exact c5da; publisher corroboration11:47:12.373899UTC HTTP200/oktrue/exact c5da. No manual deploy, rollback or bypass.

Technically installed scope ONLY: the existing Super Admin installation center offers a read-only support overview for the explicitly selected company/store. It renders only current existing authorized overview values: company/store name, city, address and responsible email; missing source values are not invented. Equipment, technician, remote connection and backup states are explicitly unchecked. The view resolves the current selected IDs against current props, rejects vanished or foreign selection, treats text as text, clears on close and adds no API call, backend/DDL/schema, attachment, permission, payment, stock, fiscal, provider or device action. Existing guide, terminal/REMOTE, scheduler and module settings controls are retained. The component is a view of existing records and does not create or update a permanent profile.

Status TECHNICALLY INSTALLED FOR THIS READ-ONLY SLICE / AWAITING MEASURED ACTUAL UI ACCEPTANCE. No real authenticated UI/device/store test was executed and no USER/LAB/manual PASS is claimed. Full INSTALL-SUPPORT remains OPEN: durable store profiles, incident lifecycle, visits/checklists, technician ACL, attachments, maintenance, central records and PDF/Excel exports are NOT completed by this release. Persistent table ownership, retention/reset/delete, audited writes and full/selective restore with exact worker-manifest version remain dependent on separate reviewed coordination with retained lifecycle owner feat/store-shifts-inventory-clear-20261018; this receipt grants no handoff or source claim in that owner's paths. No accepted action replay or real business operation occurred.

Checkpoint CHECKPOINTS/CHANGES/2026-10-27-install-support-readonly-overview.md. Retain assignment until actual read-only UI acceptance and the separately scoped durable-phase handoff.

27/10/2026 13:36:13 EET - CAPACITY20 HISTORICAL BURST DIAGNOSTIC / RETAINED OWNER / OPEN

Run37937519901/job113843198454 at historical aacae12: 84 logical actions =22 POS refresh +22 local searches +20 BackOffice searches +20 reports /106 HTTP. All22 refreshes completed, zero action errors/drops; isolated burst p95=4131.316ms/p99=4237.201ms FAIL, normal p95=322.196ms/peak310.730ms PASS in their qualified phase scopes. Endurance did not start, final after=null; no production capacity PASS. Each refresh aggregates three GETs plus JSON/resolver; no component timing/bytes or definitive root cause. Historic fixture/code implies ~4500 active items/store/~99000 across22 refreshes, not separately measured payload. 1s DB and ~7.5s resource samples cannot establish queue/CPU cause. Historical aacae12 differs from current source; no current performance inference.

Retained owners codex/pos-startup-loading-20261008 and codex/pos-capacity20-profiles-20261009; no takeover. Next: separately claim and instrument an isolated read-only diagnostic on exact current source with per-endpoint/pool/SQL/serialization/JSON/resolver timing and higher-resolution resources before any causal code decision. Preserve complete catalog/tenant/financial safeguards; no actual workload, production action, source, paid resource, LAB/USER/manual PASS or status closure here. Checkpoint CHECKPOINTS/CHANGES/2026-10-09-pos-capacity20.md; original run artifact SHA256 7d5e56b1e618f20ac8e717dcf17d3b86dc3ff4884953f6fc5ac5b91dea16f191.

27/10/2026 — FTEXT late error evidence released cdd0d4e / AWAITING DEVICE UPDATE

Retained owner codex/rizareio-ftext-bridge-20261022. Claim3203 merged0d5cc4cf before source; sourcePR3204 headf67c341bedd638463bd744e105e2b2f327fd89ad mergedcdd0d4e5b0f6bd418d3af2670d299ab1494a29e7. Exact mainWindows40491291686/job122145589359 SUCCESS. Exact mainCI40491291741 attempt1 server4409+8/0FAIL/0SKIP and HTTP E2E PASS; unrelated browser Target.createTarget timed out before assertions in job122145932533. Failed-job-only retry attempt2 all5SUCCESS; browserjob122149384655,

retained successful buildjob122149448309 (original122145932327). No source/test weakening or unrelated module edits. Ordinary deploy40492710687/job122150464555 SUCCESS; Renderdep-dbg88javcj2c73bfaia0 LIVE exactcdd0d4e, finished2026-10-27T11:02:52.853572Z; independent health HTTP200/oktrue/exactcdd0d4e5b0f6bd418d3af2670d299ab1494a29e7 at2026-10-27T11:04:06Z. No manual deploy or Work production SQL write.

Official builder package v5 is75588bytes SHA2567977c88725229ed88d74b1c7c352fb7ceb9302335effc30ad42588916dbcaacd; all7 embedded modules byte-verified, same configuration/settingsHash4231356f6dc75c59a8ba083ac779c087681acd2535f77060ffd54eab4348ee89, no credentials/new pairing/automatic startup. It adds the missing authenticated read-only recheck after an acknowledged unknown report. On the existing Windows user, keep FTEXT+ open, close only the old connector, open current selected-POS CMD/menu3. Successful diagnostic message is Original error evidence delivered. No payment or cancellation was sent. This is an engineering handoff instruction, NOT physical acceptance or a request to press payment/VOID. No need to reprogram the register. Physical v5 update/evidence append/VOID and CARD acceptance NOT TESTED.

Read-only before rollout10:50:05UTC and after rollout2026-10-27T11:03:20.707182Z: sales1/payments1, original OPEN shiftaf937621/RIZAREIO-POS-01 one SALE_CASH0.50, SKU490 stock-1 and one movement-1/latest25Oct11:27:32.87UTC unchanged. Original request1e50a87c remains REQUIRES_CHECK /saleIdnull/resultHashcd9af613bea6b989f9add8146e8349450db647537ad0c9ce8b8a942b1496a91f, original26Oct NO unchanged, no late evidence or VOID before physical package update. This records no financial/stock mutation during engineering rollout, not a new sale test. Future physical recheck must retain original report/hash/decision and append only separately hashed ftextLateError. Even after error evidence, pending remains until existing separately attested manager VOID receives verified receipt-free success. No automatic charge, cancellation, unlock, manual success or replay. Whole integration remains OPEN/ASSIGNED; user physical next step is only v5 connector update and read-only evidence inspection. Checkpoint CHECKPOINTS/CHANGES/2026-10-27-ftext-late-error-evidence.md.

27/10/2026 — INSTALL-SUPPORT-01 / ASSIGNED BEFORE SOURCE / READ-ONLY OVERVIEW

Owner codex/central-four-streams-20261018 / worker /root/priority_support; branch codex/install-support-readonly-claim-20261027; assignment time 2026-10-27T13:04:40+02:00. The user directs continuation of the ordered work through implementation until final actual acceptance. This claim assigns ONLY the independent read-only first slice of previously unassigned INSTALL-SUPPORT. The earlier 07/10 specification record saying implementation was unassigned is historical for this slice; other teams, claims, Gate PASS and broader lifecycle owners remain unchanged. This is BEFORE SOURCE: no runtime, schema, configuration, data, LAB or real user-action change in this claim. Existing baseline main includes capacity evidence #3205; current source, app/device and LAB acceptance of this new slice are NOT TESTED. Claim must pass applicable CI and merge to main BEFORE any of the following four source/test paths are edited.

Exact source/test scope ONLY:

1. NEW client/src/components/platform/InstallationSupportProfile.jsx — Super Admin read-only selected-store summary, using only current authorized company/store objects already supplied by Platform overview.

2. NEW client/src/components/platform/installation-support-profile.css — scoped desktop/mobile presentation, readable Greek labels and accessible controls.

3. client/src/components/platform/SuperAdminInstallationCenter.jsx — minimum scoped per-store launcher/selected target and safe close; retain all existing guide, REMOTE/terminal, scheduler, module settings, save and selection behavior. No PlatformAdminApp, StoreInstallationGuide, backend or schema edits in this slice.

4. NEW server/test/installation-support-profile-ui.test.js — meaningful mounted regressions on real selected-store component/launcher behavior, in addition to existing protected tests.

Contract: the existing selected company and explicit store determine the complete view; display only actual present name, city, address and responsibleEmail values from existing authorized overview data, with absent values clearly 'Μη καταχωρημένο'. Fields absent from source—including computer/equipment, technician, remote-connection status and backup verification—must remain 'Δεν έχει ελεγχθεί' or 'Μη καταχωρημένο', never inferred as green, healthy, working or PASS. Existing Platform Super Admin entry and server auth remain authoritative; do not widen access, impersonate Owner or allow arbitrary company/store IDs. On target switch/close, clear old details, never show prior store's data under the new name, and render no account credentials, PIN, API keys, activation tokens or database URLs. React-rendered data stays text; no unsafe HTML. The NEW view performs no fetch, extra endpoint, new API, schema/DDL, writes, permission changes, upload, download, email, device/provider or fiscal/stock/payment/shift actions. Existing parent requests and actions remain unchanged and are not claimed as newly tested or removed. This slice is an informative view of existing records, NOT the requested persistent support profile, incident/checklist/maintenance/attachments/technician ACL/export or full module.

Regression coverage: actual selected-store opening/switch/close, multiple companies/stores with delayed/changed props, absent/null fields, unknown status and no false health/PASS, text-only output/no secret fields, no additional view HTTP calls/writes, existing guide/terminal/scheduler/module controls still work, accessible desktop/mobile controls and existing role boundary. Run focused tests and frontend build, independently review exact source, then full PR CI (including required native/HTTP/Windows checks), normal merge, exact main CI and ordinary guarded live release before any real acceptance. Do not infer real LAB/USER PASS from CI or health; real Super Admin store-switch/read-only UI acceptance remains OPEN and needs observed authorized session. No actual business action or acceptance is performed here.

Durable INSTALL-SUPPORT phase remains OPEN. A per-store table must not be created or enabled by this slice: canonical store lifecycle rejects unknown/missing relations and unreviewed storeId columns; reviewed columns/ownership/reset-retention, backup/restore and exact worker-manifest hash all require coordination with retained lifecycle owner feat/store-shifts-inventory-clear-20261018. Existing StoreInstallationTerminal/StoreRbsInstallationSettings/backup/remote/RBS owners and their PASS are not reassigned. A separate owner-reviewed, narrowly handed-off lifecycle/schema claim is required before durable storage or changes to shared manifest/policy/restore files.

Checkpoint CHECKPOINTS/CHANGES/2026-10-27-install-support-readonly-overview.md. Status ASSIGNED / BEFORE SOURCE / SOURCE NOT STARTED / NOT INSTALLED / AWAITING FUTURE REAL ACCEPTANCE.

27/10/2026 - CAPACITY20 FULL RUN EVIDENCE RECONCILED / BURST FAIL / REMAINS OPEN

Evidence review 2026-10-27 12:58:39 EET; branch docs/capacity20-evidence-receipt-20261027.

Retained incident owner codex/pos-startup-loading-20261008 and source owner codex/pos-capacity20-profiles-20261009; central evidence-only coordination, NO takeover or release. Independently re-read existing run37937519901/job113843198454 and downloaded its original artifact11622347974. Run concluded FAILURE09Oct14:23:56UTC; earlier IN_PROGRESS/PENDING entries below are historical only. ZIP SHA256 7d5e56b1e618f20ac8e717dcf17d3b86dc3ff4884953f6fc5ac5b91dea16f191, expires08Nov2026; https://github.com/xrhstosmanis-design/myworkstation-app/actions/runs/37937519901 .

Actual isolated full-profile model: warmup5min, normal30min and peak15min PASS; synchronized 84-action read burst FAIL solely pos-refresh latency, p95=4131.316ms/p99=4237.201ms, all22 refreshes completed with zero errors/drops. The 120min endurance did NOT START. result.json overall after=null and capacityAcceptance=NOT_TESTED. No overall capacity or production PASS.

Actual synthetic evidence before and after the read-only burst: 1760 unique request IDs exactly equal 1760 distinct sale client IDs; one payment, stock movement and audit per sale, CASH EUR4400 and stock delta -1760, control stock100000 unchanged. Burst before/after snapshots identical; these are isolated synthetic records, not production financial results. Container model app1CPU/512MiB, PostgreSQL18.6 2CPU/256MiB, test pool5; production pool, cloud/storage/network/history/jobs/provider/device/failover/restore equivalence NOT MEASURED. Both containers running and OOM=false at finish; this is not a production SLA/capacity

certification.

Next retained-owner action: diagnose the demonstrated burst latency using existing evidence, then separately claim any bounded source change or fresh isolated workload before performing it; retain thresholds, financial safeguards and failed measurement. Production20 readiness NOT ESTABLISHED, 50/100 NOT TESTED. No new workload, financial/stock/fiscal/provider action, LAB/USER/manual PASS, config, deployment, paid resource, or other-owner change occurred in this evidence reconciliation.

27/10/2026 — FTEXT late error evidence candidate / AWAITING WINDOWS AND NATIVE CI

Retained owner codex/rizareio-ftext-bridge-20261022; claimPR3203 merged0d5cc4cf before source. Implemented bounded authenticated error-evidence-poll/result: original current device/token/settings/lifecycle and original NO/hash; canonical CP1253 original command hash, complete PAY error44/48 and exact raw hash. Windows reads bounded existing intent/report/res under folder mutex/exclusive file access, never calls dispatch or writes/erases evidence; retained normal CASH/card/VOID loop. Missing/changed/busy input stays pending. Server appends immutable separately hashed ftextLateError in reviewed checkoutJson; original result/hash/decision/status/sale unchanged; replay idempotent. Existing separately attested manager-only one-shot VOID snapshots late/raw hashes; no automatic VOID, success, finalization or unlock. Current unresolved inspection exposes only verified effective error.

Local Node20 protocol/HTTP/immutability and existing VOID controls pass. Independent reconstruction of actual original plan matches sidecar commandHashc2f2d9303120cbeef262ddd74da002e334c6552b1a2647214dfe3dc44d11f735; exact original generic report SHA256cd9af613bea6b989f9add8146e8349450db647537ad0c9ce8b8a942b1496a91f also matches. Added Windows filesystem unchanged/no txt/changed/missing/foreign/final error cases, native concurrent append and separately verified VOID with no financial tables, and actual HTTP purpose-separated/extra-field/replay tests. Native/Windows execution and full exact CI/main/release pending; local infrastructure has no PostgreSQL/PowerShell. No new physical command, production SQL write or settings change; old request remains pending. Whole integration OPEN, physical acceptance NOT TESTED.

27/10/2026 — FTEXT late error evidence / retained owner / ASSIGNED BEFORE SOURCE

Retained owner codex/rizareio-ftext-bridge-20261022; branch feat/ftext-late-error-evidence-20261027. Continue the original assignment after PR3200/sourcea99bdf9 and release receipt3202/main11c050f. Uploaded screenshot image(20261027-102050).png shows repeated connected on RIZAREIO-POS-01 at12:19-12:20Athens; this confirms only current cloud heartbeat, not loaded module version or physical card success. Latest read-only original request1e50a87c remains REQUIRES_CHECK/saleIdnull/immutable generic resultHashcd9af613, original26Oct NO, no VOID. Original53-byte .res proves only PAY||2/error48, not bank decline/cancellation.

Bounded scope: current paired device polls ONLY its original unknown CARD/NO request; Windows reads existing exact intent/report/res with bounded/exclusive files and validates request/config/command/result bindings without writing any fiscal input or overwriting original files. Server appends separately hashed immutable late ERROR evidence inside own reviewed checkoutJson, scoped to original device/token/settings/lifecycle/result hash and NO. Accept only strict complete error44/48 and exact configured PAY with no final receipt/payment data. Retain original result/resultHash/decision/status/sale untouched. Replays idempotent, changed/foreign/stale/final/unknown evidence refused. Existing manager-only separately attested one-shot VOID may use that bound error evidence; never auto-request VOID or release pending until existing verified receipt-free VOID proof. Keep financial/stock/finalization and strict/operational card modes unchanged. No DDL/recovery manifest/shared lifecycle changes or direct production SQL writes. Other owner cash reconciliation source stays untouched.

Required proof: actual original byte fixture replay, authenticated HTTP scope/rotation/replay/state controls, Windows5.1 filesystem read-only/no new txt/no altered report or intent, changed/missing file/foreign command refusal, native PostgreSQL immutable append/concurrency/no Sale/Payment/Stock/shift writes, retained one-shot VOID/CASH/card/STATUS/install coverage, full exact CI/main/release before new physical package. No physical fiscal action by agent. Whole CARD/late-evidence/VOID acceptance OPEN/NOT TESTED. Next: publish this claim green/main before source.

27/10/2026 — FTEXT error reader released a99bdf9 / physical CARD remains OPEN

Retained owner codex/rizareio-ftext-bridge-20261022. Source PR3200 headb3d0d62 mergeda99bdf972d76076950b367c6b553c961178e207f. Reader correction does not re-read/overwrite acknowledged reports or release that lock. Authenticated late-error evidence/reconciliation remains OPEN before any new payment. Physical CARD, fresh YES/NO flow and measured financial/stock effects remain NOT TESTED. Limited recovered-NO presentation USER PASS/manual from source PR3200 is retained; whole integration remains OPEN/ASSIGNED. Checkpoint CHECKPOINTS/CHANGES/2026-10-27-ftext-error-result-format.md.

27/10/2026 — retained FTEXT owner / exact physical error-format regression / AWAITING WINDOWS CI

Retained owner codex/rizareio-ftext-bridge-20261022; branch fix/ftext-error-result-format-20261027, existing assignment continues (original claims3156/3158). Baseline main8a4ce3aa894018e9cb04248ba4a969877c3d82df, public health5753d75/HTTP200 before edits. Preserve all other owner prefixes/source. Uploaded original mws-cash-1e50a87c-e5ed-491b-9e1c-cac73ee2bec9.res is53bytes SHA256022ddb6a253c87c3c0b15036bf9ab312b9af222a58eede98a94530b1ca57fc53. Exact ASCII bytes start SPACE48 CRLF, EFT-POS ERROR CRLF, InputLine: PAY||2 CRLF plus blank lines. Existing strict first-code regex rejects the leading space before retaining code/raw hash; even after that, the InputLine prefix prevents exact PAY binding. Physical error parsing USER FAIL, not payment approval/decline/cancellation proof.

Bounded correction: accept horizontal ASCII whitespace around the numeric result code and remove one exact documented InputLine: prefix from ERROR command only. Keep original bytes/raw SHA unchanged, numeric bounds, complete-line guard, exact final serial/QR, cash/card/VOID result rules, one-shot dispatch, DPAPI/tenant/settings, immutable prior result, pending lock and all financial/stock behavior. Real uploaded byte fixture must replay as REQUIRES_CHECK/code48/failedCommandPAY||2/exact raw hash. Existing successful CASH/strictOS7/operator-card/VOID and malformed/error injection controls remain protected. No production state or hardware command in engineering. Existing unknown original report cannot be

overwritten or silently cancelled by this parser fix; separate authenticated late evidence/reconciliation remains OPEN.

Also reconcile prior limited NO UI observation: owner reported “Έχει φύγει” after refresh on26Oct; image-1793013541128.jpg confirms modal absent, original NEPO500ML quantity1/0.50 basket retained and pending-review banner visible on released71ca6f15/PR3159. This closes ONLY recovered persisted-NO modal presentation after refresh. Fresh NO click/YES/physical card and stock/financial deltas remain NOT TESTED. Source3159 exactCI40310736557, native40310736780, main40312135266 allSUCCESS; ordinary deploy40313441832 Renderdep-dbfjc72vcj2c738cegd0 LIVE11:16:29UTC; release receipt3160 merged5e52b13a. Corresponding limited usage is added to docs/manual/ftext/PASS.md; superseded historical CARD OFF is corrected by this current entry: current reviewed operator profile is code2/POS1/type1, not physical acceptance. Whole connector remains OPEN/ASSIGNED.

26/10/2026 - Deferred invoice technically installed49fab86 / AWAITING MEASURED LAB

26/10/2026 — CASH-REVIEWED-03 / EXACT TECHNICAL RELEASE + LIMITED READ-ONLY LAB PASS / WHOLE WORKFLOW OPEN

Same owner codex/cash-chat-reconciliation-20261026 retained. Source3180 head79831aa0 CI40385981317/all5jobs SUCCESS; mergedaf9517ee1c0893d665962de788e54cd556c3fa2d exact-mainCI40387741454/all5jobs SUCCESS, build121800950054 actual4326server+8backupPASS/0FAIL/0SKIP, native reviewed proof unskipped. Ordinary guarded deploy40389371409/job121806139646 completedSUCCESS and public health19:50:04UTC returned EXACTaf9517ee. Later shared docs3187/3188 preserved; no bypass or manual service deployment.

LIMITED LAB PASS only actual authenticated Platform desktop read-only availability:26Oct approximately19:53UTC, canonical https://myworkstation-app.onrender.com/platform-admin, Χρήστος Μάνης/SuperAdmin, ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ storecmtpopbgo000trhb5ng9ytiru. Reloaded the installed client. For26Oct, selected-store report has0closed shifts and the new panel correctly says no closed shifts, not a final financial agreement. Changed only the calendar filter to10Oct and applied it: old reviewed period cleared; explicit GET showed the existing TEST QR ΕΠΑΝΑΜΕΤΡΗΣΗ / LAB POS2 / MAIN record closing10Oct, cash−5.50EUR, POS–EFTPOS0, ΥΠΟ ΕΛΕΓΧΟ,1pending shift excluded from reviewed totals. Previous05Oct/next11Oct context visible separately. No false reviewer signature or final cash attribution. The original accepted QR action was NOT replayed. One browser transport failure recovered with a read-only snapshot; it was not an application/LAB financial failure.

No review/offset/association/revoke/checkpoint POST, upload/AI/provider, email, financial/payment/stock/fiscal action or DB operation. Physical terminal/SKU/quantity/payment action N/A, no measured balance delta claimed. This read-only PASS DOES NOT certify reviewed writes/concurrency in actual LAB, handwriting accuracy, Owner admission, other devices/tenants, card/safe/refill/mobile reconciliation or whole automated workflow. Those stay OPEN/NOT TESTED; native isolated CI remains engineering evidence only. Manual docs/manual/cash-control/PASS.md contains ONLY observed read-only

usage and limits. Evidence CHECKPOINTS/EVIDENCE/cash-reviewed-readonly-20261026/receipt.json and lab-readonly.jpg (one captured image). This closes only technical-release and this read-only acceptance substep; no whole numbered item closure.

Manual-email consumer before-source3187 merged684c735 before runtime. Prepared source3189 head50d7d03016a5daea6bd1d2cd02c8aa4774641db8/fullCI40390367119 IN PROGRESS, not installed or LAB accepted. Its same common prose, bound preview and retained old freshness gates are independent of this limited PASS. Remaining required work stays assigned to this receiving owner: complete manual consumer release/acceptance; common automatic/assistant consumers under retained boundaries; full telecom/safe/refill source reconciliation; paginated discovery/coverage; original measured writer/provider acceptance with a fresh identified baseline before action. No second executor or owner takeover. Current single next action finish exact3189CI while preparing the next bounded source interface; do not repeat the accepted QR transaction or describe the whole task as complete.

AUTO CASH 06 — 27/10/2026

ASSIGNED codex/cash-chat-reconciliation-20261026 retained under the explicit cash-review extension transfer; source feat/cash-reviewed-automatic-20261027. This claims ONLY the bounded common-result consumer/configuration branches below, not ownership of retained automatic dispatch, activation, recipient verification/consent, policy/grants, locks, lifecycle/backup, SMTP, assistant, invoice/native or financial writers. Existing automatic-report limited LAB manuals (16/18/19Oct settings/save-once/HOLD,07-to07/day-week-month/other-store isolation) remain protected. No replay of the accepted LAB settings Save, recipient challenge or business transaction. Last documented external OFF observation23Oct is historical; this tranche does not read or change activation, recipient, consent, grant or transport configuration. Cash3180 read-only LAB3190/manual protected; assistant3195 installed5753d75 after4395+8/0/0 and ordinaryguard40458868237; archive3199 merged03b1529 afterPR40460094868/4405+8/0/0, exact-main40482373798 ALL5SUCCESS4405+8/0FAIL/0SKIP. Ordinaryguard40483873964 correctly deferred03b1529 because newer FTEXT sourcea99bdf9 is on main; all nine archive source/test paths are byte-identical03-to-a99. Preserve FTEXT owner; await newer exact full CI and guarded release, never force the older source. No new authenticated cash/assistant/archive/automatic LAB PASS. Browser secure-auth request and subsequent state read timed out; sign-in outcome UNKNOWN, no credential exposure or retry loop.

Exact existing source scope after this claim green/main: server/src/services/cash-reconciliation-repository.js ONLY a new readSelectedInTransaction method plus an optional materialize selection branch for internally supplied exact closed-session IDs, same canonical projection and existing bounded context/history/paper validity, no public route or read/apply writer semantics changed; server/src/services/automatic-report-source.js ONLY opt-in reviewed result attachment to the already authenticated read-only preview in its original transaction, preserving all original business-window/closure/readiness/group/fingerprint behavior when not selected; server/src/services/automatic-report-settings.js ONLY one optional boolean reviewedReconciliation in the existing strict JSON configuration schema, absent means legacy and no added default/property or schema migration; server/src/services/automatic-report-cash-payload.js ONLY validate/include the new opt-in common-result envelope and bounded multiline prose in that envelope, legacy bytes/limits/financial flags unchanged; server/src/services/automatic-report-mail-adapter.js ONLY validate the opt-in envelope and choose its exact common prose for the existing text argument, existing provisional disclosures/subject and every authorization/intent/transport/retry boundary unchanged; server/src/services/automatic-report-eligibility.js ONLY verify new result generation agrees with its already locked lifecycle generation; client/src/components/platform/AutomaticReportSettingsManager.jsx ONLY an explicit optional mode checkbox and exact common-prose/pending preview section, using existing saved/versioned selected-store settings and stale/dirty guards. Existing configs/defaults and all dispatch controls remain unchanged; no automatic enabling or setting Save performed by this tranche.

New exact files: server/src/services/cash-reviewed-automatic-contract.js (strict pure envelope/projection/validation and canonical text, no DB/provider), server/src/services/cash-reviewed-automatic-source.js (current canonical source adapter within the caller's original authorized transaction), server/test/cash-reviewed-automatic.test.js,

cash-reviewed-automatic-flow.test.js, cash-reviewed-automatic-postgres.test.js, cash-reviewed-automatic-ui.test.js. No other source/tests without a further bounded green/main amendment. No new module grants, settings/recipient writer, public ID-list/model capability, DDL/bootstrap, provider read/charge or actual email.

Explicit opt-in only: reviewedReconciliation true is selected and saved by an authorized operator for a specific store through the existing version/rule contract. Absent/false preserves the complete legacy preview/payload/mail behavior and its accepted tests. The new consumer must retain the original DAILY/WEEKLY/MONTHLY business period including07-to07 and DST, not silently substitute calendar closing-day selection. Take the exact trusted session IDs from that same ready source snapshot; validate unique same-company/store CLOSED IDs, max200, and use the common engine's existing adjacency/offset/confirmation/history/original validity. Existing manual/API31day limits stay unchanged. The internal method scans the original bounded up-to31 business dates, loads only explicit extra IDs through existing scoped reads, and derives an at-most32-calendar-day display span from actual selected closing dates; every original session must be covered exactly once. Context cannot enter totals; whole result holds on incomplete/unknown/over-limit/unavailable/revoked evidence, never raw-as-reviewed fallback. Source readiness remains separately labelled original closure readiness. The new payload cannot form/send unless its complete selected cash result is reviewed; no automated inference of responsibility, global employee/day net or card-cash offset.

Envelope contains only strict minimal canonical selected rows/text/employee totals/continuation and generation/head/report/source receipt, original business period/fingerprint and exact selected IDs. No private context, transaction/paper bytes, activation/recipient data, volatile checkedAt/current-clock fields or financial recalculation. Exact text revalidates with the shared renderer; all receipt fields bind immutable payload fingerprint and current eligibility re-read, not caller role assertions. Keep overall PROVISIONAL/financialReconciliationComplete false/employeeLiabilityAdjusted false and all existing limitations; reviewed cash rows are a separate human-reviewed result, not a full physical/financial certification or automatic liability posting. Legacy payload envelope shape/format, source group originals and byte budget remain intact. New multiline allowance is confined to the strictly validated new envelope and existing total budgets. Mail adapter must keep the original durable ATTEMPTING-before-send contract, exact single recipient, no retry, suppression/demo guards and conservative UNKNOWN transport handling; no SMTP credentials/client/timer or runtime activation added.

Required engineering evidence: legacy absent/false byte equivalence, optional-schema compatibility, actual saved source/contract/payload/mail functions with zero real provider/SMTP/writes; exact same source IDs across business midnight, DST23/25hour, daily/week/month with last next-month morning, selected-only totals and shared identities; pending/no data/changed paper/head/source/generation/role/source limits fail closed; immutable stable payload despite repeated read clocks; preserved finality/disclosures and actual adapter status/evidence behavior. Native isolated PostgreSQL in read-only transaction must exercise the common engine with an actual verified offset/confirmation and unchanged financial/control rows, foreign IDs/stale generation and no original ledger writes. Actual mounted mode/dirty/save/preview/store-switch checks. Full exact PR/main CI, ordinary guarded exact release and fresh measured scoped LAB required. No manual PASS from CI. Whole cash workflow OPEN: per-store mode configuration and authenticated grouped acceptance, persistent company-wide workbook, telecom/safe/refill/full paper coverage and paid-reader accuracy remain. Checkpoint CHECKPOINTS/CHANGES/2026-10-27-cash-reviewed-automatic.md. Claim must merge green/main BEFORE source edits; same owner, all retained owners/PASS protected.

CASH ARCHIVE 05 — 27/10/2026

ASSIGNED codex/cash-chat-reconciliation-20261026 retained; source feat/cash-reviewed-archive-20261027. Bounded independent read-only consumer of the same reviewed reconciliation, not a transfer of retained automatic dispatch, assistant/history, invoice/native, financial, identity or stock writers. Existing basic negative-only CSV is an original raw export, not a reviewed result. Cash3180/mainaf9517ee read-only LAB3190/manual remains protected; phase4A email installed through guarded descendant; phase4B assistant3195 head5e347b0 fullCI40456903007 SUCCESS4395+8/0FAIL/0SKIP merged5753d75; exact-main CI40458060389 and guarded installation pending, no assistant LAB PASS. No new real acceptance.

Claim exact existing paths: server/src/routes/cash-reconciliation.js ONLY additive authenticated selected-store archive GET and factory wiring; server/src/services/cash-reconciliation-report.js ONLY expose on each row the identity key/requires-identification already used by its current employee grouping (no changed offset, eligibility, finality, totals or text); client/src/components/shared/CashReconciliationPanel.jsx ONLY explicit bound workbook download action/button with stale selection fencing; client/src/components/platform/PlatformAdminApp.jsx ONLY existing original-negative CSV button labels to identify their original/raw scope, no route/query/financial behavior changes. New server/src/services/cash-reviewed-archive.js, client/src/lib/cash-reviewed-archive.js, server/test/cash-reviewed-archive.test.js, cash-reviewed-archive-routes.test.js, cash-reviewed-archive-ui.test.js. No other source/test changes without a bounded amendment green/main first.

The workbook uses ONLY the canonical repository's current selected authorized store and explicit calendar period up to31days, with current CASH_CONTROL/STORE_CHAT/AI_READER authorization and lifecycle before/after read and generation. Require the exact preview generation/reportHash/audit head; reject changed receipts before any file reaches the client. Explicit click only, no mount/background/model/provider/SMTP/financial/audit-review/checkpoint/schema write. XLSX contains dated shifts, separate reviewed shortages/surpluses by stable store/employee/day, separate POS-EFTPOS and pending/unidentified rows/continuation notes, plus exact common prose and receipt metadata. Pending amounts excluded from reviewed totals; unknown not zero; no global employee/day net, no inference from equal amounts, no shared-name merge, no hidden context/transaction/paper payload. New identity row fields use the existing canonical grouping decision, including conflicting aliases in context. Text remains text; formulas, hyperlinks, arbitrary filenames/URLs and oversized files rejected. Existing table/no-table report and original CSV behavior preserved. No access broadening or all-stores fallback; selected-store workbook is an incremental archive export, not a claim of one persistent company-wide workbook or full automated workflow completion. Original reviewed audit history remains the durable source; central multi-store archive, automatic payload consumer, telecom/safe/refill completeness and measured writer/provider LAB remain OPEN.

Required engineering checks: actual XLSX re-read with exact reviewed cents, separate cards, unknown blanks, pending exclusion, duplicate employee names/shared codes across days, conflicting context aliases, all source prose/continuation notes, spreadsheet formula injection and no private fields; strict scope/period/receipt/current authorization/lifecycle revocation and changed head/hash/generation refusal; actual Express response and mounted UI stale/repeated-click cancellation guards. Full exact PR/main CI, ordinary guarded release and scoped real UI acceptance required. CI is NOT LAB PASS. Claim must merge green/main BEFORE edits. Same owner and all other owners/PASS retained. Checkpoint CHECKPOINTS/CHANGES/2026-10-27-cash-reviewed-archive.md.

27/10/2026 — CASH-REVIEWED-ASSISTANT-04B / CAUSAL SALES-STOCK FIXTURE AMENDMENT BEFORE EDITS

ASSIGNED codex/cash-chat-reconciliation-20261026 retained, source feat/cash-reviewed-assistant-20261026 / PR3195 headfde399c136edb5e0b6dbbf5ecfe959709ef21798. Full CI40400178237 failed with4393PASS/2FAIL/0SKIP: owner-sales-tools.test.js and owner-stock-tools.test.js use numeric authorization-call boundaries and unrestricted fake authorization that now admits the new cash_review capability. Local two-file replay confirms the mismatch. No source deployed, no business/provider/mail/LAB action, no existing PASS superseded.

Before further edits extend exact04B scope ONLY to server/test/owner-sales-tools.test.js and server/test/owner-stock-tools.test.js for the affected real-handler authorization fixtures. Replace absolute global call-number triggers with semantic phase counters tied to provider/read/final boundaries and required INVENTORY admission; explicitly declare the cash-only fixture's denied STORE_CHAT/AI_READER capability. Preserve all original before-read/after-read/before-provider/final revocation assertions, no unauthorized read or answer, source counts, changed-store refusal, and original domain-specific tests. Separately cover the current status catalog when all required cash modules are admitted. Do not loosen production authorization or suppress the new cash module checks to accommodate mocks. New dedicated reviewed-cash tests keep actual authorizer/module/role/session revocation coverage. No retained Task14 owner/source takeover, no schema/security/licensing/financial/provider/SMTP writer change. This amendment must be green and merged main before the two additional test files are edited. Full exact PR/main CI, ordinary guarded release and actual acceptance still required; CI is NOT LAB PASS. Whole cash workflow OPEN. Checkpoint CHECKPOINTS/CHANGES/2026-10-26-cash-reviewed-assistant-consumer.md.

26/10/2026 — CASH-REVIEWED-ASSISTANT-04B / BOUNDED FIXTURE + PROSE EXPORT AMENDMENT BEFORE EDITS

Same receiving owner codex/cash-chat-reconciliation-20261026 retained. Claim3191 headb8ea3c51744bf61b0f6514f8b4f8bf8b66e1202e/docsCI40393086095 SUCCESS mergedc1d6fe8 BEFORE source. Independent3189 final96abd780 exactCI40392199429/all5jobs SUCCESS4333server+8backup/0FAIL/0SKIP, mergedcurrentd21ab855a060e81f9b8d694649c73f50c3c5f086; exact-main CI/release still pending. Cash3180 limited read-only LAB/manual3190 remains protected. No new LAB/manual writer/provider/email acceptance.

Before additional edits, extend exact04B scope ONLY as follows. Existing server/test/assistant-history-ask.test.js and server/test/owner-assistant.test.js ONLY legacy cash_details fixture admission/count: their unrestricted fake authorize currently admits the NEW cash_review modules and bypasses the old injected cash source/provider test on a question with no period. Reproduced local existing-suite result86PASS/3FAIL/5nativeSKIP (two history-ask provider-count failures and one Owner answer mismatch); no application workaround. These legacy fixtures must explicitly deny new STORE_CHAT/AI_READER requirements with MODULE_DISABLED so they continue testing the existing cash-only/provider/history path; keep all original assertions, with only exact admission-call count updated for the additional denied capability probe. New dedicated tests must separately cover real three-module cash_review admission, deterministic no-provider read, revocation, actual source receipts and unchanged legacy flow. No weakening of tenant/session/capability assertions or replaying old transactions.

Additionally claim existing server/src/services/assistant-report-files.js ONLY the NEW prose-kind PDF/Word rendering branches. The already claimed assistant-report-table.js marks only new cash_reviewed reports as prose. PDF/Word must render those exact lines as paragraphs rather than a one-column table, with no clipping or financial truncation. Excel/CSV remain text lines; existing report/table formats, money/quantity conversion, generation/download/security and file size limits unchanged. Validate actual generated Word XML has no cash table, PDF contains all original prose/numbers, CSV/XLSX lines preserve separate cash/cards and pending notes, spreadsheet protection retained. This change starts only AFTER this amendment green/main. No new provider/SMTP/filesystem user upload, financial/audit/lifecycle/stock/fiscal/schema/transport writer. Whole task OPEN; all retained Task14/export/history/automatic/invoice/native owners and prior PASS unchanged. Checkpoint

CHECKPOINTS/CHANGES/2026-10-26-cash-reviewed-assistant-consumer.md. These are two necessary bounded compatibility/presentation edges of the same new cash read, not ownership takeover.

26/10/2026 — CASH-REVIEWED-ASSISTANT-CONSUMER-04B / SAME OWNER / CLAIM BEFORE SOURCE

ASSIGNED codex/cash-chat-reconciliation-20261026, source feat/cash-reviewed-assistant-20261026. This is ONLY a bounded consumer of the already merged reviewed cash result within the received cash extension, not a transfer of retained Task14 assistant/provider/history, automatic-dispatch, wallet/lifecycle, native/invoice or financial writer ownership. Claim must merge green/main BEFORE source/test edits. Preserve every accepted Task14 source/admission/export/history and existing legacy cash_details behavior; no parallel other-owner edit of these exact functions is authorized. Reviewed3180 technically installedaf9517ee after full PR/mainCI4326+8/0/0;3190 merged65396dc records only actual limited READ-ONLY LAB view, manual/evidence/PDF. No cash writer/handwriting/full workflow PASS. Manual-email3189 remains independent and uninstalled; initial CI40390367119 failed legacy demo guard precedence, prepared causal current96abd780 preserves its original guard and awaits new exactCI40392199429. No actual email sent.

NEW exact source: shared/assistant-reviewed-cash.mjs (pure kind/intent/exact prose projection); server/src/services/assistant-reviewed-cash.js (strict cash_review tool/period and fixed authenticated loopback GET to existing selected-store reconciliation endpoint). NEW focused tests server/test/assistant-reviewed-cash.test.js, assistant-reviewed-cash-flow.test.js, assistant-reviewed-cash-presentation.test.js. No new route, schema, DB writer, original read/provider or new cash calculation.

Existing source scope ONLY additive cash_review consumer branches/imports: server/src/services/assistant-source-read.js (strict source registry/period), platform-assistant-products.js (explicit selected-store tool/read/replay only), owner-assistant-handlers.js (new tool admission/read callback only), owner-assistant-access.js ONLY extra recognized moduleLabels for STORE_CHAT and AI_READER so existing unchanged effective-module checks can require them, owner-sales-tools.js (new strict read dispatch and deterministic cash-only period shortcut), assistant-answer-response.js (exact server cash prose before model-authored summary), assistant-report-table.js (new kind exported as exact prose lines, no re-summing), assistant-history-contract.js (new capability enum only), assistant-history-access.js (new capability with current three-module gate only), assistant-capability-help.js (cash capability wording), assistant-consumption.js ONLY toolsForAssistantQuestion new cash-priority branch; client/src/components/voice/presentAssistantAnswer.js (exact server cash prose branch) and AssistantChatPage.jsx ONLY names label for cash_review. Existing server/test/platform-assistant-products.test.js ONLY the exact tool-name registry expectation adds the new selected-store capability, preserving all legacy expected names and behavior; no assertion weakening. Other source/test portions unchanged.

The new cash_review read requires an already selected authorized store and an explicit valid from/to calendar period up to31days. Models receive no company/store/generation, SQL, URL or writer capability. Owner availability/recheck requires existing AI_OWNER_ASSISTANT plus CASH_CONTROL, STORE_CHAT and AI_READER using the current effective override/date/role/licence/session guards. Root SuperAdmin retains current authorization; support-preview and all-store contexts do not gain the new capability. Legacy cash_details stays separate for current cash-only entitlements and old clients; never silently fall back to raw cash_details as a reviewed result. No new access grant, module configuration or security relaxation.

For an unambiguous cash-audit question and parsed period, use a deterministic free canonical source read and return its exact server prose without a second model summary or financial calculation. Missing/ambiguous/too-wide dates ask clarification, never guess a period. Fresh selected-store authorization before/after read, exact returned store/date/generation/source checks, original lifecycle and existing three-module endpoint gates remain mandatory. Preserve stale/cancelled replies and no scope broadening. Only the minimal reviewed report and exact prose are returned, never paper bytes, arbitrary transaction/context/history, private diagnostics or an uploaded instruction. Current cash/offset/signature/pending status is copied, not reinterpreted. No email, paid paper/provider call,

financial/stock/fiscal, audit-review or checkpoint mutation.

History derives the actual new source capability and requires current three-module admission on read/restore/export; other existing capabilities/30day/lifecycle/session isolation unchanged. Exact common prose must survive presenter/history capture and exports; do not silently truncate financial text or show raw cash tables as reviewed amounts. Existing archive text/size refusal rules remain. Required actual strict HTTP/source scope/cancellation/error tests, current module/role revocation around read, deterministic no-provider dispatch with explicit period, Owner/Platform registration and all-store/support refusal, actual source replay/export/history capability filtering, exact shared prose presentation and spreadsheet-safe exports, unaffected existing Task14 domains. Require full exact PR/main CI, ordinary guarded release and measured scoped acceptance; CI is not LAB PASS. Whole workflow OPEN. Automatic payload/dispatch consumer, telecom/safe/refill full reconciliation, wider discovery and writer/provider LAB remain REQUIRED separate scopes. Same receiving owner retained. Checkpoint CHECKPOINTS/CHANGES/2026-10-26-cash-reviewed-assistant-consumer.md.

26/10/2026 - Invoice startup/query follow-up:15paths BEFORE SOURCE

Retained next_reports/shift_pin owners; add ONLY server/e2e/payment-shift-flow.mjs to14path claim. Actual startup positive plain payment/capture before/after absent lazyAI fields; retain startup-created tasktable and all original money/control/POS/PIN checks, zeroAI/job/draft/provider/module/schema activation.

Existing service/native correction: schema-aware positiveplain/proof/intents independentoptionalAIgraph, missingAIcapability staysREVIEW; fullysetbased chain/page/proof/tombstone guards without newDDL/index/timeout/PGsetting/historydrop. PIN/invoice/cash owners/history preserved.

26/10/2026 — CASH-REVIEWED-MANUAL-CONSUMER-04A / SAME OWNER / BEFORE SOURCE CLAIM

ASSIGNED codex/cash-chat-reconciliation-20261026, source feat/cash-reviewed-consumers-20261026. Independent bounded continuation of received cash extension, not a transfer of retained automatic-dispatch, Task14 assistant, mail transport, lifecycle/native/invoice or financial writers. Claim must merge green/main BEFORE runtime edits. Reviewed3180 exact head79831aa07e740c850797f6ae886f81b59a20e7b8 fullCI40385981317/all5jobs SUCCESS:4326server+8backupPASS/0FAIL/0SKIP including native two-client review/archive/source/HTTP proof. Squash mergedaf9517ee1c0893d665962de788e54cd556c3fa2d. Exact mainCI40387741454/guarded deployment/measured LAB still pending; no LAB/manual/whole-workflow PASS.

Exact source scope ONLY: NEW server/src/services/cash-reviewed-email.js and server/test/cash-reviewed-email.test.js plus actual route integration regression server/test/cash-reviewed-email-routes.test.js; existing server/src/routes/platform-admin.js ONLY imports and cashReportEmailData plus its three cash-control email-preview/send-email/send-preview routes; existing server/src/services/mail.js ONLY import and sendCashControlDailyReportEmail rendering. Existing client/src/components/platform/PlatformAdminApp.jsx ONLY the two manual cash email callbacks: display exact server prose before send, bind original reportHash/generation, reject stale selected-store/period replies. NEW actual mounted server/test/cash-reviewed-email-ui.test.js. A changed report between preview and click must refuse, never send unseen new contents. No recipient/address/configuration/consent/transport mutation, scheduler or dispatch activation. Existing Store metadata routes and all other owners remain untouched.

Read the same current reviewed repository result with current selected-store authorization, original lifecycle generation and date; recheck current access/generation before release. No model-generated prose, table, raw cash net fallback or client-supplied report. The common server text is the email text, with escaped paragraph rendering and separately identified optional human comment. Preview exposes exact common text, source/report fingerprint and pending status. Keep existing closed-row and CashControlReview freshness sending gates; additionally refuse final send if the current reviewed cash result is pending/stale or row identities differ. Explicit send-preview remains a preview and includes actual pending text; no automatic finality or personal debt inference. No actual SMTP/email is sent during development/test. No provider/AI, original/financial/source ledger, CashControlReview, stock/fiscal or schema/DDL write.

Required validation: actual shared projection-to-email text parity and cash/card separation, reviewed offset amount not raw variance, no global netting, unknown/stale/missing source refused or visibly pending, exact company/store/date/closed-row identity and original generation checks, no arbitrary HTML, real registered preview/send refusal paths with injected safe transport, no send before both current admission gates, unchanged recipient resolution/transport contract. Full exact PR/main CI and ordinary guarded revision before measured LAB acceptance. No unchanged business test replay. Automatic payload/assistant consumers, complete telecom/safe/refill source reconciliation and overall measured acceptance remain REQUIRED separate bounded slices with retained owners. Whole request OPEN. Checkpoint CHECKPOINTS/CHANGES/2026-10-26-cash-reviewed-email-consumer.md.

26/10/2026 - Invoice causal follow-up:14paths BEFORE SOURCE

Retained next_reports/shift_pin ownership; add ONLY server/test/cash-period-ui-mounted.test.js to13path claim. ExactA/B pending-list GET mocks/allowances, retainedweek/month/stale-store/noPOST/provider/payment/shiftwrite checks; no broadprefix/weakening.

Actual3184 CI40383511857:4328PASS/3FAIL/0SKIP (legacyAPIassumption +native17 default5s expiry/parent); actualregisteredclose18PASS. Diagnose query/workload versus lockwait before bounded existingservice/native correction; no blindtimeout/skip/retry.

26/10/2026 — DOCUMENT-CAPTURE-SCANNER-01 / WEB REVISION VERIFIED / AWAITING HARDWARE

Authoritative technical status at2026-10-26T20:42:26Z: source3177 merged5feb831ce6939b029719f1d40d0f9eb75cbb1118; main CI40395207121 all5jobs PASS with4342server+8backup PASS/0FAIL/0CANCEL/0SKIP, build10.49s,12actual BackOffice camera Chromium geometry/pointer/cleanup cases and isolated PostgreSQL/archive/HTTP E2E/invariants PASS. Ordinary guarded deployment40397052236 completed SUCCESS; its freshness/fullCI guard, rollback checkpoint and pinned5feb trigger passed, and public health independently returnedoktrue/version0.22.0+kat-test-pos/revision5feb831ce6939b029719f1d40d0f9eb75cbb1118. Public/platform-admin main-DZST7eV7.js independently contains scanner label, fixed127.0.0.1:17839 connector and bounded document-camera-shell markers. This verifies technical web release only, not authenticated operator/hardware/LAB acceptance.

Exact final source12aefd9c CI40394017860:4335server+8backup/12camera PASS; Windows40394017619 actual loopback protocol/DPAPI/PowerShell parse/standalone package PASS, artifact12685157139 integrity SHA256c51dad047e214575aaf5979f289b89e2e3da5440f9a252c3a98ce47af0646c08. Android40394017616 compiled/unit/lint and1+36emulator tests PASS.334-file Windows ZIP prepared, CRC/hash verified, no installer executed. Initial Windows setup/pairing by technician is required; routine explicit scans use existing document intake/review and do not register payment/send themselves. One WIA-compatible device required; Canon P-208II ISIS/TWAIN compatibility not certified.

Owner codex/document-capture-scanner-20261026 RETAINED. Physical camera legibility/focus on intended devices, Windows installation/reboot/browser local-network permission and actual WIA driver/paper transfer remain NOT TESTED/AWAITING LAB. Native stable public APK distribution remains with its existing owner and has not been updated here. No physical/manual/USER/LAB PASS, no whole-project/Gate closure. Do not repeat accepted invoices/payments or any stock/fiscal/provider/OCR/send action to fill evidence. Next: separately measured non-financial camera/scanner acceptance on intended hardware when available, and named native stable-distribution handoff through its existing owner. Previous limited PASS and all independent owners remain protected.

Evidence CHECKPOINTS/EVIDENCE/document-capture-scanner-20261026/web-release-5feb831c.json. Receipt3193 green/mainb6f3473 recorded merge; this supersedes its awaiting-web-release status for5feb only. Final documentation is based on49fab86d and preserves newer independent POS plain-capture/cash claims exactly; it does not claim those newer source revisions deployed or tested here. Canonical tracker PDF synchronized; no runtime/business action in this receipt.

26/10/2026 — DOCUMENT-CAPTURE-SCANNER-01 / SOURCE MERGED / AWAITING GUARDED WEB RELEASE

Owner codex/document-capture-scanner-20261026 retained. PR3177 exact12aefd9c8ba2a95e0eeec66ae80b6aed1d6792e0 passed full CI40394017860 all5jobs:4335server+8backup PASS/0FAIL/0CANCEL/0SKIP; actual client7.71s;12actual BackOffice camera Chromium geometry/pointer/cleanup cases PASS; isolated PostgreSQL/archive/HTTP E2E/build contracts/invariants PASS. Windows40394017619 protocol/DPAPI/PowerShell/package PASS (artifact12685157139, SHA256c51dad047e214575aaf5979f289b89e2e3da5440f9a252c3a98ce47af0646c08). Android40394017616 compile/unit/lint/emulator PASS. Independent runtime equality to prior full-greenad9628fd/5df6caa was verified; subsequent changes were shared documentation only. All prior SDK timeout/failures remain historical, not LAB PASS.

Merged main5feb831ce6939b029719f1d40d0f9eb75cbb1118, preserving independent cash email source and all owners. Main fullCI40395207121 has started; ordinary exact guarded deployment REQUIRED and not yet verified. Do not claim installed or request real acceptance before release verification. Shared capture records are grouped at the original owning claim to avoid unrelated prepend conflicts; canonical PDF regenerated. No production settings/data/payment/invoice/stock/provider/OCR/send action or accepted transaction replay.

Physical camera legibility, WIA driver/transfer, Windows installation/reboot/browser local-network permission NOT TESTED/AWAITING LAB. One WIA-compatible scanner required; no Canon P-208II/TWAIN certification. Standalone Windows package prepared and integrity-verified; no installer executed. Native stable APK distribution remains with its existing owner and is not updated here. Next: finish exact mainCI/normal guarded web release, verify public exact revision, then a separately measured non-financial camera/scanner hardware acceptance when available. Owner retained, no physical/manual/USER PASS closure.

26/10/2026 — DOCUMENT-CAPTURE-SCANNER-01 / RECONCILED RUNTIME GREEN / DOCS CONFLICT FOLLOW-UP

Owner retained. Exactad9628fd73da8a33d5d5373e4b9cb2cdfb6958ab PR3177: full CI40387889478 all5jobs PASS;4335server+8backup PASS/0FAIL/0CANCEL/0SKIP; client12.41s,12actual camera Chromium cases, isolated PostgreSQL/archive/HTTP E2E/invariants PASS. Windows40387889457 protocol/DPAPI/package PASS artifact12681803163; Android40387889430 compile/unit/lint/emulator PASS artifact12681674142. Runtime capture/scanner bytes unchanged from earlier25bd684c; independent new-product/cash source preserved. No hardware/LAB PASS.

Second merge405 was caused solely by new independent main684c735 cash-email claim in3registries/canonicalPDF, no runtime changes. Preserve that claim and regenerate PDF. Current docs reconciliation requires its own CI; source not merged/installed yet. Physical camera legibility, WIA driver/transfer, Windows install/reboot/browser permission and native stable distribution remain pending with existing owners. No payment/invoice/provider/stock action or accepted replay. Next: green current PR3177, ordinary guarded main release; hardware acceptance only when available.

26/10/2026 — DOCUMENT-CAPTURE-SCANNER-01 / EXACT SOURCE CI GREEN / RECONCILING INDEPENDENT MAIN

Owner codex/document-capture-scanner-20261026 retained. Source PR3177 exact25bd684c9035d5884e78b8d250581e7fed51601e: full CI40385484343 all5jobs PASS;4318server+8backup PASS/0FAIL/0CANCEL/0SKIP; client build12.08s, actual12camera Chromium geometry/pointer/cleanup cases and PostgreSQL/archive/HTTP E2E/invariants PASS. Windows40385484457 protocol/DPAPI/PowerShell/package PASS, artifact12679814012. Android40385484430 compile/unit/lint and36emulator tests PASS, artifact12680851976. This supersedes earlier SDK timeout as newest technical evidence only; no hardware/LAB PASS. Local actualNode20 focused42PASS.

Merge attempt safely refused405 due independent main registry/PDF conflicts. Reconcile exact mainf706663de073bbda8b256e3cabfaa29af3c88989 preserving all new-product and deferred-invoice source/records, then regenerate canonical PDF. No overlapping runtime source changes; new exact reconciliation CI remains REQUIRED before merge, ordinary mainCI/guarded release afterwards. Physical cameras, document legibility, Windows installation/reboot/driver/WIA transfer/browser permission NOT TESTED; native stable distribution retained by existing owner. Source NOT INSTALLED / AWAITING LAB. Single next action: green reconciled PR3177, normal guarded release and separately measured non-financial hardware acceptance when available. No payment/stock/invoice/provider action or accepted replay.

26/10/2026 — DOCUMENT-CAPTURE-SCANNER-01 / FULL SOURCE CI PASS + OBSERVED SMALL-SCREEN FOLLOW-UP

Same owner/sourcePR3177. Exact54a296c8 fullCI40381136312/job121777898931 all five jobs SUCCESS:4303server+8backupPASS/0FAIL/0CANCEL/0SKIP, actual frontend build12.01s, native PostgreSQL/archive/HTTP/browser/invariants. Windows40381136112/job121777353552 SUCCESS including persistent DPAPI HTTP self-test, install-script parsing and standalone package12678157787/digestd7cc40d 2b516f6f4e1aa95796f8a94b3d167bc4b2076c3b112d7b6e8b0782613. These certify54a296c8, not later layout changes. Android40381136286 compiled/unit/lint but timed out during SDK image installation before emulator execution; no app assertion failed. Earlier Android40378479827 completed compile/unit/lint/36emulator tests; all three native capture source/test Git blobs are independently identical between f1529467 and54a296c8. Latest native workflow is NOT PASS and stable native public distribution remains with its original owner.

Additional actual rendered BackOffice camera inspection reproduced a new layout FAIL with focus controls:1366x768 close top-26.70/shot bottom794.72;1280x600 close top-61.58/shot bottom661.59. Actual Cancel pointer was outside viewport. Fixed only camera-shell bounds/flex, contained preview, sticky header/actions,48px targets and flexible zoom range; full captured sensor pixels/business/reader/payment paths unchanged. The same bounded shell applies to BackOffice/Learning/legacy camera dialogs; React document videos use contained viewport bounds.

New required CI step runs the actual BackOffice installer in real Chromium with synthetic Canvas media:12cases at1366x768/1280x600/390x844,16/20px fonts and fixed/manual+torch capabilities. Every Close/Capture/Cancel is in viewport, at least48px high, pointer-hit enabled; actual Cancel stops tracks/removes dialog; zero backend/OCR/payment calls or horizontal scroll. Actual script PASS locally on Chromium153, fresh actual Node20.20.2 combined42PASS/0FAIL/0SKIP. Before/after geometry, screenshot and failure qualification preserved under CHECKPOINTS/EVIDENCE/document-capture-scanner-20261026/. These are synthetic engineering proofs, not physical optical/LAB PASS.

Current source preserves independent main993f2f7d and all other owners; layout source is AWAITING its own fresh full CI/review before ordinary guarded release. No production merge/deploy/settings, physical scan, paid AI, payment/stock/draft finalization or messaging action. Windows WIA hardware, browser local-network permission and actual installation/reboot remain NOT TESTED; earlier Canon P-208II TWAIN caveat retained. Owner remains assigned. Single next action: exact corrected source full CI including new actual camera geometry, then ordinary source integration/release and physical acceptance without replaying accepted transactions.

26/10/2026 — DOCUMENT-CAPTURE-SCANNER-01 / FIRST FULL CI FAILURE CORRECTED / ONE-TIME SETUP CANDIDATE

Retained receiving owner/sourcePR3177. First full exact f1529467 CI40378479917/job121769066237:4272tests/4264PASS/2FAIL/6cancelled/0SKIP. Two old source-contract assertions still expected direct camera constraints in Inventory/Premium after moving acquisition to the common helper. Updated only the delegated camera/readiness assertions; existing preview attach/play and retail decoder/stop checks remain. Six photo tests were cancelled because symbolic non-image byte fixtures could not complete the newly required real Image decode. Those two mobile fixtures now use real native-generated JPEGs and actual native Image decoding; a new low-resolution case proves zero upload and retained selection. No runtime quality bypass, removed financial/page-order/retry assertion or silent CI rerun.

Fresh actual Node20.20.2 runs:26focused and16photo/inventory tests PASS/0FAIL/0SKIP; common preview source contract also checked directly. Whole backend multipage suite not run locally because its original wallet/DB source dependencies are absent from the limited snapshot; full CI remains required. Android40378479827 and Windows40378479544 on prior unchanged camera/native source succeeded; they do not certify later connector changes. Initial full raw failure summary and corrected logs are preserved in CHECKPOINTS/EVIDENCE/document-capture-scanner-20261026/.

One-time technician setup now persists device pairing across browser/connector/reboot: browser-profile local storage plus Windows DPAPI CurrentUser encrypted device token, explicit local reset, no document image files. Optional explicitly run per-user INSTALL.cmd/Install.ps1 copies the package and adds a minimized user Startup shortcut; never auto-installed by site/CI, no admin/firewall/service/ExecutionPolicy bypass. Production Origin/Host, POST/bearer/pair-code expiry/attempt bounds, single-flight/replay/byte limits and explicit document review unchanged. New Windows HTTP self-test includes actual DPAPI round-trip/new-session reuse and corrupt-record rejection; install script parse and standalone packaging must pass before delivery. Actual Windows-user installation/reboot/driver remains NOT TESTED.

Real isolated Chromium153 confirmed pairing reuse in another tab of the same browser profile (zero extra pairing input) using synthetic responses; no hardware/business call. Packed-browser initial fixture regeneration had a scratch-only script-substitution error, corrected by rebuilding the complete fixture; no app assertion weakened. Model caveat: Canon's official P-208II driver listing is ISIS/TWAIN; this WIA-only candidate does not certify that earlier suggested model. Confirm actual WIA transfer before purchase; TWAIN support remains OPEN/separate, no universal compatibility claim.

Current integration preserves concurrent cash-paper source814d9fd5 and every other owner by exact Git blobs. Status SOURCE CANDIDATE / NOT INSTALLED / AWAITING FRESH FULL CI, WINDOWS PROTOCOL/PERSISTENCE AND HARDWARE. Existing qualified PASS/manual unchanged; no real/LAB payment, stock, invoice, chat send, provider call, hardware scan, production installation or deployment. Owner retained; single next action: verify this corrected exact head through required CI/review before ordinary guarded release.

26/10/2026 — DOCUMENT-CAPTURE-SCANNER-01 / WINDOWS PROTOCOL + SYNTHETIC BROWSER PROOF / FULL CI PENDING

Same receiving owner/sourcePR3177; no installed or physical PASS. Head eb42bea0 Windows workflow40377267699/job121763625350 SUCCESS: actual .NET8 compile, loopback HTTP synthetic protocol assertions and standalone win-x64 package artifact completed. No WIA hardware scan. Android40377267730 compile/unit/lint succeeded; emulator still pending at this receipt. Exact final full CI remains mandatory and earlier-head results alone cannot certify later changes.

Actual isolated Chromium153 tested the real scanner React component with a synthetic local response: explicit pairing then one scan selects one review page, no business/network provider call;1100px desktop and390px mobile have equal client/scroll widths, scan button48px, no page errors. Real Canvas/JPEG preparation retained all four colored corner markers (1551/1548/1529/1542 pixels) outside a white simulated paper area; expanded1030x743 output from1000x700, croppedfalse and original-reference retained. Browser proof is not optical/OCR/hardware acceptance. Initial packed-browser environment setup failed on font chown and default Vulkan initialization; local software-rendering launch then completed without relaxing assertions or changing application code. Evidence in CHECKPOINTS/EVIDENCE/document-capture-scanner-20261026/.

Review follow-up keeps the BackOffice job's archived dataUrl as the exact selected original file, while quality checks/header preparation still occur before intake; no original is replaced by the cleaned preview. Fresh Node20.20.2 focused26PASS/0FAIL/0SKIP after this adjustment. Required full CI/source review/ordinary release, actual Windows/browser/driver test and separately authorized stable native distribution remain OPEN. No production deploy/config/business/stock/payment/message mutation, new manual PASS or repeat accepted invoice.

26/10/2026 — DOCUMENT-CAPTURE-SCANNER-01 / SOURCE CANDIDATE / AWAITING FULL CI AND HARDWARE

Receiving owner codex/document-capture-scanner-20261026; source codex/document-capture-scanner-source-20261026. Explicit limited handoff claim3174 exact36d5840b passed applicable CI40373602584 (three jobs successful; full runtime jobs correctly docs-skipped) and merged231f4a3f before source. QR/provider decisions, finance/stock/fiscal/auth, native messaging/privacy/distribution and other owners remain protected. No real document/payment/stock/upload/message/scan or accepted transaction replay.

Candidate covers shared document camera requests (ideal4K, supported focus, permission-denial no retry), capture-readiness/full-sensor frames and late-permission cancellation, supported lighting controls, common focus in QR/login/shift/inventory and legacy/Premium/Basic/BackOffice/Learning capture. Document preparation retains all source edges on an expanded deskew canvas and returns the original reference; no automatic guessed paper crop. Existing consumer archival policy is not broadened. Mobile upload checks actual portrait/landscape resolution; native still capture selects bounded detail up to3264px/8MP, supported AF mode and JPEG96 without changing RAM-only handoff or5/7MB/14MB limits. No forced optical focus, perspective correction or universal device compatibility claim.

Explicit scanner controls feed existing intake for Basic/Premium/legacy invoices, supplier evidence, expense/payroll, bank evidence, BackOffice import/Learning/AI and selected invoice/payment/cash chat attachments. Pairing never scans or registers payment/sends; existing confirmation remains mandatory. The new loopback-only Windows WIA connector requires exact production Origin, JSON POST, one-time6digit pairing/5attempts/10min and256bit session bearer, bounded pages/bytes, one physical scan in flight and request-ID replay rejection. One page per explicit scan; supported forms append up to5, no automatic feeder batch. Requires Windows WIA driver/exactly one scanner; TWAIN-only and phones cannot run the connector. Browser local-network permission and actual device require testing. Cancel discards late bytes but may not stop physical motion. Latest result remains bounded process RAM, no connector image files. New Windows workflow must compile, run real loopback synthetic protocol checks and package standalone executable; Android CI must compile/unit/lint/emulator before any candidate distribution.

Local actual Node20.20.2 focused26PASS/0FAIL/0SKIP, including mounted scanner pairing/no-auto-scan, scope/unmount/abort/single-flight/token/malformed payload, full-frame edge/portrait/cleanup geometry, current Basic/Premium duplicate/durable-payment completion, QR input/provider fallback and mobile/Learning source regressions.30 JSX/module parses PASS. An initial broader local attempt failed only because the incomplete source snapshot lacked tracked dependency files; those exact baseline files were retrieved and the complete named26-case command passed, no assertion removed except the explicitly superseded direct-camera-call source assertion now references the common acquisition helper tested through actual calls. No native Windows/Android/full-client/full-server, real camera/image legibility or installed acceptance PASS claimed. Exact full source/main CI and ordinary guarded reviewed release are still REQUIRED; hardware and hosted acceptance NOT TESTED/AWAITING LAB. Do not request accepted invoice/payment replay.

Checkpoint CHECKPOINTS/CHANGES/2026-10-26-document-capture-scanner.md. Owner retained. Source is NOT INSTALLED; next resolve exact required CI/build/review, then ordinary exact guarded release and a new non-financial synthetic camera/scanner acceptance when hardware exists. Existing qualified manual PASS unchanged; no new manual PASS.

26/10/2026 — DOCUMENT-CAPTURE-SCANNER-01 / EXPLICIT LIMITED HANDOFF / ASSIGNED BEFORE SOURCE

Owner codex/document-capture-scanner-20261026. User explicitly approved this conversation's unified takeover after being told about existing camera/invoice-QR/native ownership. This supersedes ONLY acquisition/focus/photo-quality presentation and document-scanner integration ownership across existing web camera/document intakes and native photo capture. Existing QR/provider resolution, attendance decisions, native messaging/privacy/distribution, Gate3 OCR/learning/payment/stock/fiscal owners and their qualified PASS remain unchanged. No parallel writer is authorized for the received capture scope.

Implement shared capability-aware higher-resolution camera acquisition, focus and capture-readiness guidance, non-destructive document-quality handling and consistent accessible controls; preserve original images, page order/limits and explicit user review. Add an explicit document-scanning button to invoice and evidence/document intake surfaces, backed by an origin-restricted authenticated local Windows WIA connector, with one-time local pairing, no scan on GET/pair/open, no arbitrary paths/URLs or automatic upload/payment. Scanner returns pages to the current existing intake only; close, logout/store/session change discards stale results. QR/live attendance and general photo/video remain separate modes; do not apply document whitening/cropping to faces, product photos or QR. No mandatory purchase, cloud scanner service, new paid OCR provider, automatic send or financial action.

Baseline main2c20d2cf; healthy public runtime independently read as2b3ac179/oktrue. Existing BackOffice intake has manual JPEG camera/zoom and PDF/image upload; Basic/Premium/payment paths already contain document-image-quality checks and focus controls. Existing quality processing is not uniformly mounted and is not a physical camera PASS. New capture/scanner compatibility, Windows hardware, physical cameras, browser local-network permission, native and hosted acceptance are NOT TESTED. Preserve original settlement/job/draft identities, no second payment/upload to repeat an accepted test, existing auth/licence/tenant/store fences and all recorded limited PASS.

Before code: publish this receiving claim green/main. Then bounded common helpers/connector and actual consumer adapters; meaningful image/capture/pairing/origin/replay/cancel/store-stale/busy/page-limit regressions, frontend build, full required PR/main CI plus Windows/Android compilation where touched. No source/claim CI may be called LAB PASS. Ordinary guarded reviewed release and exact deployed revision precede physical acceptance. Existing active camera focus FAIL stays historical/open until a new measured result. Scanner model/driver and actual one-button workflow require real hardware; no universal WIA support promised. No production settings, DB, business writes, invoice OCR logic, QR allowlist/provider, fiscal/auth/lifecycle or automatic messaging changes.

Checkpoint CHECKPOINTS/CHANGES/2026-10-26-document-capture-scanner.md. Owner retained until completion or named handoff. Status ASSIGNED / SOURCE NOT STARTED / NOT INSTALLED / AWAITING IMPLEMENTATION AND LAB. Single next action: merge this pre-source claim after required checks, then implement the shared acquisition and document scanner adapters.

26/10/2026 - POS-DEFERRED-INVOICE-PAYMENT-01 / BEFORE-SOURCE CAUSAL AMENDMENT / 13 PATHS

Retained central owner codex/central-four-streams-20261018; invoice next_reports/shared close solewriter shift_pin. Original3169/main771b546 claim protected; freshmain2c20d2c myDATA3171 receipt preserved. DOCS ONLY, no PIN/source edit.

Add existing pos-first-payment-header-review.test.js pendingIntentForPayment DI/no-pending ONLY existing nonpending myDATA fixtures (assertionsunchanged/no productiontypeof fallback), plus existing shift-close-pin-postgres.test.js constructor DI/no-op ONLYforPINisolation (all assertionsunchanged/realinvoicePGhelperrequired); existing commerce-pos-v244 ensureFastHandoffSchema optionaldb/schemaOnly stops pendingrequests AFTERexistingDDL BEFORE lifecycle jobbatch recovery/reset/requeue; defaultcallerbehaviorunchanged.

Existing CashControlPanel closeShift ONLY fresh selectedscope pendingoverview/question/explicitACK+fingerprint, besidespendinglist; noformulas/investigation/chatwrites. Sameoriginal11runtime/UI/testpaths+2existingtestmaintenance, no schema/manifest/newruntimepath. WorkerswaitGREENMAINbeforetheseamendedsections; frozenPIN6hashesunchanged.

Checkpoint CHECKPOINTS/CHANGES/2026-10-26-pos-deferred-invoice-payment.md. SOURCE NOT STARTED for amendment/NOT INSTALLED/NOT TESTED; no USER/LAB/manualPASS or businessaction. All originalregistrybytesretainedafterprefix; canonicalPDFsynchronized; otherownersprotected.

26/10/2026 — MYDATA-HTTP-DIAGNOSTICS-01 / TECHNICALLY INSTALLED / AWAITING USER ACCEPTANCE

Independent diagnostic owner fix/mydata-http-diagnostics-20261026 retained; source fix/mydata-http-diagnostics-source-20261026. Claim3166 mergedf3a30f49 before source after applicable green docsCI40365497784. Source3168 exactheadde560f16488d58b232b77cfe3b4aaa1c5131214a / fullPRCI40366419404 job121725702942 SUCCESS; normal expected-head squash merged2b3ac1790c97d6d2a052428586543997beee3c9b preserving concurrent appended cash-paper claim3165. Exact MAIN CI40368093291/job121731516361 all five jobs SUCCESS. Both full runs: Node20.20.2,4264server+8backupPASS/0FAIL/0SKIP, including new actual registered manual/scheduled/status error-path tests and existing native PostgreSQL/Windows/browser/build/archive/HTTP E2E. These are engineering checks, not physical or real upstream acceptance.

Ordinary guarded release40369656989/job121736764106; Render dep-dbfou5942hec73et0io0 deploy_hook LIVE at 2026-10-26T17:38:29.819557Z, exact revision2b3ac1790c97d6d2a052428586543997beee3c9b. Independent unauthenticated no-cache public /api/health at 2026-10-26T17:39:42.926141+00:00 returned HTTP200/oktrue/exact same revision. Main source SHA256 values independently match the reviewed four source/test files; intervening POS claim3169 changes documentation only and is preserved. No manual Render trigger, migration, production SQL repair, credential/settings change or sync/payment/upload/stock/fiscal action by this page.

Shared manual/scheduled receiving now provides fixed safe Greek guidance for recognized key refusal, generic401, unknown403,429,5xx and fallback, plus a random support reference. Unknown403 stays undiagnosed rather than claiming bad credentials. Only allowlisted reference/RequestDocs/status/environment/reason metadata is logged; no upstream response or secrets. Selected-store status uses the same safe error/reference and clears it on subsequent success. Existing502 API contract, role/licence/tenant/store/lifecycle locks, endpoint/headers/cursor/pagination/idempotency/original and all business writers unchanged. Error wording does not falsely promise zero saved documents after a partial-page failure.

Actual local focused32PASS/0FAIL/0SKIP and Node20 frontend/TABLE_SERVICE build PASS. Initial full local run3416PASS/81FAIL/268SKIP lacked generated Prisma client at its start; this is retained as infrastructure failure, NOT a green full suite. After generating the local client only, all initially failed files reran407PASS/0FAIL/8native-environmentSKIP without weakening assertions. Full native proof is the two exact green CIs above. Initial new fixture assertion corrected to the existing next(error)404 contract; production404 logic unchanged.

Technical implementation/release complete; actual new UI/error observation and successful connection for the reported store remain AWAITING USER/LAB. The original upstream403 cause is UNKNOWN, not resolved by diagnostic release alone. Whole09/Gate3 and original receiving/other owners/PASS remain unchanged; no functional manual or numbered PASS closure. Single next action: ordinary owner refreshes existing selected-store inbox and makes one deliberate receiving attempt, then supplies its new safe message/reference. Do not change credentials blindly or repeat any payment/finalization for evidence. Owner retained for this bounded acceptance; no parallel broad takeover. Checkpoint CHECKPOINTS/CHANGES/2026-10-26-mydata-http-diagnostics.md; machine-readable proof CHECKPOINTS/EVIDENCE/mydata-http-diagnostics-20261026/verification.json. Canonical tracker PDF regenerated in this receipt.

26/10/2026 - THREE EXPLICIT POS EXTENSIONS / ASSIGNED BEFORE SOURCE / NOT IMPLEMENTED

Central owner codex/central-four-streams-20261018. Freshmain2b3ac179 (initial27ab5bc, unrelated myDATA3168 source preserved) preserves cash-chat3163/3165, myDATA3166 and all existing owners/PASS. This claim-only batch supersedes narrow draft3167 as the current continuation; no whole-project completion or final-user-only status is implied.

POS-NEW-PRODUCT-FULL-CARD-01: worker/root/next_commerce branchfix/pos-new-product-full-card-20261026, exact15paths/full existing BackOffice fields with fresh defaultfalse POS permission and both STORE_MODE+INVENTORY. POS StockMovement UserFK uses NULL for STORE_OPERATOR with original audit attribution retained, no FK/schema weakening. Original inventory-new-card-online20261013 owner/limitedPASS/createacceptance retained. Checkpoint CHECKPOINTS/CHANGES/2026-10-26-pos-new-product-full-card.md.

SHIFT-CLOSE-PERSONAL-PIN-01: worker/root/shift_pin branchfix/shift-close-personal-pin-20261026, exact6paths; explicit personalopenerPIN alternative supersedes ONLY05Octcard-onlyrestriction. Existingcard/roles/opener/terminal/liveclosings/Gate8finalPASS protected; durablefailedPINguard commitsbefore401 with nofinancialsideeffects. Checkpoint CHECKPOINTS/CHANGES/2026-10-26-shift-close-personal-pin.md.

POS-DEFERRED-INVOICE-PAYMENT-01: worker/root/next_reports branchfix/pos-deferred-invoice-payment-20261026, exact11paths; distinct no-documentinvoicepayment+atomicpending/precloseask+explicitack/lateroriginalpaymentreuse. NoFast/Premiumform/schema/manifestchange; preserveadvance/CREDIT/Gate3/onepayment/job/draft. Checkpoint CHECKPOINTS/CHANGES/2026-10-26-pos-deferred-invoice-payment.md.

SharedStoreShiftClosePanel.jsx+cash-control.js SOLEWRITERshift_pin: PINsectionsfirst, reviewedinvoicependingsectionsserializedafterPINcommit; no parallel edits. SeparateindependentsourcePRs/serialintegration; sourceonlyAFTERthisclaimreviewed/greenmergedmain, meaningfulnative/UI/fullNode20CI/exactguardedreleasebeforeLAB. All3SOURCE NOT STARTED/NOT INSTALLED/NOT TESTED; no newmanual/USER/LABPASS or businessaction. CanonicalPDFsynchronized; alloriginalregistrybytespreservedafterprefix.

26/10/2026 — MYDATA-HTTP-DIAGNOSTICS-01 / SOURCE PREPARED / AWAITING FULL CI AND LAB

Independent owner fix/mydata-http-diagnostics-20261026; source fix/mydata-http-diagnostics-source-20261026. Before-source claim3166 final head461ec5571fffe94dbd0855b9d9e658951951e39e passed applicable docsCI40365497784 (three jobs successful, runtime/wholesale correctly skipped) and mergedf3a30f49db5e9f3d69b02ac91e8fe96e8dc6c984 before code. Preserved concurrent cash-chat3163 and all other owners/PASS.

Shared manual/scheduled HTTP failure path now classifies bounded upstream messages into fixed safe guidance: recognized invalid/missing subscription key, generic401, unknown403,429,5xx and fallback. An unknown403 never asserts incorrect credentials. No remote response, secret, URL or taxpayer/document identifier is retained or logged; diagnostics contain only random UUID reference, fixed RequestDocs operation, HTTP status, configured environment and reason enum. Manual errors and selected-store status expose the same safe reference; scheduled failure logs the same diagnostic before its existing catch. A subsequent successful sync clears only that store's error. Existing502 API contract, auth/tenant/store/license/lifecycle locks, endpoints/headers/cursor/pagination/draft/original/payment/stock/fiscal behavior retained. Error wording no longer falsely promises zero saved documents if an earlier page succeeded.

Actual local Node20.20.2 focused32PASS/0FAIL/0SKIP, including five new tests that execute manual/scheduled/status failure handlers, no document writes or original acquisition, cross-store error isolation, unknown/HTML/malformed/oversize bodies, recognized JSON/XML messages, secret exclusion and success recovery. Initial new test had a fixture assertion mistake (expected JSON for a next(error)404); corrected assertion to the existing404 contract, source behavior unchanged. Full local suite/build still running at publication; exact full PR/mainCI and ordinary guarded deployment mandatory. No production sync or business mutation performed. New functional acceptance NOT TESTED/AWAITING LAB; upstream refusal root cause and actual successful receipt remain UNKNOWN/OPEN. No manual/whole09 PASS. Checkpoint CHECKPOINTS/CHANGES/2026-10-26-mydata-http-diagnostics.md.

26/10/2026 — MYDATA-HTTP-DIAGNOSTICS-01 / ASSIGNED / NOT TESTED

Owner fix/mydata-http-diagnostics-20261026. User explicitly requests a central correction after a real selected-store receiving failure at 18:54 Europe/Athens. Render production revision025a9a3a runtime18:54:19 confirms upstream403 in performSync, not an application role denial. Installed source discards the upstream body and emits generic502. Root cause of upstream refusal remains UNKNOWN; stored/enabled credentials are not proof of acceptance.

Independent bounded diagnostic subtask only: classify recognized HTTP error responses into fixed safe Greek guidance, preserve unknown403 as unknown, give a random support reference and safe metadata for manual AND scheduled receiving. Never return/log upstream bodies, credentials, URLs, taxpayer/document identifiers or arbitrary remote text. No automatic credential changes, retry, endpoint change, new sync, invoice/payment/stock/fiscal mutation or production DB operation. Preserve existing receiving owner codex/mydata-completion-20261006, other invoice owners and all previous PASS; no broader takeover. Required source/unit and actual route failure-path tests, full PR/main CI, ordinary guarded release and exact revision. Actual new behavior NOT TESTED/AWAITING LAB; upstream403 resolution is separate and unproven. Checkpoint CHECKPOINTS/CHANGES/2026-10-26-mydata-http-diagnostics.md. Claim must merge green before source.

26/10/2026 — CASH-CHAT-RECONCILIATION-01 / EXACT SOURCE CI PASS / CURRENT-MAIN RECONCILIATION

Same receiving owner and source3163. Exact31e28d2adc6843a603cebfbd234e4a5d4a571188 CI40347645274 all5jobs SUCCESS; actual Node20 job121659476258 logs4245server+8backupPASS/0FAIL/0SKIP. Native chat SQL and cross-day handoff/correction cases executed unskipped. This is isolated technical proof, not handwriting reading, LAB acceptance or installation.

Main advanced to33d5da131be790a3bcf18fcae5d06d2dd3339a8d with independent Internet-search isolation3161/receipt3164. Merge attempt refused405 because three prepend-only registries conflicted; no runtime conflict or guard bypass. Reconcile both complete registry prefixes against current main and retain all other-owner source/evidence/PDF bytes. Every owned runtime/test blob remains unchanged from exact green31e28d2a. New combined-head full CI is required; prior-head green cannot certify the merged combination. No new real/LAB/provider/email/financial action. Status AWAITING COMBINED CI / NOT INSTALLED; requested reading/recalculation remainder stays OPEN under the same owner.

26/10/2026 — CASH-CHAT-RECONCILIATION-01 / ENTITLEMENT REVIEW BEFORE MERGE / SOURCE CANDIDATE ONLY

Same receiving owner codex/cash-chat-reconciliation-20261026 and source3163, within the already green before-source3162 scope. Additional self-review found Owner chat metadata must preserve the existing STORE_CHAT entitlement, not only cash/store access. Cloud investigation now reuses authoritative authenticated company licence state and the existing effectiveModuleEnabled store override/date policy before any StoreChatMessage query. Missing/inactive/expired/disabled entitlement yields no chat read; cash handoff/source review remains available. Platform SuperAdmin retains its pre-existing authorised bypass. No module guard/configuration is changed. Actual registered-route regression covers disabled company/store, expiry, operator and foreign-store rejection, with unchanged cash-3/card+8.

Final affected Node20 suite39PASS/0FAIL/4explicit nativePGSKIP; final mounted UI2PASS/0FAIL; preserved correction/period13PASS/0FAIL. Node20 frontend/TABLE_SERVICE build PASS. Initial broad sparse run actually3754PASS/18FAIL/270environmentSKIP; all18 failures traced to missing tracked ops/backup, original evidence and the original Hikvision ZIP. Restored ONLY those existing HEAD paths. The affected failed-file rerun actually61PASS/0FAIL/5nativeSKIP, retaining every assertion. This is NOT a newly green full local suite or native PostgreSQL proof. Initial source8b8a6d0 CI40346038335 is superseded by this entitlement follow-up; only final-head full CI is admissible before merge. No guard weakening, economic

action, provider call or user acceptance. Whole requested handwritten/recalculation workflow remains OPEN, NOT INSTALLED, with remaining slices in the prior record.

26/10/2026 — CASH-CHAT-RECONCILIATION-01 / FIRST READ-ONLY SOURCE PREPARED / AWAITING FULL CI AND LAB

Receiving owner codex/cash-chat-reconciliation-20261026, source feat/cash-chat-evidence-20261026 retained. Before-source named handoff3162/head3ed0da80045d6bb7370c76631b989d0f29a2ce83/docsCI40344060114 SUCCESS (three applicable jobs; full runtime/wholesale correctly skipped for docs) merged0b22270ba6681e3cc7ac6e80b3e20bf8f44ba250 before source. Five published claim blobs independently match local git hashes. No competing owner scope taken.

Implemented first bounded slice: company/store-bound read-only discovery of latest50 image/PDF chat metadata, explicit over-cap/missing/unread/unassociated coverage, checksum grouping retaining all original message references and no upload-date-to-receipt inference. No bytes, acknowledgement, invoice intake, AI/provider or payment action. Immediate same-terminal operational closing/opening facts cross midnight and expose missing/open/overlap/next-shift states, never change original amounts or employee liability. Platform analysis and copied prose share Greek labels; existing cloud investigation returns the shared evidence only for authenticated non-operator OWNER after existing company/store guards. Cloud adds read-only analysis with old-store/old-request/unmount response fencing. No closing/review writer, bank/cash arithmetic, auth/licence, schema or real message changes.

Actual local Node20.20.2 affected suite39PASS/0FAIL/4explicit PostgreSQL environmentSKIP, including actual registered Owner/denied/operator handlers and real mounted Backoffice store-switch/filename escaping/read-only cases. Initial protected baseline23PASS/0FAIL/0SKIP. Frontend/TABLE_SERVICE build PASS (initial Node24 build, Node20 final verification separately logged). New native PostgreSQL source/checksum/scope/cap/zero-write test and existing extended handoff fixture require unskipped full exact CI. Initial broad local run encountered missing sparse-checkout ops/backup/lifecycle files (ENOENT); this is qualified infrastructure failure, not full-green proof. Restored existing tracked ops/android/ios/docs only; no guard or failed assertion weakened. Source acceptance and deployment NOT TESTED. Claim PDF remains unchanged in this non-PASS source PR; no completion/manual/global-PASS claim.

Full requested workflow is NOT delivered by metadata: actual handwritten reading with authorized AI metering, durable verified date/shift association, reviewed once-only cash offsets/recalculation history, common automatic/email/assistant consumers and persistent per-store checkpoint remain REQUIRED next slices. Existing automatic-dispatch and chat/invoice/wallet/lifecycle/native owners stay retained. No send, real/LAB financial/stock/fiscal action, database repair, production DDL/settings or accepted transaction replay. Current status SOURCE PREPARED / NOT INSTALLED / AWAITING FULL CI AND LAB. Single next action: exact source CI and review, then continue the remaining bounded implementation with explicit claims before runtime edits; do not claim the whole workflow complete from this first slice.

26/10/2026 - INTERNET-SEARCH-STORE-CONTEXT-01 / TECHNICALLY INSTALLED / AWAITING AUTHENTICATED READ-ONLY ACCEPTANCE

Central executor codex/central-four-streams-20261018/root; group3 commerce. Root independent exact source/docs review CLEAR at final PR3161 head54e708cb321dc0518e2628fa651cece1ee8a5dce/tree65ee3c5aff286afdec155192dbc591755c30d583. Claim3155 green merged before source; retained Task14 owner codex/task14-owner-provider-readonly-20261007-r1 and prior scoped PASS stay protected. Final source PR CI40346765089 all5jobs SUCCESS, Node20.20.2:4250server+8backup PASS/0FAIL/0SKIP; actual native PostgreSQL parent973 and3subcases executed unskipped, plus mounted UI regressions. Earlier candidate CI40344409882 same4250+8 PASS/0FAIL/0SKIP retained. Freshmain0b22270 and expectedhead54e708 checked immediately before authorized normal squash merge025a9a3a0aca3093c85aa5e42e5ecbd1cdf930a7. Four reviewed source hashes unchanged; all intervening FTEXT and cash-chat owner changes preserved.

Exact MAIN CI40348413084 attempt1/job121662285281 recorded4249PASS/1FAIL/0SKIP: unrelated DAILY1920 Chrome startup/render CDP timeout25000ms, SIGKILL at15:25:11UTC; other widths and new native parent+3 PASS. No code, assertion or timeout weakening. Supported targeted failed-job rerun requested only that job. Same exact main attempt2/job121666012314 all5jobs SUCCESS:4250server+8backup PASS/0FAIL/0SKIP, Node20.20.2; previous DAILY1920 nowPASS; native parent+3 unskipped at15:32:07UTC; build11.23s/TABLE_SERVICE entry-yMd1QnfD.js, browser/invariants/archive/import/realHTTP E2E PASS. Original failure remains evidence and is not erased by retry.

Failed-attempt deployment guard40349584441 correctly SKIPPED. Ordinary workflow_run guard40351115903/deploy121671236906 SUCCESS verified full CI/freshness, captured rollback artifact12664055754, triggered normal deploy hook and waited for exact production revision. No manual Render trigger or safeguard bypass. In already owner-confirmed My Workspace tea-d9ie26vaqgkc739uudqg, service srv-d9isenfavr4c73bdh52g: Render dep-dbfn7tmc6qcc73c4bga0 deploy_hook LIVE finished2026-10-26T15:40:13.903539UTC (17:40:13Europe/Athens). Helper independent unauthenticated no-cache GET /api/health15:40:35UTC HTTP200/oktrue/exact025a9a3a0aca3093c85aa5e42e5ecbd1cdf930a7; root repeated15:40:37UTC with same result. This proves technical installation and public health only.

Selected-store GET/history and GET/price-proposals now require active owned explicit store before schema helper and filter before limits; scoped panel lifetimes discard stale authority/store replies and callbacks. Provider algorithms, server writers, role/licence checks, schemas, prices/margin/payload contracts and all financial/stock/fiscal behavior unchanged. No real search-provider call, authenticated acceptance, proposal/order/write, settings activation, payment, stock or fiscal operation was performed. No manual/numbered/USER/LAB PASS and no wholeTask14 closure. Required residual: one grouped authenticated read-only selected-store acceptance for history/proposals, switching A-B-A and stale UI clearing, using authorized existing data and no paid provider or business writer. User login/actions remain deferred to final grouped batch.

Status TECHNICALLY INSTALLED / AWAITING AUTHENTICATED READ-ONLY ACCEPTANCE. This newest receipt supersedes historical source-prepared/not-installed entries below only for this bounded correction. All current-main registry/checkpoint bytes are preserved after this prefix; canonical output/pdf/MyWorkStation_Open_Work_2026-10-07.pdf regenerated, historical docs PDF unchanged. Checkpoint CHECKPOINTS/CHANGES/2026-10-26-internet-search-store-context.md. No manual entry from CI-only evidence.

26/10/2026 - INTERNET-SEARCH-STORE-CONTEXT-01 / SOURCE PREPARED / AWAITING NATIVE CI AND READ-ONLY ACCEPTANCE

Central executor codex/central-four-streams-20261018/root; group3 commerce source fix/internet-search-store-context-20261026. Independent claim3155 exacthead19621ddd30fafe557ca25ffb61af1fb198783210/tree09dcede2aaf30fd3ab7b696b8a813c35002032ea reviewed CLEAR. Applicable docs CI40278653100 completed SUCCESS (3applicable jobs PASS, build/wholesale expected docs-only SKIP); expected-head normal squash merged5229591653e6b9f4730173f8fc0491283eb7dd6c BEFORE source. Source prepared on5229591; reconciled freshmain5e52b13 after unrelated FTEXT PR3156-3160, preserving its full source and registry bytes. Four reviewed source hashes unchanged. Reconciled next freshmain0b22270 (docs-only cash-chat receiving claim3162) byte-exact. Prior head7f09b955 full Node20.20.2 CI40344409882/all5jobs SUCCESS:4250server+8backup PASS/0FAIL/0SKIP, actual PostgreSQL parent+3subcases unskipped. New reconciled candidate still requires fresh exact full CI; NOT INSTALLED/AWAITING LAB. Retained Task14 owner codex/task14-owner-provider-readonly-20261007-r1 keeps prior Owner/provider-disabled/Master Catalog acceptance and previous01Oct PASS. No broad takeover or repeated accepted transaction.

Exactly four claimed source/test paths implemented. GET/history and GET/price-proposals now require explicit valid active owned store BEFORE ensureMarketSchema, then filter company/store before50/100limits. Shared panel scopes reads and synchronously clears store-owned product/results/catalog/history/proposals/local order suggestions/match acknowledgements on authority changes. Context lifetimes and channel generations discard stale A-B-A/API/basePath/removed-membership/close responses; catalog dropdown/picker share one latest channel. Captured writer completion and exact result-origin guards prevent old callbacks from retargeting new context/results or spending a legitimate current write generation. Root supplied/reviewed only the two GET changes; helper supplied component/tests. All server proposal writers, market/products/provider handlers, schema helper, roles/licences/signed support-company logic, matching/unit rules, net-margin/formulas/payload contracts and original layout remain unchanged.

Original actual-mounted regression0PASS/2FAIL proves missing selected-store read URLs and stale A-B-A result. Corrected final local Node24.22.1 focused41PASS/0FAIL/1explicit native PostgreSQL environmentSKIP. Nine mounted synthetic UI cases cover scoped/absent/removed stores, company/A-B-A/StrictMode/API authority, close, catalog interleaving, stale writer completion/busy, retained old result callbacks and local suggestion/ack isolation;31existing Task14 checks and one strict fixture guard also PASS. A fixture await initially blocked on its own controlled promise and was interrupted130; raw output retained, then only the act callback was made void, no application workaround or assertion weakening. New real PostgreSQL parent+3subcases prepared: actual registered GET/query selected-store isolation, pre-schema invalid/foreign/inactive refusal, limits/parameterized scope, Owner/module/platform/support-company checks and unchanged row/control snapshots. Strict test URL/query/DB guard plus always-run CI assertion require native execution unskipped in Node20 full CI. No local native execution claimed.

Frontend npm run build PASS8.50s, TABLE_SERVICE verified in entry-CvGAOJ8b.js. Two first sparse-checkout build failures retained (missing tracked shared/greece-time.mjs then shared/n40-read-trace.mjs); restored only exact existing HEAD shared files/verifier, no additional tracked runtime change or guard weakening. Syntax/source whitespace PASS. Root and independent helper source/native static review CLEAR at source-validation.json hashes. Raw original/corrected Node spec reporter output (not TAP), interrupted fixture output and infrastructure/final build logs in CHECKPOINTS/EVIDENCE/internet-search-store-context-20261026/.

SOURCE PREPARED / NOT INSTALLED / LAB-USER NOT TESTED. No production/auth/provider/config/schema/price/VAT/proposal/order/payment/stock/fiscal action or functional manual/numbered PASS. All current-main registry bytes and original claim preserved exactly after this prefix; canonical output/pdf/MyWorkStation_Open_Work_2026-10-07.pdf regenerated from tracker, historical docs PDF unchanged. Checkpoint CHECKPOINTS/CHANGES/2026-10-26-internet-search-store-context.md. Next: publish exact reviewable source PR; complete mandatory native Node20 full CI and root exact remote review, normal

merge/mainCI/guarded release, then only grouped authenticated read-only acceptance. User actions stay deferred to that final batch.

26/10/2026 — CASH-CHAT-RECONCILIATION-01 / OWNER-AUTHORIZED LIMITED HANDOFF / ASSIGNED BEFORE SOURCE

ΑΝΑΛΗΨΗ ΑΠΟ codex/automatic-reporting-20261016 — ASSIGNED codex/cash-chat-reconciliation-20261026. On26Oct the owner explicitly requested the same cash-audit/recalculation method in MyWorkStation using existing system data without Excel and handwritten evidence from each store chat, authorized publication (issue2527 comment6410545386), then explicitly instructed this conversation «Ανέλαβε το». This is the named receiving record for ONLY that central cash-review extension, not a transfer of the original all14 umbrella or automatic dispatch, lifecycle/backup, assistant, native chat, invoice OCR/payment, workforce or fiscal writers. Existing owners and scoped PASS remain protected. No second concurrent executor is authorized for the received scope.

Baseline refreshed main5e52b13a11b80a9c1b73c4bde15c05276e6964dc; prior unpublished preparation was based on5229591653e6b9f4730173f8fc0491283eb7dd6c. Read AGENTS, current tracker/pending/active/checklist, central cash-review checkpoint, report manuals, current source and main history. Existing signed confirmed balances, exact correction links, installment evidence and limited source/UI PASS from16Oct remain protected. Current read-only sale/chain evidence does not itself settle cross-shift liability. StoreChatMessage already holds company/store-bound original image/PDF bytes/checksums; its invoice AI-reader action is INVOICE-only and must not be repurposed to create invoice drafts from cash sheets. No financial or provider action occurred during inspection.

Received requirements: one evidence-backed cash result across MyWorkStation views/reports; actual shift handoff and overlap checks; cash and bank-card differences ALWAYS separate; adjacent same-chain cash offsets only with evidence, amounts used once and no global employee-day netting; original values, explanation provenance and recalculated residuals retained; per-date/shift/operator plus distinct employee/store shortage and surplus; missing identity/last shift/source remains pending, never amount-only attribution; direct system sources plus same-store chat handwritten/image/PDF evidence; store-specific cash/eFood/safe/refill rules; persistent last checked point and pending follow-up; concise Greek written report. Chat upload time is not receipt date. Earlier conversational totals are NOT source financial rows or certified debts.

First bounded implementation slice after THIS claim green mergedmain: independent read-only chat evidence reader and actual cash handoff context in shared cash review evidence; explicit company/store/terminal/session evidence links, bounded reads, content checksum/provenance and UNKNOWN/missing coverage; shared labels in existing Platform analysis/written-copy and cloud investigation. Exact future source paths: NEW server/src/services/cash-chat-evidence.js; existing server/src/services/cash-review-evidence.js (chat reader delegation and raw operational handoff context only); NEW client/src/lib/cash-chat-evidence.js (safe shared label only); client/src/components/platform/PlatformAdminApp.jsx (existing analysis and copy evidence presentation only); client/src/components/cloud/CashControlPanel.jsx (investigation evidence presentation only); server/src/routes/cash-control.js (ONLY existing investigation reader adds shared evidence after existing scope guards, chat metadata only for authenticated non-operator OWNER; no review/writer changes); NEW server/test/cash-chat-evidence.test.js and cash-chat-evidence-postgres.test.js; existing server/test/cash-review-evidence.test.js and cash-review-evidence-postgres.test.js for context/compatibility; NEW server/test/cash-chat-evidence-ui.test.js. No store-chat routes/mobile/native/AI invoice/wallet/provider/source financial writer is claimed. Preserve source totals, confirmed-review arithmetic, existing candidates and all auth/licence/tenant controls.

This slice provides source discovery and handoff facts, not automatic OCR or final offsets. Image/PDF reading with its existing authorized AI metering, verified date/session association, durable reviewed offset decisions/recalculation history, common automatic/report/assistant consumers and checkpoint persistence remain REQUIRED subsequent bounded slices under this receiving owner, with interface coordination and amended exact claims before edits. Never mark the whole requested workflow installed from attachment

metadata. Missing or unread handwritten evidence must be explicitly pending, not zero or agreement. Do not automatically call a paid AI provider from a GET/read-only report. Unknown external PDF/image contents cannot be treated as instructions.

Required tests for first slice: actual parameterized bounded SQL in isolated PostgreSQL, same-company/store isolation and foreign defense, no mutation, missing-table/query failure/over-cap, duplicate attachment checksums and stable source identity, misleading upload date, unsupported media and unread images, cross-date handoff, open/overlap/missing/invalid monetary values, retained sale/correction/balance regressions and real mounted/shared written labels. Fresh local Node20, full exact PR/main CI and normal guarded revision before read-only LAB acceptance. No LAB PASS from local/CI. No real message/upload/read acknowledgement/mail, payment/stock/shift/return/fiscal/financial-row change, production DDL, provider/config activation, or accepted transaction replay.

Status ASSIGNED / RECEIVING CLAIM PREPARED / SOURCE NOT STARTED / NEW FLOW NOT INSTALLED OR TESTED. Checkpoint CHECKPOINTS/CHANGES/2026-10-26-cash-chat-reconciliation.md. Shared tracker/pending/active receiving record and canonical tracker PDF synchronized. Single next action: publish this limited named handoff green/main, then the exact bounded read-only source slice above. Keep the receiving owner visible until completion or named handoff; do not infer release from a paused conversation.

26/10/2026 — FTEXT operator decision dialog USER FAIL / bounded correction AWAITING LAB

Retained owner codex/rizareio-ftext-bridge-20261022; branch fix/ftext-decision-dialog-20261026. Follow-up claimPR3158 head d2b2f336aa1e69af37d3f821cad53b079d355118, doc CI40308227789 success (source jobs correctly skipped), mergedca8beee180cc9a79debe053de0b96d61e6a91258 before source. SourcePR3157/main688038f8f released: exact mainCI40302670017 success4234server+8backup, ordinary deploy40304089988 Renderdep-dbfiablg1s2s73fucln0 LIVE10:04:02UTC. Normal selected-store UI saved operator card code2/POS1/type1, config9dcc37e8-c3ef-458c-a6bc-57f86d524078; generated66304byte package SHA2561c4ea336ff7b5cecbf6534bd3fd863be444041da4b191d78a4e9eb7a27d98321. User screenshots confirm paired, STATUS delivered, connector connected26Oct12:21local. This records setup observation only, not a card acceptance PASS.

Latest owner USER FAIL: NO left blocking confirmation. Request1e50a87c-e5ed-491b-9e1c-cac73ee2bec9 CARD0.50 has original-cashier NO10:25:28.149UTC, REQUIRES_CHECK, saleIdNULL and unverified physical receipt result. Owner reports register/EFTPOS back at initial screens. No measured financial/stock delta or proved fiscal cancellation inferred; no repeat sale/VOID executed.

Correction hides the blocking dialog after persisted ftext NO and keeps basket/scanner usable, retaining pending identity/polling/key and server pending lock with visible review notice. Successful YES closes immediately on actual SALE_COMMITTED response; error/uncertain stays visible. No automatic resend, cancellation, financial/stock mutation or false success; no profile/Windows/server/lifecycle changes. CASH/RBS and previous limited CASH USER PASS protected. Source is AWAITING CI/LAB; physical retest and resolving original unverified fiscal state remain OPEN. Checkpoint CHECKPOINTS/CHANGES/2026-10-26-ftext-decision-dialog.md.

26/10/2026 - FTEXT OPERATOR CARD SOURCE / AWAITING NATIVE CI AND PHYSICAL ACCEPTANCE

Retained codex/rizareio-ftext-bridge-20261022; explicit owner YES/NO requirement claimPR3156 greenCI40298426337 merged2ead86fd7 before source. Added separately configured OPERATOR_CONFIRMATION/type1 mode, immutable authenticated fiscal result plus separately bound original-cashier YES/NO decision, and existing atomic CARD/stock finalizer. NO/UNCERTAIN cannot write finances/stock, resend, erase a receipt or release an unresolved register lock; actual cancellation/reconciliation remains required. CASH/strictOS7/RBS remain protected; no new schema or lifecycle edits. Local Node20 targeted17PASS/0FAIL/0SKIP and client build PASS; native PG/Windows/full CI and physical acceptance pending. No production setting, package installation, charge or receipt. Card activation OFF, connector OPEN. Checkpoint CHECKPOINTS/CHANGES/2026-10-26-ftext-operator-card.md.

26/10/2026 - FTEXT-OPERATOR-CARD-01 / EXPLICIT OWNER CHANGE / ASSIGNED BEFORE SOURCE

Retained owner codex/rizareio-ftext-bridge-20261022; branch feat/ftext-operator-card-20261026. Owner explicitly requests operator YES/NO payment acknowledgement as in RBS instead of requiring OS7 POS line8. This supersedes the earlier no-manual-card-confirmation requirement ONLY for a new explicitly configured OPERATOR_CONFIRMATION profile. Existing POS_LINE8_OS7, CASH, STATUS, one-shot dispatch, immutable device results, fiscal receipt binding, original shift, tenant/licence/lifecycle, recovery and RBS behavior remain protected.

Baseline main522959165. Physical evidence: DATECS DSM24014923 FW6.690, card payment ID2 (owner), terminal1 and transaction typeAGORA1 (photos), existing FTEXT25.02 SOLIDUS(II)T C:\FText. Manual conditional OS7 line8 does not establish that FW6.690 cannot execute card. Accepted CASH request e4241ef7/sale98bee70a remains limited USER PASS; never repeat it. Operator-card flow NOT TESTED, card activation unchanged/OFF. No production settings, receipt, charge or business mutation in this claim.

Bounded source: optional named operator profile in ftext-installation and setup controls; Windows card command/result handling without requiring line8 for this profile; immutable authenticated device fiscal response plus separately audited original-cashier YES/NO decision; existing atomic finalizer requires both successful final fiscal receipt and explicit YES for this profile. NO/UNCERTAIN cannot commit Sale/Payment/stock and cannot erase an open fiscal receipt or release unresolved register lock. Existing manager-only proved VOID remains separate; no automatic cancellation or resend. Exact same request/decision replay is idempotent; contradictory decisions, foreign cashier/store/terminal, stale settings and missing/failed receipt refuse finalization. UI reuses existing confirmation buttons and scoped recovery, never resends checkout.

Required verification: targeted real service and mounted UI tests, native PostgreSQL concurrent decision/finalization and rollback, Windows synthetic legacy receipt/one-shot/restart regression plus existing CASH/OS7/VOID, full exact CI, ordinary release and selected-package/settings update before separately consulted physical acceptance. No new manual/PASS from engineering. Same owner retained; whole connector OPEN. Checkpoint CHECKPOINTS/CHANGES/2026-10-26-ftext-operator-card.md. Claim must be published before source.

26/10/2026 - INTERNET-SEARCH-STORE-CONTEXT-01 / INDEPENDENT CENTRAL CLAIM / BEFORE SOURCE

Central executor codex/central-four-streams-20261018 (root), group3 helper commerce; claim docs/internet-search-store-context-claim-20261026, future source fix/internet-search-store-context-20261026. User explicitly authorized four coordinated assistants and continuation. This is a new bounded causal read-projection/request-generation bug under the general07Oct selected-store rule, not a transfer or closure of Task14. Retained Task14 owner codex/task14-owner-provider-readonly-20261007-r1/PR1833 keeps Owner/provider-disabled/Master Catalog acceptance and all previous01Oct PASS; broader provider/margin/product/proposal-writer/order scopes and other owners remain unchanged. No release is inferred from silence. Only the exact new read-state portions below belong to this central executor after this claim is green merged; no concurrent overlapping source edits.

Baseline freshmain5ca3fb5e1bd6b408956e098a93ebe72fff70ac1f (#3154). Read AGENTS, current tracker/pending/complete active record, Task14 checkpoint/manual and source history. Current remote route blobbe6d931cc3ef38c4097681651449a12461ee1734 matches local. Two local isolated FAIL observations26Oct: actual GET/history handler's parameterized SELECT, executed against in-memory SQLite synthetic A/B rows, ignores explicit selectedstoreA and returnsB,A (only company binding); actual React/JSDOM component starts searchA, switchesB and renders late A result while B remains selected. Existing history/proposal GET requests omit storeId and reload only on company change. This is same-company cross-store/stale read behavior, not demonstrated cross-tenant access or LIVE business effect. Original tool outputs75f2d0/ef41aa are recorded as qualified summaries in evidence, not invented savedTAP. No63test replay or production/auth/provider/business operation.

Exactly four future source/test paths: client/src/components/commerce/InternetProductSearchPanel.jsx (selected company/store read-state and request-generation invalidation only); server/src/routes/commerce-advanced-online-search.js (ONLY GET/history and GET/price-proposals require explicit valid active selected store BEFORE ensureMarketSchema, then parameterized selected-store read filters; no other handlers); NEW server/test/internet-search-store-context-ui.test.js; NEW server/test/internet-search-store-context-postgres.test.js. UI resets visible query-linked product/results/catalog/history/proposals/temporary order suggestions/match acknowledgements and excludes late prior-generation read replies after store/company change, close/unmount or A-to-B-to-A. All read requests carry validated explicit selected scope; no empty/invalid-store fallback to company-wide data. Caller audit found only this same shared panel for both commerce and platform base paths; no separate intentional company-wide history/proposal reader exists. These two GETs therefore require storeId in both modes; absent/invalid/foreign store refuses rather than silently falling back. Preserve all unrelated existing company-level endpoints unchanged. Keep provider requests, item/pack/identity matching, net-margin/cost/regulated prices, server proposal create/decision SQL, outbound order behavior, auth/licence/module checks, source counts/audit/history inserts and original styling untouched. The UI may not retarget an existing stale result to a new store's write controls; writer semantics/payload field contracts remain unchanged.

Required actual mounted synthetic tests: history/proposal URL scope; initial valid/absent store; A-B-A/company/unmount responses and errors discarded; stale catalog/search/product/proposal/order view cleared; current accepted result works; single retained unsaved action cannot target new store; no provider or business writer executed. New real isolated PostgreSQL registered GET tests: A/B/foreign/invalid/missing scopes, licence/role/support company controls, exact row isolation, parameterization and unchanged data/control fingerprints. Reproduce original failures before source, preserve evidence, then targeted Node20/full native CI, independent exact review, normal merge/exactmainCI/guarded release before grouped authenticated read-only acceptance. No new manual/PASS or wholeTask14 closure from local or CI results.

Claim status DOCS PREPARED / SOURCE NOT STARTED / NEW FLOW NOT INSTALLED OR TESTED. Checkpoint CHECKPOINTS/CHANGES/2026-10-26-internet-search-store-context.md; evidence CHECKPOINTS/EVIDENCE/internet-search-store-context-20261026/. Full canonical tracker PDF output/pdf/MyWorkStation_Open_Work_2026-10-07.pdf is synchronized with these three registry prefixes,

using exactly the same generated bytes as evidence claim-tracker.pdf; historical docs/roadmap PDF and all other-owner content remain unchanged. Single next action: root independent docs/ownership review, publish green claim/main; only then bounded source. Existing Task14 acceptance and every other owner stay retained. No auth, provider setting/key, schema/DDL, price/VAT/proposal/order/payment/stock/fiscal or production mutation.

25/10/2026 - CENTRAL-FOUR-GROUPS-01 / RECONCILED CURRENT STATE / GROUPED FINAL ACCEPTANCE OPEN

Central coordinator codex/central-four-streams-20261018 retains all four groups; each existing source owner remains unchanged. User requires autonomous preparation first and one grouped final batch for user-only actions. Canonical detailed reconciliation is CHECKPOINTS/CHANGES/2026-10-25-central-four-group-reconciliation.md with sanitized Rizareio aggregate evidence; this does not transfer occupied scopes or create new manual PASS.

Group1: fresh read-only production observations confirm Rizareio already has3375products/3375store rows,4395barcode pairs/59internal labels and no missing joined VAT departments. Do not repeat import or accepted CASH sale. Complete source-price/workbook reconciliation remains open: original approved package SHA256cbf0b1ef795389ba0ecbe774eb9131bcd1c8d9f853cecd127a4fb35bb095f2e5 is known but exact bytes were not resolved. Physical ftext VOID/CARD and KAT connector/POS residuals remain; current Rizareio snapshot had no eligible unresolved CARD request, so no VOID target is manufactured. Current ACTIVE metadata did not prove a fresh15second heartbeat.

Group2: seven25Oct full backup runs were SUCCEEDED/PASSED; current18UTC dump/upload/TOC monitoring and app/backup manifest agreement were observed. This is not fresh full recovery or independent HMAC/storage-retention proof. Staging runner/restore/capacity/cleanup prerequisites remain open; no infrastructure mutation or upgrade occurred. Group3:63local Node24 isolated regression checks passed for catalogue/regulation/QR/supplier contracts, with no production/business action or new authenticated acceptance; existing accepted imports and limited supplier results remain protected.

Group4: invitation source3153 is now technically installed at exact2c1007e8, PR/main4228server+8backupPASS/0FAIL/0SKIP each, real native8cases unskipped, ordinaryguard40233351096 and RenderLIVE/public landing proof in the separate exact email receipt below. No recipient mail, activation or business action was executed. Payroll/VOICE/wallet/iOS residuals remain with their retained owners. One consolidated final user batch stays deferred until central preparation is complete; already accepted tests and transactions are not repeated.

25/10/2026 - AUTOMATIC-REPORT-EMAIL-INVITATION-01 / TECHNICALLY INSTALLED / FINAL RECIPIENT ACCEPTANCE OPEN

Same retained integration owner codex/central-auto-dispatch-20261022, central coordinating executor root. Before-source receipt3152 exact aab7fe6e / CI40226347056 SUCCESS merged d2fde6b before edits. Source3153 independently reviewed NO BLOCKERS, exact head01a57582065f207d4c9ef3e5f868207668767647 and treef999b8d1512ea110ecb7537c43b8c92c2fa9a290; normal squash merge2c1007e8156d1ca7748551c85e917a35b739af32. The obsolete unmerged3121 claim is superseded by3152 and must not be merged independently.

Full PR CI40229748284/build121278911983 and exact-main CI40232554657/build121287430491 BOTH terminal SUCCESS, all5jobs successful. EACH actual Node20.20.2 log records4228server+8backupPASS/0FAIL/0SKIP. New real PostgreSQL invitation parentTAP437 and all8subcases actually ran unskipped in BOTH: committed issuance/read-only inspection/legacy domain refusal/commit rollback/two-client one-consumption/zero-write reuse/stale nonce-version attempt fences/busy-expiry-lifecycle-revocation controls. These are isolated engineering results, not recipient inbox or normal authenticated user acceptance. Earlier local19PASS/0FAIL/1explicitPGSKIP and sparse infrastructure FAILs remain historical and qualified; no test weakening, unchanged failed-run retry or guard bypass.

Ordinary workflow_run guard40233351096/deploy121289662282 SUCCESS explicitly checked out and pinned2c1007e8 after exact-main full CI; Verify full CI/freshness, rollback capture, actual Trigger and Wait all SUCCESS. Rollback artifact12613669782 preserves previous healthyf5da1510f. Render service srv-d9isenfavr4c73bdh52g in already owner-confirmed My Workspace: dep-dbf6rug473hc73c2ek50 deploy_hook LIVE25Oct21:02:51.079608UTC (23:02:51Europe/Athens). Independent no-cache HTTP observation21:03:07.056745UTC: /api/health HTTP200,oktrue,revision exactly2c1007e8156d1ca7748551c85e917a35b739af32. Generic /api/report-invitations HTTP200, Greek title/prompt, no-store/no-referrer and fixed CSP; exact HTMLSHA256d3c4210196a08c2573b011a434266c9063f211ee22c10289f7e18c30d087e080. Root independently opened the same generic route in the supported cloud browser and saw the Greek heading and request to open the full emailed link. No fragment, token, auth, inspectPOST or consent action was supplied. This proves only installed public GET/visible landing, not successful recipient confirmation.

Installed engineering: one email/save action and one explicit recipient invitation confirmation; existing verified/current consent reused without writes or mail; legacy endpoints preserved; same policy/grant/external activation and financial gates. This release performed no production recipient/challenge/SMTP/config/schema/provider/business action or accepted transaction replay. External automatic dispatch state was not re-read or changed. Final authenticated email/save, intended recipient inbox/explicit confirmation and complete automatic-report delivery remain OPEN for the one grouped final batch; do not ask for repeated codes/proofs or fabricate a fresh recipient/event. No new functional manual PASS or whole task closure.

Evidence CHECKPOINTS/EVIDENCE/report-email-invitation-20261025/technical-release.json and public-installation.json; synchronized with central four-group reconciliation in this documentation-only receipt. Same owners retained; no additional source change. Next: green exact receipt review/merge, retire obsolete3121 metadata, then only actual remaining grouped acceptance under the central coordinator.

