MyWorkStation - OFF provisioning claim

22 October 2026 - central automatic dispatch integration

Observed runtime access

Authenticated existing Render Web Shell. Node20.20.2, revision723c818. Read-only transaction at20:27:20.403UTC.254tables. All six dispatch tables and Fence/Execution absent; Runtime present. External activation control missing:OFF.

Bounded next action

After green merged claim and independent review: exact installed six-table provisioning in one bounded transaction, identity/source hash checks, all-six absence checks, exact catalog/constraints/index validation and zero rows before commit. Abort on any mismatch. No source change, business rows, RESET, enrollment, restore or SMTP.

Still open

Canonical promotion, full-schema private recovery proof, retained DAILY catalog reconciliation, install-only enrollment, fresh external OFF epoch, verification/consent/current SuperAdmin grant/policy and final controlled delivery acceptance. Existing4094+8CI retained; no new functional PASS.

Coordination

Owner codex/central-auto-dispatch-20261022. Central issue2527/comment6350592180; stream2704/comment6350591861. Shared PDF and all other owner scopes preserved.