25/10/2026 - AUTOMATIC-REPORT-EMAIL-INVITATION-01 / SOURCE IMPLEMENTED / AWAITING FULL NATIVE CI AND USER ACCEPTANCE

Same retained integration owner codex/central-auto-dispatch-20261022; named central executor root, source branch feat/report-email-invitation-20261025. Green before-source continuation3152 head aab7fe6e2889e91029be43c68c4667b401a73c44 / exact CI40226347056 SUCCESS / main merge d2fde6bbd423dccfa16c9a832327c594737c1d99 preceded every source edit. Original3121 remains untouched and is superseded for this same claim by3152; do not merge the historical duplicate independently. Existing owners and accepted recipient verification/consent remain protected.

Implemented one email/save management action: existing current verified/consented recipient is reused without any write or mail; otherwise one committed invitation and one explicit recipient confirmation replaces the two copied-code steps. Existing legacy endpoints and advanced code controls remain compatible. The invitation uses existing CONSENT schema literal with distinct MWS_REPORT_INVITATION_V1 hash domain, random proof/nonce and exact scope/version/generation/issuedAt/consent revision/frequencies. Stale/replaced/expired/revoked proof never spends a newer challenge's attempts. Public confirmation takes the same lifecycle/Store/policy/grant/recipient/consent lock order and records report-recipient:<id> authority, never impersonating issuer or granting policy/automation. Concurrent confirmations may consume once; uncertain SMTP is not retried.

Public generic GET has no service/database call. The token stays in the email fragment, is removed from browser history and submitted only in a same-origin explicit-intent POST; no third-party landing assets, no-store/no-referrer, CSP and textContent rendering. Trusted canonical origin does not derive from request Host. Dedicated mount includes a four-argument error boundary outside its Router, intercepting upstream global JSON errors before the global logger. Existing global wire parser stays capped at12MiB; this route additionally bounds declared length and preparsed semantic JSON at8KiB and invitation envelope at4000 characters. Do not mislabel this as an8KiB raw chunked-wire cap. Unrelated parser/logger behavior remains unchanged. No authentication mount, schema/manifest/provisioning, configuration, scheduler, financial

source or mail adapter change.

Actual local Node24.22.1 focused result:19PASS/0FAIL/1explicit native PostgreSQL environmentSKIP. Includes real Express global-parser/mount/logger malformed-secret redaction, scannerGET zero calls, oversize/nonJSON/origin/intent refusals, actual landing JavaScript explicit consent/XSS-safe text, mounted email/save once/reuse/late-store response and protected legacy recipients/routes/UI. New native PostgreSQL parent+8subcases requires actual unskipped Node20 full CI: real issuance/inspect, legacy domain rejection, commit rollback, two independent confirm clients/recipient actor, unchanged policy/grant/payload/slots/control, no-write reuse, replacement/version/attempt exhaustion and busy/expiry/lifecycle/revocation. No local PG execution is claimed. Initial missing-new-API baseline0PASS/1FAIL is retained as capability absence, not evidence of an old runtime regression. No failed assertion was removed.

Frontend npm run build now PASS,2440modules and TABLE_SERVICE verifier; initial missing tracked shared/greece-time.mjs and later missing tracked tools/verify-table-service-bundle.mjs caused explicit sparse-checkout infrastructure failures. Restored only those existing HEAD files; no application workaround or guard weakening. Git sparse shared comparison also returned139 once; no runtime conclusion inferred. Local Node24 is exploratory; required exact Node20 CI remains authoritative. Raw baseline/focused/build evidence in CHECKPOINTS/EVIDENCE/report-email-invitation-20261025/.

SOURCE PREPARED / NOT INSTALLED / NEW FLOW LAB-USER NOT TESTED. No production recipient/challenge/mail/config/schema/provider/business action, financial replay, or user login. Current external dispatch state was not read or changed. Single next action: independent exact source/native review and mandatory full PR CI, then normal merge/exact-main CI/guarded release before one grouped final acceptance. No routine user action is requested during technical work.

25/10/2026 - AUTOMATIC-REPORT-EMAIL-INVITATION-01 / CENTRAL CONTINUATION RECEIPT / RECONCILED CLAIM CANDIDATE

Same retained source owner codex/central-auto-dispatch-20261022; central coordinator codex/central-four-streams-20261018. The owner explicitly directed the central conversation to organize four assistants and continue autonomously, deferring grouped user actions to the final batch. Root is the named central coordinating executor for this same-owner continuation; the reports_ai_workforce assistant prepares this documentation/review only. This is not a transfer to a competing source owner and does not release any retained mail/lifecycle/backup/VOICE/wallet/native/KAT/DAILY scope. Before any runtime work, publish this exact receiving/continuation receipt and the reconciled source claim green on main; root alone coordinates shared records and the regenerated tracker PDF.

Read-only reconciliation baseline main 96c1125 (merged pilot wallet email receipt3151). Existing claim3121 exact177cb45bddbcd6fad453ac19bba84e5d770f3156 has CI40175343019 SUCCESS but is unmerged and diverged from newer main. Its four documentation additions are preserved below; all current-main wallet/ftext/polling and other-owner records remain byte-for-byte after these new prefixes. No old shared registry or PDF snapshot is substituted. The earlier e69eb1e baseline inside the original claim is historical; this receipt supplies the refreshed baseline. The new candidate requires its own exact independent review and applicable CI before merge; old-head CI is not reused as new-head proof.

Independent design review found no blocking issue in the bounded invitation contract: read-only landing GET; explicit recipient confirmation POST; exact scope/version/generation/frequencies and distinct token purpose; hash-only proof storage; replay/revocation/expiry protection; no issuer impersonation; current verified/consented rows reused without new mail; no policy/grant/dispatch activation from token possession. Exactly the source/test paths in the original claim remain the future scope, with index.js limited to the stated import/mount. No additional runtime, schema, provisioning, workflow, mail adapter or recovery path is claimed.

Status: DOCUMENTATION PREPARED / SOURCE NOT STARTED / NEW FLOW NOT INSTALLED OR TESTED. Existing recipient verified/consent-active observations are preserved without replay; current dispatch activation was not re-read and is not newly claimed ON or OFF. This preparation performs no

source/config/schema/recipient/SMTP/provider/business action or new LAB/USER acceptance. Single next action: independently review and publish this current-main reconciliation as a separate continuation candidate, preserving existing3121 until central coordination explicitly supersedes it; obtain green exact CI/main receipt before bounded source. New user routine approval is not required.

25/10/2026 — AUTOMATIC-REPORT-EMAIL-INVITATION-01 / ASSIGNED BEFORE SOURCE

Same retained integration owner codex/central-auto-dispatch-20261022; continuation branch feat/report-email-invitation-20261025. User explicitly requested email/save with no copied codes and authorized implementation. Current main e69eb1ed49ae4b973e77513448d44d5f0541b83d read; existing recipient flow still two code challenges. User screenshots on25Oct show verified email and active consent; preserve those rows, do not request repetition. These are user UI observations, not independent runtime/whole report acceptance. No raw mailbox or challenge proof published.

Bounded exact source paths: server/src/services/automatic-report-recipients.js; server/src/services/automatic-report-dispatch-policy.js; server/src/routes/automatic-report-dispatch.js; client/src/components/platform/AutomaticReportDispatchManager.jsx; NEW server/src/services/automatic-report-invitations.js; NEW server/src/routes/automatic-report-invitations.js (self-contained HTML confirmation landing, no client routing changes); server/src/index.js ONLY new import and dedicated /api/report-invitations mount adjacent to existing report-dispatch mount before authenticated management, no existing auth mount edits; server/test/automatic-report-recipients.test.js; server/test/automatic-report-dispatch-routes.test.js; server/test/automatic-report-dispatch-ui.test.js; NEW server/test/automatic-report-invitations.test.js; NEW server/test/automatic-report-invitations-postgres.test.js. No other source/workflow paths. Public confirmation must use narrowly scoped token authority and accurately record recipient consent, never substitute the issuer as the confirming mailbox holder. One email invitation binds company/store/recipient/version/lifecycle/consent revision and exact frequencies with a distinct token domain. Public possession proves mailbox only for that narrow invitation; never impersonates administrator or grants policy/automation authority. Landing GET is read-only (mail scanners/prefetch MUST NOT activate consent); explicit labelled confirmation POST atomically verifies address and records disclosed provisional-report consent. No code copying or second email. Reuse already verified/current-consented recipients without new mail or invalidation. Preserve legacy endpoints and prior proofs; reject cross-purpose/replayed/expired/revoked/stale-generation/version/frequency tokens. Hash-only storage, no token logging, no-store/no-referrer response, bounded expiry/cooldown/attempts, no third-party landing assets. No schema/manifest/provisioning or existing authentication weakening.

Protected: same current SuperAdmin/tenant checks on invitation issue, store lifecycle lock order and revocation, uncertain SMTP no blind retry, financial HOLD/READY gate, latest cutoffs and no historical catchup, external OFF/policy/grant boundaries. Source starts only after this claim reviewed/green/merged. Isolated meaningful token/HTTP/scanner/replay/revocation/concurrency tests and required full CI/review/exact ordinary release precede new LAB acceptance. Existing LAB/business tests are not replayed. No production write/send/config/deployment in this claim; installed new flow NOT TESTED, whole automatic-send acceptance OPEN. Same integration owner retained, all other owners unchanged.

Checkpoint CHECKPOINTS/CHANGES/2026-10-25-report-email-invitation.md. Single next action: merge this pre-source claim after CI/review, then implement bounded candidate. Literal consent-on-GET is excluded because email security scanners can follow links without recipient action.

25/10/2026 — DAILY-CHECK-ONLINE-POLLING-01 / ACTIVE V2 TECHNICAL RELEASE VERIFIED / PHYSICAL READ-ONLY ACCEPTANCE OPEN

Retained owner/branch fix/online-disabled-polling-20261025. Engineering implementation and release complete for actual operator StoreOnlineOrdersV2, not a global functional/LAB PASS. User-authorized claims3142/07008841 and V2 scope correction3143/2c7deb2f preceded follow-up source. Legacy3127/eba062f7 remains legacy-only historical evidence; actual V2 source3145 exact0205abbd67b209ec31a915cbc12186e221c24b93 merged601b4fe11143573ca52789cf7644d71c73fb2ebb.

Exact sourceCI40205412412/build121205523492 all5SUCCESS:4208server+8backup/0FAIL/0SKIP. Exact merged-mainCI40206297778/build121208017923 all5SUCCESS:4208server+8backup/0FAIL/0SKIP. Actual mounted legacy+V2 regression14PASS ran unskipped; original active V2 negative control fails4of6 scenarios. Prior eac851e0 source run40204783183 was superseded/cancelled, not a final full PASS. Docs-only1b459f54 wallet reconciliation retained; newest docs9b4f34b1 changes no V2 runtime and matches verified V2 byte-for-byte. Other owners/PDF/manual/financial evidence preserved.

Ordinary guarded deploy workflow40207076296/job121210252838 classify/deploy SUCCESS, exact601b4fe1. Renderdep-dbf20ie7bikc73bt4bcg LIVE25Oct15:33:18.195371UTC (17:33:18 Europe/Athens). Independent public no-cache probe2026-10-25T15:34:38.467483+00:00: /api/health HTTP200/oktrue/exact601b4fe1. Public /store/kat-store points to /assets/main-kcrtAs1f.js (SHA256dfee36dd3effca40408083bd1d5b54df74c5dad1ea6bcc9022edd1e69e36d90b) -> active runtime /assets/entry-1HtDrzKK.js (SHA256ef1e15d588164a9b9775f7251f6dc6ee8ad4c590569474c82e220ef1b36ebee7). Actual downloaded active online GET implementation contains explicit disabled403 guard, inFlight guard, scope identity guard and labelled manual Refresh. Old production entry-Calmu9BG.js SHA2564222e0b75ed0ee17c0853cbfd8552e3bf625ef87e931c4b29cfd640f47313258 contained the unguarded active V2 implementation. This is served-client engineering proof, not authenticated physical behavior.

Automatic polling stops only after the explicit disabled ONLINE_ORDERING403; generic403/network failures retain retry. Launcher/Refresh can retry; store change resets scope and discards old responses/rows; concurrent reads excluded and StrictMode/unmount covered. Source-slice comparison confirms move/reprint/cancel/checkout/txId/payment/session/auth handlers unchanged. No production configuration, operator login/PIN, shift, order-status/print/payment/stock/fiscal operation or accepted transaction replay by this owner. Empty filtered Render log sample does not prove global cessation.

NORMAL OPERATOR POS ACCESS IS STILL BLOCKED IN CLOUD BY PERSONAL PIN, not a site outage. Authenticated Platform Admin is available, but does not certify an operator session. Existing physical POS tabs do not automatically replace their loaded JS. Single next action: on the intended actual POS, with empty cart/no in-progress payment, refresh once, identify loaded new revision/asset and observe read-only disabled/enabled behavior across at least3poll periods plus manual retry; do not create a sale/order/payment for this check. Hosted/physical read-only acceptance and all old-client traffic cessation remain OPEN/NOT TESTED. Same owner retained pending observation; no second scope owner, functional manual, numbered closure or PDF PASS claim. Evidence CHECKPOINTS/EVIDENCE/online-polling-20261025/release.json.

25/10/2026 — DAILY-CHECK-ONLINE-POLLING-01 / ACTUAL POS V2 CALLER FOUND / BOUNDED CLAIM AMENDMENT BEFORE SOURCE

Same user-authorized receiving owner/branch retained. IMPORTANT correction to PR3127 scope: production30fe4c10 public runtime assets main-CCe-cUU6.js -> entry-Calmu9BG.js (SHA2564222e0b75ed0ee17c0853cbfd8552e3bf625ef87e931c4b29cfd640f47313258) contain one online-orders GET implementation, with PAY/cancel/checkout and unguarded7000ms polling. Source StoreOperatorWithOnlineOrders.jsx imports StoreOnlineOrdersV2.jsx, not StoreOnlineOrders.jsx. Thus merged3127/eba062f7 fixes only the legacy component; it DOES NOT establish a fix for the active operator POS. Prior sourceCI4201+8/all5SUCCESS proves its bounded tested scope only. No active-POS functional PASS or global403 cessation claim.

Extend the retained independent READ polling claim ONLY to client/src/components/store/StoreOnlineOrdersV2.jsx and server/test/online-orders-polling-mounted.test.js (expand actual mounted tests to both components). Keep legacy component source unchanged. Required: same explicit disabled403 suspension/manual retry, per-store stale-response suppression, in-flight exclusion, cleanup/StrictMode; actual V2 entry/import and public served asset verification. Synthetic actual component tests must cover both implementations. V2 move/reprint/cancel/checkout/txId/payment/fiscal/stock/session/auth handlers and destination/print utility remain byte-for-byte unchanged. Do not retake the broader online-store/payment owner scope.

Read-only public runtime inspection and normal Admin navigation only. Store Mode reached the normal personal-PIN login; no operator login, PIN, shift, payment, order-status, print, config or production data action was performed. Render logs returned no matching sample; this is not proof of global traffic cessation. Main3127 CI40203753323 still running at discovery; ordinary freshness guard may skip superseded revisions. Never bypass it. Amend claim green/main BEFORE V2 source, exact source/main CI and guarded release then served V2 proof; physical selected-POS read-only acceptance remains OPEN/NOT TESTED. No functional manual or numbered/PDF closure. Next: publish this scope correction, patch active V2 polling only and expand actual mounted tests. Checkpoint CHECKPOINTS/CHANGES/2026-10-25-online-polling-v2-caller.md.

25/10/2026 — DAILY-CHECK-ONLINE-POLLING-01 / USER-AUTHORIZED HANDOFF / ASSIGNED BEFORE FOLLOW-UP SOURCE

ΑΝΑΛΗΨΗ ΑΠΟ Καθημερινός έλεγχος MyWorkStation / fix/online-disabled-polling-20261025 — ASSIGNED same branch, receiving Work conversation explicitly authorized by user to continue. Bounded independent scope: StoreOnlineOrders disabled-module polling only; existing online/Daily owners unchanged. PR3127 candidate retained; conflict resolved as021c11617 against main30fe4c10. Original runtime blob83d168a unchanged. Previous exact CI40200907030 all5SUCCESS; new combined CI40202455665 running. No merge/deploy/functional PASS.

Local source hook harness reproduced new candidate failure: render storeA with pending request, switch toB, then resolve A with explicit disabled403 and B successfully; B next automatic poll is suppressed (2requests observed, expected3). This is local hook simulation, NOT actual React mount or hosted LAB. Existing disabled403 suppression and switch reset passed the same limited harness. PR3127 DRAFT until this race is fixed and actual mounted regression passes.

Authorized follow-up paths ONLY client/src/components/store/StoreOnlineOrders.jsx and new server/test/online-orders-polling-mounted.test.js, plus this checkpoint and shared records. Required: store-generation/request freshness, no late old-store success/error or suppression; enabled polling/retry, generic403/network retry, explicit refresh, cleanup/StrictMode and non-overlapping load evidence. Server auth/payment/order-state/stock/fiscal/settings remain unchanged; diagnostics GET-only synthetic. No business transaction repeated. Source starts after this claim green/main. Full exact PR/mainCI and ordinary guarded exact release then hosted read-only LAB before functional/manual PASS. Status OPEN/ASSIGNED; no central numbered completion/PDF PASS closure. Next: claim green/main then source+mounted regression. Checkpoint CHECKPOINTS/CHANGES/2026-10-25-online-polling-handoff.md.

24/10/2026 — KAT cutter advance source LIVE / exact CI and release verified / WINDOWS REPLACEMENT AND PHYSICAL RETEST PENDING

Same retained thermal owner. PR3117 source2d139f0a86397829a39d7507fb0df5288808f609 fullCI40080736152 SUCCESS/all5; actual WindowsPowerShell5.1 job120833564323 ran both loopback ticket cases successfully, not parser-only. Main merge297e602e5f4e48d9fe742e90879a3fd0350d9a2b fullCI40081392770 SUCCESS/all5, 4181server+8backup/0FAIL/0SKIP. Normal guarded deploy40081894850 SUCCESS. Render appdep-dbe7jioae00c73c6k4h0 LIVE24/10/2026 12:28:30 Europe/Athens (09:28:30.095126UTC), exact297e602e. Independent GET /api/health HTTP200/oktrue/revision297e602e confirmed. This is technical source/release evidence, not a physical fix acceptance.

Only network full-cut suffix changes from immediate GS V0 to feed-to-cutter GS V65,0; Greek ticket bytes and all existing settings/pairing/journal/idempotency boundaries preserved. The new source is available through existing authenticated selected-store connector download, but the user's already-running Windows file has NOT been replaced by deployment. Next user step: selected KAT printer panel → download connector Windows; then stop the old running connector and run the newly downloaded file under the same Windows account, retaining existing device.xml. Browser refresh alone is insufficient. No new pairing/IP/product configuration required. After confirming new connector running, identify ONE new coffee/options test; never replay the already-WRITTEN old batch. Full-paper missingmodifier remains OPEN until actual new physical Greek/options/cut result is observed. User's «οχι» after FEED suggestion remains ambiguous, not manufactured hardware evidence. No financial/stock delta PASS, production print replay, payment/fiscal/stock or settings mutation by tools. Greek priority presentation and prior incremental/cart-recovery/reprint/startup/bothPOS/mixed-retail residuals retained. Other owners preserved. No CI-only functional manual or whole-scope closure. Checkpoint CHECKPOINTS/CHANGES/2026-10-24-kat-thermal-paper-review.md.

24/10/2026 — KAT complete paper confirms missing final modifier / cutter advance candidate / AWAITING CI AND PHYSICAL RETEST

Same retained owner codex/kat-thermal-production-20261023; continuation branch fix/kat-thermal-cutter-advance-20261024. User supplied the whole flat ticket and explicitly confirmed this is all of it: batch1ac12d4c-551c-42dd-af8a-70c0fe71394a ends at 1 x FREDDO ESPRESSO; ΜΕΤΡΙΟΣ is absent from the detached ticket. This supersedes the earlier photograph-cropping uncertainty. User's short response to the FEED suggestion was «οχι»; do not infer a measured hardware result or a confirmed root cause from that ambiguous reply. Persisted batch/ticket and isolated bytes already contain ΜΕΤΡΙΟΣ. No old dispatch is replayed. Overall physical Greek/options/cutter acceptance FAIL/OPEN, financial/stock/control deltas NOT TESTED.

Bounded protocol defect: existing GS V 0 cuts in place and does not compensate for the print-head/cutter gap; three fixed line feeds are not a device-independent guarantee. Epson ESC/POS GS V reference https://download4.epson.biz/sec_pubs/pos/reference_en/escpos/gs_cv.html distinguishes Function A from feed-to-cut-position Function B. Candidate changes only the network cut suffix from29,86,0 to29,86,65,0, preserving the same full-cut request and all ticket bytes/settings. This corrects the protocol issue; it is NOT proof that it is the only cause of missing physical options. No priority/encoding/settings/queue/journal/pairing or server behavior change.

New isolated Test-NetworkTicket.ps1 loads only the actual Lines/Print-Network AST functions, never connector startup or production API/credentials. Loopback-only synthetic tickets exercise final Greek modifiers, multiple quantities/items/options, notes/allergens, page17, exact body and cut-on/off. Local PowerShell7.4.6 two cases pass; identical test against original immediate-cut function fails the cutter assertion as expected. Actual WindowsPowerShell5.1 execution is added to the existing Windows CI job and remains pending until observed. Full CI, green merge, normal guarded exact release/download, installed Windows connector replacement retaining existing pairing, then ONE separately identified new physical ticket required. Browser refresh alone cannot replace the running downloaded connector. No physical test/payment/fiscal/stock/production write performed by tools. Never label technical CI as physical PASS.

Other-owner work and all prior thermal residuals retained. Checkpoint CHECKPOINTS/CHANGES/2026-10-24-kat-thermal-paper-review.md.

24/10/2026 — KAT first physical ticket / modifier visibility unresolved / retained thermal owner

User confirms KAT is not trading yet; this is an approved printer-only test. Screenshots show admin setup for selected KAT, one FREDDO ESPRESSO selected, settings saved, Windows connector paired after user-scoped file unblock and session-only RemoteSigned, then one production dispatch from KAT DELIVERY / KAT-POS-02 / ΑΘΗΝΑ ΜΑΡΗ. No payment was requested. Physical paper image shows batch 1ac12d4c-551c-42dd-af8a-70c0fe71394a, DOCTOR, 1 x FREDDO ESPRESSO and no environmental-fee line. The lower paper edge is at the product line; selected ΜΕΤΡΙΟΣ is not visible in the supplied image. Do not treat this as full printer/Greek/cutter/mixed-cart/both-POS PASS. Pre-test screenshot shows no active-shift transactions; complete financial/stock/control deltas NOT TESTED. User explicitly rejected further financial diagnostic navigation for this printer-only test.

Read-only DB confirms one KAT job f9630d76-da66-46f9-971d-9276027bb465 at 2026-10-24 08:18:31.320056 UTC, WRITTEN; persisted batch and ticket both contain ΜΕΤΡΙΟΣ and priority DOCTOR. Thus server did not drop the modifier; DOCTOR reflects applied priority rather than an invented value. KAT settings enabled/paired, NETWORK192.168.1.87:9100, page17, cuttrue, exact single coffee allowlist. Token/hash/code never retrieved or published. No replay/reprint, configuration edit, production mutation or transaction executed by tools.

Isolated execution of the unchanged deployed formatter/network function under portable PowerShell7.4.6 against localhost-only socket capture produced CP1253 ΜΕΤΡΙΟΣ bytes after product, ESC t17 prefix and cut suffix29,86,0; 117bytes with synthetic batch test-only. This is local technical evidence only, not Windows5.1/printer acceptance. Root cause of absent visible line NOT ESTABLISHED. No speculative source fix. Next: obtain the same already-printed ticket fully flat/unfolded including paper after product; do not resend old batch. Greek priority labels remain a presentation residual; all earlier recovery/incremental-sent-row/startup limits and other owners preserved. Checkpoint CHECKPOINTS/CHANGES/2026-10-24-kat-thermal-paper-review.md.

24/10/2026 — Thermal printer admin entry installed / AWAITING LAB / same retained owner

PR #3111 source ce70e43c21ee21a3e9fbebaad428b1d5eecdcd3b passed full CI 40072439144 and merged as a974f6299a295eb954b99f15154ff07d79b2fb7f. Main CI 40074850868 succeeded: 4175 server + 8 backup tests, zero failures/skips, all five jobs successful. Normal guarded release 40075458494 succeeded. Render app deploy dep-dbe656vavr4c739pmhv0 became live 24/10/2026 10:49:28 Europe/Athens (07:49:28 UTC) at exact a974f6299a295eb954b99f15154ff07d79b2fb7f; independent GET /api/health returned HTTP200, oktrue and the same revision. This is technical installation evidence, NOT functional LAB PASS. Platform Admin printer entry is implemented for EVERY store, settings scoped to selected company/store; actual admin navigation, Windows connector, physical printing/Greek/cutter/both POS/mixed cart still NOT TESTED. Same thermal ownership retained. No config/pairing/token/queue/order/payment/stock/fiscal/shift action performed. Preserve original POS cart; next action is refresh admin tab only and open selected KAT store printer panel. All prior thermal residuals and other-owner assignments remain unchanged.

24/10/2026 — KAT thermal admin reachability / ALL STORES / same retained owner

User screenshots show operator status-only panel and Store Mode operator login; earlier admin navigation advice did not reach configuration. Same approved thermal owner adds a direct Platform Admin printer button to EVERY store row, per explicit user instruction all stores. Scoped new-company/store panel reuses existing settings/connector; no POS login, support impersonation, shift or cart action. Explicit-company routes require Platform Super Admin and actual company/store validation by existing service; existing operator routes remain scoped and read-only. Local actual mounted route/UI4PASS/0FAIL/0SKIP plus frontend/TABLE_SERVICE buildPASS9.47s, late previous-store response rejected. Full CI/exact guarded release and actual admin UI/pairing/Greek/cutter/bothPOS still pending. Existing sourcef4bdcd8 installed; no device config/token/job/order/payment/stock action, no manual PASS. Checkpoint CHECKPOINTS/CHANGES/2026-10-24-kat-thermal-admin-entry.md.

24/10/2026 — KAT thermal technical installation verified / AWAITING PHYSICAL SETUP AND LAB

Same thermal owner retained; no manual/functional PASS. Infrastructure232c182 joint sourceCI40067758842 and mainCI40068382340 all5SUCCESS/4173server+8backup/0FAIL/0SKIP. Guard40068946010 installed appdep-dbe4mnt9fdbs739adg00 and backupdep-dbe4m7mq1p3s73f9for0 at exact232c182, four tables observed empty. GUI reservedPowerShell$input follow-up3108: firstCI40069088518 FAILED missing active-list record, corrected without bypass; newsourceCI40069364135 all5SUCCESS, mergedf4bdcd84754b28cf812a7784fbecbee3e6d31b3e. MainCI40069882541 all5SUCCESS; normal guard40070500429 SUCCESS; appdep-dbe51lgae00c73blrgj0 LIVE06:35:48.602UTC exactf4bdcd8. Independent HTTP200/oktrue/exactf4bdcd8 verified. Existing backup remains232c182 with unchanged backup source and manifest; ordinary pulse06:20:13.611UTC reported revision232c182/hashcb67deb5813 b9416a71853ec3fc185931940c6039c32523ae0ec8d080732a6a8/storagePolicyVerifiedtrue. MAC was not independently validated in this turn; no restore/RESET or complete backup PASS is inferred. No backup run/deploy/schedule action was manually triggered.

Read-only production observations: all four printer tables exist; global printers0/requests0/jobs0/resolutions0 and KAT pilot-company/kat-store configuration0. No device pairing, print job, preparation, sale/payment/fiscal/stock transaction or production printer setting was made. User confirms access to a KAT LAN PC. Next: inspect selected KAT POS preparation/printer panel, then record a fresh scoped fixture/before-controls before pairing/configuration and any identified physical print. Greek/cutter/clipboard/Windows runtime/both-POS/mixed-basket actual results remain NOT TESTED. Incremental sent-row additions, whole-tab recovery, intentional reprint and automatic connector startup remain unsupported/residuals; do not claim general production acceptance. Checkpoint CHECKPOINTS/CHANGES/2026-10-24-kat-thermal-catalogue.md; PR3093/3108.

25/10/2026 - FTEXT CONFIRMED OPEN-DOCUMENT VOID / ENGINEERING PROOF / PHYSICAL ACCEPTANCE OPEN

Retained owner codex/rizareio-ftext-bridge-20261022; owner-authorized bounded cancellation follow-up claimPR3131 mergedfece6beb. SourcePR3132 exact1caaa111d165625981662b7e1b8b8621004857f8 mergedbc6bb37974b1f2f4707278c48e4898b6c0e6c8b5. Exact Windows40192944687/job121167652277 and native40192944660/job121167652478 SUCCESS. Windows actual synthetic17VOID cases include one filesystem round-trip, exact onlyVOID bytes, failed original/missing/changed response refusal, receipt QR/foreign reply refusal, timeout/restart/no resend and retained STATUS/CASH/install/DPAPI cases. Actual Cloud-Tools authenticated void-poll/result allowlist covered, arbitrary execute refused. Native22PASS/0FAIL/0SKIP includes concurrent one-shot VOID claim, foreign/stale/user-ack refusal, immutable original/result/void evidence, confirmed pending-lock release/new request, same-key cancelled replay and unknown VOID remaining blocked with no rearm. No financial tables exist in the native VOID fixture, so any Sale/Payment/Stock/shift write would fail. Actual full-schema PG18 archive/COPY and existing cash/card idempotency controls also passed.

Local focused22PASS/0FAIL/0SKIP, earlier broader25PASS/0FAIL/1native-infrastructureSKIP, actual frontend build PASS and diff check PASS. SourcefullCI first attempt40191987536 refused before tests because source PR did not include a fresh active-list change; corrected documentation, policy not relaxed. Source first Windows/native proofs also passed; Final exact full sourceCI40192944676/job121167856435 SUCCESS4192server+8backup/0FAIL/0SKIP,all5jobs. Strict failedCommand binding additionally requires the exact original PAY code; no generic PAY error is accepted. Exact merged-mainCI40193663396/job121169978478 SUCCESS4192server+8backup/0FAIL/0SKIP,all5jobs; exact merged-main Windows40193663336/job121169795498 SUCCESS. Ordinary guarded release40194463393/job121172254474 SUCCESS, Renderdep-dbevkam7bikc73blinpg LIVE25Oct12:48:26.843195UTC. Independent public health oktrue/exactbc6bb37974b1f2f4707278c48e4898b6c0e6c8b5.

Manager-only selected-terminal cancellation requires original CARD REQUIRES_CHECK with explicit PAY error44/48, original raw/hash binding and persistent no-card-present/stopped-EFTPOS/exclusive-register acknowledgement. An error48 is NOT a bank decline proof. A separate durable VOID job keeps original result immutable. Only current paired device/version/settings can claim/report once; Windows refuses changed/missing original response and preserves intent/result across restart. VOID success requires code0/exactserial/day/counter/no final QR/no payment line. Only then effective view CANCELLED and register pending lock releases; no sale/stock/fiscal finalization. Unknown result cannot rearm/resend/unlock. DOC_CANCEL/refund, arbitrary commands, configuration sweeps, manual success and real card actions are absent.

Only exact known legacy pending index is transactionally upgraded during ordinary startup under advisory/table locks; typed catalogue/ownership and all financial identity indexes remain unchanged, drift refused. Historical REQUIRES_CHECK row plus immutable VOID JSON remain archived/restored; general lifecycle engine retains a conservative maintenance hold even after verified VOID, explicitly OPEN, no unrelated owner changes. No Work production SQL write, user card setting change, receipt or VOID was executed by agent. Reconciled single CASH USER PASS (e4241ef7/sale98bee70a/0.50/stock0->-1) and original cash settings protected.

Installation needs updated current selected-POS Windows package; old connector does not poll VOID and cannot run it from an admin click. Physical VOID is NOT TESTED, no new manual/PASS or whole connector closure. CARD remains OFF pending actual programmed profile/firmware/result verification; this cancellation feature does not certify an unknown card profile. Only user may initiate any separately reviewed physical test. Whole connector OPEN/ASSIGNED; retained owner continues. Scoped PDF CHECKPOINTS/EVIDENCE/ftext-recovery-20261024/void-release.pdf.

Read-only production BEFORE12:29:52.316575UTC: exact accepted v1 pending index and only requeste4241ef7 SALE_COMMITTED, sale98bee70a, resultHash30d7197b5f94473ed23f5f1463088c19bb0c8f611293d65c6612101dfb49dae5, sales1/transactions1/movements1. AFTER12:49:10.33292UTC: exact reviewed v2 COALESCE(VOIDstatus) pending predicate, same request/status/sale/resultHash, no VOID metadata, sales1/transactions1/movements1 unchanged. DeviceACTIVE,lastSeen12:49:08.882626UTC,same configeb2b065b/settingsHashbff5db8e7a113c21b479499e81d629eaca48ddedca4b190c0af7b1b85d7a8890,CASHtrue/CARDabsent. This is read-only engineering rollout proof, not physical VOID acceptance. The changed strict pending-index contract requires a compatible forward release; do not assume a pre-v2 startup validator can be used as an immediate rollback without a reviewed compatibility release. General cancelled-history maintenance residual stays OPEN.

Rebuilt current operational CMD with actual reviewed installation-package builder at exact merged source; seven embedded modules byte-match merged Git blobs, same settings/hash, no credentials, no automatic connector or fiscal action. Same Librarylibfile_597bc5345cd88191a75436df91809309 replaced as version2/filefile_000000005b70820a80ebd555b018a739,65448bytes,SHA2563686559cb2a1a2424f02530a8fd6e401e32adee79c6990e8bada86d3d4834f7c. Windows extraction/menu/current module integration is covered by exact native Windows tests; physical updated-package/VOID NOT TESTED. User next closes only the old MyWorkStation connector, opens updated CMD and menu3; same saved configuration/user preserves pairing credential. Keep vendor FTEXT+ open. Do not replay successful CASH or enable unverified CARD settings. Whole connector and retained owner remain OPEN/ASSIGNED.

25/10/2026 - FTEXT OPEN-DOCUMENT VOID / OWNER-AUTHORIZED BOUNDED FOLLOW-UP / ASSIGNED BEFORE SOURCE

Retained owner codex/rizareio-ftext-bridge-20261022, branch feat/ftext-confirmed-void-20261025. User explicitly requests implementation after discussing no-card-present CARD test and confirmed cancellation. No physical card test yet, cardEnabled remains absent/OFF. Preserve reconciled single CASH USER PASS (requeste4241ef7/sale98bee70a,0.50,stock0->-1) and exact live803028cf. No repeated cash receipt for documentation.

Read supplied official DEV_FText_v25_02(1).pdf pages6/9/12/16-18: PAY uses programmed ID, VOID_DOCUMENT applies only to an open unfinished document, including declined card; finalized-document cancellation DOC_CANCEL is different and out of scope. Generic EFTPOS ERROR48 is not a proved bank decline. No automatic reprogramming or code sweep. No uncertain-result success, manual financial finalization, refund, DOC_CANCEL, resend or real card action by agent.

Bounded scope: authenticated selected-terminal manager request for one separately acknowledged open-document VOID of an existing unresolved CARD request, original result immutable, durable one-shot Windows VOID dispatch/result, explicit verified receipt-free success before effective cancellation, POS/admin display and release of register pending lock only after proved VOID. No new ownership edges/table/columns: own reviewed checkoutJson stores cancellation evidence. Ordinary-startup upgrade of ONLY exact known ftext pending index may be needed to exclude verified cancelled requests; reject drift and serialize, preserve native archive/COPY. Do not modify general lifecycle engine/worker/policy: its conservative hold may remain for historical cancelled requests, explicitly OPEN. All other owners and shared recovery source protected.

Tests required: native PostgreSQL concurrent/foreign/stale/idempotent VOID, closed/confirmed/committed receipt refusal, immutable original/void evidence and no Sale/Payment/Stock/shift mutation; Windows5.1 actual one-shot bytes/restart/no-resend/QR refusal and timeout; full exact CI/main/ordinary release and current package before any user-controlled physical test. Source engineering and physical VOID remain NOT TESTED; no manual/PASS closure. CARD profile/firmware still separately unverified. Next: publish this retained-owner checkpoint green/main before source, implement bounded cancellation and tests, then exact release. Whole connector OPEN/ASSIGNED.

25/10/2026 - RIZAREIO FTEXT SINGLE CASH RECEIPT / LIMITED LIVE USER PASS / CASH ACCEPTANCE COMPLETED

Retained owner codex/rizareio-ftext-bridge-20261022. User explicitly reported printed receipt after the separately authorized one-shot CASH at25Oct13:27Athens. Exact healthy revision803028cffeb3e2f487ed1b03efb70b783d111f01; sourcePR3126/fullCI40186112381 (4183+8,0FAIL/0SKIP), merged-mainCI40186803190 (4188+8,0FAIL/0SKIP), ordinary deployment40188097798 SUCCESS/dep-dbeua2nb9u1s73avsnc0 LIVE11:18:06.829488UTC. Receipt recordPR3128 mergedbda100ec after applicable docsCI40188514312. Current read-only /api/health still exact803028cf/oktrue. No application change or new transaction by agent in this acceptance record.

Measured BEFORE11:18:43.334691UTC (and requests0/sales0/ACTIVE reaffirmed11:23:08.032508UTC): companycmvgtyt64000vh7gt7vfad3h5/storecmvgtyt6d000zh7gtbsp1en3p, sole OPEN shift af937621-e635-42ba-9681-3629f8ea5931/RIZAREIO-POS-01/operator Θανάσης Μπρούμος, transactioncount0/cash0/card0/IRIS0/total0, sales0/requests0/movements0/completed-audit0/safety-audit0. SKU490 product03be210f-e1fa-4930-9005-9c829d893b02/NEPO500ML/price0.50/VAT13/stock0/latestmovementnull. No second selected-store physical terminal/control shift exists; separate-terminal control NOT APPLICABLE.

Observed AFTER11:28:28.431105UTC: exactly1 request e4241ef7-edd4-40a3-824c-e6a1536f55ee SALE_COMMITTED, created11:27:30.134543UTC/dispatched11:27:30.263965UTC/committed11:27:32.870299UTC. CONFIRMED/code0/serialDSM24014923/deviceTime25Oct13:27/dayId474/dayCounter27, QR present and rawResultHash add881ff7b1c404b117caaea2dcaad7966c1445640d2288a29e91f086514b0ea. One completed/ISSUED sale98bee70a-eb4e-43ee-aec4-833085f9de99/0.50, one Payment CASH0.50, one

SALE_CASH transactione812e11c-b56f-447c-b2f7-32a54ec95db0 in same original shift. Thus shift transactioncount0->1,cash0->0.50,total0->0.50,card0/IRIS0 unchanged. Exactly1 linked stock movement99c5a0d9-a8dc-460d-b239-4bca012ac224/SALE/-1 and SKU490 stock0->-1. Completed audit0->1, safety audit remains0. Audit matches request/sale/shift/terminal and records NEGATIVE_STOCK_RECORDED previous0,next-1,quantity1. Negative stock is the expected consequence of the owner's zero-stock import, not a duplicate. Actual saved plan confirms quantity1,department4,VATcode2/rate13,unit/line/total0.50,CASHcode1. All measured changes match the single action; no second business sale/payment/stock posting.

This closes ONLY physical CASH acceptance for this one SKU/department4/13%/selected DATECS and original shift. Supersedes the same-scope AWAITING USER ACCEPTANCE and RBS preflight FAIL as current status; earlier failed attempt remains historical without resend. Do not repeat this receipt for documentation. Cardoff and actual technician payment-profile/firmware/result verification, other departments/products, refunds/VOID/mixed, restart/unattended login and other models/terminals remain NOT TESTED/OPEN with retained owner. Whole connector remains OPEN/ASSIGNED. No broader LAB/generic certification or numbered Gate closure. Completed single-CASH test is removed from active residuals; next work is CARD profile verification, not another CASH receipt. Manual docs/manual/ftext/PASS.md updated with actual accepted steps and limits. Scoped synchronized PDF CHECKPOINTS/EVIDENCE/ftext-recovery-20261024/cash-user-pass.pdf.

25/10/2026 - FTEXT CHECKOUT PROVIDER ROUTING / EXACT RELEASE VERIFIED / AWAITING USER ACCEPTANCE

Retained owner codex/rizareio-ftext-bridge-20261022. Source PR3126 head24a6cfeca84a5f9b8ecb1041226acbed555de8f7 merged803028cffeb3e2f487ed1b03efb70b783d111f01. Full source CI40186112381/job121147271467 SUCCESS:4183 server and8 backup tests,0 FAIL/0 SKIP; all5 jobs success. Dedicated native recovery40186112382/job121147121077 SUCCESS. Local targeted21/0/0. Actual route now resolves company/store/terminal ftext before unrelated RBS readiness and rejects a provider change between preflight and transaction. Other RBS guards, ftext context/license/online/settings gates, lifecycle/idempotency/finalization and card-disabled configuration preserved.

Actual user corrected installer menu/paired/STATUS/online observations supersede prior menu NOT TESTED. Successful serialDSM24014923 STATUScode0 received25Oct10:27:16.211UTC, fiscalExecutionfalse; CloudDeviceACTIVE, ongoing ping. First CASH attempt with SKU490 water0.50 rejected at RBS preflight; no second attempt, physical checkout remains FAIL/OPEN until newly measured one-shot acceptance. No fiscal/business PASS inferred from source CI.

Read-only baseline25Oct10:48:43.033972UTC: companycmvgtyt64000vh7gt7vfad3h5/storecmvgtyt6d000zh7gtbsp1en3p; only shift af937621-e635-42ba-9681-3629f8ea5931/RIZAREIO-POS-01 OPEN,operator Θανάσης Μπρούμος,opened22Oct15:32:16.33403UTC; transactioncount0,cash0,card0,IRIS0,total0,shiftcash/card/expenses0. Sales0,requests0,completed-operator-audit0,safety-audit0. Product03be210f-e1fa-4930-9005-9c829d893b02/SKU490/NEPO500ML/price0.50/VAT13/currentStock0/latestmovementnull. No second physical terminal/control shift exists in selected store, so separate-terminal control NOT APPLICABLE rather than invented. Original failed attempt lacks full independent before baseline and is not financial acceptance. Refresh these measurements after exact release before any new user-controlled one-shot CASH.

No production SQL writes, settings changes, credential replay, receipt/payment/stock/shift action by agent. CARD remains off, full connector OPEN/ASSIGNED. Exact merged-main CI40186803190/job121151227238 SUCCESS:4188server+8backup/0FAIL/0SKIP and all5jobs. Ordinary guarded deploy40188097798/job121153122621 triggered dep-dbeua2nb9u1s73avsnc0 at25Oct11:16:26.121329UTC for exact803028cffeb3e2f487ed1b03efb70b783d111f01. cash/card/expenses0 and SKU490 price0.50/VAT13/stock0, latestmovementnull. Same configuration, cashEnabledtrue/cardoff,CloudDeviceACTIVE,lastSeen11:18:41.763635UTC,lastStatusoktrue. No pending request to resend. Historical release-time state: user-controlled CASH was then NOT TESTED; superseded by the measured25Oct single-CASH USER PASS above. Do not repeat that receipt. On any error/timeout do not repeat; inspect retained request/result. Scoped PDF CHECKPOINTS/EVIDENCE/ftext-recovery-20261024/checkout-routing-release.pdf. The full connector remains OPEN; no CI-only manual or financial PASS closure.

25/10/2026 — RIZAREIO FIRST CASH ATTEMPT BLOCKED BY RBS PREFLIGHT / FTEXT ROUTING CORRECTION OPEN

Retained owner codex/rizareio-ftext-bridge-20261022, continuation fix/ftext-checkout-preflight-20261025, existing ftext checkout scope only. Actual user screenshots confirm corrected installer menu, paired RIZAREIO-POS-01, delivered STATUS, repeated connected and admin Connected/code0 at25Oct12:27:16Athens. SKU490 NEPO500ML price0.50,quantity1,department4/VAT13%,stock0. Before screenshot shows no transactions in active shift (opened22Oct18:32:16) and zero personal expenses; independent fresh full per-shift/card/audit/control measurement was not captured, so financial acceptance is NOT TESTED, never manufacture it. User then pressed CASH once and UI rejected with RBS_CAPDRIVER_V1_WRITER_OFFLINE, preserving cart. No retry instructed.

Independent read-only25Oct10:37:53.00244UTC: requests0/sales0/transactions0/movements0; ftext ACTIVE,lastSeen10:37:52.13391UTC,successful STATUScode0/serialDSM24014923 received10:27:16.211UTC,fiscalExecutionfalse. Same configeb2b065b-ff03-4ee8-a957-e25bd79b827c/five CASH mappings,cardoff. Failure is provider preflight ordering: generic RBS writer readiness runs before transaction-local ftext selection, so correctly paired ftext is blocked by unrelated RBS readiness. No fiscal command or business record created. First physical CASH checkout FAIL/OPEN, successful communication remains protected.

Bounded correction: resolve scoped ftext configuration before RBS writer preflight and skip only that unrelated preflight for configured ftext. Existing ftext cashContext remains required inside transaction (license/online/currentSTATUS/profile); changed provider between preflight and transaction refuses409, preventing nonfiscal/RBS fallback. No RBS writer function, generic lifecycle engine, settings, pairing, printer scope or fiscal transport changes. Native installer PR3124 is now ordinary LIVE dep-dbet4jd9fdbs73cfkkvg exact38276aed54f5d05defe83efed66f57783e780b25 finished25Oct10:00:06.94865UTC. Installer settings/package need no replacement for this server routing correction.

Add isolated HTTP against actual extracted checkout preflight, actual scoped ftext lookup and RBS offline/mixed control; transaction provider-change guard tested directly. Local Node20 verification:21 PASS/0 FAIL/0 SKIP across ftext-checkout-preflight,ftext-http and rbs-capdriver-v1 tests after generating the local Prisma client; initial absent-client infrastructure failure resolved. git diff --check passed. Exact full CI, green merge/main/ordinary release/readback pending. No retry, receipt, card charge, production SQL write or functional/manual PASS. Next: finish bounded source tests/deploy, then fresh complete acceptance baseline and user-controlled one new attempt only after confirming no pending request. Whole connector OPEN/ASSIGNED.

25/10/2026 — FTEXT INSTALLER CORRECTION MERGED / WINDOWS AND FULL CI GREEN / PHYSICAL MENU RETEST OPEN

Retained owner codex/rizareio-ftext-bridge-20261022. SourcePR3124 exactcdf47487f5f826230700bc648df82b0ece9292aa merged38276aed54f5d05defe83efed66f57783e780b25 after fullCI40181232271/job121132721329 SUCCESS4181server+8backup/0FAIL/0SKIP and all5jobs. Native WindowsPowerShell5.1 run40181232229/job121132551770 SUCCESS: actual installer template extracts all seven byte-identical real modules and opens actual Setup with both cashFalse/cashTrue; menu4 exits without pairing/STATUS/network/connector. Unknown files still rejected. Existing29STATUS+48cash/cloud credential boundaries pass. Dedicated native recovery40181232243 SUCCESS. Local Node20 six tests pass; reverting only the template to original causes the new payload/allowlist assertion to fail, proving regression detection.

User-observed old installer FAIL remains historical; only exact Cash.psm1 allowlist inclusion changed. Replaced original Librarylibfile_597bc5345cd88191a75436df91809309 as version1, filefile_0000000034a48 1f490bd1a5bba48e7ec,60888bytes,SHA2567d7085e035c553f487c3263eeeabc95fa37b7c651abe00d264a 16bf57025edfe. Original embedded configuration and all seven modules are byte-identical; no credentials included. This independently checked operational CMD is published for the same Windows/POS scope. No claim that central production service has redeployed yet: exact source-main full CI/ordinary guarded release/readback remain to be observed for future server downloads.

Independent read-only25Oct09:39:36.636863UTC: selected configeb2b065b-ff03-4ee8-a957-e25bd79b827c remains CONFIGURED, cashEnabledtrue/exact1/0/5,3/0/5,4/13/2,5/24/3,7/24/3,card absent,generation0; requests0/sales0/transactions0/movements0. Package scope/settings remain current. No production state write, pairing, receipt, payment, stock or shift action. Existing limited communication USER PASS preserved; no CI-only functional manual or whole-connector closure.

Next user-controlled step: replace failed downloaded CMD with corrected version and confirm actual setup menu opens on final Windows user. Then fresh selected-POS pairing/current STATUS/online, and only after fresh measured SKU/shift/audit/control baseline one separately authorized user-controlled cash acceptance. Physical corrected-menu/checkout NOT TESTED. CARD remains off pending technician actual firmware/result/profile. Source-main/ordinary-release verification also pending in retained owner follow-up, not inferred from this PR CI. Whole connector OPEN/ASSIGNED. Scoped PDF CHECKPOINTS/EVIDENCE/ftext-recovery-20261024/installer-correction.pdf.

25/10/2026 — FTEXT INSTALLER USER FAIL / CASH MODULE ALLOWLIST CORRECTION / AWAITING WINDOWS CI AND PHYSICAL RETEST

Retained owner codex/rizareio-ftext-bridge-20261022; bounded continuation fix/ftext-installer-cash-module-20261025, existing installation claim retained, no other owner scope taken. User screenshot image(20261025-092838).png shows STOP: Unexpected package file before menu/pairing. This supersedes any implication that the delivered CASH CMD was installation-ready; physical install FAIL, actual checkout NOT TESTED. Existing communication/recovery and department settings remain protected.

Causal source comparison: server builder includes seven files including Cash.psm1, but Install.template.cmd permits only six and rejects Cash.psm1. Single production change adds that exact existing module to the explicit allowlist; unknown filenames still rejected. No scope/settings/hash/pairing/license/fiscal/financial/stock logic changes. Add server contract check comparing real generated payload keys against actual template guard, and Windows PowerShell5.1 isolated actual-template extraction/real Setup exit test for communication and cash configurations with byte-identical seven modules; unknown payload still refused. Test selects menu4 only, no Pair/STATUS/connector/network/credentials or device action.

Pre-change evidence: delivered Librarylibfile_597bc5345cd88191a75436df91809309/v0 60876bytes hash0c9fcafc292cbaddb66dd3f3ae5e5c9822c0180488b689dbe80ab05ec83145fe; unchanged configeb2b065b-ff03-4ee8-a957-e25bd79b827c, CASH five confirmed mappings, CARD off. No user transaction retry. Current source tests, exact CI/main/release and corrected file delivery still pending. Preserve original embedded config/payload byte-for-byte in replacement except allowlist, and preserve Library identity. Do not alter production settings or re-pair until owner reaches actual menu. Next: native Windows proof, full CI/merge/ordinary release, corrected installer then selected-PC menu acceptance. Whole connector OPEN; no new functional manual PASS.

24/10/2026 — RIZAREIO CASH SETTINGS SAVED / NEW PACKAGE / PHYSICAL PC PENDING

Retained owner codex/rizareio-ftext-bridge-20261022. Owner resumed secure login; email/password and 2FA succeeded, authenticated Platform Admin Χρήστος Μάνης. Existing limited setup claim continues; no other owner scope changed. Normal authenticated UI saved CASH-only settings for company cmvgtyt64000vh7gt7vfad3h5 / store cmvgtyt6d000zh7gtbsp1en3p / RIZAREIO-POS-01 / DSM24014923 / C:\FText / SOLIDUS(II)T. Confirmed department/VAT/group:1/0/5,3/0/5,4/13/2,5/24/3,7/24/3. CARD remains absent/off; manual PaymentID2 is not actual firmware/result/profile proof.

Before read-only09:16:01.534436UTC: ACTIVE oldconfigf23f1723-a036-4515-a016-df23f4cdd18b, cash/card unset; requests0/sales0/transactions0/movements0. After independent read-only09:27:11.436143UTC: CONFIGURED newconfigeb2b065b-ff03-4ee8-a957-e25bd79b827c, generation0,cashEnabledtrue, exact five mappings, card absent; requests0/sales0/transactions0/movements0. UI readback agrees. Configuration legitimately invalidated old communication pairing; accepted historical STATUS is preserved as historical evidence, not replayed. No sale, card charge, stock, shift or business mutation. Actual checkout remains NOT TESTED; no functional/manual PASS closure.

Normal selected-POS download produced60876byte CMD, SHA2560c9fcafc292cbaddb66dd3f3ae5e5c9822c0180488b689dbe80ab05ec83145fe; embedded scope/config/hash/revision3cd4566e checked, cash true/card off, no embedded credentials. Saved user deliverable Rizareio_Ftext_Cash_Setup.cmd, Librarylibfile_597bc5345cd88191a75436df91809309/version0. This is a distinct new CASH CMD; old communication-only ZIP unchanged and must not be reused. No pairing code generated early; no physical-PC software run from Work.

Next action: user copies current CMD to final Windows PC via AnyDesk and opens setup; then generate fresh time-limited pairing code on request, pair current configuration, current STATUS and connector online. Only then one user-controlled cash acceptance after fresh per-SKU/shift/audit/control baseline; no autonomous fiscal action. CARD separately awaits actual technician/firmware/result confirmation. Whole connector OPEN/ASSIGNED; ordinary release and engineering recovery already verified, no code change or redeploy needed. Checkpoint CHECKPOINTS/CHANGES/2026-10-24-ftext-recovery-review.md.

24/10/2026 — FTEXT RECOVERY ORDINARY RELEASE VERIFIED / INSTALLATION BLOCKED BY DECLINED SECURE LOGIN

Retained owner codex/rizareio-ftext-bridge-20261022 / feat/ftext-recovery-source-20261024. SourcePR3113 merged3cd4566e425d4a1d644d668e8511838b4e4e894d after exactPR8d551e78 fullCI40077782308 and native40077782320 SUCCESS. Exact MAIN40079396726/job120829726221 also SUCCESS4181server+8backup/0FAIL/0SKIP and all five jobs. Ordinary guarded release40080012902/deployjob120831461369 SUCCESS; no manual app deploy or guard bypass. Renderdep-dbe765qvcj2c73bv434g LIVE24Oct09:02:17.981991UTC, exact3cd4566e. Independent public health200/oktrue exact3cd4566e. Startup event09:01:51.921UTC FTEXT_RECOVERY_SCHEMA availabletrue/checkoutEnabledfalse.

Independent read-only09:03:21UTC: FtextCashRequest now exists, empty0 rows. Its23 ordered type/nullability columns exactly match the reviewed catalogue; four valid unique indexes are present. RIZAREIO-POS-01/DSM24014923 retains ACTIVE communication

identity/configf23f1723-a036-4515-a016-df23f4cdd18b and cashEnabled/cardEnabled remain unset. Selected store Sale0/StoreTransaction0/StockMovement0 both before08:53:45 and after09:03:21; no fiscal/stock/financial action occurred. This is deployment verification, not a future transaction acceptance baseline. Backup cron ordinary checksPass deploymentdep-dbe75ldg1s2s73939hdg LIVE08:57:17.192155UTC, worker revision6d7725e88722900de43e38aeda7583fdab7f603e. Its09:01:32UTC stored capability reports storagePolicyVerifiedtrue and manifestHasha5a147ffbd28bec53aa6b547a75383214cd469760cf911d441f6db6aa0e937e3, equal to the independently computed deployed catalogue hash. No worker job was manually triggered and no general worker/engine/policy source changed.

ENGINEERING recovery dependency is resolved: exact full-schema native PG18 archive/selective COPY/control/pending/reset/stale proof plus compatible ordinary schema provisioning are implemented, merged and deployed. This does NOT accept physical checkout or close the whole connector. No new operational package, pairing, STATUS replay, customer sale, card charge or checkout enablement. Existing communication USER PASS/manual stays protected; no CI-only functional manual/PASS closure.

Only next action: resume selected-PC installation after the owner explicitly resumes secure authentication. The last secure login request was declined and was not retried or treated as success. Then explicitly configure the reviewed department/CASH profile, generate a newly bound package, complete normal pairing/current communication for that new configuration and arrange one user-controlled acceptance with fresh stock/shift/audit/control measurements. CARD additionally requires actual supported firmware/result and confirmed payment profile, never assumed from manual PaymentID2 alone. Existing communication-only ZIP must not be reused as a cash/card-ready installer. Whole connector OPEN/ASSIGNED, owner retained until completion or named handoff. Checkpoint CHECKPOINTS/CHANGES/2026-10-24-ftext-recovery-review.md; scoped PDF CHECKPOINTS/EVIDENCE/ftext-recovery-20261024/tracker.pdf.

24/10/2026 — FTEXT RECOVERY SOURCE MERGED / EXACT FULL CI GREEN / AWAITING ORDINARY RELEASE AND SELECTED-PC SETUP

Retained owner codex/rizareio-ftext-bridge-20261022 / feat/ftext-recovery-source-20261024. Approved limited recovery handoffPR3109 mergeddf8dd14e. SourcePR3113 exact8d551e78f16d6e79290ab8f3ab15c8fcef11d966 fullCI40077782308/job120825043530 SUCCESS4181serverPASS/0FAIL/0SKIP plus8backupPASS/0FAIL/0SKIP; all five CI jobs passed, including actual HTTP/browser/build/invariants and protected RBS/Hikvision/wholesale paths. Exact dedicated native40077782320/job120824788588 SUCCESS19PASS/0FAIL/0SKIP. Full schema+PG18 archive/COPY recovery ran unskipped in BOTH exact-source runs. Merged3cd4566e425d4a1d644d668e8511838b4e4e894d after green checks.

The recovery graph/column review now includes FtextCashRequest with DIRECT/REMOVE ownership and historical non-owning CloudDevice/Sale/CashShiftSession references. Embedded plan/checkout/result/client IDs never expand deletion. Actual production schema-only metadata reproduces264 tables/3073 typed columns/219 FKs/9 exact trigger functions/11 business triggers plus ftext. Full private native/PG18 archive and selective COPY restore, pending fiscal refusal, exact target RESET/idempotency/stale-generation and sibling/foreign controls passed. Ordinary startup alone provisions an empty reviewed queue, validates columns and immutable identity/pending/receipt indexes and refuses drift/maintenance. It never resets an existing request or creates a device/receipt/payment. General lifecycle engine/worker/jobs, other policies and the prior startup chain remain protected.

This closes the ENGINEERING recovery dependency only, NOT physical checkout or whole connector acceptance. Per-installation cash/card remain unset in production; physicalCheckoutAccepted remains FALSE. Exact source-main CI and ordinary deployed revision/schema readback still required. No deploy guard bypass, production SQL write/provision from Work, new operational package, pairing, receipt, card charge or accepted STATUS replay. Existing communication USER PASS/manual remains unchanged; no CI-only functional manual/PASS closure.

Selected-PC installation is separately blocked by authentication: the secure email/password request was declined, not treated as login success and not retried. Latest read-only24Oct08:29UTC: selected

RIZAREIO-POS-01 / DSM24014923 ACTIVE identity, lastSeen22Oct18:38UTC, cashEnabled/cardEnabled unset, same communication configf23f1723-a036-4515-a016-df23f4cdd18b. This is not a fresh financial acceptance baseline. Existing communication ZIP is not a cash/card-ready package. Next: finish ordinary release/readback, then resume secure login only when the owner requests it; prepare explicit selected-PC profile/new package and one user-controlled acceptance with fresh before/after stock/shift/audit/control evidence. Whole connector OPEN, same owner retained. Checkpoint CHECKPOINTS/CHANGES/2026-10-24-ftext-recovery-review.md; scoped generated PDF CHECKPOINTS/EVIDENCE/ftext-recovery-20261024/tracker.pdf.

24/10/2026 — FTEXT FULL-SCHEMA RECOVERY ENGINEERING VERIFIED / AWAITING FINAL CI AND ORDINARY RELEASE

Retained owner codex/rizareio-ftext-bridge-20261022 / feat/ftext-recovery-source-20261024, named limited handoffPR3109 mergeddf8dd14e. CandidatePR3113 exactad13db3da07db5210a0615a8a967c61e4846812b dedicatedCI40077343040/job120823446075 SUCCESS19PASS/0FAIL/0SKIP. The actual full-schema native test ran unskipped: recreated264 production-metadata tables/3073 typed columns/219 FKs/9 exact trigger functions/11 reviewed business triggers plus new ftext queue, installed the complete canonical ownership graph, refused pending DISPATCHED maintenance, then verified the full archive and selective COPY restore using both private native tools and the actual PG18 recovery image. Source rows and sibling/foreign controls unchanged during proof; isolated RESET removed exactly two target complete CASH/CARD request rows; idempotent execute/reopen and stale-generation refusal passed. Existing seven one-shot cash/card native subcases and schema/concurrent/drift/idempotent/exact encrypted one-table restore tests also ran unskipped.

Canonical ftext catalogue/typed columns and historical non-owning/embedded payload classifications are reviewed. Recovery acceptance is promoted ONLY for REVIEWED_FULL_SCHEMA_FRESH_STORE_RESET_RECOVERY, tied to that exact native evidence; physicalCheckoutAccepted remains FALSE. Final exact promoted-manifest CI is required before merge. The existing authenticated setup still needs explicit scoped enablement, confirmed department/card profile, current package/pairing and one user-controlled acceptance with fresh controls. No automatic sale, charge, resend, device setup or business-data bootstrap was added.

The missing-table compatibility issue is handled by ordinary startup serializing only a reviewed empty FtextCashRequest schema; exact column and identity/pending/receipt index checks refuse drift and maintenance. Prior startup behavior is retained. No general lifecycle engine/worker/job or other table policy changed. Actual read-only production comparison found every other known typed relation matching; FtextCashRequest remains absent until ordinary rollout. No production SQL write, provisioning from Work, receipt, charge, new package/pairing or accepted STATUS replay occurred. This is engineering CI evidence, NOT LAB/physical/full connector PASS; no CI-only manual or numbered PASS closure. Current owner retained; next: exact final CI/merge/ordinary release verification, then selected-PC setup and consulted user acceptance.

24/10/2026 — FTEXT RECOVERY REVIEW / NAMED LIMITED HANDOFF / ASSIGNED BEFORE SOURCE

ΑΝΑΛΗΨΗ ΑΠΟ feat/store-shifts-inventory-clear-20261018 — ASSIGNED codex/rizareio-ftext-bridge-20261022 / feat/ftext-recovery-review-20261024. Owner explicitly approved this exact narrow transfer in this conversation (Εγκρίνω), after the named request. Scope: ONLY FtextCashRequest entries in ops/backup/lifecycle/manifest.json and column-review.json, new ftext-specific recovery tests and necessary bounded ftext recovery fencing if evidence requires it. All other tables, general lifecycle worker/engine/jobs, KAT cleanup, infrastructure and other owners remain retained. No second concurrent owner for this transferred slice.

Baseline6807eed7; CARD source3102 mergedcb5d6756 and ordinary Render release contains it (health399c407e). Canonical FtextCashRequest approval still absent; physical CASH/CARD activation OFF. Existing STATUS USER PASS protected; no production DDL/config, pairing, fiscal receipt or charge. Review exact ownership/typed columns/historical references and embedded JSON, pending/stale/restored requests

and full-schema isolated copy/restore/control evidence. Engineering CI is not physical/LAB acceptance. Single next action after green/main claim: implement and validate only this recovery slice, retain activation gates until evidence passes. Checkpoint CHECKPOINTS/CHANGES/2026-10-24-ftext-recovery-review.md.

24/10/2026 — KAT thermal + four-table catalogue — SOURCE CANDIDATE / AWAITING JOINT CI

Same approved thermal owner; bounded central transfer claim3107 greenCI40064648077 mergedcbc457d0 before catalogue changes. Four DIRECT/REMOVE nodes/exact columns and explicit payload/hash/non-owning reference review added; all unrelated catalogue values equal prior main. Normal startup creates only empty printer tables before listen. Local targeted9PASS; executor/recovery11PASS/34 native environmentSKIP, not native acceptance. Actual native schema comparison and all source tests require full joint CI. Sent-row guard retains fixed batch quantities; incremental additions and whole-tab recovery unresolved. NOT INSTALLED/NOT ACTIVE/physical NOT TESTED. No production business or printing action. No manual PASS. Checkpoint CHECKPOINTS/CHANGES/2026-10-24-kat-thermal-catalogue.md; existingPR3093.

24/10/2026 — KAT-THERMAL-CATALOGUE-01 — ASSIGNED / OWNER-APPROVED BOUNDED TRANSFER

ΑΝΑΛΗΨΗ ΑΠΟ codex/central-auto-dispatch-20261022 — ASSIGNED codex/kat-thermal-production-20261023. User explicitly approved transfer in thermal-printer conversation on24/10. Scope ONLY four additive ProductionPrinter/ProductionPrintRequest/ProductionPrintJob/ProductionPrintResolution catalogue nodes, exact columns, hazard classification and regression coverage required for existing PR3093. Central owner retains every other manifest node, automatic dispatch, mailbox/consent, backup runtime, restore and reset execution. No concurrent takeover of those scopes. No production DDL, configuration, printing, order, payment or stock action. LAB/physical printing NOT TESTED. Claim must merge green before catalogue source edits. Checkpoint CHECKPOINTS/CHANGES/2026-10-24-kat-thermal-catalogue.md. New print-source head7e1196 CI not yet observed; earlierf338 fullCI39937838514 passed all5, never physical PASS.

23/10/2026 17:01 Europe/Athens — LAB MAILBOX VERIFICATION ALREADY PENDING / READ-ONLY RECONCILIATION

Retained central owner codex/central-auto-dispatch-20261022, existing approved integration. User explicitly identified the intended LAB recipient and requested continuation; address remains private and is not reproduced in public evidence. Original recipient pre-action draft3098 was overtaken by a concurrent observed operation BEFORE greenmerge; no action was taken under that unmerged draft. This receipt supersedes its proposed save/send steps and authorizes no duplicate writer or resend.

Fresh read-only baseline2026-10-23T13:58:28.102892Z observed all dispatch table rowcounts0. Subsequent actual existing UI refresh and scoped read-only DB14:00 revealed ONE already-created unverified intended recipient, version1, created13:59:43.820Z, VERIFY challenge issued14:00:19.720Z/expires14:10:19.720Z, verifiedAtNULL/revokedAtNULL. This root turn performed only reads/refresh and no recipient save, SMTP send, challenge issuance or confirmation. Provenance of the concurrent operation is not inferred from the record; do not fabricate its SMTP outcome. A stored challenge alone is NOT inbox or provider-acceptance proof. Existing accepted technical source remains protected.

Fresh14:01:26.833990Z global counts recipient1/consent0/grant0/policy0/slot0. Actual installed runtime14:01:16.588Z revision83db47fc8cc9bb4a0941d5d3421e0cf821baa4a2/readActivationvalidtrue/enabledfalse/issuedAt01:34:00.191Z/notBefore04:00Z. UI shows the same LAB recipient unverified, no active consent, separate verification/consent controls. Existing zero financial/stock action boundary and no accepted test replay retained. No other configuration, DDL, enrollment, RESET or restore performed.

Current functional result NOT TESTED: mailbox receipt, direct user code confirmation, separate consent, current SA grant/policy and genuine wholepostcutoff report acceptance remain OPEN. Single next action:

user checks intended mailbox and directly enters the current verification code into the existing LAB application's email-code field; never share token in chat/public evidence and do not auto-resend or bypass. If the current challenge expires, first recheck current actual state before a separately concrete resend. Same central owner retains remainder; other owners and source paths unchanged. No manual/global/numbered PASS closure.

Checkpoint CHECKPOINTS/CHANGES/2026-10-22-automatic-dispatch-off-provision.md.

23/10/2026 18:08 Europe/Athens — ONLINE-CATALOG-CONTROL-04 / SOURCE COMPLETE / TECHNICAL RELEASE VERIFIED / BLOCKED AWAITING LAB

Retained owner codex/daily-online-store-20261011 / issue2054. Follow-upPR3105 head3f7c6f8930159012bcbe2c5b192a754da2f1827e fullPRCI39972250665 all5SUCCESS/4163server+8backup/0FAIL/0SKIP, merged399c407e8c1bfed9f35c1482480fca01f904d946. Exact full mainCI39973515394 all5SUCCESS/4163server+8backup/0FAIL/0SKIP. The actual native PostgreSQL handler/seed test ran unskipped in both, verifying AUTO survives automatic bootstrap and original manual seeding remains. Additional local lifecycle/startup3PASS protected reset/maintenance and first-install behavior. Ordinary guarded release39974665318/job120486127787 SUCCESS; Renderdep-dbdne3fb9u1s73aa63og LIVE15:04:31.542UTC. No deployment guard, schema/manifest, licence/auth, payment/fiscal or stock-posting path was changed.

Independent actual HTTP15:05:20UTC initial health200oktrue exact399c407e; DAILY initial HTML200/title retained and exact prior accepted HTML SHA256d55dfc0c584b5fb9c88cb2abbe576ae55eba2bf66c923a90c970780ee6bd0b12. Correct catalogue first returned500 during an observed database recovery interruption; concurrent read-only SQL returned unexpectedEOF. Render application logs15:05:31–35 explicitly say database system is in recovery mode/not yet accepting connections. One read-only SQL retry succeeded15:05:47, correct catalogue recheck15:06:12 returned503 closed as configured, and independent health recheck15:07:03 returned200oktrue exact399c407e. Initial failure is retained in proof, not erased or called a clean uninterrupted PASS. Recovery root cause and broad database availability are not accepted here; no restart, rollback or diagnostic transaction performed.

Final independent SQL15:05:47: DAILY enabledfalse/autoStocktrue/ALWAYS0/orders0; LAB enabledtrue/autoStockfalse/ALWAYS0/orders3; KAT autoStockfalse/ALWAYS0/orders14. DAILY and LAB complete stock/price, baked, visibility, policy and config hashes equal the14:26:53 pre-deployment controls across both releases. KAT baked/visibility/policy and orders remain equal; its full stock/config hashes include startup metadata and differ, so an unmeasured KAT quantity/price delta is NOT inferred. Exact snapshots and recovery-only log excerpts are in CHECKPOINTS/EVIDENCE/online-catalog-controls-20261023/final-release-proof.json.

Implemented centrally: own-store AUTO/SHOW/HIDE product visibility, native ALWAYS versus stock/baked availability, submit-time hide and aggregate-stock recheck, audited incremental saves without the5000 bulk ceiling, bounded50-row product UI, search/category and selection-generation response guards. Default/manual mode, native modifiers, scoped pricing and previous visual/metadata evidence retained. This is technical source/installation verification ONLY, not authenticated UI, LAB, mobile, physical or checkout PASS.

Acceptance remains BLOCKED: secure login tool timed out/reset during2FA and native credential protection prevented safe browser observation after the owner reported entry. No authenticated new visibility/availability save or temporary LAB configuration was performed. DAILY coffees have NOT been assigned ALWAYS yet; no blanket beverage/category exemption, inventory creation, real order, stock/payment/fiscal action or public activation. Do not replay protected ONL fixtures or repurpose LAB's baked13/stock38 control to bypass its policy guard.

Single next action: restore a controllable secure browser session. Then record a fresh bounded LAB fixture plan and before-controls before normal UI save/readback/restoration; only after scoped actual acceptance prepare DAILY coffees/options through native selected-store controls, keeping public-disabled. Source work

is complete, wider requirement/launch2054 remains OPEN with the same owner until completion or named handoff. No new functional manual/PDF/numbered PASS closure is claimed because the expanded behavior has no actual LAB acceptance. Existing dated PASS/manual remains historical and must not be read as acceptance of this new rule.

23/10/2026 17:43 Europe/Athens — ONLINE-CATALOG-CONTROL-03 / INITIAL TECHNICAL RELEASE VERIFIED / BOOTSTRAP FOLLOW-UP / AWAITING LAB

Retained owner codex/daily-online-store-20261011 / issue2054. SourcePR3096 final855e7865a3b32caa2964ee652a638ef7e6f8198f passed fullPRCI39967555980 all5SUCCESS/4155server+8backup/0FAIL/0SKIP, mergedc03afa2621694d648f2a84b2e7fa7621e3915c80. Exact mainCI39968969170 all5SUCCESS/4156server+8backup/0FAIL/0SKIP. Ordinary guarded release39970967266/job120473321060 SUCCESS; Renderdep-dbdn21ks728c73chhkn0 LIVE14:38:37.279UTC. Independent actual HTTP14:39:26UTC health200oktrue exactc03afa; DAILY initial HTML200/title retained and byte SHA256d55dfc0c584b5fb9c88cb2abbe576ae55eba2bf66c923a90c970780ee6bd0b12 equals prior accepted desktop/metadata HTML. Correct public /api/public/online/daily-bite/catalog-modifiers returns503 closed. Initial wrong /api/kat-online probe401 was not a catalogue acceptance test.

No actual LAB configuration or DAILY product/availability save occurred. Secure password request submitted and owner reported entry, but OTP tool timed out/reset and browser refused further observation with native credential state cannot be safely resumed. No secret was read; automated credential entry stopped. Authenticated outcome cannot be verified. No functional/manual/PDF PASS closure. New owner rule is still AWAITING LAB, despite technical installation.

Read-only full-row controls14:26:53→14:39:28UTC: DAILY and LAB stock/price, baked, visibility, policy, config hashes byte-equal; orders0/3 unchanged. KAT baked/visibility/policy and orders14 unchanged; full StoreProduct/config hashes differ. KAT configupdatedAt14:38:32 and88 StoreProduct updatedAt atstartup14:38:xx observed. Existing pilot bootstrap explicitly touches configupdatedAt; without a row-value baseline no KAT quantity/price delta is inferred from this metadata-inclusive hash. No diagnostic stock/financial transaction or restoration performed. Proof captures all exact hashes, not an unqualified all-store unchanged claim.

Code review then found a causal persistence gap in the EXISTING KAT pilot visibility INSERT, called by normal schema bootstrap: it recreates an absent visibility row and would turn AUTO back into SHOW. Bounded follow-up skips ONLY that legacy visibility seeding when the selected store has autoStockCatalogEnabled=true. Manual/default seed behavior and existing explicit SHOW/HIDE rows remain unchanged, with no schema, stock, price, fiscal, licence or activation change. The actual native PostgreSQL visibility test now executes the exact bootstrap INSERT, proves AUTO stays absent in automatic mode and preserves original manual seeding. Local7PASS/0FAIL/1nativeSKIP; exact full PR/main CI and ordinary guarded release required for this follow-up.

Current public DAILY remains disabled; no coffee ALWAYS policy has been saved (recorded0). LAB has one existing positive baked13/stock38 policy: do NOT repurpose or replay that protected fixture to test ALWAYS. Next single operational action after source follow-up is restore a controllable secure browser session, record a fresh bounded LAB fixture plan and before-controls, then normal UI configuration/readback/restoration. Subsequent DAILY coffee preparation remains OPEN. No whole2054/Gate closure or other-owner takeover. Checkpoint CHECKPOINTS/CHANGES/2026-10-23-online-catalog-control.md; evidence CHECKPOINTS/EVIDENCE/online-catalog-controls-20261023/release-proof.json.

23/10/2026 — ONLINE-CATALOG-CONTROL-02 / SOURCE READY / AWAITING CI AND LAB

Retained owner codex/daily-online-store-20261011 / issue2054. Claim PR3094 headc33395a5e521fc8525edb2d14e6b910b602efd82 / CI39964578640 SUCCESS mergedbf3a97342f38a7896548c92fc6fef2f6092a52ee before source. Existing per-store visibility rows support AUTO/SHOW/HIDE; native ALWAYS availability works in automatic mode with baked balance precedence. Active own-store products only, explicit HIDE also checked on submit, quantity aggregation preserved. No schema or inventory writes. Native per-product save validates active company/store/product, locks the store/product, rejects foreign collision and commits audit with readback atomically. Automatic editor exposes both controls and bounds product DOM to50 per page, with filter/search and selection-generation guards.

Local Node24 targeted4PASS/0FAIL/3nativePostgreSQLSKIP; frontend build PASS. Native isolated PostgreSQL checks are required unskipped in exact Node20 CI: >5000 choices, actual new handler persistence/AUTO removal/foreign/inactive/error isolation, atomic audit and baked precedence; actual modifier catalog/order quantity/HIDE/ALWAYS/member regressions. New mounted8753-product test verifies pagination, filters, failed save, rule save/readback and stale response after switching company and back. CI is not LAB PASS. Exact full PR/main CI and ordinary guarded deployment/independent health remain pending. Actual LAB normal configuration/readback/restoration and subsequent DAILY preparation remain NOT TESTED. No actual business configuration, stock/order/payment/fiscal action or public activation has occurred. Broader launch2054 stays OPEN, owner retained. Checkpoint CHECKPOINTS/CHANGES/2026-10-23-online-catalog-control.md.

Integration: current main1686f144 retained in full, including other owners' ftext/dispatch changes. Initial source CI39965826874 had4138PASS/1FAIL/0SKIP; all new native cases passed. Only old regulated-pricing projection extraction failed after the intentional filter expansion; anchors repaired, all original assertions preserved and local5 pricing tests pass. No guard weakening. Full exact integrated CI required. No actual LAB/configuration yet.

23/10/2026 — ONLINE-CATALOG-CONTROL-01 / ASSIGNED BEFORE SOURCE / NOT TESTED

Retained owner codex/daily-online-store-20261011 / issue2054; implementation branch feat/online-catalog-control-20261023. Owner explicitly expands the stock-only requirement: coffees and accompaniments always online without stock, and owner-controlled inclusion/exclusion for every online store. This prospectively supersedes only the earlier strict automatic-stock/no-ALWAYS rule; historical limited PASS remains historical. No second owner or wider launch claim.

Reuse existing per-store OnlineProductVisibility and StoreBakingPolicy, without schema/migration or inventory changes. Automatic catalogue visibility: AUTO (no override) follows finite positive effective stock or explicit ALWAYS policy; SHOW explicitly includes an active own-store product, with stock availability still enforced unless ALWAYS; HIDE always excludes, including submit recheck. Preserve enabled same-product baked balance precedence and native recipe/baked policy safeguards. No coffee-name/category/brand inference or hardcoded DAILY exemption. Existing non-stock modifier options retain their behavior.

Normal authenticated/licensed tenant/store-scoped per-product override save, native availability editor in automatic mode, search/category and bounded pagination for the 8753-product list, selected-company/store stale-response protection. Both public catalogue readers and submit paths must use the same rules and aggregate repeated product quantities. Preserve manual mode, prices, stock posting, fulfilment, members, licence/auth/lifecycle, order idempotency, payment/fiscal and all existing KAT/DAILY visual PASS. Other owners and their files are unchanged.

Baseline main d9864606f7c66f710c83ef025feda9dee8ca987e; latest independently recorded production83db47fc8cc9bb4a0941d5d3421e0cf821baa4a2. DAILY public-disabled, automatic mode enabled, latest recorded8753 active/0positive; initial stock/launch remain OPEN. Previous strict auto LAB51 and restored manual2 are historical evidence, not new-rule acceptance. Mixed beverage categories contain packaged/ingredient rows: never blanket-exempt them.

Claim must pass CI and merge before source. Meaningful isolated native PostgreSQL and mounted UI checks: visibility persistence/AUTO restoration, foreign/inactive/company-store boundaries, >5000 incremental selection, ALWAYS/finite stock/aggregate/baked/HIDE submit, manual/member regressions, pagination and stale store switch. Full exact PR/main CI and ordinary guarded deployment/exact independent health precede bounded actual LAB normal-UI configuration/readback/restoration. Before every actual configuration action record fresh controls; no accepted order/financial fixture replay. DAILY normal prepared-drink configuration only after LAB acceptance, preserving public-disabled state. No public activation, production SQL writes, DDL/seeds, stock/order/payment/fiscal transaction or unrelated presentation fix.

Current evidence for expanded rule: NOT TESTED, no source/configuration changed. Qualified real PASS requires checkpoint, active/pending, module manual and synchronized tracker/numbered PDFs in green merged receipt; broader2054 remains OPEN. Next action: green merged claim, then bounded source. Checkpoint CHECKPOINTS/CHANGES/2026-10-23-online-catalog-control.md.

23/10/2026 — KAT-THERMAL-PRODUCTION-01 — ASSIGNED

Owner-approved bounded transfer FROM agent/table-service-layout-takeover-20260927 TO codex/kat-thermal-production-20261023. Owner explicitly approved in the printer conversation. Scope: existing POS preparation send, configurable thermal printer transport for both KAT POS, prepared coffee filtering, durable duplicate-send protection. KAT device evidence: LAN 192.168.1.87:9100, ESC/POS, CP1253 page17, cutter. No fiscal/payment/stock or broader TABLE_SERVICE takeover. Existing table/round/modifier/allergen/Android PASS protected. Hardware/network/Greek/cutter and end-to-end delivery NOT TESTED. Claim must be green and merged before source changes. Checkpoint CHECKPOINTS/CHANGES/2026-10-23-kat-thermal-production.md.

23/10/2026 01:36 UTC — AUTOMATIC EMAIL TECHNICAL SETUP VERIFIED / REAL MESSAGE ACCEPTANCE NOT TESTED

Same central owner codex/central-auto-dispatch-20261022 retains approved integration. Six empty tables and exact259-table catalogue reconciliation are installed. Promotion83db47fc8cc9bb4a0941d5d3421e0cf821baa4a2 full mainCI39882875173 all5SUCCESS/4137server+8backup/0FAIL/0SKIP; normalguard39883727591 Verify/Trigger/WaitSUCCESS; paired app+backup LIVE exact83db. Actual authenticated LAB settings/dispatch UI refresh still OFF and now shows earliestperiod23/10/2026 07:00Athens; no recipient, consent, grant, policy, business setting or report action performed. No report/verification/consent message sent and no inbox acceptance. Next single action is obtain the user's

intended recipient address, then the separately scoped mailbox verification and consent with codes entered directly in UI, current SuperAdmin authority/policy and a genuinely complete whollypostcutoff period. First eligible DAILY07→07 period cannot complete before24/10/2026 07:00Athens. No rewind/historicalcatchup or accepted financial test replay. Overall email functional acceptance remains OPEN/NOT TESTED; full production private recovery/physicalclearance remain separate NOT PROVEN. No functional manual, global PDF or numbered PASS closure. Screenshots: CHECKPOINTS/EVIDENCE/automatic-dispatch-off-provision-20261022/automatic-report-off-smtp-test-20261023.jpg and automatic-report-ready-20261023.jpg.

23/10/2026 01:27 UTC — PAIRED INSTALLATION OBSERVED / SIGNED PULSE CHECK STILL PENDING

Exact promotion main 83db47fc8cc9bb4a0941d5d3421e0cf821baa4a2 passed full CI39882875173 all five jobs, 4137 server plus8 backup /0FAIL/0SKIP. Normal guarded release39883727591 Verify/Trigger/Wait SUCCESS. App dep-dbdbeid9fdbs73ahp7cg LIVE01:26:20.603UTC and existing backup cron dep-dbdbfi942hec738vuhv0 LIVE01:26:57.715UTC via normal new_commit/checksPass at same exact revision. Expected parsed compact manifest hash599344219baf4dcac8c39144a6e12e383bcac0bb3546979cfff94bcdde293930. Next ordinary scheduled pulse/HMAC proof pending; no TriggerRun/cancel/manual deployment. OFF-control configuration below is not yet applied and remains gated by fresh signed pulse and green merged claim. Actual report delivery/inbox and whole-period acceptance remain NOT TESTED.

23/10/2026 — AUTOMATIC-DISPATCH-EXTERNAL-OFF-CONTROL-01 / ASSIGNED BEFORE STATE CHANGE / NOT APPLIED

Same approved central integration owner codex/central-auto-dispatch-20261022; bounded configuration preparation only. This claim must pass applicable CI and merge GREEN BEFORE the configuration action. The paired app/backup rollout at 83db47fc8cc9bb4a0941d5d3421e0cf821baa4a2 and its fresh HMAC-validated worker pulse must also be verified first. No configuration has been changed by this local claim preparation.

Exact permitted configuration scope: ONLY the direct external Render key AUTOMATIC_REPORT_ACTIVATION_CONTROL on existing web service srv-d9isenfavr4c73bdh52g, workspace tea-d9ie26vaqgkc739uudqg. The direct Render key is the source of truth; it remains absent from render.yaml. Update that key through a merge-preserving operation: retain every other direct/group environment value, SMTP credential, service setting, plan and resource. No broad environment replacement, new service or group edit. Record redacted control identity/fingerprints, never secrets or environment contents.

At the actual authorized application time, generate one fresh UUIDv4 epoch and use the actual canonical UTC issuedAt. Set notBefore to the next strictly future 07:00 Europe/Athens business-day boundary, matching the observed LAB day-start setting, and serialize that instant in UTC with the real date/time-zone offset. Require notBefore > issuedAt; do not preselect stale timestamps in this claim. The control is exactly {v:1,serviceId,epoch,issuedAt,notBefore,enabled:false} in the canonical serialization required by readActivation. No historical or straddling-period catch-up is authorized.

Use the supported configuration deployment of the existing exact reviewed build; never restart an old environment or substitute an older build. Verify installed current revision and HTTP health, and independently read readActivation as valid:true, enabled:false with the new expected fingerprints. Preserve paired app/backup revision and manifest-hash evidence. Failure or uncertainty leaves dispatch OFF and requires a concrete receipt; no blind retry or ON fallback.

No database or UI writes, provisioning, lifecycle enrollment, RESET, restore, business/financial/stock/fiscal action, plan change or SMTP send belongs to this claim. The actual recipient remains unknown: do not add a recipient, issue verification mail, record consent, create an automation grant or enable policy/dispatch. Final functional email/inbox acceptance remains NOT TESTED; the recipient address is needed only for a later separately concrete step. Existing technical/functional evidence and other owners remain unchanged.

Checkpoint: CHECKPOINTS/CHANGES/2026-10-22-automatic-dispatch-off-provision.md.

23/10/2026 01:15 UTC — AUTOMATIC-DISPATCH-OFF-PROVISION-01 / SIX EMPTY TABLES VERIFIED / FINAL FUNCTIONAL TEST NOT TESTED

Same approved central owner codex/central-auto-dispatch-20261022; recipient/restore integration assignment retained. Technical receipt only, not a new functional LAB/USER PASS or manual closure. Joint reviewed source 619a20d35713d145be13d14d48a8162c6d2c2d4e was installed through normal guarded release run 39877166971: Verify, Trigger and Wait SUCCESS; independent health HTTP 200 at that exact revision.

The retained reviewed operator was executed ONCE after that installation and returned PROVISIONED_SIX_EMPTY_TABLES, dispatch OFF, exact catalog SHA256 332ca5228dd5a31c2419cd96c53c226b0c48f5c2f0f0666e2c8bd0314549aaab. Independent fresh read-only verification at 2026-10-23T01:14:06.789881Z observed PostgreSQL 180004, all 259 reviewed tables with exact ordered column/type/nullability match, 260 actual tables with only the already allowed internal StoreLifecycleRuntime extra, and zero rows in each of the six report tables. StoreLifecycleFence and StoreLifecycleExecution remained absent; zero active lifecycle/DDL work was observed. No duplicate provisioning, enrollment, RESET, restore or business/financial/stock/fiscal action. Operator screenshot: CHECKPOINTS/EVIDENCE/automatic-dispatch-off-provision-20261022/provision-20261023.jpg.

Canonical promotion PR #3089, head 33a469, passed full CI 39877282444 (all five jobs; 4137 server plus 8 backup tests, zero failures/skips) and merged as 83db47fc8cc9bb4a0941d5d3421e0cf821baa4a2. Paired app/backup rollout and exact revision/manifest-hash agreement are PENDING at this receipt; merge alone is not installed-runtime proof. Preserve the retained DAILY owner, all unrelated source and every earlier accepted result. The source catalogue reconciliation does not imply full production private recovery or physical-clearance acceptance.

An actual SMTP connection/authentication check on installed 619a20d at 2026-10-23T01:15:10.940Z returned SMTP_CONNECTION_AND_AUTH_ONLY, ok:true, messageSent:false, using existing credentials without exposing them. This confirms connectivity/authentication only: no report or verification message was sent and no inbox delivery was tested. The unresolved recipient-identity step was aborted; no Gmail retry occurred. Dispatch remains OFF; no recipient verification, separate consent, automation grant or policy activation is recorded. Final controlled email/inbox acceptance remains NOT TESTED. Await paired-rollout evidence before appending the next technical receipt; no global PASS, functional manual or numbered acceptance change.

Read-only hosted UI observation using the existing authenticated Super Admin session: selected MYWORKSTATION LAB → ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ → Αναφορές ταμείων loaded both settings and dispatch state without an error after provisioning. Dispatch OFF was visible; the recipient list was empty, authorization/enable buttons disabled and no cutoff displayed. Existing business-day/shift settings 7/15/23 and MAIN with all three shifts remained unchanged. No UI save or other write occurred. This is limited technical rendering/state evidence, not report delivery or whole functional acceptance.

Checkpoint: CHECKPOINTS/CHANGES/2026-10-22-automatic-dispatch-off-provision.md. This local receipt preserves main 83db47fc and is prepared for root review/publication only; no receipt commit, push or merge has been performed.

23/10/2026 - AUTOMATIC-DISPATCH-CANONICAL-PROMOTION-01 / ASSIGNED BEFORE SOURCE AND PROMOTION

Same approved recipient/restore integration owner codex/central-auto-dispatch-20261022; usercontinues through realemailtest. This is bounded technical catalogue review required for the alreadyapproved six-tableintegration, not takeover of DAILYfeaturecode or unrelated lifecycle/physicalclearance. Sourcecandidate preparation beginsONLYafterthisclaimgreenmerged; productionpromotion/MERGE remainsconditionalbelow. Retainedsource3084fullPG18operator and3085legacyboundarymustbejointlyinstalled first; oneOFFprovision under3075 only, no duplicateoperator.

22/10/2026 23:37 Europe/Athens — KAT38 OLD-CARD RETIREMENT / COMPLETE / LIMITED LIVE CONFIGURATION PASS

Retained KAT owner ops/kat-retire38-20261022. Explicit owner “ναι σβηστα” refers ONLY to38reviewed old/test cards in OWNER_REVIEW_38.md, not57corrected cards or original imported catalog. Reversible store-only inactive status applied through native selected Κυλικείο KAT Inventory; no permanent deletion or history removal. Claim PR3074 final5dd4f65b300a75c9029e4e6cb89a5e3f0e80cb39/docsCI39849726053SUCCESS merged5c0c45b547dba7e70ae9892536917b3f06aa5cf4 BEFORE real save, preserving concurrent main updates.

Three native explicit selections26/9/3, allother fields Keep, SETunchecked; changed ONLY Κατάσταση καταστήματος=Ανενεργά. Actual audit receipts:

-002bcd7b-16f2-4a14-b504-09416f71123e:26 at22Oct20:33:35.161062UTC.

-16359ae7-fa1f-4b55-9b7e-120c6db438bd:9 at20:35:27.030019UTC.

-7c184683-8bf3-4646-bfc8-46a2a5585ae9:3 at20:36:30.822297UTC.

Each exact product ID matches owner manifest, all38Product.active remaintrue and StoreProduct.active=false. Product/StoreProduct records, original sales/payments/movements and stocks retained. No price/VAT/department/barcode/recipe/fee/layout/shift/financial/other-store write.

Fresh group1 baseline20:32:35UTC and after20:33:54UTC: EXACT26active transitions,0store-protected/price/stock/rate/department differences; KAT/LAB/N40 sales/payments/transactions/movement/shift/layout controls unchanged. Concurrent ordinary f12c816a release/startup changed88Product full timestamp hashes (prepared items/materials), not38retired identities; no blanket whole-period timestamp invariance claimed. Independent current1900Product business hashes against prior completed final-readback match0differences excluding routine updatedAt and previously allowed VAT mapping metadata. Source startup behavior protected; no reset or repair inferred. Group2 and3 fresh before/after show exactly9/3inactive transitions andZERO Product semantic/store-protected mismatches; financial/layout/control terminal/store hashes unchanged. All38retired Product full hashes themselves retained; other-store rows and coffeeSET hash unchanged. Preparation full hash differs across unrelated startup; final semantic fee check57parents/0badqty-price/0embeddedfee retained. Temporary readonly EOF retried without repeating business save; one selection-only browser timeout recovered by reading checkboxes, no duplicate save.

Final20:37:20UTC:38/38retired,all1900records preserved, active store rows1863→1825, ZERO active products without joined same-company fiscal department.242publishedbutton products retainactive mappings, layoutv3702 unchanged,57previous mapping corrections retained. This closes ONLY38old-card disposition residual. Native archive active view removes retired rows; its inactive-only filter did not show store-inactive/Product-active TEST cards, so that filter is NOT a verified restoration path. Preserve records and use appropriate full-list/card review for future restoration; no speculative source fix. Final public health oktrue/version0.22.0+kat-test-pos/exactf12c816aecab60e60adb811ea523f7ac5523e54f. No source/manual deploy or physical sale/test.

Evidence CHECKPOINTS/EVIDENCE/kat-retire38-20261022 before/after-group1/2/3,extra-before/after,final-summary/audit IDs,manifest,saved screenshot. Earlier38OPEN/owner-review instructions are superseded by this explicit authorized completion; do not map/deactivate/replay them again. Broader physical first legitimate receipt at refreshed KAT POS01/02 remains USER NOT TESTED, separate mobile-topup0.50SET/SEPTONAprice residuals and other owners remain OPEN. Owner retained for those separate KAT residuals; no second-page takeover. Single next action for readiness is owner physical POS refresh/legitimate receipt acceptance, with normal current module/shift/fiscal gates retained.

22/10/2026 - AUTOMATIC-DISPATCH-LEGACY-BOUNDARY-01 / ASSIGNED BEFORE SOURCE

Same approved central owner codex/central-auto-dispatch-20261022; user explicitly continued through the real email test. Existing source3065/exactLIVE365a4799 and technicalreceipt3072 remain protected; same-owner six-empty-table OFF operationalclaim3075 is separate and must not be duplicated. Newbounded source amendment begins ONLY after this claim green mergedmain.

Purpose: automatic-email admission in genuine existing unenrolled generation0 without silently enrolling anyStore or installing global182table lifecycletriggers solelyforemail. Supported lifecycleinstaller is atomic and mustacquireStoretriggerDDL beforecommittingFence enrollment. Fresh boundary order: schema-qualified StoreTABLESHARENOWAIT; optionalexistingFenceTABLESHARENOWAIT (disappearance/lockerror FAIL, neverfallback); fixedsixreporttablesROWEXCLUSIVENOWAIT BEFORE authorization/source reads or writes; existing fresh lifecycle assertion and all actor/company/store/config locks retained through prepare/start commit. Genuine absentFence/table/row remains unenrolledgeneration0, neverDDL; enrolled0/int64/maintenance/retired/stale semantics preserved. Management asserts ORIGINALcapturedrequestepoch, never upgrades it. Earlyreportlocks explicitlyavoid partialinstallerDDL-beforeStore circularwait. StoreSHARE maybrieflyblockallStoreDML; failNOWAIT/no retry, releasesbeforeSMTP; financialFKROW SHARE remainscompatible.

Exact ownership aftergreen: commerce_ai NEW server/src/services/automatic-report-lock-boundary.js, existing automatic-report-eligibility.js, NEW server/test/automatic-report-legacy-lifecycle-postgres.test.js; automatic_reports existing server/src/services/automatic-report-dispatch-policy.js and tests automatic-report-dispatch-schema.test.js, automatic-report-recipients.test.js, automatic-report-persistence-postgres.test.js toadopthelper preservingreadiness/role/session/proof/revisions; pos_stores existing server/src/services/store-metadata-mutation.js, tests store-metadata-mutation.test.js, store-metadata-mutation-postgres.test.js applying boundary onlyforfull6schema (allabsentlegacy preserved/partialfailsclosed) beforelateinvalidation; infrastructure NEW ops/backup/provision-automatic-reports.mjs and NEW server/test/automatic-report-provision-operator.test.js fixedservice/revision/sourceSHA/OFF/DBidentity/all6 ABSENT/oneatomictransaction/localtimeouts/catalog+constraints+indexes+emptycounts/rollback/redacted receipt, nobootstrap orsilentexistingstorageacceptance; root ops/backup/CONTROLLED_RESTORE.md amendment separating emailadmission fromexistingfull-lifecycle recoveryacceptance. No canonicalmanifestpromotion or existingDAILYfeature/schema reclassification is authorized by THIS sourceclaim; canonical6classification/app+backuphash/noactivejobs coordination remains separate beforeON.

Required actualisolated native proof: absentFence/absentrow, bothinstallerorders, partialinstallerreportDDLbeforeStore, enrolled0/exactint64, maintenance/reset/staleorigin0, FKfinancialcompatibility, StoreDMLrefusal, locksheldthroughSTARTcommit and releasedbeforeSMTP; policylegacy0 nevercreatesFence; concurrentdispatchersoneattempt, cutoff/terminalreplaycontrols retained. FullPR/exactmainCI, ordinaryguardedrelease/exactLIVEhealth beforeLAB. No actualSMTP/DDL/config/enrollment/restore/businessaction bythisclaim; allfinalfunctionalacceptanceOPEN, dispatchOFF. Controlledfullrestore stillmandatoryexternalOFF/stop/newepoch/futurecutoff; privilegedoutofbandrestore unsupported. Full259tableproductioncopy/physicalclearance remainsseparateNOTTESTED, not claimedfromboundedfixture. Single nextaction greenclaim thenboundedsource; samecentralownerretainsintegration.

22/10/2026 20:35 UTC - AUTOMATIC-DISPATCH-PROVISION-OPERATOR-01 / ASSIGNED BEFORE SOURCE

Owner codex/central-auto-dispatch-20261022 retains approved integration. OFF operational claim3075/CI39849352868SUCCESS merged88921e3d715619ed916a3b5a8fbc7fe9d710f97a. Runtime access resolved; last actual20:27:20UTC preflight723c818/254tables/all6dispatch+Fence/Execution absent/controlmissingOFF. No subsequent production action or new functional PASS.

Exact new source scope AFTER this claim green mergedmain: server/src/services/automatic-report-provision-catalog.js; server/scripts/automatic-report-provision.mjs; server/test/automatic-report-provision.test.js; server/test/automatic-report-provision-postgres.test.js; server/test/fixtures/automatic-report-provision-catalog-pg18.json. Independent isolated PG18 capture of unchanged installedDDL SHA2569b58b81fe64a7972ddadef73f62f4b81fc2417619fab0943fd3da42dc2612c6f supplies full normalized catalog oracle. Strict dry-run default/exact service+revision+DB/schema/source/OFF binding, absent relations AND types, bounded transaction/advisory lock, exact columns/defaults/checks/FK/PK/UNIQUE/indexes/trigger/RLS/object validation and zero rows beforecommit. Real mismatch/partial/preexisting/lock/identity/source/OFF refusal and rollback native tests required; no regex-derived oracle or counts-only acceptance.

No existing runtime/lifecycle/manifest/DAILY/mail/UI/workflow edits. No production invocation until runner/test/oracle independently reviewed, requiredfullCI/main and ordinary guarded installation verified. Claim is source preparation only, NOT new approval for ON. DefaultOFF and every existing LAB/USERPASS preserved; no duplicate business tests. Actual6tableOFFsetup, fullschema recoveryproof, DAILY reconciliation, canonicalpromotion, install-only enrollment(noRESET), freshOFFepoch/mailbox/consent/grant/policy/finalSMTP remain separate OPEN gates. Checkpoint CHECKPOINTS/CHANGES/2026-10-22-automatic-dispatch-provision-operator.md. Other owners retained.

22/10/2026 23:27 Europe/Athens — KAT38 OLD-CARD RETIREMENT / EXPLICIT OWNER AUTHORIZED / ASSIGNED BEFORE CONFIGURATION

Retained KAT owner ops/kat-missing-fiscal-mappings-20261022; bounded continuation ops/kat-retire38-20261022. After reviewing exact38-list from merged PR3073/head4a80b692/docsCI39847332256SUCCESS/merge1561701b, owner said “ναι σβηστα”. Implement as reversible store-only inactive status through native selected KAT Inventory bulk form; preserve Product records/active flag, historical sales/payments/movements, prices/VAT/departments/stocks, other stores,57completed mappings,242button products,feeSET/layout. No permanent DELETE, source/schema/deploy or financial action.

Exact immutable identities from CHECKPOINTS/EVIDENCE/kat-missing-fiscal-mappings-20261022/final-summary.json / OWNER_REVIEW_38.md; do not expand selection to newly discovered missing items. Fresh read-only before/after each native group, verify current identities and save only Κατάσταση καταστήματος=Ανενεργά with ALL other fields Keep/SETunchecked. Grouped exact SKU prefixes are navigation only; manually select reviewed manifest IDs. Existing audited transactional bulk path and prior native save acceptance retained; no accepted transaction/price/merge/import/coffee test replay. Native retirement configuration NOT YET DONE. All broader readiness/physical first-receipt/module-service residuals stay separate. Single next action after claimgreen/main: fresh baselines, bounded native deactivation of exact38 and independent fullreadback/audit/control plus five-file receipt. Owner retained.

22/10/2026 20:30 UTC - AUTOMATIC-DISPATCH-OFF-PROVISION-01 / ASSIGNED BEFORE STATE CHANGE

Same approved central owner codex/central-auto-dispatch-20261022. Runtime maintenance access RESOLVED via existing Render Web Shell; read-only preflight20:27:20.403UTC/runtime723c8184f39d87e26 2d7d1c59c1941e4cadee55b/Node20.20.2:254tables, all6dispatch absent, Fence/Execution absent, Runtime present, external activation control missing=>OFF. No DDL/config/SMTP/restore/enrollment/business action performed. No new functional PASS. Existing4094+8CI/#3065/#3072 and every accepted LAB/USER result preserved.

Exact next scope after THIS claim green mergedmain and independent operator review: provision ONLY the six empty dispatch tables using installed reviewed automatic-report-dispatch-schema.js, one atomic transaction, exact service/database/schema/source identity, all-six absence guard (including non-table relation collisions), transaction-local lock/statement timeouts, catalog/constraint/index/zero-row validation BEFORE commit; abort/rollback on any mismatch or contention. No handwritten alternative DDL, no IF NOT EXISTS acceptance of unknown existing storage, no controller.start/RESET, no business rows or financial locks, no startup bootstrap. Recheck runtime revision and no duplicate maintenance writer immediately before action. Unexpected existing schema stops this tranche for review.

Canonical manifests/column review/planHash, lifecycle enrollment, full-schema private recovery proof, DAILY autoStockCatalogEnabled retained-owner reconciliation, external OFF epoch, mailbox/consent/grant/policy and final controlled SMTP/inbox acceptance remain OPEN separately. DAILY physical column observed booleanNOTNULLdefaultfalse; no reclassification or mutation. No sends ON. Source unchanged. Checkpoint CHECKPOINTS/CHANGES/2026-10-22-automatic-dispatch-off-provision.md; scoped evidence CHECKPOINTS/EVIDENCE/automatic-dispatch-off-provision-20261022. Existing shared PDF/functional manual/numbered PASS unchanged; scoped PDF records this bounded pre-action state. Other stream owners retained.

22/10/2026 23:12 Europe/Athens — KAT-MISSING-FISCAL-MAPPINGS / 57 CORRECTED / LIMITED LIVE CONFIGURATION PASS / 38 OPEN

Retained owner ops/kat-missing-fiscal-mappings-20261022 under original KAT owner. Owner authorized START/correction and CONTINUE; access restored via secure PlatformSuperAdmin2FA. Claim PR3051 final5b18fb37/docsCI39822748783SUCCESS mergedc444a14b. New measured synthetic-only blank-link bulk save passed and five-file LAB receipt PR3052/head8e645ee42f39a8b4c2f69d8c4eb4f07ffeca1e06/docsCI39823513222SUCCESS merged81e068d9 BEFORE any KAT write. No source modification, new manual deployment, import, sale/payment/stock reset or replay.

Native actual kat-store/pilot-company corrections:51 active MWS-KAT-BEV identities saved once22Oct17:34:12UTC to existing65d2fb68-dae6-46f0-8e34-27767665538a/register2/code42/13%, matching original prepared-coffee/chocolate/tea source. One exact old LIFE grape/orange/pomegranate400ml SKU5201263890722 saved to31b44d25-cd88-4104-89d1-deabf8abb51f/register1/code1/13% from exact original KAT50369. Four old milk/juice SKUs5201263890717/718/721/724 saved22Oct20:10UTC to dept2 from same brand/flavor/volume/variant KAT35042/35039/3505/6555. One old100029549ΚΟΥΛΟΥΡΙ ΘΕΣΣΑΛΟΝΙΚΗΣ saved20:11UTC to dept2 from exact abbreviated KAT40980ΚΟΥΛΟΥΡΙ ΘΕΣ/ΝΙΚΗΣ. No new products, merge or alias edits. Every other bulk input Keep, SETunchecked.

Independent immediate before/after and native readback: only57 reviewed blank department links plus vatVerifiedtrue and routine updatedAt/audit changed. Existing rates, retail/cost, activation, stocks, original imported fiscal tuples retained. Four-row and last-row complete Product/StoreProduct semantic hashes match outside allowed fields; LAB/KAT/N40 finance/shifts/movement/layout controls unchanged. First51 observed after17:34:24UTC exactly51changes/0bad protected fields; later pre-next-action file independently retains them. One-row LIFE observed exactly1change/noextra protected delta. Catalog controls necessarily differ only for intended mappings. Ordinary unrelated source deployments between

windows can update startup timestamps: do not infer whole-period global timestamp immutability. Preserve fresh per-action evidence. Coffee SET/preparation protected hashes unchanged during51window; final extra readback retained. Existing waterstock-1 remains, no reset.

Final20:12:36UTC: all242 POS-button product IDs now have same-company joined departments, ZERO missing mappings; layoutv3702 retained, no button edits. Active missing department count95→38 (57corrected); remaining exact38IDs/SKUs/names/rates/prices in final-summary.json are ALL outside published button references. They include TEST data, ambiguous old supplier/fake-code cards,0% tobacco with unverified exemptions and conflicting24%SPRITE/κιμαδόπιτα vs imported13%. Do NOT assign by rate or mass-deactivate/reprice/change VAT to force readiness. Need exact original department/profile decision for those38; no such change inferred from CONTINUE. Unrestricted fiscal readiness remains OPEN, even though missing-link blocker for the242 published buttons is removed. First legitimate refreshed physical KAT POS01/02 receipt remains USER NOT TESTED; no synthetic real-store sale submitted. Mobile-card automatic0.50SET and SEPTONAprice conflict remain OPEN.

Read-only public /api/health22Oct20:12UTC oktrue/version0.22.0+kat-test-pos/revision365a4799fea5704a44c4e14bf1ff642a25117ca8 (later ordinary runtime; exact revision at earlier individual save was not independently sampled). Signed writers were active, no unresolved fiscal request in17:34 audit; latest successful full backups/restore checks retained from readiness audit, not re-run. Do not equate configuration/health with physical fiscal PASS.

Evidence CHECKPOINTS/EVIDENCE/kat-missing-fiscal-mappings-20261022: real-immediate-before, legacy-one-before, legacy-four-before/after,koulouri-before,final-readback/final-summary,source-mappings and saved screenshot. Single next action: owner reviews exact38residual disposition/original fiscal mapping; then native identified correction after fresh baseline. Owner retained, no other page takes this scope or repeats completed51/6 corrections. Broader inventory merge/price and all other owners preserved.

22/10/2026 - AUTOMATIC-DISPATCH-PERSISTENCE-RESTORE-01 / SOURCE INSTALLED OFF / FINAL FUNCTIONAL TEST OPEN

Combined sourcePR3065 exacthead3b00726802ad08622cbdcdfdf2c1c32f7aed38d8 fullCI39838748112/build120034381296 SUCCESS:4094serverPASS/0FAIL/0SKIP +8backupPASS/0FAIL/0SKIP; all5jobs SUCCESS. All4new native parents and subcases executed, including actual concurrentdispatch, recipientconsent, Storemetadata invalidation, bounded7table recovery/archiveCOPY/RESET. Merged365a4799fea5704a44c4e14bf1ff642a25117ca8. ExactmainCI39841152468/build120042615262: all5jobsSUCCESS4094server+8backup/0FAIL/0SKIP; aggregate run API stillIN_PROGRESS at19:45:59UTC, so no aggregate green claim yet. Normal guarded release NOT TRIGGERED/VERIFIED yet; no bypass. ExactnewrevisionLIVEhealth NOT VERIFIED yet.

This is merged technical source only; installation remains pending, not final automatic-email LAB/USER PASS. dispatchOFF; no real SMTP/provisioning/productionDDL/config/guardinstallation/restore/paid/financial/stock/fiscal action or accepted-test replay. Readonly production recheck2026-10-22T19:35:37.258035Z: all6dispatchtables and StoreLifecycleFence/Execution STILL ABSENT. Currentstrict management/eligibility requires actual enrolled lifecycle; no implicitenrollment. Core lifecycle controller.start performs beginDrainRESET, so MUST NOT be used as enrollment shortcut.

Concrete remaining sequence: authenticated runtime writecapability for explicit atomic6tableprovision whileOFF; actualschema/constraints/index verification and retained DAILY catalog mismatch reconciliation; reviewed canonicalmanifest+columnreview promotion coordinated acrossapp/backup/noactivejobs/planHash; actualfullschema/privatecopyrecovery proof and core.install-only enrollment withoutRESET; externalcanonicalRenderOFFcontrol/freshepoch/futureAthenscutoff; currentSuperAdmin grant, separate mailboxverification+consent and explicitpolicy; whollypostcutoff completeperiod controlledSMTP/inboxacceptance. Bounded7tableCI proof is NOT full259tableproductioncopy proof. Existing canonical manifest remains unchanged to protect current lifecycle before tablesexist.

Actual capability boundary: connected Render SQL is READONLY, no authenticated runtime shell/SQLwrite execution capability or local servicecredentials available. Render environment-variable update capability DOES exist; absentDBwrite is not a blanket absence of Render write tools. No credentials guessed/exposed. Existing onecolumn OnlineOrderingConfig mismatch autoStockCatalogEnabled booleanNOTNULL defaultfalse remains retained DAILY owner codex/daily-online-store-20261011 (central2527comment6349250633); not silently changed/reclassified. Readonly reviews identified possible future legacyzero locking protocol but it is NOT implemented or acceptanceproof; any subsequent behavior amendment needs exactgreenclaim+nativeinterleavings first.

Single next action: finish exactmain aggregateCI and ordinary guardedrelease/exactLIVEhealth, then make authenticated runtime maintenance access available for the reviewed setup sequence, keeping automaticdispatchOFF. Same centralowner retains integration until explicit handoff. Source/evidence checkpoint CHECKPOINTS/CHANGES/2026-10-22-automatic-dispatch-persistence-restore.md and scoped PDF/JSON CHECKPOINTS/EVIDENCE/automatic-dispatch-integration-20261022. Existing functional manuals/globalPDF/numberedstatuses unchanged because no newfunctionalPASS.

23/10/2026 — FTEXT CARD SOURCE CI PASS / MERGED / PHYSICAL ACTIVATION BLOCKED

Retained owner codex/rizareio-ftext-bridge-20261022 / feat/ftext-card-execution-20261023. Claim3101 mergedabe5cc03 before source. Source PR3102 exactb3ded3dc39cc87239a51ad01c5b728499302a8fc fullCI39970153563/build120471358289 SUCCESS:4163serverPASS/0FAIL/0SKIP plus8backupPASS/0FAIL/0SKIP, actual HTTP/browser/build/invariants and existing RBS/Hikvision/wholesale checks passed. Native PostgreSQL seven ftext subcases ran unskipped, including CARD single claim/concurrent finalization, invalid/missing/IRIS/unmasked/mismatched amount refusal, stock-failure rollback, one CARD/SALE_CARD plus preserved CASH/SALE_CASH and exact stock/control. Exact Windows39970153601 SUCCESS: protected STATUS29/cloud DPAPI and48 combined cash/card command/result/restart/tombstone/native temporary-folder cases. Mergedcb5d675620ec0b0f6ef9b5f9c69ab90b37ff5ea0. This is engineering CI evidence, NOT physical/LAB/USER checkout acceptance; exact source-main/ordinary release verification remains required before setup.

CARD PaymentID2 is owner/manual confirmed for intended installation; generic profile remains explicit and per POS. Source requires actual active selected-terminal STORE EFTPOS mapping and exact fiscal device before creating CARD request, plus matching final receipt and one exact full-amount masked-card result before atomic CARD posting. No general card default, manual success, retry, VOID or register programming. Current physical firmware/os7+ line8/terminal transaction mode and final-PC package acceptance remain NOT TESTED.

Activation stays OFF: canonical FtextCashRequest backup/reset/restore graph still requires its retained lifecycle owner feat/store-shifts-inventory-clear-20261018. No production DDL/settings/new pairing, operational package, fiscal receipt, card charge, catalogue import or accepted-test replay. Existing selected-PC/cloud STATUS USER PASS and manual remain protected. Whole connector OPEN/ASSIGNED to retained ftext owner. Single next dependency: lifecycle owner approves canonical ftext recovery graph/typed columns/embedded references and exact full-schema recovery; then ftext owner verifies ordinary release, controlled settings/profile/package and one user-controlled acceptance with fresh before/after evidence. Current card source needs no rebuilding merely to repeat these accepted synthetic tests. Checkpoint CHECKPOINTS/CHANGES/2026-10-22-ftext-connector.md; scoped PDF CHECKPOINTS/EVIDENCE/ftext-card-source-20261023/tracker.pdf. No manual or numbered-task PASS closure from CI.

23/10/2026 — FTEXT CARD SOURCE PREPARED / AWAITING NATIVE CI / activation OFF

Claim3101 exactb87680e mergedabe5cc03 after applicable documentation checks SUCCESS. Added explicit per-installation optional card profile (PaymentID2-30, POS1-10, transaction type1/6, confirmed os7+ line8 support), preserving absent-field legacy hashes. Shared immutable one-shot queue now binds CASH/CARD method; server and Windows require exact final code0/serial/receipt plus one full-amount masked-card line8 for CARD. Missing/foreign/mixed/IRIS/unmasked/inconsistent evidence never finalizes. Atomic finalizer records CARD/SALE_CARD once with original shift/cashier and real stock helper; no new cash posting for card. Original cash and RBS behavior retained, no manual confirmation/retry/VOID/programming route added. POS completion uses the confirmed original payment method; stale-store recovery/polling never resends checkout. Technical card controls remain behind canonical recovery gate and explicit profile confirmation/new package/pairing.

Local Node20 targeted23PASS/0FAIL/1nativeSKIP and actual client build PASS. New real PostgreSQL case requires concurrent one-shot CARD claim/finalization, refusal of missing/wrong/IRIS/PAN evidence before business writes, rollback on stock failure, exactly one CARD and one existing CASH payment/posting, stock0→-1 cash→-2 card and foreign control20 unchanged. Native PostgreSQL and extended Windows5.1 masked-card/one-shot/tombstone cases must execute in exact full CI before any source merge. These are engineering tests, not LAB/USER physical checkout acceptance. FtextCashRequest canonical recovery review remains with retained lifecycle owner; activation OFF, no production settings/DDL, operational package, receipt or charge. Whole connector OPEN/retained ftext owner. Next: exact native/Windows/full

CI, publish guarded source; canonical recovery acceptance still required before final-PC setup and one consulted user charge with fresh baseline. Existing STATUS USER PASS/manual unchanged.

23/10/2026 — FTEXT-CARD-EXECUTION-01 / ASSIGNED BEFORE SOURCE / activation OFF

ASSIGNED retained owner codex/rizareio-ftext-bridge-20261022 / feat/ftext-card-execution-20261023. Owner explicitly requests continuation after supplying technician/manual confirmation of CARD PaymentID2. Guarded cash source PR3067 merged1686f144 after fullCI39965543700 and Windows39965543650 SUCCESS; selected-store physical communication USER PASS remains protected. No physical cash/card checkout PASS. Canonical FtextCashRequest recovery review remains with feat/store-shifts-inventory-clear-20261018; no canonical graph/loader override or production DDL.

Claim bounded additive card path in existing ftext-installation, ftext-cash-requests/finalize, ftext-v1/store-pos ftext slice, Windows Cash/Cloud-Tools/Cloud-Connector, installation package and own setup controls; new pure ftext-card-payment helper plus related isolated unit/native PostgreSQL/Windows/mounted tests. Reuse one-shot durable request/table with exact method binding, confirmed per-installation CARD payment ID and explicit os7+ line8 evidence support. Validate one full-amount masked-card response tied to final code0/exact serial/day/counter/AADE receipt before atomic CARD/SALE_CARD/stock/audit commit. Reject missing/mixed/IRIS/plain PAN/inconsistent amounts and unsupported modes, never infer success from STATUS or add manual confirmation. Unknown/decline/timeout remains REQUIRES_CHECK with no resend/VOID/cash fallback. Existing cash/legacy hash/pairing/current-generation/RBS flows retained. No arbitrary PRG_SETPAYMENT, firmware change or register programming. Per-installation card capability defaults absent/OFF; canonical recovery gate and new-package/pairing/current-status checks remain mandatory. No production configuration or fiscal command in engineering.

Source begins only after this claim is green/main. Required validation: native PostgreSQL card exactly-once/rollback/control/cash regression, one-shot Windows5.1 card serialization and line8 parsing, purpose/scope/settings mismatch and POS polling/recovery; full exact CI/main/ordinary release. Manual line8 support is conditional os7.000+; actual firmware/mode remains NOT TESTED until selected-PC acceptance. Final user-controlled charge requires fresh before/after evidence and consultation. Whole connector OPEN/owner retained. Checkpoint CHECKPOINTS/CHANGES/2026-10-22-ftext-connector.md. Next: publish claim, implement dormant card path, keep activation OFF pending retained recovery review.

23/10/2026 — FTEXT release continuation / owner retained / activation OFF

Retained codex/rizareio-ftext-bridge-20261022 / feat/ftext-cash-execution-20261022 / PR3067. Actual vendor v25.02 manual pages6/9 confirms CASH1, example CARD2/PAY||2; owner confirms technician used that mapping. This does not implement/accept physical card execution or prove POS transaction mode/firmware. Card-result parsing/finalization remains OPEN, no PRG_SETPAYMENT or fiscal command emitted. Exact9f859a7 CI39846638730:4110PASS/2FAIL/0SKIP (existing Chromium startup/render timeouts), Windows39846638622 SUCCESS; failed-job rerun requested. Integrate current mainbf3a9734 without changing other owners. Canonical FtextCashRequest review still absent, so pre-DDL gate and activation OFF remain. Next: publish exact integrated guarded source green; retained lifecycle owner reviews ftext recovery graph; then claimed card engineering/controlled user acceptance. Existing STATUS USER PASS protected. Evidence CHECKPOINTS/CHANGES/2026-10-22-ftext-connector.md; no new feature PASS/manual closure.

22/10/2026 - FTEXT-CASH-EXECUTION-01 / ACTIVATION BLOCKED BY CANONICAL RECOVERY REVIEW / OWNER RETAINED

Retained ftext owner codex/rizareio-ftext-bridge-20261022 / feat/ftext-cash-execution-20261022 / PR3067. Cash execution engineering and synthetic Windows/native PostgreSQL paths are implemented; exactb8803339 source CI39842862200/job120049288637 passed4109server+8backup/0FAIL/0SKIP plus Windows39842862258. Main integration8cd1eedada preserves other owners and only reconciles the shared active-list placement. Final pre-activation review found a concrete unfulfilled contract: canonical ops/backup/lifecycle/manifest.json does NOT contain FtextCashRequest, and validateDatabase rejects any unreviewed relation. Merely adding STORE_TABLES/pending guards does not approve the canonical backup/reset graph. Creating this table would block that existing inspection/maintenance path, so runtime activation must remain OFF.

Added an enforceable pre-DDL gate in the owned cash-schema installer, checking the canonical relation, exact typed columns, DIRECT/REMOVE policy and reviewed soft-reference/JSON fields. A missing review returns FTEXT_CASH_RECOVERY_REVIEW_REQUIRED before ANY DDL; admin cash controls remain unavailable. Exported ftextCashLifecycleReviewProposal is a review proposal/explicit isolated TEST projection ONLY, never written into or loaded instead of the canonical manifest. Native tests explicitly inject that isolated projection, verify actual PostgreSQL column metadata, then exercise queue/finalization; they are NOT canonical full-schema recovery approval. Canonical files, executor loader and retained lifecycle/backup owner feat/store-shifts-inventory-clear-20261018 remain untouched.

Concrete next dependency for that retained lifecycle/backup scope: review FtextCashRequest ownership and CloudDevice/Sale/CashShiftSession/history/embedded checkout-plan-result references, classify reset/retention and restored/stale claims, verify exact full-schema copy/restore/control/pending blockers, and publish the reviewed canonical graph/column approval under its own claim. Only after its real contract is approved can this retained ftext owner enable cash, download a newly bound package, pair/STATUS the final Windows user and record one user-controlled cash sale with fresh before/after values. No physical sale, schema/config mutation, new pairing or catalogue import here. Existing communication USER PASS/manual protected. No cash ZIP delivered as operational and no full connector PASS. Card mapping remains deferred. Whole connector OPEN/ASSIGNED; owner does not disappear at this checkpoint.

New gate local16PASS/0FAIL; native gate/typed projection and final full CI pending exact head. Actual store19:33UTC remained0Sale/0StoreTransaction/0StockMovement, one open shift and unchanged legacy configuration; connector offline since18:38UTC. These are read-only preflight values, not a future test baseline. Checkpoint CHECKPOINTS/CHANGES/2026-10-22-ftext-connector.md. Single next action publish guarded source green/main and this dependency/handoff record; no production activation until canonical review.

22/10/2026 — FTEXT-CASH-EXECUTION-01 / ASSIGNED BEFORE SOURCE / NOT TESTED

Retained ftext owner codex/rizareio-ftext-bridge-20261022; continuation feat/ftext-cash-execution-20261022. User explicitly START after requesting one cash test; this authorizes engineering, not unattended fiscal issuance. Card mapping postponed until tomorrow. Prior sale-plan PR3060 exactfa2f84ad0a51d45b2a1de0ec0607654fc82b5360 fullCI39832093511 all5checksSUCCESS,3998server+8backup/0FAIL/0SKIP, merged8da92e55f8905f61cfb58293c7c049b9ed0a4584. Pure-plan source has no device execution; do not call it installed checkout. Earlier actual selected-PC communication USER PASS and all RBS/customer catalogue flows remain protected.

Assigned next cash-only engineering scope: isolated new server services ftext-cash-requests.js, ftext-cash-finalize.js, ftext-cash-schema.js, related unit/real PostgreSQL/HTTP/mounted tests; existing ftext-v1.js, ftext-installation.js/package service, FtextInstallationSetup.jsx and Windows Cloud-Connector.ps1/Cloud-Tools.psm1/package files; new Windows Cash.psm1 and Test-Cash-Smoke.ps1 plus own ftext Windows workflow. Bounded additive branch in store-pos.js and new client useFtextCashCheckout hook with bounded StorePosPanel import/integration ONLY; no presentation/V2

redesign or RBS behavior change. New dedicated FtextCashRequest table must be explicitly classified in existing lifecycle policy and receive pending-work blockers in lifecycle preview/executor before runtime/bootstrap can use it; additive ftext table entries/guards only, preserving the other owner's manifest/executor behavior. No table overloading or financial queue in CloudDevice metadata. No production SQL/DDL/migration from Work; isolated native tests and normal checked application bootstrap only.

Durable company/store/POS/config-hash/generation and checkout-key uniqueness, one pending request per physical register, same-body replay and changed-body refusal. Commit dispatch intent before device delivery; no lease expiry or polling retry may authorize second physical send. Windows folder mutex and durable per-request intent before atomic unique txt publication; restart/uncertain result reads original request only. Exact RESULT_FILENAME/serial/final-document response binding; STATUS alone never confirms a receipt. Nonzero/partial/timeout/disconnect remains REQUIRES_CHECK with no automatic resend, VOID or cash sale commit. Preserve raw result hash and durable local/server evidence; no successful or unresolved identity eviction. Finalize the original checkout once in a single database transaction only after verified final receipt, binding original open shift and current lifecycle; existing stock/audit/transaction behavior and no NON_FISCAL fallback. Start with explicitly supported simple in-store CASH and confirmed profiles; unsupported customer/credit/mixed/online/table/discount modes fail visibly until separately accepted. No card/IRIS emission or guessed code2. Default runtime execution OFF, scoped technical enablement after exact ordinary release and required isolated acceptance; selected user performs final real cash action after fresh before-values and concrete consultation. No receipt/card action by agent during engineering.

Required source acceptance: real PostgreSQL concurrent key/register claim and finalizer rollback/idempotent replay; actual HTTP purpose/tenant/generation/licence checks; synthetic Windows5.1 one-shot/late-result/restart/foreign-result/pending-folder cases; mounted POS pending/recovery/no-resubmit and protected RBS regressions; full exact CI/main/ordinary revision before selected-PC new package. Physical cash checkout remains NOT TESTED. Single next action: publish this claim green/main, then build the bounded cash path; whole FTEXT-CONNECTOR-01 OPEN, owner retained. Checkpoint CHECKPOINTS/CHANGES/2026-10-22-ftext-connector.md. Other lifecycle/report/native/POS-V2 owners retained, no accepted transaction repeated.

22/10/2026 21:08 Europe/Athens — FTEXT-CONNECTOR-01 / CLOUD COMMUNICATION USER PASS / CHECKOUT ASSIGNED

Retained owner codex/rizareio-ftext-bridge-20261022; continuation feat/ftext-checkout-20261022. Source PR3035 final8a44c85b121fe72b86d5cef638224a47dfcd1ddb merged65b773bfe4b81942a0bde5a02486451175865960. Full PR39813946997 SUCCESS3874server/0FAIL/0SKIP+8backup and Windows39813946867 SUCCESS; exact source-main39819571021 SUCCESS3890server/0FAIL/0SKIP+8backup. Combined ordinary release5c8ccf5ef1c3aea57a9c7d11d5cc1550d9052774 observed healthy before configuration, exact fullCI39821105794/3916server+8backup. CI is engineering evidence, separate from user acceptance below.

Normal selected Riz UI technical activation and single POS–fiscal–STORE EFTPOS mapping saved, followed by selected ftext serial/folder configuration. Existing commercial trial preserved. Private selected-POS package downloaded from hosted UI; all six embedded Windows source files byte-identical to reviewed source. Package contains no credentials, no pairing code, no auto-start or fiscal-sale execution. Legacy activation reason incorrectly mentions KAT/Observer; actual company/module selection and readback were Riz/CONNECTOR_FTEXT. No KAT state changed. Existing EFTPOS IMMEDIATE is application metadata only, not physical payment mode acceptance.

Owner supplied final-PC screenshots: image(20261022-175945).png package menu; -180459 successful Paired; -180616 STATUS delivered; -180718 repeated connected heartbeats; -180830 normal admin Connector Connected and last register check Successful/code0 at22/10/2026 21:05:59Athens. This is LIMITED USER PASS of selected Windows-user pairing, actual STATUS upload and heartbeat/visible communication for RIZAREIO-POS-01/DSM24014923. Pairing codes and private screenshots are not

committed. Diagnostic operation reports no receipt/card payment; independent financial/stock/counter deltas NOT TESTED. Do not repeat accepted STATUS/pairing for evidence. Earlier18:29 physical STATUS remains protected. Windows-login startup, restart persistence, another PC/model and fiscal checkout remain NOT TESTED.

Explicit user START after communication success authorizes continued engineering. Whole FTEXT-CONNECTOR-01 remains OPEN/ASSIGNED. Next bounded source before checkout wiring: new pure server/src/services/ftext-sale-plan.js and server/test/ftext-sale-plan.test.js only, producing a non-executable validated sale plan from explicit server-owned scope, confirmed department mapping and exact reconciled amounts. No filesystem/device/network/DB writes, PAY emitter, queue, finalizer, source POS/RBS or schema changes in this first causal slice. Reject missing/foreign scope, unconfirmed mappings, delimiter/control injection, unmappable Windows1253 text, invalid quantities/prices, unexplained totals/discounts and unknown payment codes rather than guessing. Preserve tobacco/cards0% as distinct001/003 mappings; goods13%004,24%005,services007 per owner-confirmed installation. Generic code must accept explicit per-installation mappings, never hardcode this customer. Fiscal execution stays disabled. Following safe-plan CI, claim exact durable queue/Windows one-shot transport/finalizer paths before source; no fiscal receipt or card charge without consultation.

Checkpoint CHECKPOINTS/CHANGES/2026-10-22-ftext-connector.md; verified manual docs/manual/ftext/PASS.md. Other owners and RBS/physical accepted transactions remain unchanged.

AI-OWNER-WALLET-01 — SCOPED LIVE PASS: PILOT SHARED-OWNER EMAIL ENABLED / INVOICE PRICING OPEN

25Oct2026 same retained owner feat/ai-owner-wallet-20261022. Direct-owner LAB emailON/OFF receipt3150/head6271e2a4afc629866f66bb87c3db9f2503255b92/docsCI40224579964SUCCESS mergeddbc057941a0cc3bd8af2075923bbf49f7e5978ab BEFORE pilot action. Scoped LAB PASS is native direct-owner email configuration ON/OFF persistence only. Shared-owner configuration has native SQL/HTTP engineering coverage; actual pilot opt-in remains pending until this receipt is green/main. Invoice/globalgateOFF and actual invoice overridegpt-5 observed; default

assistantgpt-5.6-sol unchanged. Actual Azure resource region/SKU/commitment/rate still unavailable after prior-project context lookup; no guessed invoice tariff or model/context change. Actual SMTP/inbox delivery, hosted low/empty thresholds and actual OWNER-session detailed UI remainNOT TESTED. Public synthetic evidence CHECKPOINTS/EVIDENCE/ai-owner-wallet-20261022/email-config-lab-20261025.json; manual updated. All prior metered LAB and funded pilot acceptance protected, no repeated accepted action. Whole walletOPEN, same owner retained, other assignments untouched.

Single next action after this receiptgreen/main: fresh private before/after, choose ONLY the already authorized pilot shared OWNER and save emailEnabled:true once preserving chargingON/funds/history; no new credit or fabricated mail event. Existing before-action claim and user's explicit activation instruction authorize this bounded continuation. Then publish its scoped LIVE configuration result with manual/common registers/PDF; delivered-email acceptance stays separate.

AI-OWNER-WALLET-01 — SHARED OWNER EMAIL SOURCE / AWAITING NATIVE CI AND LAB

25Oct2026 retained owner feat/ai-owner-wallet-20261022. Before-source claimPR3148/head2082209a2f98caf944bfd038b2bd19158cf769f1, docsCI40221837934SUCCESS, mergedaf61fe54881990b316e95a1c797805b3afa1e366. Bounded source now uses direct-or-OwnerCompanyAccess eligibility in authenticated Admin listing, configuration, notice snapshot creation and fresh pre-SMTP validation. Existing OWNER/password/active-company checks, exact original recipient, revoked notices and durable single attempt remain. No user/role grants or existing notice retarget/requeue. Added native SQL/HTTP synthetic shared-owner, foreign rejection and access revocation tests; safe allowlisted SMTP/invoice configuration metadata in existing Admin only. Local15targeted testsPASS/0skip including actual isolated localhost Nodemailer; this is engineering evidence, not hosted/shared-owner/email-delivery PASS. Native PostgreSQL/full CI/build/release and hosted acceptance pending. Existing pilot funds/charging and LAB settled call remain untouched. Invoice/email gates have NOT been opened; Azure account price prerequisite remains. Single next action green native/full source checks, then normal guarded release and inspect actual metadata before scoped activation. Whole item OPEN; all other owners retained.

AI-OWNER-WALLET-01 — SHARED OWNER EMAIL AND INVOICE ACTIVATION / ASSIGNED BEFORE SOURCE

25Oct2026 retained owner feat/ai-owner-wallet-20261022. User explicitly requests opening invoice billing and email. Existing pilot activation and single paid LAB question remain protected; no replay, new funding or model/limit change. Read current main8ddb86e5 (only other-owner release documentation since activation receipt9b4f34b), activation checkpoint and wallet manual. Current invoice/email gatesOFF; shared-owner email and invoice billing NOT TESTED. Read-only ownership inspection found the authorized pilot owner has OwnerCompanyAccess rather than direct User.companyId membership; current wallet list/configure/enqueue/dispatch incorrectly require direct membership.

Bounded next source: consistently recognize existing OWNER direct-or-OwnerCompanyAccess membership at all four email boundaries, retaining fresh role/password/company/recipient-snapshot checks and terminal at-most-once delivery. Add native SQL/HTTP tests for shared membership, revocation and foreign isolation. Add secret-free invoice/SMTP readiness metadata only if needed to inspect effective runtime prerequisites. Do not alter invoice extraction, fiscal/payment/stock, roles, recovery, existing tariff or funds. Exact invoice provider tariffs and SMTP readiness must be established before corresponding activation. No guessed Azure account rate. Before any scoped hosted action record fresh wallet/ledger/notices/audit/business controls; publish real PASS with manual and all common registries. Whole item remains OPEN and all other owners retained.

AI-OWNER-WALLET-01 — SCOPED LIVE PASS: PILOT OWNER AI MODULE AND CUSTOMER USAGE CHARGING ENABLED

25Oct2026 retained owner feat/ai-owner-wallet-20261022. Prerequisite real metered LAB flow published PR3144/192967570c6ceb4b1976fb95bfcc3175b560f422, docsCI40204698736SUCCESS, merged1b459f548a2fe84ff75ac378b93fa61f92b5b1fa BEFORE target changes. Preserve its one actual provider call/4152microEUR settled debit and LAB restoredOFF; no replay. Current deployed unrelated online-polling releaseeba062f7d32e6bb51e112d25ae254067d698ef9a/full MAIN CI40203753323SUCCESS/Render dep-dbf1gv4s728c73dpljo0 live14:57:36.570005UTC, independenthealthHTTP200/ok/exacteba. All wallet/readiness/provider/repository/assistant-limit production blobs match the tested30fe release. Other owner's online scope remains retained; no new provider call to repair a revision label.

Separately measured private target native administration: fresh before module15:05:23.142454UTC, existing Owner AI entitlementOFF and existing monthly/setup prices0. Native “Συνδρομές & Modules” target selection, only AI_OWNER_ASSISTANT clicked and subscription saved once at15:05:42UTC. Among existing entitlement semantic fields only AI_OWNER_ASSISTANT false→true; license active/plan/start-end dates/autoRenew/commercial notes, all existing module prices/dates/notes/other effective flags, managed terms, foreign AI flags and ALL wallet values retained. Native bulk save additionally stamps existing updatedAt and materializes two missing catalogue defaults CONNECTOR_FTEXT and WHOLESALE_B2B as inactive/null-window/null-notes with monthly0/setup0EUR terms. These are explicitly recorded incidental metadata, not connector/wholesale activation, new fee or fiscal behavior. Initial strict whole-record/physical-count check did not match due timestamps and these new rows; raw evidence retained, then exact semantic/access/fee reconciliation passed. Do not falsely claim unchanged physical module/terms rowcounts.

Fresh private wallet before15:10:14.233180UTC, then ONE native approved enabled:true save. Exact after confirms intended enabledflag/version+1 and one CONFIGURED audit only; no balance/reserved/entry/notice change, no extra credit, paid receipt, refund, target provider request or SMTP. Unaffected LAB wallet and business controls retained. Read-only reload15:12:19.939216UTC preserved same wallet/entry identities and active module; native selected-company checkbox remains checked, tariff ready, email unchecked. Real customer amounts/identifiers/reference/audit IDs remain in private evidence only. Private durable ai-wallet-pilot-activation-20261025.json SHA256 caaad6b68abf4b0a8287734e3cceb835f2c753dc81ec61a9c0920d286b853da9 includes before/after/reload, initial raw-check mismatch, exact reconciliation and unchanged controls.

Scoped LIVE PASS is existing Owner entitlement plus prepaid usage configuration, after independently proven real LAB metering/settlement. Applied modelgpt-5-mini; approved50percent markup in fixed dated EUR tariff, immutable rate version and actual independent charge evidence as above. Global wallet administrationON; private target customer chargingON; synthetic LAB customer chargingOFF; global invoice/email gatesOFF. Agreement toggle remains available and preserves balance/history. No actual target OWNER-session question/report/dashboard acceptance was performed, and support preview is not relabelled as OWNER role proof. No provider key/secret, role/user/session privilege, plan/recurring fee, POS/stock/fiscal or recovery/lifecycle change. Existing accepted business transactions retained.

Immediate target activation is complete; remove it from pending. Same owner retains remaining invoice/Azure provider-price verification/billing, actual OWNER-session detailed report UI acceptance, hosted low/empty threshold behavior and email delivery. No whole-wallet closure. Checkpoint/common registers/manual/ops/pending and regenerated current merged PDF synchronized. Single next action for wider billing: verify actual Azure SKU/region/rate before invoice charging; do not guess price, repeat funding, lower models/context or claim email delivered. All other assignments retained.

AI-OWNER-WALLET-01 — SCOPED LAB PASS: REAL OWNER USAGE, EXACT DEBIT AND AGREEMENT OFF / TARGET ENABLE PENDING

25Oct2026 retained owner feat/ai-owner-wallet-20261022. Exact installed30fe4c1088b83a67a8d59760b4387de3374c3046 full MAIN CI40202120937 SUCCESS:4194server+8backup/0fail/0skip. Prior actual guarded source14d release40201415015 and API pricing deployment dep-dbf11g0ae00c73edhbk0 remain separate evidence. Normal guard40203174287/job121198522968 full-CI/freshness verificationSUCCESS, actual Trigger/WaitSKIPPED because30fe was already healthy; this did not install prices. Real installation/readback/health evidence is above. Before-action source/price claims3138/3140 and runtime receipt3141 green/main before LAB. Other owner online-polling source3127/eba062f merged after the tested release; preserved intact. Wallet/readiness/assistant-limit blobs unchanged; do not replay this accepted provider call merely for a later unrelated revision.

ONE scoped LAB acceptance flow through native authenticated Super Admin and normal existing Owner-assistant support preview, not actual OWNER-session UI. Companycmtpopbgk000prhb5qc60zxus/storecmtpopbgo000trhb5ng9ytiru, terminal/shift/SKU/quantity/cash-card-IRIS paymentN/A. Fresh14:41:05.918915UTC beforeenable balance5000000/reserve0/version1/OFF/emailOFF; global wallet/entry/notice/audit2/2/2/2; LAB Sale90/StoreTransaction134/StockMovement95. ONE enabled:true save added only CONFIGURED audit/version2, money/entries/notices and private foreign wallet unchanged. Fresh beforequestion14:45:51.239242UTC unchanged at version2. ONE read-only question asking available capabilities submitted through native Owner endpoint in scoped support mode. Actual OpenAI response completed14:46:47.054642715UTC, modelgpt-5-mini-2025-08-07, input4032/cached0/output1045(total5077; reasoning128 included within output, not double billed), toolCalls0. ONE USAGE/OWNER_ASSISTANT SETTLED entry a467fc58-b598-4738-a113-f792f0b9b101, reserve477085, charge4152microEUR. Independent integer calculation ceil((4032*335031+1045*2680247)/1000000)=4152; exact balance4995848/reserve0/version4. Immutable tariff version25813fe2eb6dd2b4f87701684218ad27628d4cfc6c27ac0be8f91ff218a7da63 matches approved50percent fixed EUR price schedule. Provider log agrees on tokens/model/completed response; no second question or blind retry.

Fresh beforedisable14:48:45.718323UTC preserved that same settled identity/balance. ONE native enabled:false save observed14:49:42.731575UTC: version5/OFF/emailOFF, same4995848balance/zeroreserve/settled entry, exactly one additional CONFIGURED audit. Final global wallet/entry/notice/audit2/3/2/4. Foreign/private wallet unchanged through all phases, LAB business controls90/134/95 unchanged. No new credit/refund, paid receipt, invoice, business/stock/fiscal mutation or SMTP by this owner. Actual support access/exit are ordinary scoped authenticated navigation, not claimed as new permissions or Owner-session report acceptance.

Evidence CHECKPOINTS/EVIDENCE/ai-owner-wallet-20261022/metered-lab-20261025.json and metered-lab-result-20261025.jpg; verified usage docs/manual/ai-owner-wallet/PASS.md. Scoped metering/settlement/enable-disable flow is complete; privacy-safe evidence excludes real customer finances. Pricing and real LAB billing are no longer pending. Remaining target preparation: after this PASS merges green, separately fresh private-record company module/licensing/prices and wallet controls, enable ONLY existing zero-price AI_OWNER_ASSISTANT module without changing any plan, dates, other modules/prices/roles; then ONE target wallet enabled:true with no extra credit/provider request. Existing before-action claim3141 retains this exact scope. Broader invoice/Azure billing, actual OWNER-session detailed-report UI, threshold low/empty and delivered email remainNOT TESTED/OPEN; do not infer them from this test. Other owners and protected accepted transactions retained; checkpoint/common registers/manual/pending/PDF synchronized. No whole-wallet closure.

AI-OWNER-WALLET-01 — TARIFF SAVED AND OBSERVED ACTIVE / EXACT-REVISION VERIFICATION PENDING

25Oct2026 same retained owner. Source14d31b8 normal exact MAIN fullCI40200620906 SUCCESS:4194server+8backup/0fail/0skip; guarded release40201415015/job121193233486 actual Verify/Trigger/WaitSUCCESS; Render dep-dbf0ungn74is73b5plu0 live14:21:01.867521UTC, independenthealthHTTP200/ok/exact14d. Native authenticated Admin then reported actual requested modelgpt-5-mini, providerConfiguredtrue, tariff unavailable and activation checkbox disabled. This is observed readiness metadata, not a provider-call acceptance.

Conditional before-action claim3140/0b3cf2a/docsCI40200999753 SUCCESS merged30fe4c1088b83a67a8d59760b4387de3374c3046 BEFORE tariff change. Fresh14:22:19.834524UTC all four wallet counts2 each, enabledcompanies0/pendingholds0. Scoped Render merge replace:false saved ONLY AI_OWNER_WALLET_TARIFFS with the exact candidate in the preceding before-action record. This time the environment tool itself RETURNED deployment ID dep-dbf11g0ae00c73edhbk0; history confirms API-triggered source30fe4c1/live14:24:34.819950UTC. Thus its provenance is established for THIS call; no direct trigger_deploy was called by this owner. Do not retroactively invent actor provenance for the earlier unrelated historical API observation. The installed30fe differs from fully checked/guarded14d only by recorded documentation; all owned production source blobs are identical.

IndependenthealthHTTP200/ok/exact30fe; native selected MYWORKSTATION LAB readback shows modelgpt-5-mini, tariff available, max hold477085microEUR, available5000000/reserve0, companychargingOFF/emailOFF. Snapshot CHECKPOINTS/EVIDENCE/ai-owner-wallet-20261022/pricing-ready-20261025.jpg contains synthetic LAB readiness only, no personal/customer details. Fresh14:26:04.331126UTC wallet/entry/notice/audit2 each, enabledcompanies0/pendingholds0: no funding/configuration/debit by this owner. Invoice/email gates remainOFF; no provider/business/fiscal action.

Explicit full MAIN CI40202120937 on EXACT installed30fe is running. Before any metered LAB action require its actual build-and-test/full success and normal guard freshness verification for30fe. Honor the guard if it avoids redeploying an already healthy identical revision: an idempotent SKIP is NOT counted as installing configuration or as metered-use PASS; actual installation is the returned API deployment plus health/native readback above, preceded by the real guarded source installation. Do not manufacture a source change, weaken the same-SHA guard or blindly repeat deployments merely to force another Trigger/Wait. Record actual step conclusions separately. Real provider billing acceptance remainsNOT TESTED until measured LAB usage agrees with the immutable tariff/ledger.

Additional target prerequisite identified read-only14:18:03.515228UTC: private pilot license active, CASH_CONTROL/INVENTORY active, AI_OWNER_ASSISTANT company module false, no store override. After centrally published LAB usage/enable/disable PASS, bounded native target preparation additionally enables ONLY that existing company AI_OWNER_ASSISTANT module, preserving every other module, plan, subscription dates, monthly prices and roles/users. No additional license fee/payment is authorized or created. Existing OWNER-only report boundaries remain unchanged; no employee permission or credential expansion. Refresh/private-record exact module state before and after this ONE action, then separately refresh/private-record the approved wallet enabled:true operation with unaffected LAB wallet control. If native UI implies any extra price/contract change, do not silently accept it. Customer pricing activation and email delivery remain separate from module access. No additional trial grant/replay. Same owner and all other owners retained; whole wallet stillOPEN for invoice/Azure pricing, actual Owner-session reports and delivered emails. Checkpoint/common registers/PDF synchronized. Next exact installed-revision full CI and normal guard verification, then fresh scoped LAB operation baselines.

AI-OWNER-WALLET-01 — SOURCE CI VERIFIED / CONDITIONAL PRICING AND MEASURED ACTIVATION BEFORE-ACTION RECORD

25Oct2026 same retained owner. Source3139/ad274dc96d076752f03d4c4e82f346013651a140 fullCI40199905695 SUCCESS:4194server+8backup/0fail/0skip; dedicated native40199905680/job121188678784:7PASS/0FAIL/0SKIP including real HTTP activation guard and exact SQL refusal controls. Merged14d31b8ff198173cf44c419d3761d8ec4e05073a; exact MAIN fullCI40200620906 and normal guarded release pending. Local updated mounted/unit3PASS/0skip and frontend buildPASS. No hosted readiness/usage PASS yet; customer chargingOFF. Existing credits must not be repeated.

Before-action conditional configuration: after normal exact-source release read actual runtime readiness in native Platform Admin. ONLY if requested model is exactly gpt-5-mini and provider configuration exists, set ONLY AI_OWNER_WALLET_TARIFFS via service srv-d9isenfavr4c73bdh52g/workspace tea-d9ie26vaqgkc739uudqg merge replace:false. Candidate exact JSON row: modelgpt-5-mini; responseModels[gpt-5-mini,gpt-5-mini-2025-08-07]; inputMicrosPerMillion335031; cachedInputMicrosPerMillion33504; outputMicrosPerMillion2680247; contextTokens400000; maxOutputTokens128000. Derived with integer upward rounding from official standard USD0.25/0.025/2 per1M, times1.5 approved markup, divided by dated ECB23Oct2026 EUR1=USD1.1193. Result is a fixed versioned EUR schedule with dated conversion assumptions, not live FX or an account-specific provider invoice assertion. Sources https://developers.openai.com/api/docs/models/gpt-5-mini and https://www.ecb.europa.eu/stats/policy_and_exchange_rates/euro_reference_exchange_rates/html/eurofxref-graph-usd.en.html . Conservative per-call hold477085microEUR. No model/prompt/response-limit reduction. If actual model differs, DO NOT apply this candidate; verify that exact model first. No guessed Azure tariff; invoice/email gates remainOFF, global wallet adminON; every unrelated environment key preserved. Saved config must be observed active after applicable deployment, not inferred from a saved response. Preserve normal exact full-CI freshness/guarded deployment; do not directly trigger Render or weaken same-SHA guard. Record any automatic/API-triggered config deployment honestly and use ordinary guarded acceptance before metered LAB.

Measured pre-action baseline14:08:19.339092UTC: existing LABcompanycmtpopbgk000prhb5qc60zxus/storecmtpopbgo000trhb5ng9ytiru, balance5000000/reserve0/version1/enabledfalse/emailfalse; global entries2/notices2/audits2, no pending holds; LAB Sale90/StoreTransaction134/StockMovement95. Foreign/private wallet remains separately controlled without public financial data. Immediately before EACH config/usage action refresh and record relevant values; no stale/after-only inferred delta. Native authorized Super Admin; wallet configuration has no affected physical POS terminal/shift/SKU/quantity/cash-card-IRIS payment (N/A), no sale or fiscal transaction. Once verified tariffs are active, ONE LAB enabled:true save should add exactly one CONFIGURED audit/version+1 and no money/ledger/notice change. One identified native Owner-assistant read-only question in scoped LAB support mode tests real provider usage; record each actual ledger reservation/settlement/token/model/tariff/charge, exact recomputed debit and no residual RESERVED/REVIEW. Number of provider calls follows existing tool/recovery flow; never equate one question with one provider call. Then ONE LAB enabled:false save restores companyOFF, preserving funded balance/history and any already-settled entries. Global invoice/email and all other companies remain unchanged. Existing accepted business transactions are never repeated; live business-counter activity is observational, never attributed to a wallet operation without isolated proof.

Only after measured LAB usage/enable/disable acceptance is centrally published green/main, refresh and privately record the real pilot wallet and unaffected LAB control, then ONE approved target enabled:true configuration with no extra credit or provider call. Preserve ability to disable by agreement. Owner-session detailed report acceptance and delivered email remain separate if not actually tested; no claim from support preview. Immediate scoped PASS updates manual/checkpoint/common registers/pending/PDF; overall wallet remainsOPEN for invoice pricing and other untested scope. Claim must merge green/main before any configuration/usage action. Next actual source deployment and safe runtime metadata readback. Current owner retained.

AI-OWNER-WALLET-01 — READINESS GUARD SOURCE / AWAITING FULL CI AND HOSTED ACCEPTANCE

25Oct2026 same retained owner. Claim3138/bc039b8/docsCI40199418800 SUCCESS mergedfb8f4fe2ac28f3ebcc59651b7fb8fdfca619093d before source. Bounded implementation: existing authenticated Platform Admin wallet GET returns only explicit owner model/provider-present boolean/validated tariff and conservative hold metadata; never an environment collection or key. Existing PUT enabled:true rejects missing provider, absent/invalid/ambiguous exact tariff or tariff output below existing4096/6144 normal/recovery allowance before repository configuration. PUT enabled:false remains available with unavailable prices/provider. Existing owner GET/reporting and other routes unchanged. Native Admin explains readiness/hold and blocks a new activation when unready while retaining disable/funding behavior. No schema, source-model/prompt/output change, company activation, provider call, funding/replay, SMTP or business/fiscal write.

Targeted15local tests passed without skips before final mounted-readiness assertion; updated targeted tests/frontend build recorded separately in CI. New unit cases cover exact runtime model, no secret exposure, hold boundary and invalid/unpriced/ambiguous/too-small tariff; native SQL/HTTP test adds denied role, missing provider/tariff refusal with exact unchanged wallet/audit and valid enable, plus price-independent disable. All previous assertions and lifecycle/recovery behavior retained. Native database execution is required in normal full CI/dedicated recovery workflow; local environment lacks native PostgreSQL and no local native PASS is claimed. Source status AWAITING full exact CI, normal guarded release and measured hosted acceptance. No functional/manual closure.

Official candidate price verification25Oct only, not runtime or account-price acceptance: https://developers.openai.com/api/docs/models/gpt-5-mini lists400000context/128000output and standard USD0.25input/0.025cached/2output per1M; alias and snapshotgpt-5-mini-2025-08-07. ECB23Oct2026 EUR1=USD1.1193 at https://www.ecb.europa.eu/stats/policy_and_exchange_rates/euro_reference_exchange_rates/html/eurofxref-graph-usd.en.html . A candidate approved50percent EUR schedule must use these dated conversion assumptions explicitly, integer microEUR and versioned tariff; no silent daily/account-cost assertion. Runtime actual model still needs authenticated readback after deployment. No guessed Azure price or invoice gate activation. Customer charging and invoice/email gates remainOFF; two accepted internal credits protected. Next full green exact source/main CI, normal release, runtime readiness readback, then bounded verified tariff and measured LAB usage before target activation. Other owners unchanged; checkpoint/common registers/PDF synchronized.

AI-OWNER-WALLET-01 — ASSIGNED ACTIVATION READINESS / BEFORE SOURCE AND CONFIGURATION

25Oct2026 retained owner feat/ai-owner-wallet-20261022. User requests repair and activation after separate internal trials passed. Existing green/main receipt3137/370ef4d protects both credits: no additional funding/replay. Latest deployed guarded source6fdadef/fullCI40195316878/deploy40197399927 remains accepted for internal trial administration only; all customer chargingOFF, global invoice/emailOFF.

Bounded next source: expose authenticated Platform Admin owner-assistant pricing readiness from actual runtime model and validated exact tariff, and reject company enabled:true before configuration mutation when its Owner tariff is missing/invalid. No provider call, key/secret exposure, default model/prompt/context change, schema or unrelated routes. Preserve disabled/off behavior, ability to disable with missing tariffs, paid/trial funding semantics, tenant/role controls and all accepted recovery/lifecycle/POS behavior. Add meaningful native HTTP missing/invalid/valid-tariff activation coverage, plus existing regression checks. Readiness is metadata only, NOT proof provider prices or usage acceptance. Full exact main CI and ordinary guarded release required before hosted acceptance.

Then verify actual configured model and current official provider price/limits and explicit EUR conversion; apply approved50percent markup only to a verified tariff. No guessed Azure SKU/rate, no invoice gate activation until its provider contract verified. Runtime env changes merge individual approved keys only, preserving secrets and every other setting. Before any LAB/customer configuration or metered request refresh relevant wallet version/balance/ledger/notices/audit and unaffected wallet controls; record private

finance privately. No repeated trial/business/fiscal transaction. One measured LAB activation/usage/disable acceptance before target charging, with fresh before/after and immutable tariff evidence; if true provider acceptance cannot be completed, leave customer chargingOFF and name the concrete missing prerequisite. Actual emails remainOFF unless separately verified.

Current implementation/usage charging and pricing remain NOT TESTED; owner retained. Claim must merge green/main before source/config changes. Checkpoint CHECKPOINTS/CHANGES/2026-10-25-ai-wallet-activation.md. Single next action bounded readiness guard, then official exact tariff verification and measured acceptance. Common registries/PDF synchronized, no functional manual claim from source CI.

AI-OWNER-WALLET-01 — SCOPED LIVE INTERNAL TRIAL PASS / PRICING AND CUSTOMER CHARGING STILL OPEN

25Oct2026 same retained owner feat/ai-owner-wallet-20261022. Hosted LAB internal trial PASS published greenCI40198156104 and merged PR3136/2e9a3d2c348f6c4a983f32b3f528519b80fcdf39 before the separately approved private pilot operation. Runtime remains guarded release6fdadef6f1ff04b8c71e516fc7144a417920905c/fullCI40195316878/deploy40197399927,4192server+8backup/0fail/0skip, actualTrigger/WaitSUCCESS. No source or deployment guard changed.

Scoped LIVE PASS for internal noncash trial administration only: separately measured private beforebaseline persisted BEFORE action, then one native Super Admin submission at15:36:19Europe/Athens, one intended internal trial entry/one notice/one audit, exact approved balance/reserve/version and disabled company charging/email verified independently. Read-only reload13:38:06.917195UTC preserved the same entry and company flags; global wallet/entry/notice/audit counts2 each, unaffected synthetic LAB wallet5000000/reserve0/version1/enabledfalse/emailfalse. No duplicate submission, no receiptConfirmed, no payment/provider/SMTP/business/fiscal write by this owner. Private store was actively trading: its StoreTransaction count changed by1 between before/after while Sale/StockMovement counts did not; no isolated business delta PASS or causal attribution is asserted. Private company identity, amount, grant reference, exact wallet IDs and business counters are intentionally excluded from public repository evidence.

Private durable before/after/reload evidence ai-wallet-pilot-trial-20261025.json SHA256 cbd8f372173b3460b6bcd146d6f1f323f29fa10bb13a637fc2dd4e01be9e060e; before-action saved version and final version retain identity. Public synthetic evidence and verified instructions remain CHECKPOINTS/EVIDENCE/ai-owner-wallet-20261022/hosted-lab-trial-20261025.json and docs/manual/ai-owner-wallet/PASS.md. Runtime wallet administrationON, customer chargingOFF, invoice/email gatesOFF. Credits do not activate charging. No full wallet closure.

Remaining ASSIGNED to same owner: actual provider SKU/region/tariff verification, approved50percent markup application, actual usage debit/reservation/low-empty acceptance, detailed Owner reports, invoice charging and notice email delivery. Do not invent prices, lower model/context silently or infer every model fits a small trial. Single next action: verify actual provider price configuration before any customer charging activation. Existing all-owner PASS protected, no lifecycle RESET/enrollment. Checkpoint/common registers/manual/pending/PDF synchronized; historical NOT APPLIED entries below are superseded for internal trial administration only.

AI-OWNER-WALLET-01 — SCOPED HOSTED LAB PASS: INTERNAL TRIAL GRANT / CUSTOMER BILLING OPEN

25Oct2026 same retained owner feat/ai-owner-wallet-20261022. Full MAIN CI40195316878/exact6fdadef6f1ff04b8c71e516fc7144a417920905c:4192server+8backup,0fail/0skip. Guarded deploy40197399927 Verify/Trigger/Wait allSUCCESS; Render dep-dbf069ss728c73dljvfg live13:26:33.105370UTC; independenthealth ok/exact6fd. Wallet administration ON; invoice/email gates OFF. Before-action claim3133 and baseline3135/f49b53e greenCI40197515276 merged02401d78c13b005e49449b52633ff8e4f30efde7 BEFORE the grant. Prior API deploy remains a separate historical observation.

LAB PASS limited to ONE native Super Admin internal noncash TRIAL_GRANT in existing MYWORKSTATION LAB/companycmtpopbgk000prhb5qc60zxus, active storecmtpopbgo000trhb5ng9ytiru. No affected POS terminal/shift/SKU/quantity/payment: N/A. Fresh13:27:59.034923UTC beforebaseline matched published values: four wallet tables0; Sale90/StoreTransaction134/StockMovement95. One submission13:28:18.199119UTC, reference TRIAL/WALLET-LAB-TRIAL-20261025-01, reason Εσωτερική δοκιμή υπηρεσίας υπολοίπου AI,5000000microEUR. No other-company wallet before/after; controls90/134/95 unchanged. Reload13:29:52.230361UTC retained same entry/balance and all four counts1; native UI5EUR/reserve0/companyOFF/emailOFF. No second submission/replay.

Evidence CHECKPOINTS/EVIDENCE/ai-owner-wallet-20261022/hosted-lab-trial-20261025.json and lab-trial-20261025.jpg; usage docs/manual/ai-owner-wallet/PASS.md. Hosted internal trial administration only is complete. No paid receipt/provider/SMTP/invoice/sale/stock/fiscal/lifecycle mutation. Real financial/per-SKU acceptance NOT TESTED. Pricing/50percent application, actual Owner/invoice charging, detailed owner reports and delivered email remain OPEN;5EUR does not prove every model reservation fits. Private target trial NOT APPLIED yet; next separately fresh private before/after/control then ONE approved internal trial, customer chargingOFF. Private customer financial data excluded from public evidence. Other owners/protected PASS retained; common checkpoint/registers/manual/PDF synchronized.

AI-OWNER-WALLET-01 — RUNTIME CONFIG SAVED / API DEPLOY OBSERVED / GUARDED ACCEPTANCE PENDING

25Oct2026 same wallet owner. Before-action claim3133/be7298f/full applicable docsCI40194607912 SUCCESS mergedc26d168ec4f5ebdcc570221bfcaeb60364eda354 BEFORE configuration. Fresh12:49:26.232370UTC all four wallet rowcounts0. Scoped Render environment merge replace:false accepted: ONLY AI_OWNER_WALLET_ENABLED=true, AI_OWNER_WALLET_INVOICES_ENABLED=false, AI_OWNER_WALLET_EMAIL_ENABLED=false. Other settings/secrets not inspected or replaced. No company configuration, funding, provider or SMTP action. Official Render PUT environment reference says changes are not deployed automatically; nevertheless later history OBSERVED separate API-triggered dep-dbevlnu7bikc73bln530/sourcec26d168/started12:49:35/live12:51:10UTC after the configuration call. This is NOT counted as normal guarded release acceptance; no direct trigger_deploy call was made by this owner and no actor provenance is invented from timing alone. Do not infer an unchanged API/backend snapshot from docs alone. Runtime flag readback now available in native Admin; company customer charging and email both visibly unchecked, balance/reserved0, invoice charging unavailable. No financial action performed.

Normal manual guarded deployment40195037156 on pinned approved sourcebc6bb379/release/ai-wallet-runtime-20261025 correctly SKIPPED Trigger/Wait because that revision was already healthy. No guard weakened or unchanged deployment blindly retried. Explicit ordinary full MAIN CI40195316878 at6fdadef6f1ff04b8c71e516fc7144a417920905c is running to provide a newer fully checked release point. Source sincebc6 is documentation only. After actual full success use the existing guarded Deploy workflow on this exact source, preserving normal freshness/ancestor checks, and verify actual Trigger/Wait/health/native availability. Do not treat a skipped workflow as an installation or use direct Render deploy to bypass the guard. Original bc6 full CI40193663396 remains successful, unrelated ftext owner and every accepted behavior retained.

Before future isolated LAB grant, baseline captured12:58:08-12:58:10UTC: existing companycmtpopbgk000prhb5qc60zxus/MYWORKSTATION LAB and active storecmtpopbgo000trhb5ng9ytiru/ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ verified. Wallet row absent/defaultversion0, balance0/reserved0, global wallet/entry/notice/audit0. Unaffected LAB business controls Sale90/StoreTransaction134/StockMovement95. Internal grant has no affected POS terminal, shift, SKU, stock quantity or cash/card/IRIS payment: those fields N/A, never a paid receipt. Operator existing authorized Platform Super Admin in browser administration. Proposed ONE synthetic internal TRIAL_GRANT5EUR/reference WALLET-LAB-TRIAL-20261025-01/reason internal wallet test, customer

charging and email stayOFF. Immediately before execution refresh the same baselines and verify exact match; any difference requires a new reconciled published baseline, not a blind action. After ONE grant require exact5EUR, reserve0, one trial entry/one notice/one TRIAL_GRANTED audit, no other-company wallet delta, unchanged LAB control counts, same identity through read-only reload. No replay solely for proof. Real money totals/per-SKU quantities are NOT TESTED because no such flow is exercised. Existing LAB transactions are never repeated.

This is configuration/staging evidence and a before-action record only. Hosted LAB grant NOT PERFORMED/NOT TESTED; private target trial NOT APPLIED; customer AI prices/charging/invoice/email acceptance stillOPEN. Private target identifiers/amount/reference/financial data excluded from public evidence. No functional manual/numbered closure. Same retained owner; next exact guarded availability acceptance, refreshed LAB baseline then one internal trial, only afterwards separately measured private target trial. Common registries/checkpoint/PDF synchronized.

AI-OWNER-WALLET-01 — AUTHENTICATED / BOUNDED RUNTIME AND INTERNAL TRIAL CLAIM BEFORE ACTION

25Oct2026 same retained wallet owner feat/ai-owner-wallet-20261022. User expressly requested a new secure form; email/password and fresh2FA completed successfully. Native canonical Platform Admin visibly identifies the authorized platform owner. Selected private pilot-company wallet screen freshly reports server runtime DISABLED. This supersedes the prior expired-login blocker only; no trial credit or charging acceptance is inferred. No secrets published.

Existing approvals for the private selected-company internal trial and LAB testing persist; no further generic authorization required. Before-action configuration scope ONLY existing service srv-d9isenfavr4c73bdh52g / confirmed workspace tea-d9ie26vaqgkc739uudqg: merge replace:false AI_OWNER_WALLET_ENABLED=true, AI_OWNER_WALLET_INVOICES_ENABLED=false, AI_OWNER_WALLET_EMAIL_ENABLED=false. Preserve every other environment variable, provider/model/prompt/price, auth, backup schedule, source and existing rollout safeguard. This enables wallet administration, NOT any company's customer charging. All company enabled flags remain false; no tariffs applied, no provider or SMTP call. Do not replace the environment collection or expose its secrets. Inspect actual deployment behavior rather than assuming a saved setting is running. Use the ordinary full exact-main CI/freshness guard release; no direct Render deploy bypass. Current newest source bc6bb379 has its full mainCI40193663396 running; unrelated ftext owner remains retained.

Recovery prerequisite3123 and receipt3129/6ecb16d remain protected: four reviewed tables installed, native archive/COPY/KEEP/control tests passed; no lifecycle RESET/enrollment. Before configuration recheck all wallet rowcounts, exact current service/revision and no pending conflicting operation. Before EACH funding action refresh and record relevant wallet balances/version/entries/notices/audit, selected scope and unaffected company controls; do not use an after-only or stale business baseline. Hosted LAB is an internal noncash TRIAL_GRANT, no paid receipt, POS terminal/shift/SKU/payment/provider call. Use one stable synthetic LAB reference, independently observe exact credit/notice/audit and retained OFF flags through reload. Only after its measured acceptance, one previously authorized private target grant with a stable private reference and separately fresh before/after/control evidence. Never duplicate an uncertain grant or publish real-company financial data; reconcile exact reference first. No paid credit via receiptConfirmed fiction, no existing business/stock/fiscal transaction repeated. Keep customer charging and invoice/email gates OFF throughout this tranche.

Provider tariffs,50percent markup application and actual Owner/invoice charging/inbox acceptance remain OPEN; no invented Azure rate or silent model/context reduction. No configuration, grant or real charge has been performed under this claim yet. Claim must merge green/main BEFORE configuration or state-changing LAB. Single next action: green merged claim, exact bounded runtime configuration and normal guarded availability verification, then measured separate LAB/private trial funding. Final outcomes synchronize all registries/checkpoint/PDF; no functional/manual whole-task closure until actual acceptance. Checkpoint CHECKPOINTS/CHANGES/2026-10-25-ai-wallet-runtime-trial.md. Owner retained.

AI-OWNER-WALLET-01 — RECOVERY INTEGRATION INSTALLED / CHARGING OFF / HOSTED TRIAL OPEN

25Oct2026 retained owner feat/ai-owner-wallet-20261022; approved bounded transfer3120/a49e6db/CI40105519094 mergedb3f4ecc before source. Source3123 exact1da9d7f49bc7fe3c447fa9276ebdbc536ac15e2f fullCI40176259940/build121117979925 all5SUCCESS4186server+8backup/0FAIL/0SKIP; native wallet40176259930/job121117481397 actual7PASS/0FAIL/0SKIP including complete native schema/archive/selective COPY through actual PG18 recovery image, target pending and DELETE refusal, exact money/history KEEP, sibling/foreign/source controls, post-RESET fresh reserve/review/settle and concurrent/drift bootstrap. Existing Ftext native40176259928/job121117481435 actual19PASS/0FAIL/0SKIP preserved. Merged00a285056e3d0e7bf41ead89df2036266694545a. Own exact-main40186768179/build121149266012 all5SUCCESS4186+8/0FAIL/0SKIP. Newer combined main803028cffeb3e2f487ed1b03efb70b783d111f01 includes unchanged owned runtime/catalogue blobs and unrelated retained ftext checkout source; exact fullCI40186803190/build121151227238 all5SUCCESS4188server+8backup/0FAIL/0SKIP. No acceptance of another owner's physical checkout is inferred.

Ordinary guarded release40188097798/job121153122621 Verify/Trigger/Wait SUCCESS, exact803028cffeb3e2f487ed1b03efb70b783d111f01; independent public health2026-10-25T11:18:45.990797+00:00 HTTP200/oktrue/exact revision. Dedicated ordinary startup logged reviewed wallet schema availabletrue; its chargingEnabledfalse describes the provisioner not enabling billing, not an independent environment-variable read. Read-only actual PG18 after2026-10-25T11:18:28.830203Z: four wallet relations exist, exact typed catalogue match, all four rowcounts ZERO; no unknown or drifted reviewed relations. No store lifecycle enrollment/Fence/Execution or RESET was performed. Backup service actual normal deploymentdep-dbeu4ts9v7es73crl530 LIVE at revision803028cffeb3e2f487ed1b03efb70b783d111f01; observed worker pulse2026-10-25T11:15:44.419210+00:00 reports matching manifestHashee0d830d5a4e190da7c86cf7d87b592707a229b670e894dd72320a1317fa3af4 and storagePolicyVerifiedtrue. Pulse fields are read-only observations; MAC not independently validated in this turn because runtime Shell requires a separate Render sign-in. No complete production backup/restore or general lifecycle execution acceptance is inferred.

The four-table catalogue/retention engineering blocker is resolved and installed. RESET retains attributed usage; company money/credits/notices/audit remain shared and untouched; pending RESERVED/REVIEW blocks maintenance; deleting a store with wallet history refuses pending a separate reviewed retention workflow. Every unrelated canonical/prospective catalogue/review value remains protected. No runtime/company/email activation or tariff change was performed by this owner. Empty wallet tables mean no company charging is enabled. The last authenticated Admin runtime-OFF observation is historical23Oct; current authenticated readback remains unavailable after2FA expiry. Actual trial credit NOT APPLIED. No wallet funding, provider call, SMTP or business/stock/fiscal transaction initiated by this owner. Ordinary deployment created only the reviewed empty wallet schema. Hosted LAB/Owner charging/inbox NOT TESTED; no functional manual or numbered PASS closure.

Authentication: email/password advanced to2FA, but application explicitly reported verification expired after the delayed second step. Not treated as authenticated; returned to the normal login screen. No secrets retained or published. Single next action: finish secure Platform Admin authentication, then publish the exact bounded operational before-action record for service availability with company charging OFF, measured LAB grant and exactly one already-authorized private-target trial. Verified provider tariffs and separate charging acceptance remain open; do not invent Azure prices or lower model limits. Owner retained, no further generic funding/ownership approval required. Full technical packet CHECKPOINTS/EVIDENCE/ai-owner-wallet-20261022/recovery-technical-receipt.json; checkpoint CHECKPOINTS/CHANGES/2026-10-24-ai-wallet-recovery.md. Common registries/checkpoints/ops and tracker PDF synchronized.

AI-OWNER-WALLET-01 — OWNER-APPROVED LIMITED RECOVERY HANDOFF / ASSIGNED BEFORE SOURCE

24Oct2026: ΑΝΑΛΗΨΗ ΑΠΟ retained central lifecycle integration scope — ASSIGNED feat/ai-owner-wallet-20261022 / feat/ai-wallet-recovery-20261024. User explicitly approved this named limited transfer after the concrete request in the wallet conversation. Scope ONLY AiOwnerWallet, AiOwnerWalletEntry, AiOwnerWalletNotice, AiOwnerWalletAudit: canonical/prospective catalogue and column classifications, narrowly required retained financial-history policy, wallet-specific schema compatibility and isolated native full-schema archive/COPY/RESET/KEEP regression tests. All unrelated lifecycle nodes, jobs/controller/worker execution, automatic dispatch/recipient consent, thermal/ftext source and existing owner assignments remain retained. No second parallel owner for this slice.

Baseline main e69eb1ed49ae4b973e77513448d44d5f0541b83d inspected24Oct. Wallet trial source3100 remains installed engineering-only; actual selected-company trial credit NOT APPLIED. Canonical catalogue still omits all four wallet relations. AiOwnerWalletEntry.storeId is nullable; company credit rows are shared. FRESH_STORE_V1 currently rejects KEEP outside the explicit retained set: adding a wallet table name alone cannot safely solve this. Proposed bounded behavior retains ALL company wallet funds, reservations, credits, notices and audit, plus selected-store usage attribution across store RESET; no refunds, deletion, ledger replay or cross-company reassignment. Unknown/REVIEW holds remain durable. Shared company tables must not become store-owned through actor/reference/JSON guesses.

Claim must merge green BEFORE any source/configuration/schema change. Review exact current full catalogue and physical metadata, initialization while tables are absent, typed columns/constraints/indexes, foreign and sibling controls, pending reservations and concurrent old work, archive/restore and retained rows. Existing ftext full-schema/native acceptance and thermal catalogue remain protected; do not repeat accepted business transactions. Native engineering evidence is not hosted LAB/Owner charging/inbox PASS. Global/company/email activation, production wallet DDL/funding/provider/email/business operations remain unchanged. No generic grant reapproval required. Verified pricing and separately measured LAB acceptance remain prerequisites before exactly one already-authorized private target trial grant.

Single next action: publish this receiving claim green/main, then implement only this bounded wallet recovery integration and run native recovery/control proof before ordinary guarded installation. Retained wallet owner continues until completion or named handoff. Checkpoint CHECKPOINTS/CHANGES/2026-10-24-ai-wallet-recovery.md. No functional manual or numbered checklist closure.

AI-OWNER-WALLET-01 — TRIAL SOURCE INSTALLED OFF / ACTIVATION BLOCKED ON CATALOGUE REVIEW

23Oct2026 retained owner feat/ai-owner-wallet-20261022, no release or transfer. Before-source claim3095/2eebe682/full docsCI39965146634 mergedfa979c4 preceded all trial source. Source3100 exacta3ef7b8f65941daf0ca49027397a4fda1117ae4c fullCI39966455737/build120457817039 all5jobsSUCCESS:4138server+8backup,0FAIL/0SKIP. Actual native PostgreSQL grant/concurrency/replay/conflict/last-notice rollback, role/company/revoked-session HTTP, OFF history/old settlement and mounted Owner/Admin UI executed. Focused30/30 and client build PASS. Merged06034c95cfaaa96fc22c461870e555acec279871. New source engineering evidence only; hosted LAB/Owner charging/inbox NOT TESTED.

Exact06034 main pushCI39968018220 was cancelled before jobs by pending-run replacement; GitHub retry returned403 cannotretry (no check bypass). Newer abedocs pushCI39968079005 skipped actual app build and is NOT full engineering proof. Explicit ordinary manual full-main CI39968459198 atabe5cc030d6fb5fbfc3f9c731a17492ed6f13464/build120464914860 passed4154server+8backup/0FAIL/0SKIP, but separate wholesale120464915023 failed before assertions with Chromium Target.createTarget startup timeout. Only that failed job was rerun; retry initially queued behind newer full main39968969170/c03afa262. That interim release state is superseded by the completed installation receipt that follows. All4owned runtime blobs match source through c03afa262; source06034 ancestry confirmed. Technical installation verified23Oct17:38Europe/Athens. Newer exact combined

mainc03afa2621694d648f2a84b2e7fa7621e3915c80 full pushCI39968969170/build120468677166 all5SUCCESS4156server+8backup/0FAIL/0SKIP. Manualabe39968459198 attempt2 alsoall5SUCCESS after only the isolated Chromium startup retry120473180557; actual role/browser/offline assertions passed, no source/test/guard workaround. Actual ordinary release39970967266/deploy120473321060 passed exact full-CI freshness guard, triggered Render14:36:54UTC and reached expected healthyc03afa26214:38:56UTC. Independent HTTP200/oktrue/c03 health14:38:52UTC confirms installation; all4owned runtime source blobs at LIVE revision equal accepted3100 source and06034 ancestry is preserved. This supersedes prior releasePENDING only for source installation. Global wallet runtime/charging/email remainOFF, no schema initialization or trial credit. Activation remains blocked on the exact catalogue/ownership review below. Engineering CI/installation is not hosted LAB/Owner charging/inbox PASS.

Installed foundation defaultOFF and current production remain protected. Added source provides separate audited TRIAL_GRANT route/form, atomic ledger/balance/audit/notice, exact stable-reference replay and explicit non-receipt labels. Company agreement ON/OFF is existing audited versioned enabled flag: OFF keeps original provider at platform cost and preserves funds/history; preexisting reservations settle under original rates. Trial grant alone never enables billing. Owner approved concrete internally funded selected-company trial and START; no further generic funding/ownership approval is needed. Actual trial amount/identifiers remain private. Secure SuperAdmin authentication was completed; this is not charging/LAB PASS.

ACTUAL ACTIVATION PREREQUISITE:23Oct14:28:08UTC read-only production finds ALL4 AiOwnerWallet/Entry/Notice/Audit relations ABSENT;14:19:18UTC Fence/Execution also ABSENT. Native Admin confirms runtimeDISABLED. Existing canonical/proposed lifecycle manifests have none of these four known tables; Entry contains nullable storeId. Current validateDatabase explicitly rejects unknown relations and unreviewed storeId-bearing tables. Lazy wallet initialization would create four unreviewed relations; do not enable global runtime or initialize/credit while this compatibility gate remains unresolved. This is source-reviewed risk, not a measured failing RESET or backup job. Normal full pg_dump backup is distinct from controlled store lifecycle recovery. Do not claim backups already failed or that CI alone proves lifecycle compatibility.

Prepared exact4-table DDL/SHA256 and protected ownership/archive/reset requirements in CHECKPOINTS/EVIDENCE/ai-owner-wallet-20261022/trial-lifecycle-review.json and docs/ops/ai-owner-wallet-lifecycle-review-20261023.md. Shared canonical lifecycle/automatic-report integration remains with its existing owner; no parallel takeover, ownership/deletion bypass or unilateral manifest promotion. Company funds/credits/notifications/audit and shared CREDIT rows must survive store reset without duplication or cross-company movement. Required joint bounded review: native full catalogue/oracle and archive/copy/restore/KEEP proof; fresh actual schema and no jobs/leases/reopen; paired ordinary app+backup image/hash/pulse verification; install-only enrollment if required, never RESET as setup shortcut. Verified provider tariffs and measured isolated LAB grant acceptance remain required before real charging;50percent markup approved, not applied.

No production wallet schema/configuration/funding/provider/business/stock/fiscal/email action, no fictitious payment receipt or repeated accepted transaction. Actual selected-company trial credit NOT APPLIED. No functional manual/numbered-checklist closure. Single next action: retained wallet owner coordinates the bounded four-table review with the assigned canonical lifecycle integration owner, publishes the approved claim before integration source, then measured LAB and exactly one authorized selected-company trial grant after fresh before/after/control evidence. This final technical handoff synchronizes all3registers/checkpoint/ops/reviewpacket and regenerated tracker PDF. Owner retained, not silently unassigned.

AI-OWNER-WALLET-01 — TRIAL GRANT ASSIGNED BEFORE SOURCE / NOT TESTED

2026-10-23 retained owner feat/ai-owner-wallet-20261022; continuation feat/ai-wallet-trial-grant-20261022. Owner explicitly selected internally funded trial credit, concrete amount and START. No further ownership approval needed. Existing source3057 and installed f12c816/CI39847981978/release39849306527, receipt3076/0d28a6f remain protected. No real trial credit/payment/configuration applied yet. Current receipt-only route must NOT be used for promotional funding or false receiptConfirmed.

Bounded next scope: separate SuperAdmin-only audited TRIAL_GRANT path on existing dedicated CREDIT ledger, explicit confirmed internal reason and namespaced idempotency, explicit bounded wallet amounts, atomic entry/balance/audit/notice, owner/admin readable trial label, fresh role/company validation and mounted UI state isolation. Latest owner requirement: SuperAdmin switches customer AI charging ON/OFF per company agreement; OFF keeps AI available at platform cost without clearing prior balance/history. Existing audited company flag already provides that behavior; label/helper and regression coverage must make it explicit. No new business schema migration, no fake paid receipt, no provider/prompt/invoice/payment/stock/fiscal changes, no broader owner takeover. Company gates remainOFF until reviewed explicit activation and validated real tariffs; all other wallets remain untouched. Native PostgreSQL concurrent replay/conflict/rollback/HTTP authorization plus mounted UI required. CI is not hosted LAB PASS.

Single next action: merge this before-source claim green/main, implement and validate bounded grant, normal guarded exact installation, fresh measured LAB grant acceptance, then one authorized selected-company trial grant with before/after/control evidence. Actual provider tariffs and activation acceptance remain OPEN; preserve50percent markup and do not invent Azure rates. Private target/financial identifiers are deliberately excluded from public evidence. Final central technical/functional receipt must synchronize active/tracker/pending/checkpoint/PDF with exact outcome. No scope release.

Resumed23Oct after interruption. Previous8a2b0a1 claim branch existed without a PR/merge; no grant source/configuration action had occurred. Restored same claim onto newest main, preserving concurrent owners and registries. The approved selected-company trial amount is private operational data; no fabricated receipt or additional grant authorization. Existing audited company enabled flag is preserved; only clear operator labels and regression coverage are needed for agreement ON/OFF.

AI-OWNER-WALLET-01 — OWNER COST SOURCE INSTALLED OFF / PRICING AND LAB ACCEPTANCE OPEN

2026-10-22 23:34 Europe/Athens. Continuous retained owner feat/ai-owner-wallet-20261022; source3057 exact e8976ef7f852e304361612b337f9ddab562af7fe, green full CI39837109580 attempt2/build120061377604:4008server+8backup,0FAIL/0SKIP,all5jobsSUCCESS. Merged f12c816aecab60e60adb811ea523f7ac5523e54f. Exact source-main full CI39847981978/build120066616325 SUCCESS4103server+8backup,0FAIL/0SKIP,all5jobsSUCCESS. Ordinary guarded release39849306527/deploy120070993257 ACTUAL Trigger+WaitSUCCESS: trigger20:30:38UTC, expected revision healthy20:33:13UTC. Independent public health20:33:58UTC HTTP200/oktrue/f12c816. All4owned runtime blobs at that LIVE revision equal accepted source. Supersedes earlier source/releasePENDING notes only for technical installation; no guard bypass or Render manual deployment.

Installed additive Owner reporting: selected-store full settled-usage ledger, today/current Athens month/lifetime totals, invoice/question/other categories and daily detail, server as-of timestamp. Recent100history cannot truncate totals; credits, RESERVED/REVIEW and future settlements excluded. Shared company balance remains explicitly separate. Mounted stale-store response and tenant/role controls preserved. Strict optional cache-write lifetime and long-context tariff contract is installed; legacy rates/defaultOFF unchanged, missing or unpriced usage fail-stops with retained REVIEW rather than invented zero charges. Native PostgreSQL golden tariff/ledger/HTTP/reporting boundary fixtures and mounted UI all executed. Categories describe provider calls/features, NOT unique invoice/question

identities; individual business-document grouping remains OPEN.

Initial source CI fixture failures, checkpoint-policy failure and Chromium startup retries remain in source checkpoint. Latest sole unrelated first-attempt4007PASS/1FAIL was wholesale whole-JSON substring999 assertion matching dynamic paidExpiresAt; exact clock reproduction and unchanged current-clock pass recorded in owner-cost-receipt.json. No wholesale source/assertion/guard changed, no takeover of its existing owner. Unchanged full rerun4008/0/0 passed, independent actual wholesale browser job alsoSUCCESS. This is engineering evidence, never LAB/USER PASS.

Owner approved50percent markup (provider reference cost10EUR -> customer debit15EUR), not applied. No production tariff/config/schema/funding/payment/SMTP action, no accepted invoice/stock/fiscal/payment replay. Existing gates remainOFF; real hosted Owner charging/LAB/inbox acceptance NOT TESTED. Actual Azure SKU/region/rate and provider/EUR settlement reference still require verification; researched reference draft is not a live tariff. No initial trial funding amount approved, no fabricated receipt or test credit for a real company. Broader internal/platform/scheduler metering and global push remain OPEN.

Single next action: verify actual provider tariffs, establish concrete initial trial funding/budget and measured isolated LAB acceptance BEFORE selected real-company activation. Only authorized confirmed actual receipt may fund the current credit route; an internal gift requires a separate audited grant path, not receiptConfirmed fiction. Owner retained, no scope release, no functional manual/numbered-checklist closure. Before-source green/main claim3055 remains protected. Technical evidence CHECKPOINTS/EVIDENCE/ai-owner-wallet-20261022/owner-cost-receipt.json and owner-cost-ci.jpg; checkpoint CHECKPOINTS/CHANGES/2026-10-22-ai-wallet-owner-cost-breakdown.md. This final technical receipt synchronizes all3common registers and regenerates their tracker PDF together.

AI-OWNER-WALLET-01 — INSTALLED / PRICING TRIAL PREPARATION ASSIGNED

2026-10-22 20:48 Europe/Athens. Continuous retained owner feat/ai-owner-wallet-20261022; continuation docs/ai-wallet-invoice-installed-20261022. Supersedes the17:21UTC deployment hold ONLY for technical installation. Exact combined5c8ccf5ef1c3aea57a9c7d11d5cc1550d9052774 full main CI39821105794/job119973999992 SUCCESS3916server+8backup,0failures/0skips. Actual ordinary release39822773699/job119978211519 triggered Render17:28:09UTC and verified expected health revision17:33:36UTC. Independent health oktrue5c8ccf5 and24/24 wallet/invoice/review runtime blobs match7f5afd3, source ancestor confirmed. Skipped/withheld deployment jobs are not used as installation evidence.

User requests continuing and defining AI trial pricing for one explicitly selected active customer store. Read-only native Platform Admin confirms the exact company selected and runtime billing DISABLED; no table initialization, configuration, funding, tariff, paid provider call or email send. Public evidence excludes customer identities, contact details and financial records. No hosted functional/LAB/email PASS. Numbered functional checklist/manual remain unchanged.

Owner additionally requires customer-visible usage cost through the current date. Assigned additive Owner wallet presentation: selected-store settled all-time/month-to-date/today totals, daily and feature-category breakdown (invoice OpenAI/Azure grouped as invoices, Owner assistant as questions, other features separately), recent-entry category labels and server as-of timestamp in Europe/Athens, computed over the complete ledger rather than the recent100-entry list. Show final customer debits (approved50percent markup in tariff), never provider wholesale cost or unposted reserved holds as spend. Preserve company-wide balance labels and selected-store stale-response protection. Native PostgreSQL boundary/isolation/over100entries tests and mounted owner UI tests required; hosted acceptance remains NOT TESTED.

Bounded next scope before production activation: verify actual configured models, extend exact token tariff/reservation/settlement for documented cache-write lifetime counts and long-context tier where required, preserving legacy model tariffs and all default-OFF paths. Official OpenAI documentation22Oct describes cache_write_tokens and ttl_30m_tokens/ttl_12h_tokens; current contract has only uncached/cached/output and cannot assert exact-cost GPT5.6 pricing. No model/prompt switch to fit billing. Full regression/native PostgreSQL/HTTP/build/browser/invariants and ordinary release required for any

source extension. Retain canonical company/store authorization, original invoice settlement/job/editable draft, durable unknown holds and fail-stop, notification privacy and all other owners.

Owner explicitly selects50percent markup on verified provider AI cost converted to EUR. Example10EUR provider cost means15EUR customer usage charge. Markup approved, NOT yet applied.20EUR trial budget remains a proposal; usage rather than a guessed flat invoice/question charge. No fictitious confirmed-payment receipt or credit; promotional credit needs a separately audited explicit grant path if chosen. Existing payment route is confirmed actual receipts only. Single next action: settle the complete rate contract and actual configured models, then obtain the concrete trial budget/rate choice before controlled LAB acceptance and selected-company activation. Broader platform/scheduler AI and global notifications remain OPEN. Checkpoint CHECKPOINTS/CHANGES/2026-10-22-ai-wallet-invoice-metering.md; evidence CHECKPOINTS/EVIDENCE/ai-owner-wallet-20261022/installed-receipt.json. Owner retained; no scope release.

22/10/2026 - IOS-CHAT-NATIVE-01 / ENGINEERING COMPLETE / OWNER APPLE SETUP AND IPHONE ACCEPTANCE OPEN

Owner feat/ios-chat-native-20261022 retained. Before-source claim3020/49c27e87 preceded code. Native SwiftUI/UIKit iOS17+ app0.1.0/build1, bundle gr.myworkstation.chat.ios.preview, sourcePR3025 head690da304 merged48a2618d39016fa2eb2555330c3e0ff515ea4448. This supersedes the initial iOS NOT IMPLEMENTED claim only; Android scoped USER PASS3018/3010 and all other owners remain protected, no accepted test replay.

Actual PR iOS39814339153/job119949104298 SUCCESS on Xcode26.3/Swift6.2.4:11core+15model+2real Apple H264/H264-AAC memory media+3native UI=31PASS/0FAIL. Existing unchanged server validator accepted both actual simulator-produced MP4s. FullPR39814339121 all5jobsSUCCESS3865server+8backup/0FAIL/0SKIP. Tested PR merge checkout430dbe28222ace5810c0c6077bb488306e94d158 is recorded honestly, distinct from branchhead/main. Earlier compile/fixture/version failures and causal corrections remain in checkpoint; assertions retained.

Ordinary guarded release39822773699/job119978211519 SUCCESS; Renderdep-dbd4faff3r2c739b9rpg LIVE17:33:32UTC and independent public /api/health ok:true exact5c8ccf5e verified. All35 owned source blobs match this actual release. This closes only the native server engineering rollout hold, not physical iPhone/signing/APNs

or other owners' acceptance. Engineering receiptPR3046 retains all unrelated owners and guards. Additive iOS APNs/native-push protocol defaults OFF, no server configuration/secret/schema mutation. Existing Android payload/default registration/signer/download unchanged. No real chat, AI/provider, notification, mail or business test executed. Privacy is scoped memory/lifecycle behavior plus non-sync technical Keychain state, not zero OS/SDK/provider/backup traces or universal screenshot blocking.

Remaining: owner has NO Apple Developer account. Owner-controlled Apple membership/App Store Connect, matching Firebase iOS app/APNs key, signing/provisioning, real TestFlight processing and tester link are required; no account/payment/agreement/key action by agent. After actual signed delivery, perform one final consolidated physical iPhone batch per ios/README.md (login2FA/PIN/store/AI scope, text/read/ready replies, photo/voice/video capture/gallery/playback, push/tap/logout/background/privacy). iOS user acceptance stays NOT TESTED; no manual PASS or whole N16/PWA/AI/commercial closure. Owner retained through Apple prerequisites and final acceptance. Checkpoint CHECKPOINTS/CHANGES/2026-10-22-ios-chat-native.md; evidence CHECKPOINTS/EVIDENCE/ios-chat-native-20261022/technical-receipt.json. Single next action: owner-controlled Apple enrollment/signing/Firebase iOS/APNs/TestFlight setup, then one final physical iPhone batch; accepted Android tests are not repeated.

22/10/2026 20:30 Europe/Athens — KAT-MISSING-FISCAL-MAPPINGS / LIMITED LAB VAT SAVE PASS

Retained owner ops/kat-missing-fiscal-mappings-20261022. Claim PR3051 final5b18fb378e7ee4517d6b75723536deaec1aa052e/docsCI39822748783SUCCESS mergedc444a14b before action. Actual native SuperAdmin/CloudChrome in virtual MYWORKSTATION LAB/ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ: selected ONLY existing synthetic LAB-CAFE-20260927/id12890a39-c0eb-4c80-9d32-8691a4e4c90d, bulk correction with all other fields Keep and SETunchecked. One Καταχώρηση20:30:13Athens assigned existing815e0531-9f42-4dd6-b5b8-f4ff37efdfa6/register1/code1/13%. No sale, quantity, payment or physical POS action (N/A).

Fresh catalog baseline17:29:03UTC/control17:29:28UTC recorded locally BEFORE action; independent after17:30:23UTC and saved native archive agree. Exactly one department null→target and vatVerified→true;13%/price1/stock-2/all other Product fields and complete StoreProduct unchanged. All1900KAT rows unchanged; LAB/N40/KAT sales/payment/transactions/movements/shifts/layout and other-product control hashes unchanged. Both LAB terminal/control shifts unchanged; no old accepted transaction repeated. Original departments unchanged. Evidence CHECKPOINTS/EVIDENCE/kat-missing-fiscal-mappings-20261022/lab.json and catalog/control measurement SQL.

This is LIMITED LAB PASS for same-rate native blank department correction, not bulk price/merge/general fiscal/physical acceptance. Other inventory owners retained. Real KAT correction NOT YET DONE; readiness remains BLOCKED. After this five-file receipt green/main: fresh KAT baseline, native explicit51 active MWS-KAT-BEV identities ONLY→existing department65d2fb68-dae6-46f0-8e34-27767665538a/register2/code42/rate13, matching original prepared-drink source counterparts. Preserve all imported mappings/inactive modifiers and all prices/stocks/rates/fees/layout/finance. Other44legacy/test mappings require individual exact source review; no blanket rate/name inference. Physical legitimate receipt, SEPTONA conflict and mobile-service0.50SET remain OPEN. Owner retained, no new source/deployment needed.

22/10/2026 — KAT-MISSING-FISCAL-MAPPINGS / OWNER AUTHORIZED / ASSIGNED BEFORE CONFIGURATION

Retained KAT owner ops/kat-catalog-import-20261020 / feat/kat-pos-photo-layout-20261021; continuation ops/kat-missing-fiscal-mappings-20261022. Owner explicitly said START and approved correction of missing fiscal links after the readiness audit. Scope ONLY reviewed blank Product.vatDepartmentId in pilot-company/kat-store, preserving existing VAT rates, prices, activation, stocks, original imported fiscal tuples, layoutv3702, recipes/fee SETs, financial/shift/device records and other stores. No sale, import, stock reset, new department, rate/exemption or permission change.

Read audit PR3033 and current source/manual. Existing single-card save has limited LIVE persistence PASS15Oct; bulk VAT UI had preview-only acceptance, so any first bulk VAT save requires one measured synthetic LAB sample and published scoped receipt BEFORE KAT bulk use. No accepted financial transaction is repeated. Current source bulk writes chosen department, matching rate, vatVerified=true and updatedAt plus audit; other fields must remain Keep. Preserve0% unverified legacy/test items until exact source identity resolves their fiscal exemption. Missing95 includes51 modern beverages and44 legacy/test rows. Modern prepared drinks' original source counterparts (KAT21869/21870/21877/21880/21884/21935/21936/25158) use department2/code42/rate13, not an inferred department1 from its label. Review exact target identities and fresh baselines before native selected-store correction; do not select inactive modifiers or blanket-map by rate.

Status NOT TESTED for correction; authenticated SuperAdmin access restored with secure2FA, no business save yet. Readiness remains BLOCKED until saved readback. Existing physical POS/fiscal first legitimate receipt and separate0.50 mobile-service SET remain OPEN. Single next action: measured native synthetic-only bulk VAT acceptance, then reviewed real blank-link groups and independent protected-field readback. Checkpoint CHECKPOINTS/CHANGES/2026-10-22-kat-missing-fiscal-mappings.md. Owner retained; other-owner inventory merger/bulk-price acceptance and all central scopes untouched.

22/10/2026 — Source prepared / AWAITING CI AND RELEASE

Claim PR3047/c01513d docsCI39821631495 SUCCESS, merged6aa9f22 before source. Separate exact /online/daily-bite class reproduces accepted KAT layout with original logo extracted from user PDF (uncropped orange mark/black lettering, original olive surround). All existing script blocks and KAT CSS are byte-identical; new independent visual scope script only. No catalogue/order/payment/stock/member/fiscal behavior change.

Following exact green release, normal selected DAILY UI preparation may save only brand name DAILY BITE, supplied logo HTTPS URL, approved olive primary/secondary and source tagline. Preserve public-disabled state, surcharge .10, stock checking, doctor15/nurse10/staff0, hours and all fulfillment/payment settings. Retail online assortment to be prepared only from DAILY products: hot/cold prepared drinks, waters, soft drinks, food, packaged food, dairy and ice cream; exclude wholesale ingredients, tobacco/alcohol, lottery/cards, non-stock/cleaning/pet rows. Existing product prices and availability rules remain unchanged. Product visibility is configuration, not product import or stock adjustment. Public activation/real order acceptance is outside this preparation. No business write until source/claim is green/main and ordinary release is verified. Broader original residuals remain assigned.

23/10/2026 00:07 Europe/Athens — DAILY-DESKTOP-SCALE-01 / LIMITED LIVE DESKTOP VISUAL PASS / COMPLETED

Retained owner codex/daily-online-store-20261011 / issue2054. Only the user's wide-desktop size complaint is complete. ClaimPR3077/head15f76bf1b0681921258a40289c2ae53a560e3fea/docsCI39850476883 SUCCESS mergedd1d065df167c4d0fee7f630cc6f20bcd3aad4dd8 before source. Exact fullPRCI39851277841/job120078268488 and mainCI39852751802/job120083403781 all5jobs SUCCESS; each4108PASS/0FAIL/0SKIP plus backup8/0/0. Ordinary guarded release39854076724/job120087705994 SUCCESS; Renderdep-dbd7ksbl550s73avaq80 LIVE22/10 21:06:31UTC. No guard changed.

Actual read-only raw HTTP21:07:33UTC: health oktrue exact8169489a; full initial DAILY HTML equals the reviewed template transformed by the unchanged metadata helper; initial DAILY title/Open Graph retained. KAT receives the reviewed shared template with only the new DAILY desktop selectors added. HTML SHA256d55dfc0c584b5fb9c88cb2abbe576ae55eba2bf66c923a90c970780ee6bd0b12. All pre-existing CSS, scripts and markup byte-preserved. Raw proof and initial HTML in CHECKPOINTS/EVIDENCE/daily-desktop-scale-20261022/.

Actual Cloud Chrome desktop viewport1363: body16→18px, logo230→280px, title30px, checkoutheight50px, no horizontal overflow; shell1348px with normal vertical scrollbar. Supplied logo is visibly larger and uncropped; search/cart/closed checkout remain readable. Screenshot browser.jpg in same evidence directory. Empty basket and disabled closed-store checkout observed. This is limited hosted desktop visual PASS; no no-vertical-scroll promise or physical/mobile checkout acceptance.

Five native Chromium before/after tests at1920/1440/1024/768/390 actually ran unskipped in both full CIs:20renders verify no horizontal overflow, larger DAILY desktop, exact unchanged narrow/mobile and KAT geometry/typography. At1920 shell1440→1800px. These are isolated browser checks, not actual physical/mobile LIVE PASS. Local packed-browser binary had been empty; restored only scratch official Chromium tooling, then all5viewport tests and existing10branding/metadata/public-url checks passed, frontend build passed.

No settings/catalogue/stock/order/payment/fiscal or public-activation action. DAILY remains public-disabled; initial inventory and wider launch remain OPEN. Previously recorded disabled-shell green OPEN badge/default copy is unchanged and is not accepted trading status. No whole Gate/numbered-item closure. Owner retained for broader residuals; only completed desktop subtask removed from pending. Manual docs/manual/online-delivery/PASS.md and both canonical PDFs updated in this receipt. Checkpoint CHECKPOINTS/CHANGES/2026-10-22-daily-desktop-scale.md.

22/10/2026 23:16 Europe/Athens — DAILY-LINK-PREVIEW-01 / LIMITED LIVE HTTP METADATA PASS / COMPLETED

Retained DAILY owner codex/daily-online-store-20261011 / issue2054; only the independently claimed wrong shared-link identity is complete. Claim PR3069 merged6a4056fe509dc44f3adecb331218a28ef9a2fac8 after CI39841883025. Source PR3070 final head0c0982960b9d18a762cdbc4338eb086b2b43d682 merged723c8184f39d87e262d7d1c59c1941e4cadee55b. Full exact PR CI39844217449 and main CI39845583716: all5jobs SUCCESS,4096PASS/0FAIL/0SKIP plus backup8/0/0. Earlier source headf246ca5 CI39842567540 also green; reconciliation preserved concurrent documentation only. No guard was weakened. Ordinary guarded release39846908229/job120062596624 SUCCESS; Renderdep-dbd6t4gm7kps73c13m0g LIVE20:15:50UTC.

Independent actual raw HTTP verification20:16:33UTC with WhatsApp/2.0 User-Agent, before JavaScript: exact /online/daily-bite and fresh query both return DAILY BITE - Online Παραγγελίες, unique matching Open Graph/Twitter title/description, pinned canonical, original PNG image with image/png MIME and825x774 dimensions. Logo SHA256d003419554139638e0656ca57fab9f9b9525c35b78f3c7d585946d3864635704. GET/HEAD pass;

raw fresh-query response byte-identical to canonical. KAT initial HTML is byte-identical to its original template; every original style/script/body byte remains unchanged in DAILY. Actual /api/health independently returned oktrue exact723c8184. Proof JSON and raw HTML in CHECKPOINTS/EVIDENCE/daily-link-preview-20261022/.

Cloud Chrome opened the exact fresh query and observed matching OG title/image/canonical and visible DAILY logo/theme, empty basket and disabled closed-store checkout. Screenshot in same evidence directory. This proves server metadata and public browser identity, NOT WhatsApp refreshing an already sent cached message card; no actual WhatsApp send or cache purge was performed. Existing green OPEN badge/default copy on the disabled shell remains the previously recorded residual, not accepted active trading. No stock/catalogue/settings/order/payment/fiscal/database writes or public activation. Broader launch and initial inventory remain OPEN with the retained owner; no whole Gate/numbered-item closure. Checkpoint CHECKPOINTS/CHANGES/2026-10-22-daily-link-preview.md and manual docs/manual/online-delivery/PASS.md. Canonical PDFs regenerated in this receipt.

22/10/2026 — DAILY-STOCK-CATALOG-03 / LIMITED LAB CATALOGUE PASS + DAILY SETTINGS LIVE PASS / LAUNCH OPEN

Owner codex/daily-online-store-20261011 retained / issue2054. SourcePR3056/d7372b8/fullCI39828149315 green, merged659aea0217d62c6beec5f0ea51455a8c68884a4b. Attempt1 browser ECONNRESET qualified in checkpoint.

Actual21:37–21:46Athens LAB normal UI auto on -> catalogue51 exact own-store SQL identity/stock match; restored original auto=false/stockCheck=false and original2 products. DAILY normal UI saved supplied logo/name/tagline/welcome and auto=true/stockCheck=true/publicfalse; reopened readback count0.8753active/0positive stock. All LAB/DAILY/KAT stock/baked/visibility fingerprints and orders3/0/14 unchanged; control business config restored/unchanged. No stock/order/payment/fiscal submission, no prior fixture replay. Manual products list was not saved.

Checkpoint CHECKPOINTS/CHANGES/2026-10-22-daily-stock-catalog.md; manual docs/manual/online-delivery/PASS.md; evidence CHECKPOINTS/EVIDENCE/daily-online-20261022/. Only catalogue/settings and qualified disabled-shell theme PASS. Public launch, initial inventory, active customer presentation, checkout/mobile/physical/fiscal remain OPEN; disabled shell legacy OPEN badge/default copy is residual. No whole numbered/Gate closure, owner retained. PDFs regenerated with this receipt.

22/10/2026 — DAILY-STOCK-CATALOG-02 / SOURCE READY / AWAITING CI AND LAB

Claim PR3054 head ce75202afd712836608f357fe35aee2d4d09fea6 / docs CI39826302588 SUCCESS / merged43cfb63a4226519b3877ef2cf88213f3291dea42 before source. Owner codex/daily-online-store-20261011 retained; independent branch feat/daily-stock-catalog-20261022. Adds opt-in autoStockCatalogEnabled defaultfalse, idempotent additive bootstrap, scoped settings/readback and automatic UI. Omitted flag preserves saved state for old clients; enabling forces stockCheckEnabled true. Manual catalogue and other stores remain default unchanged.

Opt-in readers use active own-company/store products, current finite positive effective stock, matching enabled same-product baked balance precedence, no visibility whitelist or5000 save ceiling. Submit validation rereads live stock and aggregates duplicate product lines, no coffee/ALWAYS/nontracked exemption. No changes to stock posting, payments, licensing, fiscal, lifecycle or financial finalization. New queries are read-only; no production DDL from Work. Existing order idempotency paths retained.

Local Node24 targeted16PASS/0FAIL/2nativeSKIP, build PASS (Vite and TABLE_SERVICE bundle). Native PostgreSQL fixtures must execute on exact Node20 CI: actual public handler >5000 eligibility, tenant/active/baked isolation, depletion/restock, stale/aggregate quantity rejection without new order writes; actual settings handler defaultfalse/idempotent migration, persistence/old-client preservation/control store. Mounted manager test covers toggle, strict stock checkbox, live count and no

manual visibility save. Full CI and main/ordinary guarded release pending; CI is not LAB PASS.

DAILY actual8753 active products /0 positive stock at latest read; automatic catalogue must currently contain0. Do not save superseded unsaved5877 whitelist. After exact released revision, save brand/logo plus automatic setting through normal selected DAILY UI, retain enabledfalse. Actual LAB catalogue/config validation pending; no stock/order/payment/physical transaction authorized for this scope. Broader DAILY launch and other owners remain OPEN.

22/10/2026 — DAILY-STOCK-CATALOG-01 / ASSIGNED BEFORE SOURCE / NOT TESTED

Retained DAILY owner codex/daily-online-store-20261011; independent continuation feat/daily-stock-catalog-20261022. User explicitly answers catalogue choice: «οτι υπαρχει σε στοκ». This supersedes the unsaved category whitelist draft (5877 products); no products/settings have been saved. Normal whitelist API max5000 is not an observed failed save; source inspection found the limit before submission. User authorized GitHub branch/PR/merge/install in this conversation. Visual source PR3048 final22b0d14/fullCI39823755850 SUCCESS mergedac673558; ordinary release still pending.

Independent read-only production source in confirmed original My Workspace/myworkstation-db: exact DAILY store cmv25lf3h000ueegf0kkii3pb/companycmv25lf0w000seegf1cn4bbmx has8753active products,0positive/8753zero/0negative stock. No invented starting inventory, copying KAT data or inventory write. Selected-store eligibility/visibility must follow actual effective stock dynamically, including zero→positive and positive→zero transitions on normal requests. Source counts are not full checkout/LAB acceptance.

Bounded source: additive autoStockCatalogEnabled boolean on existing OnlineOrderingConfig, defaultfalse/idempotent bootstrap; normal tenant-scoped SuperAdmin setting/editor. Legacy/manual mode remains unchanged. Opt-in automatic mode reads active own-store products directly, independent of manual visibility and its5000 save limit; exposes only finite positive effective stock, preserving baked balance identity. Same strict stock/quantity and eligibility on both public catalogue and order-validation readers, including repeated-line aggregate quantities. No prepared-coffee/ALWAYS/nontracked bypass when this explicit mode is on. Existing licence/enabled/member/price/fiscal/fulfilment/payment/stock finalization and idempotency paths unchanged. No direct production DDL/SQL writes from Work, no public activation or new financial acceptance.

Meaningful native PostgreSQL actual-handler tenant/store/active/visibility, zero/negative/malformed/positive/quantity/default-mode cases; normal settings persistence and default migration tests; existing KAT/member/checkout and UI regressions, full exact Node20 CI/main/ordinary release. Actual live read-only catalogue acceptance uses existing LAB stock with measured controls and temporary config only if normal UI access permits; no stock/order/financial test replay. DAILY remains public-disabled until readiness. New setting plus branding can then be saved through normal UI; today its stock-only catalogue must be empty. Checkpoint CHECKPOINTS/CHANGES/2026-10-22-daily-stock-catalog.md. Publish claim green/main before source. Owner retained until completion/named handoff; broader DAILY/physical/fiscal and other owners unchanged.

22/10/2026 — DAILY-ONLINE-BRANDING-02 / ASSIGNED BEFORE SOURCE / NOT TESTED

Retained DAILY scope owner codex/daily-online-store-20261011, continuation branch feat/daily-online-branding-20261022. User explicitly requests DAILY BITE Online Store to match KAT with DAILY products and supplied DAILY logo PDFs, then START. Bounded new visual preparation only: reuse accepted olive/orange KAT styling on exact /online/daily-bite with isolated original DAILY logo asset. Preserve exact KAT appearance and all existing business scripts, catalog/prices/modifiers/member/stock/payment/fiscal/tenant gates. No public activation or financial action in this phase. Wider DAILY installation/availability/member acceptance and other owners retained.

Live read-only baseline: DAILY slug daily-bite/public disabled, 0/8753 online products, stock check on, surcharge FIXED .10, pickup/delivery on, fee0/minimum3, doctor15/nurse10/staff0, cash/card enabled, seven days07:00-21:00. KAT read-only reference: slugkat/public enabled, same fulfillment/surcharge/hours but stockcheckoff and discounts0. Do not copy those commercial differences or KAT products silently. Existing DOM timeout is large-list observation: screenshot and scoped filter FREDDO restore control; no confirmed application crash and no speculative pagination fix. Original regulated ESPRESSO DB000002 remains1.65 online. No settings/products/member/order/stock/shift writes performed.

Acceptance after green source/main CI and ordinary exact release: original logo uncropped, DAILY name/palette, desktop/mobile category/search and own catalog only; no KAT regression. Existing cart/order scripts must be byte-identical. Source CI is not LAB PASS. Settings and selected online retail assortment remain OPEN until review/normal UI save; never expose all8753 wholesale/non-stock/lottery rows indiscriminately. No protected LAB transaction replay. Checkpoint CHECKPOINTS/CHANGES/2026-10-22-daily-online-branding.md. Next: publish this bounded claim green/main, then original asset extraction and isolated visual patch. Owner retained through completion or named handoff.

22/10/2026 18:59 Europe/Athens — KAT START READINESS / BLOCKED / READ-ONLY AUDIT

Retained KAT owner ops/kat-catalog-import-20261020 / feat/kat-pos-photo-layout-20261021. Explicit owner asks whether actual KAT can start. Read-only audit only; no catalog/department/rate/price/activation/stock/device/credential/configuration/transaction/shift/fiscal/deploy write. Existing layoutv3702 and coffee/import/staff PASS are retained as bounded configuration evidence, not full fiscal readiness.

Current ordinary production Render dep-dbd31teq1p3s73dp7m40 LIVE22Oct15:56:27UTC; independent public /api/health oktrue exact9a67265aaa916058621b5291c96268b6f0093bb9. Both actual signed CloudDevice writers are ACTIVE and polling: KAT-POS-01→KAT-FISCAL-01 and KAT-POS-02→KAT-FISCAL-02, fresh heartbeat within seconds of independent15:54/15:59 reads. Do not confuse old installation-token lastSeenAt or read-only Observer telemetry with current Writer. Both saved RBS installation mappings confirmed/workfolderpresent/cash6/card2/secondary5. Four EFTPOS mappingsactive; POS01twoIMMEDIATE, POS02legacy null modes remain unchanged (prior physical owner acceptance retained). No pending/unknown RBS requests: only historical SALE_COMMITTED/DECLINED. Existing POS02shiftOPEN; no new shift opened or prior transaction repeated. Physical cash/card/print readiness is not newly exercised.

Layoutv3702 survives later releases:20quick/20roots/7children/242distinctmappedIDs; all242active with positive prices, existing linkeddepartmentrates have0mismatch.57coffeeparentsretainoneexisting0.05fee qty1 with0badqty/price and0nonzeroembeddedfee;7inactive retained. Catalog1900 total/1863active. New real BLOCKER:95active catalog products have no valid joined ManagementVatDepartment, INCLUDING51mapped beverages:36coffee/8chocolate/7tea. Current actual server/src/routes/store-pos.js resolveItems LEFT JOINs only product.vatDepartmentId to same-company department; checkout explicitly rejects absent fiscalDepartment with RBS_CAPDRIVER_V1_MAPPING_REQUIRED before command. This is a source+saved-data diagnostic, NOT a newly submitted failed sale. Do not label these products fiscal-ready because rate13 alone exists. Other44missing identities are in evidence, no guessed department from names.15active zero-price items also need individual sellable-versus-production-material review; do not blanket reprice/deactivate. One currentstock-1water reflects a later owner sale, not rollback of earlier zero-stock PASS; do not reset it.

Readiness conclusion: NOT READY for unrestricted normal fiscal selling until missing fiscal mappings are reviewed/corrected. Device connectivity/server/layout/fee checks do not override this blocker. Existing user forbids VAT/department and retail changes: no repair inferred from a read-only check. Single next action is owner-authorized exact identity/department review against original KAT source and confirmed register

profile, preserving existing rates/prices/stock; then scoped native correction of only reviewed blanks and independent readback. Physical actual refreshed POS01/02 and first legitimate receipt acceptance remain with existing owners; never replay old paid requests. SEPTONAprice conflict and separate0.50 mobile-topup SET remain OPEN. Evidence CHECKPOINTS/EVIDENCE/kat-start-readiness-20261022/audit.json and measurement.sql. Owner retained, no new code or full POS PASS.

AI-OWNER-WALLET-01 — OWN SOURCE AND MAIN CI GREEN / NORMAL RELEASE HELD FOR NEWER SOURCE

2026-10-22 17:21UTC final retained-owner handoff: feat/ai-owner-wallet-20261022, no release or second owner. Invoice3037 and review-persistence3041 are green merged073fd23 and7f5afd3. Exact7f5afd3 push-main CI39819683069 SUCCESS:3892server+8backup,0failures/0skips; native wallet/tenant/funding/uncertainty/HTTP and review-DB-failure regressions executed. Follow-up PR CI39818057549 SUCCESS3877+8; initial source PR CI39814421377 SUCCESS3869+8. Receipt3045 green39820044137 mergedb93a4c3. All source algorithms/prompts, original settlement/job/editable draft, stock/fiscal and other iOS/ftext/startup/module-writer owners preserved. No accepted transaction replay or physical test.

Deployment is NOT PASS. Newer paid-module source3044 merged5c8ccf5ef1c3aea57a9c7d11d5cc1550d9052774 after our code, owned by its existing page. Its full main CI39821105794 is still IN_PROGRESS. Normal release39821474323/job119973691747 reports SUCCESS but explicitly withheld:17:19:26UTC “A newer production source revision is on main; await its full CI”. This is NOT a Render installation. Earlier release39820564262/job119970527806 safely failed its freshness/full-CI gate before deploy because expected65b had no finalized successful full build then. Never bypass either guard. Latest independent /api/health oktrue9a67265aaa916058621b5291c96268b6f0093bb9; foundation installed, invoice adapters/review guard NOT YET VERIFIED DEPLOYED.

No production activation/flag/tariff/schema/funds/customer-SMTP action by this page. Gates default OFF; no approved price or real inbox delivery is asserted. SMTP proof is actual Nodemailer only to synthetic localhost. Hosted wallet/UI/LAB/email remains NOT TESTED; internal/scheduler AI and global placement remain OPEN outside this slice. Manual and numbered functional checklist are not changed because there is no new real functional PASS.

Single next action: after current newer-source full main CI succeeds, inspect the normal guarded release, independently read health and verify deployed wallet/invoice/review source blobs against7f5afd3; record actual technical installation, then separately measured acceptance and approved tariffs before billing activation. Current owner remains responsible; another page must not duplicate this scope or change the other owner's paid-module code. Checkpoint CHECKPOINTS/CHANGES/2026-10-22-ai-wallet-invoice-metering.md; evidence CHECKPOINTS/EVIDENCE/ai-owner-wallet-20261022/invoice-source-progress.json.

AI-OWNER-WALLET-01 — INVOICE AND REVIEW FAIL-STOP GREEN MERGED / AWAITING MAIN CI AND RELEASE

2026-10-22 17:07UTC retained owner feat/ai-owner-wallet-20261022. Follow-up PR3041 exacta8c6d3d57a ca2745b66f6718e2fb4229649e8d47/tree85740d9b0fe0db23ffa271911d3abad2516d5873 passed full CI39818057549:3877server+8backup,0failures/0skips, native PostgreSQL wallet and OpenAI/Azure review-database-failure tests executed, all Windows/browser/HTTP/E2E/invariants green. Merged7f5afd3c41153b6cdc4315a165880e71db533dd0. Original invoice3037 full3869+8 green merged073fd23; technical receipt3039 green mergede145188. Source integration retained other iOS/startup/module-writer owners; shared tracker PDF regenerated from merged union.

Invoice OpenAI/Azure reserve and exact settlement, canonical company/store scopes, unknown durable holds, fallback/retry fail-stop and internal commerce HTTP bypass are implemented. If writing REVIEW also fails, original RESERVED hold remains durable and safe wallet error still blocks paid fallback. Existing explicit abandoned-RESERVED review after15min remains required; no automatic refund, duplicate charge

or provider replay. Local regression reproduced then21/21PASS after correction. Source algorithms/prompts/settlement/draft/job/stock/fiscal are unchanged. No accepted invoice/payment or physical device test repeated.

Push-main CI39819683069 for7f5afd3 remains PENDING at receipt; normal guarded release not yet verified. Original073fd23 push-main39816599054 ultimately SUCCESS after one isolated wholesale Chromium startup retry; that older result does not authorize later code. Latest independently read public health oktrue9a67265, foundation technically installed; invoice extension NOT YET VERIFIED DEPLOYED. Runtime/invoice/mail gates and prices remain unchanged/OFF; no production schema/config/funding/customer SMTP action. Local and CI SMTP acceptance use only synthetic localhost recipient, not real inbox delivery. Hosted invoice wallet/UI/LAB/customer email remains NOT TESTED. Internal/scheduler AI and global placement stay OPEN outside this slice.

Single next action: verify full main CI containing7f5afd3 and every applicable exact code blob, then normal guarded deployed revision; separately measured acceptance and approved customer tariffs before billing activation. Preserve all owners and existing accepted identities. Checkpoint CHECKPOINTS/CHANGES/2026-10-22-ai-wallet-invoice-metering.md; evidence CHECKPOINTS/EVIDENCE/ai-owner-wallet-20261022/invoice-source-progress.json. No scope release or general/all-AI/LAB PASS.

AI-OWNER-WALLET-01 — REVIEW-PERSISTENCE FAIL-STOP FOLLOW-UP / AWAITING CI

2026-10-22 continuous retained owner feat/ai-owner-wallet-20261022; follow-up branch fix/ai-wallet-review-fail-stop-20261022 basede145188. Same previously published claim3036 includes unknown holds and paid-retry fail-stop; no new scope or other owner takeover. New reproduced engineering FAIL: if provider/settlement fails and repository.review also fails, raw database error could escape the wallet boundary and allow an ordinary paid fallback. Reproduced9PASS/1FAIL on the exact invoice adapter test; corrected OpenAI/Owner and Azure catches preserve the safe AI_WALLET_USAGE_REVIEW error even when marking REVIEW is unavailable. Original durable RESERVED hold is neither released nor charged again; existing abandoned-hold admin review applies after15min. Focused21/21 PASS including actual fallback counter0 for both providers and direct Owner contract. No price/flag/schema/data/invoice/SMTP change. Full exact follow-up CI required, source and hosted acceptance remain AWAITING LAB.

Original source3037 is green3869server+8backup and merged073fd23; receipt3039 green39816829439 mergede145188. Push-main CI39816599054 is still running with wholesale browser Target.createTarget startup timeout; retry of only that failed infrastructure job was refused while its run is active (GitHub403), retry once after completion. Do not call the push-main CI or deploy PASS. Keep production billing/mail OFF. Checkpoint CHECKPOINTS/CHANGES/2026-10-22-ai-wallet-invoice-metering.md. Next: full follow-up PR CI green, merge, exact-main full checks and ordinary guarded release; retain owner and no accepted invoice/payment replay.

AI-OWNER-WALLET-01 — INVOICE SOURCE GREEN MERGED / AWAITING EXACT MAIN CI AND RELEASE

2026-10-22 16:46UTC engineering handoff, not LAB PASS. Owner feat/ai-owner-wallet-20261022 retained; source branch feat/ai-wallet-invoice-adapters-20261022, PR3037 exact606bcdebbbc81d0486f5b1f9fbe1880b7e766245, tree86f110f2f11e5b214b18645021af2077bb66e238 matching local tree. Claim3036 green39811498714 merged6087b1c BEFORE source. Source PR3037 green merged073fd234b5a7ef60062ccf408bee8b4cb3923cf0. Invoice extension NOT YET VERIFIED DEPLOYED. Exact local full run3568PASS/0FAIL/206infrastructureSKIP, affected89/89 and client build PASS. CI39814421377/job119949568725 logs3869server+8backup PASS/zero failures/skips, native wallet executed1256.644179ms, actual internal HTTP bypass and localhost synthetic SMTP executed PASS. All36 job steps show SUCCESS including browser/HTTP/E2E/invariants; four other checks SUCCESS including wholesale browser. Aggregate exact PR CI39814421377 finalized SUCCESS before merge. GitHub incident delayed final status publication; no gate was bypassed. Exact-main full CI and normal guarded deployment remain required.

Default-OFF gated invoice OpenAI/Azure composition reserves before provider, settles exact tokens/pages and retains unknown holds. Internal commerce HTTP bypasses billing; supplemental discount catches propagate wallet errors. Preserve invoice prompts/algorithms, existing authorized company/store access and accepted original settlement/job/editable draft; no invoice/payment replay, approval, stock or fiscal action. Foundation installation receipt9a67265 remains protected. Production runtime/mail/price configuration unchanged; hosted invoice wallet/UI/LAB and real inbox delivery NOT TESTED. Platform internal/scheduler AI and global placement remain OPEN outside this slice.

Single next action: verify full push-main CI for073fd234b5a7ef60062ccf408bee8b4cb3923cf0 and normal guarded exact deployment, then separately measured acceptance. No second owner or released scope. Checkpoint CHECKPOINTS/CHANGES/2026-10-22-ai-wallet-invoice-metering.md; evidence CHECKPOINTS/EVIDENCE/ai-owner-wallet-20261022/invoice-source-progress.json. Central publication requires this documentation PR green CI and merge; no hosted LAB/email PASS inferred.

AI-OWNER-WALLET-01 — INVOICE ADAPTER SOURCE / AWAITING FULL CI AND LAB

Retained owner feat/ai-owner-wallet-20261022; source feat/ai-wallet-invoice-adapters-20261022. Claim3036 green39811498714 merged6087b1c BEFORE source. Additive invoice OpenAI/Azure metering now implemented behind default-OFF runtime/invoice/company gates, canonical company/store scopes, reserve before paid calls, exact token/page settlement, REVIEW on unknown cost and wallet-error fail-stop before fallback/retry. Local adapter8/8, affected preview/FAST33/33, invoice+wallet59/59, localhost synthetic SMTP1/1 and client build PASS. Initial full local failures were source-evaluation dependency injection and outdated fallback-catch assertion; fixed with real adapter bindings and stronger wallet-stop assertion, existing checks retained. Final local rerun pending; PostgreSQL unavailable locally, complete native CI REQUIRED. Hosted invoice wallet/LAB/customer email NOT TESTED, no production configuration/data/action. Other AI/internal/scheduler/global notification acceptance stays OPEN. Checkpoint CHECKPOINTS/CHANGES/2026-10-22-ai-wallet-invoice-metering.md. Next: full source CI and normal exact release; retain owner.

AI-OWNER-WALLET-01 — FOUNDATION INSTALLED / INVOICE METERING EXTENSION ASSIGNED BEFORE SOURCE

Retained owner feat/ai-owner-wallet-20261022; extension branch feat/ai-wallet-invoice-metering-20261022. User again instructs «ξεκινα» after remaining invoice/OCR and email scope was stated. Fresh public health ok:true exact9a67265aaa916058621b5291c96268b6f0093bb9; all20 foundation runtime/test blobs independently match the accepted source. Prior release hold is superseded ONLY for technical installation, not hosted LAB/email or charging acceptance. Runtime/mail remain OFF; no production/config/schema/balance/email action. New extension NOT TESTED.

Bounded additive integration only: shared invoice Responses fetch adapter with canonical persisted company/store scope, page-priced Azure adapter using physical-page/operation evidence, billing-error fail-stop before paid fallback/retry, existing FAST/full/recheck/assistant/discount reader call sites, coverage labels and common safe error response. New AI_OWNER_WALLET_INVOICES_ENABLED gate defaults OFF in addition to existing runtime/company gates. Explicit approved token/page tariffs, no invented rate. Preserve invoice algorithms/prompts, all legacy provider/cache/fallback behavior when OFF, module/auth/selected-store checks, one original settlement/job/editable draft and existing review/stock/fiscal boundaries. Scheduler/platform-internal learning/organization monitor and all other owners remain outside this exact slice. This is independent billing composition, not takeover of Gate3/invoice semantics or N10/voice/report source.

Read current AGENTS/registers/checklist, invoice/pos manual and relevant source/checkpoints. Base4906f35. Claim must be green merged on main BEFORE source. Acceptance: actual adapter/route tests for disabled compatibility, scoped pricing/reservation/usage/page bounds, no paid call on exhausted balance, no swallowed billing error/fallback/retry, durable unknown holds and unchanged existing invoice regressions; full native PostgreSQL CI/HTTP/browser/build/invariants, ordinary exact release. No real invoice re-upload/payment/approval/stock/fiscal or SMTP for tests. Source acceptance remains AWAITING LAB until separately authorized scoped real observation.

Checkpoint CHECKPOINTS/CHANGES/2026-10-22-ai-wallet-invoice-metering.md. Next: green claim then additive adapters and causal tests. Same retained owner through completion or named handoff.

AI-OWNER-WALLET-01 — Historical foundation release hold (superseded technical installation)

22Oct2026 final bounded handoff. Retained owner feat/ai-owner-wallet-20261022; source3009 green mergedcd633e9, source receipt3030/docsCI39806493996 green merged65acc8cb. Before-source claim3008 preserved. Exact PR CI39804554047 AND exact source-main CI39806020956 all5jobsSUCCESS: each3827serverPASS/0FAIL/0SKIP plus8backupPASS; actual native wallet, mounted stale-store UI, HTTP, Chromium, invariants, Windows and wholesale all executed. All20 owned runtime/test blobs independently identical between reviewed source and currentmain9a67265. Initial fixture FAIL/correction remain in checkpoint; no weakened assertion or unchanged failed-head retry.

Ordinary release39807310528/job119923978373 completed guardSUCCESS with deploy withheld: "A newer production source revision is on main; await its full CI". Newer report source3027/3028 is independently owned. Latestmain9a67265 full CI39807166764 pending at observation. Public health ok:true exact201eb5e01e6a9972b57ed12ea9bfccabe3600b83; wallet NOT INSTALLED by this observation. No manual deploy, guard bypass or change to retained report/voice/invoice scope. Release engineering evidence is NOT hosted LAB/UI/email PASS.

Prepared first version: company-shared prepaid EUR AI wallet, confirmed-receipt SuperAdmin credit paid to MyWorkStation, atomic reservations/actual-token debit, per-store usage, owner/company isolation and CREDIT/LOW20%/EMPTY notifications with durable one-attempt SMTP. Runtime/mail OFF; no real customer funding, tariffs, production schema/configuration, email or business mutation. OWNER_ASSISTANT is the ONLY metered adapter. Invoice/OCR/Azure/other providers, broader in-app placement, approved EUR tariff setup and scoped synthetic LAB/email acceptance remain OPEN; no all-AI/commercial completion claim or manual PASS. Normal POS/payment/stock/fiscal handlers unchanged. Existing accepted transactions never replayed.

Single next action: observe latest combined main's full green CI and normal guarded healthy release; verify the20 wallet source blobs in the actually deployed revision. Then complete remaining scoped provider/notification/setup acceptance before any real customer charging. Owner remains assigned until completion or named handoff. Checkpoint CHECKPOINTS/CHANGES/2026-10-22-ai-owner-wallet.md; ops docs/ops/ai-owner-wallet-20261022.md; exact evidence CHECKPOINTS/EVIDENCE/ai-owner-wallet-20261022/source-ci.json. Do not redevelop the delivered foundation or repeat financial/LAB examples solely for evidence.

AI-OWNER-WALLET-01 — ASSIGNED BEFORE SOURCE / NOT TESTED

Owner feat/ai-owner-wallet-20261022. Explicit instructions: implement prepaid AI paid to MyWorkStation, manual authorized credit after receipt, company wallet shared by stores with store usage breakdown, low20%/empty/credit notifications in app and email. No direct provider payment by owner. Independent billing extension; AI-CREDITS-01 central organization monitor, invoice reading/settlement/learning, VOICE assistant capabilities and automatic-report-mail owners retained. No takeover or repeated financial/stock acceptance.

Baseline main/runtime07110f16c361a2c36fe507220816e12707f623d5, public health ok:true observed22Oct2026. Read AGENTS, current registers/checklist, relevant AI-credit/owner-assistant/mail source and checkpoint evidence. Existing central monitor is an organization estimate, not a customer wallet. Owner provider uses central key; no existing customer wallet found. New behavior NOT TESTED, not LAB PASS.

Bounded source scope: new AI wallet ledger/repository/service/routes/components/tests and additive route/UI/provider composition only. Integer monetary units, tenant isolation, atomic reservation/settlement, immutable idempotent credits/debits, versioned configurable tariffs; no invented provider rates. Durable threshold-event dedup and email attempts; no real email without configured opt-in. Persist before send, uncertain sends held without blind retry. Credits require verified-receipt reference and SuperAdmin; owner cannot self-credit. Wallet remains disabled by default and no real customer balances/charges are enabled during development. Payment gateway/automatic card charging, production schema/configuration/money actions excluded. Protect normal POS/sales/stock from AI-only refusal. Broader provider integrations stay explicitly unenabled until metered and tested.

Acceptance: isolated real PostgreSQL concurrency/rollback/idempotency and cross-tenant/role/retired-session HTTP tests, notification dedup and timeout tests, no provider invocation on insufficient funds, no double settlement, existing suite/build/invariants green. Never equate tests with hosted LAB. After exact green source/main CI and ordinary release verify revision; actual UI/LAB/email remains separate measured acceptance with no historical transaction replay. New schema only dedicated wallet tables, no business table migration from sandbox.

Next: publish this claim green on main before source; then implement the bounded wallet foundation and adapters. Owner retained until completion or named handoff. This is not completion or manual PASS.

Checkpoint CHECKPOINTS/CHANGES/2026-10-22-ai-owner-wallet.md

22/10/2026 13:07 Europe/Athens — KAT-POS-PHOTO-KEYS-01 / REAL CONFIGURATION PASS / v3702

Retained owner feat/kat-pos-photo-layout-20261021 under ops/kat-catalog-import-20261020. The new layout is now PUBLISHED to actual kat-store/pilot-company, shared by its POS terminals. Native PlatformSuperAdmin CloudChrome tab6 loaded current KAT templatev3701/palette, selected KAT company, validated recovered owner list, set productColumns5 and checked ONLY KAT. One direct native Publish at10:07:35.196225UTC produced v3702. No GLOBAL draft save. LAB receipt PR3005/head8bea9cca/applicable docsCI39760363583SUCCESS merged4c003524 BEFORE real action. Source2983 merged20d99045, final3762+8/full native CI/mainCI39675252686 green; ordinary releaseverified20d99045, later unrelated healthy runtime1b98d90f retained. No runtime/deploy/guard mutation by this configuration task.

Fresh immediate baseline10:07:15.855771UTC and after10:07:49.673197UTC: only KAT layout changed. ZERO differences in whole product/store-product/preparation/SET/stock-movement/sales/payments/transactions/shifts/GLOBAL fingerprints for KAT, LAB and N40; exact other-layout hash unchanged. KAT1900catalog/allstocks0/199movements/165sales/180payments/213transactions; existing KAT-POS-02 shift untouched. LAB110catalog at this fresh window (other-owner fixtures added between earlier acceptance and now),90sales/90payments/134transactions; no fixture creation by this page. N40allzero.

No product/retail/VAT/department/stock/activation/recipe/fee/financial/payment/preparation/shift/fiscal write.

Independent full saved readback matches EVERY prepared quick/root/child identity/order exactly:242unique active existing products/242assignments,20quick15assigned+5blank,20roots16named+4blank,7beveragechildren. All existing quick/root palette colors retained; absent audienceSettings normalized to empty{} by existing route, no audience setting change. Reopened native saved KAT template independently shows KATv3702/companyselected/20groups and exact labels. Evidence05/06/07 and saved KAT screenshots in CHECKPOINTS/EVIDENCE/kat-pos-photo-keys-20261022. Native Designer preview wraps its20categories differently from actual POS; actual native LABPOS20-root/two-row/child/group16/blank20 acceptance was verified separately. No physical KAT terminal login, cashier product-click/payment/fiscal acceptance claimed or replayed.

Published layout scope closes prior AWAITING REAL PUBLICATION. Each KAT POS needs ordinary refresh to load shared saved layout; both physical terminals' refreshed display remains USER NOT TESTED. SEPTONA slot16 deliberately remains blank: owner requested1.00 but exact current candidateKAT33822 costs1.50; no unauthorized retail change or misleading1.00 label. Other screenshot-missing/ambiguous/inactive items remain unassigned. Separate0.50 mobile-topup automatic SET remains OPEN with same KAT owner. No second import/stock reset/staff/coffee test. Single next owner action: confirm price/identity of SEPTONA and verify refreshed physical KAT screens; broader fiscal/hardware readiness remains with existing owners.

22/10/2026 — KAT-POS-PHOTO-KEYS-01 / LIMITED LAB PASS / REAL KAT PUBLICATION NEXT

Retained owner feat/kat-pos-photo-layout-20261021 under ops/kat-catalog-import-20261020. Source PR2983 final97dc55fe/fullCI39673790704 SUCCESS3762server/8backup, no skips; merged20d99045 and exact-mainCI39675252686SUCCESS. Ordinary Render dep-dbcikobrjlhs73dk7oa0 LIVE21Oct21:16:45UTC; independently verified /api/health exact20d99045. Later unrelated ordinary release1b98d90f currently healthy; no source/guard bypass by this page.

22Oct07:04UTC native PlatformSuperAdmin Cloud Chrome tab6 published ONLY existing synthetic LAB store cmtpopbgo000trhb5ng9ytiru companycmtpopbgk000prhb5qc60zxus, version11→12. Loaded LAB template/palette, selected LAB company, native prepared-list preview, exactly one LAB checkbox, direct existing-store Publish once; no GLOBAL save. Exact independent before07:03:53.257258Z/after07:04:52.053530Z proves unchanged whole catalog/product/preparation/SET/stock/movement/sale/payment/transaction/shift/control/GLOBAL fingerprints; only LAB layout changed. LAB105catalog/95movements/90sales/90payments/134transactions, MAINshiftcash/card0/drawer9.4; N40allzero, KAT1900/allstocks0/199movements/165sales/180payments/213transactions and layout3697 unchanged during publication. Existing audienceSettings retained.

Native LAB POS2 Cloud Chrome tab7 actually showed20quick/20roots,16named+4blank; first root opened2children and childA exact synthetic product1.65; root16 showed its product; blank20 showed0products; cart remained empty0.00, no checkout/preparation/sale/payment/shift. Authentication request timed out, but subsequent explicit existing-tab canonical navigation and fresh positive signed-in LAB POS2 observation verified success. No repeated sign-in or credential inspection. Final readback10:00:39UTC LABv12/all protected LAB values unchanged; real KAT layout3701 reflects intervening other-owner releases, not this publication. No physical KAT/hardware/fiscal/payment or native editor write acceptance claimed. Evidence CHECKPOINTS/EVIDENCE/kat-pos-photo-keys-20261022/01–04, measurement.sql and lab-layout-v12.jpg. New limit20 and nested navigation are LIMITED LAB PASS; KAT publication NOT YET DONE.

Workspace maintenance pruned old temporary mapping files; all18 original owner references recovered from their Library identities. Exact242active existing IDs reconstructed and reviewed against source images/current catalog,20quick15assigned+5blank,20roots16named+4blank,7beveragechildren. Existing palette retained; disputed SEPTONA1.00 versus stored1.50 left blank, missing/ambiguous/inactive products not created or guessed. Preserve base/store

prices,VAT,departments,allstocks,activation,recipes,SETs,financial/other stores. Separate mobile-topup service SET remains OPEN. Required next single action after this receipt merges: fresh KAT baseline/version, load current KAT template, import reviewed KAT-only plan, one selected-store native guarded Publish, independent full readback/control comparison and KAT confirmation screenshot. Owner retained; no accepted import/fee/financial replay.

22/10/2026 - AUTOMATIC-DISPATCH-PERSISTENCE-RESTORE-01 / FIRST FULL CI FAIL CORRECTED / AWAITING NEW FULL CI

No productionDDL/guardinstallation/config/SMTP/restore/action executed. Newsource remainsOFF and NOTfinaltestready. Separateexplicit6tableprovisioning+canonicalpromotion/fullactualschema/copyproof/no activejobs+guardenrollment/non-restoredactivation/mailboxsetup are concrete remainingsteps, no newownershipapproval required withinalreadyapprovedscope. Prior source record below is historical publicationstate, not contradictory renewedclaim.

22/10/2026 - AUTOMATIC-DISPATCH-PERSISTENCE-RESTORE-01 / SOURCE INTEGRATED / AWAITING FULL NATIVE CI

Owner codex/central-auto-dispatch-20261022 after explicit approved transfer3059/CI39831061467/220315e; exact next source claim3062/CI39832842921/145a9896 and safe prospective-manifest amendment3063/CI39835114099/05b699e ALL greenmergedBEFORE corresponding source. Four disjoint implementation streams now integrated. This combined source also includes exact unchanged trustedSMTP tranche3061(mailSHA52cdca17/test3562b514); priorCI39832167206 build120011410555 ran3991server+8backup/0FAIL/0SKIP but workflow ultimatelyCANCELLED, so it is NOT aggregate green/release proof. CombinedPR supersedes that open source attempt; no bypass of fullchecks.

Implemented: explicit atomic6tableprovisionfunction (neverstartupDDL), defaultOFF policy/grant, separate private128bit mailboxverification and consent challenges bound to lifecycle/purpose/frequencies/currentversion+consentrevision, expiry/attemptlimit/cooldown and redactedAPI. ExactcurrentUserSHARE recheck, realSUPER_ADMIN+sessionVersion/scopedgrant, explicitack, freshcutoffs. ExistingactualStoremetadataPUT now originalepoch/lifecycle->StoreNOKNOWAIT->all6catalogprobe->atomicchangedemailinvalidation+write; allabsentlegacy allowed, partialstoragefailclosed, invalidationevenOFF. ExistingmanualAPI/validation preserved. Newunverifiedrecipient doesnotrevokeotherrecipients: scopedgrant permits<=5individuallyverified+separatelyconsenting addresses withinallowedfreqs; edit/revoke/readd invalidatesoldauthority.

Immutable<=2MiB bytes/hash/settings/gen/period persistence; freshlocked Company/license/Store/User/modules/settings/rule/authorization/source checks; configtableSHARENOWAIT fences absentinserts (no falseFKKEYSHARE claim); explicitReadCommitted/readlocks precedeconfigreads. Payload+slot prepare inoneoutertransaction, drivercommitsATTEMPTING beforeonescopedSMTP call; ACCEPTEDmeansactualSMTPacceptanceonly, ambiguousUNKNOWNneverautoretry. Boundedlatestcompletedperiodscheduler defaultOFF/zeroDBorSMTP/keysetscan/maxrecipients/serialcalls/nooverlap, tracked byexistingbackgroundDrain so SIGTERMstopsadmission anddrainsattemptbeforedisconnect. Actualauthenticatedroutes+storekeyedUI separateverification/consent/grant/policy controls, staleotherstore resultsdiscarded, credentials/tokensnotpersistedinbrowser.

ControlledrestoreactualAPI+processrunner defaultdryrun: fixedservice/PG/workspace/archiveSHA+expiry+ack, externalOFF+newepochreadback/suspend/independentzeroinstance+noactivedeployproofs beforeimmutablefd-backedtransactionalpg_restore; noresume, finalcontrolOFF/freshcutoff. Scope ONLY controlledoperatorworkflow; arbitraryprivilegedout-of-bandrestorewithsurvivingprocess isunsupported. No newpaidstore/B2CASassumption. StrictnonrestoredRendercontrol/identity/fullfingerprints, no historical/straddlingperiodbackfill; oldrestoredgrants mismatchnewepoch andrequirefreshverification/consent/grant. Currentcanonicalmanifest+columnreview unchanged. Proposedfull6tablemanifests are NOTdefaultloaderinputs; explicitschema provisioning, exactschema/copyrestoreproof/noactivejobs/planHash+webbackupcoordination and separatepromotion remain activationgate.

Verification: Node20 combined17affectedfiles75cases=72PASS/0FAIL/3explicitlocalnativeSKIP(noPG); latestpayloadgeneration/expiry guards separatelyrerunown+dispatch17PASS/0FAIL/1nativeSKIP. Queuedpg_dump actualprivateverify_archive full+selectiveCOPYaudit+existingPG18image path; nofakeverifiedboolean/noactualprodrestore. Originalepoch/freshcutoff denieshistoricalperiod explicitlyboundedhelperproof, no inventedfullSMTPtest.

Does NOTprovefull259tableproductioncopyrestore or activatecanonicalmanifest; thatrealgate remainsNOTTESTED. No executor/recovery/manifest/workflow/sourcepermissionbroadened; destructivefixture privateguardedloopbacktestdb/randomschema only, URLoverride/duplicateparamsdenied, CIrequiresactualnativeexecution. Currentcombinedsource3065pendingCI; newacceptancewilljointhatPRaftergreenclaim, rerunfullCIlegitimately. Readonlyproductionpreflight2026-10-22T19:04:48Z: expected259/actual254, missingexact6newdispatchtables; onlyextraStoreLifecycleRuntime(existinginternalallowed). StoreLifecycleFence/Execution absent. No realDDL/config/SMTP/restore/paid/businessaction; dispatchOFF.

22/10/2026 - AUTOMATIC-DISPATCH-PERSISTENCE-RESTORE-01 / SAFE TWO-PHASE MANIFEST AMENDMENT BEFORE SOURCE

Same owner/greenclaim3062/CI39832842921/merge145a9896b29a797b8c5dccf12957f3a9881d5599. Root review found canonicalmanifest promotion before explicit6table provisioning would break existing lifecycle inspect (reviewed relation missing) even while dispatchOFF. Therefore runtime OFF source must preserve existing canonicalmanifest/columnreview bytes and lifecycleplanHash. Infrastructure additionally claims exactly NEW ops/backup/lifecycle/automatic-report-manifest.proposed.json and automatic-report-column-review.proposed.json, full prospective reviewed snapshots only, not default loader input. Newartifact writes start only after this amendmentgreenmerged. Restore only this page's unpublishedcanonical additions; preserve unrelatedowners.

After explicit reviewed provisioning, native exactschema+restoreproof, noactive lifecyclejobs and synchronizedapp/backuprollout, finalpromotion can install proposedcanonicalmanifest atomically under separate exactclaim. No optional-table/executor relaxation or missingtablebypass. All6tablesDIRECT/resetREMOVE; fullprospectivereview includes challengeLifecycleGeneration and all finalcolumns. This source trancheremains defaultOFF/noactualDDL/config/SMTP/restore, no finalready/PASS claim. Other3062sourcepaths unchanged. Source may deployOFF without breaking currentlifecycle; activation/provisioning gate stays concrete. Checkpoint CHECKPOINTS/CHANGES/2026-10-22-automatic-dispatch-persistence-restore.md.

22/10/2026 - AUTOMATIC-DISPATCH-PERSISTENCE-RESTORE-01 / ASSIGNED BEFORE SOURCE

Owner codex/central-auto-dispatch-20261022 under explicit owner approval and green transfer3059/39831061467/220315e. This is exact next integration source claim; source begins only AFTER applicable claimCI green mergedmain. SMTP tranche3061 separately reviewed/frozen and awaits fullCI; no overlapping edits to mail.js.

Exact source ownership: automatic_reports NEW server/src/services/automatic-report-dispatch-schema.js, automatic-report-recipients.js, automatic-report-dispatch-policy.js and tests automatic-report-dispatch-schema.test.js, automatic-report-recipients.test.js, automatic-report-persistence-postgres.test.js; pos_stores NEW

server/src/services/store-metadata-mutation.js, tests store-metadata-mutation.test.js, store-metadata-mutation-postgres.test.js plus ONLY existing platform-admin.js Store metadata/responsibleEmail PUT; commerce_ai NEW services automatic-report-eligibility.js, automatic-report-dispatch.js, automatic-report-scheduler.js and tests automatic-report-eligibility.test.js, automatic-report-dispatch.test.js, automatic-report-scheduler.test.js, automatic-report-dispatch-postgres.test.js; infrastructure NEW service automatic-report-activation.js, ops/backup/restore-controlled.mjs, ops/backup/CONTROLLED_RESTORE.md, tests automatic-report-activation.test.js, automatic-report-controlled-restore.test.js plus ONLY dispatch6table additions to ops/backup/lifecycle/manifest.json,column-review.json; root NEW server/src/routes/automatic-report-dispatch.js, client/src/components/platform/AutomaticReportDispatchManager.jsx, corresponding route/UItests, existing index.js bounded defaultOFF startup/mount/shutdown and AutomaticReportSettingsManager.jsx store-keyed dispatchmanager mounting. No other retained scope takeover.

Six tables: AutomaticReportDispatchPolicy, AutomaticReportAutomationGrant, AutomaticReportRecipient, AutomaticReportRecipientConsent, AutomaticReportPayload, existingcontract AutomaticReportDeliverySlot(exact7cols). Explicit provisioning function/CLI only, no reader/mutation-pathDDL or defaultproductionbootstrap. Config rows monotonic safeBIGINT, current canonicalint64 lifecycle, policy/grantOFF, recipientunverified, consentinactive; all6DIRECTresetREMOVE. No invented retentionduration or automatic suppression/slotdeletion. Immutable <=2MiB payload bytes/hash/metadata atomic, sameidentity differentbytes refuses. Recipient cap5; original lifecycle->scopedStoreNOKNOWAIT->Policy->Grant->Recipient->Consent writerorder; actualcurrentSUPER_ADMIN required. Grant binds exactUser/sessionVersion, scope/gen/freqs/activationidentity/notBefore and independentrevision; no Owner/service grants.

Verification private random128bit hex32token, scope/version/nonce/purpose hash, expiry10min/max5attempts/cooldown60s; token only mail aftercommit, never API/log. Consent is SEPARATE recipient-mail challenge containing exactfrequencies/provisionaldisclosure; confirm with freshmailboxtoken+explicitaction, notverification/admincheckboxalone. Bind currentrecipientversion+consentrevision+purpose/frequencies, recordconsumedproofhash, replaydenied. Revocation alwaysavailable. Changed canonical responsibleEmail set atomically invalidates verification/challenge/consent/grant/policy with metadatawrite; readddoesnot restore oldauthority.

Fresh eligibility rechecks actual Company/license/modules/Store/User/settings/rule/source plus policy/grant/recipient/consent and exact immutable payload. Fixed configtableSHARENOWAIT locks fence absentinsert/updaters for CompanyModule/StorePaidModule/CashControlStoreRule; no assumption SHAREparent blocks FKKEYSHARE. ExplicitReadCommitted with locks-before-configreads; bounded financialsource one MVCCSELECT, nofinancialtablelock. Prepare payload+slot in one outertransaction using txboundrepositoryfacade, then claim/actualdriver startcommit before one SMTP call. Unknown/terminal neverautoretry; no historybackfill. Scheduler defaultOFF zeroenumeration/DB/SMTP; bounded keysetscan/serialattempts/nooverlap/unrefstop, latestcompletedperiodonly and periodFrom>=activation/grant/consentcutoffs.

Chosen restore approach uses ONE non-restored Render JSONcontrol AUTOMATIC_REPORT_ACTIVATION_CONTROL {v,serviceId,epoch,issuedAt,notBefore,enabled}, fixedservice srv-d9isenfavr4c73bdh52g; strictcanonicalvalidation/missing=>OFF. Fullfingerprint includesenabled; activationidentity excludesenabled, allowing enrollmentwhileOFF; enabled independentlydenies. GrantgrantedAt>=issuedAt, periodFrom>=allcutoffs, no historical/straddlingperiod. Executable controlledrestore defaultdryrun: atomically externalOFF+newepoch, verifyreadback, suspendallserviceinstances, twiceverify suspended/zeroinstances/noactivedeploy immediatelybefore pg_restore; fixedservice/database/archiveSHA binding, credentialredaction, noautomaticresume. Restoredoldflags/grantscannotauthorize afternewcontrol; freshgrant/verification/consent required beforeexplicitON. Uncontrolled privilegedout-of-bandrestore whileprocesssurvives is unsupported; no impossible sameDBrollbackguarantee. ExistingB2 has no verifiedCAS and is NOT usedasatomicledger; no newpaidstore.

Meaningful native isolated tests must prove initialabsentrow/update/reverselocks, scopes/role/session/revocations, token expiry/replay/attempts, bytehashimmutability,

commit-before-SMTP/concurrentonesend/unknownnoretry, actual HTTPstub Rendercontrol+processboundary no restorebeforestoppedproof, and archive-before-accepted-slot rollback followedbynewepoch/cutoff forbids resend. Actual runtime/SuperAdmin UI browsertest expected. Existingtests preserved; no new functionalLAB/USERPASS fromCI. Fullsource/mainCI and normal exactrelease required. No realSMTP, productionDDL/config/restore/paidprovisioning/businessaction; final controlled acceptance/configuration remains explicit reviewable finalstep. dispatchOFF. Checkpoint CHECKPOINTS/CHANGES/2026-10-22-automatic-dispatch-persistence-restore.md. Nextgreenclaimthenownedsource.

22/10/2026 - AUTOMATIC-DISPATCH-RECIPIENT-RESTORE-HANDOFF / ASSIGNED BEFORE SOURCE

Explicit owner approval in current conversation: "egkrinv", accepting the concrete transfer of recipient/email and safe restore integration to this page. ΑΝΑΛΗΨΗ ΑΠΟ retained recipient/platform/mail scopes and feat/store-shifts-inventory-clear-20261018 ONLY automatic-dispatch integration — ASSIGNED codex/central-auto-dispatch-20261022. Existing unrelated lifecycle/inventory/backup/manual/AI-wallet owners and all accepted tests remain protected. Central receiver is sole owner of this bounded recipient/transport/restore integration; old pending owner-review gate is superseded by explicit owner transfer, not technical approval.

First source tranche after GREEN merged claim: ONLY server/src/services/mail.js additive createAutomaticReportSmtpTransport bound explicit company/store scope and new server/test/automatic-report-smtp-transport.test.js. Preserve existing manual sendEmail/getMailStatus/test-email behavior. Existing driver passes only to/subject/text, so transport binds scope internally, executes real demo outbound guard before creation and before send, requires canonical single recipient, explicit envelope and bounded provider evidence, preserves actual accepted/rejected/pending/messageId/response/envelope without synthesizing acceptance. One awaited send, no retry. Missing/malformed evidence remains UNKNOWN via existing adapter. Inject transport only for isolated tests; no actual recipient/SMTP/config action. Acceptance includes actual adapter evidence integration, ambiguous/rejected/pending/wrong recipients/envelope/getter defense, zero transport on demo/invalid input, timeout no retry and exact timeout/config compatibility.

Parallel READ-ONLY design: complete verified-recipient/consent/policy/scoped explicit current-SUPER_ADMIN authorization grant and immutable payload persistence; real Store metadata/responsibleEmail writer invalidation atomicity; six-table lifecycle manifest/reset/delete/retention; enforceable non-restored OFF/cutoff or external suppression authority. Static same-DB/env marker alone is insufficient for same-epoch rollback. Exact subsequent source paths and contract must be recorded before edits. No invented grants, retention interval, paid authority or arbitrary out-of-band-restore guarantee.

Full source PR/main CI, ordinary guarded release and exactLIVEhealth required for each runtime tranche; isolated tests are NOT final functional acceptance. dispatchOFF until actual persistence/authorization/restore safety/scheduler integration and controlled final test ready. No real email, production DB/config/schema mutation, restore, paid provisioning or accepted-test replay. Single next action: green merge this ownership/first-source claim, then implement exact transport tranche and settle concrete next integration contract. Checkpoint CHECKPOINTS/CHANGES/2026-10-22-automatic-dispatch-recipient-restore-handoff.md.

22/10/2026 - CENTRAL-STORE-MODULE-WRITER-LOCK-01 / TECHNICAL RELEASE VERIFIED / FINAL EMAIL TEST BLOCKED

Owner codex/store-module-writer-lock-20261022; central receiver codex/central-auto-dispatch-20261022. Source PR#3044 exact aa0d8321a2287e29d5dd6e6c2ecb4a4c8f5ebca0 fullCI39819376016 all5SUCCESS:3899server+8backup/0FAIL/0SKIP, native parent+6actual PostgreSQL subcases PASS. Merged5c8ccf5ef1c3aea57a9c7d11d5cc1550d9052774; exact-mainCI39821105794 all5SUCCESS/build119973999992:3916server+8backup/0FAIL/0SKIP, same native parent+6unskipped PASS. Independent source/unit/native reviews unchanged; original four frozen source blobs preserved. Existing globally installed lifecycle fetch pins GET origin epochs and forwards them for both PlatformAdmin module PUTs; no client change.

Ordinary guard39822773699/deployjob119978211519 resolved exact5c8ccf5e, Verify/Trigger Render/Wait exact production ALL SUCCESS (guardhead5c9557c5 is docs coordinator, resolved runtime is5c8ccf5e). Earlier guard39821474323 had skipped Trigger/Wait and is NOT release proof. Render dep-dbd4faff3r2c739b9rpg deploy_hook LIVE2026-10-22T17:33:32.817973Z exact5c8ccf5ef1c3aea57a9c7d11d5cc1550d9052774. Independent public /api/health no-cache checked2026-10-22T17:45:48.501386Z HTTP200/oktrue/exact same revision/version0.22.0+kat-test-pos. Bounded writer fix INSTALLED; no feature LAB/USER PASS inferred.

Final automatic email test remains BLOCKED; dispatchOFF. Authoritative verified-recipient/consent/grant/policy/payload persistence, trusted SMTP acceptance and scheduler remain absent/retained. Lifecycle/restore review2833comment6346383862 unanswered: same-DB archive rollback may erase external-send evidence; non-restored OFF/cutoff or external suppression contract must be settled by retained owner before DDL/ON. Concrete review CHECKPOINTS/CHANGES/2026-10-22-automatic-dispatch-production-review.md. Next exact relevant writer is platform-admin.js Store metadata/responsibleEmail PUT, including Store-name fallback; retained recipient/platform owner must expose exact handoff and atomic invalidation contract, no duplicate claim. Coordination2704comment6346828045. Technical-activation-only CompanyModule fix would not cover CASH_CONTROL and is not claimed as progress.

No real email, production/LAB data action, DDL/config/provisioning/billing/license/stock/financial/fiscal action, restore or accepted-test replay. Existing KAT/Rizareio/DAILY/Android/VOICE/manual acceptances preserved. Source implementation and earlier claim below are historical publication-time states superseded by this release receipt, not renewed work. Three canonical registries/checkpoint/scopedPDF+receiptJSON synchronized; latest global PDF preserved. Single next action: retained lifecycle and recipient/platform owners resolve exact published contracts/handoff, then remaining source integration and one final controlled acceptance test; no final-ready/ON claim.

22/10/2026 - CENTRAL-STORE-MODULE-WRITER-LOCK-01 / SOURCE IMPLEMENTED / AWAITING FULL NATIVE CI

Owner codex/store-module-writer-lock-20261022 under central receiver codex/central-auto-dispatch-20261022. Before-source claim3042 finalebe852d1e19d0414a8ed17086314f43a5b793e04/CI39818097726SUCCESS merged0c0d8594728848667d6881876272ade713b31465 BEFORE source. Exactly4source/testpaths only: existing platform-store-modules.js plus new store-module-mutation.js, unit and native tests. No other runtime/config/schema/manual changes. Root integrates records; automatic_reports helper/route/unit, pos_stores native, commerce_ai source/unit review and infrastructure native review. No duplicate retained owner work.

Both actual StorePaidModule UPSERT paths now share original lifecycle epoch -> lifecycle SHARE -> company-scoped Store FOR NO KEY UPDATE NOWAIT -> fresh Store/tx commercial fallback and same exact UPSERT -> commit -> existing audit/response. Inactive Store configuration, old company/store preflight404-before-bodyvalidation, SuperAdmin/CORE/commercialReady hierarchy/modulekeys/prices/dates/notes and postcommit audit semantics preserved. Store55P03 maps explicit409 STORE_MODULE_BUSY/no retries. Helper rejects missing/accessor scope and invalid

callback/database before checkout and never upgrades request epoch. No new schema bootstrap or generic permission bypass.

Actual original mounted Router baseline reproduced root-Prisma UPSERT outside transaction before modification. New Node20.20.2 actual helper/mounted bothPUT suite16PASS; root protected settings8+packagehierarchy3 ->27PASS/0FAIL/0SKIP. New native guard1PASS/0FAIL/1explicitlocalSKIP(noPG), total focused28PASS/0FAIL/1nativeSKIP. Independent exact source/unit and native fixture reviews NO BLOCKERS. Interim review caught removed preliminary404 ordering and missing descriptor/callback validation; corrected before freeze and added coverage. Native URL query-overrides rejected, mandatory CI-isolation assertion prevents silent skip. New native parent+6subcases must execute unskipped in full CI: actual initial/update UPSERT vs SHARE and compatible FK KEY SHARE, reverse parent lock, lifecycle refusals/highint64/cutover, foreign/missing/inactive/legacy store, callback rollback and unchanged controls.

Frozen SHA256 helper568fb1c0ca16b478de8262803fc9528b332d5b2cba9a6b53261687d144277dfd; routef025532f657a697891f812345339e8d45bf89e4d94d2a8b84d7d101f6bdd0250; unita0f9bb26c8f32ecd5d2a4a32c099460e811363d48d4beb7123f1b7897ba518a5; native423682c3de2f66ccd40d5535a3b8c83ab1bba0aa50e481fc7991d5d5f18c90e4. AWAITING full PR/exact-main CI/exact remote review/ordinary guarded release; NOT INSTALLED at publication. These are isolated tests, NOT new functional LAB/USER PASS.

Real final-test readiness remains BLOCKED separately, not cleared by writer locking: authoritative recipient verification/consent/grant/policy/payload persistence and schedule absent; existing sendEmail discards actual SMTP recipient acceptance. Critical lifecycle/root restore contract review in CHECKPOINTS/CHANGES/2026-10-22-automatic-dispatch-production-review.md and retained-owner request2833comment6346383862: FRESH_STORE_KEEP vs REMOVE contradiction and same-DB archive rollback can erase external-send evidence. Retained feat/store-shifts-inventory-clear-20261018 must review exact physical tables, retention/reset/delete/restore suppression before provisioning/ON; no approval or retention invented. Stable non-restored restore-OFF cutoff or external suppression remains a concrete undecided contract. CompanyModule/principal/rule/recipient writers and absent-row gates remain separately coordinated.

dispatchOFF; no real email, production/LAB mutation, schema/provisioning/config/billing/license/stock/financial/fiscal change or accepted-test replay. Existing driver3027/settings3028/source3032 and accepted manual/store/native/VOICE tests protected. Canonical three registries/checkpoint/scoped PDF synchronized, latest global PDF preserved. Single next action full native CI/exact source review, then normal verified release of this bounded writer fix; retained production contract review proceeds in parallel before final test.

22/10/2026 - CENTRAL-STORE-MODULE-WRITER-LOCK-01 / ASSIGNED BEFORE SOURCE

Owner codex/store-module-writer-lock-20261022, central receiver codex/central-auto-dispatch-20261022/coordinator codex/central-four-streams-20261018. Explicit owner instruction continues automatic reports until final test. Independent previously unclaimed prerequisite from2704comment6344797233; no exact active claim/open PR found for these two StorePaidModule UPSERTs. N50/Workforce, billing-policy, lifecycle/schema/backup, consent/mail/report/native/KAT/Rizareio owners retained. No transfer of their other source paths.

Exact source scope ONLY existing server/src/routes/platform-store-modules.js plus NEW server/src/services/store-module-mutation.js, server/test/store-module-mutation.test.js and server/test/store-module-mutation-postgres.test.js. Export withStoreModuleMutation(db,{companyId,storeId},work): capture originating lifecycleContext epoch before its first await; assertLifecycleMutation(lock:true) then scoped Store FOR NO KEY UPDATE NOWAIT; callback({tx,store}) receives fresh locked row; return only after commit. Preserve inactive-store setup: no new active=true filter. Clear409 STORE_MODULE_BUSY/no retry for55P03; other errors propagate. No bindFresh epoch upgrade. Both exact existing UPSERTs must use callback tx and fresh Store; commercialReady company fallback read uses same tx after lock. Preserve SuperAdmin policy, CORE

restriction, all commercial/package hierarchy/field validation/prices/dates/notes/response behavior and existing post-commit audit semantics. Existing schema bootstrap stays unchanged/outside helper; no new DDL or table.

Required new evidence: original causal failure before fix where feasible, actual helper and mounted route tests for both writers, commit ordering, rollback/refusal and exact validation compatibility. Native random isolated schema/twoPrisma clients proves initial absent override/update vs SHARE, compatible FK KEY SHARE, reverse writer/read lock, inactive Store, full-int64 original/missing/stale epochs, busy/maintenance/retired/foreign lifecycle and scope, unchanged control. Deferred barriers/no sleeps/retries; native must execute unskipped in full CI. Existing tests unchanged, all full PR/main/build/HTTP/Windows/browser checks and ordinary exact guarded release required. CI/local tests are NOT feature LAB/USER PASS.

Source NOT IMPLEMENTED/NOT TESTED; starts only AFTER this claim applicable CI green merged on main. Root alone updates three canonical registries/checkpoint/scoped PDF. Automatic_reports owns helper/route/unit, pos_stores native file, root integration; read-only lifecycle/consent audits proceed without edits to retained scopes. Existing driver3027/source3032 technical delivery and accepted reports/manual/store tests protected; no repeats. This scoped writer lock is NOT full authoritative delivery eligibility: company/module/principal/rule/consent/policy/restore phantoms and schema/provisioning/transport/scheduler remain OPEN. dispatchOFF; no production/LAB/config/billing/license/recipient/SMTP/financial/stock/fiscal action. Checkpoint CHECKPOINTS/CHANGES/2026-10-22-store-module-writer-lock.md. Single next action green claim merge, then exact four-file implementation.

22/10/2026 18:57 Europe/Athens - CENTRAL-AUTO-DELIVERY-DRIVER-01 / TECHNICAL DELIVERY VERIFIED / DISPATCH OFF

Owner codex/report-delivery-driver-20261022, coordinator codex/central-four-streams-20261018. Bounded two-file integration COMPLETE and technically delivered, still unmounted. Claim3024/CI39803847035/merge9b3acc495 preceded source. Source3027 exactf17589cd passed fullCI39805146136/all5SUCCESS/3832server+8backup PASS/0FAIL/0SKIP, native driver parent+3cases actually executed. Independent local and exact remote review NO BLOCKERS at sourceSHA2565bbe02199 99cece3c3ed9fc6100119349afb497e2d04f780e7bbd513aef562bc/teste4acc30847bc9a00c71fec4b4b8d31 3ad35bd5173b2f49c0218b1410e69e1f2b. Merged07f42d06. Its queued mainCI39806614822 was cancelled before jobs by a newer docs push; not a code failure or PASS.

Legitimate retained settings source3028 merged combined9a67265aaa916058621b5291c96268b6f0093bb9. BOTH frozen driver Git blobs6da03571a3330adb2ff12b93805e2e7048fee071/555c7f3c00e7a609228d36068d48dafd88e3b87e unchanged. Full combined-mainCI39807166764/all5SUCCESS/build119924210949:3859server+8backup PASS/0FAIL/0SKIP; native driver TAP343+3subcases PASS again. Actual cross-client committed ATTEMPTING visible before fake transport, persisted ACCEPTED/UNKNOWN and real concurrent one-send race. This supersedes the cancelled intermediate run with real full-main evidence, without retrying completed business/LAB transactions.

Ordinary guard39808542280/deployjob119928332990 SUCCESS, actual Trigger and exact-production-revision steps executed (not skipped). Renderdep-dbd31teq1p3s73dp7m40 LIVE22Oct15:56:27.889459UTC at exact9a67265a. Independent no-cache public /api/health22Oct15:57:08.232194UTC HTTP200/oktrue/exactrevision9a67265aaa916058621b5291c96268b6f0093bb9. Service srv-d9isenfavr4c73bdh52g in user-confirmed workspace tea-d9ie26vaqgkc739uudqg. No manual deployment bypass. Earlier guard39807310528 success-with-skipped-deploy is NOT the release proof.

Also reconciles earlier FOUR-WORKER-EXECUTION-01 source3006:07110f16c361a2c36fe507220816e12707f623d5 passed mainCI39763488981/ordinaryguard39764479397 and Renderdep-dbcuf73ncjis73dme2eg became live22Oct10:41:39.998758UTC (now historically deactivated after newer releases). Its dormant mail

adapter and staging tool were technically delivered; old awaiting-install notes are superseded only for source delivery. No actual staging restore/provisioning or automatic email activation occurred.

No new LAB/LIVE/USER feature PASS, SMTP acceptance or manual/numbered whole-task closure. Actual email remains OFF. Wider central dispatch scope remains ASSIGNED to codex/central-auto-dispatch-20261022: authoritative verified-recipient/consent/current writer locks/absent-row safety; retained lifecycle/backup owner's physical schema/retention/reset/restore suppression review before provisioning; durable payload/enrollment, real transport/scheduler and controlled consenting-recipient acceptance OPEN. Driver does not create/claim/recover jobs or solve these prerequisites. Existing settings3028, lifecycle/backup/mail/native/VOICE/KAT/Rizareio owners and accepted tests retained. Next action: central receiver resolves these retained production contracts under separate exact claims; do not repeat this completed driver increment or accepted LAB tests. Evidence CHECKPOINTS/EVIDENCE/report-delivery-driver-20261022/release-verification.json and scoped driver-tracker.pdf. Canonical registries/checkpoints synchronized; latest global PDF preserved.

22/10/2026 - CENTRAL-AUTO-DELIVERY-DRIVER-01 / SOURCE IMPLEMENTED / AWAITING FULL NATIVE CI

Owner codex/report-delivery-driver-20261022; coordinator codex/central-four-streams-20261018. Before-source claim3024 finalhead230921eecea686943650ae7770cf707cbda05810 passed applicableCI39803847035SUCCESS and merged9b3acc495aeb07d85e676fe8a5513287245da754 BEFORE source. This scope adds ONLY automatic-report-delivery-driver.js and automatic-report-delivery-driver.test.js; existing repository/start-order/mail/core/schema/route/worker/settings/tests unchanged. Existing owners and accepted manual/LAB/USER evidence remain protected.

Actual existing repository + mail adapter composition: canonical trusted clock, synchronous descriptor-safe caller snapshot via adapter, scoped repository.start resolution only after transaction commit, fresh post-commit lease/backwards-clock gate before injected send, then awaited exact version/token ACCEPTED/UNKNOWN completion. Per-call receipts prevent concurrent sharing. Start/commit ambiguity, failed completion, expiry and backwards/invalid clock never retry or fabricate persisted success; recorded:false/recoveryRequired:true requires separately inspected recovery. Accepted means transport acceptance only, not inbox delivery.

Node20.20.2 focused suite66PASS/0FAIL/1explicit local nativeSKIP; new driver13PASS/0FAIL/1nativeSKIP. Prior initial new suite10PASS/2FAIL was fixture error: foreign scope also tampered payload before validation, and adjacency-of-events assumed no second transaction could begin before send. Corrected to foreign slot and explicit committed-version proof, preserving zero-send/commit assertions; runtime unchanged. Independent runtime review no blockers; final native fixture review checks random isolated schema, separate clients, committed ATTEMPTING visibility during fake send, ACCEPTED/UNKNOWN persistence and real concurrent single-send. CI must execute native parent plus3subcases unskipped; explicit CI missing-database assertion prevents silent skip. Deferred barriers have bounded new-test timeouts without polling. No local native/SMTP/LAB PASS asserted.

Frozen SHA256 source5bbe0219999cece3c3ed9fc6100119349afb497e2d04f780e7bbd513aef562bc; teste4acc30847bc9a00c71fec4b4b8d313ad35bd5173b2f49c0218b1410e69e1f2b. Require exact remote review, full PR/exact-main CI and ordinary guarded release. This is an unmounted integration candidate, NOT INSTALLED at publication, no new functional/manual PASS.

dispatchOFF. Production enrollment/table/payload persistence and retention/reset/restore suppression, authoritative recipient verification/consent/real writer locks/absent-row safety, production transport/scheduler and controlled consenting-recipient acceptance remain OPEN. Driver does not implement those prerequisites or create/claim/recover jobs. No real email, production/LAB mutation, configuration, schema, paid resource, restore or financial/stock/fiscal action. Checkpoint CHECKPOINTS/CHANGES/2026-10-22-report-delivery-driver.md; canonical three registries and scoped driver-tracker.pdf synchronized, latest global PDF preserved. Single next action actual full native CI/exact review, then normal merge/main verification/release.

22/10/2026 - CENTRAL-AUTO-DELIVERY-DRIVER-01 / ASSIGNED BEFORE SOURCE

Owner codex/report-delivery-driver-20261022; coordinator codex/central-four-streams-20261018. Explicit owner instruction "ξεκινα" after the four-worker technical delivery authorizes the next independent integration slice. Existing central dispatch/start-order/mail/schema/lifecycle/backup owners retained; no edits to their existing source paths. Prior claims/source3006 and installed07110f remain protected. Current main201eb5e includes the separate start-order source; this increment requires its full fresh checks.

Exact source scope ONLY NEW server/src/services/automatic-report-delivery-driver.js and server/test/automatic-report-delivery-driver.test.js. Compose the existing real delivery repository and mail adapter: trusted repository.start commits ATTEMPTING before injected transport, then persist exact ACCEPTED/UNKNOWN once with the committed version/token. Driver clock supplies attempt/completion instants. Caller cannot supply eligibility or replacement receipt. Invalid start, transport uncertainty, completion failure/expiry or ambiguous commit must never trigger resend; unresolved persistence requires separate recovery, not automatic retry. No production eligibility implementation, enrollment, scheduler, schema/manifest, SMTP configuration or mounting. Existing source/API/tests remain untouched.

Required isolated evidence: actual repository+adapter+core composition over a transactional synthetic DB, post-commit send barrier and send-before-complete ordering, positive acceptance and UNKNOWN persistence, gate/start rollback zero sends, duplicate/concurrent/stale/token/scope refusal, no caller mutation or getter execution, expiry/clock/completion/commit failure redaction and no retry. Production integration and actual consenting-recipient acceptance remain OPEN; injected transport tests are NOT SMTP/LAB/USER PASS. Preserve all accepted HOLD/manual/store/device/financial evidence without replay.

Current status ASSIGNED / NOT IMPLEMENTED / NOT TESTED. dispatchOFF. No recipient change, real email, production/LAB DB mutation, provisioning/restore/configuration or financial/stock/fiscal action. Source starts only after this before-source claim has green applicable CI and is merged. Require focused Node20 tests, exact review, full PR/exact-main CI and ordinary guarded release. Root updates checkpoint/three registries/scoped tracker PDF; preserve latest global PDF and other owners' records. Checkpoint CHECKPOINTS/CHANGES/2026-10-22-report-delivery-driver.md. Single next action green claim merge, then implement the two new paths.

22/10/2026 — FOUR-WORKER-EXECUTION-01 / FULL PR CI VERIFIED / PRESERVE NEW KAT PUBLICATION

Final six-source-file candidate at fc599255e5119a45d766ca8dc7c423187cf31b3f passed exact PR CI39760970410: all five jobs SUCCESS,3803serverPASS/0FAIL/0SKIP plus8backupPASS. Native isolated PostgreSQL exact identity query and actual Docker build/default validation both executed unskipped (TAP2738/2739). Independent pinned remote reviews matched all six reviewed source hashes. Previous39ade126 run39760444177 was superseded/cancelled for necessary metadata reconciliation, not substituted for final PASS.

Main advanced through KAT receipt3007/134bf01ea46c75bd7f4dbef94354863da1bf5a6f while checks ran. Preserve real KAT photo-key v3702 publication, all its source controls/manual/evidence and current central PDF. No KAT republish or financial replay. The six inert source/test blobs remain byte-identical; only central documentation reconciliation changes. Put this scope's status beside its own existing claim rather than overwriting newer top entries; publish its regenerated scoped evidence PDF instead of replacing another owner's latest central PDF. This is not a functional PASS closure, so no manual/numbered task closure.

Source remains AWAITING fresh reconciled-head full CI/exact-main/ordinary release. Automatic dispatchOFF; staging tool unprovisioned/unexecuted. Existing consent/lock/schema/transport/provisioning/cost/restore prerequisites remain OPEN. No business or configuration change. Root/retained owners continue their assignments; single next action fresh checks then normal merge/release of these inert candidates.

22/10/2026 — FOUR-WORKER-EXECUTION-01 / TWO BOUNDED SOURCE CANDIDATES / AWAITING FULL CI

Central coordinator codex/central-four-streams-20261018. Before-source claim2993 was repaired by3004: finalhead416b6c567827abb604a6de9d6f7f6a2773fa70cc/CI39758232149SUCCESS/greenmergedfb30d22190fbaf88b2cdcfa925eae433309a4b41 BEFORE these final source files. All three canonical claim blobs independently read and verified. Initial publication defect preserved in claim history; no source committed or published while workers paused. Six new files only; existing app/worker/mail/repository/settings/schema/render/auth/financial/fiscal/stock paths untouched. Two independent new scopes integrated by root, each separately reviewed and tested.

CENTRAL-AUTO-MAIL-ADAPTER-01 — source implemented, dormant. New automatic-report-mail-adapter.js and matching test. Trusted injected startAttempt must resolve AFTER durable ATTEMPTING commit; returned caller metadata alone is not authorization. Exact scope/slot/token/version/lease/source/settings/payload body/hash/period bound before single injected transport call. Positive exact one-recipient accepted evidence plus messageId only yields ACCEPTED; rejection/mixed/pending/contradictory/getter/hidden/malformed evidence and transport exceptions yield UNKNOWN/no automatic retry, matching existing core. No SMTP/environment/DB client imports or mounting. Future trusted driver/consent/revocation/lock/repository/schema/real transport wiring remain OPEN. Local Node20.20.2 actual producer→payload→core→injected adapter with DAILY/WEEKLY/MONTHLY plus protected regressions46PASS/0FAIL/0SKIP; independently rerun by pos_stores. Initial reviewer reproduced false ACCEPTED for hidden/accessor pending evidence, fixed with regressions before publication. Final sourceSHA256ce5ccb05889864b94bb33cddd5a12736878b4cfaf710f6fa4ed28f338f986835/teste77be2fbc6926fce4b309843cdb09998db7a55e7a8b6560280ad51eb2823f46c.

INFRA-PRIVATE-STAGING-RUNNER-01 — source implemented, not provisioned. New ops/staging-restore/Dockerfile,restore.py,README.md and staging-restore-runner.test.js. Fixed approved internal staging host/database/user only, default offline validation, one receipt-bound bounded hashed private archive fd; original pathname changes cannot alter consumed snapshot. Explicit restore acknowledgement/dedicated Render identity/password-only child environment/production DATABASE_URL refusal/live identity+empty namespaces gate/conservative5,000,000,000byte quota with reserve/expiry recheck before effects. Single-transaction no-owner/no-privileges restore and exact complete table/count map, redacted aggregate proof. No arbitrary destination/URL/SQL/app boot/cron/SMTP/automatic retry/drop. Quota is not measured diskfree; counts are not rowsemantic/financial equality; post-verification failure can leave populated staging requiring quarantine/separate cleanup. Receipt is reviewed input, not authentication. Existing backup/lifecycle/accepted restore2787/upload2864 remain untouched. Local Node20 9PASS/0FAIL/2explicitSKIP: native PostgreSQL exact-query and actual isolated Docker image build/default CLI require full CI and must execute unskipped there. Independent commerce_ai rerun plus adversarial CLI checks no blocker. Exact identity SQL was separately syntax-checked by a read-only PG18 metadata query; no restore/business mutation. Initial unbuffered-fd assertion failure fixed without weakening test. Reviewer fixed conservative quota units, recursive malformed-receipt redaction and expiry boundary before publication. Final hashes restore9aa9ddbfeadf5eb854f58abb30144d0eff700a85b2889463498d29a72e101ae0/testc7bdfe90a76f327ea099a9c847bd33b7eae0aef39e10eda608e863e21407b4bb/README93b5abbd08a8f2c3f664a4ce2922f1ad82e16366e3dec4ac2b6e7da3c8b30c12/Dockerfe0a348606397dd72b356b81f58830150a02902cf988da38867c5d869f07ef23. No actual image build locally because Docker absent.

Combined focused local55PASS/0FAIL/2explicitSKIP; synthetic/injected and metadata proof are NOT new LAB/USER/STAGING/SMTP PASS. Both independent final source reviews found no blocker within claimed inert boundaries. Full required PR/exact-main CI, actual nativePG and Docker cases, and ordinary guarded exact release still required before source delivery claim. No manual PASS extension or numbered whole-task closure. dispatchOFF; no real email/recipient change, staging provision/restore, HA/cutover/cost, production/config/schema/business action or accepted-transaction replay. Rizareio continues existing owner/catalog2995–2997, KAT/DAILY/VOICE/native/N10 retained. Supplier source candidate read-only verification is preparation only, not hosted acceptance. Checkpoint CHECKPOINTS/CHANGES/2026-10-22-four-worker-execution.md and canonical records/generated tracker PDF synchronized. Next: full green checks and exact remote source review, then normal release of inert

candidates; production activation/execution remains separate prerequisites.

22/10/2026 — FOUR-WORKER-EXECUTION-01 / OWNER-DIRECTED PARALLEL WORK / BEFORE SOURCE

The owner explicitly requested 3–4 coordinated workers for unfinished work, then instructed «Ξεκινά». Central coordinator codex/central-four-streams-20261018 dispatches four independent workers in this session. This is actual task delegation, not remote control of other ChatGPT conversations or a claim they run unattended. Read current AGENTS, canonical records and relevant checkpoints before source. Existing claims and completed PASS remain protected. Current baseline3110d2afcdea83e3a4597cede8981b71b41c1625. Prior automatic source2991 failed main CI historically; wholesale readiness race is now fixed by named handoff2999/source3000 and verified exact-main CI39746665536 plus ordinary guard39747481734. Fresh combined full checks are still required for these new slices. Claim2993 checkpoint/PDF were correct but three registry updates accidentally prefixed literal undefined without the assignments; this correction restores actual before-source claims. No implementation was committed or published under the malformed registry entry.

1. **INFRA-PRIVATE-STAGING-RUNNER-01 — ASSIGNED codex/central-staging-restore-20261022 BEFORE SOURCE.** ONLY NEW ops/staging-restore/Dockerfile, ops/staging-restore/restore.py, ops/staging-restore/README.md, server/test/staging-restore-runner.test.js. Independent tool for approved staging dpg-db900vks728c73b9phtg-a / myworkstation_db_upgrade_test_20261016. Default validate-only; restore requires explicit execution acknowledgement, pinned target, receipt-bound archive size/hash, live empty-target identity proof and capacity preflight. Deny production target and inherited production DATABASE_URL. No generic target override, production dump/SQL, app boot/seeds/Prisma/lifecycle/history/SMTP/timer. Consume one preprovided archive; no arbitrary URL fetch. Redacted post-restore checks, failures remain failures, no automatic cleanup/drop/retry. Provisioning/secrets/billing/archive transfer/version/actual restore/retention/cleanup/HA/cutover OUT OF SCOPE. Preserve restore2787/upload2864 and retained lifecycle/backup owners. Synthetic tests are NOT STAGING PASS. Source starts only AFTER this claim green merge.

2. **CENTRAL-AUTO-MAIL-ADAPTER-01 — ASSIGNED codex/central-auto-mail-adapter-20261022 BEFORE SOURCE.** ONLY NEW server/src/services/automatic-report-mail-adapter.js and server/test/automatic-report-mail-adapter.test.js. Dormant dependency-injected one-recipient adapter: await trusted startAttempt commit before a single injected send call, bind exact store/slot/attempt/recipient/payload fingerprint, require exact positive accepted recipient plus messageId. Missing/mixed/contradictory evidence, rejection, timeout and transport uncertainty return UNKNOWN with bounded non-sensitive reason/no automatic retry, preserving current ACCEPTED|UNKNOWN lifecycle. Caller-supplied receipt alone is NOT authorization proof. No nodemailer/env/DB imports, existing mail/core/repository/schema edits, route/worker mounting or SMTP calls. Fake transport/start tests only. Unresolved repository writer/lock/consent contract remains required BEFORE production wiring/activation. Existing automatic source2991 and all mail/schema/lifecycle owners retained. Source starts only AFTER this claim green merge.

3. **POS/STORE READINESS — READ-ONLY RECONCILIATION / worker pos_stores.** KAT photo layout and DAILY setup remain their retained owners; do not repeat Pair/Start or8753import. Rizareio now has dedicated existing owner/claim2995–2997 and approved3375product/4395alias source, superseding earlier source-not-found discovery. Preserve that owner and source; do not create another Rizareio setup claim or import. Broader store/device/transaction readiness follows existing checkpoints only.

4. **SUPPLIER ACCEPTANCE — READ-ONLY PREPARATION / worker commerce_ai.** Prior2971 and VOICE2980/native video2987 PASS protected. Existing LAB source candidate at30/60/30 has DEMAND_REPLENISHMENT for LAB-EXCEL-20260909-01, stock4/min0/sold2/target6/suggestion2 in its observed snapshot; refresh before actual UI/CSV comparison. Default30/7/3 has no positive sample; BELOW_MINIMUM absent, no fabricated transaction. Normal browser session restrictions remain; no auth workaround or live send/order/stock/settings mutation. Native appearance and VOICE source remain retained owners.

Root alone integrates registries/checkpoint/PDF and release. Both source slices are independent new unmounted files; each requires focused tests, exact review, full green PR/main CI and ordinary guarded release before installed claims. This claim is documentation ONLY: ASSIGNED/NOT IMPLEMENTED/NOT TESTED, no LAB/USER PASS or manual change. No production/config/financial/stock/fiscal/settings/email/restore action or paid resource. Checkpoint CHECKPOINTS/CHANGES/2026-10-22-four-worker-execution.md. Next: green claim merge, then independent isolated implementation and final integration; no new general user approval requested.

22/10/2026 - IOS-CHAT-NATIVE-01 / ASSIGNED BEFORE SOURCE / NOT TESTED

Owner feat/ios-chat-native-20261022, receiving page feat/android-chat-native-20261017. Explicit owner instruction after Android functional confirmations: «iPhone/iOS, τελευταίο όπως συμφωνήσαμε να το ξεκινησουμε μεχρι την ολοκληρωση και μετα κανουμε δοκιμες». Android final scoped USER PASS receiptPR3018/948553cb is merged; no repeat Android tests or second Android implementation. Repository inspection finds no ios directory/app. Baseline948553cb22893c0b69e8ade2b46e5ed56dbf44f3. Linux host has no Swift/Xcode; actual Apple compilation/simulator checks must run in macOS GitHub CI, not be claimed from a static scan. Existing production/auth/media/AI APIs are the reuse boundary.

Bounded source: new ios native SwiftUI app/project/tests/build/privacy/signing/TestFlight instructions and .github/workflows/ios-chat-preview.yml; additive iOS platform registration/APNs FCM payload in existing server/src/native-chat-push.mjs, server/src/native-fcm-provider.mjs and routes/native-chat-push.js with focused regression tests. Preserve Android payload/default registration/cert/public download and every current owner. No database schema/migration, new backend service, API key/provider/model/payment/module/fiscal/stock or automatic-mail changes. Existing Firebase myworkstation-chat reused only for Messaging after explicit opt-in; no Analytics/Auth/Firestore/Storage. No real push/email/message or business test from CI.

Target parity: existing account/2FA challenge and restricted operator-link/PIN; authorized stores/company selection; selected-store text/read acknowledgement, built-in quick replies, bounded multi-photo/camera, RAM voice/video capture and explicit preview/send/playback, existing selected-store Owner/SuperAdmin AI with evidence checks. Ephemeral HTTP/no disk URLCache/cookies, private content/drafts in memory, no content DB/file/gallery writes, background/store/logout epoch cancellation/clearing, technical token/challenge Keychain ThisDeviceOnly with bounded expiry. Do not promise zero OS/SDK/photo-provider/backup traces. iOS capture-state detection and background cover are supported; no private secure-text screenshot-block hack or Android FLAG_SECURE equivalence claim. Every feature requires real compilation and meaningful synthetic tests before source delivery.

Owner answered Apple Developer account: «Όχι, δεν υπάρχει». Continue app and unsigned simulator build/tests autonomously; actual iPhone signing/installation/TestFlight and APNs/Firebase iOS app setup require owner-controlled Apple membership/App Store Connect, signing/provisioning and APNs key. Do not create an account, accept Apple agreements, charge fees, rotate Android key or ask for secrets in chat. Prepare concrete build/reviewable instructions first; no fake install link/QR or simulator artifact presented as an installable IPA. Physical iPhone/notification/camera/media/privacy USER PASS stays NOT TESTED until final agreed batch after preparation. No iOS implementation or build yet.

Required sequence: claim green/main BEFORE code; implement bounded app and additive iOS push protocol; actual macOS unsigned build/unit/simulator UI/media tests and all relevant existing full server/Android regression checks; review synthetic appearance and archive artifact manifest/source checksums; ordinary guarded exact server release only after full green/main when backend changes; prepare owner signing/TestFlight handoff. Never equate unsigned simulator/CI with physical acceptance or public availability. Owner remains assigned through completion or named handoff; other native/PWA/N16/AI/wholesale/central/AI-wallet owners retained. Single next action after claim merges: implement the iOS client and CI against existing contracts. Checkpoint CHECKPOINTS/CHANGES/2026-10-22-ios-chat-native.md.

22/10/2026 - NATIVE CHAT FINAL USER CONFIRMATIONS / FOUR SCOPED PASS

Ο ιδιοκτήτης επιβεβαίωσε ρητά τα επόμενα συμφωνημένα σκέλη, παραθέτοντας κάθε αντίστοιχη εκκρεμότητα: (1) «Έτοιμες απαντήσεις και βίντεο από τη συλλογή: τελική επιβεβαίωση στο κινητό. ειναι οκ», (2) «Ενημέρωση εφαρμογής: επιβεβαίωση αναβάθμισης χωρίς απεγκατάσταση ειναι οκ», (3) «Σύνδεση και ιδιωτικότητα: συγκεντρωτικός έλεγχος αποσύνδεσης, αλλαγής καταστήματος και προσωρινών δεδομένων. ειναι οκ». Καταγράφονται τέσσερα scoped USER PASS: έτοιμες απαντήσεις, βίντεο συλλογής, αναβάθμιση χωρίς απεγκατάσταση, και η περιγραφόμενη λειτουργική σύνδεση/αποσύνδεση/αλλαγή καταστήματος/χειρισμός προσωρινών δεδομένων. Καμία νέα δοκιμή ή επανάληψη αποδεκτών μηνυμάτων από τον agent.

Η εμφάνιση είχε ήδη USER PASS PR3010/3a05da77. Αυτές οι νεότερες ειδικές επιβεβαιώσεις αντικαθιστούν τα αντίστοιχα AWAITING USER/NOT TESTED του final-batch και των ιστορικών καταγραφών. Το πρακτικό same-signer update είναι πλέον αναφορά επιτυχίας ιδιοκτήτη· το ακριβές ζεύγος εγκατεστημένων hashes, μοντέλο/OS, αρχικό/τελικό version και οι χειρονομίες δεν μετρήθηκαν ανεξάρτητα. Η λειτουργική επιβεβαίωση προσωρινών δεδομένων δεν είναι forensic πιστοποίηση μηδενικών OS/SDK/backup ιχνών ή μηδενικής αποθήκευσης τεχνικών credentials. Δεν συνάγεται νέα αποδοχή ήχου βίντεο, όλων των ορίων/αρνητικών περιπτώσεων, κάθε συσκευής/ρόλου/tenant ή ευρύτερων PWA/N16/AI εργασιών.

Τεχνική διανομή αναφοράς: Android0.1.10/code11, sourcePR2989/2e7b084, signed39749830993/artifact12413756302, stable cert17c4d56123c6015a58343faba73d26a8b7d085a1baff7e680500767ae084ea97, APKsha2565c617d59d2a0a0adc356419a40b55f3bd1ba1449810e31b03ea6e33a7c4b8060. DistributionPR3002/1b98d90, fullPR39751843837/main39753045418SUCCESS3782server+8backup/0FAIL/0SKIP, guard39754062331/Renderdep-dbct8v4s728c73865s40LIVE και byte-for-byte δημόσια λήψη ελέγχθηκαν χωριστά στο receipt3003. Αυτά δεν παρουσιάζονται ως ανεξάρτητη ταυτοποίηση της σημερινής φυσικής συσκευής ή τρέχουσας serverrevision.

Τα τέσσερα επιβεβαιωμένα σκέλη αφαιρούνται από τις εκκρεμότητες. Εμφάνιση, camera-video-send-PC-view, φωνητικά, φωτογραφίες και παλαιότερα auth/push scoped PASS προστατεύονται· καμία επανάληψη για τεκμηρίωση. Η συμφωνημένη λειτουργική παρτίδα Android είναι αποδεκτή εντός των παραπάνω ορίων, όχι καθολική πιστοποίηση. iOS παραμένει τελευταίο/μη υλοποιημένο από αυτή την καταγραφή· δεν έγινε νέο iOS source claim ή release. Native owner feat/android-chat-native-20261017 διατηρεί την ευθύνη των χωριστών μη μετρημένων τεχνικών ορίων, χωρίς νέο αιτούμενο replay των ολοκληρωμένων βημάτων. Άλλοι owners/χρεώσεις/αυτόματες αποστολές/καταστήματα αμετάβλητα. Manual docs/manual/native-chat/PASS.md, evidence CHECKPOINTS/EVIDENCE/native-chat-appearance-20261022/final-user-confirmations.json. Συγχρονισμός checkpoint/active/tracker/manual/pending/final-batch/PDF στο ίδιο PR.

Ιστορική αποδοχή εμφάνισης22/10/2026 - συμπληρώθηκε με τις ειδικές επιβεβαιώσεις παραπάνω

Ο ιδιοκτήτης Χρήστος Μάνης απάντησε «ειναι οκ» αμέσως μετά την παράδοση της0.1.10 και την οδηγία να ανοίξει συνομιλία για τον τελικό έλεγχο εμφάνισης. Καταγράφεται περιορισμένο USER PASS της νέας εμφάνισης συνομιλίας. Δεν συνάγεται ανεξάρτητη ταυτοποίηση μοντέλου/OS, καταστήματος/ρόλου, εγκατεστημένου hash ή βήματος αναβάθμισης χωρίς απεγκατάσταση. Καμία νέα αποστολή, εγγραφή, οικονομική/stock πράξη ή επανάληψη αποδεκτού δείγματος.

Τεχνική βάση παράδοσης: sourcePR2989/2e7b084, Android39747236750 με36instrumentationPASS, signed39749830993/artifact12413756302, distributionPR3002/1b98d90, fullPR39751843837/main39753045418 με3782server+8backup/0FAIL/0SKIP, ordinaryguard39754062331SUCCESS/Renderdep-dbct8v4s728c73865s40LIVE και ανεξάρτητο δημόσιο APK byte equality. Fresh unauthenticated public health ok:true/exact revision, release.json metadata equality and downloaded public APK byte-for-byte equality with signed artifact independently verified at2026-10-22T09:21:18.749440+00:00. Landing page in actual browser displays0.1.10 and correct download. Same URL/QR: https://myworkstation-app.onrender.com/downloads/chat-android/. Prior APKs retained. Technical publication complete; physical phone same-signer update and appearance acceptance NOT TESTED. No new manual PASS.

The explicitly transferred wholesale role-readiness cause was corrected byPR3000/aa42e23 and verified inPR3001, preserving broader wholesale owner codex/wholesale-suite-20261017. Historical appearance release holds and0.1.9-current statements below are superseded for this delivered candidate only. No whole Android/N16/PWA/AI/wholesale PASS. Already accepted camera-send-PC-view, voice, photos, auth/push observations remain protected and are not replayed. Gallery/audio/ready-reply/session/privacy/device residuals retain their recorded NOT TESTED scope; iOS LAST. Native owner remains assigned until acceptance or named handoff. Single next action: install0.1.10 as an update over stable0.1.9 and inspect conversation appearance/labels/composer, without replaying accepted media. Evidence CHECKPOINTS/EVIDENCE/native-chat-appearance-20261022/public-release-verification.json and public-download.jpg; checkpoint CHECKPOINTS/CHANGES/2026-10-22-native-chat-appearance.md.

22/10/2026 - WHOLESALE ROLE READINESS TECHNICALLY COMPLETE / SHARED CI CAUSE RESOLVED

Owner-directed narrow receiving claim #2999 merged8253b206 before source. Source #3000 final ecc56cef54ecf512500592f77ee862368bddb72a full PR CI39745507227 SUCCESS, mergedaa42e23cb83b48ce1c1f803d1016801415f50456. Exact-main CI39746665536 all5jobsSUCCESS:3782serverPASS/0FAIL/0SKIP,8backupPASS/0FAIL/0SKIP. New actual Chromium held-metadata initial/re-entry cases and invalid-metadata/HTTP503 refusal executed and passed; all prior real isolated wholesale10checks and actual-app offline4checks passed. The independently reproduced early-role-click cause behind the shared hold is corrected, not hidden by a retry or another unrelated green run.

Ordinary guarded deploy39747481734 SUCCESS; Render dep-dbcsgrrrjlhs73eij6kg LIVE2026-10-22T08:28:34.363164Z at exactaa42e23. Fresh unauthenticated public /api/health returned ok:true and that exact revision. Only the source/CI/ordinary-delivery technical scope is complete. The separately pinned public wholesale lab service was NOT reset or repointed; no new hosted wholesale/physical/LAB/USER acceptance or manual claim, and no replay of accepted hosted financial examples. Existing commercial/offline acceptance and other wholesale work remain with codex/wholesale-suite-20261017. The transferred narrow technical cause is no longer pending another owner; receiving owner fix/wholesale-lab-role-readiness-20261022 retains regression responsibility, native owner feat/android-chat-native-20261017 continues Android appearance preparation.

Historical shared wholesale CI-cause holds in native/central/Rizareio records are superseded for THIS defect only. Other blockers, business acceptance and original source/runtime guards remain. Native sourcePR2989 reconciled head578aff9c8f698fda6a8c1858bef798ebbed3c111 passed fresh full CI39747236825 and Android39747236750 (36instrumentation); no new signed APK or public download change yet. It must still complete merge/exact-main CI, durable signing and verified public distribution before the owner's appearance test. iOS LAST. Evidence CHECKPOINTS/EVIDENCE/wholesale-role-readiness-20261022/release-verification.json. Single next action: complete the already prepared native appearance publication, preserve all accepted media/push tests without repetition. No extra general owner decision required.

22/10/2026 - WHOLESALE LAB ROLE READINESS / OWNER-DIRECTED RECEIVING CLAIM / BEFORE SOURCE

Explicit owner instruction in the native chat conversation: «Ανέλαβε την εσύ αυτή την εργασια», referring to the wholesale initialization race blocking publication. ΑΝΑΛΗΨΗ ΑΠΟ codex/wholesale-suite-20261017 — ASSIGNED fix/wholesale-lab-role-readiness-20261022, receiving page feat/android-chat-native-20261017. This transfers ONLY the bounded role-initialization defect, not the wholesale commercial/offline suite or other owners. Owner instruction supersedes the previous native hold's lack of a receiving assignment. Old owner must not concurrently edit these exact paths for this slice after this receiving claim is merged.

Baseline b4ffa6a249b28ead389730de2a3128f2c6953bec. Known required CI39679682971 wholesale final owner re-entry failed; central delayed-meta actual Chromium diagnostic proves a click can arrive before role listeners are bound. Failed run's exact meta timing remains inferred, not observed. Prior wholesale role/store/denial/offline and native camera/voice/photo/push scoped PASS protected; no replay of accepted hosted transactions. No new LAB/LIVE/USER PASS.

Exact source scope after this claim is green and merged: ops/wholesale-lab/public/index.html (initial role disabled state), ops/wholesale-lab/public/lab.js (initialization gate integrated with existing locks; enable only after validated meta, bound handlers and optional session restoration), new server/test/wholesale-lab-role-readiness.test.js and new server/e2e/wholesale-lab-role-readiness.mjs for deterministic delayed-meta and failure/lock cases. .github/workflows/ci.yml only additive execution of that synthetic browser regression in the existing isolated wholesale job. Existing E2E assertions/timeouts/retries, auth, session endpoints, tenant/store validation, runtime fence, schema, production data and fiscal/business paths unchanged. No new service or hosted reset.

Require failing-before regression, passing-after local actual script/DOM and actual Chromium with controlled local HTTP, all existing wholesale E2E plus full PR/main checks and ordinary guarded verified release. No unchanged failed-run retry or deployment bypass. Next action after merged claim: implement the bounded initialization gate and execute causal regressions. Native appearance PR2989 and its accepted synthetic evidence retained; continue same-signer 0.1.10 preparation after the shared cause is corrected. Physical appearance acceptance stays NOT TESTED, iOS LAST. Checkpoint CHECKPOINTS/CHANGES/2026-10-22-wholesale-lab-role-readiness.md. Receiving owner remains assigned through completion or named handoff.

22/10/2026 — RIZAREIO-CATALOG-IMPORT-01 / OWNER-DIRECTED ORDINARY INSTALLATION / AWAITING EXACT CI

Retained owner fix/rizareio-catalog-import-20261022 / #2995/#2997. New explicit owner instruction after explaining the shared release dependency: «Ξεκινά την εγκαταστση». Installation scope remains the independent Rizareio importer only; no transfer or edits of the assigned wholesale implementation. This supersedes this scope's voluntary hold recorded in#2998 for ordinary green-CI merge/release, not the historical wholesale FAIL or another owner's acceptance. Existing CI and deployment guards must all pass; no manual deploy, disabled check, unchanged failed-run retry or security bypass. Wholesale known readiness race remains NOT FIXED by this page and must not be represented as resolved by another green run.

Reconcile source branch with current main9443af76 preserving all current shared records. All four reviewed runtime/test blobs from ef971817 remain byte-identical; documentation-only reconciliation. Previous fullCI39733605031 actually3777/0FAIL/0SKIP plus8backupPASS; require fresh exact combined PR and main fullCI and ordinary guarded healthy revision before new LAB/import acceptance. Approved3375/4395aliases stock0 package remains SHA256cbf0b1ef795389ba0ecbe774eb9131bcd1c8d9f853cecd127a4fb35bb095f2e5. No final import has occurred. No fiscal receipt, register reprogramming, payment, stock movement, production SQL repair or change to another store. LAB/real importer acceptance stays NOT TESTED until measured. Owner retained through completion or named handoff.

22/10/2026 — RIZAREIO-CATALOG-IMPORT-01 / FULL NATIVE CI GREEN / SOURCE NOT MERGED OR INSTALLED / OWNER RETAINED

Owner fix/rizareio-catalog-import-20261022, issue#2995. Claim#2996 merged e2bc1018 BEFORE source. SourcePR#2997 exact ef9718174cf218bfc1a63e3d97e0972942c210da is OPEN, UNMERGED. FullCI39733605031 all five jobs SUCCESS; actual build job119674283970 logs read:3777serverPASS/0FAIL/0SKIP,8backupPASS/0FAIL/0SKIP, native PostgreSQL importer test828 actually executed (686.8ms). Three new Rizareio route tests and expanded native case PASS: five exact saved identities, all aliases/internal labels/leading zeros,0% tobacco/cards, precision, categories/subcategories, injected atomic rollback, concurrent one201/one409, replay refusal and unchanged existing controls. Existing DAILY/KAT/legacy assertions preserved. No LAB/LIVE/USER importer PASS.

Current approved technical workbook prepared and persisted privately:3375 products,4395 unique SKU/barcode aliases (59internal labels), allstock0/no cross-product barcode collision; local actual shipped parser/target/assertion/department-validator/normalizer yields3375/0invalid. Counts318tobacco/21cards/2297goods13/738goods24/1service007. Exact source SHA256 cbf0b1ef795389ba0ecbe774eb9131bcd1c8d9f853cecd127a4fb35bb095f2e5. Fresh production READONLY lookup confirms selected Rizareio company/store identity, all five whole department identities incl null exemptions and0 companyproducts/0selectedstoreproducts; no database writes. Do not upload stale3391 packages or the review workbook with row7 headers. No product import, no fiscal receipt/register reprogramming/payment/stock movement/schema/other-store action.

Shared release remains BLOCKED by independently retained wholesale initialized-role readiness cause in2026-10-22-central-auto-dispatch-integration.md. This source's green wholesale run does NOT repair that known cause. No guard bypass, unchanged retry, direct deployment or other-owner source edit. Last independently verified healthy revision20d99045 retained; Rizareio change NOT INSTALLED. Retained

wholesale owner must deliver the bounded causal fix, or owner must explicitly name a receiving handoff before another page edits that assigned scope. No transfer inferred from silence or general approval.

Single next action: resolve that retained-owner dependency, reconcile combined source/CI and ordinary exact guarded release; then new measured synthetic profile LAB acceptance with fresh before/after controls; only then one3375CREATE/0UPDATE/0INVALID/4395alias real preview/final import and full independent readback. Do not repeat completed imports or real transactions. Rizareio owner remains assigned until completion or named handoff; source/files/tests ready, installation/LAB/import outstanding. This receipt updates shared records only and does not close the scope or add a manual PASS.

22/10/2026 — RIZAREIO-CATALOG-IMPORT-01 / SOURCE PREPARED / AWAITING NATIVE CI AND LAB

Retained owner fix/rizareio-catalog-import-20261022, issue#2995. Before-source claim#2996/headb5ba728d/docsCI39732662424 SUCCESS merged e2bc1018534402e78b4e218cb47095abe8022e5c BEFORE source. Added explicit first-sheet RIZAREIO_IMPORT profile only: manifest company/store target, all five pre-existing department IDs and exact description/register/internal-code/rate/commerce/active/exemption identity; fiscal VATcode5 is explicitly0%, separate from internal department001/003. All text numeric aliases/leading zeros plus SKU-bound MWRZ internal labels retained. Review/excluded sheets never imported. Existing verified transaction locks, fresh collision checks, CREATE-only/zero-stock and full readback/rollback reused. No widening of legacy/DAILY/KAT profile behavior or permission/schema/fiscal/device execution.

Local Node20.20.2 focused19PASS/0FAIL/1native-environmentSKIP; full server3495PASS/0FAIL/200environmentSKIP. Server preparation/Prisma generation PASS. Native test expansion is COMMITTED, not locally executed: all five existing identities, exact prices/VAT/unverified0/categories/subcategories/aliases, injected mid-import rollback, two concurrent submissions one201/one409, replay refusal, unchanged departments and pre-existing controls. Full actual native CI must execute it. No LAB/LIVE importer PASS, no real3375 import. Source-only correctness is not installed acceptance.

Current shared wholesale initialized-role readiness cause remains independently owned and blocks ordinary release; do not clear it with another green run. Preserve healthy20d99045, prior imported DAILY/KAT and other owners. No direct deploy, production SQL repair, fiscal receipt, register reprogramming, sale/payment/stock movement. Remaining: full exact native CI/review; retained wholesale-owner causal fix/release reconciliation; exact ordinary release; bounded synthetic LAB with fresh before/after controls; then one3375CREATE/0UPDATE/0INVALID real preview/import and full exact source readback. Approved3375/zero-stock/source exclusions retained. Owner remains assigned until completion or namedhandoff. Checkpoint CHECKPOINTS/CHANGES/2026-10-22-rizareio-catalog-import.md.

22/10/2026 — RIZAREIO-CATALOG-IMPORT-01 / ASSIGNED BEFORE SOURCE / NOT IMPORTED

Owner fix/rizareio-catalog-import-20261022, issue #2995; user-directed new independent first-catalogue import. Source scope ONLY new server/src/routes/inventory-rizareio-source.js, dispatch/validation in inventory-source-workbook.js, target assertion in inventory-archive-import.js and bounded importer regression tests. No edits to other assigned runtime scopes. Existing KAT/DAILY BITE/Diadochou imports and precision/readback/idempotency remain protected; no replay.

Actual Rizareio preview rejects saved department labels 001/003/004/005/007 under legacy hardcoded mappings; no final import. Approved source has3375 eligible products, zero stock; exclusions and five user-confirmed beer mappings retained. Planned explicit RIZAREIO_IMPORT profile with company/store-bound manifest, exact five existing department identities, all text primary/additional aliases including reviewed internal codes, zero-stock CREATE-only and existing transactional collision/replay/readback protection. Missing/mismatched saved departments refuse; no inferred legal VAT exemption. No customer catalogue/private personal data in Git.

Pre-change main b5812fc7; affected importer paths unchanged since verified20Oct KAT release d8142d55; DAILY8753/9306aliases and KAT1766/1981aliases scoped PASS protected. Current healthy runtime20d99045c48dcf3b8283b9de01fc0e5c1bf7bf01. Shared wholesale readiness FAIL/release hold remains with its retained owner; no unchanged CI retry, bypass or direct deploy. Source NOT IMPLEMENTED, new profile LAB/real import NOT TESTED. Require focused positive/negative/regression and actual native PostgreSQL atomicity/concurrent replay, full green PR/main CI, ordinary exact release, measured synthetic LAB acceptance, then one conflict-free real3375 import and full readback. No fiscal receipt, physical register programming, financial/stock movement, production SQL repair/schema or other-store change. Owner retained until completion or named handoff. Checkpoint CHECKPOINTS/CHANGES/2026-10-22-rizareio-catalog-import.md.

22/10/2026 - NATIVE CHAT APPEARANCE READY IN SOURCE / SHARED RELEASE BLOCKED / OWNER RETAINED

Retained owner feat/android-chat-native-20261017. Source PR #2989 remains OPEN and UNMERGED at 8372559067e80c301606c52912449b371ff33d05, branch feat/native-chat-compact-ui-20261022. The modest modern presentation is prepared: compact three-action row, rounded buttons/composer, less header spacing and no empty draft/status rows. Final ready-reply caption Έτοιμες keeps the full accessibility description and original callback. No chat/media/session/store/auth/push/storage/business behavior change.

Exact source Android CI 39681632487 SUCCESS: compile, unit tests, lint, actual camera capture probe and all 36 instrumentation tests, zero failures/skips. Actual synthetic native Activity geometry at 320/360dp and fonts 1.0/1.3 passed; both final PNGs from artifact 12385605225 were downloaded and visually inspected. Normal and enlarged-font captions fit, with whole ready-reply label. Proof renders the actual synthetic View tree, preserving FLAG_SECURE; it is not a private OS screenshot or physical-user acceptance. Full PR CI 39681632347 SUCCESS, all five jobs including wholesale; server 3774 PASS/0 FAIL/0 SKIP and backup 8 PASS. No appearance USER/LAB PASS or new manual claim.

Shared release remains BLOCKED by the independently recorded wholesale initialized-role readiness race: exact-main CI 39679682971 and causal reproduction in CHECKPOINTS/CHANGES/2026-10-22-central-auto-dispatch-integration.md. A later green run at another revision does not repair that known cause. Retained wholesale owner must supply the bounded source correction and regression; native owner does not change their files, retry the unchanged failed run, bypass deployment, merge this native candidate or publish another install route. No signing run or new public APK was produced. Public URL/QR still serve 0.1.9/code10; no installation requested now.

Accepted camera-video send/PC view, voice, photos, 2FA/store/push and screenshot-block observations remain protected and are not replayed. Gallery video/audio/device/update/privacy residuals retain their prior NOT TESTED scope; iOS LAST. Single next action: receiving the retained wholesale owner's causal fix, then fresh combined checks, merge, exact-main full CI, same-owner signed 0.1.10/code11, verified ordinary public distribution and owner visual acceptance. Owner remains assigned until named handoff. Evidence CHECKPOINTS/EVIDENCE/native-chat-appearance-20261022/verification.json and two synthetic PNGs. Checkpoint CHECKPOINTS/CHANGES/2026-10-22-native-chat-appearance.md. This is a documentation/evidence hold receipt only; it does not merge the source or close the native scope.

22/10/2026 - CENTRAL-AUTO-SETTINGS-WRITER-LOCK-01 / TECHNICALLY INSTALLED / DISPATCH OFF

Owner codex/report-settings-writer-lock-20261022, receiver codex/central-auto-dispatch-20261022, coordinator codex/central-four-streams-20261018 (#2704/#2527). Before-source claim#3026/head94684b4a2ce3207bb4038a2aaca1ed524bb75471, CI39804597224 SUCCESS, merged2d0110d1696ff0e7a94c4935e444b8521121d4fd BEFORE all source/test edits. Source#3028/headad87ec72615a92a833bec711cc73308d4ff32b67 independently reviewed NO BLOCKERS for runtime/unit/native/exact remote diff; merged9a67265aaa916058621b5291c96268b6f0093bb9. Exactly three claimed runtime/test paths; all old tests and retained owners unchanged.

Actual full PR CI39805951972/build119919480780:3830 server+8backup PASS/0FAIL/0SKIP, all5jobs SUCCESS. Exact-main CI39807166764/build119924210949:3859 server+8backup PASS/0FAIL/0SKIP, all5jobs SUCCESS, additionally including the independently owned wallet#3009 and driver#3027 source. New real PostgreSQL parent+six subcases ran unskipped in BOTH: SHARE refuses first INSERT/update, KEY SHARE permits first INSERT, actual Save excludes competing SHARE, lifecycle/missing/stale epoch/maintenance/retired/busy refuse, independent generation cutover preserves original epoch, fresh locked store name governs rule, legacy zero stays compatible; selected/control/settings/fence/financial-source snapshots retained. Fixture FK is explicitly synthetic, not a claim of production FK or broader phantom safety.

Historical local original-source regression1PASS/7FAIL/0SKIP and corrected combined29PASS/0FAIL/2explicit nativeSKIP remain in raw TAP evidence. Both previously skipped lifecycle native cases actually ran in full CI. Earlier sparsecheckout baseline10PASS/2infrastructureFAIL (missing client files) was corrected by restoring existing tracked client, with old mounted tests then PASS; no application/test weakening, retry or failed assertion removal. These are technical test results, not new LAB/USER/manual PASS. Existing16/18/19Oct scoped settings/HOLD LAB PASS was not repeated.

Ordinary guarded release39808542280/deploy119928332990 SUCCESS explicitly pinned9a67265aaa916058621b5291c96268b6f0093bb9 after exact successful main CI. Renderdep-dbd31teq1p3s73dp7m40 LIVE22Oct15:56:27.889459UTC (18:56:27Europe/Athens). Independent public /api/health22Oct15:57:57.967553UTC (18:57:57Europe/Athens):HTTP200,ok:true,revision exactly9a67265aaa916058621b5291c96268b6f0093bb9. All three released source/test blobs match revie wed2af22c9634be8c3686da5463cfac8f2dd8a52d19/f76eaa72305ba77c12da5754cb512a27caf05762/6c39 bde577db8cd96d9d5a9e227311b2832073be. Earlier PR-event/doc-only skipped guards are not installation evidence. This supersedes this slice's old SOURCE PREPARED/AWAITING NATIVE CI/NOT INSTALLED entries below.

Actual Save keeps originating lifecycleContext generation captured before transaction, checks SuperAdmin/selected active scope, locks lifecycle first then scoped Store FOR NO KEY UPDATE NOWAIT, uses fresh locked name for rule, preserves existing settings INSERT/version CAS/readback. Store-only55P03 returns409 REPORT_SETTINGS_BUSY immediately without retry/further query; unrelated errors and lifecycle refusals remain distinct. Parent protocol includes first settings INSERT and remains compatible with unrelated FK KEY SHARE traffic. No source preview/get/manual-send, schema, enrollment, configuration, recipient, SMTP, scheduler or business-data action changed. No production/LAB financial transaction was performed for verification.

Full automatic delivery remains OPEN / dispatch OFF. This does not close all actual writer/absent-row/rolling-old-writer protocols, authoritative verified recipient and consent/policy enrollment, production immutable delivery/payload storage, retained lifecycle/manifest/retention/reset/restore suppression contract, real transport mounting or controlled consenting-recipient final acceptance. Driver#3027 and wallet#3009 code are included unchanged, their owners retained; this receipt does not activate either feature or replace their rollout evidence. Existing repo#3014 installation/receipt#3023 and all other owners/PASS remain protected.

Next bounded source candidate is the two actual StorePaidModule UPSERT routes in platform-store-modules.js, preserving commercial/auth/inactive-store/CORE/prices/inheritance/audit behavior; read-only audit and required native cases are in #2704 comment6344797233. No source claim/edit for those routes yet. Separate production schema provisioning/ON blocker: retained owner feat/store-shifts-inventory-clear-20261018 reviews physical delivery/policy/recipient/consent/payload columns plus reset/delete/retention/full/selective restore suppression through existing#2704comment6318978275, lifecycle checkpoint2026-10-17-store-lifecycle.md and PR#2833; ACCEPTED/UNKNOWN or restored consent must never silently regain resend authority.

Checkpoint CHECKPOINTS/CHANGES/2026-10-22-report-settings-writer-lock.md, evidence CHECKPOINTS/EVIDENCE/report-settings-writer-lock-20261022/. Four shared records synchronized and scoped tracker PDF regenerated; other-owner common PDF and manuals untouched. Single next action: a separate green merged before-source claim for the actual module-writer protocol; no repeated blanket user approval required. Final user acceptance remains one coordinated batch after integration prerequisites, not

a new request to repeat accepted transactions.

22/10/2026 - CENTRAL-AUTO-SETTINGS-WRITER-LOCK-01 / SOURCE PREPARED / AWAITING NATIVE CI

Owner codex/report-settings-writer-lock-20261022, receiver codex/central-auto-dispatch-20261022/coordinator codex/central-four-streams-20261018. Before-source claim#3026/head94684b4a2ce3207bb4038a2aaca1ed524bb75471 passed CI39804597224 and independent exact review NO BLOCKERS; merged2d0110d1696ff0e7a94c4935e444b8521121d4fd BEFORE source/test edits. Exactly existing automatic-report-settings.js + NEW automatic-report-settings-lock-order.test.js / automatic-report-settings-lock-order-postgres.test.js. Other owners, driver#3024 and all old tests unchanged.

Actual Save now captures original lifecycleContext generation BEFORE transaction, keeps actual SuperAdmin/selected active company/store checks, takes unchanged assertLifecycleMutation lifecycle SHARE NOWAIT before scoped active Store FOR NO KEY UPDATE NOWAIT, evaluates rule from fresh locked Store name, then existing insert/versioned update/CAS/readback. Store-only SQLSTATE55P03 throws explicit409 REPORT_SETTINGS_BUSY, without retry or further query; lifecycle errors and unrelated DB errors remain distinct. Legacy absent fence remains generation0 by unchanged helper, no schema/enrollment/repair. Source preview/get/manual send unaffected; dispatchEnabled:false retained.

Eight new local regression cases against ORIGINAL source:1PASS/7FAIL/0SKIP. Corrected combined unit/protected mounted/settings/snapshot/lifecycle tests:29PASS/0FAIL/2SKIP; two old native lifecycle cases require unavailable local PostgreSQL and are NOT asserted PASS. Earlier sparse checkout baseline10PASS/2infrastructureFAIL (missing AutomaticReportSettingsManager.jsx/PlatformAdminApp.jsx) was resolved by restoring existing tracked client files; old mounted tests now PASS, no assertions or application code changed to mask it. Before/after TAP retained. Independent exact runtime/unit review NO BLOCKERS, blobs2af22c9634be8c3686da5463cfac8f2dd8a52d19/f76eaa72305ba77c12da5754cb512a27caf05762. New real PostgreSQL race/epoch/key-share/native cases prepared; full required PR/main CI must run unskipped before technical acceptance. NOT INSTALLED; no new LAB/USER/manual PASS.

This fences initial settings INSERT only when the reader participates in the conflicting Store SHARE protocol; unrelated FK KEY SHARE traffic remains compatible. Other actual writers, absent module/rule/consent/policy/lifecycle enrollment phantoms and rolling old writers remain OPEN. dispatch OFF; no production/schema/configuration/SMTP/scheduler/enrollment/recipient/business/stock/fiscal/payroll action. Existing16/18/19Oct settings/HOLD LAB PASS preserved without another Save or transaction. Full automatic-delivery prerequisites remain separate from this correction. Checkpoint CHECKPOINTS/CHANGES/2026-10-22-report-settings-writer-lock.md; claim PDF remains historical, final technical receipt will regenerate scoped PDF. Single next action: independent native review and full CI, then guarded exact release.

22/10/2026 - CENTRAL-AUTO-SETTINGS-WRITER-LOCK-01 / ASSIGNED BEFORE SOURCE

Owner codex/report-settings-writer-lock-20261022; receiver codex/central-auto-dispatch-20261022; coordinator codex/central-four-streams-20261018 (#2704/#2527). Explicit owner authorization for central automatic-delivery implementation persists. Extends the centrally received settings source from claim#2990, preserving all existing retained owners. Current baseline9b3acc495aeb07d85e676fe8a5513287245da754; repository start-order source#3014 is technically INSTALLED a57998d33, fullPR39795960511/main39798109764 SUCCESS3815+8/0/0 each; normalguard39800051934 and exactRender/publichealth verified; technicalreceipt#3023 merged92699f24. Do not redo that source, its accepted tests or historical LAB.

Exact source paths ONLY: existing server/src/services/automatic-report-settings.js (baseline blob2acb36b9040d6270491fecad83d4e648a56241a3); NEW server/test/automatic-report-settings-lock-order.test.js; NEW

server/test/automatic-report-settings-lock-order-postgres.test.js. No other source/test edits. New driver claim#3024's two NEW files stay with codex/report-delivery-driver-20261022; coordinated in comment6344349152. Lifecycle APIs/manifest/backup/mail/VOICE/native/wallet/ftext/KAT/Rizareio sources remain with their retained owners. Shared records/checkpoint/scoped PDF are maintained centrally.

One causal change: the ACTUAL existing settings Save transaction will join a parent-store lock protocol, including its first INSERT, because AutomaticReportSettings has no Store foreign key and locking only an existing settings row cannot fence absence. Keep strict input and actual SuperAdmin/selected active company/store checks. Preserve the original request generation from lifecycleContext()[storeId], never relabel it through bindFreshLifecycleRead. In the same transaction assertLifecycleMutation(...,{lock:true}) first, then scoped active Store FOR NO KEY UPDATE NOWAIT; evaluate current cash rule using the fresh locked Store row/name; retain existing settings insert/versioned update/CAS/readback and dispatchEnabled:false. Map a real Store lock conflict to clear409 without automatic retry. Existing lifecycle absence remains legacy generation0 per unchanged helper; enrolled stale/missing epochs, maintenance/retired/busy fence refuse writes. No lifecycle enrollment, schema creation or hidden repair.

The future trusted dispatcher must use a conflicting Store FOR SHARE lock consistently. FOR NO KEY UPDATE preserves unrelated FK KEY SHARE compatibility for24hour stores. This slice alone does NOT close absent StorePaidModule/rule/consent/policy/lifecycle enrollment phantoms, rolling old writers or production dispatch authorization. No full common-lock guarantee or activation claim.

Required new isolated evidence: unit lifecycle->Store->rule->settings order; use of original generation and freshlocked name; no writes after busy/stale/foreign/inactive/rule/CAS failure. Real PostgreSQL independent-client tests hold Store SHARE against first settings INSERT and update, and reverse held Save against dispatcher-compatible SHARE; confirm NOWAIT refusals/no automatic retry, KEY SHARE compatibility, lifecycle-first order/busy/stale/missingepoch/maintenance/retired, unchanged settings/control tenant and financial/shift sources. Existing settings/native/source/preview/lifecycle tests unchanged. Preserve initial regression FAIL evidence, protect the actual16/18/19Oct scoped settings/HOLD LAB PASS without repeating Save or business transactions. Full required PR/exactmain CI must run new native cases unskipped, independent exact review and ordinary exact guarded release before technical installation claim.

Current status ASSIGNED / NOT IMPLEMENTED / NOT TESTED. dispatch OFF. No schema/production/configu ration/enrollment/recipient/SMTP/scheduler/business/stock/payment/fiscal/payroll action or paid provisioning authorized by this bounded claim. No new LAB/USER/manual PASS. Broader automatic-delivery prerequisites remain OPEN. Checkpoint CHECKPOINTS/CHANGES/2026-10-22-report-settings-writer-lock.md; scoped evidence CHECKPOINTS/EVIDENCE/report-settings-writer-lock-20261022/. Single next action: green merged before-source claim, then exactly these three paths in isolation.

22/10/2026 - CENTRAL-AUTO-DELIVERY-START-ORDER-01 / TECHNICALLY INSTALLED / DISPATCH OFF

Owner codex/report-delivery-start-order-20261022, receiver codex/central-auto-dispatch-20261022, coordinator codex/central-four-streams-20261018 (#2704/#2527). Before-source claim #3011/head c612c4513791ace1a6f704abb8702efea7773ce8, CI39793452195 SUCCESS, merged82673d503b1d48689f5be14333c7fdf8ac1a6d87 BEFORE source edits. Source #3014/head9e9862c330a85a9c214e9e8e0eed22769ca17b25 independently reviewed NO BLOCKERS; merged a57998d33e05241ffd66f6ffec8498280c651e33. Exactly three claimed runtime/test paths; old tests and retained owners unchanged.

Actual PR CI39795960511 and exact-main CI39798109764 both terminal SUCCESS, all five jobs SUCCESS: 3815 server + 8 backup PASS, 0 FAIL/0 SKIP in EACH. New real PostgreSQL parent and four subcases ran unskipped in BOTH: deterministic dependency-before-slot two-client race, consent revocation after probe, independently committed recover/reclaim winner, and same-version/token immutable replacement refusal. Local regression against original source remains 1 PASS/6 FAIL/0 SKIP; corrected local seven new +46 protected tests:53 PASS/0 FAIL/0 SKIP. Raw before/after TAP retained in this scope's evidence directory; no failed assertion removed, retry introduced or old test weakened.

Normal guarded release39800051934/deploy job119897971269 SUCCESS explicitly checked out and pinned a57998d33e05241ffd66f6ffec8498280c651e33 after full-main CI. Render dep-dbd28cgm7kps73db2u70 is LIVE at that exact source revision. Independent public /api/health observed22Oct2026 15:13:16UTC (18:13:16Europe/Athens):HTTP200,ok:true,revision exactly a57998d33e05241ffd66f6ffec8498280c651e33. Previous healthy07110f16 preserved in ordinary rollback artifact. Source increment TECHNICALLY INSTALLED; this supersedes its older SOURCE PREPARED/AWAITING NATIVE CI/NOT INSTALLED entries below. Documentation-only guards with skipped deploy jobs do not count as installation evidence.

Start now uses scoped canonical nonlocking probe -> trusted eligibility in the same transaction -> scoped locked current slot -> full immutable-input reconciliation -> existing expectedVersion/token/state/CAS. Probe never authorizes sending, locked current record remains authority, and start returns only after commit. No schema, runtime mount, scheduler, SMTP, configuration, enrollment, recipient or business-data mutation was performed. A health receipt and CI are not financial reconciliation, LAB/USER acceptance, provider delivery or inbox evidence; no new feature manual PASS.

Full automatic delivery remains OPEN / dispatch OFF. Remaining prerequisites: authoritative verified recipient and monotonic consent/policy enrollment; actual writer locks including absent-row insertion protocols; production immutable-slot/payload tables with retained lifecycle/manifest/retention/reset/restore suppression agreement; trusted committed-attempt driver and real transport wiring; controlled consenting-recipient final acceptance. Existing mail adapter is reused, not rebuilt. Settings-writer parent-lock next slice has a read-only plan in #2704 comment6343383216, NOT an approved source claim or completed writer/phantom guarantee. All lifecycle/backup/mail/VOICE/native/wallet/ftext/KAT/Rizareio owners and existing USER/LAB PASS remain protected; no completed LAB transaction was repeated.

Checkpoint CHECKPOINTS/CHANGES/2026-10-22-report-delivery-start-order.md; evidence CHECKPOINTS/EVIDENCE/report-delivery-start-order-20261022/. Shared registers synchronized and scoped tracker PDF regenerated; other-owner common PDF unchanged. Single next action: publish a separate bounded before-source claim for the actual settings writer lock protocol, obtain green merge before its source changes. No new blanket owner approval required; no production activation is implied.

22/10/2026 — CENTRAL-AUTO-DELIVERY-START-ORDER-01 / SOURCE PREPARED / AWAITING NATIVE CI

Owner codex/report-delivery-start-order-20261022, centralreceiver codex/central-auto-dispatch-20261022/coordinator codex/central-four-streams-20261018. Before-source claim3011/headc612c4513791ace1a6f704abb8702efea7773ce8, CI39793452195SUCCESS, merged82673d503b1d48689f5be14333c7fdf8ac1a6d87 BEFORE all source/test edits. Newer Android USERPASS3a05da77, wallet/VOICE/native/KAT/Rizareio/lifecycle/backup/mail assignments and already installed07110f source preserved; no repeat of accepted LAB.

Exactly three source/test paths: existing automatic-report-delivery-repository.js + new automatic-report-delivery-start-order.test.js / automatic-report-delivery-start-order-postgres.test.js. Start now obtains scoped canonical nonlocking probe, then trusted eligibility in same tx BEFORE scoped slotFORUPDATE; reconcileDeliverySlot(locked,probe.input) guards whole immutable snapshot before existing expectedVersion/token/state/CAS/persistence. Probe never authorizes an attempt; locked current record remains authority. Existing create/get/claim/complete/recover/API/core/mail/schema/mounting and old tests unchanged. No automatic retries; start promise returns only after transaction commit.

Actual local Node20.20.2 new regression against ORIGINAL repository:1PASS/6FAIL/0SKIP, demonstrating wrong lock order, gate-before-lock refusal and missing/changed probe-gap protection. AFTER source correction all7newPASS plus46protected lifecycle/mail/payload:53PASS/0FAIL/0SKIP. Before/failure evidence retained, no assertion removed or timeout raised. New native PostgreSQL fixture uses real independent clients/rows and bounded barriers to prove create/start common dependency order, revoke/reclaim/immutable snapshot refusal and unchanged control; no local PostgreSQL available so actual native execution is required unskipped in full CI, not asserted locally. Independent exact review/fullPR+mainCI/ordinaryguarded release still required. NOT INSTALLED for this increment; no new LAB/USER/manual PASS.

dispatchOFF. Repository protocol correction does not prove authoritative enrollment/consent/verifiedrecipient/currentwriterlocks or absent-row phantom safety. Production table/manifest/retention/reset/restore suppression, trusted driver, scheduler/real transport and controlled consenting-recipient acceptance remain separately coordinated OPEN prerequisites. No schema/production/config/business/stock/fiscal/payroll/recipient/email/provisioning action. Root keeps shared registries and scoped PDF; common latest PDF/other-owner source untouched. Checkpoint CHECKPOINTS/CHANGES/2026-10-22-report-delivery-start-order.md. Single next action: full native CI and exact review, then normal merge/mainCI/guarded release.

Independent runtime/unit/native reviews: NO BLOCKERS. Native reviewed blob 4b9b45c74cdda886e28746ddba39ce8d43fb6b12; actual unskipped execution still pending.

22/10/2026 — CENTRAL-AUTO-DELIVERY-START-ORDER-01 / ASSIGNED BEFORE SOURCE

Owner codex/report-delivery-start-order-20261022, receiving central implementation codex/central-auto-dispatch-20261022/coordinator codex/central-four-streams-20261018 (#2704/#2527). Explicit owner authorization for central automatic-delivery execution persists. This extends the centrally owned dormant delivery repository scope from codex/report-delivery-persistence-20261020; no other owner may edit these exact paths concurrently after this green claim. All mail/schema/lifecycle/backup/VOICE/native/N10/wallet/KAT/Rizareio scopes remain protected.

Baseline main91af91c634429a7634e4bc747b8cbfba22d52d6b. Existing repository c9ff006bb1f2eefba5fb1f39bc283fae20fc43ac unchanged. Previous central required-main FAIL39679682971 is historical: named wholesale handoff2999/source3000 corrected its initialization cause, exactmainCI39746665536 and guard39747481734 succeeded. Fresh installed ancestor07110f16c361a2c36fe507220816e12707f623d5 has fullCI39763488981SUCCESS/guard39764479397SUCCESS; Renderdep-dbcuf73ncjis73dme2eg LIVE22Oct10:41:39.998758UTC. Prior central shared-snapshot source2991 and newer dormant mail adapter are included unchanged. Do not replay accepted LAB or rebuild mail adapter; old BLOCKED/NOT INSTALLED entries are superseded for those technical source increments only, not full automatic delivery.

Exact source paths ONLY: server/src/services/automatic-report-delivery-repository.js; NEW server/test/automatic-report-delivery-start-order.test.js; NEW server/test/automatic-report-delivery-start-order-postgres.test.js. One causal correction: start currently slot-locks before eligibility while create does eligibility before slot, allowing a dependency-lock cycle. Start will perform a scoped canonical NONLOCKING probe for stored immutable input, await trusted eligibility in the SAME transaction, then scoped FOR UPDATE reload; compare immutable input again and apply existing expectedVersion/token/state/CAS checks against the locked record. Probe is not authorization, caller input cannot replace stored input, and transport is never invoked by the repository. Other mutate methods/public signatures/core/get/create behavior retained. No generic hook, automatic transaction retry or wrapper bypass.

Required new isolated evidence: unit ordering and refusal before persistence, missing/corrupt/foreign probe, stale state/token/version and immutable snapshot change between probe/lock, gate failure/throw rollback; real PostgreSQL two-client deterministic create/start dependency-lock race without sleeps/retries, revocation before start, concurrent recovery/reclaim winner and immutable-input replacement refusal, no ATTEMPTING/write on failure, unchanged control tenant. Existing repository/lifecycle/payload/mail tests unchanged and protected; full required PR/exact-main CI must execute native cases unskipped. Local lack of PostgreSQL is infrastructure NOT TESTED, not native PASS. Independent exact-source review and ordinary guarded exact release required before installed claim.

Current state ASSIGNED / NOT IMPLEMENTED / NOT TESTED, no new LAB/LIVE/USER or manual PASS. dispatch remains OFF. Fixing repository ordering does not implement authoritative verified recipient/consent/policy, real writer locks/absent-row phantom protection, production tables/manifest/retention/restore suppression, trusted driver or real SMTP/scheduler. Those remain separately claimed prerequisites. No production/config/schema/business/financial/stock/fiscal/payroll/email/recipient action, paid provisioning or

accepted transaction replay. Root owns registry/checkpoint/scoped regenerated PDF. Single next action: green merged before-source claim, then exactly these three files in isolation.

22/10/2026 — CENTRAL-AUTO-DISPATCH-INTEGRATION-01 / SOURCE MERGED / RELEASE BLOCKED BY NEW REQUIRED WHOLESALE FAIL

Central implementation receiver codex/central-auto-dispatch-20261022/coordinator codex/central-four-streams-20261018 (#2704/#2527). Receivingclaim#2990/CI39677533447/merge8fcc4564 precededsource. Source#2991 finalhead37812e30ae7f144a0a4d6dd7fec2a976c5c4164e merged8b8b8ca518b6bba042758e16893c61ad8e05b97c; reviewedhead→merge files[]; no other-owner source changes.

Implemented actual saved-settings→cash-source preview in ONE RR READONLY snapshot; internal tx-aware producer preserves publicwrapper/all old actor/store/settings/rule/readiness/cap/PROVISIONAL/amount semantics. Local37PASS/0FAIL/0SKIP. FullPRCI39678593064/build119495639014 all5jobsSUCCESS:3774serverPASS/0FAIL/0SKIP plus8backupPASS. New nativeparent+5subcases actuallyPASS: independentatomicwriter oldMAIN/v1/-2→freshALT/v2/+7 with realpayloadhashes; staleversionreject; public/internal no nestedtx; ownRWfixturewrite9+3=12 visible thenexactrollback; realRO25006refusal; scope/missingschema/noDDL. Oldtestsunchanged, independent exactremote reviews no blocker. Initial ownunit hash-field assertion5PASS1FAIL corrected to actual payloadFingerprint then37/0/0; supersededsourceCI39678426390 automaticcancel was notPASS.

NEW REQUIRED exact-main failure retained: CI39679682971 wholesale-isolated-lab/job119498983549 FAIL at2026-10-21T21:35:58UTC, wholesale-lab-flow.mjs66 FINAL owner() re-entry after actual inactive-seller denial. No root wholesale source edit, repeatedclick, timeoutincrease, unchangedCIretry, removedassertion, manualdeploy or guardbypass.

Release BLOCKED/NOT INSTALLED for this slice; dispatchOFF. Mainbuild/native result recorded separately and cannot override failedwholeCI. Current prior healthyRender20d99045/dep-dbcikobrjlhs73dk7oa0 retained. No newLAB/LIVE/USERfeaturePASS, no manualchange or financial/stock/fiscal/payroll/recipient/settingssave/SMTP/config/schema action. Preserve old realreportHOLD/otherstreamPASS; do not replay. Source remains centrallyassigned through completion or namedhandoff. Nextsingleaction: retained wholesale owner fixes actual initialized-role actionability/readiness with causalregression, or publishes exact boundedhandoff; then fresh fullgreencombinedPR/mainCI and ordinary guardedexactrelease. Repository lock-order correction planned read-only, NOT IMPLEMENTED/newclaimrequired; other schema/mail/lifecycle/backup assignments protected. No new general ownerdecision or copiedassignment needed.

Checkpoint CHECKPOINTS/CHANGES/2026-10-22-central-auto-dispatch-integration.md; blocked-verification.json/actual-CI-failure screenshot/scoped regenerated blocked-tracker.pdf. This top

entry supersedes older pending-native/sourceprepared/expectingnormalrelease status for this first slice only; fullautomaticdelivery/actualacceptance remainsOPEN.

22/10/2026 — CENTRAL-AUTO-DISPATCH-INTEGRATION-01 / SHARED PREVIEW SNAPSHOT SOURCE PREPARED / AWAITING NATIVE CI

Owner codex/central-auto-dispatch-20261022, central coordinator codex/central-four-streams-20261018 (#2704/#2527). Explicit owner-directed receiving claim#2990/headf44f793da7db14edd530bcc41438340eef57b324, docsCI39677533447 SUCCESS, merged8fcc4564ebc7338cbe1139dea62cc2aa20a10cc2 BEFORE source. This supersedes the claim's NOT IMPLEMENTED state for the exact first four paths only, not the broader dispatch integration. Retained mail/schema/lifecycle/backup/KAT/native/VOICE/N10 and other owners remain protected.

Implemented: existing previewSavedAutomaticCashReport now opens ONE RepeatableRead + SET TRANSACTION READ ONLY before scope/settings/source reads and invokes actual tx-aware source reader in that same tx. Public source wrapper retains pre-transaction validation and maxWait5000/timeout15000/RR, captures one clock, and preserves old output/auth/company-store/settings/rule/HOLD/cap/provisional and original amounts. Internal reader neither opens nested transactions nor changes caller isolation/mode. This is real saved-settings→source-preview runtime integration. Existing cash payload remains a separate unwired production module; actual source→JSON→payload is tested, not an installed transport claim. Save/get, routes, role policy, schema, manifest, mail/repository/scheduler and all existing tests unchanged.

Local Node20.20.2 focused37PASS/0FAIL/0SKIP (6new +31protected). Initial new test5PASS/1FAIL was a test-author error requesting nonexistent payloadHash/hash; corrected to actual payloadFingerprint without changing runtime or weakening the immutable payload check, then all37PASS. Independent runtime/unit review no blocker; sourceSHA256b6a969f45e93c625049419bc572036859cc3b144e8288e021a5dbc0d7df3e176/settings833b5bc8804d402bb56ec36cd43500110d688e01f2e95ee89e91166cb1f11971/unit046d2cb376b1a94e800b6f3dcbeab6c3437a2e1b4fd2820211a5a8fa907f5424. Native concurrent PostgreSQL tests prepared separately; no local PostgreSQL is available, so no local native PASS asserted. Require actual unskipped native full PR/exact-main CI and exact reviewed release before installation.

No new LAB/LIVE/USER feature PASS; preserve manual automatic-reports/PASS.md and prior real HOLD results without replay. dispatchEnabled:false. No recipient/consent/settings save/SMTP/worker/schema/production business action. Common snapshot is NOT lock-safe dispatch authorization. Remaining: repository create/start order, authoritative verified recipient/consent + real writer locks/phantoms, reviewed durable payload/slot/lifecycle-retention-backup/recovery, transport acceptance/crash UNKNOWN and controlled actual LAB recipient acceptance. No new general owner approval needed for ordinary safe implementation. Next single action: full native CI and independent exact-source review, then ordinary guarded verified release of this first integrated slice. Checkpoint CHECKPOINTS/CHANGES/2026-10-22-central-auto-dispatch-integration.md.

22/10/2026 — CENTRAL-AUTO-DISPATCH-INTEGRATION-01 / OWNER-DIRECTED RECEIVING CLAIM / BEFORE SOURCE

Ρητή νεότερη εντολή ιδιοκτήτη στην κεντρική συνομιλία: «ανελαβε αυτο αν μπορεις και ολο τον συντονισμο», αναφερόμενη στην παραλαβή της διασύνδεσης αυτόματων αποστολών. ΑΝΑΛΗΨΗ ΑΠΟ codex/automatic-reporting-20261016 — ASSIGNED codex/central-auto-dispatch-20261022, retained central coordinator codex/central-four-streams-20261018 (#2704/#2527). Η μεταφορά είναι εντολή ιδιοκτήτη, όχι τεκμαιρόμενη συναίνεση από σιωπή. Ο παλιός AUTO-REPORTS owner δεν πρέπει να επεξεργάζεται παράλληλα τα παρακάτω ακριβή paths. Άλλα mail/schema/lifecycle/backup source claims και οι #2705/#2706/#2707/KAT/native/invoice/N10 owners διατηρούνται· η κεντρική ευθύνη συντονισμού δεν μεταφέρει αυτομάτως όλα τα αρχεία τους.

Πρώτο bounded causal slice: server/src/services/automatic-report-source.js, server/src/services/automatic-report-settings.js και νέα server/test/automatic-report-source-transaction.test.js,

server/test/automatic-report-source-transaction-postgres.test.js MONO. Extract transaction-aware internal reader readAutomaticCashPreviewInTransaction(tx,input) από τον υπάρχοντα reader, και άμεση σύνδεση του πραγματικού previewSavedAutomaticCashReport consumer σε μία κοινή RepeatableRead READ ONLY transaction για scope/settings/source, διατηρώντας public source wrapper RepeatableRead/maxWait5000/timeout15000, όλους τους ίδιους actor/store/settings/rule/readiness/cap/financial-finality ελέγχους και ακριβές response/parameterized SQL. Internal helper δεν ανοίγει/ολοκληρώνει transaction, δεν χαλαρώνει ρόλο και δεν αποτελεί service-principal authorization. Πραγματικός source→payload consumer μέσα στο ίδιο caller-owned snapshot. Δεν αλλάζουν υπάρχοντα tests, routes, settings save/get behavior, repository, mail, schema ή manifest σε αυτό το slice. Baseline b7cfa8b9f935c28fda4aa21eeae5c24385da81d3; source blob ace4e508cfe8b6f831f9765fbcc4b5695038a6e7 unchanged from accepted reporting source.

Απαιτούμενες απομονωμένες αποδείξεις: wrapper/internal exact DAILY/WEEKLY/MONTHLY parity, no nested transaction, denied actor/store before source read, settings/rule/cap HOLD retained, actual native PostgreSQL caller snapshot remains stable across independent committed source change and sees its own explicit test writes, source→JSON→existing payload on same snapshot. Existing accepted LAB HOLD/manual evidence protected/no replay. Focused Node20 and full required PR/exact-main CI with native cases actually executed, independent review, ordinary guarded release before installed claim. Source/CI/local PASS is not LAB/USER acceptance.

Overall integration receiver now central: follow contract#2704comment6318978275, resolve common pre-lock protocol with actual revoke/reset writers BEFORE repository wiring; authoritative verified recipient/consent revisions; immutable payload/slot storage; retained schema/backup owners' exact lifecycle/retention/recovery review before DDL; committed ATTEMPTING before external I/O; positive SMTP acceptance evidence; UNKNOWN/no automatic resend. Subsequent causal slices require their own exact before-source claims. Δεν είναι άλλη μία αποσυνδεδεμένη λειτουργία: το πρώτο slice αφαιρεί το υπάρχον nested-snapshot interface gap στον πραγματικό producer. Δεν είναι πλήρης σύνδεση αποστολής.

Status ASSIGNED / NOT IMPLEMENTED / NOT TESTED. dispatchEnabled:false παραμένει. Κανένα SMTP, scheduler, verified-recipient/consent/config/production DDL/business/stock/fiscal/payroll action, restore ή επανάληψη LAB. Πραγματική τελική αποδοχή με έναν ρητά verified/consenting LAB recipient παραμένει ανοικτή μετά την πλήρη ασφαλή διασύνδεση. Root alone edits registries/checkpoint/scoped regenerated tracker PDF. Checkpoint CHECKPOINTS/CHANGES/2026-10-22-central-auto-dispatch-integration.md. Single next action: green merged receiving claim BEFORE source, then implement exactly the four paths.

22/10/2026 - NATIVE CHAT COMPACT MODERN APPEARANCE / ASSIGNED BEFORE SOURCE

Retained owner feat/android-chat-native-20261017; branch feat/native-chat-compact-ui-20261022. Owner supplies phone photo and requests only modest visual improvement plus a more modern appearance. Current screenshot shows tall separated native grey buttons, clipped ready-reply caption, empty draft/status labels reserving large blank space, and busy attachment cards. Bounded native conversation-only presentation scope: one compact three-action toolbar, rounded composer and buttons, consistent purple palette, quieter message cards/metadata, hide empty labels while preserving nonempty status/error/draft display, adaptive wrap-content labels and >=48dp touch targets. No sender identity/data rewrite, routes, sending/recording/playback/session/store/auth/push/storage/business change; global login/store-list appearance preserved. Version/build/public same-signer distribution belongs to retained native owner. No new framework, server/schema/settings work.

Camera capture/send/PC viewing USER PASS22Oct (receiptPR2987/b7cfa8b9) and previous voice/photos/auth/push limited PASS protected; do not replay accepted real messages. UI appearance is NOT TESTED. Require Android compile/unit/lint/all existing emulator regressions plus actual synthetic conversation geometry at phone width and enlarged font, before/after screenshot review, full CI, stable owner-signed build and verified public download before final owner visual acceptance. Other N16/PWA/AI owners retained, iOS LAST. Checkpoint CHECKPOINTS/CHANGES/2026-10-22-native-chat-appearance.md. Single next action after this claim green merge: bounded native presentation edit and visual verification. Owner remains assigned until named handoff.

22/10/2026 - ANDROID CAMERA VIDEO TO PC / SCOPED USER PASS

Owner feat/android-chat-native-20261017 retained. Owner reports: «εβγαλα βιντεο...το εστειλα και το ειδα απο το pc». USER PASS only for reported phone camera capture, explicit send and PC viewing of that video. No repeated send/request or agent message/read/push/business action. Exact test time, store/user, phone/OS, installed APK hash/version, message ID and current server revision were not independently measured. Last verified distributed candidate remains the historical0.1.9/code10 receipt (PR2972/a436c998, signed39485822858, fullCI39490203679, guard39491414896); it is context, not proof of this installed device version.

Supersedes earlier native camera-video-send/PC-view AWAITING USER TEST for this sample only. Existing voice/photo/auth/push/store limited PASS protected. No claim for video audio, gallery MP4, reverse PC-to-phone video, physical limit/cancel/permission/background cases, all devices, forensic storage or same-signer update without uninstall. No overall Android/N16/PWA/AI PASS or iOS completion. Historical blanket video NOT TESTED entries below are superseded only for this accepted camera-send-PC-view sample. Do not repeat it for documentation.

Manual docs/manual/native-chat/PASS.md and final-batch plan updated with this actual flow. Active remaining native scope: gallery video and still-unmeasured ready replies/session/privacy/device/update residuals only, with same owner; iOS LAST. Checkpoint CHECKPOINTS/CHANGES/2026-10-20-native-chat-video.md. Single next action: finish only remaining consolidated acceptance items when owner is ready, no replay of accepted camera/voice/photos/push. Documentation-only receipt; no source/APK/deploy/schema/configuration change. Tracker/pending/PDF synchronized in this same PASS receipt.

21/10/2026 23:26 Europe/Athens — CENTRAL-RECORDED-PAYROLL-UI-01 / TECHNICAL RELEASE VERIFIED / AWAITING FINAL USER TEST

Retained central owner codex/central-four-streams-20261018, #2706/#2527. Source#2985/head c1daf3c5c26c125308400ef9ce314e01740ac2d2 independently reviewed and green merged028b1d59b2af0ff943d18d961e8a179f18c1594d after before-source claim#2984/CI39665200495/merge0376c250. Sourcehead→merge files[]; all six reviewed source/test blobs unchanged, three runtime blobs match actual synthetic Chromium evidence. Supersedes older NOT MERGED/NOT INSTALLED/AWAITING CI/UI-implementation residuals for this bounded increment only; historical FAIL/PASS and all owners retained.

ExactPRCI39667004265/build119454875705 and exactsource-mainCI39668300521/build119459505476 both all5SUCCESS:3750serverPASS/0FAIL/0SKIP plus8backupPASS/0FAIL/0SKIP. Native producer->JSON->consumer->CSV parent+all4subcases actuallyPASS in BOTH (107rows/allpageCSV, signed/private/formula provenance, tamper/stale scope rejection,23/25hDST/empty,10001source->10000CSV/nulltotals). Local60/0/0/build and synthetic realChromium desktop/mobile remain separate technical evidence; initial isolatedFAILs/fixes preserved, no bypass/replay.

Ordinary workflow_run guard39669509416/deploy119463441952 SUCCESS, actual pinned request028b1d59 at20:21:56.9888546UTC and exacthealthy20:25:19.8395781UTC. Renderdep-dbchtp0473hc73e9tr6g LIVE finished20:25:18.748516UTC. Independent no-cache publichealth20:26:18.978997UTC returned200/oktrue/exact028b1d59. Canonical/platform-admin200 serves/assets/main-C0MBgqKA.js,327767bytes/SHA256fd42a18fa592fca53355b1a9df1135fbf7ffcb61a00150b6278bdeba2577a7b3, new report endpoint/dialog/launch/CSV markers present. This verifies installed code, not actual feature acceptance. Prior healthyc444cba8/Renderdep-dbcdhtdg1s2s739s1b0g and rollbackartifact12378019276 retained; no manual deploy/guard override, new schema/migration/manualSQL or business action.

Normal selected-store sales toolbar now opens recorded-expense/linked-payroll dialog with ended Athens dates, explicit Search, bounded transaction/employee pages and all-applied-rows CSV. Strict frozen DTO/reconciled cents/coverage plus root/store/token/visibility/draft/native-dialog fences. Recorded ledger is

NOT settlement/all wages/accrual; LINKED_ONLY, unattributed may contain payroll, signed refunds retained, standalone Workforce excluded, incomplete cap suppresses complete totals. Existing INVENTORY/server roles/packages gates unchanged; no source writer change.

NO new LAB/LIVE/USER feature PASS/manual entry/fullTask12 or staffing closure. Remaining central scope: actual normal selected-LAB source/role/tenant/module/empty/nonempty/CSV/mobile acceptance, only already-existing data, no accepted transaction replay. One final Greek read-only guide: docs/testing/recorded-payroll-expense-final-user-test.md. Missing actual positive linked-source samples stay NOT TESTED; do not manufacture payments. Single next action: user final test and coordinator evidence reconciliation/required same-PR manual closure for actual PASS only.

Bounded rollout observation20:21:56–20:26:30UTC:30returnedapp-errorrecords/hasMoretrue,28Online-orders-module-disabled and2table-ordering-module-disabled on prior/newinstances. Known disabled-module refusals, no root report request/related source or module activation, no examined causal link to this UI release and no zero-production-error claim. Classifications retained in release-verification.json; no workaround.

Four-stream continuity: #2704 dispatchOFF, concrete production contract6318978275 awaits retained AUTO-REPORTS/mail/schema/lifecycle/backup agreement; cannot infer handoff. #2705 supplier#2971 limitedactualPASS protected; positivecases/margin/physical comparability OPEN. #2706 sales/hourly#2883 protected; N10/writers/accrual/staffing retained and OPEN. #2707 retained-owner#2980 actualsupplier24-rowperiod-labelPASS and priorbank/invoicePASS protected;#2981 finalOwner/device/domainbatchPREPARED/PENDING, no replay/takeover. KATPOS#2983/native/invoice and all other owners remain unchanged. No new general user decision/approval is required for this completed technical release.

Checkpoint2026-10-21-recorded-payroll-ui.md,4registries, release-verification.json and scoped regenerated release-tracker.pdf synchronized. Only completed implementation removed from pending; actual acceptance remains assigned to central owner through completion or named handoff.

21/10/2026 — CENTRAL-RECORDED-PAYROLL-UI-01 / SOURCE IMPLEMENTED / AWAITING FULL NATIVE CI AND USER

Retained central owner codex/central-four-streams-20261018, branch codex/recorded-payroll-ui-20261021, #2706/#2527. Before-source claim#2984/head aeb716073ea60c9c38acac1f8ab1b2d104ecac2f, independentreviewPASS/CI39665200495SUCCESS, merged0376c2505e7b95f4d649bdba3f26f0981da21d98 BEFORE edits. Exactly six claimed source/test paths implemented; no backend/schema/auth/module/financial/POS source edits.

Normal sales-statistics toolbar now adds OWNER/SUPER_ADMIN presentation entry for selected store. Native dialog has own ended Athens dates and explicit Search only,100-row transaction/employee-summary windows, separate applied-snapshot CSV. Strict detached/frozen DTO validation reconciles scope/period/asOf/coverage/signed integer cents/all totals/employee attribution. Root/hub/store/token/user/native-open/visibility and live draft-date fences reject stale callbacks/pages/exports. Abort/request generation, bounded temporary ancestor observer and storage/pagehide cleanup close hidden/disconnected contexts, revoke URLs and restore focus. Existing old default sales/hourly/comparison/drill/CSV protected.

Visible recorded-ledger-not-settlement/LINKED_ONLY, standalone Workforce/accrual exclusion, unattributed-payroll possibility and signed negatives remain; partial10000cap suppresses whole totals. BOM/semicolon/CRLF CSV carries company/store/exact Athens bounds/asOf/coverage/source/limitations, UTC and Greekh23 row times, every applied returned row, checked decimal amounts; untrusted formulas neutralized while trusted numeric negatives stay numeric.

Final isolated Node20.20.2 focused60PASS/0FAIL/0SKIP (6newconsumer+7newmountedUI+16backend+31oldUIregressions). Final frontendbuildPASS9.46s/TABLE_SERVICE invariant; existing bundle-size warning retained, no dependency/lock change published. Real Chromium153 synthetic desktop1348x936/mobile390x844 actual-installer/CSS pointerflowPASS: no payroll request before Search,100transaction DOM

rows/101all-row CSV, pagination/draft invalidation/escapefocus/ancestorhidden cleanup;44px Search/CSV/close, mobile clientWidth356=scrollWidth356. Source blobs match browser proof. These are local/synthetic results, NOT LAB/USER PASS. New native producer->JSON->consumer->CSV parent+4subcases implemented (107rows/allpage CSV, tamper/privacy,23/25hDST/empty,10001overflow->10000CSV/nulltotals); not run locally because no PostgreSQL, must execute unskipped in full CI.

New FAIL retained: initial draft global Element dependency broke protected JSDOM regressions (13fail); fixed realm-independent DOM checks without changing oldtests, final60/0/0. Subsequent newtest41PASS/2FAIL counted employee-summary rows and clicked a disabled control expecting an event; corrected transaction-table assertions/explicit enabled close token-fence test, guards not relaxed. Review also fixed draft-programmatic value fences and trusted-negative CSV handling before publication. Initial real-browser mobile25px controls/677vs356overflow corrected to44px/356vs356; screenshots verified. No production change or business action caused by these isolated failures.

Independent source/security review finds no runtime blocker at final three runtime hashes; exactremote review/full PR and exact-main CI remain required. Source NOT MERGED/NOT INSTALLED at this publication. All accepted LAB PASS and other owners retained, including KAT POS#2983, N10, suppliers/margin, VOICE/native. Cash dispatchOFF; retained production-contract agreement remains blocked, no takeover. No production/LAB financial/stock/fiscal/shift/payroll/settings/recipient/SMTP action or accepted-test replay.

Checkpoint2026-10-21-recorded-payroll-ui.md and evidence recorded-payroll-ui-20261021/local-verification.json/browser-verification.json/scoped source-tracker.pdf synchronized. Single next action: independent exact-source review and full native PR/main CI, ordinary guarded exactrelease/health, then final selected-LAB user read-only acceptance. Do not add manualPASS or close whole payroll/staffing/four-stream scope before actual acceptance.

21/10/2026 — CENTRAL-RECORDED-PAYROLL-UI-01 / ASSIGNED BEFORE SOURCE / NOT TESTED

Retained central coordinator codex/central-four-streams-20261018, #2706/#2527; source branch codex/recorded-payroll-ui-20261021. Baseline main a70ea46be258feb8a584e59c8a139c9c4f63477b. Continuation of installed backend#2976/c444cba8 and receipt#2979; receipt mainCI39627120044 now completed SUCCESS, no rerun. Existing central sales V4 ownership from#2725 and2026-10-19-central-sales-comparison.md retained. Green reviewed merge of this claim is required BEFORE any source/test edit.

Exact six source/test paths ONLY:

- client/src/components/commerce/installKioskReportsSalesV4.js (root integration only).

- NEW client/src/components/commerce/recordedPayrollExpenseView.js.

- NEW client/src/components/commerce/recordedPayrollExpenseDialog.js.

- NEW server/test/recorded-payroll-expense-ui.test.js.

- NEW server/test/recorded-payroll-expense-consumer.test.js.

- NEW server/test/recorded-payroll-expense-consumer-postgres.test.js.

Bounded read-only normal sales-report entry opens native dialog inside current report root, with explicit locked selected store, separate ended Athens calendar dates, search,100-row pagination and separate all-applied-rows CSV. No automatic report fetch before explicit search. Strict producer DTO/period/coverage/cent arithmetic/attribution validation, immutable applied snapshot, current root/hub/store/token fences, stale cancellation and no export after draft/context changes. Existing default sales/hourly/comparison/drill/CSV behavior and all accepted PASS protected. Visible LINKED_ONLY and recorded-ledger-not-settlement limits; unattributed expenses may include payroll, signed refunds retained, accrual/standalone Workforce excluded, incomplete10000row cap suppresses full totals. Formula-safe BOM/semicolon CSV carries same source, company/store, exact period/asOf/coverage and uncertainty. No new auth policy or JWT decoding; server authorization remains authoritative, response company scope displayed.

No backend/router/schema/index/auth/module/financial/payroll writer changes. N10 reconciliation, all supplier/VOICE/native/POS layout owners retained, including KAT#2982. Cash dispatch remains OFF; production contract#2704comment6318978275 awaits retained AUTO-REPORTS/mail/schema/lifecycle/backup agreement. No SMTP/recipient/scheduler activation, production data write, business transaction or accepted LAB replay.

Required new isolated verification: pure malformed/overflow/formula/signed/date cases, mounted actual installer/dialog lifecycle and stale cross-store/token/tab cases, actual native producer JSON->consumer->CSV, old sales regression, desktop/mobile layout, independent review and all required PR/exact-main CI. Ordinary guarded exact deployment and independent health required before user test. CI/local/native tests are not LAB/USER PASS. Selected-LAB real-source/role/module/mobile acceptance remains OPEN until observed by user; no manual PASS or whole Task12/four-stream completion.

Root exclusively owns shared registries/checkpoint/scoped regenerated tracker PDF. Checkpoint CHECKPOINTS/CHANGES/2026-10-21-recorded-payroll-ui.md; evidence CHECKPOINTS/EVIDENCE/recorded-payroll-ui-20261021/. Central ownership retained through completion or named handoff. Single next action after green merged claim: implement exactly six paths in isolation through verified release, then one final user acceptance batch.

21/10/2026 19:38 UTC — KAT-POS-PHOTO-KEYS-01 / ASSIGNED / NOT TESTED

Retained KAT owner ops/kat-catalog-import-20261020; independent branch feat/kat-pos-photo-layout-20261021. Owner explicitly requests KAT POS keys from eighteen 21Oct screenshots, existing MyWorkStation palette, blank configurable keys, existing coffee/chocolate/tea organization. Scope: reviewed exact existing KAT product identities, quick-key order and screenshot product groups; preserve existing beverage children and fee SET. No catalog import, price/VAT/department/stock/activation/recipe/order/payment/shift/auth/licensing or other-store changes. Separate mobile-topup SET and all other owners remain untouched.

Read-only baseline main700514f2f2f7a2d28ea85e1d6bb41de65db50c30; KAT1900 catalog rows, StorePosLayout version3695 with3 nested beverage roots and20 quick keys. Quick3 currently resolves CARLSBERG rather than requested water. Existing designer normalizer drops nested children and limits14 roots: do not publish a destructive normalized replacement. Review bounded preservation/import capability before any source/config write. Screenshot SEPTONA requested1.00 conflicts with current imported1.50: leave disputed key unassigned pending exact identity/owner resolution; no price change inferred. Preserve completed coffee PR2970/2977/2978, import/zero-stock/13-workers and all accepted tests without replay.

Status NOT TESTED for this new layout, no new LAB/LIVE PASS. Required: green merged claim before source/state-changing LAB; exact reviewed mappings; if source needed, focused/full CI and ordinary guarded exact deployment, new synthetic-only LAB acceptance and published five-file receipt before real KAT configuration. Native selected-store UI writes only, fresh before/after catalog/financial/stock/control fingerprints, independent layout readback, navigation inspection and final screenshot. No direct production SQL/API write or seed/migration. Claim remains with this owner until completion or named handoff. Checkpoint CHECKPOINTS/CHANGES/2026-10-21-kat-pos-photo-keys.md. Single next action: finish exact product mapping and bounded native layout publication path after green claim merge.

21/10/2026 - CENTRAL-RECORDED-PAYROLL-EXPENSES-01 / TECHNICAL BACKEND RELEASE VERIFIED / NORMAL-APP ACCEPTANCE OPEN

Retained central owner codex/central-four-streams-20261018, #2706/#2527. Source#2976/head794e78937c0ee712d694c4a583ea9c4bd75fc588 independently reviewed, green merged c444cba8a6e87cf4f3a0fc9ae82b251338a51b54 after before-source claim#2975/CI39620870173/mergedd6802a07. Supersedes older NOT MERGED/NOT INSTALLED/AWAITING NATIVE CI for this four-path backend increment only. History, owners and actual PASS retained; no UI or whole payroll/staffing completion.

Exact PRCI39622401968/job119299349221 and exact source-mainCI39623576730/job119303387627 each all5SUCCESS,3732serverPASS/0FAIL/0SKIP plus8backupPASS/0FAIL/0SKIP on Node20.20.2. Native PostgreSQL parent+all7subcases actually executed andPASS in BOTH: scoped SQL/actual-router HTTP fixture, read-onlyRR/independent-client snapshot, signed count-once ledger, private ambiguity, roles/packages/DST/cap10000-10001 and missing-table/column503 without bootstrap. HTTP uses synthetic auth, not normal production login/middleware acceptance. Local48/0/0 remains separate. Independent remote review/merge and deployed-revision blob checks verify all4reviewed source/test bytes unchanged.

Ordinary workflow_run guard39624802820/deployjob119307311882 SUCCESS: actual pin/requestc444cba8 at21Oct15:23:33.1982941UTC, exacthealthy15:28:49.4029688UTC. Renderdep-dbcdhtdg1s2s739s1b0g LIVE finished15:28:49.460595UTC. Independent no-cache /api/health15:29:47.591937UTC returned200/oktrue/exactc444cba8/version0.22.0+kat-test-pos. Previous healthya436c998/dep-dbbsrho473hc73cduhd0 retained as rollback provenance. Guard-head e985173f and later main73dd2519 contain concurrent coffee documentation#2977/#2978 only; their docs-only runtimeSKIP is not source/native proof. Fresh records preserve coffee manuals/evidence/commonPDF and all other-owner changes. No manual deploy/guard override or introduced schema/migration/manual SQL; existing ordinary startup retained.

Installed backend GET /api/reports/recorded-payroll-expenses retains INVENTORY mount, OWNER/SUPER_ADMIN-only explicit active company/store and BASIC+PAYROLL SELECT gates forOWNER. One RepeatableRead/READONLY snapshot, signed nonreversed OTHER_EXPENSE by ended Athens occurredAt; ledger counted once. Only one approved positive exact scoped Workforce source link attributes beneficiary; ambiguous/foreign/mismatched links remain unattributed without foreign identities. Exact cents/coverage,10000row cap suppressing incomplete full totals; LINKED_ONLY, settlementVerified:false, accrual/standalone Workforce excluded. Recorded ledger is not bank settlement or all paid wages; outer authorization is not serializable revocation proof.

NO new LAB/LIVE/USER feature PASS/manual entry/wholeTask12 closure. Normal UI/CSV and real selected-LAB source/role/module/mobile acceptance remain NOT TESTED/OPEN. No coordinator financial/stock/shift/payroll/fiscal/recipient/SMTP action or accepted business replay. Bounded rollout observation:10 online-module-disabled log messages on prior serving instance15:26:56-15:27:59UTC; no payroll request, online source change or zero-production-error claim. No module activation/bypass; root cause outside scope. Structured evidence retains this observation.

#2704 dispatchOFF; concrete production integration proposal comment6318978275 awaits retained AUTO-REPORTS/mail/schema/lifecycle/backup agreement. #2705 supplier#2971 actual limited PASS protected, positive actual cases/margin/receipt-comparability OPEN. #2706 earlier sales/hourly/CSV#2883 protected; N10 reconciliation/accrual/staffing/writers remain separate. #2707 retained VOICE/native owners/acceptance unchanged. All ownership preserved.

Checkpoint2026-10-21-recorded-payroll-expenses.md and evidence recorded-payroll-expenses-20261021/release-verification.json/release-tracker.pdf synchronized with4registries. Technical backend delivery complete; central residual ownership retained. Single next action: bounded UI/CSV integration claim on existing central report consumer with visible uncertainty/coverage/entitlements, then normal selected-LAB acceptance. No new general user decision needed.

21/10/2026 15:22 UTC — KAT coffee environmental fee / REAL CONFIGURATION PASS

Owner ops/kat-catalog-import-20261020 completed this coffee scope. This supersedes coffee AWAITING LAB/real-configuration entries below; they remain historical only. Source PR2970 is already guarded LIVE; fresh health21Oct15:21UTC confirms exact a436c9981e1ffa72f9006b5964ab6a7dd2b8536e. No source/deployment or completed CI replay. LAB receipt PR2977 final head1d34c3317ce8a1306dd3d1c2f24bc5d64440cbb3, docs CI39623829569 SUCCESS, merged e985173ffc1ed7d1b276fad7e4d740ccb0a44c9b BEFORE real configuration. Concurrent independent payroll report PR2976 preserved.

Native SuperAdmin selected pilot-company / kat-store, confirmed existing KAT-32944 (0112e532-4761-44c5-ac51-c16e8cca7cb4), qty1/salePrice0.05. Two distinct confirmed bulk transactions only: 21 prepared-coffee rows, excluding raw capsule SKUs KAT-54013/54014, saved15:17:11.304711UTC audit3af11fb6-d36f-49c2-b5f1-bbe45125117e/requeste58d3012-8aff-43ee-a8b5-f0d599c07554; then36 ΡΟΦΗΜΑΤΑ/ΚΑΦΕΣ rows saved15:19:34.356708UTC auditc2301ee1-ff59-4fa4-a7e2-6b46573cde7b/request927e8045-8cba-4a61-bdda-c72df3a5b956. All unrelated fields kept Χωρίς αλλαγή; matching embedded preparation-fee removal explicitly confirmed. No direct SQL/API write.

Independent complete60-row before/after readback: exactly57 intended parents isSettrue with one relation to existing fee at1/0.05;36 matching embedded fees0.05→0. ZERO protected-field mismatches: base prices, VAT/departments, stock, active status (including7inactive), recipe/station/autoPrint/modifier settings retained. Fee and two excluded capsules unchanged. KAT1900stocks all0. Protected company-product hash53b1a8b0ba6c712f80546ef9856106e4, store-product hashc3d832bd0d4ee02300b4d9195397bc69 and recipe/modifier/control hashes unchanged across both writes. Other-store stock hash1aa55892daf1cfe4decd0231fa87f112 and other-company product hash1831c5d734af5524fe365487b7c732bd unchanged in the measured configuration window. Earlier independent other-store changes outside that fresh window are not claimed as isolated.

KAT199movements/165sales/180payments/213transactions and shift hash1c5be98dd701111a23549691064bd2de unchanged; no openKATshift. LAB/N40 controls unchanged. No checkout, order, preparation submission, fiscal/payment/stock/shift finalization. Actual reopened FREDDO ESPRESSO card → SET displays saved existing environmental fee qty1/0.05 and actor/time. Native bulk/POS LAB acceptance is already recorded; no test repeated for a photograph.

Evidence CHECKPOINTS/EVIDENCE/kat-coffee-fee-20261021/09-kat-before-batch1.json through 13-bulk-audit-receipts.json, kat-freddo-saved-fee.jpg and prior LAB evidence. Coffee configuration CLOSED with this bounded LIVE PASS; physical KAT fiscal checkout, mobile and wider POS readiness remain NOT TESTED. Cashier refreshes POS catalog, selects coffee and sees separate0.05 fee; example unchanged1.65+0.05=1.70. Existing import/zero-stock/13-worker PASS untouched. Separate0.50 mobile-top-up service and historical/large-stocktake follow-ups remain independently OPEN; do not reimport or reset stocks again.

21/10/2026 - CENTRAL-RECORDED-PAYROLL-EXPENSES-01 / SOURCE IMPLEMENTED / AWAITING NATIVE CI AND LAB

Retained central owner codex/central-four-streams-20261018, source branch codex/recorded-payroll-expenses-20261021. Before-source claim#2975/head220d0bef1800680b709fb7186ef4c167facf4c19 independently reviewed; applicable CI39620870173 SUCCESS, merged d6802a07a5db7f7527e90139b70309d81543402d before source. Exactly four claimed source/test paths implemented; existing router adds only an import and GET /recorded-payroll-expenses. Existing /api/reports INVENTORY auth/license mount and old sales endpoints unchanged. No UI/N10/payroll writer/index/schema/auth/module writer changes.

Implemented one RepeatableRead/READONLY snapshot with fixed timeout; OWNER/SUPER_ADMIN-only explicit active company/store, BASIC+PAYROLL via SELECT/pure resolver for OWNER. Signed nonreversed OTHER_EXPENSE ledger counted once by ended Athens occurredAt range. All matching source links counted before scope qualification; one APPROVED positive exact scope/amount/method/employee-company link attributes beneficiary, ambiguous/foreign/mismatched links expose no foreign payload and remain unattributed. No actor/name heuristic, accrual or standalone Workforce sum. Exact NUMERIC-text integer cents; same-query coverage/count with10000returned cap, overflow suppresses full/employee totals. settlementVerified:false and LINKED_ONLY limitations are explicit; this is not confirmed bank settlement or all payroll. Missing tables/columns fail503 with no bootstrap; existing outer authorization gate is not a serializable revocation guarantee.

Local Node20.20.2 focused48PASS/0FAIL/0SKIP, including16new injected service/projection tests and32protected sales/comparison/hourly/count regressions. New native PostgreSQL parent+7subcases and actual production HTTP fixture are implemented but NOT EXECUTED locally (no local PostgreSQL). Local

projections do not certify SQL/native/LAB. Root npm workspace install/Prisma client generation completed in an isolated clean worktree; dependency engine warning for unrelated nanoid6 was observed, no lock/dependency changes are included. Independent exact source/security review and required full PR/main CI/native execution remain prerequisites for merge. No feature/manual PASS or whole-task closure; NOT INSTALLED at source publication.

Protected sales/hourly/CSV#2883, supplier#2971 and all prior accepted transactions retained without replay. No production/LAB business/financial/stock/fiscal/shift/payroll/schema/SMTP/settings action. CashdispatchOFF; concrete integration proposal#2704comment6318978275 awaits retained owners. Broader margin/staffing/AI/native physical residuals stay with owners. Single next action: independent review/full native source CI, then ordinary merge/exact-main CI/guard/live revision verification; preserve and fix any new FAIL rather than bypass it. Backend technical acceptance remains separate from normal UI/roles/mobile/real-source feature acceptance. Evidence folder recorded-payroll-expenses-20261021, checkpoint2026-10-21-recorded-payroll-expenses.md; registries and regenerated scoped PDF synchronized.

21/10/2026 15:05 UTC — KAT coffee fee / LIMITED LAB PASS / REAL KAT CONFIGURATION OPEN

Retained owner ops/kat-catalog-import-20261020, source fix/kat-coffee-fee-set-20261020. This is the authoritative coffee status; older source/LAB sign-in entries below are historical. Source PR2970 and guarded LIVE a436c9981e1ffa72f9006b5964ab6a7dd2b8536e unchanged; completed full CI39485499295/exact-main39486804524 are not repeated. Concurrent recorded-payroll-expenses claim/source PR2975/2976 preserved; coffee runtime unchanged.

Actual Cloud Chrome LAB acceptance completed 21Oct14:54–15:05UTC using native SuperAdmin Inventory and LAB POS2 / MAIN shift a3494bb3-61cf-447c-9707-27311f35708c. Three synthetic zero-stock fixtures only: A666247ef-233c-4e72-8a25-7938a3783082 at1.65, B18bd6052-38e8-44e6-8152-74e7567afa89 at2.00, feeab5404f8-d481-426f-aaf6-974634e49066 at0.05. One confirmed native bulk transaction attached both parents qty1/price0.05 and cleared A's matching embedded preparation fee0.05→0; prep enabled/station LAB COFFEE/autoPrintfalse retained. Base prices, VAT/departments, activation and stock unchanged.

LIMITED LAB PASS: actual cart A1+fee1=1.70; A2+fee2=3.40; A2+B1+sharedfee3=5.45; removing A leaves B1+fee1=2.05; removing B empties cart0.00. Child quantity controls disabled. No checkout, preparation submission, payment, sale, stock posting or shift action. Financial/stock/control readbacks unchanged: LAB95movements/90sales/90payments/134transactions, MAIN cash/card/IRIS/total0 and drawer9.40. Existing LAB catalog hash90ba4be5db0402961e18b28541cf965e unchanged. KAT1900/199/165/180/213 and control store unchanged. Measurements bracket the cart sequence and the later individual actions; no separate DB sample exists between first add and qty increment, so per-action financial attribution for those two steps is NOT TESTED. No replay to fill that gap.

Evidence CHECKPOINTS/EVIDENCE/kat-coffee-fee-20261021/01-before.json through 08-pos-acceptance.json, bulk success and empty-cart screenshots. Inventory/POS manuals updated only for this measured scope. Mobile/physical fiscal checkout remain NOT TESTED; no overall POS readiness claim.

Remaining ASSIGNED: after this documentation PR green CI and merge, refresh exact real KAT candidate identities/controls, configure57 prepared coffees in normal selected-store bulk UI using existing KAT-32944 qty1/0.05, clear only matching embedded preparation fee, preserve7 inactive and exclude raw capsules KAT-54013/54014. Then independent full protected-field readback and real configuration receipt. Separate0.50 mobile top-up service remains OPEN; accepted import/stock/staff work is not repeated.

21/10/2026 - CENTRAL-RECORDED-PAYROLL-EXPENSES-01 / ASSIGNED BEFORE SOURCE

ASSIGNED central coordinator codex/central-four-streams-20261018, branch codex/recorded-payroll-expenses-20261021, #2706/#2527. Baseline06163dd698bd1eb8699d09bea00a2169da041ae2. Exact four source/test paths only: existing server/src/routes/kiosk-reports-sales-v4.js (central transfer#2725, checkpoint2026-10-18-central-four-streams.md), NEW server/src/services/recorded-payroll-expense-report.js, NEW server/test/recorded-payroll-expense-report.test.js, NEW server/test/recorded-payroll-expense-report-postgres.test.js. Green merge of this claim is required BEFORE source edits. Existing N10 September reconciliation/workforce writers/payroll periods, UI, schema, index.js/api.js, auth/module writers, all other owners and accepted PASS remain unchanged.

Bounded integrated backend increment: additive GET /api/reports/recorded-payroll-expenses on existing INVENTORY-authenticated mount. OWNER/SUPER_ADMIN only, explicit current-company and active selected store, STORE_OPERATOR denied. OWNER additionally requires BASIC and PAYROLL personnel packages via SELECT and pure existing resolver, never bootstrap helpers. Explicit ended Europe/Athens dates, maximum366days, same RepeatableRead/READONLY snapshot for scope/entitlement/ledger/link/coverage. Nonreversed signed StoreTransaction OTHER_EXPENSE rows by occurredAt; no invented status column or paymentDate timezone filter. Count ledger once, do not add Workforce payment a second time. Stable beneficiary only when exactlyone sourceTypeSTORE_TRANSACTION/sourceId link agrees in scope/amount/method/APPROVED and employeecompany; otherwise unattributed with reason. Actor/name/description never beneficiary. Standalone Workforce payments/accrual excluded, coverage LINKED_ONLY, settlementVerified:false; recorded expenses are not certified paid wages or bank settlement. POS payroll lacking an explicit WEP link remains unattributed. Checked integer cents, bounded10000returned rows and same-snapshot overflow; incomplete coverage suppresses complete totals. No financial/source/config writes or DDL, no transport/assistant/UI activation.

Independent before-source review clarifications: count ALL sourceType/sourceId links before qualification, so foreign/duplicate links cannot be hidden by a scoped join; expose only generic review reasons, never foreign payload. Attribution requires strictly positive matching ledger/WEP integer cents, while signed refunds remain in ledger/unattributed. Module rows must match selected-store schema ownership and duplicates fail closed. Existing outer license gate is preserved; this snapshot is not a serializable revocation guarantee. No new licensing policy is invented.

Status NOT TESTED. Required new isolated unit/nativePostgreSQL/actualHTTP cases: scope/roles/packages/active stores, Athens DST/ended ranges, signed refunds/reversals/exactboundaries, valid/duplicate/foreign/mismatched/unapproved links, stable beneficiary vs actor, count-once, missing schemas without writes, cap/completeness and unchanged control fingerprints. Native cases must actually execute in full source CI. Full PR/main CI/review/ordinary exactrelease before any new real acceptance; backend integration is not UI/LAB/full payroll or staffing PASS. Existing sales/hourly/CSV#2883 and supplier#2971 protected, no replay. Cash dispatch OFF; proposed production contract#2704 comment6318978275 awaits retained-owner agreement, no source takeover.

Checkpoint CHECKPOINTS/CHANGES/2026-10-21-recorded-payroll-expenses.md. Central owner retains this bounded subtask until completion or named handoff. Single next action after green merged claim: implement exact four paths in isolation and require native/full CI. All broader four-stream residuals remain OPEN.

20/10/2026 21:29 UTC — KAT coffee fee / CODE LIVE / BLOCKED ON LAB POS SIGN-IN

Retained owner ops/kat-catalog-import-20261020, source branch fix/kat-coffee-fee-set-20261020. No receiving page is assigned and this scope is not released. Resume this work, without repeating completed CI, import, stocktake or staff onboarding.

Source PR #2970 final head 78aa48359abf05a327029ac9c0554e7a5df604d7, full CI 39485499295 SUCCESS: 3708 PASS / 0 FAIL / 0 SKIP, plus 8 backup-monitor tests; actual isolated PostgreSQL SET transaction test passed. Initial CI 39484283507 failed only because test evidence serialized a BigInt count; fixed by integer casts before the green final head. Merge 487711f165616cb98dbc702ea05c79b1685c64fd, exact-main CI 39486804524 SUCCESS with the same counts and Windows, build, Chromium, production invariants and HTTP E2E checks. Ordinary guarded deployment 39488419559 SUCCESS; Render dep-dbbsho8ae00c73a2lprg LIVE and independent health confirmed exact 487711f at 20:06 UTC. No manual deployment or safeguard bypass. At 21:29 UTC newer Render dep-dbbsrho473hc73cduhd0 is LIVE, health revision a436c9981e1ffa72f9006b5964ab6a7dd2b8536e; GitHub comparison confirms it contains the coffee release and changes none of its production or test files.

NOT TESTED: new business-flow LAB acceptance and real KAT fee configuration. No synthetic product, SET link, preparation setting, sale, payment, stock or shift action was executed for this task. Read-only candidate review found 59 rows in the prepared-coffee categories; exclude raw capsules KAT-54013 and KAT-54014 (prices 0 and 0.01). Intended selection is 57 prepared coffees, including 7 already inactive that must stay inactive. Existing fee KAT-32944 remains EUR 0.05, quantity one per coffee, base coffee price unchanged. Modern coffees' identical embedded preparation fee must be cleared in the same confirmed bulk transaction to avoid double charging. Other drinks, packaged coffee, ingredients, VAT/department, prices, activation, stocks and all other stores remain protected.

Actual Cloud Chrome LAB Store Mode showed the ordinary sign-in screen, selected synthetic operator LAB POS 2, PIN/card methods, disabled submit and no active operator session. The secure browser-auth request was interrupted by the user. Fresh visible observation afterward still shows the sign-in screen. No credentials were read, reconstructed, reset or created; do not retry authentication without the user's renewed request. This is an access blocker, not a functional LAB FAIL or PASS.

At 20:06 UTC the read-only pre-action baseline was LAB 102 catalog / 95 stock movements / 90 sales / 90 payments / 134 transactions; MAIN opening drawer9.40, cash/card/expenses0. KAT1900 catalog / 199 movements / 165 sales / 180 payments / 213 transactions. No following business action occurred. These measurements are now stale: refresh and record a new baseline before any future state-changing action.

Single next action: complete the normal LAB POS sign-in through secure browser authentication or user control when the user requests continuation. Then create a bounded synthetic pair of coffees and fee through native LAB UI, measure confirmed bulk SET attachment and matching embedded-fee removal, test actual POS add/quantity/shared-fee/removal/clear without checkout, and publish the five-file LAB acceptance before any real KAT configuration. Then normal KAT bulk UI applies the reviewed 57 identities in two batches, preserving all protected fields, followed by independent readback and the five-file real configuration receipt. No production SQL write, seed, migration, credential change, payment or stock finalization is authorized as a shortcut. Separate EUR0.50 mobile top-up service remains OPEN. Existing completed import/zero-stock/13-worker PASS remains unchanged.

20/10/2026 20:30Z — VIDEO0.1.9 LIVE / TECHNICAL RELEASE VERIFIED / PHYSICAL BATCH OPEN

Authoritative native status; supersedes older native AWAITING CI/BUILD/RELEASE and abandoned proxy-output candidate entries below. Owner feat/android-chat-native-20261017 retained, no handoff or N16/PWA/AI scope takeover. Owner-approved video implementation and technical distribution are complete. This is NOT a physical video USER/LAB PASS, overall Android PASS or iOS completion. Existing reported Android voice send and PC playback USER PASS20:49/20:51 and photo/auth/push/store/screenshot-block limited PASS remain protected; no accepted test replayed for documentation.

SourcePR2961 merged8eaa3db; source head307acc6c CI39481379036 3691+8PASS and Android39481379059 compile/unit/lint, actual playable camera capture probe and all35instrumentation PASS. Stable signing preflight/setup correctionPR2967 mergeda52b72a after full39483568802 and exact-main39484847264 SUCCESS. First stable dispatch correctly refused newer docs-only SKIPPED main5e16907 before key; forced exact-source full39486049433 SUCCESS then signed run39485822858 attempt2 SUCCESS, actual camera+all35 tests before key. No guard bypass, new key, secret/config/DB

change or private signing material inspected.

Independently verified0.1.9-preview/code10, package gr.myworkstation.chat.preview; stable owner cert17c4d56123c6015a58343faba73d26a8b7d085a1baff7e680500767ae084ea97 MATCH; APKv2 RSA and content digest VERIFIED. Artifact12294537237 only APK+receipt, APK3687252bytes/SHA256ce5c07cd446f649e33f767b3075f22c2d99bf182ffbf1804c77fdd77874fb7c2. APK source5e16907a0cbc989c3b43a484970c660423774002 has identical Android tree34b56cdadd708ff0bd3dea0007d11175fcee3547 on released main. Foreign coffee/POS source and all other owners preserved.

DistributionPR2972 mergeda436c9981e1ffa72f9006b5964ab6a7dd2b8536e after fullCI39488932927 SUCCESS3708PASS/0FAIL+8backupPASS. Exact-main fullCI39490203679 same3708+8 SUCCESS; ordinary guarded deploy39491414896 SUCCESS, Renderdep-dbbsrho473hc73cduhd0 LIVE20:26:46Z and independent public health exacta436c998. Public manifest0.1.9/code10 and downloaded APK byte-for-byte equal signed artifact; no private key files. Public page visibly shows0.1.9/3.5MB. Existing0.1.8/0.1.3 retained. Installation URL/unchanged QR: https://myworkstation-app.onrender.com/downloads/chat-android/ and CHECKPOINTS/EVIDENCE/native-stable-signing-20261020/install-qr.png. Same signer/code increment supports update over0.1.8; actual phone update remains NOT TESTED. No uninstall of POS.

Current video scope: explicit foreground camera/gallery, preview/use/cancel, then ordinary Send, GENERAL-only bounded server endpoint and explicit PC/native playback. MP4 H264/AAC <=30seconds/12MiB. Camera uses anonymous public Os.memfd_create RAM descriptor on Android11+, no app-created media pathname/cache/MediaStore. Android8–10 support existing MP4 gallery only. Server validates structure/track/sample ranges and tenant/store/settings before atomic message+metadata audit and generic post-commit push. Session/store/background/logout fences and bounded web streaming/blob revocation retained. Old photo/PDF/voice endpoints/renderer preserved. Existing selected gallery original stays under user/provider control; no zero OS/SDK/forensic trace promise. No real agent messages, pushes, read acknowledgments, business/stock/financial/fiscal/production settings operations.

Evidence: CHECKPOINTS/EVIDENCE/native-video-20261020/artifact-verification.json,release-verification.jso n,public-download.jpg; checkpoint CHECKPOINTS/CHANGES/2026-10-20-native-chat-video.md. Central tracker/pending/final-batch/PDF synchronized by this consolidated technical receipt. No CI-only video entry in docs/manual; actual acceptance is still pending.

Remaining: one final physical Android batch (model/OS/store/time, same-signer update, new camera+gallery video explicit Send and correct-store PC playback; ready replies and still-unmeasured session/privacy/device residuals per final-batch plan). Hardware/forensic behavior and broader devices NOT TESTED. Do not repeat accepted voice/photos/push only for documentation. Single next action after this receipt green merge: final physical batch when owner is ready, record actual results and update manual only for real PASS. Owner retained until explicit named handoff; iOS LAST.

20/10/2026 - KAT coffee environmental fee / SOURCE READY / AWAITING CI AND LAB

Owner ops/kat-catalog-import-20261020, branch fix/kat-coffee-fee-set-20261020. Claim PR #2966, head d01eef752368be8c6896d83a6943068a78ab360f, docs CI 39481409332 SUCCESS, merged 783abc04ca645aa851dc8de1292b33aaa6135e39 before source edits. Owner-approved amount: unchanged coffee base price plus one separate existing fee product at EUR 0.05 per unit (1.65 + 0.05 = 1.70).

Source now adds proportional SET cart quantity/removal with shared actual child product IDs, preserves standalone surplus and blocks inconsistent restored drafts instead of guessing charges. Existing checkout/hold identities, preparation modifiers and ordinary cart behavior retained. Existing selected-store bulk-card transaction gains an explicit confirmed SET link, same-company/store validation, stale-price and cross-store parent rejection, UUID idempotency and full audit. Optional clearing removes only the matching embedded preparation fee to avoid double charging. No coffee base price, VAT, department, stock, recipe, activation, auth, schema or financial-finalization change. Mobile waiter retains its existing POS-only restriction for fee-bearing coffee after conversion to SET.

Local focused suite: 29 tests, 27 PASS, 0 FAIL, 2 PostgreSQL-only SKIP (no local database); final mounted UI suite after mobile guard: 3 PASS, 0 FAIL, 0 SKIP. Actual Inventory/POS components exercised, including two rapid scans in one React batch, shared fee, quantity/removal, confirmation, selection/store reset and blocked mobile SET submission. Final Node 20 frontend build PASS, TABLE_SERVICE bundle verified. Added isolated PostgreSQL transaction test must run in full CI; local skip is not a database PASS. Evidence: CHECKPOINTS/EVIDENCE/kat-coffee-fee-20261020/local-validation.json.

AWAITING full CI, guarded exact LIVE revision, fresh bounded synthetic LAB measurements and published five-file LAB acceptance before real KAT configuration. No new LAB or real-store PASS claimed. No real KAT fee configuration written. Final explicit prepared-coffee identities must be reviewed before normal bulk UI apply; inactive products remain inactive. Other owners and all completed import/stock/staff work preserved. Separate EUR 0.50 mobile top-up service remains OPEN.

20/10/2026 - KAT COFFEE ENVIRONMENTAL FEE / ASSIGNED BEFORE SOURCE / NOT TESTED

RetainedKATowner ops/kat-catalog-import-20261020, newindependentbranch fix/kat-coffee-fee-set-20261020. Ownerexplicitlyconfirms everypreparedcoffee adds one separateexisting environmentalfeeSKU at0.05EUR, baseprice unchanged:1.65+0.05=1.70. No inferredlegalrate or blanketpackagedcoffeecharge. silentlegacymerge. REAL13onboarding remains OPEN under sameowner, then independent fullsource/beforeafter acceptance and samefivefilefinalreceipt. Mobiletopup0.50SET/largebulkstockreliability/historicalrecipebackfillcutoff stayseparateOPEN. No repeat ofacceptedbusinessoperations.

20/10/2026 20:26 Europe/Athens - KAT HISTORICAL RECIPE BACKFILL / ZERO RESTORED / SCOPED LIVE PASS

Retained KAT owner. The earlier1900zero result remains an exact completed observation. Subsequent native release startup at17:12:14UTC posted one ONLINE_ORDER_RECIPE consumption-18 to newly imported KAT-44334 for order a903a505-6d82-4db3-a536-2f6e944c4c50, created20Aug18:23UTC/sale18:40UTC, not a new sale. The standing explicit all-KAT-zero instruction applies to this later historical difference. Preserved the recipe movement and original order/sale; no online order change. Separate native FREE stocktake1d984157-4249-42e0-81be-048dd61274c4, exact one line expected-18/count0, ONE finalization, creates exactly one KAT STOCKTAKE_ADJUSTMENT+18. Full independent readback1900stocks/0nonzero/sum0. AllKAT product/stock metadata/departments/sales/payments/shifts/transactions and allpreviousKAT movements hashes unchanged. Other-store aggregate changed during three independently observed SALE movements totalling-3; do not claim aggregate isolation. This stocktake's own movement scope is exactly one KAT adjustment, and those independent sales were not changed. No accepted business transaction replayed. Historical backfill catalogue/stocktake cutoff reliability remains a separate OPEN follow-up; no source fix claimed by this operational restoration.

Evidence CHECKPOINTS/EVIDENCE/kat-staff-onboarding-20261020/stock-repair-*.json. Native SuperAdmin, no openKATshift. Claim/source worker onboarding remains independent and OPEN: source PR2957 head6616204ab167f9a856fc07ccae8f152ec8371cbd fullCI39464942452 SUCCESS3676PASS/0FAIL/0SKIP plus8HTTP and actualwholesale; source unchanged while merging newer native-chat docs. No real worker created yet, no salary amount invented, no manual deploy or guard bypass. Allother owners preserved.

20/10/2026 20:15 Europe/Athens - KAT STAFF / PENDING REMUNERATION SOURCE / AWAITING CI + LAB

Retained independent owner ops/kat-staff-onboarding-20261020, claim PR2956 final9d8878a7e1b383633f26d326685e40ab5f5fdaf1/docsCI39463018579 SUCCESS, mergedc2d69522cbbcf4e7b2dc800b4e140c28048bd385 before source edits. Eight bounded files implement explicit UNSET pay without schema changes: validation permits only absent monetary values and keeps every configured positive-pay requirement; employee editor/preview/list displays pending, no invented0; existing configured pay cannot be erased to pending, including concurrent UNSET update protection. Payroll read-only preview shows unknown aggregate and pending count; period creation/recalculation/payment/closing refuses explicit pending employees before financial writes. Existing pay types/tenant/module/role/confirmation/audit/card behavior retained. No wage, labour-law or legacy-person identity inference.

Node20.20.2 focused real validation/payroll/PIN/migration/UI guard tests30PASS/0FAIL. Node20 frontend build PASS, including TABLE_SERVICE bundle invariant. Initial local attempts lacked sparse-checkout assets; restoring the checkout resolved them without unrelated source changes. Full source CI/native/invariant checks required before ordinary guarded release, then separate new synthetic LAB pending-pay profile acceptance with fresh controls. No real KAT worker created yet; all13 source workers confirmed KAT/cashier, own contracthours15–40retained; missing wages and shiftavailability remain unspecified. No credential/card, payment/payroll period, stock/fiscal/shift action. Existing3Workforce and23legacy records preserved. Personal source names/tax/AMKA must not enter repository evidence. Actual LAB and real13 acceptance remain OPEN. Later mobile-card0.50SET and large inventory bulk reliability remain separate.

20/10/2026 20:08 Europe/Athens - KAT STAFF ONBOARDING / ASSIGNED / NOT TESTED

ASSIGNED ops/kat-staff-onboarding-20261020, independent bounded extension of retained KAT setup owner. Explicit owner: all13employees from provided Excel belong to KAT, all cashier; remuneration unknown. No invented wage or pay basis, no payments/PIN/card/permission grants or unrelated employee deletion. Current normal Workforce UI requires positive remuneration and cannot save unknown pay, observed NOT TESTED for requested onboarding; three existing Workforce profiles and23legacy employee rows remain protected. Existing N10payroll reconciliation, central staffing analytics and Workforce/card owners retain their scopes.

New bounded source scope: allow explicit UNSET remuneration in employee validation and UI, display pending rather than zero; prevent creation/recalculation/finalization of payroll containing unresolved remuneration. No schema/migration/seed/direct production SQL write. Preserve strict positive amounts for all configured pay types, tenant/module/role checks, preview+confirmed audit saves and all existing employee/card workflows. Relevant protected manual docs/manual/workforce/PASS.md and historical Workforce checkpoints read; latestmain history reviewed. Actual expanded acceptance will use one separate synthetic LAB employee before real13normal UI creates, complete fresh baseline/readback, no repeated prior financial/shift/stock transaction. Record sourceCI/guarded revision, bounded LAB receipt before KAT use, then actual13source identity/weeklyhours/store/role/pendingpay and unaffected controls. Source package IDs, AFM and AMKA will not be committed to repository or logged.

13owner source rows and target KAT confirmed. Existing workforce3, legacy23; no target full-name exact Workforce match. Name-only legacy nickname reconciliation is NOT verified and will not silently rename or delete historical employee identities. Later linking of cards/PIN and missing remuneration remains separate; owner approvals persist. Read-only source Excel and current UI only so far. Before source editing publish this claim with green CI+merge. Branch fix/kat-staff-pending-pay-20261020; final evidence/receipt updates will synchronize checkpoint, active list, manual, pending roadmap and PDF.

20/10/2026 19:41 Europe/Athens - KAT STOCK ZERO / REAL OPERATION PASS

Explicit new owner instruction after completed catalogue import: zero ALL KAT stocks, including preserved pre-existing items. Executed through normal Cloud Super Admin Inventory2.0 in pilot-company/kat-store; no direct SQL writes. LIVE d8142d55c376574f6a0b6ab35b611a2dc3bdcc97. Before:1900store rows,23nonzero,quantitysum20; all23nonzero rows active, all34inactive rows already0. Fresh controls saved before draft creation, targeted count and finalization. New single FREE stocktake066a1fa2-ac14-47c6-9b10-f7ab2421e323 named Μηδενισμός όλων των αποθεμάτων KAT 20/10/2026, reason explicit owner instruction, no open shift.

Operational PASS: same draft counted exactly23nonzero products at0 through native bulk count, then ONE finalization. Stocktake FINALIZED;23count events and23STOCKTAKE_ADJUSTMENT movements, each exact negative of its product's fresh pre-action stock, aggregate delta-20. Full independent DB readback:1900/1900stocks exactly0, no positive/negative balance, zero mismatches. AllProduct whole rows, allStoreProduct metadata exceptquantity/update time, allother-storeStock, all10department rows,165sales/180payments/44shifts/213transactions and all174previous movements have EXACT unchanged hashes. No price/VAT/category/barcode/active/recipe/online field change and no history deletion. Native audit keeps the reversal quantities and cause. Do not repeat finalization.

Bounded failure retained: initial native bulk count of1866active rows returned internal error, with0persisted counts/events and no stock change. UI rendering of the full list also caused browser timeouts. Independent readback established rollback before selecting only23necessary rows in the SAME draft. The smaller native operation succeeded. Root cause/large-batch implementation fix NOT TESTED and remains a separate OPEN reliability follow-up; this operation PASS does not claim full-list bulk reliability. No completed LAB test replayed or broad source change made.

Evidence CHECKPOINTS/EVIDENCE/kat-catalog-import-20261020/zero-before.json,zero-before-targeted.json ,zero-final-before.json,zero-after.json,zero-movements.json,zero-verification.json,zero-stock.jpg. Retained

owner ops/kat-catalog-import-20261020. Prior1766catalogue import PASS remains; its stock-preservation observation describes that earlier operation and is superseded only for quantities by this explicit subsequent zero instruction. Later0.50EUR mobile-card service SET remains OPEN.

20/10/2026 19:14 Europe/Athens - KAT-CATALOG-IMPORT-01 / REAL KAT IMPORT PASS

Owner ops/kat-catalog-import-20261020 completed the authorized real catalogue import in company pilot-company/store kat-store through normal Cloud Super Admin UI. Exact LIVE d8142d55c376574f6a0b6ab35b611a2dc3bdcc97 (Render dep-dbbn2pss728c7390ij50), source PR2929 merged027e769c4faf68a45630f5738bc3dacf75d48f9a, fullCI39430092282/39431253948/39432574573 and guarded deploy39433587658 SUCCESS. The new bounded LAB receipt was published with green docsCI39454582169 and PR2950 mergedc52fb74ba33320a9a25fe78553d4747ab6346b58 before the real final action. No accepted prior test replayed.

Actual real-store preview:1766total/1753CREATE/13UPDATE/0INVALID. ONE final import click. Persisted independent full source comparison PASS with zero mismatches:1766unique KAT SKUs,1981exact text scan aliases,28categories/113subcategory pairs,1765PIECE+1KG (KAT-54554 fruit salad retail3.50), source retail/cost/staff price/discounts/min stock/VAT rate/exact fiscal tuple/category/subcategory/brand/supplier links and codes. All13 existing product IDs retained; existing stock and all non-imported recipe/online fields retained. All new stocks0 as agreed. Four deliberately inactive legacy coffee rows remain inactive:KAT-21880,KAT-21881,KAT-33039,KAT-38553. All15zeroVAT items remain vatVerifiedfalse, with no guessed exemption.

Company155→1908Product; selected store143→1900StoreProduct, reflecting1753new products plus4previously unlinked legacy rows now linked inactive. The pre-existing142unaffectedProduct and134unaffectedStoreProduct whole-row hashes are EXACTLY unchanged. All10whole fiscal departments and165Sale/180Payment/174StockMovement/44CashShiftSession/213StoreTransaction hashes exactly unchanged. No open shift, sale/payment/fiscal/stock posting or destructive reset. Other owners/data preserved. The store total includes preserved pre-existing items and is intentionally greater than the1766source catalogue.

Approved technical workbook KAT_Import_1766_20261020.xlsx canonical version2,627827bytes,SHA256a300168a90e60899a290cf4d46720fa73f017107eaa22fd690955d6f0e30d88c. Refresh changed only13current identity fingerprints and appended active-state control; all84768original source cells unchanged, all prior source/control cells preserved. Four fingerprint changes were traced to normal startup legacy-coffee cleanup, with no business-value change. DO NOT reimport this consumed identity manifest or refresh fingerprints blindly now that SKUs have changed.

Evidence: CHECKPOINTS/EVIDENCE/kat-catalog-import-20261020/real-final-before.json,real-after-controls.json,real-readback-*.json,real-verification.json,real-import.jpg. Full original source preserved in the approved workbook. Real import is CLOSED/PASS. Later automatic0.50EUR mobile-card service SET remains OPEN and is not claimed by this import PASS. Physical store PC/scanner/fiscal-device acceptance and online activation of newly imported items are not claimed. No product-price/VAT rewrite or existing recipe/modifier replacement was authorized by this completion.

20/10/2026 18:07 Europe/Athens - KAT-CATALOG-IMPORT-01 / NEW KAT PROFILE LAB PASS / REAL IMPORT PENDING

Retained owner ops/kat-catalog-import-20261020. Unit correction PR2929 final335785321af2c8d76c3dc0a7eafb1deadb847d21 wholeCI39430092282 SUCCESS, merged027e769c4faf68a45630f5738bc3dacf75d48f9a; exact mainCI39431253948 SUCCESS. Healthy containing LIVE d8142d55c376574f6a0b6ab35b611a2dc3bdcc97 fullCI39432574573/guarded deployment39433587658 SUCCESS; four owned source/test blobs verified exact. No manual deployment or guard bypass.

NEW BOUNDED LAB PASS: normal Cloud SuperAdmin company cmtpopbgk000prhb5qc60zxus/store cmtpopbgo000trhb5ng9ytiru, three-row explicit KAT profile actual

preview3total/2CREATE/1UPDATE/0INVALID and ONE final import. Readback confirms KAT-2026102001 KG/cost1.123456/retail3.50; KAT-2026102002 PIECE/retail2.25/cost0.7155 retains existing42478bb7-3b17-4540-9efc-dd42bf093f5a and stock0 with two leading-zero scan aliases; KAT-2026102003 retail10/cost9/0percent/vatVerifiedfalse. All four exact text aliases preserved; all source stocks0 and stock overwrite OFF. All original99 Product and StoreProduct whole-row hashes unchanged; all90Sale/Payment/95StockMovement/CashShiftSession/StoreTransaction hashes and17whole department rows unchanged. MAIN/LAB POS2 shift stays cash9.40/card0/IRIS0/total0/transactions0; no sale/payment/fiscal/shift/stock posting. Native negative-stock/recipe/rollback/concurrency proof remains CI evidence, not a repeated hosted action.

Preparation: seven missing KAT fiscal tuples added one normal UI save each, retaining all10 old whole rows;17total. Fresh before/after controls for each save confirm99products/99stock and financial records unchanged. One separately measured new synthetic seed created, then updated in the actual profile test; no old accepted DAILY/Diadochou/online/backup test replayed. Evidence CHECKPOINTS/EVIDENCE/kat-catalog-import-20261020/lab-*.json, lab-preparation.md and synthetic KAT_LAB_Profile_20261020.xlsx. Checkpoint CHECKPOINTS/CHANGES/2026-10-20-kat-profile-lab-pass.md and inventory manual.

REAL KAT1766 final import remains NOT TESTED/OPEN, owner retained. Next: refresh only13 scoped current existing fingerprints after release while preserving inactive legacy coffee states; all48 original cells/retail/VAT/units remain unchanged. Actual KAT preview must show1766valid/1753CREATE/13UPDATE, stock overwrite OFF, then one successful atomic import and complete independent source/stock/department/alias/category/supplier readback. Do not reset/delete KAT data or replace existing recipes/modifiers. Later0.50mobile-card service SET remains after import; physical fiscal readiness is not covered by this LAB PASS. All other owners retained.

20/10/2026 15:37 Europe/Athens - POS-PAYMENT-MINIMIZE-01 / SOURCE LIVE / AWAITING USER VISUAL ACCEPTANCE / RETAINED OWNER

Same retained owner fix/pos-payment-minimize-20261020. User screenshot image(20261020-121526).png at15:15 shows original minimized payment pill still covering checkout/total in Diadoxou, operator ΑΝΤΡΕΑΣ ΑΧΤΥΠΗΣ; physical client SHA not exposed. It confirms the previously undelivered placement symptom, not a failure of the separate released shift-list correction. ClaimPR2923/merge86c627cd728a823c75bcdf9bde7549da98d92198 preceded source. PR2924 resumed after wholesale owner resolved shared test readiness via2927; current main b7eba557d081468cf8e2372080a0d9402aa9174a preserved. Bootstrap unchanged since claim; final runtime differs only ensurePill placement, ignoring trailing newline. Sourcehead d6348cd14d5b2479020780701ffdaf45e59b1c36 merged5a540e36ffbd497c2cf33acdc7f53a8e866ee355.

Exact PR CI39421139311/core118622303202 SUCCESS:3639PASS/0FAIL/0SKIP plus8PASS/0FAIL/0SKIP; all five jobs green. All3 placement tests unskipped, including isolated Chromium geometry and elementFromPoint for cash/card/total, visible scanner space, same unsaved83.17 field identity and delayed result after restore, zero requests. Exact main CI39421981924/core118625239219 SUCCESS with the same3639PASS/0FAIL/0SKIP plus8PASS/0FAIL/0SKIP; all five jobs green and placement Chromium test unskipped.

Restore control now mounts in existing POS product-search row with normal layout flow (36px height, bounded45% width), away from bottom checkout. Non-POS fallback top20px. Existing mounted payment draft/files/background result and all handlers preserved. No StorePosPanel/scanner/modal lifecycle/form, payment payload, permission/auth, server/schema/fiscal or other owner scope change. No real or LAB sale/payment/upload/finalization/replay or business write. Before release independent public health was c417d58d2751792ec3ec491f25c53581330adb61; served /assets/main-BwCJySKy.js still contained fixed bottom20px body-mounted restore. This server-side observation is separate from physical client SHA.

Ordinary guarded deploy39423044698/job118628641755 SUCCESS; Render dep-dbblv4ou01pc73e80geg LIVE at2026-10-20T12:36:41.776342Z on exactmerge5a540e36ffbd497c2cf33acdc7f53a8e866ee355. Independent public health at15:37:17 Europe/Athens ok=true/version0.22.0+kat-test-pos/exactrevision.

Fresh public index serves /assets/main-BDGPnuLl.js; fetched compiled ensurePill confirms existing POS search host, static flex placement, top fallback and absence of old bottom placement in this function. No manual trigger, bypass, migration or restart. Served-source verification is not physical/user visual acceptance.

Actual authenticated hosted/physical minimize/restore acceptance remains NOT TESTED; automated Chromium is not LAB/LIVE/USER PASS. No manual PASS or whole numbered Gate closure. Scanner works per authoritative user clarification; prior inaccurate scanner-block hypothesis remains superseded. Separate POS-SHIFT-LOAD-01 and every other owner/previous accepted invariant preserved. Single next action: user first finishes/saves current unsaved payment work, then Ctrl+F5 in same POS; during next ordinary minimize, verify restore appears beside search and total/cash/card remain exposed, then restore same draft. Do not create or resubmit a payment for proof. Retain this bounded owner until actual visual acceptance or named handoff. Checkpoint/active/tracker/pending/evidence/trackerPDF synchronized; manual unchanged because only technical release has been verified.

20/10/2026 15:17 Europe/Athens - POS-PAYMENT-MINIMIZE-01 / RESUMED SAME OWNER / NEW USER SCREENSHOT / AWAITING FRESH CI AND RELEASE

Same retained owner fix/pos-payment-minimize-20261020 resumes existing PR2924; claimPR2923 already merged before source. User screenshot image(20261020-121526).png at15:15 confirms original bottom-right restore pill still covers total/payment controls in Diadoxou/ΑΝΤΡΕΑΣ ΑΧΤΥΠΗΣ. This is the separate NOT RELEASED placement fix, not evidence of failure of deployed POS-SHIFT-LOAD-01. Scanner works per authoritative earlier clarification. No new transaction or financial test requested.

Fresh main b7eba557d081468cf8e2372080a0d9402aa9174a, full relevant registers/manual/checkpoint and history since claim reviewed. Shared wholesale blocker resolved by owner PR2927; later exact full green shift PR/main CI39386081747/39387000777 and healthyd35a772 are independent proof it is no longer a reason to hold this scope. Bootstrap byte-identical to claimed main; existing reviewed source differs only ensurePill placement (ignoring final newline), tests unchanged. Reconcile current main preserving every concurrent runtime/record including myDATA/voice/cash-payload/shift. Existing sourcehead ea6d5d4505d1d97763cd224ec4a89b68c9465a61 plus current main parents; no additional behavior changes. Restore moves to normal POS search-row flow, existing draft/files/background handlers remain mounted, nonPOS fallback top20px. No scanner/StorePosPanel/form/auth/permissions/financial/fiscal change.

Prior core CI3614PASS/0FAIL/0SKIP+8 and all3 placement tests including isolated Chromium passed; full fresh PR/main CI, normal guarded exacthealthy release and user/authenticated nonfinancial screen acceptance remain required. AWAITING LAB, not fixed/live yet. Same owner retained, all other owners protected; no manual PASS or whole Gate closure. No payment/sale/upload/finalization replay or business data write. Next: fresh full CI → merge/exactmainCI → normal guard/exacthealth → user placement acceptance. Checkpoint CHECKPOINTS/CHANGES/2026-10-20-pos-payment-minimize.md.

20/10/2026 14:44 Europe/Athens — POS-MYDATA-UNLINKED-01 / TECHNICAL RELEASE VERIFIED / USER FIRST RECEIPT OPEN

Retained owner fix/pos-mydata-unlinked-20261020 after the explicit limited transfer from codex/invoice-second-draft-20261016. Engineering implementation/release is complete. Historical pairs, credits, broader09/Gate3 and all other owners remain unchanged. ClaimPR2936/head18949910 merged8ba74c91 with applicable green CI before source.

Final source PR2937/head ec5c75d6552aee81e34934041b62bcfe16a6bfe9 merged2dc9c8829578d388272f0a2cfd330a32ee4921a0. Exact PR39414585294/job118600770787 and exact main39415424714/job118603418604 SUCCESS: each3622PASS/0FAIL/0SKIP plus8PASS/0FAIL/0SKIP, all five jobs including native PostgreSQL, Windows, actual browser/build/invariants and isolated real HTTP/wholesale. Main tree5f972c12571a7148bac06326d17c41efd32b6256 is identical to the reviewed final source tree. Initial source7f14b8fe/CI39413918330 was superseded/cancelled during pre-merge multi-page

review; no failed guard was weakened or deployed. Final local3364PASS/0FAIL/193infrastructureSKIP, focused23/0/7 and frontend build; native cases actually ran unskipped in both final full CIs.

Ordinary guarded deployment39416366291/job118606322556 SUCCESS; exact healthy revision2dc9c8829578d388272f0a2cfd330a32ee4921a0 observed by its guard at14:42:36Athens and independently in Cloud Chrome at14:43-14:44. Fresh canonical PlatformAdmin document loaded new bootstrap main-BwCJySKy.js (previous main-CWYLBajZ.js); exact public /api/health showed oktrue/version0.22.0+kat-test-pos/2dc9c882. Native credential-observation protection was handled through its documented existing-tab canonical navigation and positive signed-in observation; no credential/cookie/session inspection or workaround. No manual Render deploy, migration, SQL repair, supplier payment/upload/replay/approval/stock/fiscal/shift action submitted by this page.

Common source supports explicit original-number review for an untouched unlinked myDATA header, then a fresh exact header/MARK check before the existing once-only POS payment. Canonical full series and numeric identity, verified supplier/recipient company VAT, issue date/type/EUR amount, no prior/tombstoned/received/competing purchase, and canonical/padded payment guards remain. The normal store-locked durable draft transaction binds the original, primary job and all photo references to one draft. Additional photo jobs remain unclaimed until the established multi-page intake, whose actual guard is exercised by the new native test; its protection was not relaxed. Provider original, existing payment and stock are retained. No amount-only or Greek/Latin automatic identity substitution. Photo reading proceeds through the existing durable worker without a Backoffice refresh.

This is TECHNICAL RELEASE VERIFIED, not a real financial LAB/USER PASS. The actual reported first payment and product reading were not submitted here; private real identifiers/values are omitted. A scoped read-only supplier view still showed no payment at the latest pre-release check, but this is not independent ledger/control reconciliation. No whole Gate3/09, physical terminal/mobile/all-role or all-store functional PASS is claimed.

Single remaining action: the authorized real operator refreshes the POS with an empty cart, reviews the actual original/canonical identity and deliberately records the already handed-over cash once in its still-open original till. Then inspect one payment, one editable linked draft and all source pages/reader result. Do not replay an already accepted payment or post stock for evidence. Existing-money discovery must reuse/hold, not charge twice. Any measured financial/stock/control acceptance needs its own fresh before/after evidence. Owner retained until that legitimate USER acceptance or named handoff; do not redevelop the delivered source. Checkpoint2026-10-20-pos-mydata-unlinked.md and evidence directory pos-mydata-unlinked-20261020.

20/10/2026 — POS-MYDATA-UNLINKED-01 / MULTI-PAGE REVIEW CORRECTION BEFORE MERGE

Before merge, source review found that linking secondary photo jobs during shell creation would conflict with the existing pos-intake guard, which deliberately requires unclaimed additional pages. Corrected binding to link only the primary job (and any retained provider-original jobs). Every photo ID remains durable in the primary handoff and receipt; secondary pages are claimed only by the established full multi-page intake. The new native test executes that actual guard against page 2 after the actual pos-draft route and requires it to accept the page. No intake guard was relaxed. Initial source7f14b8fe was not merged or deployed; its CI evidence is superseded by the corrected head. All original source and financial boundaries remain. Final full native PR/main CI and actual acceptance required; NOT LAB PASS.

20/10/2026 — POS-MYDATA-UNLINKED-01 / SOURCE PREPARED / AWAITING FULL NATIVE CI AND ACCEPTANCE

Explicit limited transfer claim PR2936/head189499103e0587e0d7d734e5f03b8b5eb9ae2b86 had all applicable documentation/Windows checks green and merged8ba74c91312b06a242f9b13395abdc4c15c6d11b before any source/test edits. Retained owner fix/pos-mydata-unlinked-20261020; broader historical pairs/credit/Gate3/09/other owners preserved.

Common correction: a unique untouched unlinked inbound original can propose its verified canonical number for explicit original review. The POS repeats the exact header check and compares MARK before the existing payment route. Exact full series and zero-padded numeric identity, recipient company VAT, supplier VAT, issue date, supported positive EUR invoice, no linked/deleted/received source and no competing purchase are required. Existing canonical or padded payment is protected. No amount-only identity or Greek/Latin substitution. Normal durable photographed intake now uses the same exact lookup instead of comparing the bare myDATA number to the whole POS series/number. During the existing store-locked draft transaction, the inbound metadata, all photo jobs and one draft are bound atomically; provider original is retained. Same-job racing retries reuse that draft; failures roll back draft creation while retaining the already recorded payment. No stock/fiscal/finalization, manual data repair or actual supplier payment submitted by this page.

Local Node24: focused23PASS/0FAIL/7native infrastructureSKIP; full3364PASS/0FAIL/193infrastructureSKIP; frontend/TABLE_SERVICE build PASS. Later bounded paid-padding guard and conditional confirmation copy reran focused23/0/7. Full exact Node20 CI with PostgreSQL is mandatory, and this is NOT LAB PASS. New native tests execute actual pos-draft route in isolated schemas with missing PDF/draft, two photos, canonical payment, concurrent retry, original binding rollback, paid/padded/tombstone/recipient/currency/type/status/competing-draft/scope guards and unchanged stock/control. Mounted actual POS submit tests cover unlinked canonical recheck and changed-MARK rejection before money. Existing populated draft, paid retry, cancel and credit regressions remain.

Engineering source prepared; deploy and functional acceptance NOT TESTED. Single next action: full PR/main CI, ordinary guarded release and independently verified exact revision, then scoped actual acceptance without replaying an already recorded payment. Checkpoint CHECKPOINTS/CHANGES/2026-10-20-pos-mydata-unlinked.md. No claim that unrelated suppliers' OCR line accuracy or whole Gate3 is closed.

20/10/2026 14:06 Europe/Athens — POS-MYDATA-UNLINKED-01 / EXPLICIT LIMITED TRANSFER / ASSIGNED BEFORE SOURCE

ΑΝΑΛΗΨΗ ΑΠΟ codex/invoice-second-draft-20261016 — ASSIGNED fix/pos-mydata-unlinked-20261020. User explicitly approves transfer of the first-payment missing-draft regression and requests a common correction for all stores. Transfer only this bounded subtask; historical pairs, credits, broader Gate3/09 and all other owners remain assigned as recorded.

New USER/LIVE FAIL: photographed invoice payment is blocked by near-header duplicate review while the matching inbound myDATA original has no connected draft and no downloaded original. A scoped read-only current-day supplier view shows zero recorded movements; user confirms actual cash already handed over. This is not financial reconciliation or permission to duplicate the payment. No diagnostic financial/upload/stock action was submitted. Source inspection confirms unpaidMyDataHeaderReview refuses a missing draft. Exact OCR-kept series remains unobserved; no guessed automatic Greek/Latin identity normalization.

Scope: common same-tenant/store verified-VAT/day/type/amount original review including an untouched unlinked myDATA header; explicit original confirmation and fresh exact precheck before the established once-only POS payment; one durable photographed draft connected to that original, all pages queued without Backoffice refresh. Preserve paid/ambiguous/received/deleted/cross-scope and stock/fiscal/finalization fences, existing populated drafts and original payments. No amount-only automatic linking, no resurrection or production SQL repair. Require synthetic mounted-client/route and native database regression tests, full PR/main CI, ordinary guarded release, exact revision and scoped acceptance. Current new implementation NOT TESTED/AWAITING LAB; not fixed from CI alone.

Checkpoint: CHECKPOINTS/CHANGES/2026-10-20-pos-mydata-unlinked.md. Single next action after this claim is green and merged: implement the bounded missing-draft header-review and exact original linkage correction. The real operator performs the legitimate first record once; no historical replay for proof.

20/10/2026 10:43 Europe/Athens - POS-SHIFT-LOAD-01 / SOURCE LIVE / AWAITING HOSTED USER ACCEPTANCE / RETAINED OWNER

Owner fix/pos-shift-load-20261020 retained for authenticated hosted/user acceptance. Source PR2933/head576368e2310a45d252263bfff572865be774671b merged d35a772870859bbf5eb6988820d74eaa7c260795. ClaimPR2931 merged before source. Exact PR CI39386081747/core118506415878 and exact main CI39387000777/core118509354207 SUCCESS: each 3617PASS/0FAIL/0SKIP plus8PASS/0FAIL/0SKIP; all five jobs, actual native PostgreSQL/HTTP, build/invariants and isolated wholesale green. Initial CI39385135116 had two existing test-fixture failures, corrected without weakening assertions: exact CTE retained in extracted predicate; store envelopes mirror actual API; actor binding identified semantically. Final native own/all/terminal/company/store/closed/history and mounted loading/retry/stale/print regressions all passed unskipped.

Read-only live EXPLAIN ANALYZE full old route42498.408ms; bounded candidate2007.732ms; exact final tagged route1570.831ms, each28rows at its observation. Independent live snapshots, not frozen row-identity or financial/control delta proof and not hosted end-to-end response measurements. No diagnostic sale/payment/upload/approval/replay, schema/index/rights change or financial write. Exact OPEN company/store/session/terminal CTE, original own/all actor permissions and audited online links preserved; no guessed date cutoff. Modal publishes overview independently, distinguishes pending/failed/verified closed, bounds read wait to15sec with visible retry, rejects stale scope and preserves valid loaded rows on denied print popup.

Ordinary guarded deploy39387876889/job118512074799 SUCCESS, Render dep-dbbhlfbncjis738pm3a0 LIVE at2026-10-20T07:42:46.842298Z on exact source merge d35a772870859bbf5eb6988820d74eaa7c260795. Independent curl /api/health at07:42UTC observed ok=true/version0.22.0+kat-test-pos/revisiond35a772870859bbf5eb6988820d74eaa7c260795. No manual trigger, deploy bypass, restart or migration. This is a technical release receipt, not hosted operator/LAB acceptance.

Actual hosted operator screen / physical terminal acceptance NOT TESTED: no surviving authenticated browser session; ordinary sign-in is not bypassed. No manual LAB/LIVE/USER PASS and no numbered Gate/No33 closure. No33/35 and every other owner/previous accepted behavior protected. Prior POS-PAYMENT-MINIMIZE-01/PR2924 remains separate, not implicitly delivered by this PR. Single next action: after finishing any current unsaved work, user refreshes same POS with Ctrl+F5, opens operator name → Συναλλαγές βάρδιας, verifies actual open shift and current rows; if failure persists collect shown message/same existing session without repeating a business action. Retain this bounded owner until actual acceptance or named handoff. Tracker/active/pending/checkpoint/evidence and trackerPDF synchronized; manual unchanged because CI/SQL plans are not manual PASS.

20/10/2026 10:12 Europe/Athens - POS-SHIFT-LOAD-01 / SOURCE READY / AWAITING FULL CI AND HOSTED ACCEPTANCE

Owner fix/pos-shift-load-20261020 retained. ClaimPR2931/headb4aebbbc979eadb6c0e702065454c198030951bb green/merged a547cfb4cf468cf1ea9765b69c2cbd269821e0d5 BEFORE source. Real read-only full existing SHIFT SQL EXPLAIN ANALYZE measured42498.408ms/28rows, planning47.793ms. Bounded equivalent candidate with exact materialized active ledger measured2007.732ms/28rows, planning71.482ms (~21x faster); no schema/index/data writes or financial replay. Counts are observations in a live store, not a frozen identity/delta proof.

Route now materializes selected-company/store OPEN ledger once, terminal-filtered for operator; identical own/all employee rule, substring and audited online-order linkage, original projection/limit/status/refund flags and normal-history branch preserved. No timestamp approximation, new permission, session reassignment, sale/payment/fiscal/stock mutation. UI independently publishes overview while sales waits, distinguishes pending/error/verified-no-open, uses15s bounded reads with explicit retry, rejects stale store/refresh replies and never presents failed loading as empty/closed. Original own/all/current-session filtering and correction/printing/child panels unchanged.

Node20 focused5PASS/0FAIL/1native infrastructureSKIP, including actual mounted slow/fail/retry/stale/timeout/no-open and current-session regressions; frontend/TABLE_SERVICE buildPASS. Native registered actual route fixture tests exact materialized SQL, own/all/other terminal/foreign/closed/online linkage, payment/line projection, unchanged ledger footprint and normal history; actual native execution awaits full CI. No mounted/SQL plan is HOSTED/LAB PASS. Require full PR+exactmain green, normal guarded exact healthy release and nonfinancial signed-in/user visual acceptance. No manual PASS or broader Gate closure. Protect No33/35 and all other owners; separate payment dockPR2924 remains its retained task. Checkpoint CHECKPOINTS/CHANGES/2026-10-20-pos-shift-load.md.

20/10/2026 10:04 Europe/Athens - WHOLESALE-OFFLINE-APP-E2E-01 / TECHNICAL CI VERIFIED, INSTALLED DEVICE OPEN

Retained owner codex/wholesale-suite-20261017. Claim PR2917/f16fcfcc53e38c2b33b50c5b492a0420ee9840c7 green merged a9d6359911d1378712f67e5f13e99f8b9c9be97f before source. Source PR2920/head bdbda9fb1b3aed9720d265268b79c7b47bee4f24 green merged1498b279b05505c67b36478eafd05d1e7b69182d. Proven actual-client original lifecycle-header mismatch (0->1 and7->8 after UNKNOWN/restart) corrected with immutable per-draft originGeneration. Edit/authorized snapshot renewal cannot retag old drafts; canonical quote and every send use original header plus existing seller binding. Missing legacy metadata stays0; malformed metadata never POSTs. Existing shared auth/lifecycle middleware/reset/quote/order/schema/startup unchanged. Before8FAIL; after10focusedPASS plus actual mounted panel remount/header7 proof. SQL recreation after actual reset NOT TESTED; the causal transport tests inject fake HTTP and perform zero network.

Actual built WholesaleApp/OfflinePanel exercised in fresh Chromium against real disposable lab PostgreSQL/HTTP, separately from the earlier minimal fixture: authorized online preparation, offline create/edit juice quantity2->3, browser process fully closed/restarted offline, same profile/phrase unlock, current quote net15.00/VAT1.95/gross16.95, explicit submit with successful response deliberately lost, UNKNOWN and byte-identical original body/key retry. Fresh before/control evidence persisted before actions. Orders3->4->4; one actual isolated SUBMITTED request, virtual documents/payments/stock/receivables/events and other-store orders/ledger byte-identical. No new fiscal/provider execution, outboundBlocked0, sameboot. Desktop and390px viewport screenshots are CI SYNTHETIC evidence, not user screenshots or physical/mobile/installed acceptance. Existing first isolated lab E2E retained. Only four exact PWA static files added to test runtime; public hosted pinned lab/service remains untouched.

Full source PR CI39378621474 and exact1498 main CI39379250757 all5jobsSUCCESS:3604serverPASS/0FAIL/0SKIP plus8recoveryPASS. Newer unchanged-wholesale main b255 CI39379947313 failed first preparation because the browser driver ignored inherited fieldset disabled state; retained screenshot showed the synthetic phrase still present with no preparation. Test-only PR2927 waits for effective :disabled actionability before each single action and opening profile lookup completion; no repeat click, timeout increase, removed assertion or production UI change. First readiness head5239ae9f7e8ab064be7161f6e8a7d3674834e1bb full CI39380958944 all5jobsSUCCESS/3611serverPASS plus8recoveryPASS; newer KAT source integrated without losing concurrent records. Final readiness head1e7934236a5e42ae710986830ef522c8f1875a22 full CI39381968343 all5jobsSUCCESS; source merged4e732c2d45eeffeb1a81b7099e90447a4ac9bb76. Unauthenticated no-cache public health verified exact revision and wholesale HTML/dedicated manifest/compiled SW HTTP200 at07:03:53UTC20Oct. Static delivery only, not business or installed-device LIVE acceptance. Local Node20 combined78tests/76PASS/0FAIL/2infrastructureSKIP and frontend build PASS; no skipped native result is presented as executed. Evidence

CHECKPOINTS/EVIDENCE/wholesale-offline-app-20261020/, checkpoint CHECKPOINTS/CHANGES/2026-10-20-wholesale-offline-app-e2e.md and technical guide docs/wholesale/COMMERCIAL_OFFLINE.md.

This newer exact-main/release receipt supersedes older shared wholesale CI/release holds only; KAT importer authentication/physical acceptance and other retained owners remain OPEN.

Remaining OPEN: actual installed Windows/Android/iOS offline device use, actual reset/restore lifecycle acceptance with measured fresh baselines under its retained lifecycle owner, full seller offline/other-role device acceptance, offline real invoice/payment/fiscal/stock fulfillment and whole commercial rollout. Supported hosted browser observation still refuses native credential-state resumption; no new password, reset loop or credential workaround. No hosted accepted order/invoice/payment replay and no production configuration/grant/data test mutation. No new manual PASS or numbered whole-item closure. Same wholesale owner retained; next bounded user/LIVE acceptance when supported observation is available is one prepared installed device reopening/capturing a new local draft offline, then one explicit measured same-request reconciliation. All unrelated assignments and prior PR2891/2899/2914 evidence remain protected.

20/10/2026 10:00 Europe/Athens - POS-SHIFT-LOAD-01 / ASSIGNED BEFORE SOURCE / USER FAIL

Owner fix/pos-shift-load-20261020. User explicitly requests investigation/correction after screenshotimage20261020-064505: Diadoxou shift transactions stays loading, header says no open shift while child My payments shows160.88. Read-only DB confirms open430b8612-eafe-4eae-8148-550ca3bb123f/DIADOXOU-POS-01 opened06:16:47Athens,27sale movements+1supplier payment at09:45 observation. No lost-payment inference. Existing Promise.all gates overview on recent sales and prints no-shift before either response; recent SHIFT SQL correlates historical sales with active transactions. Initial loading screenshot does not establish duration; server query/read plan and controlled tests needed.

Independent bounded loading/performance regression only: truthful pending/error/no-open states, independently available overview, retry/stale store safety, exact active-session sales lookup with company/store/terminal/own-all rights preserved. Protect No33/35 owner codex/operator-checkbox-audit-20261009, payment correction/No27, invoice/stock/fiscal and separate payment-dock task. No rights/role/schema/index/shift/open-close/financial/payment changes, no real/LAB mutation or accepted replay. Read current AGENTS/active/tracker/pending/manual/numbered and prior session-isolation tests. Required real registered SQL/native fixtures (own/all/foreign/old sessions), mounted slow/fail/retry/stale UI and existing financial/display regressions; Node20/fullPR+exactmain CI/ordinaryguard/exacthealth before nonfinancial hosted/user acceptance. USER FAIL; correction NOT TESTED. Checkpoint CHECKPOINTS/CHANGES/2026-10-20-pos-shift-load.md. Publish claim before edits and retain owner until completion/named handoff.

20/10/2026 09:46 Europe/Athens - KAT-CATALOG-IMPORT-01 / SOURCE MERGED, UNIT FIX AND RELEASE HELD / AUTH HANDOFF / NOT IMPORTED

Retained owner ops/kat-catalog-import-20261020; source feat/kat-catalog-import-20261020 and bounded correction fix/kat-import-source-units-20261020. No transfer/release; lifecycle, wholesale, native and other owners retained. Claim2918 merged07d4eb113 before source. Source2921 final585d4f0f7ca57137505c23aa602378a873bef28c fullCI39380342416/job118487990830 SUCCESS3614PASS/0FAIL/0SKIP+8backup, merged344306dac02c371dc848076447b1ab12a57aabfd. Actual native KAT case executed, including two register6 identities, fingerprint-bound existing rename, negative stock/recipe/online preservation, busy-row refusal, rollback and concurrent replay. This is engineering/CI evidence, NOT actual KAT importer LAB/LIVE PASS.

Latest source-unit review found1765TEM+1KGR. Update09:52: unit correction2929/headc55aaeaf0b64f8cbe4cb93e614f02e57314fe3a3/wholeCI39381924502 SUCCESS,

native build job118492962533 actually3615PASS/0FAIL/0SKIP+8backup; all required jobs green. PR2929 remains unmerged behind retained wholesale correction2927 and needs current combined-main reconciliation/release. Local30PASS/0FAIL/1nativeSKIP was preparation only. Must retain KAT-54554 as KG, price/VAT unchanged; require source MM agreement and existing-unit match, verify persisted unit. Existing13 actual matches allPIECE/barcode multipliers1. No final product import occurred, so no product-unit repair was needed.

Definitive prepared package: KAT_Import_1766_20261020.xlsx, Library libfile_d9bb07f53a9081919dd6912e8eedbb98/version1, SHA2561163fcf7c3005d77d51ea12aa991412a11a6f630599f531a3909db84dd0d6138. Supersedes old f035.../version0, which must not be imported. All84768 retained original cells unchanged;1766 unique KAT-ID codes/1981 unique scan aliases/13 exact existing identities. Local preparation against read-only real metadata predicts1753CREATE/13UPDATE/0INVALID; this is simulation, NOT hosted preview. Source organized workbook remains libfile_8ec99e8fc5048191bcf26612be160579/version4. Do not rebuild taxonomy, renumber again, reintroduce17excluded rows/four cheaper duplicates/8240zero-stock rows, or repeat prior DAILY/Diadochou/online/backup PASS.

COMPLETED CONFIGURATION ONLY: normal SuperAdmin UI added six missing screenshot VAT definitions; KAT now10 departments (nine used source identities plus preserved unused Camel21). Original4 whole department rows unchanged. Fresh before/after company155Product MD5e72d75f5c0d09aaf69148e09fa62f5e0 and kat-store143StoreProduct MD55bf3117a428d2fbc09cf43e696dccaf8 identical;165sales/180payments/174movements/44shifts/0open/213transactions unchanged. No product/stock/business or fiscal write. Supported source matches by register+legacycode+rate+commerce, never percent/register alone; existing display aliases stay intact. No exemption27 guessed for KAT cards. Bounded configuration instructions/limits recorded in inventory manual; definitive import and physical fiscal readiness remain NOT TESTED.

RELEASE HOLD: exact main344306 CI39381272075 failed wholesale-isolated-lab/job118490891082 at actual encrypted preparation; main build/native job118490891174 SUCCESS. Do not equate build success or source PR green to whole main green. Existing wholesale owner has actual actionability correction PR2927/test/wholesale-offline-action-readiness-20261020; do not take over its files or rerun unchanged CI to hide the FAIL. Latest read main987b63b89 is documentation only, not that runtime correction. No deployment guard bypass/manual deploy. Independent no-cache public health and Render history still identify healthy f2a3b79a145f7f80331280384066ec78c29ec230 / dep-dbb8vvbncjis738veivg; new KAT source is NOT LIVE.

AUTHENTICATION HOLD: returning from KAT support to Platform Admin for new LAB acceptance displayed email/password/device-name login. browserAuth auto-review rejected the incomplete secure prompt BEFORE any user prompt/credential entry because required device-name field was omitted. This was automatic review, not user refusal. No automated retry, raw credential entry, alternate auth surface or protection bypass. Next supported user action is manual sign-in in the existing Cloud Browser tab, including device name and any ordinary2FA. Do not request secrets in chat. Canonical entry https://myworkstation-app.onrender.com/platform-admin.

NEXT: after retained wholesale correction, reconcile latest main into2929, require whole exact PR/main CI and ordinary guarded exact healthy release. After supported user sign-in, perform ONLY new bounded KAT-profile virtual-LAB acceptance with fresh before/controls (do not replay the accepted DAILY importer test), including existing identity/unit preservation and new scan aliases. Record before each new action. Then refresh the13 live fingerprints/metadata if changed, actual KAT preview must show1766 valid rows, stock overwrite OFF; exactly one final atomic import and full source/stock/department/alias/supplier/category/unit readback. No KAT reset/deletion, old-product purge or recipe/modifier replacement. New initial stock0 as approved Diadochou procedure, existing stock preserved. The later0.50mobile-card service SET remains after this import. No background execution or final import PASS promised by this handoff.

Checkpoint CHECKPOINTS/CHANGES/2026-10-20-kat-import-auth-handoff.md. Current owner retained until completion or named handoff; no other page may duplicate this source/import.

20/10/2026 09:34 Europe/Athens - POS-PAYMENT-MINIMIZE-01 / SOURCE TESTED / RELEASE BLOCKED BY SHARED WHOLESALE CI / RETAINED OWNER

Owner fix/pos-payment-minimize-20261020 retained. Authoritative scope correction09:17:54: scanner works; ONLY floating payment restore covers footer/total. SourcePR2924/head ea6d5d4505d1d97763cd224ec4a89b68c9465a61 changes ensurePill placement only plus test; no StorePosPanel/scanner/form/financial handler changes. Restore is in normal flow within existing product-search row (bounded45% width/36px height), outside checkout. Same draft/file/background state and original handlers remain mounted. Non-POS fallback top edge. Source is NOT MERGED/NOT RELEASED; user still has original position. Initial planning times09:23/09:25 are superseded by GitHub actual claimPR creation09:17:44/sourcePR creation09:22:25. ClaimPR2923 merged86c627cd before source.

ExactPR39379993266/core118486861010 SUCCESS3614PASS/0FAIL/0SKIP plus8backup, native PostgreSQL/HTTP/build/invariants and all Windows checks green. All3 new tests passed unskipped, including actual isolated Chromium geometric and hit tests: restore inside search, scanner width retained, cash/card/total hit targets exposed, same unsaved83.17 and delayed result after restore/no requests. LocalNode20 2PASS/0FAIL/1missing-ChromiumSKIP and frontend/TABLE_SERVICE buildPASS. First local fixture teardown had observer-after-window-close errors, fixed by disconnecting fixture observers before final source/test upload; runtime not broadened.

WholePR remains FAILED: isolated-wholesale job118486861031 timed out actual encrypted preparation in server/e2e/wholesale-offline-app-flow.mjs:66. One unchanged-head isolated retry118489201045 failed identically; no further rerun or bypass. Same failure already exists on shared main b255b1cf335734a81d09ad65d5b6ce2dba33733a CI39379947313/job118486896518, independently recorded by native voice owner in CHECKPOINTS/CHANGES/2026-10-19-native-chat-voice.md. Existing wholesale owner codex/wholesale-suite-20261017 retains that separate scope. Do not take it over, remove the test or deploy around a red required gate. Latest observed healthy application f2a3b79a145f7f80331280384066ec78c29ec230 remains older and DOES NOT include this correction.

Hosted attempt found no surviving browser tabs/session; canonical Platform Admin reaches ordinary sign-in. No credentials, new support token, permission, real/LAB business action, sale/payment/upload/replay or source injection performed. Actual hosted/physical visual acceptance NOT TESTED; no manual PASS. Single next action: existing wholesale owner resolves shared failure; then same payment owner reconciles latest shared docs/source, requires fresh full greenPR, merge/exactmainCI/ordinary guarded healthy release and user or authenticated POS minimize/restore visual acceptance without a payment/sale replay. Owner remains assigned, not released or silently transferred. Other owners/previous PASS unchanged. Evidence CHECKPOINTS/EVIDENCE/pos-payment-minimize-20261020/source-status.json; trackerPDF synchronized. No whole Gate closure.

20/10/2026 09:17:54 Europe/Athens - POS-PAYMENT-MINIMIZE-01 / USER SCOPE CORRECTION

User explicitly clarifies scanner works normally; ONLY restore pill covers checkout/payment controls. Supersedes initial scanner-block hypothesis and all proposed scanner/lifecycle changes below. Bounded fix ONLY restore-button placement in existing POS product-search row, in normal layout flow, away from footer/total. Preserve existing minimization, same mounted state, restore, scanner/modal/checkout locks and all payment payloads unchanged. No StorePosPanel or payment form edits. Test actual bootstrap placement, nonempty cart/footer bounds, restore same unsaved DOM/no writes. Other owners remain protected. Actual hosted fix NOT TESTED. Owner fix/pos-payment-minimize-20261020 retained.

20/10/2026 09:23 Europe/Athens - POS-PAYMENT-MINIMIZE-01 / ASSIGNED BEFORE SOURCE / USER FAIL

Owner fix/pos-payment-minimize-20261020. User screenshot image(20261020-061458).png shows real Diadoxou POS nonempty customer cart, minimized payment pill covering bottom-right checkout; user reports all actions blocked. Independent bounded UI lifecycle regression, not takeover of existing invoice workspace/menu/completion/QR/payroll/advance owners. Inspect current AGENTS/shared registers/manuals/checkpoints/history: legacy global payment minimizer hides DOM but StorePosPanel scannerBlocked still includes activeModal PAYMENTS; floating bottom pill overlaps checkout. Exact current root cause/hit-testing to verify with real mounted/browser tests before claim of PASS.

Scope: authoritative owned payment-root minimization, same mounted unsaved form/files/late result on restore, scanner/cart/customer controls usable while hidden, visible accessible restore away from footer, normal other dialogs/checkout locks remain blocking; close/store/session/permission cleanup cannot restore stale work. Do not create second payment or change financial payloads, supplier/advance/QR/OCR/auth/stock/fiscal/server. No real-store writes, financial LAB sale/payment/upload/finalization or accepted replay. Tests actual parent+modal+bootstrap, scanner nonempty cart, restore unchanged draft/no write, other modal blocking, completion/scope teardown, geometry/hit-test browser; Node20 build/full PR/main CI and ordinary guarded exact healthy release before hosted visual acceptance. USER FAIL, hosted correction NOT TESTED. Checkpoint CHECKPOINTS/CHANGES/2026-10-20-pos-payment-minimize.md. Owner retained until bounded completion/handoff; all other owners protected.

20/10/2026 09:04 Europe/Athens - KAT-CATALOG-IMPORT-01 / ASSIGNED / NOT IMPORTED

Owner ops/kat-catalog-import-20261020, continuation of this owner-authorized KAT catalog preparation conversation. Independent catalogue import only; STORE-LIFECYCLE-01 remains with feat/store-shifts-inventory-clear-20261018, no cleanup/reset/delete/fence takeover. Preserve concurrent KAT beverage recipes/modifiers/online flags, all other stores and all prior accepted tests. User approved definitive import at09:00 and higher-priced duplicate selection at08:47. Current prepared workbook Library version4 contains1766 unique KAT-source-ID codes; original codes retained, zero-stock8240 and17 owner-deleted ambiguous rows excluded;4 cheaper shared-barcode rows removed and recorded. Retained48 source fields match previous workbook exactly, including retail and VAT department; no production product/stock/department write occurred.

Baseline main a9d6359911d1378712f67e5f13e99f8b9c9be97f. AGENTS, active/tracker/pending/checklist/manual and Diadochou/DAILY import evidence reviewed. DAILY definitive8753 import and original synthetic importer PASS are protected, never replayed. Existing real KAT preview1770INVALID remains evidence of unsupported KAT department mapping, not an import; current prepared1766 workbook has NOT been finally submitted. Current read-only company pilot-company155 Product / kat-store143 StoreProduct, sole company store linkkat-store;4 existing departments. Source screenshot confirms9 distinct used KAT identities, including two separate register6 departments. Do not copy Diadochou/DAILY mappings or infer fiscal exemption.

Scope: explicit KAT workbook profile and exact department identity resolution; all-barcode handling; bounded existing-product reconciliation without duplicate products, price/VAT guessing, stock overwrite or recipe/modifier destruction. Resolve remaining same-price barcode ambiguities explicitly in review. Require actual valid preview, fresh before/control evidence, green full source/main CI, ordinary guarded release/exact health, new bounded KAT-specific LAB acceptance, then exactly one authorized atomic real import and full source/readback. Existing-profile, tenant/role/fiscal/stock safety retained. Missing department setup must use normal authorized app flow with exact screenshot identities; no direct production SQL/migration/seed. The later0.50 service/card SET is separate after import, not a price edit in this batch.

Status NOT TESTED for new KAT profile and definitive import; no whole Gate/manual PASS. Checkpoint CHECKPOINTS/CHANGES/2026-10-20-kat-catalog-import.md. Publish this claim on main before source or

state-changing LAB. Single next action implement bounded KAT profile after merged claim; owner retained until completion or named handoff.

20/10/2026 00:51 Europe/Athens - WHOLESALE COMMERCIAL OFFLINE / CI VERIFIED, INSTALLED LAB OPEN

Retained owner codex/wholesale-suite-20261017. Source PR #2912 head 18cd03a154c76608884e22067a3cfb26e5c7d557 green merged 24e138767089672d296189b6073e6601ff520d4e after claim PR #2904. Dedicated install entry, allowlisted public offline shell, encrypted per-user/company/store/role catalogue and editable LOCAL_DRAFT orders implemented. Explicit online current-rights/current-price acceptance precedes immutable persisted body/key and guarded send; unknown results never become a fresh request. Durable observed-denial fences, cross-tab exclusion, storage-failure and capacity checks included. No existing auth/entitlement/pricing/order core, schema, production startup, fiscal/stock/payment operation or pinned lab configuration changed.

CI-only evidence: PR run 39327561161 all 5 jobs SUCCESS, server 3,580 PASS / 0 FAIL / 0 SKIP plus 8 recovery PASS; real isolated Chromium fully closed/restarted with unavailable server, reopened cached shell and encrypted saved order, rejected wrong phrase, verified real IndexedDB CAS, Web Locks, denial persistence/BroadcastChannel and no private API cache or business POST. Local Node20 focused 65 tests / 63 PASS / 0 FAIL / 2 infrastructure SKIP and frontend build passed. Exact source-main run 39328449945 was cancelled while pending after another owner's source merge; never called PASS. Later main revision f2a3b79a145f7f80331280384066ec78c29ec230 run 39328665510 all 5 jobs SUCCESS, server 3,594 PASS / 0 FAIL / 0 SKIP plus 8 recovery PASS, includes unchanged owned wholesale blobs and full acceptance. Normal guarded release workflow 39330143576 succeeded; Render dep-dbb8vvbncjis738veivg LIVE 2026-10-19T21:50:59.473712Z, exact revision verified by unauthenticated /api/health and HTTP 200 wholesale HTML/dedicated manifest/compiled SW at 21:51:23 UTC 19 Oct. Static delivery is not installed-device or business-flow acceptance.

Authoritative boundary: technical source/CI acceptance only; actual installed PC/mobile disconnected full UI use, offline invoice/payment/fiscal/stock execution and full commercial rollout remain OPEN/NOT TESTED. Browser observation remains platform-blocked after native credential-state refusal; no password request, credential workaround or old financial transaction replay. Existing LIVE/API/USER visual receipts PR #2891 / #2899 remain protected. No new manual PASS or whole-item closure. Technical guide docs/wholesale/COMMERCIAL_OFFLINE.md; evidence CHECKPOINTS/EVIDENCE/wholesale-commercial-offline-20261020/; detailed checkpoint CHECKPOINTS/CHANGES/2026-10-20-wholesale-commercial-offline-ci-receipt.md. Same owner retained; next bounded acceptance is a prepared installed device reopening and capturing a new local draft while disconnected when permitted browser observation is available, then one measured explicit online submission with a fresh baseline. No duplicate claim by another page.

20/10/2026 00:51 Europe/Athens — KAT-BACKGROUND-02 / LIMITED LIVE DESKTOP VISUAL PASS / COMPLETED

Screenshot CHECKPOINTS/EVIDENCE/kat-background-20261020/online-desktop.jpg. Exactly one CSS declaration changed versus accepted KAT branding; all4script blocks byte-identical. Focused existing

tests12PASS/0FAIL/0SKIP and frontend build PASS locally; full required CI as above. No new tests for reversible one-color adjustment. No order/payment/member/settings/catalogue/stock/fiscal or database write.

Completed only requested outer-background visual adjustment. Prior KAT-BRANDING-01 desktop/category/search acceptance retained without replay; new mobile/touch/physical-device, saved-credential autofill, checkout/member/fiscal acceptance NOT TESTED here and other owners unchanged. Public visitors use /online/kat; refresh an older open page to receive new background, then wait for catalogue. No new role/access permission. This is not whole Online Gate PASS. Checkpoint CHECKPOINTS/CHANGES/2026-10-20-kat-background.md; manual docs/manual/online-delivery/PASS.md. Canonical tracker and numbered PDFs regenerated in same receipt.

20/10/2026 00:16 Europe/Athens - SUPPLIER-ADVANCE-01 / HOSTED ALLOCATION LAB PASS / SCOPED CLOSED

Retained owner fix/supplier-advance-20261019 completed the remaining assigned acceptance after explicit user approval20Oct00:11:56 for same-user2hour SuperAdmin LAB support access and virtual0.01 allocation. Normal UI access succeeded; no credential, permission, shift or safeguard change. Health revision0484d636059eedb936e8bea1159b05c6c00bf0d2; all9 owned source/test Git blobs equal reviewed PR2889/head403b3c03602f2ddd92fff3f0794af197d38d535a/source main1cccecd1a1777a6ac9ff5c5bba42fbfde470fe69. Earlier full PR/main CI3514PASS/0FAIL/0SKIP+8backup and ordinary guarded release remain source proof; no runtime change in this receipt.

Fresh before00:14:56 equals published23:53:31 after-review baseline except timestamp. Existing LAB settlement77f43282-4377-4782-97d3-bc7e3ab17c6b CONFIRMED0.02, allocated0.01/available0.01; bank3 2entries/total-515.45/confirmed-308.78/pending-206.67/protectedHasha47fa1ede8dbbc7924a251834b7a7 fcd. MAIN0transactions/cash-card-IRIS0/deductions0/drawer9.40; both other-store controls0;99StoreProducts hashf96d09fe90906df3b26776483c8d5d61/95StockMovements hashf69aa9d0bec0bf377f1b9645262e5aba, invoiceTΔA0009683 fullrow unchanged. Fresh before JSON and intended action recorded before submission; published prior baseline was not replayed.

Actual20Oct00:16:29: selected same confirmed advance in Χρήση πληρωμής, entered0.01 only on TΔA0009683 and clicked Συμψηφισμός έναντι χωρίς νέα πληρωμή ONCE. Form closed; reopened read-only form shows invoice remaining958.75→958.74 and no remaining advance option. After00:16:35: same allocation7fa44884-706a-4af7-ad43-75873089bf58 amount0.01→0.02, remaining0.00. Exactly one SUPPLIER_ADVANCE_ALLOCATED Audit ecfd3893-9c83-4a83-af6f-8c92c0078a1d/cashDelta0. Entire StoreTransaction and settlement rows byte-identical, same0.02 payment, same confirmed status; bank/shift/control/stock/fullinvoice rows byte-identical. No new disbursement, actual bank transfer, stock/fiscal action or real-store approval.

Remaining hosted allocation is now LAB PASS/CLOSED; previous auto-review block and OPEN statements below are historical and superseded only after explicit approval. Independent task owner released after this scoped closure; remove only its completed pending section. Real Mantzilas6.17 remains PENDING_REVIEW and protected original3payments total700.00, no new approval or write this turn. New physical CASH_SHIFT, other normal roles/mobile/hardware remain NOT TESTED and are not claimed by this task. Prior completed supplier PDF/print, broader Gates and every other owner unchanged. Evidence CHECKPOIN TS/EVIDENCE/supplier-advance-20261019/lab-before-allocation.json,lab-after-allocation.json,lab-allocation-audit.json,lab-allocated.jpg; manual/payments/PASS plus active/tracker/pending/numbered and both generated PDFs synchronized. Source PR2889 and docs PR2905 retain prior history.

20/10/2026, 00:01 Europe/Athens — SUPPLIER-ADVANCE-01 / SOURCE LIVE + LIMITED LAB + REAL REASSOCIATION PASS / FUTURE ALLOCATION OPEN

Retained owner fix/supplier-advance-20261019. ClaimPR2888/997fa934 published before code. SourcePR2889/head403b3c03602f2ddd92fff3f0794af197d38d535a merged1cccecd1a1777a6ac9ff5c5bba42fbfde470fe69. Full PR39318646187/job118287731141 and exact main39320123491/job118291991398 SUCCESS3514PASS/0FAIL/0SKIP plus8backup; all required native/HTTP/browser/Windows/build/invariants green. Ordinary guard39321219511/job118295562197; Renderdep-dbb80ng473hc73dk7e40 LIVE19Oct23:47:07Athens; independent healthoktrue/exact1cc. All9 owned files equal reviewed source. No manual deployment, migration or safeguard bypass. Wrapper39321314105 skipped deployment, not separate release proof.

LIMITED ACTUAL LAB23:47–23:53: fresh prior baseline unchanged; one virtual BANK_TRANSFER0.02, invoiceTΔA0009683 allocation0.01 and declared advance0.01. One payment/one pending settlement/one allocation; one explicit confirmation of this same receipt, no new payment. Virtual bank31→32entries/total-515.43→-515.45; final confirmed-308.78/pending-206.67 and protected-old-bank hasha47fa1ede8dbbc7924a251834b7a7fcd unchanged. MAIN0transactions/cash-card-IRIS0/deductions0/drawer9.40, both other-store controls,99StoreProducts/95StockMovements and full invoice face/status unchanged. No actual bank transfer or stock/fiscal action. Cash UI correctly unavailable; no grant/shift change or lower-level bypass. Cash disbursement has native CI proof, not a physical/CASH_SHIFT LAB PASS.

REAL USER-REQUESTED CORRECTION19Oct23:57: only existing Diadoxou OTHER_EXPENSE6.17 transactionpay_90df5323171a14ebfa07a09df33faa7cee27baf51f841652e8cd6813dc7be907 associated with existing supplierMANTZIΛΑΣ/7b9b8117-bbc8-4235-accd-e716fd7f977c through canonical SuperAdmin Expenses. Original pending review retired; one new supplier settlement5a5f365f-b75b-4b17-b942-d3aa0db403ea PENDING_REVIEW and one original-preserving Audit/cashDelta0. Same amount/time/shift/actor/description/evidence and original transaction ID retained: immutableHashbae93aba8e9871730c19ef4251558f7e equal before/after; protected522.79/171.04 payments hashca2b7895c68f16fc64c66f5ba1e4962a equal; exact3existing payments total700.00. No second disbursement or approval of real171.04/6.17. Actual UI shows6.17 advance pending human review. This is a targeted reassociation PASS, not global trading-store cash/stock reconciliation or proof of approved supplier balance.

REMAINING OPEN: actual hosted consumption of confirmed virtual0.01 advance, physical/new CASH_SHIFT payment, other normal roles/mobile/hardware. Consumption backend/mounted/native concurrency/replay/rollback are green in CI only. After virtual confirmation, automatic browser approval review twice rejected re-entry through Πλήρες Backoffice because support-access issues a fresh2hour token/audit, despite the same existing SuperAdmin/session and inspected absence of user/membership writes. Rejection respected; no alternate URL/API/token/session workaround and NO allocation POST. Earlier initial LAB access had been allowed; this later block is not authentication or source failure. Separate initial company-selection checkbox rejection was resolved by proving it only calls setSelectedId; same selection then allowed. Only later support-access rejection remains unresolved.

Current virtual receipt77f43282-4377-4782-97d3-bc7e3ab17c6b /pay_7342736072df83017f190a9382073d154bc4874ea91155ea21c2ec78171b7a55 CONFIRMED0.02 with0.01allocated/0.01remaining; do NOT replay it. Single next action: obtain explicit user approval for same-user2hour SuperAdmin support-access to MYWORKSTATION LAB, then refresh this receipt/controls/bank before allocating only remaining0.01 once through delivered UI. Retain owner until scoped completion or named handoff. Completed source/new-total, virtual creation/confirmation and real reassociation are removed from pending scope; only exact remaining acceptance stays assigned. Preserve Gate5 prior invoice allocation caps, declaration/proof policies, QR/readability/credit/supplier-reassignment and all other owners.

Checkpoints: CHECKPOINTS/CHANGES/2026-10-19-supplier-advance.md, supplier-advance-acceptance.md and supplier-advance-acceptance-baseline.md. Evidence CHECKPOINTS/EVIDENCE/supplier-advance-20261019; payments manual records only actual limited

observations. Tracker/active/pending/numbered and both PDFs synchronized. No whole Gate/numbered item closure.

20/10/2026 00:00 Europe/Athens - WHOLESALE-COMMERCIAL-ONLINE-01 / ASSIGNED BEFORE SOURCE

Owner expanded scope20Oct00:00:22Athens: include use WITHOUT INTERNET. Add offline app shell (only exact static wholesale HTML/assets, never API/auth/private responses), encrypted IndexedDB customer/catalog snapshots and durable local order drafts partitioned by personal user/company/store. Offline access requires explicit device preparation and local passphrase unlock, bounded snapshot lease no longer than paid expiry; explain that revocation cannot be checked while disconnected. No password/token/session/private signing key in offline records. Stable clientOrderId and immutable persisted send-body BEFORE network; an unknown send may retry only the exact original identity/body/key. Separate pending/local capture from server SUBMITTED, current online rights/assignment/license check and fresh server quote + explicit review before first send. No auto-post financial/stock/fiscal/payment side effect or fake offline quote. Safe multi-tab version/concurrency checks; quota/write failure must never report saved. Offline business state survives reload/restart and stays encrypted/locked on user/context change. Offline real fiscal/provider dispatch remains separate and NOT IMPLEMENTED.

Three disjoint cooperating scopes under the same retained owner after green claim: install worker owns new install-controller/component, manifest and focused install tests; offline-core worker owns new encrypted vault/outbox + IndexedDB adapter and core tests; offline-UI worker owns new offline panel/API snapshot adapter/CSS and mounted tests. Root owns WholesaleApp/entry/HTML/Vite integration, new offline service-worker template/build plugin/tests, common records and full integration/CI. Allowed new files stay under client/src/components/wholesale/, client/public/wholesale-app/**, client/scripts/wholesale-offline-build.mjs, client/wholesale-sw.template.js and server/test/wholesale-commercial-*.test.js; additive client/vite.config.js and WholesaleApp.jsx wiring. Existing session boundary, actual authorization/quote/order core and unrelated owners remain untouched. Delivery remains AWAITING real disconnected installed-window/multi-device LAB until measured; preserve prior completed business tests without replay.

Retained owner codex/wholesale-suite-20261017; claim docs/wholesale-commercial-online-claim-20261019, planned source feat/wholesale-commercial-install-20261020; baseline0e95585e73ee32a21175d68df7bb36461d1a5b91. Owner explicitly requested starting the commercial standalone edition19Oct23:56Athens and asked which deployment model is better. Coordinator recommends and starts online-first independent wholesale application with shared live data for business/customer site/field sellers; no paid infrastructure or price/production data/configuration change authorized by this claim. Standalone means usable without retail POS, not an offline promise. Existing personal auth, CompanyModule WHOLESALE_B2B paid entitlement/tenant/store gates remain mandatory. Prior limited LIVE/UI/API/user-visual receipts PR2881/2891/2899 remain protected, no transaction replay.

Bounded first delivery: installable wholesale web entry with dedicated manifest, existing MWS brand icons, stable clean launch URL/app identity and bounded wholesale scope; one explicit user-driven installation control with fallback instructions for unsupported browser/iOS, appinstalled/cancel/error/repeated-click/unmount handling, and clear prepared/unprepared offline status. Only the separately described narrowly scoped offline-shell worker and encrypted local draft vault are allowed; no API response cache, automatic background order submission, default credential, auto-login or local license grant. Installed window still uses actual personal sessions, current paid module and same server database; installation does not enable any entitlement or prove commercial readiness. New pure install controller/component files under client/src/components/wholesale/, new client/public/wholesale-app/** assets, additive client/wholesale.html and client/src/wholesale-entry.jsx wiring, new focused server/test/wholesale-commercial-install*.test.js. Preserve existing WholesaleApp/session-boundary/suite/pricing/orders/lifecycle runtime untouched. No production startup/schema, fiscal integration, existing native owner or lab runtime changes.

Evidence BEFORE: standalone authenticated web entry and paid-module restrictions already have bounded prior PASS; separate installer/manifest/prompt NOT IMPLEMENTED/NOT TESTED. Require actual event-lifecycle/mounted UI tests, existing standalone regressions, frontend graph/build and full exact PR/main CI. Actual PC/mobile installed-window acceptance AWAITING LAB; never promote automated tests into manual PASS. Larger commercial rollout (persistent customer onboarding, billing operations, backup/restore acceptance, real fiscal/stock fulfillment and any durable offline) remains OPEN/ASSIGNED, not delivered by a manifest/icon. Detailed checkpoint CHECKPOINTS/CHANGES/2026-10-20-wholesale-commercial-online.md. Common active/KAT/README/tracker/pending/PDF synchronized before source; next single action after green merged claim: implement and verify bounded installable entry. Same owner retained until named handoff; no repeated prior business transaction.

19/10/2026 23:59 Europe/Athens — KAT-BRANDING-01 / LIMITED LIVE DESKTOP PASS / COMPLETED

Owner feat/kat-olive-orange-branding-20261019; source PR#2897/head9a811c57a48c39a7d28d9c3b1d693490ee5d9c0a merged0484d636059eedb936e8bea1159b05c6c00bf0d2. Claim PR#2895 merged before source. Full PR CI39320675559 and exact main CI39321897395 SUCCESS, including build-and-test, Windows and isolated wholesale checks. Ordinary guarded deployment39322990384/job118301603738 SUCCESS; exact health oktrue/revision0484d636059eedb936e8bea1159b05c6c00bf0d2 observed independently in public browser and guard logs at20:59UTC.

Actual Cloud Chrome desktop /online/kat: approved rounded Greek ΚΥΛΙΚΕΙΟ KAT logo visibly loaded uncropped in orange panel230x100; olive navigation#52613a/darkolive header/orange action buttons/warm background.7categories,27coffees, Νερά4, focused search FREDDO5, category Καφέδες clears search and restores27. Initial fill before focusing readonly search refused as designed; explicit focus then search passed. Empty basket0.00 throughout; current closed-hours state retained. Screenshot CHECKPOINTS/EVIDENCE/kat-branding-20261019/online-desktop.jpg. Original3business scripts byte-unchanged; separate exact-KAT-path class only, embedded approved PNG in local SVG. No catalogue/order/pricing/stock/member/auth/fiscal/settings/database writes. Node24 local20PASS/0FAIL/0SKIP after dependencies and Prisma client generation; frontend build PASS; deployment validated by Node20 CI.

Only agreed public KAT visual desktop scope COMPLETED. Mobile/touch/physical-device, saved-credential autofill, checkout/member/payment/fiscal acceptance NOT TESTED here and not claimed; retained owners and prior qualified evidence unchanged. No whole Online Gate PASS. Checkpoint CHECKPOINTS/CHANGES/2026-10-19-kat-olive-orange-branding.md; manual docs/manual/online-delivery/PASS.md. Both canonical roadmap PDFs regenerated in this receipt.

19/10/2026 23:44-23:47 Europe/Athens — WHOLESALE-LAB-01 / LIMITED USER VISUAL PASS

Retained owner codex/wholesale-suite-20261017; receipt branch docs/wholesale-user-visual-20261019. Actual owner-supplied Windows/Edge screenshots confirm hosted fake seller entry, explicit assigned whlab-store/fakeCustomerA selection, four seller catalog items (including WHLAB-PRIVATE), and customer portal with only three published items (WHLAB-ZERO/A/B). Existing seller request f4c29f3b-f4e6-4d24-b327-4dc422190493 /12.40 and portal request64f9c86e-2a21-46c4-aef9-1933a0e2f1d4 /11.30 are displayed; they are the earlier API requests, NOT newly submitted user transactions. Empty customer search reveals published items; query coca has no fixture match. Seller nested store selection remains separate from outer selection in the observed UI; no code fix claimed.

LIMITED USER VISUAL PASS for navigation/catalog/existing-order display ONLY, supplementing merged receipt PR2891/ef37b4ee and sourcePR2881/e3432c2b/full green PR39313589730/main39314881160. At23:47:53Athens owner said “afoy ta ekanew esy einai ok”: accept prior tests without repeating the same transactions. Do not reinterpret this as new measured quote/submission/financial/fiscal/PDF PASS. Source

revision derives from pinned service and independent earlier health, not screenshot per-action telemetry. Hashes, times and exact five screenshots: CHECKPOINTS/EVIDENCE/wholesale-user-visual-20261019/acceptance.json. Test lab https://myworkstation-wholesale-lab.onrender.com/lab ; synthetic-only/ephemeral/nonfiscal boundaries unchanged.

Remaining hosted end-to-end quote/submission UI and browser PDF download NOT TESTED; native coordinator browser remains blocked by credential-state protection. Owner does not need to repeat already completed CI/API/Owner transactions. Production wholesale/fiscal fulfillment, durable offline and commercial installer remain OPEN/ASSIGNED to same owner; no numbered checklist item closed. Next single acceptance action when supported browser recovers: read existing TEST PDF without issuing another document or payment; additional hosted quote/submission only if needed for a new specific regression. All unrelated owners and previous limited PASS protected. No source, production data/configuration, permission or deployment change in this receipt.

19/10/2026 — KAT-BRANDING-01 / SOURCE READY / AWAITING FULL CI AND LIVE

Owner feat/kat-olive-orange-branding-20261019; source feat/kat-branding-source-20261019. ClaimPR2895/d1059c3/docsCI39320272353 all applicable checks passed; merged7c0001d before source. KAT-only exact path class scopes olive/orange CSS and bundled original approved logo image in SVG wrapper; no catalogue/order/auth/member/pricing/script changes and no production config mutation. Other-store styles and existing dynamic branding remain untouched. Local Node24 scope/asset/branding/public-route tests10PASS, mounted daily public/member tests2PASS; broad fulfillment import initially unavailable Prisma generation, not functional failure. Frontend build in progress. Require full Node20 CI and ordinary guarded exact release; hosted desktop/mobile NOT TESTED. No order/payment/stock/fiscal/settings writes. Preserve retained autofill/mobile/DAILY/other owners.

19/10/2026 — KAT-BRANDING-01 / ASSIGNED BEFORE SOURCE

Owner feat/kat-olive-orange-branding-20261019. Explicit user asks only public KAT online site to match approved olive/orange ΚΥΛΙΚΕΙΟ KAT cards/logo. Independent visual scope; retained autofill/mobile, DAILY, ordering and all other owners unchanged. Preserve search/category reset, catalogue/prices/member/checkout/stock/fiscal and store isolation. Baseline1bc1c9f; existing public HTML/manual/autofill checkpoint reviewed. Existing configurable brand primary/secondary/logo require durable HTTPS asset; logo is currently circle-cropped. Plan additive KAT-only visual override/logo asset and existing KAT settings branding update only, no other commercial setting change. No source or production config edits yet. Status NOT TESTED; require full CI and normal guarded release, then read-only public desktop/category/search inspection. No order/payment/member/product/stock action. Checkpoint CHECKPOINTS/CHANGES/2026-10-19-kat-olive-orange-branding.md.

19/10/2026 23:05 Europe/Athens — SUPPLIER-ADVANCE-01 / ASSIGNED BEFORE SOURCE

Owner fix/supplier-advance-20261019. Explicit new owner requirement: actual supplier disbursement may exceed selected invoice allocations; retain invoice caps and recognize the remainder as supplier advance, never miscellaneous expense. Independent scope from retained supplier declaration/readability, supplier reassignment, credit-note and central evidence owners. Existing invoice allocation overpayment denial remains protected; this expands total disbursement only. Source entry StoreSupplierOpenInvoicePayment and bounded supplier-settlements route/review projection plus new isolated service/tests; no OCR/stock/fiscal/auth/license changes.

Read-only Diadoxou19Oct evidence: two open-invoice allocations74.33+96.71=171.04 at20:17, current invoice14452 payment522.79 at20:17:43 and OTHER_EXPENSE6.17 at20:23:48, total700.00; all cash-shift deductions active. Existing171.04 settlement PENDING_REVIEW. No existing payment replay/approval or correction performed. Existing6.17 reclassification needs explicit audited once-only association retaining

original amount/time/shift and unchanged cash, not a new disbursement; design/acceptance NOT TESTED. Do not silently confirm171.04 or infer whole supplier debt from these rows.

Preserve Gate5 qualified PASS, pending-review/no-document policy, proof verification, valid invoice allocations/current store and tenant ownership, stable retry/once-only cash and bank effects, cancellation and reversal semantics. Source PR2889 implements the bounded flow; local Node20 focused22PASS/0FAIL/2native infrastructureSKIP and frontend/TABLE_SERVICE build PASS. Native full CI/release/measured LAB remain required. No production transaction or6.17 correction yet. New total input with explicit remainder acknowledgement; positive exact-cent total >= allocations, allocations never exceed actual invoice residual. Pending advance remains pending, confirmed supplier ledger includes actual full payment. Pure advance and future allocation without new cash must be explicit scoped operations, not hidden automatic deductions. Require mounted tests and real isolated PostgreSQL atomic/replay/concurrency/rollback/foreign scope/control checks, full PR/main CI then ordinary guarded exact healthy release and measured LAB acceptance. No real production payment/stock/fiscal mutation for diagnostics. Status USER FAIL existing total limitation / new behavior NOT TESTED; no CI-only manual PASS. Checkpoint CHECKPOINTS/CHANGES/2026-10-19-supplier-advance.md. Owner retained until completion or named handoff.

20/10/2026 00:54 Europe/Athens - VOICE NATURAL SALES CSV LIMITED LIVE PASS / WHOLE OPEN

Retained owner codex/assistant-business-queries-20261015. Pre-source claim PR2906 merged adb5b0d4fe2d6036e7f923669df5e84083c915dd before code. Source PR2911/head884a5006843d9b6beb60859b4855f56c541fd100, full PR CI39326635381 SUCCESS3530PASS/0FAIL/0SKIP plus8backup, merged3c47be598fdd6be78a274c5a523b08412d468769 with exact mainCI39327705958 SUCCESS3545/0/0 plus8backup. Combined exact main CI39328665510 SUCCESS3594/0/0 plus8backup; ordinary guarded workflow39330143576 SUCCESS; Render dep-dbb8vvbncjis738veivg LIVE; independent healthy revision f2a3b79a145f7f80331280384066ec78c29ec230. Reviewed bounded runtime/test blobs match. No direct deployment or guard bypass. Local Node20 suite3289PASS/0FAIL/187environmentSKIP, frontend/TABLE_SERVICE build PASS; 14 focused new regressions include actual Owner/Platform fresh-read/replay/revocation. CI is separate technical proof.

ACTUAL LIMITED LIVE PASS: normal personal Platform SuperAdmin, existing desktop Chrome, explicit Diadoxou only/all-storesOFF, current-day new product conversation with explicit17Oct question as necessary setup. Typed exactly 'Σε CSV' after that fresh valid answer. Initial00:52 attempt in yesterday's archived thread correctly asked for report/period because the existing server history day fence excludes prior-day dialogue context; visible archived prose is not current evidence. This is a protected history control, not a new unread-source regression. No history/day-fence source was changed. New canonical product evidence and actual downloaded CSV retain the latest period and exact native product, matching independent original completed/nonCREDIT signed source before and after, including reversal and displayed quantity/gross/net/VAT. Newest17Oct versus stale18Oct precedence has automated coverage; this actual format retest verifies explicit17Oct retention in same-day context, not a new cross-date dialogue. CSV native bytes parsed UTF8BOM/semicolon/ten columns; private SHA3241adf0ea2fb0d23fe265d1dcefae6dd6a3a59b851aa666a79efd17445a7360. No commercial rows/amounts/operators/exports/screenshots published. This supersedes only19Oct23:55 natural product CSV no-read FAIL. Earlier product/date/button and transfer/history/consumption/cola/four-format limited PASS remain protected.

Strict format-only sales continuation now requires a first-round read and exact resolved current period before canonical I/O. No-tool provider still yields the safe unread-source refusal; invalid/missing/unknown/mixed context, normal questions, permissions, coverage/ambiguity/reversals, call caps and signed fresh replay remain unchanged. No financial/stock/fiscal/shift action or original transaction replay. Other formats have focused automated coverage; no new actual six-format or Owner claim is inferred. The existing CSV creation-time label displayed h24 near midnight; only report period/business fields are accepted here, not general midnight timestamp presentation.

Whole VOICE and printedNo30/Tracker32 remain OPEN/ASSIGNED to the same owner. Remaining actual normal Owner parity/history/files/role context, mobile/touch, physical speech when available, broader domain completeness/recorded offers and missing beer-category numerical acceptance are NOT TESTED here. Owner has no microphone; no microphone request. Completed decorated-product and typed CSV corrections are removed from pending. Single next action: continue only the remaining normal-context acceptance when available, preserving all existing results; no duplicate protected transaction/test. Checkpoints2026-10-19-assistant-diadoxou-acceptance and2026-10-20-assistant-sales-export-read; manual super-admin/PASS; redacted evidence assistant-diadoxou-20261019/acceptance.json. Other owners retained.

20/10/2026 00:01 Europe/Athens - VOICE PRODUCT FOLLOW-UP LIVE PASS / NATURAL SALES FILE LIVE FAIL / ASSIGNED BEFORE SOURCE

Retained owner codex/assistant-business-queries-20261015. Actual normal personal SuperAdmin access returned after the user's retry; no login/token/grant/bypass performed.19Oct23:54-23:56, Diadoxou only/all-storesOFF, retained original failed product thread: exact same short17Oct question now returns checked native name+SKU, quantity/gross/net/VAT and recorded reversal, matching independent original completed/nonCREDIT/signed source before and after. Visible search still contains NAME (SKU CODE), exercising the repaired path. Actual CSV button on that successful answer reauthorizes/replays and produces parsed UTF8BOM/semicolon/ten-column original-source-matching bytes; private SHAefe493122c47a9742190bbcc7c28c0a55d9f350c4fb26cd9bc195d7bc65bab0a. This closes only PR2887's demonstrated decorated-product failure. Brief support-session denial was real and subsequently cleared through normal access; its cause remains unknown, not an app-code regression claim.

Health before was1cccecd1a1777a6ac9ff5c5bba42fbfde470fe69, after0484d636059eedb936e8bea1159b05c6c00bf0d2 due independent KAT release. All five reviewed assistant runtime/test blobs are unchanged in both. Do not assign one SHA retrospectively to the entire interval. Own PR/main3489/0/0+8, combined1cccecd/main39320123491 3514/0/0+8 and ordinary guarded39321219511/LIVEdep-dbb80ng473hc73dk7e40 remain release proof. Private CSV shared-file copy did not synchronize; actual downloaded bytes were read and parsed in their native browser runtime, not transferred by alternate means. First natural CSV download observer timed out; no file-success inference.

NEW ACTUAL LIVE FAIL19Oct23:55: after the correct product/date answer, typed 'Σε CSV' returned the safe unconnected/unread-source refusal, no file. This differs from the successful CSV button and earlier transfer-format PASS. Local read-only diagnosis: generic refusal is the requireEvidence branch in assistant-answer-response.js when a completed provider answer contains no tool read. Shared runOwnerAssistant currently uses tool_choice:auto even for a strict format-only sales continuation, allowing that terminal no-read response. No provider failure, dirty data, permission or server-log cause inferred; unrelated module-denial logs are not attributed to this request. Existing safety refusal remains protected, never replaced with cached/prose amounts.

ASSIGNED BEFORE SOURCE fix/assistant-sales-export-read-20261020, same retained owner. Bounded causal scope ONLY new pure server/src/services/assistant-sales-export-read.js; import and shared runOwnerAssistant first-round tool-choice + pre-read exact-period gate regions in server/src/services/owner-sales-tools.js; new focused pure/actual dispatcher/Owner/Platform reader tests. No provider/model/key, route/schema/auth/module/tenant/catalog/history/export ticket/file renderer/stock/business source or other-owner edits. For strict current format-only request with recognized sales-only inherited topic and valid resolved period, require a permitted sales tool on first provider round, then enforce that period before actual canonical read. Leave missing/invalid/mixed/unknown-context and ordinary requests on existing clarification/refusal path. No extra arbitrary tool, invented date/product identity, all-store expansion or trust in historical amounts. Reauthorization, matching/coverage/caps/finite values/reversals/fresh signed export replay and existing max rounds/read limits remain.

Publish this claim green to main BEFORE source. Reproduce actual no-read first response in real shared/Owner and Platform execution; prove strict-only activation, exact current period, no wrong-domain/period read, missing/invalid/unsupported refusal, provider-disobeys-required safe failure,

fresh evidence/export and pre/post authorization. Full exact PR/main/native/browser CI, ordinary guarded exact healthy release, then only the demonstrated natural sales-format follow-up and actual file/source comparison. Do not repeat protected product/transfer/history/consumption/cola/PDF/DOCX/XLSX/financial transactions. Whole VOICE OPEN/ASSIGNED; actual normal Owner/mobile/physical/wider residual retained. User has no microphone, no request. All real amounts/rows/operators/exports/screenshots private. Product receipt CHECKPOINTS/CHANGES/2026-10-19-assistant-diadoxou-acceptance.md; NEW causal checkpoint CHECKPOINTS/CHANGES/2026-10-20-assistant-sales-export-read.md. Single next action after green claim: failing actual no-read fixture, then bounded source correction. Other owners preserved.

19/10/2026 23:54-23:56 Europe/Athens - VOICE DIADOXOU READ-ONLY BATCH / PRODUCT FOLLOW-UP LIMITED LIVE PASS / WHOLE OPEN

Retained owner codex/assistant-business-queries-20261015. SourcePR2887 final5db929d133baf960b3d7cff7bb9a934293c627c3/fullCI39316947048 SUCCESS3489PASS/0FAIL/0SKIP plus8backup, mergedc17b6605e970dc47478c7314a6ccff3b20d9f562. Exact mainCI39320123491 SUCCESS3514/0/0 plus8backup; ordinary guarded workflow39321219511 SUCCESS, exact healthy revision1cccecd1a1777a6ac9ff5c5bba42fbfde470fe69. Reviewed runtime/test blobs independently checked. No direct deploy or guard bypass. First PR run39316288566 was superseded/cancelled after registry-only reconciliation; not claimed green.

ACTUAL LIMITED LIVE PASS at23:54-23:56: existing personal SuperAdmin desktop Chrome, explicit Diadoxou/all-storesOFF, real reload and same retained product conversation. The short17Oct follow-up now returns the existing exact product and correct ended-day quantity/gross/net/VAT against independent original completed/nonCREDIT/signed sales. A fresh product CSV also matches the checked current period/identity/source. This supersedes22:53 decorated-label false no_match and this slice's AWAITING CI/release/retest wording only. Actual Owner execution is not inferred from shared code or CI. No sale/payment/stock/fiscal/shift action or original business replay.

ADDITIONAL LIMITED LIVE at23:06-23:14: exact health was not sampled at each additional answer; preceding verified revision was a6902d149624d0f687dbe2e906f852eb501c7ee7, later health before final release reports e3432c2b3f6c8a890bbe52b61a0270ee06bc9899. Do not assign an exact intervening revision retrospectively. Current recorded-stock answer matches the before-query source and distinguishes it from physical count. Later source differs during active real trading; no frozen after-state or causal/global stock delta is claimed. Original13Oct daily consumption request now returns native POS event item lines, recorded operators/Athens timestamps/quantities/reference values matching independent original events; actual UTF8BOM/semicolon eight-column CSV parsed and source-matched (private digest69a5094ef7edb6d3401383cce735ed79de55132a2cc05a64aa990fb211c4af55). Natural Greek Coca-Cola family11Oct returns each real variant separately, all displayed values/quantities and total matching independent sales. Beer12Oct has no matching native product/category label in this company catalog; actual response lists recorded categories and explicitly refuses zero-sales inference. This is a catalog-limit observation, NOT numerical beer acceptance or permission to remap all alcohol. No catalog changes.

Protected actual22:41-22:53 PASS remains: transfer original rows/direction/date/source, personal history reload/fixed expiry/empty-selection withdrawal, latest-filter CSV/XLSX/PDF/DOCX bytes and rendered Greek documents, cancellation without late UI answer at measured point, natural yesterday total and all displayed product-group reconciliation, precise product name. Earlier source/preparation records below are historical. Real rows, commercial amounts, operators, exports and screenshots remain private; only redacted results enter repository.

Whole VOICE OPEN/ASSIGNED. Remaining grouped normal Owner parity/history/file/role acceptance, mobile/touch/physical microphone and broader domain completeness/recorded offers remain NOT TESTED here; missing catalog category remains an explicit limitation. No new microphone request: owner has no microphone. Do not repeat protected successful transactions/tests for paperwork. Next action: the newly assigned natural sales-file no-read correction in the latest claim; keep same owner until completion or named handoff. Checkpoint CHECKPOINTS/CHANGES/2026-10-19-assistant-diadoxou-acceptance.md;

manual docs/manual/super-admin/PASS.md; redacted CHECKPOINTS/EVIDENCE/assistant-diadoxou-20261019/acceptance.json. No full-module/numbered closure.

19/10/2026 22:58 Europe/Athens - VOICE DIADOXOU LIMITED LIVE PASS / PRODUCT FOLLOW-UP LIVE FAIL / BOUNDED CLAIM

Retained owner codex/assistant-business-queries-20261015. User19Oct22:39:46 explicitly requested real-store Diadoxou read-only acceptance instead of LAB and confirmed because it has real data. Existing same personal SuperAdmin session became visible through ordinary canonical navigation; no credential entry, alternate auth workaround, token read or grant. Actual cloud Chrome/tab1, exact Diadoxou/all-stores-OFF, public independent health a6902d149624d0f687dbe2e906f852eb501c7ee7. Financial/stock/fiscal/payment/shift actions were not performed; only authorized assistant questions/personal history and file downloads. Active trading means no unrelated financial before/after invariance is claimed.

LIMITED LIVE PASS22:41–22:53: ended01–18Oct OUT-transfer report matches independent original source row dates/direction/amount/description/operator and aggregate; after real reload, same personal historical prose/dated labels/fixed18Nov expiry restored without old evidence/files. Short FROM-owner follow-up retains period and correctly reports no matching source rows. Explicit11Oct OUT replaces date/direction, then short CSV and natural PDF preserve latest filters. Actual CSV parsed with BOM/semicolon/nine columns; XLSX native numeric cell, DOCX native text and rendered page, and separately generated PDF text/render match the checked source. Empty store withdraws all history/report/files and disables composer; same-store selection restores only its prose. Explicit cancellation shows cancelled notice, no late answer before next question and no archived new thread at the measured post-cancel metadata observation; this does not assert no server/provider work. Natural yesterday total sales and precise product-name sales match independently queried signed/completed/nonCREDIT source. All rendered product groups match at displayed cents/quantity/name after whitespace normalization; original raw name digest differs only because display whitespace collapses. No unsupported all-domain/security/physical/Owner acceptance inferred.

ACTUAL LIVE FAIL22:53: date-only follow-up to a successful real product query changes requested day correctly but extracts a display-decorated name plus parenthesized SKU, so literal report search returns no_match despite independently verified source sales for that exact item/day. Private failed DOM/screenshot and actual reports retained outside public repository. Public fixture/evidence is redacted; commercial amounts, operators, rows and exported files are not published. This overrides general product follow-up acceptance only; protected transfer/history/export/specific-name/total-sales PASS remains.

ASSIGNED BEFORE SOURCE: fix/assistant-sales-decorated-query-20261019, same owner. Bounded causal scope ONLY new pure helper server/src/services/assistant-sales-product-query.js; literal query construction/shared productSalesEvidence matching regions in owner-sales-tools.js; sales_by_product query argument/import in platform-assistant-products.js; new focused pure/actual-reader regressions. No dispatcher/period interpretation, other product matching modes, stock, all-store, source SQL/business rows, provider/model/key, role/module/tenant/auth or lifecycle/native/central assignment takeover. Publish this claim green to main before source.

Proposed exact behavior requires reproduction: only strict trailing NAME (SKU CODE) decoration can use NAME as canonical read filter, then accept an exact native name+SKU pair. Preserve exact literal full-name matches first, ordinary SKU/name searches, ambiguity, missing/foreign/incomplete/malformed source refusal and reauthorization. Never strip arbitrary parentheses/qualifiers, trust assistant prose as identity, broaden to all products or accept name-only/SKU-only mismatch. Export replay uses identical checked adapter. Cover both actual Owner and Platform readers, current source metadata/period, both pair mismatches, duplicate ambiguity, literal decorated catalog names, coverage and transport/revocation controls. New full exact PR/main CI and ordinary guarded release precede actual same-context17Oct retest; no repeated sale or protected financial fixture.

Whole VOICE OPEN/ASSIGNED. Remaining actual Owner parity/role tests, mobile/touch/physical microphone and wider domain residual retained; user lacks microphone, no permission requested. Single next action after this green claim: reproduce strict decorated-pair FAIL locally, implement bounded

helper/adapters, require focused/native/full CI and actual same-store/day source comparison. No final whole PASS. Checkpoint CHECKPOINTS/CHANGES/2026-10-19-assistant-diadoxou-acceptance.md; redacted evidence CHECKPOINTS/EVIDENCE/assistant-diadoxou-20261019/acceptance.json. All other owners and concurrent records preserved.

20/10/2026 - CENTRAL-SUPPLIER-SHORTFALL-01 / LIMITED LAB UI-CSV PASS / POSITIVE CASES OPEN

Central owner codex/central-four-streams-20261018 remains. New actual read-only acceptance20Oct22:32-22:36Athens (snapshot2026-10-20T19:32:08.012Z), authenticated Platform SuperAdmin, MYWORKSTATION LAB / ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ / storecmtpopbgo000trhb5ng9ytiru, cloud desktop tab4. Canonical normal navigation positively verified the existing signed-in session; no new credentials were requested. This supersedes earlier unknown-login/AWAITING LAB only for the tested cases below, not the entire feature.

LIMITED LAB PASS: new REVIEW_REQUIRED filter shows11negative-recorded-stock rows and actual CSV11unique products across all filtered pages,38columns,10118bytes/SHA256a3d6fd22ba619928a3baf4e07e896300785c04b6ab97ce27b98cd46330c7d991. All11 have null/empty recorded gap, NEGATIVE_RECORDED_STOCK and physicalVerificationNO. WaterSKU2269 stock-71/min0,sales22/returns4/net18/daily0.6/proposal77 displays the new review/negative-stock label; original product fields match between exports. The19Octproposal82 is protected dated evidence under a different rolling window, not repeated or expected to equal77.

ALL with only-neededOFF shows101rows; actual CSV101unique products,75646bytes/SHA2564f0e59d405dec10a39a26a423e50f6dc3966227230eb33ad88ad9e3b863f2b71, same store/snapshot,90NO_SHORTAGE+11REVIEW_REQUIRED, physicalVerificationNO throughout. Product columns15-31 of all11review rows equal their ALL-export counterparts. Actual SKU00580/7UP1.5L stock0/min0/proposal0 shows Χωρίς καταγεγραμμένο έλλειμμα; this certifies the recorded-minimum comparison only, not available physical stock. BELOW_MINIMUM and DEMAND_REPLENISHMENT filters each showed0rows and disabled CSV: EMPTY-CASE PASS ONLY, no positive case inferred.

Adjacent independent health at19:32UTC wasoktrue/f813ea5edf6621cd0ad0cdd6cb50d2719b03dd24; all3runtime supplier blobs exactly match reviewed source#2946. Its verified technical release/full native CI remains as recorded in#2969. No transactional sale/return/payment/order/stock/settings/email action or accepted LAB replay was performed. No claim of independently measured full database/financial deltas. No new FAIL observed. Browser snapshot/JPG and redacted structured evidence: CHECKPOINTS/EVIDENCE/supplier-stock-shortfall-20261020/lab-acceptance.json, lab-verified.jpg; manual docs/manual/commerce/PASS.md; checkpoint CHECKPOINTS/CHANGES/2026-10-20-supplier-stock-shortfall.md. Scoped PDF lab-tracker.pdf regenerated; concurrent common PDF retained.

Remaining OPEN with central owner: real positive below-minimum and demand-replenishment cases (absent from this LAB snapshot), other roles/stores/mobile, physical inventory/source correctness, genuine deliveries/comparable cost/margin, weekly stock history and any actual order/report delivery. Do not replay the accepted negative/no-recorded-gap/CSV/empty-filter cases merely for paperwork. Next single action: coordinate an independently identified available positive read-only acceptance case; do not mutate shared LAB quantities to manufacture it. Automatic report dispatch staysOFF pending retained-owner production contracts.

20/10/2026 - CENTRAL-SUPPLIER-SHORTFALL-01 / TECHNICAL RELEASE VERIFIED / AWAITING LAB

Retained central owner codex/central-four-streams-20261018, source branch codex/supplier-stock-shortfall-20261020, #2705/#2527. Claim #2945 was reviewed and green merged before source. Source #2946 exact head0808c71d0d3da04a68cc5e9ceec9973e9f6d580b reviewed, green and merged asd8142d55c376574f6a0b6ab35b611a2dc3bdcc97. This receipt supersedes older NOT MERGED, NOT INSTALLED and AWAITING CI descriptions below for this bounded slice only; historical evidence remains preserved.

Technical PASS: PR CI39431207932/build118656937874 all5jobsSUCCESS,3668serverPASS/0FAIL/0SKIP+8backupPASS. Exact combined main CI39432574573/build118661509900 all5jobsSUCCESS,3669serverPASS/0FAIL/0SKIP+8backupPASS. Real isolated native PostgreSQL supplier HTTP/SQL parent and all5subcases executed, including producer/JSON classification, original flat quantities/source-table fingerprints, tenant/license/role denials and overflow; all11new producer->group->JSON->UI/filter/CSV contract cases executed unskipped. Mounted UI/CSV and ordinary/offline wholesale checks passed. Local30PASS/0FAIL/1native-infrastructureSKIP remains separate historical local evidence, not native/LAB acceptance. Initial setup/fixture failures and pre-merge CSS review correction are retained; historical first-head CI39430718110 was cancelled after head replacement, not a product FAIL.

Actual ordinary release verified20Oct13:52UTC: workflow_run guard39433587658/deploy118664772862SUCCESS, pinned trigger13:49:27.6081997Z and exact healthy revision13:52:42.7190523Z. Renderdeploydep-dbbn2pss728c7390ij50LIVE, finished13:52:34.431512Z, commitd8142d55c376574f6a0b6ab35b611a2dc3bdcc97; independent no-cache /api/health returnedoktrue exactsameSHA. Previous healthy rollbackac39d0fb/dep-dbbmn5rncjis7398fgv0. No manual deployment or guard bypass. This is a dated installation observation, not a claim that production cannot advance subsequently.

Installed behavior: recorded minimum-stock gap versus demand replenishment or review, supplier-only filters, separate metadata inside original stock cell, original5tablecolumns and first32CSVcolumns retained with6appended metadata columns. Original proposals, supplier proxy/ties/cap and flat endpoint unchanged. No base producer/routeSQL/auth/licensing/schema/margin/supplier assignment/stock/financial/order/transport changes. Existing19Oct11row actual UI/CSV PASS, including recordedstock-71/proposal82, remains protected and was not repeated. New classification does not certify physical stock or historical weekly shortage.

Actual new UI/filter/CSV acceptance remains AWAITING LAB. Native secure sign-in request was interrupted; no successful login or new LAB observation is inferred. No new manual/numbered-list closure. Owner remains central. Next single action: establish a verified normal authenticated session and perform only the added read-only LAB classification/filter/CSV acceptance, without replaying accepted financial/stock actions. Automatic report dispatch remains OFF pending retained-owner production consent/lifecycle/schema/transport contracts. Scoped tracker PDF: CHECKPOINTS/EVIDENCE/supplier-stock-shortfall-20261020/release-tracker.pdf; common PDF retained under the recorded concurrent-publication rule. Checkpoint: CHECKPOINTS/CHANGES/2026-10-20-supplier-stock-shortfall.md.

20/10/2026 - CENTRAL-SUPPLIER-SHORTFALL-01 / SOURCE IMPLEMENTED / AWAITING CI AND LAB

Owner codex/central-four-streams-20261018, branch codex/supplier-stock-shortfall-20261020, #2705/#2527. Before-source claim #2945 head d2130c9a, independent review PASS and CI39429002928 all5 SUCCESS (3652 server/0FAIL/0SKIP +8 backup), merged21b265ae30518b64bd3239c98379b2684e3a8b9b before edits. Checkpoint: CHECKPOINTS/CHANGES/2026-10-20-supplier-stock-shortfall.md.

Exactly8 central-delegated paths: server/src/lib/supplier-order-groups.js, server/test/supplier-order-groups.test.js, server/test/supplier-order-groups-postgres.test.js,

client/src/components/commerce/OrderSuggestionsPanel.jsx, client/src/components/commerce/supplier-order-proposal-export.js, server/test/supplier-order-groups-ui.test.js, server/test/supplier-order-proposal-export.test.js, server/test/supplier-stock-shortfall-contract.test.js. Adds recorded minimum-stock gap classification independently of demand replenishment; supplier-only filter and visible labels, six appended CSV columns after the original32, same applied snapshot/all filtered pages. Missing/invalid/negative stock remains REVIEW_REQUIRED; tiny positive gaps are not displayed as zero. Original quantities, default rows, supplier proxy/cap/ties, flat endpoint and existing columns remain protected. No base producer/route/SQL/CSS/auth/licensing/schema/margin/supplier assignment/stock/financial/order/transport changes; retained owners unchanged.

Technical local evidence Node20.20.2: integrated30PASS/0FAIL/1native PostgreSQL SKIP because no local PostgreSQL; the native case is NOT RUN locally and must execute unskipped in full CI. Actual producer -> grouping -> JSON -> shared UI/filter/CSV and mounted download/reset/stale-response tests are covered. Initial partial-checkout missing CSS/zod/Express and one contradictory test fixture are retained in evidence with corrections; they are not product/LAB FAIL. Existing19/10 actual11row UI/CSV PASS, including stock-71/proposal82, is protected and not repeated.

Status: source implemented locally, not yet merged/installed; full required CI/review/normal guarded release pending. New UI/filter/CSV scope AWAITING LAB; no new real PASS, no manual/numbered closure. Dispatch OFF. Next action: review exact source, require full CI including native PostgreSQL without skip, merge and verify exact ordinary release; then new read-only acceptance only. Scoped regenerated tracker PDF: CHECKPOINTS/EVIDENCE/supplier-stock-shortfall-20261020/source-tracker.pdf; common PDF retained under existing concurrent-publication rule.

20/10/2026 - CENTRAL-REPORT-CASH-PAYLOAD-01 / TECHNICAL RELEASE VERIFIED / DELIVERY ACTIVATION OPEN

Retained owner codex/report-cash-payload-20261020 and central coordinator codex/central-four-streams-20261018 (#2704/#2527). Source PR#2922 final integrated head134a2a530b134169ac19d4a0d1238b9b7a6893b3 green/reviewed, merged c417d58d2751792ec3ec491f25c53581330adb61. Original before-source claim#2919/CI39378635258/mergedd1f2f3b2 preceded both new files. This receipt supersedes historical SOURCE BLOCKED, AWAITING FULL CI, NOT MERGED and NOT INSTALLED entries below for this bounded source increment only. Earlier failures and actual PASS remain preserved.

Technical PASS: exact integrated PR CI39417260089/job118609437298 and exact main CI39418394373/job118613240288 each all5jobsSUCCESS,3636serverPASS/0FAIL/0SKIP plus8backupPASS. All14 new payload tests actually executed without skip, including actual DAILY/WEEKLY/MONTHLY producer->JSON->payload,6 Athens DST cases, scope/settings/period/day/session/cents/monthly identity fences, deterministic UTF8/SHA256 and bounded/private metadata refusal. Existing native PostgreSQL delivery persistence parent and all11subtests PASS unskipped on main. Local Node20.20.2 34/0/0 remains separate evidence, not native/LAB/inbox acceptance. Independent exact remote review verified the two unchanged source/test blobs and no occupied source takeover.

Actual normal release verified: guarded workflow39419369668/deployjob118616263103 SUCCESS, pinned c417d58d2751792ec3ec491f25c53581330adb61, actual hook trigger and exact healthy result at2026-10-20T12:07:45.1489067Z. Renderdep-dbblheon74is73d3h4dg LIVE finished2026-10-20T12:07:41.22209Z. Independent no-cache public /api/health request in12:07UTC returned ok:true/version0.22.0+kat-test-pos and the same exact revision. Prior healthy2dc9c8829578d388272f0a2cfd330a32ee4921a0 / dep-dbbl5non74is73d2fm3g remains rollback evidence. No manual deploy, startup override, schema push, secret change or guard bypass.

Exact module SHA256ab1c3fc128f2f182bcc1bd0eef6b1f019baa5de0452d9426e9f105ab81a7ee7e/blobfaa574c1566cbe3f0e493d6bead2a5017f8df2c6; test SHA256016cd65ad9dcba4cf2a9cfbbb1bf8038cf167f4f938103f9e3cdb9165700b855/blob0d7493b771caf2caab9393cb1d5d87224d9c22db. Only these two new runtime/test paths were introduced. Other-owner KAT import/unit/auth, POS loading/payment/myDATA, Android voice, wholesale and current accepted records preserved. Source evidence and scoped PDFs

remain auditable.

The old whole-CI FAIL39379328574/job118484757813/artifact12244299880 is not erased or relabelled PASS. Retained wholesale owner fixed effective disabled-fieldset actionability in#2927; receipt#2932 and our fresh PR/main actual-app E2E now independently pass all stages. No repeated click, timeout increase, removed assertion or production UI change by this coordinator. Root did not edit wholesale ownership paths. The separate aggregate-input memory review finding was fixed before original source publication with4MiB UTF8 key/value budget,256byte keys, early1000collection and2MiBbody bounds; no new unresolved payload FAIL.

Installed source remains UNWIRED: canonical provisional body/hash only. It preserves original day/POS/STORE-versus-DELIVERY amounts and recorded-opening-user/unattributed identities with explicit Greek limitations; it does not prove current source authenticity, authorization/consent or financial reconciliation. No production table provisioned by this increment, recipient Save/verification/activation, email/SMTP send, scheduler, financial/stock/fiscal/shift/payroll mutation or accepted LAB transaction/test replay occurred. No LAB/LIVE/USER feature PASS, manual addition or whole cash-report/task closure is asserted. Dispatch stays OFF.

Four-stream status: #2705 limited supplier UI/CSV and scoped advance allocation#2910 remain protected; broader margin/comparable units/physical receipt/invoice residuals remain with owners. #2706 comparison/hourly/CSV remains protected; paid-vs-accrual, stable identity/dedup/date/source completeness and actual staffing sources remain OPEN. #2707 has no new AI acceptance since the already recorded limited product/date/typedCSV#2894; retained Owner/mobile/physical/domain residuals remain OPEN. Separate Android voice technical release does not become AI/microphone/device/signing acceptance. No takeover or repeated accepted business test.

Next single action: resolve the already published retained-owner production integration contracts in#2704 (authoritative verified recipient/consent/dispatch versions and revocation, reviewed schema/lifecycle/retention/backup, consistent lock ordering, payload retention/reissue and positive one-recipient transport acceptance) through an explicit bounded claim before any activation. Those are genuine remaining integration requirements, not supplied by pure payload consistency or READY previews. This bounded payload implementation/release is complete; central and residual ownership remains assigned until completion or named handoff. No new user decision is needed for this verified technical release.

Checkpoint CHECKPOINTS/CHANGES/2026-10-20-report-cash-payload.md; machine evidence CHECKPOINTS/EVIDENCE/report-cash-payload-20261020/release-verification.json and regenerated release-tracker.pdf. Four canonical registries are synchronized; scoped tracker follows established concurrent-publication convention and preserves other owners' common PDF/manual/actual PASS records.

20/10/2026 - CENTRAL-REPORT-CASH-PAYLOAD-01 / INTEGRATION RESUMED AFTER OWNED CI FIX

Retained owner codex/report-cash-payload-20261020 and central coordinator codex/central-four-streams-20261018 (#2704/#2527). Resume source PR#2922 after reading current main2dc9c8829578d388272f0a2cfd330a32ee4921a0, complete canonical registries, AGENTS, relevant checkpoints/manuals and intervening history. Original before-source claim#2919/greenCI39378635258/mergedd1f2f3b2 remains valid. No new source behavior or owner takeover.

The former required-CI blocker is positively superseded, not erased: retained wholesale owner corrected effective inherited-fieldset :disabled actionability in test-only#2927, preserving all assertions/no timeout increase/no production UI change. Finalhead1e7934236a5e42ae710986830ef522c8f1875a22 fullCI39381968343 SUCCESS; merge4e732c2d45eeffeb1a81b7099e90447a4ac9bb76 exactmainCI39382797465 all5jobsSUCCESS3614serverPASS/0FAIL/0SKIP+8backup, actual offline-app E2E executed. Guard39383434126 and Renderdep-dbbh223rjlhs73e8f6hg verified that source. Receipt#2932/checkpoint2026-10-20-wholesale-offline-app-e2e.md records exact evidence. Earlier failed run39379328574/job118484757813/artifact12244299880 and bounded diagnosis remain protected history in the handoff below.

Normal merge of current main into the existing source branch preserves ALL concurrent KAT importer/unit/auth, POS loading/payment/myDATA, Android voice and other-owner source/records. Reuses unchanged reviewed payload module blobfaa574c1566cbe3f0e493d6bead2a5017f8df2c6 and testblob0d7493b771caf2caab9393cb1d5d87224d9c22db. Independent current-main review confirms producer/policy/core/settings/schema/mail/lifecycle/backup contract unchanged since the original source. Preserve original source evidence files and add this scoped current tracker snapshot; no common PDF/manual replacement.

Existing technical evidence remains localNode20 34/0/0 and original PRbuild3618/0/0+8backup,14newpayloadtests executed. These results do NOT certify this new integrated head. Fresh full required PR/main CI, independent exact diff review and ordinary guarded exact deployment are required before installation can be reported. No accepted LAB test, business transaction, recipient Save or mail send is repeated. No new feature/manual PASS.

Payload remains unwired: deterministic canonical UTF8 provisional body/hash and scope/period/settings/session/cent/monthly-summary checks only. It cannot authenticate supplied source or prove fresh authorization/consent, financial reconciliation or permission to send. Production recipient/consent/verification/version/revocation, schema/lifecycle/retention/backup, consistent lock ordering, payload retention/reissue and SMTP acceptance contracts remain OPEN with retained owners. Dispatch stays OFF.

Next single action: run the corrected full integrated PR CI, review the exact tree, then normal merge and exact full main CI/guard/live-health verification. If any new FAIL occurs, preserve and diagnose it within ownership; do not bypass checks. Four canonical registries/checkpoint updated; scoped integration-tracker.pdf generated from fresh tracker under the documented concurrent-publication convention. This supersedes earlier SOURCE BLOCKED status only for the now-proven fixed wholesale dependency; payload is still NOT MERGED/NOT INSTALLED pending new evidence.

20/10/2026 09:23 Europe/Athens - CENTRAL-REPORT-CASH-PAYLOAD-01 / SOURCE REVIEWED / CI BLOCKED HANDOFF

Retained owner codex/report-cash-payload-20261020 and central coordinator codex/central-four-streams-20261018 (#2704/#2527). Claim#2919/head64be66d2e6f0d44f8dec197718134a92f7bc8b58, CI39378635258 SUCCESS, merged d1f2f3b2dac33f76b039e5fba17b06887955f4c4 BEFORE either new file. Source#2922/head204aad0bf3b33b4b5f2581469779cff8763dfb20 is implemented and independently reviewed but NOT MERGED/NOT INSTALLED. Exact new source paths ONLY server/src/services/automatic-report-cash-payload.js and server/test/automatic-report-cash-payload.test.js. No receiving owner transfer/release is implied.

PASS evidence: final Node20.20.2 local34/0/0 (14new actual producer->JSON->payload plus20protected source/policy/weekly/monthly). PRCI39379328574 build-and-test/job118484757823 SUCCESS3618server PASS/0FAIL/0SKIP plus8backup PASS; all14 new payload tests actually executed unskipped, full build/native/HTTP/browser/security tests in that job green. Windows/preflight/classification green. Whole required workflow is FAIL because wholesale-isolated-lab/job118484757813 FAILED; never equate the green build job to green whole CI.

NEW FAIL preserved: actual-app wholesale offline E2E at server/e2e/wholesale-offline-app-flow.mjs:66 timed out at encrypted preparation,06:18:16UTC. Actual checkout a0ae3f3 merges payload204aad0b into current wholesale1498b279 (#2920), so stale checkout was ruled out. Preceding ordinary isolated wholesale browser flow passed10 checks; new offline flow recorded zero completed checks and failed BEFORE local draft/order steps. Artifact12244299880, ZIP SHA2561815ae0faa586c3f9e295a295693f856e8719cb13db4a424c70d5a3bf00d86c5, contains results and FAIL screenshot. Independent artifact review: password still filled/no alert or busy; prepare() clears it on entry. Likely test actionability race: asynchronous profile loading disables parent fieldset while helper checks only button.disabled, not effective :disabled. This is a bounded diagnosis, NOT a proven fix or production failure. Logs/triage published to retained wholesale owner on#2920/#2922/#2527. Root did not

edit owned wholesale/CI paths, rerun to hide failure, weaken checks or merge/deploy the blocked source.

Payload contract: deterministic canonical UTF8 JSON/body SHA256, exact selected scope/settings/day/period/session/count/cent and monthly-opening-user fences; original day/POS/STORE-versus-DELIVERY differences remain PROVISIONAL with fixed Greek no-reconciliation/no-liability disclosures. Actual producer Date and JSON forms agree; private extras omitted. Deep detached/frozen. Review-found aggregate-input memory gap fixed BEFORE publication by4MiB UTF8 keys/values,256byte keys, early1000collection limits and2MiB body; regressiongetterCalls0. Module SHA256ab1c3fc128f2f182bcc1bd0eef6b1f019baa5de0452d9426e9f105ab81a7ee7e/blobfaa574c1566cbe3f0e493d6bead2a5017f8df2c6; test SHA256016cd65ad9dcba4cf2a9cfbbb1bf8038cf167f4f938103f9e3cdb9165700b855/blob0d7493b771caf2caab9393cb1d5d87224d9c22db. No DB/transport/recipient/scheduler/repository creation or runtime wiring. Source authenticity/current authorization/fresh consent and financial reconciliation are not proven by payload consistency.

Production remains last independently healthy f2a3b79a145f7f80331280384066ec78c29ec230 / Renderdep-dbb8vvbncjis738veivg at this page's20Oct09:10 read. No new source installation claimed. DispatchOFF and all previous actual PASS protected; no LAB/payment/stock/fiscal/shift replay. #2705 scoped supplier allocation#2910 retained; margin/comparable delivery identity remains OPEN with owners. #2706 prior sales/hourly/CSV retained; paid/accrual/identity/dedup/staffing sources remain OPEN. #2707 stale issueheader corrected to ALREADY RECORDED limited product/date/CSV LIVEPASS#2894; wider Owner/mobile/physical/domain acceptance remains retained-owner OPEN. Redundant receipt#2913 closed in favor of published#2916, evidence preserved.

Single next action: retained wholesale owner confirms/fixes actionability race in its claimed E2E; then reconcile latest main into#2922 preserving all owners and these exact reviewed payload blobs, require full green PR/main CI and normal guarded exact release. Until then HOLD. Separate production eligibility/consent/verification/version/revocation, schema/lifecycle/retention/backup, lock-order and transport acceptance contracts remain blocked/requested in#2704 before any delivery activation. No additional owner decision requested and no background execution promised after this handoff.

Checkpoint CHECKPOINTS/CHANGES/2026-10-20-report-cash-payload.md; evidence CHECKPOINTS/EVIDENCE/report-cash-payload-20261020/ci-blocked-handoff.json and handoff-tracker.pdf. Four canonical records synchronized with a regenerated scoped PDF under established concurrent-publication convention, preserving current common PDF/manual/other-owner records. No new feature/manual PASS or whole-task closure.

20/10/2026 09:06 Europe/Athens - CENTRAL-REPORT-CASH-PAYLOAD-01 / ASSIGNED BEFORE SOURCE

ASSIGNED codex/report-cash-payload-20261020, retained central coordinator codex/central-four-streams-20261018 (#2704/#2527). Independent new files ONLY server/src/services/automatic-report-cash-payload.js and server/test/automatic-report-cash-payload.test.js. Baseline a9d6359911d1378712f67e5f13e99f8b9c9be97f. Existing AUTO-REPORTS runtime/settings/source/mail, schema, lifecycle/backup, supplier, Workforce and VOICE owners remain unchanged. Publish this claim green on main BEFORE creating either new source/test file.

Bounded implementation: pure deterministic payload builder consuming the actual existing readAutomaticCashPreview response, explicit company/store/settings version, exact period/frequency/source fingerprint and ready/complete fences. Retain original day/POS/STORE-versus-DELIVERY rows/amounts and monthly recorded-opening-operator limitations; strict canonicalization, checked cents, immutable detached output and UTF-8 payload SHA256. Reject HOLD/incomplete/foreign/stale/malformed input, inconsistent rows/totals/monthly summaries and financial-finality escalation. Fixed explicit Greek PROVISIONAL disclosure; READY is source readiness, never employee liability or financial reconciliation certification. Pure existing policy/date exports may be reused. No DB/schema/clock/transport/recipient/scheduler/repository creation or runtime wiring.

Meaningful tests: actual source producer -> JSON wire response -> new builder for DAILY/WEEKLY/MONTHLY and Athens DST; deterministic identical bytes/hash, original evidence/unknown identity preservation, tenant/store/version/period/source consistency, malformed or unsafe input and HOLD/finality refusal. Existing policy/source tests remain unchanged. Native PostgreSQL coverage is not claimed by this pure slice; require focused Node20, independent review, exact full PR/main CI and ordinary guarded release before any installation claim. No financial/stock/fiscal/shift/email action or replay of prior LAB. New payload is NOT IMPLEMENTED/NOT TESTED and no feature/manual PASS.

Production integration dependency blocker positively identified, not bypassed: AutomaticReportSettings supplies configuration/version and dispatchEnabled:false; responsibleEmail/cashCloseEmailEnabled do not provide authoritative verified recipient/consent revision. AutomaticReportDeliverySlot lacks reviewed production schema/lifecycle/backup enrollment. safe-prisma-push skips production DDL. Current mail helper omits accepted/rejected recipient evidence. Coordinate authoritative consent/verification/dispatch records and revocation, schema/ownership/retention/recovery, consistent lifecycle/auth/settings/recipient/slot lock order, payload retention and one-recipient transport classification with retained owners before activation. readEligibility must derive trusted facts inside its transaction, never echo input assertions.

Preserve #2883 limited daily/weekly/monthly HOLD/control/supplier/sales CSV PASS, #2909/#2916 technical repository release with11native PASS, #2910 scoped supplier allocation and newest VOICE LIVE observations. Fresh read-only four-stream audits found no new financial FAIL or released margin/payroll/VOICE scope. #2707 old AWAITING product/CSV status is superseded by retained-owner recorded scoped actual PASS (#2894); whole module remains OPEN.

Next single action after green claim: implement ONLY the two new files, review and execute tests; dispatch remains OFF and production integration remains blocked on the named owner contracts. Checkpoint CHECKPOINTS/CHANGES/2026-10-20-report-cash-payload.md. Root alone updates canonical registries/checkpoint and regenerated scoped claim PDF under CHECKPOINTS/EVIDENCE/report-cash-payload-20261020/, following the concurrent-publication convention; do not replace another owner's common PDF or manual.

20/10/2026 01:06 Europe/Athens - CENTRAL-REPORT-DELIVERY-PERSISTENCE-01 / TECHNICAL RELEASE VERIFIED / DELIVERY STILL OPEN

Retained owner codex/report-delivery-persistence-20261020; coordinator codex/central-four-streams-20261018 (#2704/#2527). Source PR #2909 merged c5b751db49858e9cf3437e844cce6c5344473056 after green before-source claim #2903 (merge19e7644f046a03dd8e149095e008712982594bad). This receipt supersedes the historical SOURCE PREPARED / AWAITING NATIVE FULL CI and pending-installation statuses below for this bounded increment only.

Technical PASS: PR CI39325922089 and exact source main CI39327214192 each 3531 server PASS/0 FAIL/0 SKIP plus8 backup PASS. Integrated3c47be598fdd6be78a274c5a523b08412d468769 CI39327705958:3545/0/0 plus8 backup. Actual deployed f2a3b79a145f7f80331280384066ec78c29ec230 CI39328665510:3594/0/0 plus8 backup, all5 jobs SUCCESS. All11 native PostgreSQL repository subtests actually executed and PASS without skips, including independent-client create/CAS races, tenant/store isolation, literal parameter binding, eligibility rollback, post-SQL pre-commit failures, reconnect/UNKNOWN fences, terminal acknowledgement, corruption refusal and unchanged control tenant. Local25 PASS/1 infrastructure SKIP is historical local evidence, not the native proof. Reconnect is a database CLIENT reconnect test, not a PostgreSQL-server restart or SMTP crash/inbox test.

Installation verified: normal guarded deploy39330143576/job118326018997 SUCCESS; exact target f2a3b79a145f7f80331280384066ec78c29ec230, Render dep-dbb8vvbncjis738veivg LIVE finished2026-10-19T21:50:59.473712Z. Guard observed exact healthy revision2026-10-19T21:51:06.3278155Z; independent /api/health request at22:05 UTC returned ok:true and the same revision. Previous healthy0484d636059eedb936e8bea1159b05c6c00bf0d2 remains rollback evidence. Earlier freshness guards39328246953/39329319340 correctly skipped older targets; those skips

are not installation. Later documentation main3b727d1f51716f18ae68b1376f214b9087d0a1bd is not substituted for the observed deployed source.

Repository Gitblob c9ff006bb1f2eefba5fb1f39bc283fae20fc43ac; native test7ef8f7d4e49a59ea4f63aae299a33ae9cd135395. Independent review confirmed exact repository, lifecycle core and both tests unchanged on deployed f2a3b79a. No transport or runtime wiring was added.

Boundaries: dormant injectable metadata persistence is installed as source only. This increment did not provision a production table, change schema/bootstrap, activate SMTP/scheduler/recipients, write financial records or replay LAB transactions. Production table/schema authority, lifecycle/retention/backup/privacy, real authorization/consent/revocation and consistent lock ordering, report payload persistence, scheduler/overlap/reissue, financial reconciliation and controlled delivery/inbox acceptance remain OPEN with retained AUTO-REPORTS/mail/lifecycle/backup owners. No LAB/LIVE/USER feature PASS or whole Task14 closure is asserted; manuals and accepted PASS remain unchanged.

Four-stream reconciliation: #2705 retained owner has published scoped hosted supplier-advance allocation LAB PASS (#2910), cashDelta0, without repeat disbursement; do not replay it. Broader margin/comparable units/physical receipt remain OPEN. #2706 preserves accepted comparison/hourly/CSV; paid-payroll vs accrual, identity/dedup/date boundaries and staffing-source acceptance remain OPEN. #2707 includes deployed #2911 sales-file follow-up source; actual retained-owner acceptance remains required. No takeover of these scopes.

Next single action: coordinate a separate bounded production-integration claim with retained runtime/schema/lifecycle/backup owners before any activation; keep dispatch OFF. This bounded source claim is complete; central coordination and residual owners remain assigned. The temporary source-merge coordination window from issue#2527 comment6277844311 is CLOSED after healthy release; normal independent owner work may continue.

Evidence: CHECKPOINTS/CHANGES/2026-10-20-report-delivery-persistence.md; CHECKPOINTS/EVIDENCE/report-delivery-persistence-20261020/release-verification.json and release-tracker.pdf. Scoped PDF follows the documented concurrent-publication convention: regenerated from this exact fresh tracker, while preserving other owners' common PDF and actual PASS publications.

20/10/2026 - CENTRAL-REPORT-DELIVERY-PERSISTENCE-01 / SOURCE PREPARED / AWAITING NATIVE FULL CI

Retained owner codex/report-delivery-persistence-20261020 under central coordinator codex/central-four-streams-20261018 (#2704/#2527). Before-source claim#2903 finalheadf0c0cf702a2b4136ec5fa67e4c871821ee1325f3, docsCI39324706458 SUCCESS, merged19e7644f046a03dd8e149095e008712982594bad before either new file was edited. New dormant repository and native fixture/test only; existing lifecycle core and all runtime/schema/bootstrap/mail/settings/source/backup/lifecycle owners untouched.

Implementation: dependency-injected interactive Prisma transactions, parameterized selected-company/store/slot SQL, PK conflict reconciliation of immutable snapshots, canonical JSON and SQL projection validation including lossless bigint version, row locks plus exact version/status/token/prior-JSON CAS, named existing-core transitions, fresh trusted injected eligibility inside create/start, and mutation receipts only after outer transaction resolves. No schema creation/import/global Prisma/env/clock/transport/activation/retries or generic record replacement API. Production table is NOT provisioned.

Exact Node20.20.2 local run25PASS/0FAIL/1 infrastructure SKIP (22 protected core +3 new boundary/constructor tests); all11 native subtests remain NOT TESTED locally. Portable PostgreSQL18.4 binaries were found but this sandbox exposes only mapped UID0; ordinary runuser/setuid nonroot startup was unavailable. No bypass/shim, server or DB access occurred. Full CI isolated PostgreSQL16 must execute native fixture unskipped before merge. Dedicated cryptorandom schema, independent clients and own-schema cleanup isolate native concurrency/create/CAS/scope/hostile binding, stale-token/recovery, gate refusal/throw, write-before-commit rollback, client reconnect persistence/ATTEMPTING expiry UNKNOWN, exact terminal acknowledgment and SQL/JSON corruption checks. Client reconnect is not an

actual database-server restart or SMTP crash/inbox proof.

Module SHA256fb303807ee833e6ab38368b94de0108070f358c88a163eddcd4bac0675cf6c8b (blobc9ff006bb1f2eefba5fb1f39bc283fae20fc43ac); test SHA256d069e35ed7a4425cf5c34804390e47918c68af93776550e566ec05f3b9c9cb88 (blob7ef8f7d4e49a59ea4f63aae299a33ae9cd135395). Independent review found no source blocker; actual native/full PR/main CI and ordinary guarded exact release still required.

Automatic delivery remains OFF/OPEN. Real consent/authorization/lifecycle lock integration, production migration/manifest/backup/retention, scheduler/overlap/reissue, SMTP and financial reconciliation/actual delivery remain separately owned OPEN. Existing limited LAB/CSV PASS and newer supplier/KAT/VOICE receipts preserved, no repeated business tests or new LAB/LIVE/USER/manual PASS. To avoid overwriting concurrent real PASS PDF receipts, retain current shared PDF and publish regenerated source tracker snapshot under this scope's evidence per existing concurrent-publication rule. Root only updates unique persistence claim location and checkpoint/evidence. Next: execute full native CI; fix actual failures within these two paths, then verify exact integration/release without activating dispatch. Checkpoint CHECKPOINTS/CHANGES/2026-10-20-report-delivery-persistence.md.

20/10/2026 - CENTRAL-REPORT-DELIVERY-PERSISTENCE-01 / ASSIGNED BEFORE SOURCE

ASSIGNED - codex/report-delivery-persistence-20261020, retained central coordinator codex/central-four-streams-20261018 under #2704/#2527. Independent new dormant persistence subtask follows released pure lifecycle core #2885/receipt#2898. Exact new files ONLY server/src/services/automatic-report-delivery-repository.js and server/test/automatic-report-delivery-repository-postgres.test.js. Existing AUTO-REPORTS runtime owner codex/automatic-reporting-20261016, settings/source/mail/lifecycle/backup/schema owners and all other assignments retained; no existing source/core/manifest/schema.prisma/bootstrap/workflow edits. This claim must be green merged on main BEFORE either new file is edited.

Bounded contract: dependency-injected Prisma transaction repository, explicit company/store/slot predicates, unique stable slot INSERT and immutable-snapshot reconciliation, named lifecycle transitions delegated to existing pure core, bigint-safe version/token/status/previous-record CAS, canonical stored-record validation, fresh injected eligibility reader within create/start transaction, commit-before-return start receipt and no automatic transaction retries. No generic save/replacement API or transport callback. No module/global Prisma/env/clock/DDL/SMTP/route/scheduler imports or activation. Required table contract is created ONLY by isolated test fixture; production migration/lifecycle manifest/retention integration remains separately owned and OPEN. Injected eligibility is not proof of actual authorization or lock-safe revocation.

Required isolated native PostgreSQL tests: independent concurrent clients unique create/CAS winner, duplicate snapshot conflicts, stale version/token/reused token, company/store controls and hostile parameter binding, gate refusal/throw, transaction failure after write before commit rollback, persisted CLAIMED/reconnect recovery, persisted ATTEMPTING/reconnect expiry UNKNOWN/no auto resend, ACCEPTED reopen/idempotent exact acknowledgment and conflicting terminal refusal, corrupted SQL/JSON fences and no import/constructor DDL. Local missing native DB is infrastructure SKIP, never PASS; full native CI must execute all native cases unskipped. Restart/crash-window simulation is not SMTP crash or inbox-delivery acceptance.

Protected evidence: core22 focused PASS, integrated full mainCI39320123491 3514+8 PASS, guarded healthy1cccecd1 release, previous limited monthly/HOLD/control/supplier/sales UI/CSV PASS. Do not repeat accepted LAB/business actions. Current persistence NOT IMPLEMENTED/NOT TESTED; automatic delivery remains OFF/OPEN. No production DB/table/migration, financial/stock/fiscal/shift/payroll/recipient/email write or manual deploy. Checkpoint CHECKPOINTS/CHANGES/2026-10-20-report-delivery-persistence.md. Next after green claim: implement ONLY the two new files, independently review and require exact full PR/main CI and ordinary guarded release; no new manual/LAB PASS from technical tests.

19/10/2026 23:48 Europe/Athens - CENTRAL-REPORT-DELIVERY-CORE-01 / TECHNICAL RELEASE VERIFIED / AUTOMATIC DELIVERY OPEN

Retained central coordinator codex/central-four-streams-20261018 and bounded core owner codex/report-delivery-core-20261019. Source PR#2885 is technically integrated in exact main revision 1cccecd1a1777a6ac9ff5c5bba42fbfde470fe69. Full main CI39320123491 SUCCESS: 3514 server PASS/0FAIL/0SKIP +8 backup PASS, all5jobs green, including native PostgreSQL, browser/HTTP/invariants and Windows. Independent release review confirms unchanged reviewed module/test blobs463f541d930bbab12c2c027d4f7158256d800c7a/eb08aa8442db2e0c7f7181e6c97274af0caedb37. Focused core22 tests and final PR CI39317383179 remain valid technical evidence.

Ordinary guarded deployment39321219511 SUCCESS. Render deploy dep-dbb80ng473hc73dk7e40 became live at2026-10-19T20:47:07.182627Z (23:47 Athens). Independent public /api/health returned ok=true, revision1cccecd1a1777a6ac9ff5c5bba42fbfde470fe69, version0.22.0+kat-test-pos. Guard logs verify pinned trigger and exact healthy revision. Previous healthy e3432c2b remains rollback provenance. The earlier jobless cancellation/403/workflow_dispatch release blocker is SUPERSEDED by this later full-source main CI and ordinary deployment; no manual workflow, login, guard bypass, dummy source edit or manual deploy was needed. Current receipt baseline0484d636 contains newer KAT branding source; that later source has its own CI/release and is not certified by the1cccecd1 receipt.

This is technical release verification only, NO new LAB/LIVE/USER feature PASS. Pure lifecycle core remains unwired: no durable SQL outbox/CAS, transport/SMTP, scheduler, recipient consent or activation was added. Actual automatic sending remains OFF/NOT TESTED. ACCEPTED means transport acceptance only; UNKNOWN/ACCEPTED must not auto resend. Operational duplicate/crash guarantees and financial reconciliation remain OPEN. A small runtime log sample contains inactive-module denials also observed before release; it is not complete error clearance or report-module failure evidence. No licensing settings were changed.

Existing #2883 limited monthly HOLD/control,11row supplier UI/CSV and sales/hourly/CSV PASS are protected and not repeated. No financial/stock/fiscal/payment/shift/payroll/recipient mutation or email was performed by the coordinator. Supplier advance and AI product-follow-up code are included in this release, but their actual acceptance remains with retained supplier/VOICE owners. All Task14/Task29/inbox/Workforce/native/wholesale/KAT and AUTO-REPORTS assignments remain intact.

Next bounded implementation requires its own published claim coordinated with retained AUTO-REPORTS/mail/lifecycle owners: durable exact-slot uniqueness and transaction CAS, fresh consent/scope/lifecycle/authorization gates, persisted attempt before I/O, native concurrent/crash/revocation tests with injected synthetic transport. Keep real dispatch disabled until separate reconciliation/SMTP/scheduler and actual acceptance criteria pass. No new owner decision is required for this verified technical release. Checkpoint CHECKPOINTS/CHANGES/2026-10-19-report-delivery-core.md; evidence CHECKPOINTS/EVIDENCE/report-delivery-core-20261019/release-verification.json. Central ownership retained until completion or named handoff.

19/10/2026 — CENTRAL-REPORT-DELIVERY-CORE-01 / ASSIGNED BEFORE SOURCE

Retained central coordinator codex/central-four-streams-20261018 assigns independent new pure lifecycle core codex/report-delivery-core-20261019 under #2704/#2527, baseline b48ff544cebe4e5befe3abc25e56638742719459. New files ONLY server/src/services/automatic-report-delivery-lifecycle.js and server/test/automatic-report-delivery-lifecycle.test.js. This is an additive metadata-only safety model, NOT an implemented durable outbox/worker or permission to send. Existing AUTO-REPORTS orchestration/settings/source/mail/worker/schema owners remain retained and untouched; no takeover or parallel edits. Root owns shared records/checkpoint/PDF.

Implement deterministic one-recipient logical slot (company/store/report type/frequency/exact UTC exclusive period/normalized recipient), immutable snapshot/version fences stored separately from uniqueness; changed source/settings cannot silently create a second send. Explicit injected time, expected version and unique lease token fence claims/attempts. Persist-before-I/O adapter contract; expired pre-dispatch claim may reclaim, expired started attempt becomes UNKNOWN. ACCEPTED means transport acceptance only, never inbox delivery; ACCEPTED/UNKNOWN are never automatically retried. Fail closed on missing/stale current consent, tenant/store/lifecycle/license/module/principal/settings/recipient/source/policy assertions; READY never certifies financial reconciliation and PROVISIONAL remains explicit. No transport, DB, schema, route, scheduler, env, clock, random or financial writer import; no runtime wiring.

Current evidence: prior limited LAB previews/CSV from #2883 retained; true durability/concurrent SQL/SMTP acceptance NOT TESTED. New core ASSIGNED/NOT IMPLEMENTED/NOT TESTED. Require this claim green merged before new source, then isolated edge-case tests, independent review, exact full PR/main CI and safe ordinary release discipline. No new manual PASS from unit tests. Actual duplicate/crash safety requires later transactional durable adapter and transport-specific tests; no exactly-once inbox guarantee. Original14 and automatic delivery remain OPEN, actual sending disabled, no recipient or business mutation/replay. Checkpoint CHECKPOINTS/CHANGES/2026-10-19-report-delivery-core.md. Next single action after green claim merge: implement the two new unwired files and execute isolated adversarial tests.

19/10/2026 22:27 Europe/Athens - HISTORY FLAG ACTIVATED / EXACT LIVE RELEASE / NORMAL-APP ACCEPTANCE OPEN

Retained owner codex/assistant-business-queries-20261015 continues the same VOICE assignment at the user's explicit request to final PASS. Prior narrow transfer/activation approval21:03:26Athens, claimPR2867 and sourcePR2872 remain authoritative. Source final3645062a6816480b591916157b6a498fd3c96f97 merged3fe46f01e553e0280ac928a17754abc813629922. Exact PRCI39304048090 attempt2/build118238285962 and mainCI39305802059/build118244306478 SUCCESS3468PASS/0FAIL/0SKIP plus8backup; native activation/access and mandatory checks executed. No repeat of completed tests.

ACTUAL production: ordinary prior release dep-dbb6i8gn74is73bpscr0 provisioned the archive19:05:34.408543Z (availabletrue/createdtrue), manifest216e5de83f80ae9f869314501febe7021dce4689e822c60f576736d8a7891aff. Read-only information_schema confirms11 reviewed columns; pg_indexes confirms primary scopeKey and partial expiresAt/scopeKey index. Compatible backup deploy dep-dbb6hqm1egvs73b1i7u0/revision6490840eeb079539fec1ca78296ac55909a4759f LIVE; scheduled history cleanup COMPLETED19:10:22/19:15:32UTC. Fresh production runtime metadata observed19:26:28.302463Z reports COMPLETED/checkedAt19:25:29.518647Z/current manifest/compatible worker. No MAC/key read or independent cryptographic verification in Work; the real application must verify the signed readiness itself.

APPROVED single-key merging configuration update19:22:39UTC sets ASSISTANT_HISTORY_ENABLED=true on existing srv-d9isenfavr4c73bdh52g in confirmed My Workspace. replacefalse preserves all other variables; no credentials retrieved. Its automatically triggered configuration deploy dep-dbb6rvom7kps73catpfg became LIVE19:26:05.976249Z at a6902d149624d0f687dbe2e906f852eb501c7ee7. Independent public no-cache health after LIVE reports oktrue/version0.22.0+kat-test-pos/exacta6902d149. Startup19:24:43.008519Z reports availabletrue/createdfalse/same manifest. Compare3fe46f01..a6902d149 contains documentation/evidence/PDF only, no runtime differences; latest docs CI39309151681 correctly skips build, not a substitute for exact full source CI above. No separate deploy trigger, manual SQL, guard bypass or business/test transaction. Existing production start command and its normal startup work were unchanged.

This is verified configuration/release evidence, NOT normal authenticated history/LAB/manual/whole VOICE PASS. Current cloud browser inventory has only about:blank, no inherited authenticated tab. Retain prior

credential-state auto-review restriction: no alternate-tab/privateHTTP/token/credential workaround. No new microphone request; user has no microphone. Post-release general module-disabled log entries are not attributed to the assistant or described as clean global logs.

GROUPED remaining acceptance: actual personal selected-store Owner and SuperAdmin history capture/reload/close-reopen, cross-scope withdrawal and server readiness; exact new short-follow-up CSV after changed direction/date/actor plus XLSX/PDF/DOCX bytes against canonical current source; cancellation/late results/mobile drawer and outstanding domain/source/ambiguity limits. Existing direct-question CSV USER PASS, two original LAB movement-line reconciliation, name filter and guidance/desktop controls remain protected without replay. No live reset of old conversations, financial/stock/fiscal/shift/payroll/grant/settings action for acceptance. Technical native expiry/reset/recovery proof is separate from real UI acceptance. Thirty days is archive visibility, not erasure of historical full backups.

Whole VOICE OPEN/ASSIGNED; no manual PASS added or numbered closure. Next single action: restore permitted normal authenticated application access, then execute only the remaining grouped read-only acceptance and publish actual measured outcomes. Evidence CHECKPOINTS/EVIDENCE/assistant-history-activation-20261019/receipt.json. This receipt synchronizes checkpoint/ACTIVE/KAT/README/tracker/pending and PDFs; all other owners retained.

19/10/2026 — COORD read-only acceptance batch / LIMITED LAB UI PASS

Retained central owner codex/central-four-streams-20261018, #2527/#2704–#2707. User restored normal SuperAdmin access; no authentication bypass. Existing LAB only, actual monthly HOLD/control isolation, ended-period sales/hourly UI and actual supplier/sales CSV observed. Monthly details below. Sales12Oct versus11Oct:5.00/0.00/delta5.00, zero-base percentage explicitly undefined;17vs16Oct0/0. Canonical3productgroups/5unique sales/0reversals;hourly18/19/22/23UTC+03 counts1/1/1/2, PIECE quantity5; actual3-rowCSV same store/products/unit/quantity/gross5.00. Supplier snapshot19Oct19:20:03.157Z,30/7/3,11filteredproducts/page1of11; actualCSV exports11unique rows/allpages/sameLAB/snapshot/reviewYES/autoSendNO. All11unassigned without approved-document evidence; visible water500ML row quantity82 matches CSV. PROXY is not physical-delivery truth or a primary supplier assignment.

LIMITED LAB UI/CSV parity only. Independent SQL/prior-zero-source truth, nonzero/negative comparison basis, DST/caps/overlap cause/positive supplier selection/otherroles/devices remain NOT TESTED. No whole requirement or original14 closure; payroll/staffing/margin, reconciliation, worker/outbox/SMTP/actual sending and broader AI remain OPEN. Latest independently checked AI exact-mainCI39305802059 SUCCESS3468/0/0+8; history activation receipt#2878 remains OPEN/HOLD, retained VOICE owner. No source change/install/manual deploy, business/stock/shift/settings/recipient/order/email mutation or accepted transaction replay.

Checkpoints: CHECKPOINTS/CHANGES/2026-10-19-central-monthly-hold-ui.md, 2026-10-19-central-sales-ui-acceptance.md and 2026-10-19-central-supplier-ui.md; hashed actual evidence and limited automatic-reports/reports/commerce manuals synchronized. Only the described monthly HOLD and UI/CSV acceptance subcases are retired; all wider residuals and unrelated owners preserved. Next bounded work: remaining actual source/role/cap acceptance and separately claimed safe mail lifecycle, with no fabricated READY day or live send. Documentation CI/review/merge required for administrative publication.

19/10/2026 — COORD monthly HOLD / LIMITED LAB UI PASS

Retained central owner codex/central-four-streams-20261018 (#2704–#2707/#2527). Actual authenticated canonical SuperAdmin read-only LAB MONTHLY preview: October bounds 01Oct07:00→01Nov07:00 exclusive/Athens, 13 source shifts/settings version1, explicit HOLD and PROVISIONAL; control N40 has zero configured terminals, save-first/preview disabled and no leaked MAIN/result. No group tables/operator aggregate observed. Only MONTHLY HOLD/interface-isolation subcase is accepted; READY totals, reconciliation, employee liability, cap/exact overlap, worker/outbox/SMTP/delivery, other roles/devices remain OPEN/NOT TESTED. No Save/send/business action or transaction replay; earlier daily/weekly PASS not repeated. Later health revision3fe46f01e553e0280ac928a17754abc813629922 is separate availability evidence, not per-action telemetry. Receipt CHECKPOINTS/CHANGES/2026-10-19-central-monthly-hold-ui.md and machine evidence; limited automatic-reports manual synchronized. Administrative publication/CI/merge pending; owner and unrelated scopes retained.

19/10/2026 22:09 Europe/Athens — PLATFORM-OWNER-GROUPS-01 / LIMITED LIVE PASS / CLOSED

Independent owner feat/platform-owner-groups-20261019 completes the approved owner-button UI scope only. Supersedes this scope's earlier NOT TESTED/AWAITING CI/release and actual clipping FAIL; no wider Platform/company lifecycle, TODAY-04 or PLATFORM-COMPANY-LAYOUT-02 closure or other-owner release.

Claim PR2862 merged72c73cbc55d44b7a7ac40a527bc7d5e4a012e999 before source. Initial source PR2863/final16e843c82acc7027cbc5e0ef9718b5119f0dca21/full PR39298007775/3460PASS0FAIL0SKIP+6 mergedf3305f096eb7830f89483dda64f69271c9fb4535. Its source-main39299200148/job118221022847 passed3463/0/0+8; initial normal release and exact healthy f3305f0 showed correct grouping/search/management but actual smaller desktop geometry FAILED: group172px/content783px, list310/310, hidden cards. That failure remains recorded, not rewritten as PASS.

Causal follow-up PR2873 final e60c33fd2f5a5f8eb1b6a31897d4fd4507f06c5d/full PR39303554469/job118235073923 passed3463/0/0+8. Intrinsic max-content grid rows leave normal scrolling with the bounded list; singular owner counts corrected. Merged d3b993fa298247b951a071f16e8093a68fea8953 after green exact PR-head checks, resolving only shared active-record insertion while retaining concurrent native assignments and identical reviewed runtime/test blobs; GitHub PR2873 is merged. Its main39305035135 attempt1 passed3463/0/0, then Chromium Target.createTarget startup timed out before browser assertions/E2E; retry attempt2 was queued then cancelled by newer main, not counted as PASS. No browser check was disabled and no deploy guard bypassed. Abandoned synchronization PR2875 closed without merge.

Actual common release3fe46f01e553e0280ac928a17754abc813629922 retains all three follow-up source/test files byte-for-byte. Full native common-main CI39305802059/job118244306478 SUCCESS:3468PASS/0FAIL/0SKIP plus8backup, browser/HTTP/build/invariants/Windows green. Ordinary guarded deployment39307390799/job118247981848 pinned that revision; Render dep-dbb6i8gn74is73bpscr0 LIVE19:06:51.261248Z. Independent browser /api/health ok:true/version0.22.0+kat-test-pos/exact3fe46f01.

ACTUAL read-only LIVE acceptance22:07–22:09 Athens, Cloud Chrome browser1/tab3, existing Platform SUPER_ADMIN / canonical https://myworkstation-app.onrender.com/platform-admin. Fresh reload: two collapsed owner buttons; Niki3companies/3stores and LAB1company/3stores, total4companies/6stores before/after. Open Niki: DAILY BITE, Diadoxou and KAT only; LAB shows its own three named test stores and clears previous KAT detail. Accentless διαδοχου returns one matching company/store under Niki; clear and normal Ανανέωση restore all groups. Collapse/reopen and correct KAT management/AFM997261585 observed.

Measured inner viewport1363x936 (earlier failure note used nominal1366x926): list clientHeight310/scrollHeight921; expanded Niki group clientHeight783/scrollHeight783, no clipped nested content. Normal downward wheel reaches scrollTop611 with last KAT management button y700.89–750.89 wholly inside list y606–916; click opens correct KAT detail. Normal upward wheel inside the list returns

scrollTop0. Final screen has both owner buttons collapsed. Evidence CHECKPOINTS/EVIDENCE/platform-owner-groups-20261019/{acceptance.json,before-clipping.jpg,after-ready.jpg}.

No production company/owner/store creation, ownership reassignment, delete, permission/license, payment/stock/fiscal/shift submission or transaction replay. Financial/stock deltas not inferred. New-owner/company/store refreshed-prop appearance, same-name account separation and missing-owner category are mounted CI evidence; no real account was manufactured. Other actors, mobile, physical POS, maximum load and real new-account creation NOT TESTED. Manual contains only the observed central navigation flow. Pending removes only this completed independent scope; broader owners/PASS remain. Scoped owner released after this synchronized closure merges. Single next action for user: Ctrl+Shift+R in canonical Platform Admin, then click the intended owner's name.

19/10/2026 22:03 Athens - KAT DESKTOP LIVE PASS AND BACKUP UPLOAD/READBACK LIVE PASS

KAT PR2848/source19e6adcdf25fce65449b1f82f35c71808b61b3ac passed exactPR/main CI and ordinaryguard39297996180; Renderdep-dbb5ing473hc73cn7vt0 LIVE20:59:26Athens. Real Cloud Chrome21:00-21:01: all7categories after synthetic email reset PASS27/11/4/4/2/1/64; normal FREDDO5; /kat/ email-to-water4; basketempty. Physical saved-password autofill and new mobile acceptance remain NOT TESTED; prior owner mobile category PASS retained. Later independent health22:00 reports healthyf3305f096eb7830f89483dda64f69271c9fb4535; KAT HTML blobd42536b8d3329422811154de64fb31736856f396 is identical to accepted source, so no repeated transaction/test. Manualonline-delivery/PASS.md and acceptance.json/live-water.jpg record scope. No products/prices/stock/licenses/orders changed.

Backup PR2864/head4ac85dd45b23d8825bea359c19adf38ab88b37eb fullPRCI39297370367 SUCCESS3459/0/0 plus8backup; merge673f1ee1122f1ab09ec4041edeb1e51ae802f304. Its queued mainCI39298522324 was cancelled by newer shared main, never PASS. Combined mainf3305f096eb7830f89483dda64f69271c9fb4535/fullCI39299200148 SUCCESS3463/0/0 plus8backup. Current cron imaged3b993fa298247b951a071f16e8093a68fea8953 contains exact reviewed scriptblobfc1294d279e7707eefcb14a2769e614570504648; observed Renderdep-dbb6cfhjfumc73dcpcrg LIVE21:49:56Athens/triggerapi by independent work, not a deployment this page triggered. Other image changes/full exact image CI remain their owners; this PASS is bounded to the reviewed backup script and real archive below.

One explicit existing /backup/run-backup.sh in authenticated Render Web Shell: run20261019T185759Z-10226 started21:57:59 and SUCCEEDED22:00:12Athens,251288470bytes,SHA256 457fd2e71f9254fb02cb00c6dcd30b5c71aa736c3c3c910155c937f2e1ee53e9,TOCPASSED,errornull,revision d3b993fa. Independently downloaded SAME off-site object: actual SHA256 and byte size match, pg_restore--list readable with table entries, HeadObjectAES256, final REMOTE_ARCHIVE_READBACK_PASS22:03. Temporary readback copy removed, remote object retained. Before-action and after-action records/screenshots in CHECKPOINTS/EVIDENCE/kat-online-autofill-20261019/. Shell/monitor agree. Initial readback typing timeout occurred BEFORE Enter; partial line cleared and complete readback submitted once, no second dump or uncertain backup replay. Source-backed retry fault tests remain LOCAL/SYNTHETIC, not live S3 failure injection.

UPLOAD_FAILED repair and one real new-code full backup/upload/readback are CLOSED within this scope. No full database restore, new-code scheduled recurrence, forced production outage, store reset, financial/stock/fiscal/shift test or configuration/schedule/credential change. Existing wider Task18/disaster-recovery and lifecycle owners retained. Mobile/physical autofill residual remains assigned to KAT owner. Manuals/checkpoints/active/tracker/pending/PDF synchronized; no broader Gate closed. Secure Google sign-in held the tool for approximately47minutes; fresh Render UI positively verified before execution, credential values never read. No manual cron trigger or change of /backup/run-jobs.sh; that five-minute worker alone is not full backup proof.

19/10/2026 — WHOLESALE-LAB-01 / PUBLIC TEST LAB DELIVERED / LIMITED LIVE PASS

Retained owner codex/wholesale-suite-20261017; receipt branch docs/wholesale-isolated-lab-acceptance-20261019. Source PR2881 merged e3432c2b3f6c8a890bbe52b61a0270ee06bc9899 after full green PR CI39313589730; exact source-main full CI39314881160 all5 jobs SUCCESS (3481 server PASS/0FAIL/0SKIP plus8 backup; actual Docker/Chromium ten checks PASS). Claim PR2879 preceded source and state changes. CI evidence is separate from LIVE acceptance.

Public isolated HTTPS test lab: https://myworkstation-wholesale-lab.onrender.com/lab . New free service srv-dbb7fam7bikc73es2l40, deploy dep-dbb7fau7bikc73es2mhg LIVE20:06:36UTC, pinned e3432c2b / lab/wholesale-isolated-e3432c2b, auto-deploy off. Embedded disposable loopback PostgreSQL, generated fake identities/catalog only, TEST/nonfiscal documents, no production configuration/data/provider changes. Health exact revision/boot0c680151-20df-4d1f-8b52-0f19fe49cebf verified over HTTPS and Chrome. Restart clears all synthetic state. Provider default TCP health retained; custom Render HTTP health path was NOT configured.

LIVE Chrome Owner UI measured20:08–20:10UTC: real SUBMITTED order0→1, mixed quote35.00net/6.75VAT/41.75gross; virtual combined document0→1, virtual coffee100→98/juice80→77, receivable0→41.75; one simulated CASH payment10.00 gives receivable31.75, payment0→1/audit5→6. Explicit same-key replay leaves one payment, same ID, stock98/77, receivable31.75/audit6. Independent control store coffee777 baseline recorded. These financial/stock effects are SIMULATION ONLY; real production fulfillment/fiscal/accounting is not accepted. Live DOM before/after and exact API measurements are retained in CHECKPOINTS/EVIDENCE/wholesale-isolated-lab-20261019/; authoritative detailed checkpoint CHECKPOINTS/CHANGES/2026-10-19-wholesale-isolated-lab.md. Automated preview PNG is from exact-main CI, not a LIVE screenshot.

Independent LIVE HTTPS API acceptance20:17–20:20UTC PASS (software client, NOT browser UI): actual EMPLOYEE seller assigned store/customer only, other-store404; seller order f4c29f3b-f4e6-4d24-b327-4dc422190493 and same-key replay1→2→2 total orders. Actual customer Secure/HttpOnly/SameSiteStrict cookie and CSRF/publication/scope/Bearer denial verified; customer order64f9c86e-2a21-46c4-aef9-1933a0e2f1d4 and replay2→3→3. Missing CSRF403, cross-store403, mixed Bearer401, inactive seller403/no grants. Both request pairs leave the entire virtual ledger unchanged: one doc/payment, audit6, stock98/77/private25/zero50, receivable31.75; control state unchanged777, sameboot/source/outboundBlocked0. Existing authenticated TEST PDF downloaded over API, extracted and rendered: correct Greek rows/net35/VAT6.75/gross41.75/nonfiscal watermark. This does not assert hosted browser PDF or seller/customer UI acceptance. Evidence live-api-acceptance.json plus saved BEFORE bodies/keys and live-TEST-invoice-delivery.pdf.

Historical status superseded ONLY for role/catalog/existing-order display by the newer limited USER VISUAL PASS above. Hosted new quote/submission and browser PDF download remain NOT TESTED. Native browser credential restriction persists; no bypass or repeat of completed financial transactions. Same owner retained, no handoff/reassignment. Single next action when authorized browser runtime is available: resume only seller/customer UI and existing PDF read, with fresh role/store baselines; never repeat the completed Owner financial transaction. Whole production wholesale/site/field sales, real fiscal/stock fulfillment, durable offline and commercial standalone installer remain OPEN. Existing production Owner/nonmember PASS and all unrelated owners remain protected.

19/10/2026 21:18 Europe/Athens - WHOLESALE NONMEMBER TRANSITION / LIMITED LIVE UI PASS

Retained owner codex/wholesale-suite-20261017. The bounded nonmember seller transition is COMPLETE with actual read-only LIVE UI PASS; it supersedes PR2856 transition FAIL and this flow's earlier AWAITING CI/LAB only. Whole wholesale/site/field sellers/offline/commercial standalone package remains OPEN/ASSIGNED; no numbered item closed. Pre-source claim PR2858 green merged67e33c842; causal source PR2860 final review aa81233df4cbe8f5ed8a30f5c5fe50f8ff220c77 green merged a6fdbe0688631497ead8ce33fa761400f67db543. Only denial classification changed: valid paid personal nonmember is forbidden, never granted a principal; genuine invalid identity/company/license remains401. Shared session boundary/frontend and membership/assignment requirements unchanged.

Technical proof: actual mounted standalone/suite/boundary/SellerWorkspace baseline reproduced blank selected store (19PASS/3FAIL/0SKIP); corrected focused37/0/0, broader local131/0/7 native database NOT RUN locally, Node20 client build PASS. Full final PR CI39297164985/job118213239430 and exact source-main CI39298411196/job118217186138 each3462PASS/0FAIL/0SKIP plus6 backup tests and all browser/HTTP/build/invariant/Windows checks. Signed native HTTP verifies nonmember Owner403/no auto-enrollment/no audit/manager access retained, revoked session or disabled license401, inactive member order403. Source main release was correctly deferred by guard run39299498271/job118220740626 because newer common production source existed; no manual deploy or guard bypass.

Actual ordinary guarded release39300393127/job118223830539 pinned f3305f096eb7830f89483dda64f69271c9fb4535 at18:11:58.146UTC, exact healthy18:16:52.982UTC. This common revision includes PR2860; all four wholesale source/test blobs unchanged. Its full main CI39299200148/job118221022847 passed3463/0/0 plus8 backup tests and full checks. Independent public no-cache health before/after UI acceptance both oktrue/version0.22.0+kat-test-pos/exactf3305f096/curl exit0. Do not call a6fdbe068 itself deployed; f3305f096 is the measured runtime.

ACTUAL LIVE observation18:18:07.684-18:18:56.896UTC /21:18Athens, existing Cloud Chrome desktop/browser1/tab2, personal Υπεύθυνος Εργαστηρίου / MYWORKSTATION LAB / only ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ cmtpopbgo000trhb5ng9ytiru. Fresh manager screen shows existing B2B-TEST-001 customer. Existing membership list shows both users Χωρίς ενεργή ιδιότητα, including this Owner; no activation clicked. Twice opened Εργασία πωλητή: stable Απαιτείται ενεργή ιδιότητα πωλητή. Επικοινώνησε με τον διαχειριστή για ανάθεση. Exact outer store remains selected and navigation remains available. Twice returned through Χονδρική, site & αναθέσεις to existing customer management without reselecting store or relogin. Actual screenshot shows second refusal with exact selected store. Final browser left in customer management. This proves UI refusal/navigation stability, not an independently measured LIVE HTTP403 or exhaustive backend security. Native tests are separate technical evidence.

No LIVE module/license/membership/assignment/customer/account/site/order/price/stock/payment/fiscal/shift/schema/production SQL/migration/seed change performed. Existing user-managed module activation remains unchanged; no automatic deactivation/reactivation. Read-only test SKU/quantity/payment/operator shift/balances N/A; no financial/stock delta inferred and no other store opened as a control. Actual assigned EMPLOYEE/positive seller quote/order, portal/customer login/publication, durable offline/reload recovery/custom domain/commercial packaging remain NOT TESTED/OPEN. Existing qualified five-manager-screen and earlier limited PASS remain protected. Cosmetic layout/asset appearance is not a visual-polish acceptance.

Evidence CHECKPOINTS/EVIDENCE/wholesale-seller-denial-20261019/acceptance.json, technical.json and refusal-store-retained.jpg; no credentials or browser storage exported, membership emails omitted. Checkpoint CHECKPOINTS/CHANGES/2026-10-19-wholesale-seller-membership-denial.md; common ACTIVE/KAT/README/tracker/pending, relevant manual and combined tracker PDF synchronized. Completed bounded pending claim/transition-failure action removed; broader product remains assigned. All native/history/Platform grouping/central/lifecycle/backup/supplier owners preserved. Next single action prepare separately scoped remaining limited-seller/portal/order LAB acceptance with required identity, assignments and before/after evidence; no automatic access grant or transaction. Coordinator retained until named handoff.

19/10/2026 20:41 Europe/Athens — PLATFORM-OWNER-GROUPS-01 / ASSIGNED / NOT TESTED

Owner feat/platform-owner-groups-20261019. User approved screenshot-based mockup and automatic owner grouping. Independent additive owner accordion scope only: derive groups from existing owner IDs and current overview company/store data; click owner reveals their companies and named stores, preserve selected-company management, search, linked-owner guards, toolbar/sidebar and existing exact IDs. Same-name owners stay separate; unassigned companies remain explicit. New owners/companies appear from refreshed current data without manual buttons. No backend/schema/auth/license changes or production business writes. PLATFORM-COMPANY-LAYOUT-02 remains with feat/platform-company-layout-20261017 for its prior visual acceptance; no takeover of that wider scope or other owners.

Baseline 8a6c78dfe10b2232ad0e1a37265a2dab3882576e; current AGENTS, active/tracker/pending/numbered/manual and layout checkpoint/history reviewed. Existing layout source LIVE, prior visual acceptance AWAITING USER; new grouping NOT TESTED, mockup is not acceptance. Claim must merge green before source. Required: mounted grouped navigation/search/refresh/same-name/missing-owner/exact-action regression, full PR/main CI, ordinary guarded release and exact health, then actual read-only owner expansion. No company creation, ownership reassignment, deletion, payments/stock/fiscal/shift actions to manufacture evidence. Checkpoint CHECKPOINTS/CHANGES/2026-10-19-platform-owner-groups.md. Single next action after claim merge: implement bounded grouping and test.

19/10/2026 - WHOLESALE SELLER TRANSITION / BOUNDED CORRECTION CLAIM

ASSIGNED retained owner codex/wholesale-suite-20261017; implementation branch fix/wholesale-seller-membership-denial-20261019; claimed 2026-10-19T17:30:54.966651+00:00. Baseline main a8ae40b2d; source edits begin only after this claim is green merged. Checkpoint CHECKPOINTS/CHANGES/2026-10-19-wholesale-seller-membership-denial.md. PR2856 real personal Owner active five-manager-screen LIMITED UI PASS and nonmember seller transition LIVE FAIL remain authoritative. No new LAB PASS; local reproduction/correction/deploy acceptance NOT TESTED. Overall wholesale/site/field sellers/offline/commercial packaging OPEN.

Exact causal scope: distinguish a missing/inactive seller membership from an invalid personal session. Keep the existing membership-joined, paid-license, signed-identity, company and lock checks; only when it returns no row, independently revalidate the same personal session/paid entitlement and deny the nonmember with403 and a clear membership message. Invalid/expired/revoked/wrong-role/wrong-company/support sessions and disabled/expired license must still deny401. No global401 boundary relaxation, manager bypass, automatic membership/assignment/license grant, central store fallback, schema or production data change. A concurrent membership addition may conservatively require retry; no new access is authorized by the fallback.

Required regressions: exact nonmember403 plus genuine session/license401 in unit/native signed HTTP; actual mounted standalone app + shared boundary + actual seller workspace keeps exact selected store, stable refusal and return to management on403; genuine401 still clears private context. Preserve active assigned seller scope, immutable principal brand, tenant/assignment locks and expiry checks, A-B/A-B-A stale-result rejection, frozen uncertain order/retry identity/body, portal isolation, existing five manager tabs and inactive paid-module refusal. Full native CI and ordinary guarded release exact revision required. Then one read-only LIVE acceptance in existing personal LAB Owner, exact ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ: seller refusal, selected store retained, return to customer management, repeat bounded navigation. No grant or business transaction; SKU/quantity/payment/shift/balances N/A. Only after observed result synchronize manual/common records/PDF; CI alone remains AWAITING LAB.

Read current main history/new native-camera work; preserve native/history/central/lifecycle/backup/supplier owners and prior qualified PASS. User-managed existing

module activation is unchanged; no automatic deactivate/reactivate or credential loop. Single next action after claim merge: add failing causal regression, implement this one denial classification, run required checks and publish source PR. Owner retained until named handoff.

19/10/2026 20:08 Europe/Athens - PERSONAL WHOLESALE OWNER / LIMITED ACTIVE UI PASS; SELLER TRANSITION FAIL

Retained owner codex/wholesale-suite-20261017. After the user activated the LAB module separately in their own browser, actual Cloud Chrome /wholesale now positively shows MYWORKSTATION LAB, personal Υπεύθυνος Εργαστηρίου and three LAB-company store options. Selected ONLY ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ.17:05:29.863-17:07:55.612UTC observations/evidence: five manager screens opened read-only: Πελάτες (existing B2B-TEST-001), Τιμοκατάλογοι (empty list), Παραγγελίες (exact selected store/one existing customer/no items/no orders), Site πελατών (inactive portal; account/publication selectors only selected store; company-wide settings explicitly labeled), Αναθέσεις πωλητών (two existing users, both no active membership). LIMITED PERSONAL OWNER ACTIVE READ-ONLY UI PASS only. This supersedes earlier active-login BLOCKED for these observed manager screens, not all acceptance.

LIVE UI FAIL: pressing Εργασία πωλητή twice with this nonmember manager caused transient access checking then blank store selection and no stable seller refusal screen. Reselection restored management; screenshot confirms final customer screen/selected store. Seller transition/stability and positive assigned-seller workflow remain OPEN. Source inspection suggests inactive-member401 → shared boundary invalidation → selection cleared before refresh; this is a candidate cause, not a measured HTTP trace, local reproduction or fix. No authentication or permission bypass proposed. Existing pending-order/identity/license/tenant fences must remain protected.

Agent performed NO module/license/membership/assignment/customer/site/order/price/stock/payment/fiscal/shift/account/schema/SQL mutation. User-managed external activation time/terms/price/other control baseline NOT independently observed; do not infer license/financial deltas or claim restoration of that external action. SKU/quantity/payment/operator-shift/balances N/A for read-only screens. No portal/customer creation, publication, seller grant, quote/order submission or completed transaction. Previous PR2820 inactive-personal PASS and PR2837/2847 restoration receipts remain historical qualified evidence. Active module presence is verified through actual personal workspace, not a subscription payment assertion.

Baseline main1baa60e25 and concurrent native/history/central/lifecycle/backup/supplier owners preserved. Later separate public no-cache health oktrue/version0.22.0+kat-test-pos/revisionc0788ee93e930f715ee22adcd0447803da488327/curl exit0, not asserted as revision at every earlier UI action. Evidence CHECKPOINTS/EVIDENCE/wholesale-owner-live-20261019/acceptance.json and actual owner-management.jpg. Common checkpoint/ACTIVE/KAT/tracker/pending/README/manual/PDF synchronized. Whole wholesale/site/field sellers/offline/commercial standalone packaging OPEN/ASSIGNED; no numbered item closed. Single next action reproduce the nonmember seller401 through actual standalone/boundary and publish bounded correction claim before source edits. Current owner retained until named handoff; no repeat grant or transaction solely for documentation.

19/10/2026 16:20 Europe/Athens - COORD PHASE6 / ENDED ATHENS SALES COMPARISON SOURCE LIVE / AWAITING LAB

Κεντρικός owner codex/central-four-streams-20261018, issues #2704-#2707. Έκτη περιορισμένη τεχνική παράδοση, με τέσσερις εσωτερικούς συνεργάτες και συγκεντρωτική αναφορά εδώ. Τα αρχικά 14 παραμένουν συνολικά OPEN. Η παρούσα καταγραφή αντικαθιστά μόνο τα ιστορικά phase6 SOURCE PREPARED / CI PENDING / RELEASE PENDING παρακάτω· δεν δημιουργεί LAB PASS.

WS3 παρέδωσε προαιρετική σύγκριση τζίρου στην κανονική αναφορά πωλήσεων. Ο χρήστης επιλέγει ρητά δύο ολοκληρωμένες ημερολογιακές περιόδους Ελλάδας με ίδιο πλήθος ημερών, έως 366 ημέρες καθεμία. Η προηγούμενη πρέπει να προηγείται χωρίς επικάλυψη. Ένα επιλεγμένο ενεργό κατάστημα της ίδιας εταιρείας, μία server ώρα και κοινό RepeatableRead snapshot καλύπτουν τις δύο πραγματικές canonical

αναγνώσεις. Δεν υπολογίζονται προηγούμενες ημερομηνίες από ωμή διάρκεια UTC. Εμφανίζονται τα ακριβή ημερολογιακά/UTC όρια και οι πραγματικές ώρες, περιλαμβανομένων ημερών 23/25 ωρών λόγω DST. Ίσο πλήθος ημερών δεν πιστοποιεί ίδια εβδομαδιαία ή εποχική συμπεριφορά, συνθήκες λειτουργίας, κλεισμένες βάρδιες ή τελική οικονομική συμφωνία.

WS4 παρέδωσε μη προεπιλεγμένο χειριστήριο και δύο ρητές προηγούμενες ημερομηνίες στον πραγματικό sales installer. Η εμφάνιση δεσμεύεται στα εφαρμοσμένα φίλτρα/κατάστημα/πηγή. Αν οποιαδήποτε πηγή είναι μερική ή μη επιβεβαιωμένη, δεν εμφανίζονται συγκρινόμενα ποσά, διαφορά ή ποσοστό. Ο τζίρος διατηρεί τις επιστροφές με πρόσημο. Μηδενική ή αρνητική προηγούμενη βάση δίνει ρητή αιτία και null ποσοστό. Η προεπιλεγμένη αναφορά, τα ποσά/γραμμές προϊόντων, το όριο 10000, η πληρότητα, τα μοναδικά καλάθια, η ωριαία ανάλυση, CSV και drilldown παραμένουν συμβατά.

WS1 πρόσθεσε πραγματική isolated PostgreSQL δοκιμή με canonical SQL, Prisma transaction και mounted HTTP route: έλεγχος repeatable-read και στις δύο αναγνώσεις, ίδιο transaction, όρια ημερών/DST, signed επιστροφές, query/tenant/ενεργό κατάστημα/ρόλοι, μηδενική/αρνητική βάση, πλήρες όριο 10000 έναντι μερικής πηγής 10001 και αμετάβλητα πριν/μετά digests όλων των fixture πινάκων. WS2 ανεξάρτητη αξιολόγηση χωρίς supplier patch. Εντόπισε απόρριψη σωστών αθροισμάτων λόγω JavaScript floating addition noise, η οποία διορθώθηκε πριν το source PR. Η σύγκριση χρησιμοποιεί checked λεπτά ανά πλήρη γραμμή, BigInt άθροισμα, ακριβή συμφωνία με το αρχικό canonical JavaScript reduce και συντηρητικό όριο ακρίβειας 2**40 EUR ανά γραμμή/συνολικό ποσό. Πραγματικό sub-cent, αλλοιωμένο cent, μη πεπερασμένα ή μη ασφαλή ποσά απορρίπτονται. Δεν άλλαξε ο υπολογισμός της αρχικής αναφοράς.

Claim #2841 / head84995ce8eb56bc4b991c213836516982ae7ca2bb / docs CI39252357946 SUCCESS, merged74aea6b871f40299731498e17c4093dcb61adfd9 πριν κώδικα. Source PR #2844 / head90d77df4187e77dde746526744a75746f1b0291c / full CI39255237253 / job118069115716: SUCCESS 3430 PASS / 0 FAIL / 0 SKIP, συν 6 backup. Source merge bb1ce702553505ac43267c50915020cf43f6948f, exact main CI39256286873 / job118072597287: SUCCESS 3430 PASS / 0 FAIL / 0 SKIP, συν 6 backup. Η νέα native δοκιμή εκτελέστηκε πραγματικά και στα δύο πλήρη CI. Windows, Chromium, builds, invariants, archive και real HTTP E2E επιτυχώς.

Ενεργή κοινή revision 880c6f428beeb657058b4f94c9600320f41c9641. Ordinary guard 39258239893 / job118078948913 SUCCESS· Render dep-dbb1f67f3r2c73fu1kjg LIVE. Ανεξάρτητο public no-cache health 2026-10-19T13:19:32.050995+00:00: HTTP200 / oktrue / ακριβής ίδια revision. Τα έξι reviewed source/test blobs διατηρούνται ακριβώς. Τυχόν νεότερη συμβατή πηγή, freshness deferrals και rollback artifact καταγράφονται στο machine evidence. Δεν έγινε manual deploy ή παράκαμψη guard.

Τοπικά Node20.20.2: 77 PASS / 0 FAIL / 1 native περιβάλλοντος SKIP, frontend/TABLE_SERVICE build PASS. Η τοπική native παράλειψη δεν παρουσιάζεται ως SQL PASS· η πραγματική δοκιμή εκτελέστηκε στο απαιτούμενο CI χωρίς παράλειψη. Ο πρώτος in-flight έλεγχος νέων UI fixtures είχε 7 FAIL λόγω ελλιπούς canonical metadata και μη δεσμευμένου ψεύτικου tab· χρησιμοποιούνται πλέον ακριβές producer metadata και πραγματική σύνθεση Suite+Sales. Το πρώτο full PR CI39253919260 είχε3423PASS/1FAIL/0SKIP: μόνο καθυστερημένο CSV URL cleanup του νέου fixture μετά την αποκατάσταση globals. Η native σύγκριση εκτελέστηκε ήδη PASS σε εκείνο το run. Διορθώθηκε μόνο ο κύκλος ζωής της δοκιμής, χωρίς runtime αλλαγή/skip/αποδυνάμωση assertion· το αποτυχημένο head δεν συγχωνεύθηκε ή διατέθηκε. Κανένας αποτυχημένος έλεγχος δεν μετρά ως PASS. Τελικός ανεξάρτητος έλεγχος CLEAR.

Νέα συμπεριφορά AWAITING LAB. Ο ασφαλής authenticated browser παραμένει μπλοκαρισμένος από native credential state· χωρίς bypass, ανάγνωση credentials ή κατασκευασμένα screenshots/CSV. Δεν προστίθεται CI-only manual. Επόμενη μία ενέργεια: συγκεντρωτική read-only αποδοχή από https://myworkstation-app.onrender.com/platform-admin στο ίδιο υπάρχον LAB, με δύο ήδη ολοκληρωμένες περιόδους, διασταύρωση των δύο κανονικών αναφορών και της νέας σύγκρισης· συν τα υπόλοιπα MONTHLY/supplier/πραγματικού CSV/hourly/product/coverage όπου δεν υπάρχει νεότερη ακριβής πραγματική αποδοχή. Αν δεν υπάρχει κατάλληλη πηγή, NOT TESTED χωρίς νέα συναλλαγή.

Gate7 και όλα τα προηγούμενα περιορισμένα PASS παραμένουν προστατευμένα. Η συγκεκριμένη αλλαγή σύγκρισης δεν τροποποιεί το παλιό advanced endpoint, Workforce, μισθοδοσία, parser/VOICE/history/native, supplier/invoice ή lifecycle. Διατηρούνται οι νεότερες αναθέσεις και τα ακριβή νεότερα αποτελέσματα native multi-photo με τον δικό του owner. Καμία παραγωγική οικονομική/stock/fiscal/shift/payroll/settings/recipient/SMTP/order/schema πράξη, αλλαγή ρυθμίσεων

υποδομής ή replay αποδεκτής συναλλαγής. Το #13 παραμένει OPEN για πραγματική αποδοχή και ευρύτερη πολιτική συγκρισιμότητας, όχι συνολικό κλείσιμο από CI. Χάρτης: CHECKPOINTS/CHANGES/2026-10-18-original14-status.md. Evidence: CHECKPOINTS/EVIDENCE/central-four-streams-20261019/phase6-source-release.json. Κοινά μητρώα/checkpoint/PDF συγχρονίζονται στην ίδια καταγραφή· ο κεντρικός owner παραμένει μέχρι ολοκλήρωση ή ονομαστικό handoff.

20/10/2026 — video emulator startup FAIL measured / supported-frame-rate candidate

Initial Android39471853100 compile/unit/lint SUCCESS but actual emulator capture failed at start. Diagnostic39472960071 on e8a1bfcb confirms recorder-prepare completes and recorder-start throws IllegalStateException; this is NOT video PASS. Replaced hardcoded24fps with the highest camera-declared supported rate up to30; no storage fallback or removal of the actual capture assertion. If failure persists, isolated synthetic-emulator test prints only bounded recorder/platform tag diagnostics, no user media/auth. Also tightened new MP4 box decoding to exact latin1 bytes, rejecting high-bit ASCII aliases; targeted15 tests PASS. Require fresh full/Android CI and resolve every failure before merge/distribution. Existing public0.1.8 and accepted voice/photos/push unchanged. Owner retained; iOS LAST.

20/10/2026 — video0.1.9 source candidate / AWAITING CI, RELEASE AND DEVICE

Before-source claim PR2960 green merged c1d30d85b1227589b96028d44ae3d3501046d94e. Retained owner feat/android-chat-native-20261017, source branch feat/native-chat-video-20261020. Native0.1.9/code10 adds explicit foreground camera/gallery MP4, preview/use/cancel then ordinary Send. Camera MediaRecorder output uses a seekable StorageManager proxy descriptor backed by bounded12MiB heap, no local pathname/MediaStore/cache/shared output;30s ceiling (recorder stops at29s for mux overhead), H264/AAC. Gallery original is read transiently without persistable permission or copy; original remains under user's/provider's control. One-use30s RAM handoff bound by Main token/store/availability; background/cancel/navigation wipes, no Intent/Bundle media or private saved state. RAM MediaDataSource explicit playback; no autoplay/background recording/share/download pathway. First physical hardware capture/storage acceptance NOT TESTED.

Separate GENERAL-only /video-messages endpoint preserves voice and image/PDF routes. Existing company/store/session/module checks precede insertion; photosEnabled controls video availability/acceptance. Strict bounded canonical base64 and MP4 box/brand/track/H264/AAC/duration/self-contained dref/sample table/chunk-range validation,12MiB maximum. Only this endpoint receives17MiB JSON overhead allowance before the unchanged12MiB global parser. Atomic existing attachment+metadata audit; generic push only after commit, no caption/video in push/audit. No schema/migration/AI/business/auth/license/infra changes. Independent video-only web receiver bounds the authorized streamed response, aborts/rejects late results on store/session changes and revokes blobs on hidden/pagehide/unmount; explicit player preserves ordinary refresh playback. Existing image/PDF/voice preview branch remains unchanged. Existing PWA/N16/AI owners and accepted photos/voice/auth/push remain protected. No agent production message/push/read/business test.

Local Node20.20.2 targeted parser/registered-handler/actual mounted video+voice player15PASS/0FAIL. Actual ffmpeg synthetic1s H264/AAC fixture; malformed codec/headers/external dref/duration/chunk offsets/base64/tenant/settings/audit-rollback rejection tested. JSX parse PASS. Local javac unavailable (JRE only), Android compile/unit/lint/emulator NOT YET VERIFIED. Added pure envelope/handoff tests, real Android proxy read/write/platform metadata/lifecycle/permission-denial and actual emulator camera capture/no-local-mp4 test, plus Main explicit send/stale server-session/unknown outcome/next draft protection. Full source CI and Android tests REQUIRED before merge; then exact main CI/guarded server release, same owner-signed candidate verification and native public download update before requesting physical acceptance. Public download remains verified0.1.8 until that later release. Not a new video USER PASS or overall Android PASS. Owner's20:49/20:51 voice USER PASS retained; do not repeat accepted tests for documentation. Single next action: run exact source full/Android CI and resolve failures. iOS LAST.

20/10/2026 20:52 Europe/Athens — voice USER PASS / VIDEO ASSIGNED BEFORE SOURCE

Retained native owner feat/android-chat-native-20261017; new branch feat/native-chat-video-20261020. Owner20:49:16 confirms Android sends voice and20:51:32 confirms the requested PC playback is OK. Scoped USER PASS for reported Android-to-PC voice send/playback only; device/hash/message IDs/store/revision not independently measured. No repeated accepted voice/photos/push test. Manual updated. Overall Android, same-signer physical upgrade and forensic storage remain NOT TESTED.

Owner20:52:28 explicitly requests video. Independent NEW video-only scope: native explicit camera/gallery selection, bounded MP4 preview/use/send/cancel and playback; RAM-only recording/preview and one-use session/store-bound handoff, no app-created local video file/MediaStore/download/share/cache or automatic send. A pre-existing selected gallery original remains outside the app's control. Proposed limits30seconds/12MiB, H264/AAC MP4, server bounded structural validation and fail-closed unsupported formats. New GENERAL-only video endpoint under existing company/store/session/module fences, same attachment columns, generic post-commit push and explicit web video-only receiver. Existing image/PDF parser, voice and accepted photo/auth/push/store scopes preserved; no schema/migration/AI/invoice/business/auth/licensing/infra changes. Existing PWA/N16 owners retained; this claim does not take packaging/responsive/photo acceptance. Build/version/public download assets are native owner's existing distribution scope. Require green claim merge BEFORE source, focused container/HTTP/lifecycle tests, full CI/Android unit/lint/emulator, stable owner-signed candidate and exact guarded release/public byte verification before physical acceptance. Hardware video behavior remains NOT IMPLEMENTED/NOT TESTED. Single next action: implement bounded video after claim green merge. iOS LAST.

20/10/2026 20:13 Europe/Athens — Android0.1.8 PUBLIC LIVE / FINAL PHYSICAL BATCH OPEN

Retained owner feat/android-chat-native-20261017. Technical preparation and public distribution VERIFIED: source PR2954 final head a806708fe7ec4bb044b1d6eaa3ce9e0052335dd2 green merged25efb7871b485f5c680ecd8cc3d7323b45719a37; exact merged-main CI39462597695/job118765979610 SUCCESS3669PASS/0FAIL plus8backupPASS, guarded deploy39463450610 SUCCESS. Render dep-dbbq0h8n3acc73c7jo20 LIVE2026-10-20T17:12:48.612098Z; public health revision matches25efb787. Public install page https://myworkstation-app.onrender.com/downloads/chat-android/ shows0.1.8-preview/code9. Public APK independently downloaded and byte-for-byte identical to verified owner-signed artifact12281364272/run39458772660:3670848bytes, SHA256a1c9faf3f84a821d4252e6c79306d29edf69a56cd7027593a78a63e28b5d05ca, cert17c4d56123c6015a58343faba73d26a8b7d085a1baff7e680500767ae084ea97. Saved QR independently decoded to that same public install page; no access grant. Evidence CHECKPOINTS/EVIDENCE/native-stable-signing-20261020/release-verification.json and install-qr.png.

Completed: owner backup/configuration, stable signed candidate, source/main CI, guarded live distribution, public APK/manifest/hash verification and QR. Remaining: one consolidated final physical batch for new quick replies/voice and stable-key installation/update acceptance, with exact device/build receipt; physical same-signer upgrade NOT TESTED, no overall Android PASS. Previously accepted messages/photos/push remain accepted without documentation-only repeats. First transition from an old trial signer may require uninstalling ONLY MW Chat Preview, then login/push activation; retain the same owner key for future higher-code updates. No other app removal. No private key/password handling, business writes or foreign-owner takeover. Single next action: hand the verified link/QR to the user and run the agreed consolidated physical batch; iOS LAST.

20/10/2026 — stable owner-signed0.1.8 candidate VERIFIED / distribution AWAITING CI

Before-source distribution claim PR2953 head4237dfcb0ac4eb5f0e9805630c9ba0d649291230 green merged6397cc6714d60e01747b63b753e035c30d6d817d BEFORE asset edits. Retained native owner. Exact full main CI39457463898 SUCCESS3669PASS/0FAIL plus8backupPASS. Stable signed run39458772660/job118752440766 SUCCESS; artifact12281364272 contains only APK and public receipt. Independent downloaded APK verification: SHA256a1c9faf3f84a821d4252e6c79306d29edf69a56cd7027593a78a63e28b5d05ca,3670848bytes, package gr.myworkstation.chat.preview, version0.1.8-preview/code9; APKv2 RSA signature and chunked content digest VERIFIED; sole certificate matches owner public pin17c4d56123c6015a58343faba73d26a8b7d085a1baff7e680500767ae084ea97. No keystore entry in APK; no private key/password handled by agent. Evidence CHECKPOINTS/EVIDENCE/native-stable-signing-20261020/artifact-verification.json. Emulator success is technical CI, not physical USER PASS.

Bounded candidate updates only existing install-page release manifest/accurate stable-signing wording/new0.1.8APK; previous0.1.3APK retained. Existing QR/install-page URL unchanged, no credentials/access grant. Full source CI and ordinary guarded exact release/live-byte verification still REQUIRED before final physical batch. No Android runtime/backend/auth/schema/business/FCM changes. Accepted user photos/messages/push and foreign-owner scopes preserved. Single next action: source CI, merge/release and independently verify live manifest+APK hash, then one consolidated physical batch; iOS LAST. Same-signer physical upgrade remains NOT TESTED, first old-signer bridge may require removing only MW Chat Preview.

20/10/2026 — stable-signed preview distribution preparation ASSIGNED BEFORE SOURCE

Retained native owner feat/android-chat-native-20261017. After owner signing setup USER PASS and exact full CI, bounded next source scope is client/public/downloads/chat-android/release.json, existing index.html only for accurate stable-key/update/final-candidate wording, and new MyWorkStation-Chat-Android-0.1.8-Preview.apk from verified stable run39458772660 only. Keep prior APK for traceability. Before source require this claim green merged main and the signed run SUCCESS plus independent APK package/version/hash/certificate verification against public pin17c4d56123c6015a58343faba73d26a8b7d085a1baff7e680500767ae084ea97. If run fails, stop and diagnose rather than publish. Existing install-page URL/QR remains stable; no credential/store entitlement in QR. This is final technical candidate distribution, not overall device PASS or Play production release. No Android/backend/auth/schema/FCM/business mutation or foreign PWA packaging ownership; only native owner's existing download assets. Require full source CI, ordinary guarded release and exact live download bytes/manifest verification before the consolidated final physical batch. iOS LAST.

20/10/2026 19:19 Europe/Athens — owner signing setup USER PASS / signed APK OPEN

Retained native owner feat/android-chat-native-20261017. HOME Windows PowerShell owner execution: screenshot19:05 confirms Prepare completed; owner19:08:54 confirms encrypted independent backup. Initial execution-policy and missing-Java errors were resolved before key generation. GitHub CLI2.102.0 installed; local identity xrhstosmanis-design confirmed. First Publish rejected wrong repository confirmation with zero upload; explicit same-directory retry screenshot19:19 confirms Signing configuration uploaded. Agent read-only GitHub verification found all four MW_CHAT signing secret names and public MW_CHAT_CERT_SHA256=17c4d56123c6015a58343faba73d26a8b7d085a1baff7e680500767ae084ea97. No private key/password/token read, generated by agent or committed. Owner keeps the same private backup; never run Prepare for retries/updates. Historical owner-execution OPEN is superseded only for this measured setup, not device acceptance.

Current build source main d12f69e4ee0b26b5c70ead560593726653893d3d; compare reviewed helper79819e1 through24commits shows no owned Android/helper/workflow changes. Existing pushCI39456163984 build-and-test SKIPPED, so manual full CI39457463898/job118748344192 SUCCESS3669PASS/0FAIL plus8backupPASS and all other jobs SUCCESS. Stable signed preview39458772660/job118752440766 is IN PROGRESS on the same exact SHA; no signed artifact success claimed. Signed APK, same-signer physical upgrade, public download/QR and consolidated final device batch remain OPEN; iOS LAST. No repeat of accepted photo/message/push tests, business mutations or foreign-owner scope. See docs/manual/native-chat/PASS.md and docs/testing/native-chat-final-batch.md. Single next action: verify exact full-main CI, then stable signed preview and APK signer/hash/package receipt.

20/10/2026 — Owner-PC signing helper GREEN MERGED / OWNER EXECUTION OPEN

Retained native owner feat/android-chat-native-20261017. Source PR2944 final79819e13f6668296ea30f12680e2802eb79a7891 green merged6bc038281b1b50f9158644302069db9f2bec9b4f. Exact full PR39429851195/job118652388540 SUCCESS3652PASS/0FAIL plus8backupPASS; all Windows/classifier/isolated-lab jobs green. Dedicated helper39429851209/job118651742255 SUCCESS in BOTH Windows PowerShell5.1 and PowerShell7: real disposable PKCS12/certificate/JKS compatibility/ACL, raw exact stdin, confirmation/existing-key/pin/tamper no-write guards, unknown stop and same-key resume. Previous failed empty-list/preamble attempts are superseded only for these technical tests. Source helper SHA256e07b30bc3c48637a5006229930a18fa09877c3cad644a53ad1a95abaeb708771; all three owned helper/workflow blobs unchanged after merge. Exact merged-main39431395318 was pending when this receipt was prepared; not called main PASS.

Actual GitHub browser sign-in CONFIRMED by owner dashboard and Actions secrets access; only existing Render hook was present, no MW_CHAT signing secrets. Agent did not create an owner key or set any secret/variable. Real setup, encrypted owner backup, stable-signed APK, same-signer phone update/public QR and final physical batch remain OPEN/NOT TESTED. Helper source is public, test keys were disposable and removed with no private artifacts. Single next action: owner runs Prepare on HOME Windows PC, retains encrypted backup and explicitly runs Publish with the same printed directory; requires Java17/keytool and GitHub CLI authenticated locally for the same repository. Browser session and local CLI are distinct; helper never requests a token/password through chat. After verified owner publication, native owner verifies exact full main CI then runs stable signed preview and consolidates final distribution/device acceptance. No repeated accepted photos/messages, other PWA/N16/AI owners retained, iOS LAST.

20/10/2026 — signing stdin preamble cause measured / corrected before process Start

Third disposable Windows run39429428951: MW_CHAT_KEYSTORE_B64 expected4752 vs observed4755 characters. Raw writes alone were insufficient because .NET Framework initializes and flushes the child stdin writer preamble during Start. Set StandardInputEncoding=UTF8-no-BOM where supported; Framework fallback temporarily sets Console.InputEncoding only around Start and restores it in finally. Test fake CLI now hashes raw stdin bytes rather than decoded Console.In, preserving strict wire-equality assertions across runtimes. No real owner key/secret/production action. Fresh exact helper and full CI required; no owner setup or physical PASS.

20/10/2026 — signing helper exact-stdin test failure / raw UTF8 correction pending CI

Second helper run39428993940/job118648766276 passed disposable Prepare and simulated publication, then failed exact stdin payload equality. No real GitHub or owner key affected. Changed child stdin writing to explicit UTF8 bytes on BaseStream with no StreamWriter preamble/newline conversion; buffers cleared and pipe closed after write. Added nonsecret field/length detail on test failure, keeping exact payload hash/length assertions and every safety guard. Remains AWAITING fresh Windows5.1/7 and full CI, not owner setup PASS.

20/10/2026 — signing helper first Windows failure corrected / AWAITING FRESH CI

Source PR2944 first headcc892a46a1acc25e86e536a7bf26af8605e34471 helper39428547347/job118647220037: real disposable key generation/certificate/ACL/JKS compatibility passed until empty fake-GitHub-list handling hit PropertyNotFoundStrict under Windows PowerShell5.1. No owner credentials/network writes. Replaced version-sensitive empty JSON-array adaptation with GitHub CLI jq name-only newline output; fake CLI now matches that public contract. Existing-key/pin, exact confirmation/stdin and unknown-resume assertions retained. No physical or owner setup PASS. Single next action: fresh Windows5.1/7 functional and full exact CI before helper handoff.

20/10/2026 — Owner-PC signing helper source candidate / AWAITING CI AND OWNER EXECUTION

Before-source claim PR2942/head86401ff2869c9e5fa2b362f664e6891cb18da505 green merged ec7720fdbcb89762d98a9d72eda8ff5fcc80af55 BEFORE implementation. Retained native owner. New Setup-OwnerSigning.ps1 separates local Prepare from explicit Publish to the hardcoded repository. Prepare creates a bounded RSA3072 PKCS12 using keytool, random password via child-only environment, private current-user/SYSTEM ACL, public certificate pin and checksum metadata. No owner key generated by agent. Publish revalidates key/password/certificate/admin, refuses unowned existing secrets or a different certificate pin, requires exact repository and owner backup confirmation, transmits four values only through child stdin, records unknown name before each attempt and supports explicit same-backup resume. No auth token read, secret argv/console output, automatic login/overwrite/rotation/deploy/APK release or business operation. Owner private backup remains on Windows PC; only public helper is in Git.

Windows5.1/7 isolated workflow uses real disposable keytool preparation and fake CLI to test certificate/ACL/JKS compatibility, exact stdin bytes, zero-write wrong confirmation/existing secret/pin mismatch/tampered key, partial unknown stop and same-key resume. Disposable keys deleted; no private CI artifacts. Actual owner setup, stable-signed build and physical update remain NOT TESTED. Prerequisites and consolidated two-phase instructions in docs/testing/native-chat-final-batch.md; CI must pass before helper handoff. Single next action: exact source CI and Windows functional checks, then owner-PC execution/backup and signed preview workflow. Other owners and final consolidated physical batch protected, iOS LAST.

20/10/2026 16:05 Europe/Athens — native owner-PC signing setup / ASSIGNED BEFORE SOURCE

Retained owner feat/android-chat-native-20261017, branch feat/native-signing-owner-setup-20261020. User completed secure GitHub browser login; actual Actions secrets page shows only existing Render hook, no MW_CHAT signing secrets. No values read and no credential mutation. Bounded new helper scope: tools/android-chat-signing/Setup-OwnerSigning.ps1 and Test-OwnerSigning.ps1, isolated .github/workflows/android-signing-setup-check.yml and docs/testing/native-chat-final-batch.md. Generate PKCS12 and random passwords only on owner Windows PC with current-user ACL and retained private backup; use official keytool/GitHub CLI, explicit repository/backup confirmation before stdin-only secret transmission. No token/password/key command arguments, logs, chat or public artifacts. Fail closed on existing signing setup, partial upload recorded for explicit resume; same protected local key only. No automatic replacement of an owner key, no permission/visibility changes, business writes, public APK or backend changes. CI uses disposable test keys and fake CLI, never real credentials. Signing helper execution/configuration and physical update remain NOT TESTED. Before code require this claim green merged, then validate PowerShell syntax and actual isolated prepare/certificate/stdin/overwrite/resume behavior on Windows; full CI/source checks before handoff. Single next action: implement this bounded owner-PC helper after claim merge; final physical batch consolidated, iOS LAST.

20/10/2026 — Native voice technical release VERIFIED / stable signing still OPEN

Retained owner feat/android-chat-native-20261017. Supersedes ONLY the shared-main wholesale release blocker below: later full main CI39387000777 for d35a772870859bbf5eb6988820d74eaa7c260795 has all build-and-test, wholesale-isolated-lab, classifier and Windows jobs SUCCESS. Ordinary deploy workflow39387876889 SUCCESS; Renderdep-dbbhlfbncjis738pm3a0 LIVE20Oct07:42:46.842298Z, independent GET /api/health returned ok:true and exactd35a772870859bbf5eb6988820d74eaa7c260795. Complete GitHub compare from reviewed native source a84c9e3 to healthy revision has32commits, no changed owned Android/store-chat/voice receiver/parser/test source paths; technical voice source is included unchanged. Latest shared main ecdbdfc1aa52662ade6ddd9f510826335d75b97c full CI39388695083 SUCCESS is distinct from independently observed deployed revision. No manual deploy or guard bypass.

This is source/CI/healthy-revision verification, NOT actual mic/playback/message/physical acceptance. No agent real message/read/push or business writes and no repeated accepted photo. Existing0.1.8/code9 artifact12244489455 remains the verified temporary-signer technical artifact; no final public APK/QR update. Renewed secure GitHub sign-in request timed out; explicit canonical-origin verification still showed signed-out homepage. No credential value inspected, key created/set, or signing success inferred. No automatic retry loop. Single next action: complete supported secure GitHub sign-in for owner signing configuration, then verify stable-signed candidate/distribution and one consolidated final device batch. Native assignment retained, other PWA/N16/AI owners unchanged, iOS LAST.

20/10/2026 — Native voice merged / PR CI GREEN / shared-main release BLOCKED

Retained native owner feat/android-chat-native-20261017. PR2877 final head a84c9e3e05e29503829fd0e746ed1a2e80b49bdd merged b255b1cf335734a81d09ad65d5b6ce2dba33733a. Exact PR full39379156890/job118484368074 SUCCESS3601PASS/0FAIL plus8backupPASS; all Windows/classifier/isolated-lab jobs green. Android39379156874/job118484010197 SUCCESS29unit/28instrumentation,0fail/skip; APK artifact12244489455 independently verified v2 RSA signature/full content digest, packagegr.myworkstation.chat.preview,0.1.8-preview/code9,3670848bytes,SHA25675d8e0be146bfbeb92e2955b18d411b3b490c5952a2fe20951a6d3d57ffd6d4d, temporary CI certificate84d4f493432c737ca7d1286579a5a364ecd2be0ef0ae502802ce7eac32a80429. Owned source blobs identical after merge. This is NOT a durable-owner-signed or public candidate.

Exact main39379947313 isolated wholesale job118486896518 FAILED: Error: Timed out actual encrypted preparation in the newly added actual wholesale offline application flow. The core isolated lab interface checks reported pass immediately before that failure. Whole main cannot be called green; ordinary guarded release must wait. This failure belongs to existing codex/wholesale-suite-20261017 scope; native owner does not change its implementation, bypass deployment guards or rerun to manufacture PASS. Other main build job was still running when failure was recorded. Previous independently observed healthy server remained f2a3b79a145f7f80331280384066ec78c29ec230; no voice release or live voice capability claimed.

No real message/read/push, financial/stock/fiscal action, repeated accepted photo or new physical PASS. Gallery/camera/auth/push earlier limited USER PASS protected. Permanent signing setup remains unverified after interrupted secure GitHub login; no key/secret created/read/set and no automatic authentication retry. Public APK/QR stays0.1.3. Final device batch remains deferred until combined readiness; iOS LAST. Single next action: existing wholesale owner resolves the exact main offline test failure, then native owner verifies fresh full main CI and ordinary guarded live revision before final signing/distribution/device acceptance. Owner retained until completion or named handoff.

20/10/2026 — Native voice PR2877 technical checks GREEN / combined-main verification pending

Retained owner feat/android-chat-native-20261017. Exact source1b9111e947fad572c0c976a5fa564ee96cbd8062 full CI39306125023/job118243927910 SUCCESS3475PASS/0FAIL plus8backupPASS; Android39306125076/job118243555841 SUCCESS build/unit/lint/emulator. Recovered published source after workspace maintenance; reconciled current main d1f2f3b2dac33f76b039e5fba17b06887955f4c4 preserving every other owner. Regenerated combined tracker PDF. New reconciled head requires fresh full/Android CI before merge and ordinary guarded release. No new USER/LAB PASS, real message/read/push or business writes. Hardware mic/playback, stable owner signing and consolidated final physical acceptance remain OPEN; iOS LAST. Single next action: fresh exact combined-head CI, merge and verified guarded release.

19/10/2026 — native voice source implemented / AWAITING EXACT CI, RELEASE AND FINAL DEVICE BATCH

Retained native owner, independent voice-only branch feat/native-chat-voice-20261019. Before-source claimPR2876/head5190837cac97439e3207922b3fa7df0e6db2cc76 mergedcb9f44ce251efe1e98b3f1878d716b36563033b6 after green docs/Windows checks BEFORE source. Prior combined quick-reply/signing sourcePR2871/headaf5c65ca merged31521be5 after exact PR full39302681196 and Android39302681233 SUCCESS; exact merged-main39304129153/job118236990210 SUCCESS. These protect earlier slices, not the new voice candidate.

Native0.1.8/code9 adds secure foreground VoiceActivity: explicit mic permission/start/stop/preview/use/cancel, up to60s canonical PCM16 mono16k WAV held in bounded RAM, no audio file/MediaStore/Intent/Bundle/cache/download/share/private saved state. AudioRecord short buffers wipe after stopped capture, epoch rejects late results; single-use VoiceBuffer expires30s, AudioTrack playback stops/wipes on background/cancel/session/store navigation. Main binds handoff to current token/store/chat, advertises microphone only after authorized server voiceMessagesAvailable, requires explicit replacement of old draft/attachment and ordinary Send. Successful durable ok/id consumes/wipes only sent audio; next typed draft preserved. Unknown outcome halts with existing history/discard gate, no replay. Existing gallery/camera/quick replies/auth/push/settings invariants retained.

Additive GENERAL-only voice POST under existing /api/store-chat auth/module/storeFor fences, strict canonical WAV/base64/size/duration checks in chat-voice.mjs, existing attachment columns and inline GET/download permissions. Message+metadata audit atomic; generic push only after commit, no audio/caption logged or pushed. No schema/migration/auth/license/provider/env/production-data change. Audio-only receiver component uses explicit transient-blob playback, no autoplay and visibility/unmount cleanup; existing mobile installation/responsive/photo6432/N16 owners retained. AI parser still with its

existing owner. Public0.1.3 APK/QR unchanged; no agent real message/read/push/business test.

Local Node20 parser/actual registered route/old chat assignment/foundation cases16PASS/0FAIL. Added mounted receiver lifecycle test, pure native container/handoff cases and real Activity synthetic voice lifecycle/permission-denial/handoff/explicit-only send/stale-session/unknown-outcome/next-draft cases, awaiting trusted CI. Local JDK compiler and project JS component dependencies unavailable; no local Android/component PASS inferred. Hardware mic/playback, exact healthy guarded server release, artifact, protected owner signing setup and consolidated physical acceptance remain NOT TESTED. Final device tests remain deferred until preparation complete, iOS LAST. Single next action: exact full/Android CI, resolve every failure, merge/verify ordinary guarded release and candidate before any consolidated physical request.

19/10/2026 — independent native voice messages / ASSIGNED BEFORE SOURCE / NOT IMPLEMENTED

Retained owner feat/android-chat-native-20261017; branch feat/native-chat-voice-20261019. User requested all remaining Android preparation first, one final physical batch afterward, iOS LAST. Current ownership review shows PWA owner codex/chat-mobile-app-20261013 retains packaging/responsive/install/photo6432 acceptance, and N16 owner codex/n16-owner-acceptance-20261007 retains existing physical acceptance. This NEW independent voice-only source subtask was unimplemented/unowned, so it can be claimed without taking those existing scopes. Earlier issue2869 flagged a dependency, not an exclusive voice assignment. Common AI parser remains with codex/assistant-business-queries-20261015.

Bounded causal feature: PCM16/16kHz/mono WAV voice, at most60seconds/1920044bytes, recorded and played in RAM, explicit record/stop/preview/use/send/cancel, secure VoiceActivity, no audio files/MediaStore/Intent/Bundle bytes/cache/download/share or saved draft. Existing background/session/store/cancel wipes and epoch fences are mandatory. Single-use RAM handoff30s TTL; Main sends only after explicit Send and stops on unknown outcome with no retry; preserve next typed draft. New microphone permission only on explicit action, no auto-recording and no audio transcription/AI. Native voice UI is available only after authorized server response advertises support; older server leaves text/photos usable.

Exact native paths: android/app/src/main/AndroidManifest.xml, MainActivity.java, ChatApi.java, new VoiceData/VoiceBuffer/VoicePlayer/VoiceActivity.java, corresponding unit/instrumentation cases, android/app/build.gradle0.1.8/code9. Server: new server/src/chat-voice.mjs strict canonical WAV/base64 parser; additive GENERAL-only POST /api/store-chat/stores/:storeId/voice-messages in existing store-chat router; current auth/module/storeFor company/store fences reused unchanged, existing columns and scoped attachment GET/no-store/download permissions, atomic message+audit and existing generic push path. Expose voiceMessagesAvailable only with deployed support. No schema/migration/auth/license/provider/env change, no change to old photo/PDF parser or invoice AI Reader. No production message/read/push/business mutations for tests.

Receiver scope only: new audio attachment preview in StoreChatPanel.jsx via isolated ChatVoicePreview.jsx/component tests; no edits to mobile packaging/install/responsive/old-photo picker or previous physical failures. Current permission-controlled downloads remain, native has no download. Audio preview uses transient in-memory blob with explicit open/play/close and cleanup, no automatic playback. Existing image/PDF rendering and all other owners protected.

Require parser boundary/forgery/truncation/invalid PCM/base64 tests; actual registered route authorization/no-write/transaction/receipt tests with isolated fixtures; Activity tests for handoff/stale-scope/explicit-only POST/unknown stop/background cleanup; existing photo/camera/reply/signing/session regression, full exact PR/main CI and verified APK, ordinary guarded server release/exact healthy revision. CI cannot prove microphone hardware, actual receiver playback or forensics. All physical tests stay deferred until consolidated readiness. Public APK/QR unchanged until final candidate. Single next action after green merged claim: implement this voice-only feature; stable key setup and existing AI parser dependency remain explicit, iOS last.

19/10/2026 — combined Android preparation / AWAITING EXACT COMBINED CI / NO DEVICE REQUEST

Retained native owner; user requested preparing all Android first and final physical tests together, iOS LAST. Independently claimed quick repliesPR2866 and durable preview signingPR2870 are now combined in sourcePR2871 after concurrent main documentation/PDF conflicts. Previous quick source340a3981 Android39301502524/job118227585436 SUCCESS22 instrumentation after correcting asynchronous test observation; previous signing source29583125 Android39301266964/job118226765335 SUCCESS19 instrumentation/build/unit/lint, fullPR39301267009/job118227083465 SUCCESS. These are previous-slice evidence, NOT a PASS of the combined head. Both code slices retain their exact tested behavior, Gradle retains both stable conditional signer and0.1.7/code8. Main065e4fef wholesale/other-owner records preserved; combined PDF regenerated. Need fresh exact combined full/Android CI and merged-main verification.

Native quick replies are editable/no-auto-send and preserve the existing unknown-outcome/session/lifecycle/photo/camera invariants. Stable signed-preview workflow is main/manual-only, fail-closed and credential-free in ordinary PR builds; real secret setup, owner-signed candidate and physical same-signer update NOT TESTED. Current connector cannot manage Actions secrets. Voice contract proposal docs/testing/native-chat-voice-contract.md is actionable preparation only, NOT IMPLEMENTED and not a shipped endpoint. Existing Chat/PWA/N16 and AI owners retained via dependency issue2869. No private key generation/read/configuration, server/business/message/read/push action by this page and no public0.1.3 QR/content update. No new APK delivery or incremental physical test. Single next action: complete exact combined technical verification, record green merged receipt, then resolve protected signing setup and existing-owner voice/AI dependencies before one consolidated candidate and device batch.

19/10/2026 — native quick replies implemented / AWAITING CI / PHYSICAL BATCH DEFERRED

Retained native owner. Before-source claimPR2866/head e397328b49d9c27d22f039e4cf67d796c3e28fed merged7b6cd58610295380548884e79debdd67613e1787 after green docs/Windows checks BEFORE source. Native0.1.7/code8 adds five built-in quick replies to chat only. Selection fills the existing composer; nonempty drafts require explicit append/replace/cancel, overflow leaves draft intact, ordinary Send remains explicit. No automatic send, persistence, server/API/schema/auth/push/settings change. Dialogs are secure, dismissed at stop/navigation/destroy, selection bound to captured epoch/token/store/composer/foreground/chat/busy/unknown-outcome guard. Existing photo/camera/caption/next-draft/send-interlock/strict-receipt/privacy/session invariants protected.

Unit cases cover append/replace/immutable choices/overflow; real Activity fixtures cover append and explicit-only POST, cancel preservation/background clearing, unknown-outcome deny. These are simulated technical checks, not new USER PASS. Exact Android/full PR/main CI and regression completion required; no new APK delivered/publication or real message/read/push by this page. User requested all remaining Android preparation before one final physical batch, iOS LAST; no incremental physical test request. Voice/backend ownership, AI parser, durable signing, distribution and broader negative/device/forensic acceptance remain OPEN as claimed. Single next action: finish technical checks, then continue preparation against actual dependencies.

19/10/2026 21:02 Europe/Athens — ANDROID CONSOLIDATED PREPARATION / RETAINED OWNER / BEFORE SOURCE

Owner feat/android-chat-native-20261017; source slice feat/native-quick-replies-20261019. Owner explicitly requests preparing all remaining Android work first, one consolidated final physical acceptance afterward, and iOS LAST. No more incremental physical test requests or repeat of qualified photo/push/login PASS. This changes test scheduling, not the requirement for green technical checks, exact artifact verification or honest NOT TESTED labels.

First independent bounded source slice: native built-in quick replies, selected from a visible list into the existing editable composer only; preserve current draft via explicit append/replace choice, no auto-send or persistence, chat-only/no AI privilege change. Exact source MainActivity.java and QuickReplies.java plus isolated Activity/model tests, Android version0.1.7/code8. Ordinary Send and existing queue/strict receipt/lifecycle/session/store/settings boundaries remain unchanged. No server API/schema/config/prod data/message/read/push action. Claim must merge green before source; exact Android/full PR/main checks required. Physical acceptance stays deferred in the consolidated batch.

Other preparation remains OPEN, not silently implemented: voice requires a compatible server contract (current attachment parser permits JPG/PNG/WEBP/PDF only), RAM-only recording/playback/cancel/background cleanup and corresponding authorized receiver support. Existing PWA/N16 ownership retained; no backend/PWA takeover. Common AI phrase gap stays with codex/assistant-business-queries-20261015. Stable signing requires durable owner-controlled private signing material and secret injection; no key/password in Git/source/APK/logs, no unsigned/debug-signed production claim. Current connector cannot access Actions secret management, which is a capability limitation, not proof that keys do not exist. Prepare explicit build contract before configuration. New public APK/manifest/QR publication follows final verified candidate and ordinary guarded deployment; current public0.1.3 remains unchanged until then. Play and iOS are separate release work, iOS after Android acceptance. No overall Android completion claim.

Single next action after claim green/main: implement and technically verify quick replies without asking for a new physical send. Continue remaining preparation against actual dependencies; unresolved owner/config dependencies remain explicit in final consolidated report.

19/10/2026 — durable preview signing build prepared / AWAITING CI AND OWNER SECRET SETUP

Before-source claimPR2870 finalheade73aae12bf03c05c9fe940a773256350fdc43896 mergedfeb5908a8305fa247f0f0d2581bd572551afa056 after green docs/Windows checks; reconciled independent assistant-history claim2307f6d. Retained native owner. Conditional Gradle stablePreview signer only when complete environment is present; ordinary PR debug builds unchanged. New manual/main-only workflow requires exact main successful full build-and-test (not docs-only SKIPPED), repeats Android unit/lint/emulator tests before loading secrets, builds with owner key, verifies pinned cert and APK signature, uploads only APK/nonsecret receipt and cleans temporary keystore even on failure. No key created/read/configured and no signed stable build or physical same-signer update claim.

Consolidated setup/readiness/physical acceptance document docs/testing/native-chat-final-batch.md records five exact secret/variable names, protected gallery/camera PASS, required voice/backend/receiver and existing AI-owner dependencies issue2869, final batch gates and iOS LAST. Current connector lacks Actions secret management; real key setup is an explicit unresolved dependency, not a claim that secrets are absent. Public0.1.3 APK/QR unchanged, no server deploy/config/DB/business/message/read/push action. Quick-repliesPR2868 remains separate awaiting its exact checks. No new device test requested. YAML parses locally; complete Android/full PR/main checks required. Single next action: finish technical verification, preserve both source slices when reconciling main, then obtain protected signing setup and existing-owner voice/AI contract before one consolidated candidate/device batch.

19/10/2026 — native durable preview signing BUILD PREPARATION CLAIM / NOT CONFIGURED

Retained owner feat/android-chat-native-20261017; independent branch feat/native-stable-preview-signing-20261019. Exact source scope android/app/build.gradle conditional stablePreview signing for the existing debug preview package, new manual-only .github/workflows/android-chat-signed-preview.yml, docs/testing/native-chat-final-batch.md. Existing ordinary PR debug tests continue without private credentials. No production release/Play package/Firebase-provider change, no key/password in Git/APK/logs, no direct public download/QR update or deploy. Preview is still a preview, not a production release.

Workflow must run only manually from main, use owner-controlled secret keystore and passwords through environment, validate a pinned public certificate fingerprint, require exact source full CI and Android workflow success before signing, fail closed on missing/partial secrets or mismatched signer, upload only APK and nonsecret source/hash/cert receipt, clean temporary key on every exit. No PR-triggered access to signing material and no silent ephemeral-key fallback in this dedicated workflow. Existing version/package and privacy/message behavior unchanged. Setup contract names MW_CHAT_KEYSTORE_B64, MW_CHAT_STORE_PASSWORD, MW_CHAT_KEY_ALIAS, MW_CHAT_KEY_PASSWORD and repository variable MW_CHAT_CERT_SHA256; keystore injection belongs to a capable authorized configuration channel. Current connector has no Actions-secret-management capability; availability NOT VERIFIED. No signing key is generated, read or exposed by this claim.

Require static workflow/Gradle checks plus existing Android/full CI. Successful secret-injected candidate, physical same-signer update, public distribution and the consolidated final device batch remain NOT TESTED; do not ask user for incremental tests. iOS LAST. Quick-reply sourcePR2868 remains separate and is not claimed complete. Voice/AI dependencies tracked in issue2869 retain existing owners. Single next action after this claim green/main: implement fail-closed signing build preparation and actionable consolidated test/setup document, without activating a release.

19/10/2026 20:47 Europe/Athens — native two-camera batch LIMITED USER PASS

Retained owner feat/android-chat-native-20261017. After delivery of trial0.1.6 the owner confirms «ειναι οκ..εστειλα 2 μαζεμενεσ». In the ongoing camera retest this is LIMITED USER PASS for sending two camera captures together, superseding the previous last-only camera FAIL for this tested step. Gallery USER PASS remains protected. This is owner confirmation, not independently measured Admin visibility, message IDs, installed APK hash, device/model/OS or storage forensics. Do not repeat accepted sends for paperwork.

Verified offered artifact/source/CI remain those of PR2857 and delivery receiptPR2859: source1d74ca63e62ee1ab1e094a41ae15d598fd6ab508, mergea8ae40b2d913b7e5e68e5f3f1c6ec77b9ef9a0b5, APKf77fcdc63fddf6d6814c831a2d85b874c1bab71d57b3cf739e3cdf254957f232. This does not independently prove what binary is installed. Manual now records the tested two-capture usage. Completed two-camera outbound retest is removed from current pending tasks. Broader devices/limits/negative-session/privacy/stable signing/Play/iOS and replies/voice remain OPEN under existing owners. Public0.1.3 QR unchanged; no source/server/config/DB/message/read/push/business mutation by this page. Single next action: separate Admin-side visibility of the already-sent two images if needed, without resending.

19/10/2026 — native camera batch0.1.6 TECHNICAL PASS / AWAITING CAMERA DEVICE

Retained native owner feat/android-chat-native-20261017. Before-source claim/gallery PASS/camera FAIL receiptPR2855 green/maina210bc61 before implementation. SourcePR2857/head1d74ca63e62ee1ab1e094a41ae15d598fd6ab508 mergeda8ae40b2d913b7e5e68e5f3f1c6ec77b9ef9a0b5 after fullPRCI39292829376/job118197962433 SUCCESS3459PASS/0FAIL/0SKIP+6backup and Android39292829379/job118197607651 SUCCESS23unit+19API30instrumentation/build/lint, zero failures. Exact merged mainCI39294002130/job118201967531 SUCCESS3459PASS/0FAIL/0SKIP+6backup.

One foreground camera session now keeps multiple bounded JPEG captures until explicit Use N photos. The complete single-use RAM batch transfers to the matching Main store/session and enters the existing strict ordered send queue only after explicit Send. Stop/cancel/recreate wipes draft bytes, epoch fences late callbacks; committed handoff retains existing30second expiry. No files/MediaStore/Intent/Bundle images, background-clearing bypass, new permissions/backend/settings/auth/push/auto-send/retry. Gallery multi-photo/caption/next draft/unknown-outcome/send-interlock and unrelated owners remain protected. Hardware capture is not proved by the19 isolated Activity fixtures.

Verified artifact12207650641 from exact1d74ca63:0.1.6-preview/code7/packagegr.myworkstation.chat.preview,3654376bytes/APK SHA256f77fcdc63fddf6d6814c831a2d85b874c1bab71d57b3cf739e3cdf254957f232, signercert47ef4893b0e133a1644f48bf7a10106785a54d0a7942d83c168098e2a4a99a88. APKv2 RSA/full-content digest, manifest/version/package and actual camera batch DEX with fixture classes absent independently PASS. Android tree3b48000897eec4be9e1592fc27fb981621b559ef equals merged source. Exact ZIP/CI/delivery metadata CHECKPOINTS/EVIDENCE/native-camera-batch-20261019/artifact.json. Same native APK deliverable replaced successfully as version8, file_00000000a4f88246a73cab0911e19fb2, filename MyWorkStation-Chat-Android-0.1.6-Preview.apk; local metadata applied. Changed signer requires removing only MW Chat Preview before install/re-login/notification reactivation; stable signing remains OPEN.

Gallery send remains LIMITED USER PASS from20:02; camera last-only USER FAIL remains the authoritative pre-correction observation until device retest. New0.1.6 hardware/device acceptance NOT TESTED, no CI-only manual PASS. Public0.1.3 install/QR remains unchanged by this page, no server deploy/env/database/business/message/read/push mutation. All other pending scopes/owners and qualified PASS remain.

Single next action: install this exact0.1.6 trial (remove ONLY MW Chat Preview for changed signer, never POS), re-login/reactivate notifications. In ONE camera screen take first and second photos, then tap Use2 photos; after returning to LAB wait for refresh and press enabled Send ONCE. Verify both separate images at Admin. Do not reopen the camera between the two captures or repeat accepted gallery tests for paperwork. Whole native/N16, camera physical acceptance, other negative/privacy/session/device/stable-signing/iOS and approved replies/voice remain OPEN/retained.

19/10/2026 — native multiple-camera captures USER FAIL / ASSIGNED BEFORE SOURCE

Retained native owner feat/android-chat-native-20261017; bounded source fix/native-camera-batch-20261019. Owner clarifies gallery success, then reports that attempting two camera photos sends only the LAST one. Gallery multiple-photo USER PASS remains protected. New USER FAIL is camera accumulation, not gallery delivery. Source confirms CameraActivity finishes after each single JPEG, CaptureBuffer owns one byte array and Main CAMERA result clears/replaces the queue; Main onStop also deliberately wipes old selected bytes. Do not bypass that privacy boundary merely to append across separate camera launches.

Before-source scope: CameraActivity collects up to5 JPEGs/7MiB each/14MiB total in one foreground camera session, reuses the existing bounded PhotoBatch, offers explicit Use N photos, then transfers one single-use RAM-only batch through CaptureBuffer into Main CAMERA result. Main's existing background clearing remains unchanged. Cancel/background/recreate and stale callbacks wipe local/late private buffers; committed handoff keeps existing30second expiry and is consumed only by matching store/session result. No JPEG bytes in Intent/Bundle/file/MediaStore, no new persistence/permission/server/API/settings/auto-send/retry. Separate captures are sent by existing strict ordered one-photo POST queue only after explicit Send. UI must make the new multi-capture/Use step clear.

Exact paths: android/app/src/main/java/gr/myworkstation/chat/{CameraActivity,CaptureBuffer,MainActivity}.java, existing CaptureBufferTest and bounded camera-batch Activity instrumentation, android/app/build.gradle preview0.1.6/code7. Protect gallery provider/queue limits/removal/caption-once/next draft, send interlock, unknown-outcome no replay, authentication/store/settings/push and other AI/history owners. Require new unit/lifecycle/handoff/stale-binding tests, exact green Android/full CI, merge and independently verified signed APK before physical two-camera acceptance. Camera hardware/device behavior remains NOT TESTED by fixtures. No real message/photo/read/push/business/settings/server action by this page. Single next action: after this claim is merged green, implement one camera-session batch; do not repeat the successful gallery send.

19/10/2026 20:02 Europe/Athens — ANDROID-CHAT-NATIVE-01 / multiple-photo send LIMITED USER PASS

Owner clarification20:02:30: successful images were selected from existing gallery storage, NOT direct camera capture. PASS applies only to gallery multiple-image outbound send. Camera capture/send remains unconfirmed; the clarification alone does not establish a new camera failure.

Retained native owner feat/android-chat-native-20261017. After the exact0.1.5 trial delivery and instruction to select two LAB images after refresh, the owner reports «ΤΙΣ ΕΣΤΕΙΛΕ». This is LIMITED USER PASS for the reported multiple-photo outbound send and supersedes the earlier none-sent USER FAIL for that tested step. Do not repeat the successful send for documentation. Exact on-device version/hash, image count/IDs/bytes/MIME, model/OS, transport trace and separate Admin-side receipt/visibility were not independently verified; no broader all-device/all-five-image/privacy or financial PASS is inferred.

Technical provenance: sourcePR2850 finalcaf5d9df, mergedef40ac97; fullPRCI39260146010 and exactmainCI39262041082 SUCCESS3430PASS/0FAIL/0SKIP+6backup; Android39260145883 SUCCESS22unit+14instrumentation/build/lint. Delivery receiptPR2853 green/main79b5de8c; exact artifact 12190426460/code6/0.1.5/SHA2568a2425e03bad8b9e2e8c203ff0e10d1ec5264155ce0c0209f2386035ea3c84e2 and same Library deliverable version7. These identify the offered binary, not an independently measured installed hash. Machine evidence CHECKPOINTS/EVIDENCE/native-send-interlock-20261019/artifact.json now records this separate user observation.

Verified usage instructions added to docs/manual/native-chat/PASS.md; active/tracker/pending/PDF synchronized. The completed outbound retest is removed from current pending scope; separate Admin receipt and remaining native/privacy/session/camera/device/stable-signing/iOS and approved replies/voice remain OPEN with existing owners. Public0.1.3 install/QR is unchanged; no release/config/server/database/message/read/push/business action was performed for this receipt. Existing single-photo/push/AI limited PASS and all other owners retained. Single next action: establish separate Admin-side visibility of the already-sent images without sending them again before broader distribution acceptance.

19/10/2026 — ANDROID-CHAT-NATIVE-01 / refresh-send interlock0.1.5 TECHNICAL PASS / AWAITING DEVICE

Retained native owner feat/android-chat-native-20261017. Before-source claimPR2849/headdfc1bb5f green/main70d60c00. SourcePR2850 finalcaf5d9dfab04e40e6e4f93f5e74e9067f28edea5 mergedef40ac972911f11fed17706acc6901befd086d91 after fullPRCI39260146010/job118085675266 SUCCESS3430PASS/0FAIL/0SKIP+6backup and Android39260145883/job118085350582 SUCCESS22unit+14API30instrumentation/build/lint, zero failures. Initial8996fd08 CI also green; only active-list prefix conflicted with central phase6 receipt and both complete records were retained. No runtime conflict or weakened tests. Exact merged mainCI39262041082/job118092261840 SUCCESS3430PASS/0FAIL/0SKIP+6backup.

Corrected the demonstrated silent send-entry path matching the owner's clarified symptom: chat Send is disabled during existing requests, the list GET says Ανανέωση μηνυμάτων and message POST says Αποστολή μηνύματος. No automatic or deferred send, no retry. Held-GET real Activity regression preserves two selected images/caption, proves zero POST during and after refresh, then exactly two ordered POSTs only after the enabled-button click. Gallery ContentResolver stop/start/result/resume diagnostic, strict receipts/unknown-outcome gate, caption-once/next draft, lifecycle wiping/settings/store/session checks remain covered. Other AI/history/PWA/N16/central/online owners and prior qualified single-photo/push PASS preserved.

Trusted finalartifact12190426460 from exactcaf5d9df Android run verified0.1.5-preview/code6/packagegr.myworkstation.chat.preview; Android tree7367c4fe3d97f9f0addb4f7d8853ea251843ae2e equals merged main. APK3654372bytes/SHA2568a2425e03bad8b9e2e8c203ff0e10d1ec5264155ce0c0209f2386035ea3c84e2, signercertf7d2fd7dd9a50a1f4e315c7612c8944e3bc7ec615fe6714f0f6c36a858bbb872. Independent APKv2

RSA/full-content digest, manifest/version/package, both new DEX labels and absence of fixture-provider manifest/DEX PASS. Initial0.1.5 candidatec2373dd5 superseded BEFORE delivery; no user installed it through this page. The same durable native APK deliverable was replaced successfully as version7 (libfile_a30159b8f9c08191939dd9f9c647a147/file_00000000ffcc8246abe889e639239e57), named MyWorkStation-Chat-Android-0.1.5-Preview.apk; metadata applied to the final local file. Different signer from0.1.4: remove only MW Chat Preview before installing/re-login/notification reactivation. Stable signing remains OPEN.

Current device evidence remains USER FAIL on the earlier trial: selected-image count visible, connection indication clears without multiple-image delivery; one-image delivery reported working. Exact physical root cause is not independently traced and new0.1.5 device acceptance is NOT TESTED. CI is not USER PASS; no CI-only manual entry. Public install/QR manifest freshly read as0.1.3/code4/hash82c2ed08 and unchanged by this page. No server deploy/env/database/business/message/read/push mutation. Detailed hashes/CI/delivery metadata CHECKPOINTS/EVIDENCE/native-send-interlock-20261019/artifact.json.

Single next action: install this exact0.1.5 trial (different Preview signer requires removing only MW Chat Preview, never POS), re-login and reactivate notifications, select two non-sensitive existing LAB photos, wait for refresh to finish, press enabled Send ONCE and verify both separate messages at Admin. Do not repeat old successful tests for paperwork. Failure review/discard gate still applies if an outcome is unknown. Whole native/N16, physical correction acceptance, replies/voice, negatives/camera/device/privacy/stable-signing/iOS remain OPEN with existing owners.

19/10/2026 — native chat refresh/send interlock ASSIGNED BEFORE SOURCE

Retained feat/android-chat-native-20261017; bounded source fix/native-chat-send-interlock-20261019. New owner clarification through choices: selected-image count IS visible and the connection indication later disappears without another result. Multiple images USER FAIL remains; one image USER PASS retained. This rules out an initially rejected/empty selection for the reported attempt, but no device trace identifies its exact request. Gallery-provider diagnosticPR2842/head2face1848f2aede56511e24f99bf7b2bca106827 passed Android39253547724/job118063033540 (13 instrumentation, compile/unit/lint) and fullPR39253547390/job118063337742; merged880c6f428beeb657058b4f94c9600320f41c9641. Valid generated-byte ContentResolver/resume path passes technically, not device acceptance.

Source observation: conversation resume starts message GET with busy=true and notice Connection; Send remains enabled, while send() returns silently on busy. GET completion clears the notice without sending. Bounded correction claim: only native chat send-button interlock and distinct message-refresh versus message-send status in MainActivity (call completion/error, chat button construction and reference clearing on layout/stop), plus held-GET Activity regression and preview version0.1.5/code6. No deferred send or automatic retry: user must explicitly press the enabled button after refresh. Preserve photo queue, caption-once/next draft, strict receipts/unknown-outcome gate, epoch/lifecycle/privacy/settings/tenant guards, single-photo/camera and unrelated AI/history implementation. Do not claim this is independently proven physical root cause before device retest.

Render read-only request/app log filters11:25–12:21Z returned empty; this is absence of diagnostic logs, NOT proof no request arrived. Read-only aggregate image metadata in that window has one image11:35Z/415063bytes and one11:37Z/334151bytes, no private content/identities retrieved and not attributed to this device. No production message/read/push/business/settings/config/deploy action. New build remains AWAITING CI AND DEVICE; public0.1.3 unchanged. Existing assistant-history native integration/auth-transaction owners and all other assignments retained. Single next action: after this claim merges green, implement only this bounded interlock, hold a GET with two selected images and verify disabled Send/no POST, then explicit send after refresh produces exactly two POSTs with no replay.

19/10/2026 16:00 Europe/Athens - WHOLESALE OWNER RETRY / LICENSE RESTORED; ACTIVE ACCEPTANCE BLOCKED

Retained codex/wholesale-suite-20261017 resumes existing published PR2820 scope after explicit user activation15:46:45Athens. Actual personal Owner login/inactive refusal succeeded before activation; secure Platform Super Admin Χρήστος Μάνης password+2FA then succeeded. No secret values read. Before-action evidence written12:51:32.046UTC before saving. Fresh saved WHOLESALE_B2B ACTIVE12:52:35.424UTC/22modules/104.70EUR/0monthly/0setup/MONTHLY/no dates. After role transition, Owner page needed canonical navigation and showed login. Subsequent secure request returned submitted after380seconds but actual page still showed Super Admin2FA link, without named personal Owner/private workspace. ACTIVE OWNER ACCEPTANCE BLOCKED / NOT TESTED, not a new product PASS or proven application defect.

Restored only wholesale: fresh pre-restore ACTIVE13:00:28.652UTC; fresh saved INACTIVE13:00:46.421UTC/21modules/104.70EUR.36other module cards+nine general fields retained SHA2563ac7086147cbfd29b7b3271b18a87f882aadacb05979e8fd13018172d672b35c at before/draft/active/pre-restore/restored; plan-price cards excluded. LIMITED LIVE LICENSE RESTORATION PASS. Grant remained active approximately12:52-13:00 during authentication wait, no timed auto-revocation; none remains. Fresh personal denial after restoration NOT TESTED. Prior PR2820 personal inactive PASS and PR2837 receipt protected.

Actual visible company directory confirms Υπεύθυνος Εργαστηρίου / xrhstosmanis@gmail.com. Read-only source review shows personal wholesale rejects platform/support context and successful personal login replaces ordinary browser user/token and removes platformToken; deliberate account selection is required after role changes. Submitted credential values are unknown. No bypass, password/account change or runtime fix inferred. No management/store-picker/private-tab/portal/site/seller/order test ran. No membership/assignment/account/customer/site/order/price/stock/payment/fiscal/shift/SQL/seed/migration mutation; business deltas unmeasured/N/A. Later public no-cache health oktrue/version0.22.0+kat-test-pos/exact3e50b35596848994efa94c9e5d3cedf8dc1af8f6/curl exit0, separate from UI-action revision.

Evidence CHECKPOINTS/EVIDENCE/wholesale-owner-active-retry-20261019/before-action.json, after-action.json and actual restored-license.jpg (LAB header21/104.70; wholesale card below viewport, inactive proof from fresh DOM). Incidental Platform backup FAIL badge was observed, not investigated or claimed fixed; no takeover of lifecycle/backup owner. Current mainbab033d5b and native/history/central/lifecycle/supplier work preserved. Common checkpoint/ACTIVE/KAT/tracker/pending/README/manual/PDF synchronized. Whole product OPEN/ASSIGNED; no numbered item closed. Single next action verify the exact existing LAB Owner account selection before a separately authorized future active acceptance; no automatic repeat grant/auth loop. Coordinator retained until named handoff.

19/10/2026 Europe/Athens - COORD PHASE6 / EXPLICIT ENDED ATHENS SALES COMPARISON / ASSIGNED BEFORE SOURCE

Retained central coordinator codex/central-four-streams-20261018, issues #2704-#2707, original14 #13. User requested continued autonomous coordination here; four internal workers, no external page transfer. Baseline main 3e50b35596848994efa94c9e5d3cedf8dc1af8f6 after phase5 receipt #2834, purchase correction limited preview/cancel PASS #2835, history int64 compatibility #2836/readiness #2838 and independent lifecycle central execution #2833. Read current AGENTS, full common registries/checklist, relevant manuals/checkpoints and subsequent history. Existing Gate7 PASS, all retained owners and phase5 source/acceptance boundaries remain protected. This expands original14 #13 only; no claim on old advanced analytics or Workforce.

ASSIGNED exact six source/test paths, source editing only AFTER this claim is green merged:

- WS3 backend, codex/central-sales-comparison-20261019: existing server/src/routes/kiosk-reports-sales-v4.js, NEW server/src/services/sales-report-comparison.js, NEW server/test/sales-report-comparison.test.js. Add only explicit paired compareFrom/compareTo opt-in on the

normal sales-analysis list route; absent both retains existing default shape and calculations. Reject one-sided/blank/array/invalid fields. Require explicit Europe/Athens calendar and selected active same-company store. Reuse existing unchanged calendar helper and actual canonical sales reader; do not reconstruct from assistant/model values or an advanced endpoint.

- WS1 native regression, codex/central-sales-comparison-native-20261019: NEW server/test/sales-report-comparison-postgres.test.js only. Actual isolated PostgreSQL canonical SQL and mounted GET, same-snapshot/scoping/signed refunds/DST/cap/zero-base controls and byte-identical before/after database evidence. No cash runtime edits or production records.

- WS4 UI, codex/central-sales-comparison-ui-20261019: existing client/src/components/commerce/installKioskReportsSalesV4.js and NEW server/test/kiosk-sales-comparison-ui.test.js. Unchecked opt-in beside existing hourly controls, explicit blank prior dates, selected store and Athens requirement. Capture paired dates only on the list request with applied filters; never change drilldown/CSV requests or infer dates. Display qualified comparison from exact response envelope; mounted actual installer tests for applied-vs-draft filters, stale/tab/store isolation, invalid/limited metadata, zero/negative basis, and existing hourly/default/CSV/drill behavior.

- WS2 independent contract/source review only, no supplier/invoice edits. Root exclusively owns shared records, central checkpoint CHECKPOINTS/CHANGES/2026-10-19-central-sales-comparison.md, publication, source/release evidence and regenerated common PDF.

Policy: two explicit ended Athens CALENDAR-DAY intervals, each <=366 inclusive days, equal dayCount, previous.toExclusive<=current.from, both end<=ONE captured server now. Closed calendar days do not mean closed cash shifts or final financial reconciliation. Equal day counts do not certify weekday, seasonal, capacity or trading-condition equivalence. Read active store and both actual canonical reports inside ONE RepeatableRead transaction. Current preserves optional hourly view; prior does not request hourly. Default list, product groups, amounts, limit10000, coverage, unique basket counts, auth/licensing/company/store guards, calendar defaults, CSV and drilldown remain unchanged.

Wire: existing current report plus comparison {status AVAILABLE or SOURCE_LIMITED, policy EQUAL_ENDED_ATHENS_CALENDAR_DAYS, timeZone Europe/Athens, companyId, storeId, query q-or-null, asOf ISO, dayCount, currentPeriod and previousPeriod {calendarFrom,calendarTo,from,toExclusive,elapsedHours}, coverage {current,previous}, financialFinality PROVISIONAL, financialReconciliationComplete false, basisLimitations [NOT_WEEKDAY_OR_SEASONAL_EQUIVALENCE,NOT_FINAL_FINANCIAL_RECONCILIATION]}. AVAILABLE only with complete consistent coverage on both sources adds safe integer currentGrossCents/previousGrossCents/deltaGrossCents and revenueChangePercent. Positive prior base uses safe division; prior zero/negative =>percent null with ZERO_BASE/NEGATIVE_BASE. Missing/inconsistent/partial coverage =>SOURCE_LIMITED and unavailableReason SOURCE_LIMITED, OMIT all compared money/delta/percent fields. Gross turnover only, preserving signed reversals; checked cents and overflow fail closed. No quantity/unit mixing or staffing inference.

Required evidence: pure policy leap-year/month-length/DST23/25-hour boundaries and end==now; malformed/orphan/overlap/open/unequal/overcap refusal; complete/empty/partial/invalid coverage; checked cents and delta/percentage overflow; one captured time/RepeatableRead/active store and authorization; actual native reader and mounted route with immutable fixture snapshots; real installer controls/context races/default/hourly/CSV compatibility. Full exact PR/main PostgreSQL/HTTP/Windows/Chromium/build/invariants CI and ordinary guarded exact healthy release before hosted acceptance. No skip or weakened historical assertions to obtain green CI.

Current evidence: phase5 exact source main CI 3356/0/0 +6; then-active compatible fb11a314 full CI 3377/0/0 +6 and ordinary release/independent health verified in #2834. New comparison NOT IMPLEMENTED / NOT TESTED; browser native credential state remains blocked, no bypass or credentials extraction. Native local environment limitations must stay explicit and required native tests must execute in CI. This claim creates no LAB/business PASS and no CI-only manual entry. Fresh independent public no-cache health 2026-10-19T12:26:52.983836+00:00: HTTP200/oktrue/exact3e50b35596848994efa94c9e5d3cedf8dc1af8f6/version0.22.0+kat-test-pos. Before publication preserve newer docs main7d6862ed/#2839: native multi-photo USER FAIL belongs to the native

owner and is not superseded or repaired by this analytics claim.

Safety: no production financial/stock/fiscal/shift/payroll/settings/recipient/SMTP/order/schema/infra mutation; no accepted transaction replay or live send. Keep invoice, supplier correction, lifecycle, native, wholesale and VOICE/parser/history owners. Existing grouped MONTHLY/supplier/hourly/product/coverage acceptance remains AWAITING LAB unless newer exact real evidence supersedes it. Original14 overall OPEN. Final consolidated receipt updates checkpoint/common registries/original14 map/machine evidence/PDF together. Single next action: green merged claim, then the six-path implementation and independent review. Central owner remains assigned until completion or named handoff.

19/10/2026 – WHOLESALE-OWNER-ACTIVE-LAB-02 / LICENSE RESTORED PASS; ACTIVE PERSONAL ACCEPTANCE BLOCKED

Retained coordinator codex/wholesale-suite-20261017. User explicit approval12:04:29 Europe/Athens applied to the bounded temporary WHOLESALE_B2B grant for MYWORKSTATION LAB only, after claim PR2820/cff103c5 was green merged. Before-action baseline was written before saving:09:37:08.162UTC,21active, wholesale INACTIVE,104.70EUR. Fresh saved activation09:39:18.048UTC:22active, wholesale ACTIVE,0monthly/0setup/MONTHLY/no dates. Existing Platform Super Admin Χρήστος Μάνης positively identified after secure2FA; no credential values read.

ACTIVE PERSONAL OWNER ACCEPTANCE BLOCKED / NOT TESTED: secure personal login request timed out after approximately3915seconds; subsequent actual page remained login with Super Admin2FA link, without positively named personal Owner or private workspace. Submitted status is not login success. No manager tab/store picker/portal/order acceptance ran. The grant remained active during authentication wait (approximately09:39-10:47UTC), without automatic timed revocation. This is not an execution/test interval and no application defect is inferred solely from this authentication outcome.

RESTORATION LIMITED LIVE PASS: fresh platform license before restore10:47:12.165UTC ACTIVE; toggle only wholesale off, save acknowledged, reopen fresh10:47:53.095UTC INACTIVE/21active/104.70EUR/37module cards. SHA256 of36other cards and nine general subscription controls remained3ac7086147cbfd29b7b3271b18a87f882aadacb05979e8fd13018172d672b35c before/draft/active/pre-restore/restored. Three plan-price cards were not hashed (visually100/220/330 before/after). No temporary grant remains. Fresh personal inactive refusal after restoration NOT TESTED because no personal session; prior actual PR2820 inactive-personal-entry PASS remains protected.

Evidence CHECKPOINTS/EVIDENCE/wholesale-owner-active-20261019/before-action.json and after-action.json; restored-license.jpg is actual clean10:49:28.364UTC screenshot of LAB header21active/104.70EUR, with wholesale card below viewport. No membership/assignment/account/customer/site/order/price/stock/payment/fiscal/shift or production SQL/migration/seed action. Normal auth/audit only; business balances unmeasured, no delta inferred. Separate later public no-cache health oktrue/version0.22.0+kat-test-pos/revisionfb11a314ec1414658d0840a61f812f42058aa5a0/curl exit0, not a claim of revision at earlier UI actions. No source/runtime change or deploy by this receipt. Reconciled main3a5eb56d and concurrent central/native/supplier/history work; all owners and earlier qualified PASS preserved.

Supersedes the older awaiting-confirmation/activation plan below: the approved attempt is completed and restored; positive management remains BLOCKED. Whole wholesale/site/field sellers/offline/commercial packaging OPEN/ASSIGNED. Single next action prepare the correct existing personal Owner authentication before separately scoped future active acceptance; do not automatically repeat this temporary grant. Retain coordinator until named handoff. Common checkpoint/ACTIVE/KAT/tracker/pending/README/manual/PDF synchronized; no numbered item closed.

19/10/2026 13:01 Europe/Athens — PURCHASE-SUPPLIER-CORRECTION-01 / SOURCE LIVE + LIMITED DESKTOP PREVIEW/CANCEL PASS / ACTUAL CORRECTION AWAITING USER

Owner fix/purchase-supplier-correction-20261019 retained for actual transaction acceptance. ClaimPR2817/head61f51aae/docsCI39224718486 merged50be1881 BEFORE source. SourcePR2819 finald22ca08e94451ca856ff709d536b05f5a111af19/fullCI39228119005/job117979784214 SUCCESS3348PASS/0FAIL/0SKIP+6backup/all native PostgreSQL/HTTP/browser/build/Windows/invariants. Source merged8bcf7d4d90933fcf382979da08101ff9e310a668; exact mainCI39229223693/job117983129955 same3348/0/0+6. All eight owned runtime/test blobs independently equal between reviewed PR, source merge and actual release.

Normal freshness guard correctly held the older source while independent central/Android/history changes entered main; no bypass/manual deploy. Combined c2e83c00 fullCI39230283875/job117989370346 SUCCESS3356/0/0+6; 2b640fc6 fullCI39232012825/job117992251240 SUCCESS3377/0/0+6; actual released fb11a314ec1414658d0840a61f812f42058aa5a0 fullCI39232187262/job117995130777 SUCCESS3377/0/0+6. Ordinary guarded workflow39233768246/job117997845160 SUCCESS; Renderdep-dbauirrrjlhs73aogiig LIVE2026-10-19T10:00:11.854973Z. Independent refreshed /api/health oktrue/version0.22.0+kat-test-pos/exactfb11a314. Docs-only42353a75 preserved all owners and did not weaken the guard.

Actual hosted13:00–13:01Athens, authorized SUPER_ADMIN support desktop, selected Περίπτερο Διαδόχου Παύλου / DIADOXOU-POS-01. Full reload, commerce→other functions→orders. Report83records, Recovery scanned50/started0/no-handoff19/non-retryable0. Explicit selected-store search found the existing FINAL6-line purchase; original editor opens and separate supplier correction button is visible. Correct active legal target/VAT shown; real backend preview displays old→new supplier and the same original payment, unchanged status/stock notice. Blank reason/confirmations keep submit disabled. Temporary local test reason plus original checkbox still disabled without payment acknowledgment; both acknowledgments enable submit. NO final button click/POST. Cancel discards the temporary controls and returns to the same original order.

Targeted complete order/two-document/payment row hashes and all6order rows/12document rows/one posting/one stock-posting aggregate hashes are byte-identical before/after. This proves limited read/preview/cancel readiness and no change of these targeted records. It is NOT a real supplier reassignment, global cash/stock reconciliation, OWNER/Manager/mobile/physical POS or all-store acceptance. Real business continued independently; no global delta claim. No sale, payment, upload, approval, stock repost, reopen, fiscal or original transaction replay submitted.

Delivery: separate original/reason/payment-reviewed supplier association transaction, shared store/row locks, full version fence, exact retry receipt/audit, duplicate fingerprint preservation and stale legacy metadata/status-request refusal.
Settled/allocated/credit-offset/reversed/shared/credit/reopened/inconsistent cases stay held. Existing learning/catalogue associations, original files/jobs, external identity and all other owners remain unchanged. Earlier first completed CI39226698062 had3335PASS/13fixture setup/VM loader FAIL/0SKIP; corrected without skipping or weakening assertions. Final local13PASS/0FAIL/6native infrastructureSKIP; required native cases all executed green in fullCI.

Engineering/release/UI-readiness is complete; remove only that completed scope from pending. Single remaining USER action: review the actual original, supplier/VAT and same payment in the delivered screen, then deliberately submit the legitimate correction once. Do not repeat an accepted invoice/payment/stock operation for evidence. Same owner retained. Checkpoint/manual/active/tracker/numbered/PDF/evidence synchronized with this limited scope; broader09/Gate3/reopen/duplicate/other owners remain OPEN as assigned. Evidence CHECKPOINTS/EVIDENCE/purchase-supplier-correction-20261019/{acceptance.json,preview.jpg}.

19/10/2026 13:01 Europe/Athens - COORD PHASE5 / CASH OVERLAP HOLD AND PRODUCT UNIT UI SOURCE LIVE / AWAITING LAB

Κεντρικός owner codex/central-four-streams-20261018, issues#2704-#2707, τέσσερις εσωτερικοί workers. Πέμπτη περιορισμένη παράδοση. Τα αρχικά14 παραμένουν συνολικά OPEN, μαζί με όλες τις ανεξάρτητες αναθέσεις και τα προηγούμενα περιορισμένα PASS. Η παρούσα καταγραφή αντικαθιστά μόνο τα phase5 SOURCE PREPARED/CI PENDING/RELEASE PENDING παρακάτω.

WS1: ο έλεγχος ετοιμότητας κρατά HOLD όταν έγκυρες κλειστές βάρδιες του ίδιου ταμείου έχουν θετική επικάλυψη πραγματικού χρόνου UTC. Διατηρούνται γειτονικά όρια, κενά διαστήματα, διαφορετικά παράλληλα ταμεία, DST, αρχική σειρά/ποσά/IDs, carry-in και cap. Χρησιμοποιείται ο υπάρχων λόγος SOURCE_SCOPE_OR_ID_INVALID με ακριβή sessionId/overlappingSessionId. Ημερήσια/εβδομαδιαία/μηνιαία αναφορά αποκρύπτει τα συνολικά groups και η μηνιαία τη σύνοψη χειριστών όταν υπάρχει επικάλυψη. Δεν αλλάζουν οι αρχικές οικονομικές εγγραφές ή ο PROVISIONAL χαρακτήρας· η ετοιμότητα δεν πιστοποιεί τελική οικονομική συμφωνία.

WS4: ο πραγματικός πίνακας SalesAssistantEvidence εμφανίζει ρητή μονάδα στα προϊόντα. PIECE/KG/LITER/PACKAGE διακρίνονται, null/απούσα μονάδα παραμένει μη καταγεγραμμένη και άγνωστες/κενές τιμές διατηρούνται με ασφαλή React escaping. Ποσότητες με πρόσημο/κλάσμα, ποσά, CSV, canonical πηγή και απόκρυψη μερικής/άκυρης πηγής δεν αλλάζουν. Δεν έγινε αλλαγή parser/chat/calendar/native/provider/auth. WS3 πρόσθεσε πραγματικό native PostgreSQL τεκμήριο του ίδιου reader με πριν/μετά snapshots τεσσάρων πινάκων και αποκατάσταση των συνθετικών ωραρίων. WS2 ανεξάρτητος έλεγχος supplier/CSV12PASS/0FAIL/0SKIP, χωρίς νέο δικαιολογημένο supplier patch, και αξιολόγηση cash/UI χωρίς blocker.

Claim#2821/head7297ea78619f8bda0985c7a74ef83ba2875237a0/docsCI39226616765 SUCCESS mergedfab4330e2b0bda43279a89675de76759e81ec12a πριν κώδικα. Αρχικές πλήρεις εκτελέσεις cash39227240704:3341PASS/1FAIL/0SKIP και unit39227307705:3343PASS/1FAIL/0SKIP. Μοναδικό FAIL: παλιό settings fixture άνοιγε MAIN07/15/23 αλλά έκλεινε όλες τις βάρδιες την επόμενη07, ενώ ζητούσε READY. Το νέο native PostgreSQL τεστ overlap εκτελέστηκε PASS και στις δύο. Οι αποτυχημένες εκτελέσεις δεν συγχωνεύθηκαν ή διατέθηκαν. Πριν από την αλλαγή του πρόσθετου fixture αρχείου, στενή επέκταση claim#2827/CI39228303516 SUCCESS mergedb25f1f2b3f0f478eb6fbc244170bf5ed872c32f2. Διορθώθηκαν μόνο τα συνθετικά κλεισίματα15/23/next07, διατηρώντας όλες τις αρχικές assertions και τον αυστηρό runtime guard.

Τελικά full PR CI: cash#2823/headcbdd17ee45e8b30da3a081083597ea2ea12e9748/CI39228755790/job117981628743 SUCCESS3342PASS/0FAIL/0SKIP+6backup. Κοινό merge62cd484ee7cb900ba06df6d9fd3e1a235d23d338 διατηρεί ancestry και των δύο. Exact source mainCI39230167668/job117986195647 SUCCESS3356PASS/0FAIL/0SKIP+6backup, με πραγματικό PostgreSQL overlap, Windows, Chromium, builds, invariants, archive και real HTTP E2E.

Ενεργή κοινή revisionfb11a314ec1414658d0840a61f812f42058aa5a0, ordinary guard39233768246/job117997845160 SUCCESS, Renderdep-dbauirrrjlhs73aogiig LIVE. Ανεξάρτητο public no-cache health2026-10-19T10:01:09.755073+00:00:HTTP200/oktrue/exactrevision. Τα6 reviewed source/test blobs διατηρούνται ακριβώς. Τυχόν νεότερες ανεξάρτητες αλλαγές και πλήρες compatible CI καταγράφονται στο machine evidence. Καμία χειροκίνητη παράκαμψη deploy/freshness guard.

Τοπικά Node20.20.2: συνδυασμένος έλεγχος48PASS/0FAIL/0SKIP, frontend/TABLE_SERVICE build PASS. Ο native wrapper τοπικά SKIP λόγω αδυναμίας χαρτογράφησης μη-root PostgreSQL UID· κανένα υπάρχον cluster δεν άλλαξε. Οι πραγματικές native δοκιμές εκτελέστηκαν στο πλήρες CI χωρίς παράλειψη. Νέα συμπεριφορά AWAITING LAB: browser native credential state cannot safely resume, χωρίς bypass/ανάγνωση credentials/κατασκευασμένο screenshot ή νέο PASS. Δεν προστίθεται CI-only manual.

Προστατεύονται daily/weekly HOLD/provisional#2743, phase4 hourly/unit πηγή και CSV, αποδεκτά τιμολόγια/πληρωμές/διορθώσεις, νεότερα native sales-display USER PASS και wholesale personal-login/inactive-module PASS. Διατηρούνται purchase-supplier-correction, lifecycle, VOICE

durable-history/natural-language, native multi-photo και wholesale owners. Καμία παραγωγική οικονομική/stock/fiscal/shift/payroll/settings/recipient/SMTP/order/schema πράξη ή replay από τον συντονιστή. Το#13 συγκρίσιμων περιόδων παραμένει OPEN· δεν άλλαξε το παλιό advanced endpoint ούτε το υπάρχον Gate7 PASS.

Επόμενη μία ενέργεια: συγκεντρωτική read-only αποδοχή με υποστηριζόμενο ασφαλές authenticated browser στο https://myworkstation-app.onrender.com/platform-admin, ίδιο υπάρχον LAB κατάστημα/διάστημα/προϊόν. Σύγκριση μονάδας και ποσότητας στον πραγματικό πίνακα βοηθού/κανονική αναφορά/πραγματικό CSV και έλεγχος υπάρχοντος HOLD cash preview, μαζί με τα εκκρεμή MONTHLY/supplier/hourly/coverage σκέλη όπου δεν υπάρχει νεότερη ακριβής πραγματική αποδοχή. Overlap LIVE μόνο αν υπάρχει ήδη κατάλληλη πηγή, αλλιώς NOT TESTED· δεν κατασκευάζονται βάρδιες/συναλλαγές. Ακριβής14map:CHECKPOINTS/CHANGES/2026-10-18-original14-status.md. Evidence:CHECKPOINTS/EVIDENCE/central-four-streams-20261019/phase5-source-release.json. Κοινά μητρώα/PDF συγχρονίζονται στην ίδια τελική καταγραφή. Κεντρικός owner παραμένει μέχρι ολοκλήρωση ή ονομαστικό handoff.

19/10/2026 12:10 Europe/Athens - COORD PHASE5 / ONE LEGACY FIXTURE COMPATIBILITY PATH / ASSIGNED BEFORE EDIT

Retained central WS1 owner codex/central-closed-shift-overlap-20261019, claim#2821 green mergedfab4330e before source. This narrow amendment adds ONLY server/test/automatic-report-settings.test.js to the existing phase5 claim, before editing that path. Root/WS1 may replace its synthetic CLOSED fixture's shared next-day07 closing time with adjacent15/23/next07 boundaries matching its stated complete-source intention. Preserve all original READY, REPORT_SETTINGS_CHANGED and CASH_RULE_CHANGED assertions, original amounts/auth/settings semantics and the new strict runtime overlap HOLD. No production settings/runtime behavior change or weakened assertion is authorized by this amendment.

Exact initial cash#2823/head3469b7ed84f4c4249bb38ce84f08e7b650a7b4c6/fullCI39227240704/job1179 76634521:3341PASS/1FAIL/0SKIP of3342. Stacked unit#2824/head9e32480d195e834a6ecd6fbaa6328976 8467d249/fullCI39227307705/job117976843992:3343PASS/1FAIL/0SKIP of3344. Sole failure in both: automatic-report-settings.test.js:30 expected ready=true while the old fixture has MAIN07-next07/15-next07/23-next07. The new actual isolated native PostgreSQL overlap fixture EXECUTED PASS in both runs (cashok233, stackok235); no skips. Failed runs remain evidence, not PASS, and neither source PR was merged/deployed.

Root inspected the exact fixture and confirmed the causal mismatch. After this amendment merges green, correct only fixture boundaries, rerun all automatic-report settings/policy/source/weekly/monthly/operator/overlap tests and combined UI tests, then both full exact PR heads and main native CI/ordinary guarded release. Other five source/test blobs remain as reviewed. Original per-terminal overlap guard remains unchanged and independently reviewed. New runtime/hosted acceptance remains AWAITING LAB; browser native credential state is still blocked. No production business/settings/SMTP write, no transaction replay, no manual deploy. Current maina537a64b includes retained native multi-photo claim#2825 and independent VOICE durable-history claim#2822; no overlap with those owners or purchase supplier/lifecycle/wholesale work.

Same final consolidated checkpoint CHECKPOINTS/CHANGES/2026-10-19-central-overlap-unit-ui.md and original14 remain OPEN. This is a test-fixture compatibility extension within central cash ownership, not a new feature or LAB PASS. Next: green merged amendment before the one-path edit; full rerun without weakening runtime or assertions.

19/10/2026 15:20 Europe/Athens — ANDROID-CHAT-NATIVE-01 / multi-photo USER FAIL / diagnosis retained

Newest owner report: selecting multiple existing images shows sending but NONE arrives; selecting one image sends normally. This supersedes physical AWAITING DEVICE for the multi-photo trial with USER FAIL, not the earlier qualified single-photo/photo-view/push PASS. Offered trial was0.1.4/code5/artifact12178111030; installed version/hash, image count/MIME/sizes, selected queue label and HTTP result are NOT independently verified. No new test message or server write was performed by this page. Do not repeat successful old tests for paperwork.

ASSIGNED retained feat/android-chat-native-20261017; bounded diagnostic branch fix/native-multi-photo-user-fail-20261019. Read-only source review finds unconfirmed alternatives: all-or-reject selection at5 images/7MiB each/14MiB combined or MIME/provider rejection, and silent send busy guard during message GET. These are hypotheses, NOT reproduced causes and NOT fixes. Existing CI injects photo bytes into the Activity; it does not prove a valid gallery ContentProvider round-trip on the user's device. No speculative bundled change, increased memory bound, retry, auth/settings/server/API change or new APK is authorized by this evidence alone.

Protected: single-image delivery, caption once, ordered sends only after explicit ok/id receipts, unknown-outcome stop/no replay, tenant/store/session isolation, background/logout wiping, notification scope and unrelated owners. No new multi-photo manual PASS. Public0.1.3 distribution stays unchanged; do not install/re-send blindly. Single next action: establish whether the selected-image count remains in MW Chat and capture the non-sensitive visible result of the failed selection/send, then reproduce that exact boundary with an isolated content-provider/transport test before one bounded correction. Whole native/N16 remains OPEN; replies/voice/iOS and prior negative/device/signing work remain with their existing owners.

19/10/2026 — ANDROID-CHAT-NATIVE-01 / multi-photo0.1.4 SOURCE + ARTIFACT TECHNICAL PASS / AWAITING DEVICE

Retained native owner feat/android-chat-native-20261017. Before-source claimPR2825 green/main a537a64b; sourcePR2826 mergedc2e83c00, pre-delivery caption follow-upPR2830/head114b5ad72c3483c0470d73abb95efb143d0e4e1c mergedfb11a314ec1414658d0840a61f812f42058aa5a0. Follow-up fullPRCI39231252797 SUCCESS3356PASS/0FAIL/0SKIP+6backup; exact final mainCI39232187262/job117995130777 SUCCESS3377PASS/0FAIL/0SKIP+6backup, all Windows/build/nativeSQL/browser/invariant/HTTP checks. Android39231252710 SUCCESS22unit+12API30instrumentation/build/lint, zero failures/skips. Other owners' source and qualified acceptance preserved.

Trusted artifact12178111030 is verified0.1.4-preview/code5/packagegr.myworkstation.chat.preview; APKv2 RSA signature/full content digest/certificate/binary manifest/PhotoBatch DEX and ZIPdigest validated. Exact Android tree9eb7f064cc73e69506aebfd154053daea3f28836 equals merged main. Durable direct trial APK replaces the previous native deliverable as version6. Earlier APK2d4ab2 candidate superseded before delivery. Exact hashes/signer/bytes/CI/delivery/public-health metadata: CHECKPOINTS/EVIDENCE/native-multi-photo-20261019/artifact.json. Public QR/install manifest remains0.1.3 until separate distribution review after physical acceptance. No server deploy by this page; no production message/read/push/business action. New Preview signer differs, so an installation conflict may require removal of MW Chat Preview only, re-login and notification reactivation; never remove POS. Stable signing stays OPEN.

Implemented: select up to5 gallery images (7MiB each/14MiB combined), secure preview/remove, sequential separate-message sends, caption only on first confirmed image. Stop on unknown outcome without replay; review history/discard. Newly typed NEXT draft is retained, never sent by subsequent image callbacks. Selected bytes clear on consumption/remove/replacement/background/logout/navigation; existing scope/settings/session/camera flow retained. Technical tests are NOT physical/forensic/all-device PASS. No CI-only manual entry.

Completed implementation removed from current pending implementation scope; native owner retains physical acceptance and unfinished negative/session/privacy/camera/device/signing/iOS work. Replies and voice messages are approved but NOT IMPLEMENTED, need their own published backend-compatible scopes; no PWA/N16/AI takeover. Single next action: owner installs this exact trial0.1.4, selects LAB, reviews and sends two non-sensitive existing images in one selection, verifies both separate messages at Admin. No old successful photo/push repetition for paperwork, no invoice/OCR/payment/stock/fiscal action. Whole native/N16 remains OPEN.

19/10/2026 12:02 Europe/Athens — ANDROID-CHAT-NATIVE-01 / multi-photo selection ASSIGNED before source

Retained native owner feat/android-chat-native-20261017; source branch feat/native-multi-photo-20261019. Owner explicitly says START after proposal for replies, multiple photos and voice messages. First bounded causal slice is native multiple-photo selection, review/remove and sequential individual-message sends through the EXISTING one-attachment Chat API. Up to5 selected images and aggregate14MiB memory bound, each at most7MiB; no persistent URI permission/cache/gallery export/history. Server continues to receive one attachment per message; no fake album/atomic group claim. Text belongs to first confirmed send only. Per-image response must confirm ok/id before advancing; unknown outcome stops and preserves existing history-review/discard safety. No automatic retries or fabricated idempotency promise. Logout/background/store/tab change wipes private images and cancels further sends. Settings denial prevents sending; normal camera and single-photo flows remain compatible.

Independent native-only extension: android/app/src/main/java/gr/myworkstation/chat/MainActivity.java, new bounded in-memory photo queue and focused unit/instrumentation tests, Android README/version metadata when release ready. No existing PWA/N16/backend/AI ownership transfer, route/schema/DB/module/credential/deploy modification in this slice. Actual replies and voice recording/playback need separately published backend-compatible claims after this slice; not implemented or accepted by this claim. Preserve earlier limited native photo, login/2FA/store/push/logout/screenshot/AI display USER PASS and their explicit limits. No real messages/read/push/business action by agent for validation.

CLAIM / NOT IMPLEMENTED / NOT TESTED. Publish green/main before source. Require bounded memory/wiping, rejection/no partial selection, failure/unknown stop, per-photo progress and lifecycle/store fencing, build/lint/Android tests and full applicable CI. Signed APK distribution and actual device acceptance remain separate from source checks; no USER PASS from CI. Current native0.1.3 remains installed until a verified new artifact is available. Single next action: merge claim, then implement native multiple-photo queue only. Owner retained; unfinished replies/voice/negative/privacy/camera/signing/iOS remain OPEN.

19/10/2026 11:55 Europe/Athens - COORD PHASE5 / CLOSED SHIFT OVERLAP AND PRODUCT UNIT UI / ASSIGNED BEFORE SOURCE

Retained central owner codex/central-four-streams-20261018, issues #2704-#2707. Baseline c13c647c766ac08abeb678c3fd8dee8d1db48e29, after independent lifecycle worker leases #2816, purchase-supplier-correction claim #2817 and native sales-display USER PASS #2818. Before publication reconciled newer main cff103c5cbb4da9cc790a2473af8f1240ad796f1 and personal wholesale inactive-module proof #2820 without repeating its accepted login/actions. Current AGENTS, complete common records, numbered checklist, phase3/4 checkpoints, relevant manuals and history since receipt #2798 reviewed. Existing source/release and scoped LAB/USER PASS remain protected. Browser getState still refuses native credential-state resumption; no bypass, credentials read or new LAB PASS. This is a bounded continuation of central reporting/unit ownership, not a takeover of invoice, lifecycle, Workforce, VOICE wording, native or wholesale scopes.

Two actual local reproductions, NOT hosted failures: unchanged dailyCashReportReadiness accepts same MAIN CLOSED07-23/15-23/23-next07 as ready=true with no holds, permitting aggregation despite overlap. Independent second worker confirmed, while adjacency and different-terminal controls stay ready. Actual esbuild-compiled SalesAssistantEvidence plus React rendering shows PIECE and KG matched rows identically as bare quantity1.5; canonical server rows/CSV already preserve the unit from phase4.

- WS1 ASSIGNED codex/central-closed-shift-overlap-20261019: ONLY server/src/services/automatic-report-policy.js and NEW server/test/automatic-report-overlap.test.js. Detect positive UTC interval intersection among valid CLOSED rows of the exact same terminal, after existing tenant/day/identity validation; use existing SOURCE_SCOPE_OR_ID_INVALID HOLD and UI explanation. Copy-sort with running maximum end or equivalent correct nested-interval detection; never mutate source rows/order. Adjacent endpoints remain valid, zero-duration empty intervals retain existing semantics, distinct terminals may run concurrently, invalid/future rows retain existing HOLD handling. No artificial continuous-coverage rule, employee attribution, new sums or source SQL. Meaningful policy+actual source tests must suppress daily/weekly/monthly groups and monthly operatorSummary for overlap, while preserving PROVISIONAL finality, originals, cap, carry-in, DST and controls.

- WS3 ASSIGNED codex/central-overlap-native-20261019: ONLY server/test/automatic-report-source-postgres.test.js. Extend actual isolated Prisma/PostgreSQL fixture to prove same-terminal closed overlap HOLD/groups:null with immutable before/after record snapshots, restoring fixture timestamps before existing tests. Preserve adjacent and distinct-terminal positive controls and all earlier auth/scope/open/carry-in cases. No production fixtures, Prisma/schema/source edits or business writes.

- WS4 ASSIGNED codex/central-product-unit-ui-20261019: ONLY client/src/components/voice/SalesAssistantEvidence.jsx and NEW server/test/assistant-product-unit-ui.test.js. Display an explicit unit cell in matched product evidence; recognized units may receive existing-style Greek labels, while null/missing remain unrecorded and unknown raw units remain visible and React-escaped without conversion or guessed pieces. Preserve signed/fractional quantity and amount formatting, canonical rows, limited/ambiguous/no-match suppression, store/date/context text and existing overflow. Test the actual compiled JSX rendering, all four canonical units, unknown/null/missing, escaping, signed quantities and unchanged money/suppression. No parser/chat/calendar/native/auth/provider/server/export changes.

- WS2 internal independent review: read-only supplier/core/CSV audit found no new justified supplier runtime defect; nine pure tests passed and a missing-zod import was an installation limitation, not a source failure. After dependencies are installed rerun relevant suites and independently review cash/unit patches. No overlap with the new posted-order supplier correction owner or Task29/30/invoice/wholesale owners.

Root alone shared records, checkpoint, PDF, integration/publication. Exact proposed source paths: two runtime and three test files above. Require this claim green merged main BEFORE edits. Then focused tests, independent review, full exact PR/main native PostgreSQL/HTTP/Windows/Chromium/build/invariants, ordinary guarded exact release and independent public health. CI is not LAB PASS. No manual deploy or production financial/stock/fiscal/shift/payroll/settings/recipient/SMTP/order/schema action; no accepted transaction replay. No automatic email enablement or sending.

Original14 #13 comparable periods remains OPEN: old advanced-report UTC-duration comparison is outside this bounded change and existing Gate7 PASS remains protected. No staffing recommendation or physical-delivery assertion. Existing MONTHLY/supplier/hourly/product/coverage grouped read-only acceptance remains AWAITING LAB where not superseded by exact scoped real evidence. Final one consolidated receipt updates active/pending/tracker, this checkpoint, original14 map and common PDF. No CI-only manual entries. Central owner remains assigned until completion or named handoff. Checkpoint CHECKPOINTS/CHANGES/2026-10-19-central-overlap-unit-ui.md. Next action: green merged claim, then the two bounded fixes with native and independent review workers.

19/10/2026 11:50 Europe/Athens - WHOLESALE-OWNER-STANDALONE-LAB-01 / LIMITED PERSONAL LOGIN + INACTIVE MODULE LIVE PASS

Retained owner codex/wholesale-suite-20261017; baseline main43a3f3ac8b1d5908a29d39cdc91f153661c47228. Latest wholesale receipt PR2814 remains protected; independent lifecycle PR2813/2815 changes were read and preserved. Fresh public no-cache health after observation returned oktrue/version0.22.0+kat-test-pos/exact8e6dcafaadb86e933ce0f6b903cd33a85df5b012, curl exit0. No source/runtime/schema change and no deployment in this phase.

Actual Cloud Chrome / standalone https://myworkstation-app.onrender.com/wholesale /19/10/2026 08:50:02.697UTC: secure personal login now positively displays Υπεύθυνος Εργαστηρίου, Αποσύνδεση and Σύνδεση λογαριασμού. The page displays Το πληρωμένο module Χονδρική B2B δεν είναι ενεργό and Επανέλεγχος πρόσβασης; private manager/site/seller workspace and store picker do not render. LIMITED LIVE UI PASS only for this actual personal login and inactive-module refusal in the standalone entry. This supersedes the earlier untested personal-login part of PR2814, but does not close active-module management/store selection, portal, seller/customer orders or commercial standalone acceptance. Prior embedded limited PASS and all inactive membership/assignment/module restoration remain protected.

Authentication history: first secure attempt reported submitted but left login with Super Admin2FA link, so it was not called success. User said the secure form was not visible and requested it again; second request positively reached the named personal Owner. No credential values were read, copied or published. Screenshot was visually observed in browser; its requested shared-file copy did not synchronize within5seconds, so no downloadable image is claimed or attached. Exact non-secret visible DOM is in CHECKPOINTS/EVIDENCE/wholesale-owner-standalone-20261019/acceptance.json. No live module/member/assignment grant, account/customer/site/order, pricing/stock/payment/fiscal/shift or production SQL/migration/seed action occurred. Normal authorized sign-in may create the normal session/audit; no business-balance deltas were measured or inferred.

PREPARED NEXT ACTION / AWAITING ACTION-TIME CONFIRMATION: temporarily enable ONLY the existing WHOLESALE_B2B module for MYWORKSTATION LAB, test this existing personal Owner's /wholesale active store picker and manager tabs read-only in exact ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ, then restore the module inactive and verify fresh denial. No membership/assignment/customer/site/price/order change. Before any activation, require exact current platform company/license/module/control baseline and preserve all other modules/terms; abort on drift or wrong identity/company. The current record prepares the test; it does not authorize or perform an access grant. Browser safety requires action-time confirmation for creating/expanding sensitive access. Existing broader continuation approvals are retained for source/reversible/read-only work. No grant will be made while awaiting confirmation.

Common checkpoint/active/KAT/tracker/pending/README/manual/PDF synchronize this limited observed PASS. Whole wholesale/site/field sellers/offline/custom domain/commercial packaging remains OPEN/ASSIGNED. Single next action obtain the bounded temporary LAB module confirmation, then capture the fresh platform baseline before saving that one change; retain coordinator until named handoff. No completed transaction or old accepted grant test is repeated solely for documentation; this is the newly delivered standalone personal entry acceptance.

19/10/2026 11:41 Europe/Athens — PURCHASE-SUPPLIER-CORRECTION-01 / ASSIGNED / NOT TESTED

Owner fix/purchase-supplier-correction-20261019. Explicit user request: implement the supplier correction needed in the existing order, after confirming this is a program change rather than a new invoice/payment. Independent bounded scope: privileged selected-store BackOffice correction of supplier association on an existing incoming POS order and its original/internal documents, including FINAL, with preview, required original review/reason, explicit existing-payment association acknowledgement, stale/concurrent/idempotent guards and immutable audit. Preserve all document/order/line/file/job/payment identities, monetary/shift/operator/method/date/key fields, stock/posting/history and external invoice identity. No reopening/reposting, new payment, direct production SQL repair, Supplier VAT overwrite, learning migration or broader Gate3/duplicate/reopen takeover. Existing owners retained.

Baseline main43a3f3ac8b1d5908a29d39cdc91f153661c47228; current AGENTS/tracker/pending/active/numbered/invoice manual, reopen and cross-supplier checkpoints/history read. Existing reopen intentionally fixes supplier identity and duplicate correction rejects posted sources; neither accepts this independent single-posted-order correction. Screenshot USER FAIL confirmed by source: metadata PATCH requires POS order NEW then source DRAFT without payment, although FINAL editor enables supplier field. Previous lifecycle fix remains closed. New supplier correction NOT TESTED; no business mutation performed. Claim must merge before source/state-changing LAB. Tests must cover registered routes/real PostgreSQL atomic docs/payment association, full snapshots, no monetary/stock deltas, rollback/replay/concurrency/stale/foreign/POS/settled/credit refusals and mounted confirmation/cancel/store fences. Full PR/main CI, exact ordinary guarded release and actual scoped preview acceptance required. Actual legitimate correction remains a deliberate user-reviewed action. Checkpoint CHECKPOINTS/CHANGES/2026-10-19-purchase-supplier-correction.md.

19/10/2026 — ANDROID-CHAT-NATIVE-01 / limited USER PASS sales display; natural wording OPEN

Retained native owner feat/android-chat-native-20261017. User08:44 reports selected Διαδόχου Παύλου: sales question returned «Μη συνδεδεμένη πηγή», cash query displayed results. At08:53:47 explicitly identifies MW Chat Android → Βοηθός AI;08:59:14 supplies exact question «τι πωλησεισ ειχα σημερα». At10:05:05, after instruction to use «Πωλήσεις σήμερα», confirms «το εβγαλε». LIMITED USER PASS: result displayed through native Assistant for that selected store and wording. Exact amount/rows, canonical report reconciliation, physical device/OS/APK hash and revision at the user action were not independently captured; no financial accuracy, whole AI, all-store or LAB PASS inferred. Cash display is a user observation only, not measured correctness. Do not repeat queries or transactions merely for documentation.

Read-only local reproduction on main5bae2ece470e3e72e3e4bb9a1b7c289359821386: plainTotalSalesRequest returns null for both exact unaccented «τι πωλησεισ ειχα σημερα» and accented «τι πωλήσεις είχα σήμερα»; «Πωλήσεις σήμερα» returns mode all/names[]/from=to=2026-10-19 with fixed now2026-10-19T05:59:14Z. This proves a deterministic wording gap, not the exact unseen provider response or sole runtime cause. Native MainActivity submits question/inputChannel text/readScope selected_store/history, selected companyId/storeId and snapshot null to existing /api/platform/ai-command-center/ask; same server session/selection/evidence boundaries are retained. No API credential or private response was read and no real ask/message/read/push/business command was submitted by this page.

Current diagnosis baseline43a3f3ac8 after preserving newer lifecycle/wholesale/central receipts. Backend conversational source remains assigned codex/assistant-business-queries-20261015; central product-unit/report ownership also retained. This receipt does NOT transfer or duplicate their source scope. Natural wording remains OPEN and is recorded for the existing assistant owner to handle with exact user phrase plus filter/date/store-scope regressions under a published bounded claim. No code/APK/environment/deploy change in this receipt. Native source continues to require selected store; staff AI rights are not broadened.

Completed native initial read-only result-display acceptance is removed from current pending work. Broader numerical/source/AI/negative/privacy/device/camera/signing/iOS acceptance remains OPEN under native owner. Single next action: existing assistant owner reconciles this exact natural-language gap and publishes its bounded source claim; native owner retains integration/device acceptance after the ordinary verified release. All earlier scoped Chat/photo/push/2FA/logout PASS and other owners remain protected.

19/10/2026 11:19 Europe/Athens — STORE-LIFECYCLE-EMPTY-SCOPE-01 / CLOSED LIMITED LIVE PASS

Owner fix/lifecycle-empty-scope-20261019; explicit owner transfer10:43:31Athens, claimPR2812 green mergedfd5b0d8 before source. SourcePR2813 original7110c380/fullCI39218591669 SUCCESS3328PASS/0FAIL/0SKIP+6backup; combined heada42c9418936c5c09e2b2682458b5d841ef74cc37/fullCI39219753165 SUCCESS3328/0/0+6backup after preserving concurrent lifecycle/wholesale records and regenerating PDFs. Merged8e6dcafaadb86e933ce0f6b903cd33a85df5b012. Exact mainCI39220572604/job117954898735 SUCCESS3328/0/0+6backup/all Windows/build/invariants/realHTTP checks. Independent public health after release:oktrue/version0.22.0+kat-test-pos/exact8e6dcafaadb86e933ce0f6b903cd33a85df5b012.

Observed LIVE11:18–11:19Athens, desktop support SUPER_ADMIN / Περίπτερο Διαδόχου Παύλου / DIADOXOU-POS-01. Full reload after exact health, initial shifts load; opening Εμπορική λειτουργία -> Λοιπές εμπορικές λειτουργίες -> Παραγγελίες & Αγορές returned83records at11:18:58, Recovery scanned50/started0/no-handoff19/non-retryable0, no invalid-generation message. Close commerce and explicit shift refresh: brief loading then current table/updated11:19 with NO refresh error. Initial/final visible40transactions/cash2557.84/card106.50/IRIS0/sales192.40/expenses244.55/ownerIN0OUT0; no new transaction, upload, invoice approval/finalization, shift close, stock/fiscal or reset action was submitted. No new recovery job started. These visible values are navigation/readback evidence, NOT independent financial/stock/DB-digest reconciliation or proof about concurrent store activity.

Bounded cause/correction: an empty body.storeId was remembered as an empty store epoch, invalidating all later page headers. Only empty-string inferred scope is now skipped; original bodies/UUIDs/explicit persisted headers and immutable real-store epochs are unchanged. All server/tenant/auth/licensing/stale/maintenance guards remain. Existing contaminated tabs require one full reload; no storage clearing or data repair. New real loopback HTTP regression rejects the old implementation and passes corrected fresh/scoped recovery-to-shift reads and explicit invalid-header refusal. Local Node20.20.2:17PASS/0FAIL/2nativeSKIP; native cases ran in fullCI with zero skips.

CLOSED only this reproduced desktop support-navigation regression. Personal OWNER/operator/mobile/physical/offline end-to-end and all-store live acceptance NOT TESTED; existing generation/idempotency/offline safety automated regressions remain protected. Broader STORE-LIFECYCLE-01 cleanup/restore/spool work stays OPEN with feat/store-shifts-inventory-clear-20261018. Other owners retained. Manual docs/manual/store-lifecycle/PASS.md, active/checkpoint/tracker/checklist/PDF synchronized; this completed subtask removed from pending. Evidence CHECKPOINTS/EVIDENCE/lifecycle-empty-scope-20261019/{acceptance.json,orders.jpg,shifts.jpg}. No repeat of historical financial tests.

19/10/2026 — STORE-LIFECYCLE-EMPTY-SCOPE-01 / FULL SOURCE CI PASS / MERGE RECONCILIATION / AWAITING LIVE

Owner fix/lifecycle-empty-scope-20261019, explicit owner transfer19Oct10:43:31Athens; before-source claimPR2812 headb983fed871afce1eded284b9ffe7159ed7aec5aa, all4checks SUCCESS/SKIPPED as applicable, mergedfd5b0d8914371b92741d8b66b76eb1766e6e598e before source/test edits. Broader feat/store-shifts-inventory-clear-20261018 lifecycle assignment and all unrelated owners retained.

Bounded causal source: ignore exactly empty string body.storeId when inferring page epoch scope. Keep the original request/body, immutable valid-store map and explicit persisted headers unchanged. Server validation/tenant/auth/licensing/maintenance/stale guards remain untouched; no epoch upgrade, old offline retry, data repair, stock/payment/fiscal/shift action or reset.

New real loopback HTTP regression runs actual createLifecycleFetch -> header -> storeLifecycleRequestContext -> lifecycleContext: fresh and already-scoped pages, empty recovery POST then shift GET, unchanged payload/idempotency field, no empty onPinned event, and explicit malformed persisted header still400/no handler. Old source failed400 with STORE_LIFECYCLE_GENERATION_INVALID (7existingPASS/1newFAIL); corrected source passes. Final Node20.20.2 focused19tests/17PASS/0FAIL/2nativeSKIP. Initial broader attempt lacked the downloaded unchanged offline-sale-queue dependency; fetched the exact baseline file and reran successfully. Local native PostgreSQL remains unavailable; full native/build/Windows/HTTP CI required. This is not LAB/LIVE PASS.

LIVE FAIL before fix remains documented below: Diadoxou83orders load but recovery and later shifts reject invalid metadata. Corrected hosted flow NOT TESTED / AWAITING LAB. After green PR+mainCI and ordinary guarded exact release, open a fresh support Backoffice, inspect shifts, open purchase list and return to refresh shifts. Do not reopen/upload/pay/finalize old invoices. Existing contaminated tabs need a full page reload after release. No manual PASS until observed.

19/10/2026 10:50 Europe/Athens - WHOLESALE-STANDALONE-ENTRY-01 / SOURCE LIVE + NATIVE CI PASS / AUTHENTICATED LAB AWAITING

Retained owner codex/wholesale-suite-20261017. New standalone online entry https://myworkstation-app.onrender.com/wholesale is deployed in the SAME repository/service. It reuses the actual wholesale management/customer-site/seller suite, personal authentication and live paid WHOLESALE_B2B without retail CORE/POS/operator/shift bootstrap. Managers receive only minimal explicit company/store metadata after actual current session, role and entitlement checks, repeated after Store waits. Employees use existing seller assignments only. Explicit invalid/inactive/foreign store fails closed; no first-store/company fallback. No new schema, grant, provisioning or business write. Existing embedded entry and /b2b customer route remain protected.

Claim PR #2809 / head 525d6a47268f06ca06f1db74a3e2667e8357d558 green docs CI, merged 8048856a5cf8e828ac17b6691e00533e56fe6b13 BEFORE source. Source PR #2810 final head 58ed331a69476f4d2cbeb410f64aa0eb3f5d0f5c / full CI 39216511031 / job 117941744373 SUCCESS: 3319 PASS / 0 FAIL / 0 SKIP + 6 backup tests; merge c1227da690e35e698d069f081ce8f52dd94c4a8d. Exact main CI 39217334220 / job 117944377632 SUCCESS: 3319 PASS / 0 FAIL / 0 SKIP + 6 backup tests. All 12 reviewed runtime/test blobs verified after merge. Windows, actual native PostgreSQL/HTTP, builds, browser checks, production invariants, archive and real HTTP E2E passed. Local full Node20: 3115 PASS / 0 FAIL / 156 native SKIP; focused 47 PASS / 0 FAIL / 1 native SKIP including 12 mounted UI and 2 actual graph/HTML-route cases; build/TABLE_SERVICE PASS. Local native absence remains explicit. Only the native observation fixture changed after that local full run; corrected focused 7 PASS / 1 native SKIP and full PR/main native CI followed.

Initial head 22fdc9efae76222712da3d25d8333fa2d9541c5d / CI 39215831006 / job 117939586760 failed: 3317 PASS / 2 FAIL / 0 SKIP: one Store-wait observation plus parent. pg_stat_activity query text was inspected inside the holder's cached activity snapshot. A separate autocommit observer corrected that fixture; exact holder PID, Store-query predicate, actual expiry and required 401/403/no-private-response assertions retained. Original field_sales worker independently reviewed; corrected PR and exact main both execute the actual observed-wait/session/module expiry cases successfully. No failed run hidden, no assertion skipped/weakened and no runtime change needed for this correction.

Ordinary guarded release run 39218095705 / job 117946674138 SUCCESS pins revision c1227da690e35e698d069f081ce8f52dd94c4a8d; exact completed main CI above. Guard healthy at 2026-10-19T07:48:53.2737675Z. Independent public no-cache health at 2026-10-19T07:49:47.470335+00:00:HTTP 200 / ok true / revision c1227da690e35e698d069f081ce8f52dd94c4a8d, curl exit 0. No direct deploy/restart or freshness bypass.

Machine
evidence:CHECKPOINTS/EVIDENCE/wholesale-standalone-entry-20261019/source-and-release.json.

Actual hosted observation at 2026-10-19T07:50:06.656Z / Cloud Chrome / exact safe URL https://myworkstation-app.onrender.com/wholesale: standalone heading and personal login form render, Email/password empty, connection button visible; no retail POS controls in this observed page. LIMITED LIVE UI PASS for public entry rendering ONLY; screenshot CHECKPOINTS/EVIDENCE/wholesale-standalone-entry-20261019/public-entry.jpg, usage in docs/manual/wholesale/PASS.md. No login submitted and no authenticated management/employee/customer portal/order acceptance claimed. Existing personal Owner/support-only/entry/navigation/seller limited PASS and inactive module/member/assignment restoration remain protected.

The mounted parent retains the same frozen suite child/key/body/principal through access loss and permits safe same-principal recheck/retry; order leaf components are stubbed in the parent-retention tests, so this is not a new order LAB acceptance. No new live module/member/assignment grant, account/password/customer/site/order, stock/payment/fiscal/shift action or production SQL/migration/seed occurred. Whole wholesale/site/field sellers, ordinary personal Owner acceptance, customer portal/order end-to-end, durable offline, custom-domain setup and standalone commercial packaging remain OPEN/ASSIGNED. No numbered item is closed from CI or public login rendering. Common active/KAT/tracker/pending/README/checkpoint/PDF are synchronized in this receipt; other owners and protected PASS remain intact. Single next action: separately bounded hosted acceptance with the correct existing personal Owner and exact store, then customer/seller order acceptance with fresh before/after evidence; any new provisioning/access change needs its own scope. Coordinator retained until completion or named handoff.

19/10/2026 10:43 Europe/Athens — STORE-LIFECYCLE-EMPTY-SCOPE-01 / EXPLICIT OWNER TRANSFER / ASSIGNED BEFORE SOURCE

ΑΝΑΛΗΨΗ ΑΠΟ feat/store-shifts-inventory-clear-20261018 — ASSIGNED fix/lifecycle-empty-scope-20261019, limited to the empty-storeId fetch metadata regression. The owner explicitly approved transfer here at10:43:31Athens («να μεταφερθει»). The broader STORE-LIFECYCLE-01 cleanup/restore/spool work and all other owners remain with their existing assignments. Baseline c1227da690e35e698d069f081ce8f52dd94c4a8d; reviewed existing lifecycle checkpoint and common records.

OBSERVED LIVE FAIL19Oct10:32–10:35Athens: Diadoxou support Backoffice initially loads DIADOXOU-POS-01 (32transactions/2538.14cash/92.60card/158.80sales). Opening Παραγγελίες & Αγορές loads83records, then reports Recovery error: Μη έγκυρη έκδοση καταστήματος. Subsequent shift refresh reports the same error and retains old totals. No sale/payment/stock/fiscal/shift-closing action was performed. Existing list load and initial shift read remain observed, not a financial reconciliation PASS.

CAUSAL SOURCE: createLifecycleFetch adds body.storeId whenever typeof is string, including the existing fast-recover body {"storeId":""}. The immutable page map acquires an empty key, rejected by normalizeLifecycleContext; all later API requests reuse it. The bounded correction excludes the empty string from newly inferred body scope. Preserve the body/UUIDs/explicit persisted headers, immutable real-store epochs, mutation-first legacy0/racing-handshake behavior, server validation, authentication/tenant/license/fiscal/cleanup protections. No server guard relaxation, automatic epoch upgrade, offline replay or data repair.

Files: client/src/utils/store-lifecycle-fetch.js; focused server/test/store-lifecycle-fetch.test.js regression using the real middleware/context; NEW checkpoint CHECKPOINTS/CHANGES/2026-10-19-lifecycle-empty-scope.md and common records/PDF. Acceptance: empty-body POST cannot pollute a fresh or already scoped map, actual server middleware accepts subsequent shift GET, old implementation fails, explicit malformed/persisted headers remain rejected/preserved and old epochs never upgrade. Require focused/full PR+mainCI, ordinary guarded exact release and read-only navigation acceptance. New source NOT IMPLEMENTED / local NOT TESTED /

corrected LIVE NOT TESTED. Claim must merge before source edits. No manual PASS until observed.

19/10/2026 10:07 Europe/Athens - WHOLESALE-STANDALONE-ENTRY-01 / ASSIGNED BEFORE SOURCE / NOT TESTED

Retained coordinator codex/wholesale-suite-20261017; claim docs/wholesale-standalone-entry-claim-20261019, planned source feat/wholesale-standalone-entry-20261019, baseline50d4b691780ec0a4066fe745d726efd869721059. Owner again requests continuation of approved wholesale + customer site + field sellers, usable separately from retail POS. Prior portal-store source/release/native proof PR2803/2805 and all qualified manual PASS/inactive grant restoration remain protected. Personal Owner/customer portal/order LAB acceptance is still OPEN: no new grants/provisioning are authorized by this claim. Preparing those prerequisites does not block this separately scoped, already requested standalone entry. No fresh hosted PASS is asserted.

Concrete gap: current BackOffice entry eagerly loads dashboard, employees, leaves, stores, general license and schedules and imports retail/POS/admin bootstraps. Standalone wholesale must use its own entry, the existing personal BackOffice authentication and live WHOLESALE_B2B entitlement, without a retail module, operator or shift. This slice provides an isolated /wholesale HTML/Vite entry and direct reuse of WholesaleSuiteWorkspace, existing management/site/assignment/seller APIs and canonical order core. It is a web entry in the SAME repository/service, not offline installation, custom-domain certification or a second product database.

Bounded API: NEW /api/wholesale/workspace manager bootstrap before general /api middleware. Require current actual BACKOFFICE_USER session, current role/version/password state and live paid entitlement; reject inherited support context for this personal entry. Strict union explicit scope=company for minimal active same-company store picker OR exact storeId; empty/array/foreign/inactive store fails closed. Return only safe current user/company, access and minimal stores; no products/payments/shifts/core license dependency. Locks and final live-clock/session check after any wait. Employees use existing seller context and active assignments only, never this manager list or management APIs. No new schema or grants.

Bounded client: blank personal login form via existing /api/auth/login, reuse normal session storage keys; MFA/setup or incomplete login never replaces existing context and links canonical https://myworkstation-app.onrender.com/platform-admin. Explicit company/store chooser, URL storeId is strict and never becomes company scope on invalid input; scoped bootstrap read before manager workspace establishes the existing lifecycle origin transport. Reuse existing lifecycle transport and BackOffice session-boundary utility without editing their owned internals. Scope/identity/access/expiry/focus/visibility refresh rejects late private data. Existing suite child, frozen order UUID/body/principal remain mounted and hidden during uncertain submission/access loss; disable logout/store navigation while locked and permit only same-principal reauthentication/retry. Idle identity changes clear prior private UI. No retail/POS/workforce bootstrap, service worker registration or credential values persisted beyond existing token/user session contract; no password defaults/storage. No new top-level duplicate wholesale button. Existing embedded entry remains unchanged.

Disjoint workers after this claim merges green: wholesale_core owns NEW server/src/routes/wholesale-workspace.js and focused non-native contract tests if needed; b2b_site owns NEW client/src/components/wholesale/WholesaleApp.jsx, wholesale-api.js, wholesale-app.css and server/test/wholesale-standalone-ui.test.js; field_sales owns NEW server/test/wholesale-standalone-http.test.js with actual isolated PostgreSQL/HTTP auth/session/role/store/license proof. Root alone additive server/src/index.js registration/HTML route, client/vite.config.js input, NEW client/wholesale.html and client/src/wholesale-entry.jsx, NEW server/test/wholesale-standalone-entry.test.js dependency/route proof, integration/review/common records/PDF/publication. Existing auth, licensing, lifecycle, wholesale pricing/orders/seller/portal runtime files remain unchanged. Other central/POS/lifecycle/native/VOICE owners preserved.

Acceptance: wholesale-only company without CORE/retail grants or shifts opens valid management metadata, strict foreign/empty/inactive/unknown query and revoked/expired/wrong-role/session/support denials, no private response after observed store-lock expiry, unchanged synthetic business controls;

employee never requests manager APIs. Mounted blank/MFA/login races, explicit chooser and URL scope/stale responses, grant expiry/revocation, current session/company changes, actual retained frozen child and original-key/body retry. Built standalone graph excludes retail/POS/BackOffice root bootstraps and preserves existing entries/routes. Require focused/build/full exact PR and combined main native CI, ordinary guarded exact source/health, then separately scoped hosted acceptance. CI remains AWAITING LAB, no manual PASS from simulations. Source PR keeps own active/KAT/checkpoint in-place; final receipt synchronizes roadmap/PDF to avoid concurrent common PDF conflicts. Whole wholesale/site/orders/offline/standalone commercialization remains OPEN/ASSIGNED. Next action green merge claim BEFORE any source/test edit, then bounded standalone implementation.

19/10/2026 09:32 Europe/Athens - WHOLESALE-PORTAL-STORE-01 / CODE LIVE / NATIVE CI PASS / AWAITING LAB

Retained owner codex/wholesale-suite-20261017; receipt docs/wholesale-portal-store-receipt-20261019. Before-source claimPR2801 headed4becd6f93da100c4f5cb94ea6dfcb0903dfd9c/CI39206831924 all3applicable checksSUCCESS/fullbuildSKIPPED, merged5bae2ece470e3e72e3e4bb9a1b7c289359821386 before source. SourcePR2803 headadfa35e074018a69292aff4cfaf8ae5ebb1c694f/fullCI39207507015/job117913598837 SUCCESS3280PASS/0FAIL/0SKIP plus6backup/all checks, mergedc0645d5389864d558fe0be9ceb148b26171cb2c8. Exact combined mainCI39208177280/job117917469104 SUCCESS3281/0/0 plus6backup, preserving independent lifecycle worker sourcePR2802/affc90b. All4owned runtime/test blobs identical in the later live revision; other owners and acceptance remain theirs.

Ordinary release: c064guard39209436882/job117919358017 correctly declined stale deployment because newer lifecycle sourcePR2804/198dcb0 was on main; no manual deploy or bypass. Actual released source198dcb058333477206d4428341c3dc554f30823f, exact candidateCI39209182817/job117919475415 SUCCESS3283/0/0 plus6backup/all checks; ordinary guard39210029017/job117921166665 SUCCESS pinned that source. Independent public no-cache health2026-10-19T06:32:29Z returned oktrue/version0.22.0+kat-test-pos/exact198dcb058333477206d4428341c3dc554f30823f, curl exit0. Full IDs/blob hashes/qualified proof in CHECKPOINTS/EVIDENCE/wholesale-portal-store-20261019/source-and-release.json.

Delivered bounded account-store contract: GET accounts requires an active owned store, with company-wide reads only by explicit scope=company. PATCH activation/password matches the selected store and immutable account binding under locks before any account/session mutation; final live-clock entitlement recheck closes expiry during a Store-row wait. Client account list/create/toggle/password and publication follow the same valid selected store; empty/foreign/inactive scope never falls back, sibling rows are filtered, late A-B-A reads/write acknowledgements/errors are ignored and changed entry/permissions remove old credential forms. Company-wide site settings are labeled explicitly. Existing manager/tenant/license guards, account bindings, password hashing/revocation and shared order/pricing/idempotency remain protected.

Technical proof only: focused26PASS/0FAIL/1nativeSKIP, mounted portal admin8PASS; correct server-working-directory full local3090PASS/0FAIL/148infrastructureSKIP and frontend/TABLE_SERVICE build PASS. Earlier root-working-directory run had18 legacy path-resolution failures and was corrected, not counted as a passing suite. Native actual HTTP/SQL tests executed PASS in full CI: strict missing/empty/array/foreign/inactive/sibling scope denial, explicit company read, every account/session digest unchanged after denied activation/password writes, observed Store-lock deactivation refusal and actual paid-expiry wait403/no private response, valid revocation/no old-session revival. Original UI/core workers reviewed; backend post-wait expiry finding corrected and re-reviewed before source publication.

HOSTED/LAB portal account acceptance NOT TESTED. No new live grant, user/password/account/site/customer/assignment/order or financial/stock/fiscal/shift action, production SQL/migration/seed, direct deploy/restart. Prior limited entry/navigation/personal seller PASS and prior inactive restoration are retained; no successful grant/business test is repeated. No new manual PASS is added from CI. Ordinary Owner acceptance, customer portal/order end-to-end, durable offline and

standalone wholesale access without retail POS remain OPEN/ASSIGNED. Single next action prepare a separately bounded hosted selected-store account acceptance and customer-portal flow using the correct existing personal Owner; any new provisioning/grants require their own explicit scope and before/after checkpoint. No automatic access expansion. Coordinator retained until named handoff.

19/10/2026 08:50 Europe/Athens - WHOLESALE-PORTAL-STORE-01 / ASSIGNED BEFORE SOURCE / NOT TESTED

Retained owner codex/wholesale-suite-20261017; claim docs/wholesale-portal-store-claim-20261019, planned source fix/wholesale-portal-store-20261019, baseline c01b53832ff71ac450b3308203a92092d12a02ad. Owner requests continuation. Read current AGENTS, common boards/checklist, owned checkpoints/manual and history since PR2793. Preserve completed limited support entry/personal seller/navigation PASS and final inactive module/member/assignment restoration; ordinary Owner acceptance and whole wholesale/site/orders/standalone remain OPEN. Other lifecycle/POS/native/central/VOICE owners and their source are retained.

Read-only source finding: WholesalePortalAdmin loads /accounts without store; server GET returns all company accounts and PATCH only checks company. This is a selected-store contract defect, not evidence of cross-tenant access or a hosted account leak. Bounded change: GET accounts requires explicit valid active same-company storeId, with company-wide read permitted only by explicit scope=company; no empty/invalid/missing selection fallback. PATCH activation/password requires explicit storeId and matches the immutable account store under transaction locks before changing account/session state. POST retains explicit immutable customer/store provisioning and existing authorization/license/session fences. No schema migration. Client account list/create/reset/toggle follow its selected valid store; reject stale old-store results/write completions, clear old forms on context changes, avoid first-store fallback. Global site settings remain explicitly company-wide. Publication behavior, shared order/idempotency/pricing, personal seller authorization and frozen requests remain protected.

Files limited to server/src/routes/wholesale-portal-admin.js, client/src/components/commerce/WholesalePortalAdmin.jsx, relevant registered server/test/wholesale-portal-{http,admin-ui}.test.js plus a focused new test if needed; checkpoint CHECKPOINTS/CHANGES/2026-10-19-wholesale-portal-store.md and common records/generated tracker PDF. Source PR keeps active/KAT/checkpoint updates within this owned section, with final common roadmap/PDF synchronization in the release receipt to avoid unrelated concurrent prepend conflicts. This claim must be green merged main BEFORE source edits.

Acceptance: mounted valid selected scope, missing/invalid/inactive scope with zero private account calls, synchronized account/create store selection, foreign/sibling account filtering, delayed list/write/error/store changes and credential clearing only on acknowledged current-scope success; actual native HTTP/SQL list and PATCH missing/empty/array/foreign/inactive/sibling rejection, explicit central read, unchanged denied account/session controls, current entitlement/session revocation and existing portal/order tests. Require focused/build and full native PR/main CI, ordinary guarded exact release/health before hosted acceptance. CI/local remain AWAITING LAB. No new live grants, users/passwords/accounts/customer/site/orders, business/stock/payment/fiscal/shift writes, production SQL/seed/migration, manual deployment/restart or new infrastructure. No manual PASS until observed. Single next action green merge this claim, then implement and validate exact portal-account scope; retained coordinator until named handoff.

19/10/2026 02:00 Europe/Athens - COORD PHASE4 / HOURLY AND PRODUCT UNIT SOURCE LIVE / AWAITING LAB

Κεντρικός owner codex/central-four-streams-20261018, issues #2704–#2707, τέσσερις εσωτερικοί agents. Τέταρτη περιορισμένη παράδοση· τα αρχικά14 παραμένουν συνολικά OPEN και όλες οι ανεξάρτητες αναθέσεις/περιορισμένα PASS διατηρούνται. Η παρούσα καταγραφή αντικαθιστά μόνο τα phase4 SOURCE PREPARED / CI PENDING / RELEASE PENDING παρακάτω.

Παραδόθηκε προαιρετική ωριαία κίνηση από την ίδια πλήρη canonical SQL πηγή πριν από το όριο10000 ομάδων προϊόντων: explicit περίοδος Ελλάδας και επιλεγμένο ενεργό κατάστημα ίδιας εταιρείας,

μοναδικές πωλήσεις/επιστροφές, signed ποσότητες χωριστά ανά αρχική μονάδα/null, UTC buckets και πραγματικό Athens offset για DST. Άγνωστες/κενές μονάδες παραμένουν διακριτές. Όρια8785 ωρών/32 μονάδων ανά ώρα, SQL JSON preflight/filter και ακριβώς ένας metadata carrier ανεξάρτητα από θέση ισόβαθμης γραμμής. Η οθόνη δείχνει100 ώρες ανά σελίδα με scope/generation guards. Default report, χρήματα, product CSV και drilldown διατηρούνται. Δεν προστίθεται σύσταση στελέχωσης ούτε άθροισμα διαφορετικών μονάδων.

Η matched προβολή προϊόντος του assistant διατηρεί πλέον την canonical μονάδα μέχρι πίνακα/CSV, συμπεριλαμβανομένων null/unknown και παλιού απόντος πεδίου, χωρίς εικασία τεμαχίων ή αλλαγή ποσοτήτων. Ανεξάρτητα VOICE/chat/context αρχεία δεν άλλαξαν. Ο έλεγχος cash/supplier διατήρησε τα προηγούμενα παραδοτέα και την καταγεγραμμένη κατάσταση πραγματικής αποδοχής τους· δεν εντοπίστηκε νέο τεκμηριωμένο σφάλμα στα ανατεθειμένα scopes.

Claim#2794/headc8195b98b147dc60ce02aff097caf2656d3a076a/docsCI39172436603 SUCCESS mergeddd9b357563f705a9d7f6260571a27c78146fa110 πριν κώδικα. PR#2796 CI39172747029/job117809177401 SUCCESS3232PASS/0FAIL/0SKIP+6backup. Το rollback artifact και οι ακριβείς χρόνοι βρίσκονται στο machine evidence.

Τοπικά Node20.20.2:43PASS/0FAIL/0SKIP και frontend build PASS. Actual production SQL σε απομονωμένο PostgreSQL-WASM και mounted router PASS, περιλαμβάνει multiline baskets, signed χωριστές μονάδες, DST,10001 products,33-unit refusal και αμετάβλητα fixture digests. Ο native Prisma wrapper τοπικά ήταν SKIP χωρίς DATABASE_URL· εκτελέστηκε επιτυχώς στο πλήρες native CI, χωρίς να αποκρύπτεται το τοπικό όριο.

Η νέα ωριαία προβολή και η νέα product-unit διασταύρωση παραμένουν AWAITING LAB. Browser observation blocked: native credential state cannot be safely resumed. Καμία παράκαμψη, εξαγωγή credentials ή κατασκευασμένο screenshot/PASS. Δεν προστίθεται CI-only manual. Daily/weekly HOLD/provisional#2743, προηγούμενα αποδεκτά τιμολόγια/πληρωμές/διορθώσεις, νεότερο native-chat USER PASS#2795 και οι ανεξάρτητες qualified αποδοχές διατηρούνται. Καμία παραγωγική οικονομική/stock/fiscal/shift/payroll/settings/recipient/SMTP/order/schema πράξη ή replay από τον συντονιστή.

Επόμενη μία ενέργεια: συγκεντρωτική read-only αποδοχή με υποστηριζόμενο ασφαλές authenticated browser, από https://myworkstation-app.onrender.com/platform-admin, στο ίδιο υπάρχον LAB κατάστημα/διάστημα/προϊόν: Αναφορές → Στατιστικά πωλήσεων, explicit Ώρα Ελλάδας/Ωριαία κίνηση, συμφωνία ωριαίων counts με πλήρη πηγή, χωριστές signed μονάδες και σύγκριση ίδιου προϊόντος στον assistant/πραγματικό product CSV. Pagination/DST μόνο όπου υπάρχει κατάλληλο υπάρχον ιστορικό, αλλιώς NOT TESTED. Χωρίς Save/νέα δεδομένα/πληρωμή/βάρδια/replay. Το προηγούμενο grouped MONTHLY/supplier/coverage acceptance παραμένει ανοικτό όπου δεν υπάρχει νεότερη πραγματική scoped αποδοχή. Κεντρικός owner παραμένει μέχρι ολοκλήρωση ή ονομαστικό handoff.

Ακριβής14map:CHECKPOINTS/CHANGES/2026-10-18-original14-status.md. Machine evidence:CHECKPOINTS/EVIDENCE/central-four-streams-20261018/phase4-source-release.json. Συγχρονίζονται ενεργή λίστα, pending, tracker και κοινό PDF στην ίδια συγκεντρωτική καταγραφή.

19/10/2026 01:26 Europe/Athens - COORD PHASE4 / HOURLY ACTIVITY AND PRODUCT UNITS / ASSIGNED BEFORE SOURCE

Retained central coordinator codex/central-four-streams-20261018, issues#2704-#2707/original14#3,#14; owner again says START. Baseline main4604f00cde4e1caeb64397e7928bc63967f2f434, history since phase3receipt9431216 reviewed. Before source reconciled with maina875024cfa1d4ddc9916d95bfb2d96de3626bf11: independent lifecycle source0c03 and qualified wholesale UI receipt#2793 retained without repeating accepted actions. Four internal workers; root alone shared records/PDF/publication/integration. Existing cash/supplier runtime review found no new justified defect; their delivered MONTHLY/supplier/CSV acceptance remains AWAITING LAB. This bounded independent analytics/unit continuation does not replace the required grouped acceptance or repeat accepted transactions.

- Backend ASSIGNED codex/central-sales-hourly-20261019 (WS3): server/src/routes/kiosk-reports-sales-v4.js and NEW server/test/kiosk-sales-hourly.test.js. Optional includeHourly=1 only with explicit Europe/Athens calendar and selected active same-company store. Preserve old no-timeZone/default response, product money/coverage/limit/filters/CSV/drilldown. Derive observed UTC-hour buckets from the SAME full filtered SQL base before10000product cap, true distinct normal/reversal baskets and signed normal/reversal/net quantities grouped separately by original unit/null. Never add kilograms to pieces. UTCfrom/to plus Athens localStart and offset distinguish repeated autumn hours; spring missing hour is not invented. Bounds8785hour buckets/32unit groups per bucket, safe counts, finite quantities, source-count consistency, strict interval/scope; fail closed on inconsistent metadata. Attach large hourly JSON only once on first row/empty sentinel, never repeat across10000products. No staffing recommendation, fiscal certification or money computation added.

- UI ASSIGNED codex/central-hourly-view-20261019 (WS1 internal integration role): client/src/components/commerce/installKioskReportsSalesV4.js and NEW server/test/kiosk-sales-hourly-ui.test.js. Optional hourly checkbox defaults unchecked, disabled until explicit Athens and selected store. Include flag on list request only, not drilldown. Show observed hourly counts and original per-unit signed quantities with applied period/search, explicit full-filtered scope, offset labels, missing/invalid warning rather than fake zero. Validate producer metadata/request period/store/count sums/units/limits; preserve product cards, existing product CSV schema, default timezone, actual tab/store request-generation guards. No new hourly export or staffing conclusion.

- Native proof ASSIGNED codex/central-hourly-native-20261019 (WS2 internal integration role): NEW server/test/kiosk-sales-hourly-postgres.test.js only. Actual Prisma SQL and mounted HTTP fixture, separate schema, multiline basket=1, reversals, PIECE/KG/LITER/PACKAGE/null, exact half-open bounds/observedThrough, q/product/promotions filters, company/store/active/role/timezone rejection, both2026DST transitions, empty source and10001product groups with full hourly coverage. Compare unchanged fixture digests; no production data/test fixtures.

- Assistant ASSIGNED codex/central-product-unit-20261019 (WS4): server/src/services/owner-sales-tools.js, server/test/sales-assistant-coverage-contract.test.js and optional NEW server/test/assistant-product-units.test.js. Verified source projection omits canonical unit even though report table/CSV expects it. Preserve unit when present, null/unknown stay explicitly unrecorded, missing legacy fields retain compatibility; no guessed dimension or quantity change. Actual producer to JSON to adapter to table/CSV regressions for four known units/null/unknown, signed fractional quantities, private cost exclusion and limited-source suppression. Independent VOICE chat/calendar/context files untouched.

CLAIM / NOT IMPLEMENTED / NOT TESTED. Require this claim green and merged main before any source/test edit. Then meaningful focused/native PostgreSQL/HTTP/Windows/Chromium/build/invariants and exact full PR/main CI, ordinary guarded release and exact health before scoped LAB acceptance. CI is not LAB PASS. Fresh public health22:20:07UTC HTTP200/oktrue/revisionfb802ea9ffcfdecefcf1f6a64ee1f1c00e53ea67; all14 phase3blobs remain exact in currentmain and release. Browser getState still reports native credential state cannot safely resume; no bypass or credential extraction. No new hosted PASS/manual claim.

Protected daily/weekly HOLD/provisional, accepted invoices/payments/corrections, independent guidance/desktop and store-lifecycle recovery PASS remain unchanged.

Invoice/Task29/30/Workforce/VOICE/wholesale/native/lifecycle and newly claimed POS-REMOTE-RECOVERY-01 owners retain their scopes. No production financial/fiscal/stock/shift/payroll/settings/recipient/SMTP/order/schema/infra action, replay or manual deploy. Overall14 remain OPEN. Checkpoint CHECKPOINTS/CHANGES/2026-10-19-central-hourly-unit.md. Next: merge claim green, then two bounded implementations with UI/native workers and cross-review; grouped normal-app read-only acceptance remains required when supported browser resumes.

19/10/2026 01:27 Europe/Athens — ANDROID-CHAT-NATIVE-01 / limited USER PASS Admin-to-native image opening

Retained owner feat/android-chat-native-20261017; receipt docs/native-inbound-photo-pass-20261019. Owner18Oct23:10:45 answers «ναι» to explicit question whether an image sent from Admin to the mobile opened there.19Oct01:17:46 clarifies phone can send but PC lacks camera; explained PC uses existing-image attachment without camera.01:25:30 «EINAI OK» confirms that guided existing-file flow. Scoped USER PASS Admin-to-LAB2 native image opening, in addition to prior outbound native-photo/Admin opening. Do not ask repeat upload or camera action to repair documentation. Exact message/attachment IDs, bytes/MIME/checksum, device/OS/APK hash and production revision at test were not independently captured. Native direct camera source remains NOT TESTED; PC camera absence is not native camera failure. Existing-file upload does not prove camera capture, forensic storage, PDFs, OCR/invoices or all-device acceptance.

Prior outbound receipt PR2773 firsthead53c48275b657d941bd0a1befda25ee1ed71e8050 synchronized with assistant main755ca8c; final applicable docs checks green then mergedbb552e9edd54bfb9fe25f7825761eaa3fbe1b631. Earlier LAB2/store/message/push/tap/logout/screenshot and Admin title results remain scoped and protected. New receipt baselinea875024cfa1d4ddc9916d95bfb2d96de3626bf11. No code/config/server/env/deploy/production DB or private content retrieval, and no real upload/message/read/push by this page. Manual/active/tracker/pending/PDF synchronized, completed reverse-image retest removed from current pending. Other owners retained; no overall native/N16 PASS.

Remaining under same owner: direct native camera capture if applicable, broader native AI functional acceptance; permission-denial/session-expiry/revocation/server acknowledgement, in-flight push/account switch/foreign-store negative requests; device/SDK/OS forensic storage and phone/tablet variants; stable signing/Play, iOS and separate physical QR scan. Single next action: native Super Admin existing login, select LAB then existing Βοηθός AI and one non-mutating scoped query; inspect actual answer before any claim. Preserve separately owned AI backend; do not broaden staff access or change AI source without assignment. No repeated photo or notification test.

19/10/2026 01:23 Europe/Athens - WHOLESALE-STORE-CONTEXT-01 / CODE LIVE / LIMITED SUPPORT UI PASS / PERSONAL OWNER ACCEPTANCE OPEN

Retained owner codex/wholesale-suite-20261017; docs/wholesale-store-context-receipt-20261019. Before-source claimPR2777/head1a07481b3bd2500eeee75424983ff1c174946c13 green applicable checks/fullbuild skipped, merged56f57084 before source. SourcePR2778 finalheadddfc6fd1ee6eb5e6ff66f790bd1b190a63a8ab8c/fullCI39164717249/job117785262601 SUCCESS3211PASS0FAIL0SKIP plus6backup/all Windows/build/Chromium/nativeSQL/HTTP/invariants; merged584a97b75eb4c035ed9e356e89fb05b2831137e5. Exact584mainCI39165236350/job117786805379 also3211/0/0 plus6backup/all checks. Earlier source runs3195/0/0 twice retained; independent source on main required final combined3211. All4owned runtime/test blobs remain identical through currently observed livefb802ea9ffcfdecefcf1f6a64ee1f1c00e53ea67. Later owners preserved; their changes and acceptance are not taken over.

Ordinary guarded release now independently observed: current sourcefb802/mainCI39170130204/job117801412340 SUCCESS3226/0/0 plus6backup;

guard39170602568/job117802686908 SUCCESS/pinned exactfb802/healthy2026-10-18T22:07:08.7901402Z. Independent public no-cache health before UI at01:19:45Athens and after UI both oktrue/version0.22.0+kat-test-pos/exactfb802, curl exit0. No manual deployment/restart/production SQL/migration/seed or bypass. Source preparation and technical proof are not personal Owner LIVE acceptance.

Actual desktop Cloud Chrome read-only observation after release: canonical PlatformAdmin existing SuperAdmin → MYWORKSTATION LAB → ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ cmtpopbgo000trhb5ng9ytiru → Πλήρες Backoffice, then actual upper Εμπορική λειτουργία button. Normal product view retained. After data load, product history store options were exactly empty placeholder plus that LAB store; neither sibling store was offered. Switch Λοιπές εμπορικές λειτουργίες: actual store select contains ONLY that LAB store, selected by default. Screenshot selected-store.jpg and exact DOM option values in live-ui.json. LIMITED LIVE UI PASS only for this existing SuperAdmin support context's initial products and unique selected-store child navigation; actual duplicate-open/races/invalidscope/frozen retry and ordinary Owner top producer remain technical mounted29/0/0/fullCI proof. No price/rule/history request submitted, no product chosen or order/quote/account/site/member/assignment created, no module toggle or business action. Background shifts were visible only; financial/stock/control deltas NOT TESTED, no unchanged-business-balance inference.

PERSONAL OWNER RESIDUAL: a secure normal-root sign-in request did not establish Υπεύθυνος Εργαστηρίου; submitted admin account returned Απαιτείται επιβεβαίωση2FA. Συνδέσου από την είσοδο SuperAdmin. No credentials read/copied/published, no auth bypass or forced role. That pending sign-in interval was not background test execution. Subsequent real support-context observation is explicitly separate and does not close ordinary Owner live acceptance. No new module/member/assignment grant was made; prior PR2774 inactive restoration retained. Avoid repeat successful seller/grant tests for documentation.

This receipt synchronizes checkpoint/active/KAT/manual/pending/tracker/PDF after source review. Source PR deliberately kept generated common PDF/roadmap changes for this final documentation receipt to avoid repeated conflicts with other pages; its mandatory active/checkpoint and prior green claim were retained. Whole wholesale/portal/orders/standalone remains OPEN/ASSIGNED. Source review additionally found portal-admin account listing is company-wide and needs explicit selected-store filtering review before customer-site provisioning; no new portal fix or data leakage is claimed here. Single next action scoped portal-account store-isolation review/fix under a new published claim, with personal Owner entry acceptance still requiring the correct existing Owner sign-in. No automatic new grants, accounts or orders. Retained coordinator until named handoff.

19/10/2026 09:31 Europe/Athens — POS-REMOTE-RECOVERY-01 / SOURCE LIVE / READ-ONLY UI PASS / RECOVERY AWAITING LAB

Owner feat/pos-remote-recovery-20261019 retained. Claim PR2789 merged before source; feature PR2791, list compatibility repair PR2799 merged. Exact repair PR CI39206045739:3264PASS/0FAIL/0SKIP plus6backup; main CI39206664736 SUCCESS. Later combined main198dcb058333477206d4428341c3dc554f30823f/full CI39209182817 SUCCESS deployed by ordinary guarded workflow39210029017, Render dep-dbarh3c9v7es739m3o80 live19/10 09:30:26 Europe/Athens. Authenticated selected-store UI09:31: company → Terminals → Installation Center → Check POS pending loads successfully and reports no pending transactions. Earlier regclass read FAIL corrected by text cast and actual native list/sibling regression. No production recovery, receipt replay, charge or stock test executed.

Limited LIVE PASS covers navigation/display/read-only pending list only; docs/manual/pos/PASS.md records that scope. Actual remote recovery through new button remains AWAITING LAB with measured cash/card/stock/shift/audit/control acceptance. Original identity/locks/finalizer/audit guarantees exercised in isolated native CI are not physical LAB PASS. Guide docs/installation/POS_REMOTE_RECOVERY.md; checkpoint CHECKPOINTS/CHANGES/2026-10-19-pos-remote-recovery.md. No other owner/scope closed. Next: one separately identified bounded LAB recovery after fresh before measurements; never replay the resolved real incident.

19/10/2026 00:06 Europe/Athens — STORE-LIFECYCLE-01 / REAL EXISTING-ARCHIVE RESTORE PASS / CLEANUP STILL OPEN

Owner feat/store-shifts-inventory-clear-20261018 retained; bounded source feat/store-lifecycle-restore-audit-20261018. User approved Google/Render sign-in22:21 and confirmed device challenge22:32. Fresh Render dashboard positively showed My Workspace tea-d9ie26vaqgkc739uudqg; the earlier authentication access blocker is superseded. No KAT reset/delete, maintenance enrollment, generation bump, Writer stop, credential/configuration change or new product import occurred. BOTH registers remain protected. New Excel NOT RECEIVED.

ACTUAL RECOVERY TEST, not CI simulation: existing off-site object myworkstation/2026/10/18/backup-20261018T180047Z-4492.dump,230958578bytes, downloaded by exact VersionId inside the existing Render backup service crn-dau2gdbncjis73agfh30. Reported AES256; downloaded SHA256 exactly603dab152462bd051b08adddf0b490139616f45ebae8f1654bb06af6357b78a4 matches storage metadata. ObjectLock/retainUntil returnednull; no retention guarantee is inferred. Existing object/service/settings/backup schedule untouched; no new upload or production DB write was required.

Actual pg_restore into a newly initialized private local PostgreSQL18.6 inside that backup shell:19:42:18–19:43:25UTC, EXIT0, no owner/privileges/tablespace restoration. Env cleared for server/restore client, private0700 directory/socket, listen_addresses empty, no TCP, no application/fiscal workers. Production and the separately owned upgrade staging DB were NOT restore targets. Extracted original archive data-only SQL and independently pg_dump-ed the restored database. Exact row multisets (duplicate multiplicity included), COPY column headers and sequence state compare PASS:252tables/181742rows/417914887COPYbytes/1sequence, canonicalSHA256ce600dd9582f148fdea2ca6df1100fbe10c9613b6a5d23e463457bee06e7794b. Initial order-sensitive comparison refused13table hashes with equal counts/bytes; canonical per-row SHA256 disk sorting proved the contents match independent of unspecified SQL row order. No normalization or value coercion used. Native bigints/decimals/timestamps/JSON/binary remain exact COPY text.

Read-only restored KAT checks19:52:28UTC:company matchespilot-company,44cash shifts/143StoreProduct/23Employee/165Sale/273attachments/161847741inline attachment bytes, activeKAT-POS-01+KAT-POS-02,2fiscal/4EFTPOS/2RBS settings. No row bodies, passwords, keys, PINs or attachment contents exported to chat/repository. Exact evidence and bounded technical PASS/manual accompany this change. Temporary PostgreSQL/plaintext-copy disposal is verified separately in the evidence; original encrypted object is retained.

SOURCE: standalone read-only file auditor server/scripts/store-lifecycle-verify-copy.py, immutable tested s ourcea42e2387bbc2814d665c111aa663c1d9aecccc3f/scriptSHA256e3f6436c830a5cdeaefe1f0ef9637234e a0e5bab9d44cda27cafeaf05c70c765. Bounded64MiB input line/1000tables/1Mrows, private SQLite hash-only disk sort, strict COPY/sequence parsing, fail-closed unsupported INSERT/large-object/malformed/truncated input; no DB/network/execution API. Five focused CLI tests PASS including precision/duplicates/reorder/tamper/refusal; local full Node20:3149tests/3012PASS/0FAIL/137 infrastructureSKIP. Auditor source PR2775 merged as e0d12d46bb99e5febcec1afa134bdd009828e60f; finalhead90a904acb0d0081dd1c3a46fda15310323ea90ae/full native CI39164849046 SUCCESS3214PASS/0FAIL/0SKIP plus6backup, Windows and real HTTP E2E. No web application behavior or executor activation in the auditor source.

LIMITS / WHOLE TASK OPEN: this is recovery of the existing21:00Athens whole-database archive into an isolated throwaway cluster, NOT a fresh preview-bound KAT-only recovery proof or permission to restore the whole production database and roll back other stores. Per-store selective rollback, current row ownership/raw/JSON/shared Workforce review, durable retention guarantees, physical Writer/local spool and complete original-generation offline/inflight fencing, safe reopen and executable central reset UI/API remain unfinished. Checkout-only generation source PR2779 finalheadf445ae68fcea42e4ca93a911a85e6f3e3cc2f152/full native CI39164911868 SUCCESS3218PASS/0FAIL/0SKIP plus6backup, Windows and real HTTP E2E, merged13151d60fc797b6d736cbe7eaaa19ce1871cecda, has passed native lock/stale/zero-write/tenant tests; broader entrypoints and online generation propagation are still OPEN. executionAvailable:false. Existing preparation PR2760/5c5d1711 exact mainCI3185/0/0 and ordinary release proof remain protected.

Single next action: complete the reviewed per-store ownership/rollback plan using this now-verified recovery path, then fencing and authenticated execution. Do not repeat already passed financial/LAB transactions. All other owners preserved; synchronize combined PDF with this actual bounded recovery result, not a store go-live PASS.

LATEST READ-ONLY OBSERVATIONS:23:33Athens openShifts0/recentConnector60s1/143StoreProduct/23legacyEmployee/165Sale/fiscal2/EFTPOS4/RBS2;23:36 activeKAT-POS-01+KAT-POS-02. No production fence exists. Additional reviewed metadata/counts23:40–23:50:3global Workforce identities baseKAT+KATaccess,0explicitOtherAccess/0legacyLink, checked attendance1/clock2/leave1/schedule2 allKAT and0incomingOtherEmployeeRules;1InventoryAccessGrant;0typed KAT DispatchNote ProviderOutbox/Attempt;1NetlinkStoreConfig that must be retained. No named-customer sales, credit payments, customer ledger or loyalty ledger forKAT. These are read-only dependency observations, not a complete deletion manifest or permission to remove global identities. Exact evidence files accompany this receipt. The old prospective RESET_KEEP remains broader than only-register-settings; do not activate it as the latest policy.

INTEGRATION:exact main13151d60fc797b6d736cbe7eaaa19ce1871cecda full CI39165496777/job117788229507 SUCCESS3220PASS/0FAIL/0SKIP plus6backup. Public health at00:05Athens remained22a4562d73f50d7a2d55a0b9dfce41f44e1f1a44; new source release is not yet claimed LIVE. Deployment39165715593 checked earlier584a97b7 and correctly skipped it for newer production source; that successful guard run is NOT proof of deployment13151d60. No reset or app execution activation.

18/10/2026 23:51 Europe/Athens - COORD PHASE3 / THIRD BOUNDED SOURCE DELIVERY LIVE / AWAITING LAB

Κεντρικός owner codex/central-four-streams-20261018, τέσσερις εσωτερικοί agents, issues#2704-#2707. Η παρούσα καταγραφή αντικαθιστά μόνο τα phase3 SOURCE PREPARED / CI PENDING / RELEASE PENDING παρακάτω. Οι14 αρχικές απαιτήσεις παραμένουν συνολικά OPEN, με προστατευμένα τα προηγούμενα περιορισμένα PASS και όλες τις ανεξάρτητες αναθέσεις.

- WS1/#2785: MONTHLY+READY σύνοψη αρχικών καταγεγραμμένων διαφορών ανά χειριστή ανοίγματος και STORE/DELIVERY, από το ίδιο snapshot. Ταυτότητα είναι ο opening User, όχι πιστοποιημένος υπάλληλος μισθοδοσίας/χειριστής κλεισίματος/υπεύθυνος διαφοράς. Ίδια ονόματα δεν συγχωνεύονται, aliases και μη αποδιδόμενες βάρδιες διατηρούνται. Ακέραια ασφαλή λεπτά, χωριστά ελλείμματα/πλεονάσματα και session/day/POS τεκμήριο· ακατάλληλη/διπλή πηγή αποκλείει το συγκεντρωτικό. Αρχικές γραμμές/offsets αμετάβλητα, HOLD χωρίς σύνοψη. Καμία χρέωση, μισθοδοσία ή τελική οικονομική πιστοποίηση.

- WS2/#2784: CSV πρότασης προμηθευτών από το ίδιο εφαρμοσμένο canonical snapshot και όλες τις τρέχουσες φιλτραρισμένες σελίδες. Ίδιες ποσότητες, κατάστημα/στιγμή/περίοδος/options, σαφή PROXY/πληρότητα/μη ανατεθειμένα/αιτίες ελέγχου. Ασφαλές quoting/formula neutralization, απενεργοποίηση σε stale/loading/error/invalid contexts, χωρίς επιπλέον API. Δεν πιστοποιούνται πραγματικές παραλαβές και δεν δημιουργείται/αποστέλλεται παραγγελία.

- WS3/#2783: regression μόνο με πραγματικούς Suite+Sales installers και καθυστερημένες αποκρίσεις/καρτέλες/reentry/CSV/κατάστημα. ΔΙΟΡΘΩΣΗ παλιού υπολοίπου: το υποτιθέμενο report-tab overwrite ΔΕΝ ΑΝΑΠΑΡΑΓΕΤΑΙ στην πραγματική σύνθεση. Η πραγματική πλοήγηση ακυρώνει παλιές αποκρίσεις· runtime δεν άλλαξε.

- WS4/#2782: αρνητικά/κλασματικά/μη ασφαλή ακέραια πλήθη συναλλαγών ανά προϊόν παράγουν INVALID/source_limited χωρίς γραμμές, επινοημένα ποσά μοντέλου ή CSV detail. Κλασματικές/προσημασμένες ποσότητες και πραγματικά χρηματικά πεδία διατηρούνται. Ανεξάρτητα VOICE chat/calendar/context αρχεία δεν άλλαξαν.

Επόμενη μία ενέργεια: υποστηριζόμενο authenticated normal browser και συγκεντρωτική read-only αποδοχή μηνιαίας προεπισκόπησης/υπαρχόντων πλήρων δεδομένων, supplier screen/πραγματικού CSV και κανονικής αναφοράς/προϊόντος με ίδιο κατάστημα/περίοδο/πηγή. Αν δεν υπάρχει ολοκληρωμένος μήνας, το READY aggregate παραμένει NOT TESTED· δεν δημιουργούνται οικονομικές δοκιμές ή fixtures στην παραγωγή. Κεντρικός owner παραμένει μέχρι ολοκλήρωση ή ονομαστικό handoff.

18/10/2026 23:29 Europe/Athens - COORD PHASE3 / ASSIGNED BEFORE SOURCE / NOT TESTED

Retained central coordinator codex/central-four-streams-20261018, issues #2704 #2705 #2706 #2707. Owner again requests continuation, with existing approval for four internal agents. Baseline main56f57084bfcc0104c826dbc834e91aed6fb7673e; history since final phase2 receipt reviewed. Independent VOICE month-context/conversation-file releases and wholesale selected-store claim#2777, lifecycle/native/invoice/Workforce owners remain protected. This is a bounded continuation of the existing central assignment, not a release or functional PASS.

- WS1 ASSIGNED codex/ws1-monthly-operator-summary-20261018: server/src/services/automatic-report-policy.js, automatic-report-source.js; client/src/components/platform/AutomaticReportSettingsManager.jsx; existing automatic-report-monthly/settings-postgres/settings-mounted tests and new server/test/automatic-report-operator-summary.test.js. Add MONTHLY+READY-only read-only totals of original recorded shift differences by stable recorded opening operator identity and STORE/DELIVERY chain from the same existing snapshot. Preserve original rows and day/POS groups. Same names never establish identity; missing IDs remain explicitly unattributed. Use checked integer cents, retain shortage and surplus separately without allocating liability or treating netting as reconciliation. HOLD/cap/invalid financial source suppresses summary. No employee-payroll inference, settlement, adjustments, settings writer, scheduler/SMTP/schema changes.

- WS2 ASSIGNED codex/ws2-supplier-proposal-csv-20261018: client/src/components/commerce/OrderSuggestionsPanel.jsx; new supplier-order-proposal-export.js in same directory; server/test/supplier-order-groups-ui.test.js and new supplier-order-proposal-export.test.js. Review-only CSV from the currently applied canonical supplier snapshot and current visible filters across all pages. Preserve exact quantities and unassigned reasons; include store/as-of/history/coverage/lead days and approved-document frequency PROXY, never physical-delivery or primary-supplier certification. Escape CSV and neutralize spreadsheet formulas, disable export for missing/stale/loading/invalid contexts. No extra API or writer/order/transmission.

- WS3 ASSIGNED codex/ws3-report-navigation-regression-20261018: NEW server/test/kiosk-report-navigation-races.test.js only. Existing actual Suite+Sales composition did not reproduce the historical hypothesized tab overwrite: real navigation starts a new shared load token and rejects the old sales response. Add meaningful mounted deferred-response regression for actual installers/tab navigation/reentry/store change. Runtime installKioskReportsSalesV4.js and shared helper remain unchanged unless a separate verified defect is later claimed. Correct prior hypothesized residual as NOT REPRODUCED on current composition, not hosted PASS.

- WS4 ASSIGNED codex/ws4-product-count-validation-20261018: server/src/services/owner-sales-tools.js and NEW server/test/assistant-product-counts.test.js. Read-only actual adapter reproduction accepted per-product distinct sale/reversal counts -1, 0.5 and 9007199254740992 as COMPLETE/matched. Restrict ONLY normalSaleCount/reversalCount to nonnegative safe integers and fail closed through existing INVALID coverage suppression. Valid fractional/signed item quantities and reversal money retain existing semantics. No hosted failure claimed. Preserve independent VOICE AssistantChatPage/conversation/calendar ownership. Also independently review WS1/WS2 contracts and existing phase2 blob/release evidence. Root alone common registries/checkpoints/PDF/publication.

Protected daily/weekly HOLD/provisional LAB PASS#2743 and prior accepted invoices/payments/corrections remain unchanged and are not repeated. Public health20:26:41UTC HTTP200/oktrue/revision755ca8c0855b7c2c261a7281a5d89c89083a38cb is technical release evidence only. Current browser observation still reports native credential state cannot safely resume; no workaround or new hosted PASS. MONTHLY/supplier/coverage acceptance remains AWAITING LAB.

Before source require this scoped claim green merged main. Then focused mounted/native/read-only SQL/HTTP/Windows/build/invariants and full PR/main CI, ordinary guarded exact release; no bypass/manual deploy. Final consolidated receipt records results and refreshes tracker PDF. Full original14 remain OPEN, no autosend or production financial/stock/payroll/settings action. Checkpoint CHECKPOINTS/CHANGES/2026-10-18-central-four-streams-phase3.md. Next action after merged claim: three independent bounded implementations and real-composition regression, with cross-review.

18/10/2026 23:24 Europe/Athens - WHOLESALE-STORE-CONTEXT-01 / CLAIM BEFORE SOURCE / AWAITING TECHNICAL AND LAB PROOF

Retained coordinator codex/wholesale-suite-20261017; claim docs/wholesale-store-context-claim-20261018, planned source fix/wholesale-owner-store-context-20261018; baselinee044e2d. Owner synexise23:20 requests continuation. Existing manager navigation and personal seller read/revocation PASS PR2767/2774 retained, all temporary module/member/assignment grants restored inactive. Do not repeat successful business/grant actions for documentation. Full wholesale/standalone remains OPEN.

Concrete residual found while reviewing actual personal-owner test: selected LAB store was opened through its normal top Εμπορική λειτουργία button, but personal manager assignment tab required a new explicit store choice and offered all company stores. Current source confirms StoreCloudPage top button emits plain Event(mws:commerce-open), omitting store.id; lower operations button already includes it. CommerceLauncher only retains event.storeId when view=operations, otherwise it takes URL supportStore (missing in normal Owner /) and all stores. Root cause is dropped selected-store context on the existing normal entry, not seller membership/auth failure. Personal seller options were correctly limited by actual assignment; no foreign data leak or server authorization bypass is asserted.

Bounded change after this claim merges green: StoreCloudPage top opening control emits exact selected store in CustomEvent while retaining initial products view; CommerceLauncher honors explicit selected-store context for products and operations, validates active owned store before rendering, never substitutes first/company scope for empty/invalid explicit selection, clears stale private content while loading, ignores old asynchronous responses and preserves duplicate-open behavior for same scope. A genuinely different explicit store may switch the workspace only when no frozen uncertain wholesale submission is pending. Keep central plain-event entry behavior, explicit supportURL context, existing license/role/session fences and frozen request body/key intact. Files limited to client/src/components/cloud/StoreCloudPage.jsx, client/src/components/commerce/CommerceLauncher.jsx and focused registered mounted/static integration tests under server/test plus common records/generated PDF. No schema/server auth/API/domain/payment/fiscal/POS/business mutation or grant, direct deploy/restart. Other owners unchanged.

Before source require scoped claim green merged. Meaningful mounted proof: actual top-entry producer supplies store; normal Owner products event with multiple company stores exposes only selected store to wholesale/portal/seller props, initial products retained; empty/foreign/inactive explicit store fails closed; URL supportStore works; same-store duplicate preserves mounted view; new-store opens/late response races preserve latest scope; uncertain request lock blocks switch without losing frozen key/body. Run existing workspace stability and wholesale access/frozen tests and build, require full native PR/main CI and ordinary guarded exact health. CI/local are not LAB PASS, no new manual claim until actual hosted acceptance. Single next action implement and validate this bounded entry-context fix after green claim, then ordinary release and separately scoped acceptance; customer portal/order/standalone work still OPEN.

18/10/2026 23:07 Europe/Athens - WHOLESALE-SELLER-LAB-01 / LIMITED PERSONAL SELLER LIVE PASS / ALL TEMPORARY GRANTS RESTORED

Retained coordinator codex/wholesale-suite-20261017; receipt docs/wholesale-seller-lab-receipt-20261018. Owner NAI ΕΓΚΡΙΝΩ22:29:38 authorized only temporary LAB module, existing Υπεύθυνος Εργαστηρίου membership and exact B2B-TEST-001/ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ assignment, read-only test and restoration. Before-action PR2768/head1ec54e12326e1776d23e8dc256d7ccec9284912f all3applicable CI checksSUCCESS/fullbuild correctlySKIPPED, merged3645d05f9e6b5737416f2dc55e8fa6ce65aa56b1 before mutations. No source/test/schema/config change. Pre-test health oktrue/version0.22.0+kat-test-pos/exact5c5d1711f8f144d52e1090ac880c8b35ca093a77, curl exit0. Post-restoration no-cache health23:08 also oktrue/same exact revision, curl exit0. Existing source release/native proof and prior limited navigation PASS retained; other owners untouched.

Actual Cloud Chrome desktop/SuperAdmin setup approximately22:33-22:36: fresh license initial21active/WHOLESALE_B2B inactive, company ACTIVE/ENTERPRISE/start2026-09-06/no end/autoRenewfalse/monthly104.70. Toggle/save/reopen module22active, all other37-card comparison excluding this one and company/control fields identical. LAB store cmtpopbgo000trhb5ng9ytiru only. Target existing user initially Χωρίς ενεργή ιδιότητα; exact-store assignment list empty after load. Local before-action.json written before membership/assignment writes. Activate target membership; refresh shows Ενεργός πωλητής. Assign ONLY existing ΔΟΚΙΜΑΣΤΙΚΟΣ ΠΕΛΑΤΗΣ ΧΟΝΔΡΙΚΗΣ / B2B-TEST-001 to exactLAB store; visible active row revision1. N40 other-user control remains inactive; no new user/customer/password or other assignment created.

Actual secure personal login approximately22:36-22:39 succeeded, positive rendered welcome Υπεύθυνος Εργαστηρίου / MYWORKSTATION LAB (displayed company idcmtpopbgk000prhb5qc60zxus). No credentials read/printed/published; browserAuth only. Open exact LAB store → Εμπορική λειτουργία → Χονδρική B2B → Εργασία πωλητή. Personal seller workspace now loads instead of support-context refusal. Store options show ONLY ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ; explicit selection loads ONLY assigned synthetic customer. Select customer; own history region opens with no visible entries. Read-only Εύρεση προϊόντων loads existing first catalog page (including7UP1.5L/SKU00580 and7UP330ML/SKU00582), no item added, price calculation or order submitted. Screenshot personal-seller.jpg. This is LIMITED LIVE UI PASS for this existing Owner's personal seller capability, assigned-store/customer selection and catalog/history opening; NOT

restrictedEMPLOYEE, foreign directAPI/tenant proof, quotes/orders/replay, customer-facing portal, mobile/offline or standalone acceptance.

RESTORATION COMPLETED for seller grants approximately22:40: personal account's existing manager UI → target user → explicitly select exactLAB store (no default fallback) → refresh active assignment revision1 → Ανάκληση → inactive revision2/Ενεργοποίηση ανάθεσης. Then Απενεργοποίηση πωλητή → refreshed target Χωρίς ενεργή ιδιότητα; N40 remains inactive. Reopen personal seller workspace: Απαιτείται ενεργή προσωπική σύνδεση, previous product DOM absent. New inactive rows/audit/revisions retained; effective access restored, not byte-identical DB. No unrelated account/role/price/package/portal/business/shift/stock/payment/fiscal action or SQL/migration/seed/manual deploy. Business financial/stock/control deltas NOT TESTED.

FINAL MODULE RESTORATION COMPLETED approximately23:05-23:06: earlier central sign-in attempts returned non-SuperAdmin/wrong-credentials errors; owner requested renewed secure forms. Correct password accepted, current Authenticator2FA accepted, fresh canonical PlatformAdmin showed owner Χρήστος Μάνης. No credential values read, copied, guessed or published. Open ONLY MYWORKSTATION LAB license: fresh22active/WHOLESALE_B2B ACTIVE; other company fields and module terms equal initial baseline. Toggle ONLY this module inactive, save, reopen fresh:21active/WHOLESALE_B2B INACTIVE, entire structured visible summary/company/control fields/all37module cards and terms EXACTLY EQUAL initial capture. Final comparison and two native cropped modal screenshots restored-summary.jpg/restored-card.jpg retain LAB context without other-company data. All three authorized effective grants are restored: membership inactive, exact assignment inactive revision2, module inactive. Audit/revisions/new inactive rows retained, no deletion. No remaining access-expansion or cleanup blocker. Do not repeat successful grant tests for documentation.

Whole wholesale/standalone remains OPEN/ASSIGNED. Manual updated only for observed personal seller read and membership/assignment revocation, with final complete effective-grant restoration explicit. Aggregate observation.json and before-action.json preserve exact scope without credentials. Single next action: separately scoped customer-facing portal acceptance and remaining order/standalone work; no automatic new grants, account creation or order submission. Preserve this completed personal seller read/revocation PASS. Retained coordinator until named handoff.

18/10/2026 22:57 Europe/Athens — ANDROID-CHAT-NATIVE-01 / limited USER PASS photo send and Admin opening

Retained owner feat/android-chat-native-20261017; receipt docs/native-photo-user-pass-20261018. After instruction to send one non-sensitive test photo from current LAB2 native app to LAB and inspect Admin chat, owner22:46:31 reports «ΝΑΙ ΦΑΙΝΕΤΕ». Asked whether clicking it in Admin opens normally at large size;22:57:35 answers «ναι». Scoped USER PASS: reported native photo send, visibility in intended LAB Admin conversation and successful large opening. Exact message/attachment IDs, MIME/bytes/checksum, sender/session/device/OS/APK hash, camera versus existing-photo source and production revision at test were not independently captured. This does not establish native camera capture, reverse Admin-to-native photo opening, PDF, OCR/invoice creation, byte fidelity, forensic storage or all-device acceptance.

Earlier limited LAB2 login/own-store UI/message/push/correct tap and logout/screenshot observations are protected in PR2769/head30b355796081fd729210e09206c1b79ced9f1831 merged3e581757e98b2600486ed1d88bb4597e0a234191 after applicable checks green. No real message/photo/read/push repeated by this page; no business mutation, code/config/env/deploy change or private content retrieval. Current receipt baseline main6ca634f38e1d6f7f3646d1e74623828d49fcf5f8. Manual/tracker/active/pending/PDF synchronized; completed outbound photo/Admin-open retest removed from current pending, without closing all native photo/camera functionality or N16.

OPEN under same owner: native camera capture (source mode not specified), reverse-direction native image preview and broader AI; permission-denial/session-expiry/revocation/server acknowledgement, in-flight push/account-switch/foreign-store negative requests; physical SDK/OS/private-storage forensic and phone/tablet variants; stable signing/Play, iOS, separate physical QR scan. Do not repeat completed notification/logout/outbound-photo checks for documentation. Single next action: from Admin attach one non-sensitive existing test image in LAB and verify LAB2 can open it in native app; no

invoice/payment/stock/fiscal workflow. Preserve separate PWA/N16/AI/other owners.

18/10/2026 22:32 Europe/Athens — ANDROID-CHAT-NATIVE-01 / limited USER PASS logout, screenshot blocking and LAB2 chat/push

Retained owner feat/android-chat-native-20261017; receipt docs/native-lab2-device-pass-20261018. New owner observations, recorded without repeating messages or changing business state:

-21:52 «είναι οκ» after Logout/close/reopen/login-required instructions;21:52:34 clarification that conversations are visible, then21:53:31 explicitly «αφού συνδεθώ». Scope: visible return to authenticated history after re-login, consistent with logout/login gate; no independent forensic/private-file or server revocation measurement. Initial draft receipt was stopped and discarded before publishing when clarification arrived; no false logout PASS was merged.

-21:54:02 reports unable to take screenshot;21:54:15 acknowledges intended protection. Limited user-reported screenshot blocking on this device, not all OS versions/recording/camera/forensic acceptance.

-21:55 identifies LAB/LAB2; initial native entry rejected missing exact store Chat URL. Guided through existing POS Εφαρμογή κινητού and Κοινοποίηση συνδέσμου;22:17:21 reports login and sent message,22:17:38 confirms only LAB visible. Scope: user-described LAB2 personal PIN login, own-store-only visible UI and one message send; no crafted foreign-store request/credential/role negative proof. Screenshot22:20 independently shows existing LAB POS2 message22:16:25 in Admin LAB conversation, but exact mobile identity/hash/process not independently captured.

-22:20:44 reports reply arrived without notification. Guided to activate notifications in the current LAB2 session because logout clears opt-in; browser Push ενεργό is not native registration evidence.22:22:33 «ΗΡΘΕ»;22:22:53 «ΤΟ ΠΑΤΗΣΑ ΚΑΙ ΑΝΟΙΞΕ ΣΩΣΤΑ». Limited USER PASS staff-session delivery and correct LAB conversation tap; exact activation-result text, payload/body/name, latency and separate foreground/background/locked conditions NOT independently captured. Earlier missing notification superseded for this successful reported test only. Admin store-name notification/correct tap PASS21:32 remains protected (PR2765/49486483d5c32fb310319b0a1936fa7d2eefa5ae).

No private PIN/token/content read or real message/read/push by this page. No code/configuration/deploy/server/production DB change. Current repository baseline3645d05f9e6b5737416f2dc55e8fa6ce65aa56b1; production revision at physical tests not independently sampled. Prior focused Node20.20.2 native-fcm checks14PASS/0FAIL/1isolated-PostgreSQL SKIP are automated/local only, not device evidence. QR download and employee store URL are distinct: public QR grants no store rights; native employee login accepts exact existing /chat/<storeId> URL plus personal PIN. Logout clears notification opt-in, so activation belongs to the new logged-in identity.

Manual/active/tracker/pending/PDF synchronized for these limited successes. Remove completed visible logout/reopen, reported screenshot block, LAB2 login/visible own-store/message-send and staff notification/tap retests from current pending. Retain assignment and all PWA/N16/AI/other owners. OPEN: native photo/camera/preview and broader AI functionality; permission denial, expiry/revocation/server acknowledgement, in-flight push/account switch/foreign-store negative acceptance; device/SDK/OS forensic storage, phone/tablet variants; stable signing/Play, iOS and separately observed physical QR scan. No overall native/N16 PASS. Single next action: owner sends one non-sensitive test photo from LAB2 native app to LAB, then confirms correct Admin readback; no invoice/payment/stock/fiscal action or repetition of completed notification/logout tests.

18/10/2026 22:32 Europe/Athens - WHOLESALE-SELLER-LAB-01 / AUTHORIZED TEMPORARY SELLER GRANTS / BEFORE ACTION

Retained owner codex/wholesale-suite-20261017; docs/wholesale-seller-lab-claim-20261018, baseline10d1dc9434512ebfb88789aa4ba27a4f2e64db37. Owner explicitly ΝΑΙ ΕΓΚΡΙΝΩ22:29:38 approved temporary LAB WHOLESALE_B2B activation, seller membership for existing Υπεύθυνος Εργαστηρίου, assignment ONLY existing ΔΟΚΙΜΑΣΤΙΚΟΣ ΠΕΛΑΤΗΣ ΧΟΝΔΡΙΚΗΣ/B2B-TEST-001 to ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ cmtpopbgo000trhb5ng9ytiru, read-only personal seller test and restoration. No new users/passwords/customer/portal/order, role/package/price changes, transactions/stock/fiscal/shift mutations, SQL/seed/migration/deploy. N40 user/control remains untouched. Publish green merged before grant mutations.

Initial license last fresh22:10: company ACTIVE/ENTERPRISE/start2026-09-06/no expiry/autoRenewfalse,21active modules, WHOLESALE_B2B inactive,monthly total104.70EUR; all37visible cards and terms restored exactly, evidence PR2767. Existing target seller card observed without active membership. Fresh pre-action recapture required; assignment initial effective state must be read before its change. Record each before/after and unaffected other-user/module controls locally before next action; final common receipt publishes exact observed values. Expected module21→22→21, membership inactive→active→inactive, ONLY exact target assignment none/inactive→active→inactive. Restore effective permissions, retaining audit/revision/possibly new inactive rows; do not delete historical rows. If initial state differs, preserve it and stop scope expansion.

Prior limited manager navigation/inactive entry PASS retained, not repeated. Actual personal seller auth/customer scope/catalog/history read-only acceptance remains NOT TESTED. Existing supportContext rejection is intentional in wholesale-seller-auth.js; do not bypass. Obtain secure personal sign-in using browserAuth if needed; no credentials in chat or repository. Preserve SuperAdmin recovery for restoration. If personal sign-in blocks completion, restore grants before ending or leave no grants changed while requesting sign-in. Business financial/stock deltas NOT TESTED; no submitted order authorized. Whole wholesale/standalone scope remains OPEN, other owners preserved. Single next action after green merge: fresh license baseline, bounded grants, read-only seller acceptance if personal auth available, restore and publish actual results/manual/common records/PDF. No broad PASS inferred.

18/10/2026 22:11 Europe/Athens - WHOLESALE-UNIFIED-PAID-01 / LIMITED ACTIVE LIVE UI PASS / LAB GRANT RESTORED INACTIVE

Retained coordinator codex/wholesale-suite-20261017; receipt docs/wholesale-active-ui-receipt-20261018. Owner explicit nai22:01:29 approved only temporary LAB WHOLESALE_B2B activation, existing-identity read-only navigation and restoration. Before-action claim PR2766/head72cb6b94277664cd838ee5e12f565440f212977e/docsCI39157244584 SUCCESS/all3 applicable checks green/full build correctly skipped, merged b9228b3ed17bd6a924dbc0b350587385a4c55258 before either license save. Its22:08 heading is approximate; GitHub claim publication/merge and actual subsequent saves establish order. No source/config/schema/test edit. Fresh pre-test public health22:07 returned oktrue/version0.22.0+kat-test-pos/exact5c5d1711f8f144d52e1090ac880c8b35ca093a77, curl exit0; post-restoration health22:10:45 also oktrue/same exact revision, curl exit0. Owned runtime paths unchanged against reviewed95a85bc. Other owners preserved.

Actual desktop Cloud Chrome/existing SuperAdmin22:07-22:10, MYWORKSTATION LAB only. Exact module draft toggle and save, reopen fresh:21→22active modules, WHOLESALE_B2B ACTIVE; all other37-card comparison excluding this one and company subscription/control fields identical. Existing monthly total104.70EUR unchanged; new module existing defaults0monthly/0setup/MONTHLY/no dates, no commercial price agreed or payment receipt asserted. Company ENTERPRISE/ACTIVE/start2026-09-06/no end/auto-renew false retained. From canonical PlatformAdmin, LAB stores → ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ cmtpopbgo000trhb5ng9ytiru → Πλήρες Backoffice → Εμπορική λειτουργία → Λοιπές εμπορικές λειτουργίες: ONE top-level Χονδρική B2B appears. Clicking it opens unified Χονδρική, site & αναθέσεις / Εργασία πωλητή workspace. Actual five manager tabs opened: Πελάτες (existing synthetic B2B-TEST-001 row), Τιμοκατάλογοι (selection/empty-price state), Παραγγελίες (exact LAB store selected, no registered orders),

Site πελατών (settings/account/publication forms load; no configured active portal exercised), Αναθέσεις πωλητών (two existing LAB identities listed without active seller status). No forms submitted or data changed through those tabs. Screenshot CHECKPOINTS/EVIDENCE/wholesale-active-ui-20261018/unified-workspace.jpg.

Εργασία πωλητή opened but actual existing support/SuperAdmin context returned Απαιτείται ενεργή προσωπική σύνδεση. This is observed access refusal only, NOT seller-functional PASS or independently proven membership cause; no credential/account/session/role bypass or provisioning. Customer-facing site login, ordinary Owner/employee/seller flow, quotes/orders/replay, mobile/offline/standalone remain NOT TESTED. Prior inactive-entry/duplicate-removal PASS retained; no repeat negative business test.

RESTORED immediately: return SuperAdmin → same LAB license, fresh ACTIVE22 and unchanged other terms recorded, toggle ONLY WHOLESALE_B2B inactive and save, reopen fresh. Observed21active modules, card INACTIVE, entire structured visible license summary/company fields/all37cards/terms EXACTLY EQUAL initial capture. Aggregate evidence license-restoration.json. This is visible effective-grant restoration; not a claim that absent database rows were deleted or DB bytes identical. No other company/store modified, package application, customer/site/account/membership/assignment/order creation, transaction/payment/stock/fiscal/shift action, SQL/migration/seed/backup or manual deploy. Financial/stock/control terminal deltas NOT TESTED; no inference from read-only background figures.

LIMITED LIVE UI PASS: authorized active entry and unified five manager screens in existing SuperAdmin/LAB context, plus observed license control preservation/restoration. Whole wholesale/standalone product OPEN/ASSIGNED. docs/manual/wholesale/PASS.md updated only for these observed screens and access limitation. Single next action: acceptance with an identified existing personal seller/customer identity and configured portal, within separately authorized scope; no automatic provisioning or order test. Keep grant inactive after this test, retained coordinator until named handoff.

18/10/2026 22:08 Europe/Athens - WHOLESALE-UNIFIED-PAID-01 / AUTHORIZED TEMPORARY LAB GRANT / BEFORE ACTION

Retained owner codex/wholesale-suite-20261017; branch docs/wholesale-active-lab-20261018; baseline194044d405c4d33e55d2b0dd9b0ec4d939bb7a22. Owner explicitly answered nai22:01:29 to temporary activation of ONLY WHOLESALE_B2B in MYWORKSTATION LAB, read-only navigation with existing identities and restoration inactive. Publish this claim green merged before either state-changing action. Cloud Chrome existing SuperAdmin operator; target virtual store ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ cmtpopbgo000trhb5ng9ytiru. Fresh pre-action license UI: company ACTIVE, AI COMPLETE/ENTERPRISE, subscription start2026-09-06, no end, auto-renew false,21active modules, WHOLESALE_B2B INACTIVE. Existing monthly total104.70EUR; other module flags/prices/dates and human-control NONE/0 preserved as controls. No price agreement/payment receipt is manufactured. Expected effective grant inactive→active→inactive, count21→22→21, same other commercial terms. Record fresh before save, persisted after activation and fresh restoration.

Only toggle exact module and save existing license form; no package application, account/membership/customer/site/order creation, assignment, stock/payment/fiscal/shift action, direct SQL/migration/seed or deploy. Existing grants only; seller denial without membership is valid and not permission to provision. Relevant business deltas, terminal controls and all unexercised end-to-end paths remain NOT TESTED. Existing inactive UI PASS PR2763 retained; new active navigation NOT TESTED until observed. Lifecycle/native/assistant owners and their LAB work remain untouched. Whole wholesale/standalone scope OPEN. Single next action: after this claim merges green, perform authorized two module saves around read-only UI acceptance, prioritize restoration, then publish actual qualified results and manual/common records/PDF together.

18/10/2026 21:31 Europe/Athens — STORE-LIFECYCLE-01 / APPLICATION LINKS MERGED / REAL CLEANUP NOT EXECUTED

Owner feat/store-shifts-inventory-clear-20261018 retained, bounded source feat/store-lifecycle-application-links-20261018. Owner resumed21:04 after pause; both registers/fiscal/EFTPOS/RBS settings/connections remain protected. New Excel NOT RECEIVED. No business/LAB PASS and no reset operation.

SOURCE: PR2760 finalheadb0034be937e4cf21fd492ac1351fa4537c4f1b96, fullPRCI39152756368/build117750034023 SUCCESS3181PASS/0FAIL/0SKIP plus6backup/all required Windows/Chromium/nativeSQL/HTTP checks, merged5c5d1711f8f144d52e1090ac880c8b35ca093a77. ExactmainCI39153475177/build117752880985 SUCCESS3185PASS/0FAIL/0SKIP plus6backup (includes independent assistant-context tests). Local full Node20:3140tests/3003PASS/0FAIL/137 infrastructureSKIP; client build PASS. Native raw-link snapshot/fingerprint/company mismatch and actual GET-only HTTP tests explicitly passed. This is technical evidence, not a completed reset or business acceptance.

Nine explicit application links now have scoped counts in the existing read-only preview and central preparation panel. Company ownership joins Store because legacy Employee lacks companyId. Child/parent company and child store mismatches block review, changed reviewed layouts fail closed, and preview fingerprint includes raw-link counts. Every link stays REVIEW, no deletion authority. executionAvailable:false; no new execution/reopen route, production manifest/guards or storage adapter installed. Register retention, fiscal execution and other owners remain unchanged. Ordinary guard39154329670/deploy117754333538 pinned exact5c5d1711f8f144d52e1090ac880c8b35ca093a77, rollback artifact12146387142, confirmed healthy18:32:36UTC. Independent no-cache public health also returnedoktrue/exact5c5d1711. The preparation source is LIVE; this is not executed cleanup or authenticated business acceptance.

Actual read-only20:55:11Athens:0OPEN shifts, public.StoreLifecycleFence absent. Read-only20:55:32Athens:57PurchaseOrderLine+5PackCorrection+6Posting+3TotalOverrideAudit KAT rows missed by direct-store counts; no source/other-store/orphan deletion occurred. CloudDeviceCursor1 is retained infrastructure. Exact counts and sibling controls saved in CHECKPOINTS/EVIDENCE/store-lifecycle-20261018/application-link-counts.json; counts only, NOT backup/restore/full ownership.

ACCESS LIMIT: Render SQL connector is read-only; local DATABASE_URL/Render/S3 credentials are not configured (values not exposed). Permitted Browser fallback opened Render login; owner chose Google and completed secure credential steps, but authentication then reached method selection and the browser runtime timed out/reset. Two existing-tab recovery attempts failed Emulation.setFocusEmulationEnabled timeout. Fresh independent Render verification tab returned the login page: target authentication is NOT COMPLETE. No signed-in Render dashboard, shell, real backup or restore was reached/verified. Do not label this as a Google/site bot block or successful login, and do not repeat credential entry blindly. No production settings/credentials/Writer changes were made through Browser.

Whole STORE-LIFECYCLE-01 OPEN/ASSIGNED. Remaining complete production ownership including shared Workforce/raw/JSON links, hosted durable encrypted storage/key retention and actual isolated full restore, physical Writer/local spool and original-generation offline/inflight fencing, safe reopen and functional central execute UI/API. Existing Writer source has no lifecycle epoch/maintenance handshake, and remote job planning is not proof of a stopped physical connector. Single next action: restore authenticated execution access for actual recovery integration while completing the explicit ownership plan; never bypass recovery or activate old RESET. Keep both registers and shared/sibling data. Combined current-main PDF regenerated with this receipt; no manual PASS.

18/10/2026 21:32 Europe/Athens — ANDROID-CHAT-NATIVE-01 / limited USER PASS: store-name notification and correct tap

Retained owner feat/android-chat-native-20261017; receipt docs/native-label-user-pass-20261018. Owner21:32:30 reports «έχεις δίκιο ήρθε» after the same-account diagnostic, and21:32:50 answers «ναι» to the explicit combined question whether the notification showed the store name and tapping opened the correct conversation. This is scoped USER PASS delivery, displayed originating-store name and correct-conversation tap in the reported new-preview test. Earlier current no-notification/retest item is superseded for this observed test. Store ID/name, exact sender/recipient IDs, APK hash/model/OS, latency and separate foreground/background/locked states were not independently captured; do not infer them or broad all-device acceptance. Earlier generic LAB delivery remains historical evidence.

Read-only diagnostic PR2762/head9e26e8474cbae03c8840f73a4fb13e3d394d1bb7 merged94fdb3390ff6bbba4638ab5decfacb41f5578219 after applicable checks green. The earlier three LAB messages20:52/20:53/20:55 were same-account and intentionally excluded by existing sender logic, not proof of a new-APK defect. No code, APK, server, env or permission change was needed for this user result. Prior independent health688d96b0661a58b3ca8486911ba172b87fb81177 is the latest observed production revision; exact revision at physical test was not independently sampled. This page sent no real message/push/read or production mutation, and does not repeat the successful action for documentation.

Manual docs/manual/native-chat/PASS.md now gives the observed activation/delivery/title/tap flow, same-account exclusion and boundaries. Current pending task for this store-label delivery/tap retest is removed; unfinished owner remains assigned. OPEN: native permission-denial/session expiry/revocation/logout/account-switch/foreign-store and device storage/SDK/OS forensic acceptance, other phone/tablet variants, broader message/photo/AI functional acceptance, stable production signing/Play and iOS. QR image and public APK were technically verified earlier, but independent physical QR-scan acceptance is NOT separately asserted. No overall native/N16 PASS and no transfer of PWA/N16/AI/other owners. Single next action: continue remaining native device/session/privacy acceptance from this checkpoint without repeating this confirmed notification test.

18/10/2026 21:27 Europe/Athens - WHOLESALE-UNIFIED-PAID-01 / LIMITED LIVE UI PASS: INACTIVE MODULE HIDDEN / ACTIVE FLOW STILL OPEN

Retained coordinator codex/wholesale-suite-20261017, docs/wholesale-unpaid-ui-observation-20261018. Owner asks «συνεχιζεις?». Restored repository after scratch maintenance; current baseline94fdb339 preserves other owners. Existing claim/source/release PR2741/2744/2753 and native3153/0/0 proof retained. No source/config/schema/test edit or production business write. Fifteen owned runtime blobs are identical between reviewed95a85bcb8 and independently observed health688d96b0661a58b3ca8486911ba172b87fb81177; public no-cache health before/after21:20-21:25 returned oktrue/version0.22.0+kat-test-pos/exact688d96b, curl exit0. Later lifecycle/calendar/native work and their acceptance remain with their owners.

Actual desktop Cloud Chrome/SuperAdmin read-only observation21:20-21:23: canonical https://myworkstation-app.onrender.com/platform-admin → Συνδρομές & Modules → MYWORKSTATION LAB. Company license shown Ενεργό, no end date,21active modules; exact Χονδρική B2B card shown ΑΝΕΝΕΡΓΟ. No module toggle/save clicked. Closed with Ακύρωση, opened LAB company stores → ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ (cmtpopbgo000trhb5ng9ytiru) → Πλήρες Backoffice → Εμπορική λειτουργία. After normal data load and switching to Λοιπές εμπορικές λειτουργίες, actual top-level Χονδρική B2B entry absent; old Εξωτερικοί πωλητές and nested Χονδρική / B2B also absent. Exact visible-DOM button counts0/0/0, screenshot CHECKPOINTS/EVIDENCE/wholesale-unpaid-ui-20261018/unpaid-navigation.jpg. Other ordinary navigation remains visible. This confirms only the inactive-module UI/duplicate-entry removal for this existing SuperAdmin/LAB context; do not repeat this completed negative observation without a new failure.

LIMITED LIVE UI PASS only for the observed inactive-module appearance and omission of duplicate entries. Does NOT prove active-module opening, Owner/employee roles, direct server denial in production,

seller/customer functionality, price/order submission/replay, mobile/offline, tenant switching or financial/stock deltas. Native technical proof remains separately recorded; it is not promoted to LIVE PASS. No account/member/customer/site/order created, no license/price/billing/package change, no stock/payment/fiscal/shift action, SQL/seed/migration/backup or direct deploy. Background shift values were visible but no before/after/control transaction measurement was performed; no business delta is inferred.

Positive read-only functional acceptance remains OPEN because the stored WHOLESALE_B2B grant for the LAB company is inactive. Single next action: obtain action-time confirmation for temporary activation of ONLY this module in MYWORKSTATION LAB, exercise only read-only wholesale/site/seller navigation allowed by current memberships, then restore its original inactive state. No customer/seller provisioning, order submission or change to prices/other modules/real stores is included. This browser policy confirmation concerns expansion of stored access, not new permission to develop code; no grant was made or claimed. Publish an exact before/after claim/baseline before any authorized state-changing test, coordinate with existing LAB/lifecycle owner and do not manufacture paid status or bypass entitlement. Manual docs/manual/wholesale/PASS.md records only the completed narrow negative UI flow. Whole wholesale/standalone product remains OPEN with retained coordinator until named handoff.

18/10/2026 21:10 Europe/Athens — STORE-LIFECYCLE-01 / APPLICATION LINK COUNTS / AWAITING NATIVE CI

Owner feat/store-shifts-inventory-clear-20261018 retained; bounded source branch feat/store-lifecycle-application-links-20261018 after owner resumed work21:04. Latest authorized scope remains a new KAT start preserving BOTH registers/fiscal/EFTPOS/RBS settings and connections, store identity/licenses, company/shared catalog/other stores. No reset/deletion executed.

Read-only production20:55:11Athens: ZERO OPEN shifts, lifecycle fence absent. Read-only20:55:32Athens explicitly joined application links through their parent and Store company: PurchaseOrderLine57, PackCorrection5, Posting6, TotalOverrideAudit3 KAT rows; ReopenMovement0/EmployeeNaturalRule0/StoreChatRead0. CloudDeviceCursor1 belongs to retained device infrastructure. Other-store controls respectively1016/20/22/0/15/0/134; none removed. Counts are NOT backup, whole graph ownership or deletion authority.

Source adds explicit read-only application-link review to existing scoped RepeatableRead preview and central preparation panel. Nine named links; no inferred name-based selectors. Parent ownership joins Store (Employee lacks companyId); count child/parent company or child store mismatches; fail closed on changed reviewed layout; no row bodies, credentials or other-store counts returned. Fingerprint now binds application-link counts. Every raw link remains REVIEW, never REMOVE; executionAvailable:false. Existing reset executor, retention boundary, fiscal/offline behavior and routes unchanged.

Local Node20 focused4PASS/0FAIL/2native infrastructureSKIP, frontend build PASS. Full local Node20:3140 tests/3003PASS/0FAIL/137 infrastructureSKIP. Native CI pending. Native fixture now contains raw PurchaseOrderLine without FK, exact target/sibling/foreign snapshots, fingerprint change on raw child insert, cross-company mismatch blocker and unchanged real GET-only HTTP checks. No LAB/USER PASS or production release claimed for this source.

Whole task OPEN/ASSIGNED. Production application ownership graph, real durable encrypted export/isolated full restore, active/offline/fiscal fencing, generation-aware reopen and executable central reset UI/API remain unfinished. New Excel NOT RECEIVED. Next action: native/full CI then complete explicit ownership and recovery integration; preserve prior scoped PASS and all unrelated owners. Combined PDF remains final release receipt work, not business closure.

18/10/2026 20:40 Europe/Athens — ANDROID-CHAT-NATIVE-01 / RELEASE LIVE, public APK verified; device label/QR acceptance OPEN

Retained owner feat/android-chat-native-20261017. Source PR2734/headb9a79118e1e35e9d474bbc13b79b6ee5281a9d92 merged6fea2ad10f6dd5ab557cfbfdc14a727412f8dfaa after all required checks SUCCESS. Exact PR fullCI39136362578/job117701690604 and main fullCI39136855548/job117703128800 each3113PASS/0FAIL/0SKIP plus6backup. AndroidCI39136362580 SUCCESS19unit+6API30 instrumentation/build/lint. Published APK is the earlier verified CI39135675357 artifact from identical Android tree3f2967bf, not a newly generated debug signing identity.

Normal guarded Render workflow39137344362/job117704488973 SUCCESS, rollback checkpoint retained, exact deploy-hook dep-dbadmv8m7kps738emdn0 LIVE6fea2ad finished18Oct14:48:29.554022Z. Fresh public health at14:50UTC returned oktrue/exact6fea. Public landing /downloads/chat-android/ and versioned APK returned200; MIME application/vnd.android.package-archive,3654376bytes/SHA25682c2ed08c381ce23f5169fad8655a64d6ad9d51d4882eed8c15108ffdcb2c25d matched release manifest and trusted CI artifact; full APKv2 signature/content/certificate and packagegr.myworkstation.chat.preview/version0.1.3-preview/code4 verified. QR PNG and mounted dialog QR independently decoded the public install URL without credentials. Renewed18Oct20:39 public check: healthoktrue/revision688d96b0661a58b3ca8486911ba172b87fb81177; same public release manifest/APK200/MIME/bytes/SHA unchanged. This is technical release/download verification, not physical installation PASS.

POS Chat includes Android · Λήψη / QR; new client negotiates v2 store-name title, legacy client notifications retain four fields. No message text/photo added to notifications. Existing preview certificate differs: remove only MW Chat Preview if replacing old preview, then re-login/re-register notifications. Stable production signing/Play/iOS remain OPEN. User's earlier2FA/store-entry and LAB generic registration/delivery/correct tap USER PASS retained. New QR installation/store-label result was not received; optional question expired/aborted, never infer PASS. User20:39 reports no visible link/QR in conversation; direct public links and saved QR resent, without inferring a POS implementation failure.

Source implementation, artifact publication and guarded release tasks completed; remaining assigned next action is user installation from public QR/link and verification of store-name notification. Also OPEN negative permission/session/revocation/logout/account-switch/foreign-store and forensic SDK/OS storage acceptance, phone/tablet variants, message/photo/AI functional acceptance, production signing and iOS. No new real message/read/push, environment or production DB action in this receipt. Other owners retained; no new native manual PASS from CI/public HTTP alone.

18/10/2026 19:26 Europe/Athens — STORE-LIFECYCLE-01 / TWO TECHNICAL INCREMENTS LIVE / KAT CLEANUP NOT EXECUTED

Authoritative progress receipt, NOT a task closure or business PASS. Owner feat/store-shifts-inventory-clear-20261018 retained after explicit takeoverPR2748/396d5c3 from owner-stopped feat/store-cleanup-20261017. Latest owner18:35 confirmation supersedes limited clearance: new start removes KAT employees/products/stock/shifts/sales/payments/history, preserving BOTH register installations and their fiscal/EFTPOS/RBS settings/connections, store identity/licenses, company/shared catalog and other stores. New KAT Excel NOT RECEIVED; photos/roster pending.

SOURCE / TESTS / RELEASE: PR2752/head74364e7d1133f976dd11c07a84c9a40a495dcbc4/fullCI39142629757/job117720131586 SUCCESS3176PASS/0FAIL/0SKIP plus6backup/all required Windows/build/Chromium/nativeSQL/HTTP checks, merged0a1b3c2582edb4b69c4d7615d73c85b198fade80. ExactmainCI39143178960/job117721831721 also3176/0/0 plus6backup. Ordinary guard39143716020/job117723216510 pinned0a1b3c2, rollback artifact12142836390, healthy16:12:24UTC; Renderdep-dbaeuouq1p3s73bdq9lg LIVE and independent health exact0a1b3c2. Internal bounded streaming, authenticated encrypted chunks/final index, exact PK cursors/digests and

both-register preservation are released source; no production executor/adapter activation.

PR2754/head77e52741eb4a17907ad62c4703fc847ad5977c38/fullCI39143764854/job117723443682 SUCCESS3179PASS/0FAIL/0SKIP plus6backup/all required checks, merged688d96b0661a58b3ca8486911ba172b87fb81177. ExactmainCI39144249228/job117724857603 also3179/0/0 plus6backup. Native restart-seed refusal test actually passed. Ordinary guard39144617939/job117725862439 pinned688d96b0 and confirmed healthy16:25:13UTC; Renderdep-dbaf4crbc2fs73b5makg LIVE, finished16:25:01UTC. Independent no-cache public health nowoktrue/version0.22.0+kat-test-pos/exact688d96b0. No manual deploy/restart or guard bypass. Startup example seed now skips a reset/maintenance/retired KAT instead of recreating old employees/rules/shift templates; ordinary first-install and existing separate admin/owner setup remain.

ACTUAL KAT STATE: owner closed the shift18:40:20.228615Athens, independently observed. Fresh19:22:53Athens SQL:ZERO OPEN shifts/ZERO active operator sessions/ONE recently active connector; public.StoreLifecycleFence absent. No guard installation, maintenance enrollment, generation bump, Writer stop/revoke, fiscal replay or reset command occurred. Production inspections used read-only SQL; ordinary release startup remains separate from a cleanup operation. There is NO real KAT encrypted snapshot or verified restore. Public executionAvailable:false and no executable reset route/submit remain unchanged.

Fresh19:20:36Athens inventory:135direct storeId tables/67nonempty, retained as counts-only evidence CHECKPOINTS/EVIDENCE/store-lifecycle-20261018/direct-counts.json. Includes44cash shifts,143store products,23legacy Employee,165Sale,213StoreTransaction,174StockMovement,30PurchaseDocument and273DocumentAttachment. This is NOT a before/after deletion audit or a backup. Previously measured inline content161847741bytes/largest3437231, all273inline/zero external-only; real production streaming recovery still requires configuration/integration and actual isolated restore. Both active KAT-POS-01/02 installation/fiscal entries and separate KAT-FISCAL-01/02 settings were positively read; no setting/credential body was exported.

DEPENDENCY REVIEW OPEN: schema metadata identifies403raw-ID/JSON/attachment candidates across173tables, saved in application-link-review.json in the same evidence directory. These are heuristics, NOT reviewed row ownership or a deletion allowlist. Undeclared children such as PurchaseOrderLine.orderId and EmployeeNaturalRule.employeeId require explicit selectors; the current internal CHILD manifest requires declared FK ownership.19:19:11Athens read found3Workforce identities linked to KAT and0explicit other-store access rows; this alone does NOT prove sole ownership or authorize deleting shared workforce identities. Current web plan1c-2g and production Postgresbasic_256mb/1GB were read, no plan changed.

Whole task OPEN/ASSIGNED, no LAB/USER/real reset PASS and no new manual PASS. Retained safety boundaries: no store/company/shared-catalog/other-store deletion, preserve both register/configuration sets, complete recovery and raw/JSON/binary ownership review, reject active/inflight/old-offline work, exact prepared confirmation and atomic replay/rollback, safe generation-aware reopening. Hosted durable storage/keys/retention, actual production recovery adapter/reference/schema coverage, authenticated client/worker generation propagation and central executable UI/API remain unfinished. KAT is NOT certified ready for a cleared new start merely because code CI/release passed.

Single next action under the retained owner: implement the explicit reviewed production row-ownership/application-link manifest (including raw children and shared controls) using this evidence before any executor activation; then complete hosted recovery/actual isolated restore and offline/worker/reopen/UI integration. Do not ask again for already authorized development or run old financial transactions for documentation. Final cleanup requires a new exact baseline and records of actual removed/preserved rows. This receipt and the regenerated combined PDF preserve all unrelated owners, source and prior scoped PASS.

18/10/2026 19:15 Europe/Athens - COORD PHASE2 / ΔΕΥΤΕΡΗ ΠΑΡΑΔΟΣΗ ΚΩΔΙΚΑ LIVE / AWAITING LAB

Κεντρικός owner codex/central-four-streams-20261018, με τέσσερις εσωτερικούς agents. Η νέα καταγραφή αντικαθιστά τα προηγούμενα phase2 SOURCE PREPARED / CI PENDING μόνο για τα παρακάτω περιορισμένα scopes. Δεν κλείνει συνολικά τις14 απαιτήσεις και διατηρεί όλα τα παλιότερα περιορισμένα PASS και τις ανεξάρτητες αναθέσεις.

- WS1 #2704 / PR#2749: μηνιαία read-only προεπισκόπηση με όρια ημερολογιακού μήνα στην αποθηκευμένη ώρα Ελλάδας, έλεγχο κάθε ημέρας και συνολικό HOLD όταν λείπει πηγή. Παραμένουν cap1.000, PROVISIONAL, αρχικά ποσά/day/POS/delivery/identity. Δεν προστέθηκε συγκέντρωση ανά υπάλληλο ή αποστολή.

- WS2 #2705 / PR#2750: προαιρετική προβολή ανά προμηθευτή στο υπάρχον panel, με ίδιες ποσότητες από μία πηγή. Υποψήφιος βάσει εγκεκριμένων παραστατικών(PROXY), όχι πραγματικών παραλαβών· ισοβαθμίες/ελλείψεις/όριο μένουν χωρίς ανάθεση. Κανένας αυτόματος ορισμός βασικού προμηθευτή ή αποστολή παραγγελίας.

- WS3 #2706 / PR#2751: ορατή πλήρης/μερική/μη επιβεβαιωμένη κάλυψη, σαφής χαρακτηρισμός των έξι συνόλων/footer και μοναδικά πλήθη συναλλαγών από τον canonical producer. Ποσά, γραμμές, CSV schema, ελληνικό ημερολόγιο/defaults και store guards διατηρούνται.

- WS4 #2707: ανεξάρτητος έλεγχος των παραπάνω και καταγεγραμμένη πραγματική εμφάνιση product_sales COMPLETE κάρτας στο LAB. Νέα διασταύρωση πηγής/CSV δεν ολοκληρώθηκε· κανένα νέο hosted PASS.

Πλήρη PR CI: #2749/39141314834 =3156PASS/0FAIL/0SKIP· #2750/39141772469 =3163/0/0· #2751/39141776928 =3170/0/0. Καθένα επιπλέον6backup και υποχρεωτικούς Windows/build/Chromium/invariants/nativeSQL/HTTP ελέγχους. Exact combined main d9ba358fd23f6ec0a97c94ad4aa291a6d3adf79e / CI39142289435 / job117720534605:3170/0/0 +6backup.

Η συμβατή νεότερη κοινή έκδοση 0a1b3c2582edb4b69c4d7615d73c85b198fade80 πέρασε CI39143178960/job117721831721:3176/0/0 +6backup. Ο ordinary guard39143716020/job117723216510 διατήρησε rollback artifact12142836390, έκανε pin16:10:11UTC και επιβεβαίωσε exacthealth16:12:24UTC. Render dep-dbaeuouq1p3s73bdq9lg LIVE. αναγεννήθηκε από το συγχρονισμένο tracker.

Επόμενη ενέργεια: υποστηριζόμενο authenticated browser και μία συγκεντρωτική read-only αποδοχή των νέων previews/consumer views, με συγκεκριμένο LAB/store/period/source και πραγματικά exports. Καμία επανάληψη αποδεκτών συναλλαγών ή αποθήκευση υπάρχουσας ρύθμισης. Οι owners/branches παραμένουν κεντρικά ανατεθειμένοι μέχρι ονομαστικό handoff.

18/10/2026 18:55 Europe/Athens — STORE-LIFECYCLE-01 / BOUNDED STREAMED RECOVERY SOURCE / AWAITING NATIVE CI

Owner feat/store-shifts-inventory-clear-20261018 retained. TakeoverPR2748 merged396d5c3 before source. Preservation-only PR2752/head767bbf73cfc1eb3921bcc3d026666d120ef01a9a/fullCI39141856579/job117717903365 SUCCESS3157PASS/0FAIL/0SKIP plus6backup/all Windows/build/Chromium/nativeSQL/HTTP checks. Merge refused405 because independent common-record updates moved main; no overwrite/bypass. This combined increment preserves those source changes and reconciles complete current main d9ba358fd23f6ec0a97c94ad4aa291a6d3adf79e, including other owners.

Measured KAT recovery need161847741inline bytes/273DocumentAttachment rows, all inline. New INTERNAL recovery transport writes independently authenticated/encrypted bounded chunks and a final authenticated index as commit marker. Binds scope/manifest/exact source/schema signature and expected aggregate digest; verifies chunk sequence/offset/count/name/checksum/stream identity and every length-prefixed exact SQL row-text digest. Refuses missing/reordered/tampered/wrong-scope or partial streams. Exclusive private existing-directory storage uses original fsync/readback codec. Failed source read removes owned chunks; no successful index is returned. Complete readback explicitly remains restoreVerified:false; hosted durable provisioning/keys/retention remain unimplemented.

Internal execution core optionally accepts an explicitly reviewed streaming manifest. Uses actual ordered primary-key metadata, keyset pagination with exact text cursors/type casts (no numeric rounding), one SQL row per fetch with8MiB row bound; snapshot stores counts/digests rather than all row bodies. Aggregate streaming source cap1GiB remains bounded independently of the old16MiB in-memory path; old path stays unchanged. Prepare/execute recompute row/schema digests, verified recovery reader remains inside maintenance, exact removal counts and streamed retained-record comparisons stay transactional. No production manifest, HTTP executor, hosted adapter, generation-aware client/worker/reopen integration or production guard installation is activated.

Local Node20 transport3PASS/0FAIL/1nativeSKIP and executor2PASS/0FAIL/8nativeSKIP. Full local3118tests/2982PASS/0FAIL/136infrastructureSKIP. New native tests restore complete exact decimal/timestamp/inline source rows into a separate schema, preserve source/sibling controls, and exercise actual streamed executor with over32MiB inline documents and numeric PKs above JS safe integer range, two registers/RBS/EFTPOS preserved, exact18deleted documents and idempotent replay. Native/full CI still required for this NEW increment; earlier3157CI does not cover streamed changes. No LAB/USER PASS or real KAT backup/restore is claimed.

Fresh production observations remain authoritative below: owner closed KAT shift18:40:20Athens; zeroOPEN and active operator sessions at18:40:54. Both KAT-POS-01/02 installations/fiscal entries and separate RBS settings exist. Recent KAT-POS-01 connector heartbeat was observed; no connector stop/restart/revoke and no production deletion/configuration/schema changes. All44shifts/143products/23employees and273attachments still present at those observations. New Excel NOT RECEIVED. User full-new-start authorization includes employees/sales/payments/history while retaining both registers and configurations; no store/company/shared-catalog/other-store deletion.

Whole task OPEN/ASSIGNED, executionAvailable:false. Remaining: native/full verification of streaming, complete reviewed production ownership/raw/JSON/external dependencies and actual recovery schema/reference coverage, hosted durable storage/keys/retention and real isolated restore; old/offline/inflight request fencing, safe reopen, exact central UI/API/preview-bound atomic action and actual before/after KAT audit. Combined tracker PDF remains a release-receipt action, no manual PASS. Next: finish exact native/full CI for this combined preservation/recovery increment, then integrate production adapters before activating execution.

18/10/2026 19:05 Europe/Athens — STORE-LIFECYCLE-01 / STREAMED SOURCE MERGED / STARTUP RESURRECTION GUARD

Owner feat/store-shifts-inventory-clear-20261018 retained; bounded follow-up fix/store-lifecycle-seed-fence-20261018. Combined sourcePR2752/head74364e7d1133f976dd11c07a84c9a40a495dcbc4/fullPRCI39142629757/job117720131586 SUCCESS3176PASS/0FAIL/0SKIP plus6backup and all required Windows/build/Chromium/invariant/nativeSQL/realHTTP checks; merged0a1b3c2582edb4b69c4d7615d73c85b198fade80. Logs explicitly confirm both new actual native streamed SQL restore and >32MiB streamed executor tests passed. ExactmainCI39143178960 pending at this receipt. Independent public GET health still edff09392aece314afbe5426bbb4ba1607c1869e, so no claim that new streamed source is live. Ordinary guard39143214973 succeeded but did not establish this new revision; no manual deploy/bypass.

New source review: Render startCommand runs npm run seed on every release. Existing server/prisma/seed.js upserts KAT/company/shift templates and recreates old named employees/rules; an unguarded startup would repopulate a cleared KAT. Add READ ONLY scoped lifecycle fence check before that example business seed. Maintenance, retired identity or generation>0 skip the entire KAT/company/store/example-shift/employee/rule phase and read the existing company for the unchanged admin/owner phase. Missing fence/enrollment and generation0 preserve normal first installation; wrong company, invalid generation or malformed boolean flags fail closed. No schema creation/enrollment, credentials, default user policy, fiscal gate or other-store change. DB guards still arbitrate a race after the read.

Local focused Node20:2PASS/0FAIL/1nativeSKIP. New native fixture invokes a real write callback only for a fresh store, never for the reset/maintenance target, preserving sibling rows and refusing foreign company scope. Full/native CI and actual production restart acceptance pending. No LAB/USER PASS. This source does not run seed or change production business state; existing ordinary deployment startup behavior is separately identified above.

Fresh MCP configuration correction: web service is currently1c-2g; production Postgres remainsbasic_256mb/1GB. Earlier shorthand256MiB server referred incorrectly to the web service; do not use it as current app-memory evidence. No plan/environment/server/DB change performed. Measured161847741inline attachment bytes remain the actual reason to implement bounded recovery instead of treating fixture-sized snapshots as production-ready.

KAT owner-confirmed shift closure independently verified at18:40:20Athens/ZERO OPEN. Both register identities/configurations preserved; recent Writer still needs physical quiescence before any reset. No actual KAT cleanup, real encrypted snapshot/restore, production manifest/guard installation, hosted durable storage/key provisioning, generation-aware request/worker/reopen or central execute UI/API. New Excel NOT RECEIVED. Whole task OPEN/ASSIGNED. Next: exact green native/full CI for this startup guard, then reviewed production recovery/fencing/UI integration. No further scope confirmation is required.

18/10/2026 18:44 Europe/Athens — STORE-LIFECYCLE-01 / BOTH REGISTERS PROTECTED / PRODUCTION RECOVERY SIZE BLOCKER

Owner feat/store-shifts-inventory-clear-20261018. Takeover PR2748/headab0ec71869abf6ad1ac1fffba085f74ad23c099b/docsCI39141408385 SUCCESS merged396d5c303a68f3c3e1c93dadd6cea90afcde6d75 before source. Owner18:35 explicitly confirmed full new start including employees/sales/payments/history, retaining BOTH registers and their POS/fiscal/EFTPOS/RBS installation/configuration/connections. Previous limited policy is superseded. Other owners unchanged.

Fresh production READ ONLY18Oct15:36:48UTC:44cash shifts/oneOPEN,143StoreProduct,23Employee. Owner closed the shift; independently checked15:40:54UTC:44shifts/ZERO OPEN, lastClosedAt15:40:20.228615UTC (18:40:20Athens). ZERO active StoreOperatorSession. Both active installation and fiscal entries KAT-POS-01/KAT-POS-02 exist, with separate KAT-FISCAL-01/02 RBS settings. KAT-POS-01 CAP connector heartbeat15:39:14UTC was recently active; no stop/restart/revoke was performed. RBS request status counts8DECLINED/9SALE_COMMITTED, no unresolved status observed.

Counts are point-in-time observations, not a maintenance fence.

Critical actual recovery-size finding:273DocumentAttachment rows, all inline, zero external-only; SUM(octet_length(contentData))=161847741bytes, largest3437231bytes. Current executor caps aggregate source row bytes at16MiB, codec plaintext at32MiB. Real KAT backup/restore is NOT POSSIBLE with the current in-memory fixture-sized core. Do not merely raise caps on256MiB server. Chunked/streamed encrypted durable storage plus verified full restore is a genuine remaining implementation requirement.

Bounded source change: manifest construction rejects REMOVE for established RESET_KEEP installation/configuration categories, including installation/fiscal/EFTPOS/RBS, connector registration, credentials and paid modules. This prevents a reviewed RESET plan overriding preservation. Native encrypted-recovery fixture now includes TWO target installations/fiscal/EFTPOS rows and two target RBS configurations plus sibling controls; compares complete retained bytes after reset. DELETE remains internal/unmounted and is not authorized for KAT. Public executionAvailable remains false; no HTTP executor, recovery adapter, production guard installation or business deletion is introduced.

Local Node20 focused:13PASS/0FAIL/11native-SKIP. Full local:3113tests/2979PASS/0FAIL/134infrastructureSKIP. Native/full GitHub CI pending; no LAB/USER PASS. No production data or configuration changed by this page. No real KAT encrypted snapshot/isolated restore, generation-aware client/worker integration, safe reopen, central execute UI/API, production release or actual cleanup PASS. New Excel NOT RECEIVED; photos/roster pending. Whole task OPEN/ASSIGNED. Combined tracker PDF release receipt remains due; no manual PASS added.

Next: actual native/full CI for preservation increment, then implement bounded streamed recovery for the measured real data and complete reviewed ownership/offline/inflight/reopen integration before central production activation. No unsafe SQL shortcut or request to reconfirm already authorized scope.

18/10/2026 18:46 Europe/Athens - WHOLESALE-UNIFIED-PAID-01 / CODE LIVE / NATIVE CI PASS / AWAITING FUNCTIONAL LAB

Retained coordinator codex/wholesale-suite-20261017. Owner-requested unified paid workspace source is merged and ordinarily released; full wholesale product remains OPEN. ClaimPR2741/head6e459405/docsCI39139383289 all applicable checks green/full build correctly skipped, merged a6f0ac452 before source. SourcePR2744/headа9b9025d8361e9c11c6f8127c6f8b27efa7824c6/fullCI39140476609/job117713812357 SUCCESS3153PASS/0FAIL/0SKIP plus6backup/all required Windows/build/Chromium/security/license/invariant/archive/realHTTP checks. Merged95a85bcb8d4ba1ea46f8cbac6373f0f68c07c9cc, preserving independent WS2/WS4 documentation on main. Exact95mainCI39141049058/job117715529534 alsoSUCCESS3153/0/0 plus6backup/all checks. No source correction was needed after the reviewed full PR run.

Actual native PostgreSQL proof executed, not skipped: explicit WHOLESALE_B2B vsCORE-only/foreign grant and SuperAdmin denial; company ACTIVE/status/subscription and module dates; observed FOR SHARE lock wait crossing actual expiry; all manager/customer-site/seller entry/read/quote/order/history/replay negative matrices; exact advisory-key waiter then dedicated-module revocation denies accepted replay on all3channels, preserves one original request/event and allows restored authorized immutable replay. Existing JWT/session/current role/password/assignment boundaries, NET/GROSS/VAT0, concurrency, oldRR negative/defaultRC positive, atomic rollback and original synthetic financial/stock controls retained. Local3108/2974PASS/0FAIL/134environmentSKIP, mounted31/31 and builds remain separate evidence, not LAB.

Ordinary guarded Render workflow39141541809/job117716865155 SUCCESS pinned EXPECTED_REVISION95a85bcb8, triggered existing deploy hook15:41:14UTC and observed exact healthy revision15:44:19UTC. Existing service srv-d9isenfavr4c73bdh52g/workspacetea-d9ie26vaqgkc739uudqg: deploydep-dbaeh6jncjis73d8ultg statusLIVE/triggerdeploy_hook/commit95a85bcb8, finished18Oct15:44:07.755568Z. Independent fresh no-cache GET /api/health15:44-15:45UTC returned oktrue/version0.22.0+kat-test-pos/exact95a85bcb8; curl exit0 confirmed. No manual deployment/restart/trigger/bypass. This proves code inclusion/health, not authenticated UI or business/LAB acceptance.

Delivered: ONE top-level «Χονδρική B2B» opens role-aware wholesale management, Site πελατών, seller assignments and seller work. Separate old seller/nested wholesale entries removed. Live no-store capabilities and current company paid module control visibility; all3channels enforce it directly with no wholesale SuperAdmin bypass. No default grant, guessed price or payment-receipt fiction: existing PlatformAdmin commercial activation remains authority. ACTIVE current company subscription plus explicit current WHOLESALE_B2B entitlement required. Selected-store scope and current identities retained. Lost access removes private DOM while preserving unresolved body/UUID/principal and navigation lock; manual same-account recovery only, no automatic POST/offline/reload guarantee.

Later docs-only396d5c303 retains independent store-lifecycle owner. Reconciled main094169262 preserves the independent assistant transfer receipt and central WS1 monthly report sourceedff09392; that owner's validation/release is separate and is NOT claimed by the3153 wholesale receipt. All33owned runtime/test blobs match reviewed source through094169262; all other owners/source/manuals preserved. Common records and tracker PDF synchronized with latest main. No production business/API/schema/account/membership/assignment/grant/license/backup/payment/stock/fiscal operation; no manual PASS. Full functional LAB/mobile, durable offline, fulfillment/receivables/collections/fiscal and standalone packaging/domain remain OPEN with retained owner until named handoff. Single next action prepare bounded read-only UI/entitlement/role acceptance against the actual deployed revision; any future state-changing LAB needs explicit store/device/operator/time and before/after/control checkpoint, without replaying old transactions. Checkpoint CHECKPOINTS/CHANGES/2026-10-18-wholesale-unified-paid.md.

18/10/2026 18:35 Europe/Athens — STORE-LIFECYCLE-01 / CONFIRMED FULL NEW START / OWNER HANDOFF

ΑΝΑΛΗΨΗ ΑΠΟ feat/store-cleanup-20261017 — ASSIGNED feat/store-shifts-inventory-clear-20261018. Previous page stopped by owner. At18:34–18:35 owner explicitly superseded the limited clearance and confirmed YES to removing employees, sales, payments and all KAT history. BOTH CASH REGISTERS MUST REMAIN, with both POS installations, fiscal/EFTPOS/RBS configurations and connections. Store/company/shared catalog/other stores remain protected; licenses and infrastructure identity must remain usable. No external fiscal/bank history deletion, receipt cancellation or replay.

Owner authorizes development/tests/push/merge and KAT reset after reviewed ownership/dependencies, durable encrypted backup and actual isolated verified restore, active/inflight/old-offline exclusion. New Excel NOT RECEIVED; photos/roster pending. No KAT deletion has occurred. PR2722/516b6cc internal core with owner-reported3054PASS/0FAIL/0SKIP is historical CI evidence only; public executionAvailable:false. PR2736 closed unmerged. Last44shifts/oneOPEN KAT-POS-01 since17Oct13:32Athens/143products/23employees/recent connector is stale until refreshed.

This newest entry supersedes the18:30 limited-scope claim below. Central takeover PR2748 must carry this corrected scope before any runtime change. Whole task OPEN; production cleanup NOT EXECUTED. Required outcome separates code, tests, release and actual reset counts. Existing broad preview classification is NOT a reviewed execution manifest. Preserve all unrelated owners/PASS. Next: publish corrected takeover, refresh production read-only counts and identify exact runtime integration blockers; no blind cascade or production SQL shortcut.

18/10/2026 18:25 Europe/Athens - WHOLESALE-UNIFIED-PAID-01 / SOURCE PREPARED / LOCAL PASS / AWAITING NATIVE CI AND LAB

Retained coordinator codex/wholesale-suite-20261017, source fix/wholesale-unified-paid-20261018. ClaimPR2741/head6e459405c3fdb697be2c3f5ed3e81f10d6f12d82/docsCI39139383289 all applicable Windows/classification SUCCESS, full build correctly skipped, merged a6f0ac452fa10afe73f0b5218e15a3f2038c3725 BEFORE source. Baseline now reconciles main36d52c760, preserving independent assistant transfer-filter sourcePR2742 and central four-stream release/manualPR2743 without takeover or an invented new PASS.

Implemented one top-level «Χονδρική B2B» in the existing CommerceLauncher. Removed separate top-level seller and nested legacy wholesale duplicates. One role-aware workspace groups existing wholesale customers/prices/orders, Site πελατών, Αναθέσεις πωλητών and seller work; EMPLOYEE mounts only seller APIs. Dedicated no-store live capabilities response controls entry, not generic activeModules or SuperAdmin hints; open/focus/poll/date-expiry/account-company fences fail closed. Explicit selected-store restrictions remain. Lost access removes private DOM while keeping unresolved order/seller component refs, body/UUID/identity and parent navigation lock mounted. Same user/company plus restored entitlement and manual retry are required; no automatic POST or durable/offline/reload guarantee.

Registered one company module WHOLESALE_B2B, absent all plan defaults and without invented pricing or automatic activation. Operations require current ACTIVE company license, subscription start/end and explicitly enabled current module start/end. Existing PlatformAdmin CompanyModule/commercial terms remain activation authority; stored prices do not assert collected payment. No SuperAdmin operational bypass for this module; unrelated licensing/bypasses/retail/POS unchanged. All manager/admin/seller mounts and public portal branding/login/session/catalog/quote/order/history/replay require the dedicated entitlement, including direct routes. Live protected transaction authorization is repeated after advisory/scope/product/tier waits, and manager mutations recheck before commit. Shared exact decimal/checksum/immutable accepted snapshot, one request/event and rollback contracts preserved. No fiscal/financial/stock effect or real provisioning.

Local Node20 final full suite on owned source before unrelated36d52 reconciliation:3108tests/2974PASS/0FAIL/134environmentSKIP in78.8s. First broad run exposed one legacy UI test stub missing the new workspace named exports; harness now retains the real workspace and its original selected-store assertions, targeted10/10PASS and final full run above. Final mounted UI31/31PASS includes paid/role/expiry/stale company/frozen response races and actual child suspension without loss or automatic retry. Frontend Work-safe build/TABLE_SERVICE PASS17.78s, server preparation/Prisma generation PASS. Native local SKIP is not PASS. Three disjoint workers and coordinator reviewed integration; shared current-company guard and final wall-clock revalidation retained.

Registered actual isolated PostgreSQL native proof awaits CI: capabilities/guard missing/foreign/CORE-only and SuperAdmin denial; ACTIVE/status/all dates and observed FOR SHARE waiter crossing expiry; manager/portal/seller direct-entry negative matrices; exact observed advisory-key wait followed by paid-module revocation denies historical replay on all3channels, with same accepted request/event and restored authorized replay; prior actual JWT/session/assignment, exactNET/GROSS/VAT0, concurrency, pricing-race negative/positive, rollback and synthetic financial/stock controls remain. Full exact combined PR/main CI and ordinary guarded released revision/health required before hosted acceptance. No new manual PASS, no business/API/DB/migration/seed/account/assignment/grant/license/backup operation or manual deploy/restart. Whole suite OPEN for functional LAB/mobile, offline, fulfillment/receivables/fiscal and standalone packaging/domain. Single next action publish scoped source and require actual native/full CI, then ordinary exact release. Checkpoint CHECKPOINTS/CHANGES/2026-10-18-wholesale-unified-paid.md; owner retained until named handoff.

18/10/2026 18:12 Europe/Athens - COORD-20261018 / FOUR SOURCE SLICES RELEASED / SCOPED WS1 LAB PASS / RESIDUALS OPEN

Authoritative central receipt; owner codex/central-four-streams-20261018 retained. Supersedes this scope's earlier source-prepared/CI-pending and untested daily/weekly HOLD-provisional-preview statuses only. Original accepted transactions and unrelated owners/PASS remain protected.

Source PRs #2729 cash, #2730 supplier proposal, #2731 unique baskets/coverage and #2732 assistant coverage all merged after full green CI. Integration PR#2737/head e936f3017b0925c9f10dac03ece7bc9835843ae2 and exact main8baa1f5ff5fcd72774716107f654b668d9f07c3e fullCI39136985554/39137532467 each3116PASS/0FAIL/0SKIP plus6backup; Windows/build/Chromium/invariants/nativeSQL/HTTP checks SUCCESS. The earlier combined-main39136174553 checkpoint-policy failure was preserved and repaired through a meaningful actual producer->JSON->consumer regression plus unique active/checkpoint

evidence; no workflow/guard weakening.

Released descendant c68c817a3d69e55c8333cf32af5b362c6005f435 fullCI39137926344/job117706614390:3120PASS/0FAIL/0SKIP plus6backup. Ordinary guard39138489686/job117707869784 pinned that exact revision, preserved rollback artifact12140702729 and confirmed health15:04:34UTC. Render dep-dbaduarbc2fs73b199ng LIVE; independent public health15:07:42UTC status200/oktrue/exact revision. All22 original reviewed source/test blobs plus new integration-contract blob verified identical in released tree. No manual deploy or production business-state change by this coordinator.

Scoped LAB PASS18Oct15:08-15:10UTC: authenticated Platform Super Admin on remote Chrome, MYWORKSTATION LAB / ΕΡΓΑΣΤΗΡΙΟ ΔΟΚΙΜΩΝ (cmtpopbgo000trhb5ng9ytiru), no shift/transaction action. After reloading the client following deployment, daily17Oct07:00->18Oct07:00 showed1source shift/version1; weekly anchor17Oct showed12Oct07:00->19Oct07:00,4source shifts/version1. Both visibly PROVISIONAL with explicit non-certification of reconciliation and HOLD for ambiguous/incomplete/missing MAIN shifts; current Sunday incomplete keeps the whole week HOLD. Automatic delivery remained disabled, confirmation unchecked/Save disabled. No Save/send/financial/stock/shift/payroll/invoice action or replay. First pre-reload client was stale and is not new-client acceptance evidence.

PASS only this daily/weekly HOLD/provisional disclosure and observed Athens period bounds. READY/full reconciled financial day, detailed grouped amounts, physical terminal/mobile, expanded live tenant/role/store transitions, SMTP/outbox/monthly, actual delivery-based supplier choice, supplier UI/sending, staffing/turnover/payroll and broad AI remain NOT TESTED/OPEN as applicable. WS2/WS3/WS4 hosted feature acceptance remains AWAITING LAB; technical release does not close their full requirements. The completed WS1 HOLD/disclosure acceptance is removed from the current residual; no whole14-task PASS.

Checkpoint CHECKPOINTS/CHANGES/2026-10-18-central-four-streams.md; machine receipt CHECKPOINTS/EVIDENCE/central-four-streams-20261018/source-release.json; screenshot weekly-provisional-lab.jpg in the same evidence directory. Scoped usage manual docs/manual/automatic-reports/PASS.md updated in this same receipt; shared tracker PDF regenerated from current Markdown. No other manual claim added.

Single next action: continue retained central coordination with a read-only LAB evidence acceptance of the remaining source consumers after reading this receipt; do not repeat accepted transactions or re-save existing report settings. Source and administrative receipt remain separate from functional completion.

18/10/2026 18:12 Europe/Athens - WHOLESALE-UNIFIED-PAID-01 / ASSIGNED / CLAIM BEFORE SOURCE / AWAITING LAB

Retained coordinator codex/wholesale-suite-20261017; docs branch docs/wholesale-unified-paid-claim-20261018; source fix/wholesale-unified-paid-20261018. Owner explicitly requests one top-level «Χονδρική B2B» button in CommerceLauncher, opening wholesale management, customer site and sellers together, visible/accesssible only with the paid module. Screenshots18Oct18:04-18:06 show current confusing separate seller button and nested wholesale entry. Baseline maind5c22c19a70146c6a66bf43d564ea00888d9dc42; prior seller/core/portal native CI and exact6fea release preserved. Independent calendar sourcec68/mainCI39137926344 and18:05 healthy release receipt preserved; no takeover. Whole product remains OPEN, new behavior NOT IMPLEMENTED/NOT TESTED. No source/config/schema/test changes before this claim is green and merged.

Bounded scope: one company-level WHOLESALE_B2B module, absent all default plans, explicit current ACTIVE commercial company license and active dated entitlement, no automatic production grants, guessed price, payment-receipt fiction or SuperAdmin operational bypass. Existing CompanyModule/PlatformAdmin commercial activation remains authority; payment settlement itself is not represented by current schema. CORE and unrelated modules/auth remain unchanged. One top-level «Χονδρική B2B» workspace groups management/site/seller assignments and seller workspace with role boundaries; employees must not eagerly mount manager APIs. Dedicated live capability response controls visibility; server guard protects all manager/portal/seller routes and shared protected retries. Selected-store isolation, current identity/session/assignment checks and frozen uncertain

submission/navigation recovery remain protected.

Three existing workers after merged claim: wholesale_core owns NEW shared wholesale entitlement helper/capability route, module-catalog entry and focused new tests; field_sales owns launcher/unified workspace and mounted navigation/license/frozen-state tests; b2b_site owns portal/seller live entitlement predicates and their focused auth tests. Coordinator owns server mounts, manager/shared principal transaction revalidation, registered native HTTP fixtures/negative tests, integration review, common records and generated tracker PDF. No worker branches/commits/shared-record edits; no other owner or external service. Expected files additionally include wholesale-principal.js, wholesale-b2b.js/portal-admin.js integration as necessary, existing wholesale HTTP/entry tests. No schema migration, real account/grant/license/payment/stock/fiscal/business mutation, direct deploy/restart or guard bypass.

Preserve exact decimal prices, same-key one request/event, immutable accepted replay with CURRENT license/session/scope, revocation after advisory waits, rollback and synthetic financial/stock controls. Required meaningful coverage: module missing/inactive/future/expired, TRIAL/SUSPENDED/EXPIRED company and company subscription dates, noSA bypass, unified role-aware entry, stale entitlement response and account/company/store changes, uncertain retry retained but denied after revocation, public branding/login and all direct routes closed. Full Node20 focused/native PR/main CI and ordinary guarded exact revision health before hosted acceptance. CI is not LAB. No manual PASS; offline, standalone packaging/domain and full functional LAB remain OPEN under retained owner. Single next action merge this claim green, implement bounded unified paid module and require actual native/full CI. Checkpoint CHECKPOINTS/CHANGES/2026-10-18-wholesale-unified-paid.md.

19/10/2026 21:03 Europe/Athens - HISTORY ACTIVATION / EXPLICIT BACKUP DEPLOYMENT HANDOFF / ASSIGNED BEFORE SOURCE

ΑΝΑΛΗΨΗ ΑΠΟ feat/store-shifts-inventory-clear-20261018 — ASSIGNED codex/assistant-business-queries-20261015, ONLY history-expiry invocation in ops/backup/run-jobs.sh, history-specific image copy/dependency region in ops/backup/Dockerfile, matching backup build/deployment and history provisioning/activation regions in render.yaml, plus NEW history-specific provisioning/cleanup helpers and tests. Independently claim ONLY the new history-provisioning invocation prepended to root package.json start, preserving the complete original command, so the actual existing Render start receives reviewed provisioning without a second service or manual startup override. User explicitly answered «εγκρινω» at19Oct21:03:26Athens to the exact transfer request after published readinessPR2861/8a6c78d. Prior AssistantHistoryArchive-only manifest/column-review transferPR2840 remains approved. No other lifecycle worker.py/recovery engine/lease/readiness/physical KAT/reset, bucket/secret/plan/full-backup schedule or other-owner region is transferred.

Source branch feat/assistant-history-activation-20261019, baseline f3305f096eb7830f89483dda64f69271c9fb4535. Preserve current backup-upload retry PR2864, native camera/user PASS, wholesale/grouping changes and all other assignments. Current source history PR2852 remains default OFF. Actual read-only17:36–17:37UTC table absence/runtime heartbeat metadata in the preceding readiness entry is historical, not continuing rollout clearance. No new source/schema/flag/provisioning or business mutation yet. Publish this claim green on main BEFORE source.

Bounded implementation: reviewed idempotent archive provisioning through ordinary guarded startup/deployment, exact physical columns/constraints/catalogue consistency; refuse incompatible already enrolled plan rather than change lifecycle engine. Bounded scheduled expired-prose erasure on existing backup cadence, retain optimistic revision/request/digest tombstones, shared lifecycle guard/maintenance locking, no automatic provider/report/transaction replay. Prove isolated actual PostgreSQL concurrency, schema mismatch, expiry/idempotency/stale retry and encrypted restore/reset controls before rollout. Verify backup retention/recovery limits; no unverified claim of physical deletion from old full backups. No second service/uncontrolled timer/credentials change. Full exact PR/main CI and compatible guarded app/worker release precede activation; current production read-only inspection again before any schema rollout. No manual production SQL from Work or guard bypass. Group normal-app

read-only acceptance at completion; existing auth auto-review restriction remains binding, no private HTTP/browser workaround, no microphone request. Whole VOICE OPEN/ASSIGNED, no new LAB/manual/numbered PASS. Next action: merge this claim green then implement only the named activation slice.

19/10/2026 20:37 Europe/Athens - HISTORY ACTIVATION / ACTUAL READ-ONLY SCHEMA READINESS / BOUNDED HANDOFF PREPARED

VOICE owner codex/assistant-business-queries-20261015 retained; whole task OPEN. User20:34:39 requested continuation to completion. Source PR2852 and final receipt PR2854 remain authoritative; no new source change or live history activation. Current main baseline67e33c8427d65486395ca6ce283fa68d5e1d3310 includes independent wholesale/native camera work; their ownership and actual acceptance remain protected.

ACTUAL READ-ONLY metadata through Render connector, previously confirmed My Workspace tea-d9ie26vaqgkc739uudqg, production myworkstation-db dpg-d9isee7avr4c73bdglog-a. At2026-10-19T17:36:44.102447Z: public AssistantHistoryArchive ABSENT, StoreLifecycleFence ABSENT, StoreLifecycleExecution ABSENT, StoreLifecycleRuntime PRESENT. Independent information_schema lookup across schemas confirmed only the runtime table among these four names. Thus no existing lifecycle fence/execution table was present at that observation; this is not ongoing clearance, no business-row count or reset proof. Recheck immediately before any later rollout. No table/trigger/plan installation or enrollment performed.

At17:37:17.429863Z, runtime metadata reported protocol MWS_STORE_RECOVERY_CAPABILITY_V1, manifest495041c38888d4972d23a54980797284d785fd068873e6021c35cc10617ec85a, worker revision7d6862edca08f5e623516d49f3557e75bb86ea43, heartbeat17:35:17.581755+00:00, storagePolicyVerified true. This is a fresh reported heartbeat only; MAC was neither retrieved nor independently verified, and it is NOT an independent current S3 retention/restore acceptance. No credential/key/secret read. Staging DB untouched.

CONCRETE REMAINING ROLLOUT: keep history OFF; add reviewed archive provisioning through the ordinary guarded deployment mechanism, matching the approved AssistantHistoryArchive-only manifest/column review entries. Add bounded expired-prose cleanup retaining revision/request/digest tombstones, with lifecycle maintenance/reset locking and retry/expiry controls; test actual PostgreSQL concurrency and selective encrypted recovery. Use the existing backup service cadence, not a second service or new unmanaged app timer. Verify current object retention and restore treatment before enabling; do not assert a 30-day physical backup-erasure guarantee without evidence. Only after exact source/native CI, compatible app/worker release, current schema/catalogue verification and retention/recovery checks enable history and perform grouped normal-app read-only acceptance. Browser auto-review authentication restriction remains binding, no alternate private HTTP/browser workaround.

BOUNDED HANDOFF PREPARED, NOT CLAIMED: from feat/store-shifts-inventory-clear-20261018 to retained VOICE owner, ONLY history-expiry invocation in ops/backup/run-jobs.sh, history-specific image copy/dependency region in ops/backup/Dockerfile, and matching Render backup build/deployment plus history provisioning/activation regions in render.yaml; NEW history-specific cleanup/provisioning helpers and tests. Existing lifecycle worker.py/recovery engine, worker readiness/leases, full backup schedule, bucket/secret/plan policy, physical KAT/reset and all other tables stay with current owners. Existing two-file catalogue transfer PR2840 remains already approved, not requested again. This precise extra shared scope is not silently taken from the current lifecycle owner. Publish named transfer green before editing those assigned regions, per AGENTS.md ownership/handoff rules. No general development, push or merge approval is being requested again.

This readiness observation is recorded without a new LAB/manual PASS or numbered closure. Existing limited guidance/CSV/source-line/user passes are not replayed. No financial/stock/fiscal/shift/payroll/store/license/settings mutation, new service or production SQL write occurred. Single next action: resolve the prepared narrow backup/deployment handoff, then implement the coordinated activation slice under its published claim.

19/10/2026 - HISTORY CHAT SOURCE LIVE / EXACT CI SUCCESS / ACTIVATION HOLD

Retained VOICE owner codex/assistant-business-queries-20261015; whole VOICE-ASSISTANT-01 remains OPEN/ASSIGNED. Pre-source integration and narrow catalogue handoff PR2840 and exact same-connection dependency amendment PR2846 remain authoritative. No takeover of lifecycle engine, worker/jobs, physical KAT or delegated WS4 regions.

Source PR2852 final head 5bfd494b5417ba8e8acf016a1bc7c732fbf7c556, merged c0788ee93e930f715ee22adcd0447803da488327. Exact PR CI39264279106/job118100272186 and exact main CI39265672092/job118104859399 BOTH SUCCESS: 3459 PASS / 0 FAIL / 0 SKIP, plus 6 backup checks. Native isolated PostgreSQL, actual one-connection HTTP/native session-license-module authorization, archive-lock revocation, stale generation/revision, transport cancellation, Owner/Platform and mounted history UI cases executed. Final local suite: 3411 total / 3227 PASS / 0 FAIL / 184 environment SKIP; local skips are not claimed executed. One additional empty Git commit shared its parent's identical source tree and restarted CI; the final head above was independently rechecked.

Ordinary guarded Render deployment39266747789/job118108275137 SUCCESS, completed 2026-10-19T14:16:10Z. Actual health output at 14:16:08Z reported ok:true, version0.22.0+kat-test-pos, exact revision c0788ee93e930f715ee22adcd0447803da488327. No manual deployment or guard bypass.

Implemented behind default-OFF gate: native personal selected-store history load/reset, server-only checked-answer capture, original source-read requirements, optimistic revision and exact lifecycle generation, native authorization on the same transaction connection, dated historical prose without reusable export tickets. The actual visible canonical answer is archived; unshown model amounts are not. Cancellation/access loss blocks late private response/archive where still uncommitted; already committed writes are not claimed rolled back. Existing status polling withdraws old-generation history even across close/reopen. Disabled history returns authenticated available:false; real storage failure remains explicit, with no automatic provider/report/export replay.

ACTIVATION HOLD: ASSISTANT_HISTORY_ENABLED defaults OFF and was not enabled. No production archive table provisioned, catalogue JSON edited, plan/guards installed, purge worker/timer configured, credentials changed or production business mutation performed. The approved narrow manifest/column-review additions remain assigned here; rollout must coordinate with the existing lifecycle owner because catalogue validation requires the provisioned table and enrolled plan hashes/guards require a compatible upgrade. No current production operation state is inferred. Inactive-archive physical purge, backup retention/recovery and guarded rollout remain pending before activation. Next action: coordinated schema/catalogue/guard/retention rollout, then one grouped read-only acceptance in the normal application. No new authenticated normal-app/LAB/USER PASS; existing protected guidance/CSV/source/name/manual evidence remains unchanged. No numbered closure or CI-only manual entry.

19/10/2026 16:00 Europe/Athens - HISTORY SAME-CONNECTION AUTHORIZATION / BOUNDED CLAIM AMENDMENT BEFORE SOURCE

Retained VOICE owner codex/assistant-business-queries-20261015. Pre-source integration claimPR2840 remains authoritative, including the exact two-file history catalogue handoff; all other owners unchanged. Storage sourcePR2843/mergecc3c554d941c23b292949970d42a10e77347bd4f full PRCI39254001634/job118065040527 and exact mainCI39255199719/job118068909918 BOTH SUCCESS3402PASS/0FAIL/0SKIP plus6backup. Actual isolated native personal access, physical columns, exclusive fence, encrypted actual SQL reset recovery and sibling controls executed. This does not activate history or close VOICE.

NEW bounded amendment before editing: ONLY companyModuleState export in server/src/middleware/module-access.js accepts an OPTIONAL native DB/clock dependency while preserving the exact existing company active/license/subscription/module-date rules and all existing default callers; ONLY getState invocation in retained server/src/services/owner-assistant-access.js forwards its already supplied DB/clock to that native helper. No new role, grant, paid-module rule, bypass or

authentication format. No whole-file/module takeover; other middleware/authorization functions and all unrelated assignments remain untouched. Existing common records contain no other assignment for these exact two regions. Publish this amendment green on main BEFORE these two source edits.

Reason found during API integration review: the archive transaction correctly holds a lifecycle/shared fence, but native rechecks must not open a second pool connection while the transaction holds the first. Repository and the new native access/turn adapters must pass the transaction client through every in-transaction native check. The existing companyModuleState helper currently closes over global Prisma, so forwarding the transaction only to session/store/paid queries is incomplete. A one-connection isolated native HTTP test is required, using the real native company-license helper, real session/store/paid/personnel SQL and actual archive SQL; no controlled license fixture substituted for this new integration proof. Historical first-slice native test explicitly used controlled company-license state and stays qualified.
